The tenth is ſtronger yet: Take *Cummin prepared with Vinegar, or Annis ſeeds, or both, an ounce; Fennel and Carua ſeeds, each two drams; Ameos, ſiler mountain, Calamints or Mints, Marjoram, Savory, Time, Lovage, red Roſes, of each a dram; Citron peels dryed, Maſterwort or Zedoary roots and Pellitory, each half a dram; Liquoriſh, Nutmeg, Mace, Cloves, Galangal, Cinnamon, each a dram: Pepper, Ginger, great Cardamoms, Cubebs, Schænanth, each half a dram; Spike and Saffron, each a ſcruple*; make a Pouder.

Or inſtead thereof, give *ſpecies Dianiſi* of *Meſue*, which hath *Maſtick*, *Diacumini* of *Nicholas*, or the ſpecies of the Electuary of ſeeds.

There are alſo other ſpecies, as that *Diazingiber* of *Nicholas*, which have ſpices and other ſeeds, Roſes and Liquoriſh, alſo Rhubarb and Piſtaches and pine Nuts.

Alſo *Diaxylaloes* of *Meſue*, which is alſo cordial, and beſides many ſpices, hath Roſes, Maſtick, Bean roots, Rawſilk, Pearl, Currans, Amber, Citron leaves, Baſil, Balm, Gallia-Moſchata, Musk and Amber greeſe.

Alſo Pleres-Archonticon, is good for the ſtomach, like Diaxyloaloes and hath Camphire in it.

Alſo the ſpecies of the Electuarium Ducis of *Nicolas*, is good againſt crudities and Excrements and wind that breeds from them: and is a proper Medicine againſt the ſtone and colick.

The ſpecies called *Diarhodon*, is not given alone to cold ſtomachs, but mixed with others.

There are beſides theſe, bitter pouders to be taken, a ſpoonful at a time in Wine, as that of Wormwood and centaury in a cholerick cauſe.

Or this: Take *roots of Maſterwort, Birthwort, each a dram and an half; Wormwood, Centaury, each a dram; cummin, caraway, Ginger, each a ſcruple; ſaffron five grains*, make a Pouder; or add *half a ſcruple of caſtor* and make Pills *with ſyrup of Wormwood*, give *a dram*.

Of proper aſtringents, we make Pouders to be taken after meat, that the ſtomach may better imbrace and concoct them, and to hinder the breeding of wind, theſe are not too hot, leaſt they digeſt too ſoon.

As: Take *coriander ſeed prepared half an ounce, Fennel and Annis ſeed, each two drams; caraway ſeed a dram, cinnamon two drams, calamus, Galangal, citron peels dryed, each a dram; red Roſes half a dram, with ſugar* as much as all, make a Pouder to be taken after meat.

In the looſneſs and moiſtneſs of the ſtomach, we add greater aſtringents and dryers: As, Take *Cinnamon half an ounce, ſweet caſſia two drams, roots of Galangal and cypreſs, each a dram and an half; dryed citron peels half a dram, dryed Quinces, red Roſes, each a dram; Antiſpodium of Ivory, burnt Harts-horne, Hens guts burnt, of each half a dram, red Coral a dram, (or a dram of Diacydonium without ſpecis) with ſugar of Roſes* as much as all the reſt, make a Pouder for after meat, to aſtringe the ſtomach. with Frankincenſe and Maſtick it is better.

Groſs Pouders to be chewed are divers, theſe are alſo given afore meat: and to aſtringe and help concoction after meat.

They are pleaſant: As, Take *Annis ſeeds an ounce, ſweet Fennel ſeed an ounce, Coriander ſeeds three drams, Caraway ſeed two drams, Liquoriſh three drams, Cinnamon half an ounce*, make a groſs Pouder.

It will be ſweeter, with *Nutmeg, Mace, cloves and Ginger, each half a dram.*

There is a Compound Pouder of this ſort, called *Prieſts Paſture*, thus made: Take *Ginger half an ounce, Nutmeg, cinnamon, each three drams; Galangal, calamus, cloves, of each two drams; great cardomoms a dram and an half, coriander, Fennel and Annis ſeeds, each half an ounce; caraway ſeeds two drams, Liquoriſh two ounces and an half*, to theſe they add *comfits of ſeeds and ſugar, or ſugar.*

Alſo Lozenges may be made of the ten Kinds of pouders mentioned, as of *Diacinamomum, Diatrioupipereon, Diacalamintha, Aromaticum roſatum, Novella, Diagalanga, Dianiſum, Diacuminum, Diazingiber, Diaxylaloes, Pleres-Archonticon, Electuarium Ducis.*

Or you may make the Groſs pouders, as that called *Prieſts-paſture*, into Tablets, adding *an ounce of ſugar to a dram of the ſpecies, boyling the ſugar with a little Roſe water.*

Or thus, when we will heat much: Take *of the firſt, ſecond or third Pouder, or Diacinamomum, a dram; of the ſixth or ſeventh Pouder, or of Diatrioupipereon, or Diacalamintha half a dram, Ginger candied a dram, Oyl of Marjoram two drops with ſugar* diſſolved in *calamints water*; make Lozenges.

To ſtrengthen the Stomach: Take *of the eight Pouder, or of Aromaticum roſatum a dram. of the ninth Pouder, or Diagalanga half a dram, candied Citron peels, or conſerve of Roſes a dram, Oyl of Cinnamon four drops with Sugar* diſſolved in *Mint water*: make Lozenges.

In a windy ſtomach: Take *of the tenth Pouder, or Dianiſum a dram, Diacuminum half a dram, conſerve of Mints, or of Marjoram a dram, with ſome drops of Oyl of Annis ſeeds and Fennel ſeeds and Sugar* diſſolved in *Fennel water*; make Lozenges.

You may make alſo many ſorts of Lozenges, of Spices or Plants with conſerves or Oyls.

Alſo of ſome drops of Oyl of Annis ſeeds, Fennel, Caraway, Marjoram, Cinnamon, Cloves, with boyled Sugar, theſe are pleaſant, if the Oyl be not added to the Sugar while it is hot, and ſo fly away.

Alſo there are conſerves and candies, both dry and alſo moiſt, made of Sugar and Honey. And theſe conſerves are moſt uſual: conſerves of Roſemary flowers, Mints, Marjoram, Stæchas, and of Eryngus, according to *Rondeletius* and *Dioſcorides* ſaith, that the conſerve of Bettony made with Honey helps concoction, or of Squils.

Alſo candied Ginger, or the Pouder of Ginger, boyled with Honey two drops, or Icikles. Alſo Calamus candyed, or Nutmegs, Myrobalans, Citron peels, or Wallnuts with Spices prepared, as commonly they are.

Of theſe, ſome are given alone, or mixed with others, or in forms of Electuaries or Tablets.

Alſo the confection of wiſemen ſo called, is good, Take *Calamus candied ten ounces, ſweet Almonds blanched and Pine-nuts nine ounces, Piſtachoes three ounces, candied Eryngus nine ounces, the three Peppers, each three drams; Ginger, red Roſes, Cardamoms, Mace, Nutmegs, Galangal, each ſix drams; Aromaticum roſatum half an ounce, red Sanders an ounce, clarified Sugar twelve pound*, make a Confection.

Alſo dryed candied ſimples with Sugar, as Cinnamon, Cloves, Ginger, Zedoary, Galangal, Calamus,

Citron

Citron peels, cut in pieces and hardned with Sugar, alſo Roſes and Marjoram, which by ſome are ingeniouſly confected with Sugar. Eſpecially ſeeds to diſcuſs wind, before and after meat, as comfits of Coriander, Annis ſeeds, Fennel and Caraway ſeeds, and candied Quinces with theſe ſeeds ſticking in them, are good.

You may make divers Electuaries of the tenth Pouder mentioned, or the uſual Species with Honey or Sugar, boyled to a ſyrup, or ſyrup of Mints, Quinces, or of candied Ginger, or citron peels, or of pulp of Quinces.

Such did the ancients make up of Species or Pouders with Honey ſcummed into ſoft Electuaries, rather then otherwiſe. And the ſpiced conſerve of Quinces, by *Nicholas* was made up with Pouders.

With Fruits and Roots, as *Confection Diacydonites*, which is made of Quinces, conſerved and Pouders.

The moderne Authors uſe the Electuary of calamus, it is made of calamus, boyled in wine with Honey and ſpices. The roots of Acorns do as weil, for they aſtringe.

There is alſo an Electuary called the Electuary of Sea Radiſh, made with honey and ſpices of Horſradiſh and Gentian.

From the divers mixtures of all theſe, you may make divers Electuaries, and add to them conſerves and candyes, and the like.

As when you will heat: Take *the Electuary of the three Peppers, or the Lozenges thereof an ounce, or a dram of the ſpecies, conſerve of Mints, Marjoram, each an ounce; candyed Ginger half an ounce, with ſyrup of Stœchas*: make a mixture.

When you will ſtrengthen: Take *the Electuary of Aromaticum roſatum, or Diagalanga, or both, or the Tablets* made of them *an ounce, or the ſpecies of them, or our pouders a dram, conſerve of old Roſes, Citron peels candyed, Calamus candyed, each half an ounce; with ſyrup of Quinces*: make an Electuary.

When you will chiefly expel wind: Take *the Electuary Dianiſum, or Diacuminum, or Tables, or Species, or our Pouders of the ſame*, in the weight mentioned, and add *conſerve of Roſes, Calamints, candyed Nutmegs, of each half an ounce; with ſyrup of Mints.*

In looſe and moiſt Stomachs, give dryers and binders: As, Take *Quinces candyed an ounce and an half, citron peels candyed an ounce, candyed Ginger half an ounce, one Emblick Myrobalan, of Diacydonites without the ſpecies made of burnt Ivory and aſtringents half an ounce, Aromaticum roſatum, red Coral, each a dram; Aſhes of Hens guts, Antiſpodium of Quinces and Ivory, or ſhavings of Ivory, each half a dram; with ſyrup of Quinces*: make an Electuary, take after meat as much as a Nut.

There are alſo dry mixtures: As, Take *candyed Quinces half an ounce, conſerve of Roſes three drams, conſerve of Marjoram, Ginger candyed, each two drams; Aromaticum roſatum a dram, Cinnamon two drams, Cloves, Nutmeg, each a dram; with Sugar of Roſes*; make a mixture, give it in the mornings, or add *Coriander, Annis or Fennel ſeed Comfits.*

After meat to aſtringe the ſtomach, we uſe theſe mixtures without the hot Spices: thus, Take *candyed Quinces three drams, conſerve of Roſes and Citron peels candyed, each two drams; Cinnamon a dram and an half, the pouder of Diacydonium without ſpecies a dram, red Coral half a dram, Coriander ſeeds two drams, Annis and Fennel ſeed, of each a dram; red Roſes and Marjoram, each half a dram: with Sugar or Seed Comfits*: make a mixture.

Some Opiats take away pain of the Stomach from a cold cauſe, for Opium doth not cool, as ſome think, but rather heat by reaſon of many ingredients with the Opium in Opiats, as we ſhewed often.

Therefore in pain of the ſtomach, give *Treacle, Mithridate, Aſyncriton, or Philonium from a dram to a dram and an half*, alone or with other things, and give *Wine* upon it to help the operation; or other Narcoticks with Spices.

Or this, *Treacle with Citrons*: Take *candyed citron peels half a pound, old Treacle or Mithridate, each ſix drams; Smaragds prepared half a ſcruple, Electuary of Gems two ſcruples, ſealed Earth a dram; with ſyrup of citrons*, make an Electuary.

Some mix purgers with them; as *Philonium* with *Diaphœnicon*, when the ſtomach is pained from the Excrements.

Remedies to be applied to alter the weakneſs of the ſtomach.

Outwardly we anoynt or foment or Plaiſter the ſtomach to heat it and expel wind, when it is ſtretched, or to aſtringe, when it is weak or looſe, they muſt be proper and applied actually hot

You muſt anoynt on the left ſide, where the lodg of the heart is before, but behind right againſt ſtomach, upon the ſpondils of the Back towards the left ſide, and ſprinkle the Pouder following thereon.

When you will heat, uſe Oyl of Mints, Spike, Jeſamin, Elder, or that of Nutmegs by expreſſion, or of Mace which are pleaſant, or the diſtiled Oyl of Spike, Mints, Cloves, and the like, when you will expel wind uſe Oyl of Rue and Bayberries, or the diſtil'd Oyl of Juniper berries in a ſmal quantity with the reſt, or that of Fennel, Caraway, Cummin ſeed by drops with other; when you will ſtrengthen, uſe Oyl of Maſtich, of Wormwood: when you will aſtringe uſe Oyl of Maſtich, Myrtles, Roſes, Quinces, and that made of preſſed Grape ſeeds.

When pain is to be abated, uſe Oyl of Chamomil, Spike or Dill; which is good after pain from glutony. Or uſe Oyl of Herbs boyled.

To heat, expel wind, and ſtrengthen: Take *Maſtick ſix drams, Calamus, Galangal, cypreſs, each half an ounce; Nutmegs, cloves, each three drams; Fennel and Angelica ſeeds, of each two drams: with two ounce of Sack and Oyl*, put them in a hot place, or boyl them a little.

When you will ſtrengthen more: Take *Wormwood, Mints, each two drams; Sage, Roſemary, Lavender, of each an ounce and an half; red Roſes three drams*, cut them ſmall; add *Maſtick an ounce, red wine four ounces, Oyl of Nuts* three fingers above them; boyl and ſtrain them.

This is beſt againſt wind: Take *cummin, caraway, Lovage, Fennel ſeed, each two drams; Bay and Juniper berries, each half an ounce; Rue, Lovage, Mints, Baies, each three drams*; beat them and add *Aqua vitæ two ounces and with Oyl Olive or of Nuts*; boyl as aforeſaid.

Of the oyls mentioned, you may make ſtomach Oyntments with ſpices, or the like: when you will chiefly heat: Take *Oyl of Mints, Spike, of each an ounce and an half; Oyl of Wormwood half an ounce, Oyl of Spike, ſome drops of cloves, Nutmegs or Mace, each a dram; of wood Aloes and Sanders, half a dram, dryed Mints, Marjoram, Roſemary or Schœnanth, each two ſcruples; with Wax*, make an Oyntment.

The ſame is good againſt wind; with *Oyl of Rue or Bayes half an ounce, or ſome drops of diſtil'd Oyls, as that of Juniper berries.*

This

This is good in both caſes: Take *Oyl of Nutmegs by expreſſion, of Mace or both two drams, Oyl of Cloves three drops, of Aniſe-ſeeds ſix drops, Gallia moſchata half a dram,* with *Wax* make an Oyntment; we may add Muſk, or Ambergreaſe, or Oyl of Cinnamon, or Hiera picra.

To dry and aſtringe a moiſt and dry Stomach. Take *Oyl of Myrtles, Maſtick, Quinces, each an ounce and half; Oyl of Wormwood half an ounce, Galangal, Snakeweed, Citron-peels, each a dram; Roſes, wild Vine, Pomegranate-flowers, each two ſcruples; Hypociſtis, Labdanum, each half a dram; Maſtick, Frankincenſe, coral, each a dram; and Bole,* and a little with *wax* make an Oyntment, adding *Allum* and *Vinegar.*

If there be pain; Take *Oyntment of Marſh-mallows an ounce, Maſtick two drams, Oyl of Dill or Chamomil, each half an ounce; Seeds and Mints, each a dram;* with *wax* make an Oyntment.

Cerots or Plaiſters made like a Scutchion are laſting, they are made of the Oyntments mentioned, with more Wax for a Cerot, and Roſin for a Plaiſter.

Galens Cerot for the Stomach is good, made of Roſes, Wormwood, Spike, Maſtich, Oyl of Roſes and Wax.

Or this inſtead of it: Take *long Birthwort, Calamus, each half an ounce; mints, wormwood, red Roſes, each three drams; Spike two drams, maſtick ſix drams,* with *Oyl of Spike, and maſtick and wax* make a Cerot.

Or this Stomach-plaiſter: Take *maſtick an ounce and half, Frankincenſe and Labdanum, each an ounce; Storax half an ounce, Aloes two drams* (except there be pain) *Coral two drams, Galangal, mints, marjoram, wormwood, red Roſes each a dram; Cloves, Spike, Sanders, each half a dram,* with *Oyl of Spike, mints and Roſin, and Pitch and Wax* make a Plaiſter.

When the ſtomach is looſe, uſe Emplaſter of Maſtich. This is beſt corrected. Take *Maſtich two ounces, Frankincenſe an ounce, ſtorax and half Labdanum, each an ounce; Hypociſtis, Acacia, each three drams; Gallia or Alipta moſchata a dram, cypreſs-roots and wormwood three drams, Mints, Marjoram, Roſemary, Myrtles, each two drams; red Roſes half an ounce, ſeeds of coriander, cummin, Bar-berries, ſumach, each three drams; cloves two drams, ſanders, wood-aloes, ſchænanth, ſpike, each a dram; Bole, coral, each half an ounce;* with *Oyl of Maſtich, and ſpike, Pitch, Roſin, wax and Turpentine* make a Plaiſter.

If there be Wind, uſe Emplaſter of Bay-berries, Maſtich, Frankincenſe, Myrrh, Cypreſs and Coſtus, with Honey.

Or this againſt wind, and to fix the ſtomach. Take *Bay-berries an ounce and half, Juniper-berries half an ounce, caraway, cummin and Ameos-ſeeds, each two drams; Mints, Rue, each a dram; cypreſs, coſtus or Maſterwort-roots, each half an ounce; Zedoary two drams, Maſtich, Frankincenſe, each ſix drams; Aloes, Myrrh, each two drams; or two of Hiera picra,* with *Honey and Turpentine* make a plaiſter, with Nard-oyl, and chymical Oyl of Seeds a little.

Hiera picra with Honey makes alſo a good Plaiſter for the weak ſtomach.

Cataplaſms without Oyl (which are unpleaſant) are better, but ſooner dry, therefore muſt be repeated.

Wormwood, Mints, Sage beaten and heated are good to be applied alſo, or laid upon a hot tyle, and ſprinkled with wine, and then applied. Or if they be dry, cut and poudered, and ſoftned with wine.

Or thus: Take *dryed Mints, wormwood, red Roſes and chamomil-flowers, each half an ounce; toaſted Bread two ounces,* boyl them in *wine,* and with *Maſtich,* or other Plaiſters, apply them.

Or, Take *Maſtich half an ounce, Frankincenſe, Labdanum, each two drams; red Roſes, Nutmeg, Cloves, Mace, Cinnamon, each a dram; Barley-meal an ounce,* with *juyce of Mints, Wormwood or Marjoram,* make a Paſte, apply it watm to the ſtomach.

The ſame may be mixed with Quinces or ſour Apples roaſted, or crumbs of Bread in Wine boyled and beaten.

In Wine, Take *crumbs of Bread and Caraway, Cummin, Fennel and Bay-berries, each half an ounce; with white Wine* make Cakes, bake them, cut them in the middle, and apply the round piece to the ſtomach, change it as it grows cold for the other part, in this form uſe other Emplaſters.

If theſe be wet with Stomach-oyls, they need not be ſo often changed being dry.

Dioſcorides ſaith that Mugwort beaten with Oyl is good.

Alſo the Emplaſter of a Cruſt of Bread of Oyl of Maſtich, Quinces, Bread-cruſt, Barley-flower, Maſtich, Mints, Coral, burnt Ivory. And that called hot *Diaphœnicum* Emplaſter of *Meſue,* made of Oyls, Wax, pulp of Dates, Quinces, Bread and Stomach-pouders.

Alſo Fomentations with Spunges, and the like in time of pain, or before Oyntments are good to prepare.

In pain: Thus, Take *Wormwood, Mints, wild Time, each a handful; Marſh-mallow roots ſix drams, Roots of long Birthwort half an ounce, Roſemary, Chamomil, Mililot and Dill-flowers, each half a pugil; Fœnugreek and Line-ſeed, each two drams; Nutmeg and Mace, each a dram and half;* boyl them in wine and water.

In a cold Diſtemper of the Stomach; Take *Mints, Marjoram, Balm, each a handful; Galangal three drams, Cloves, Ginger, each two drams; long Pepper a dram,* boyl them in Wine for a Fomentation.

The ſame is good againſt wind, and this: Take *Penny-royal, Organ, Calamints, Mints, each a handful; Flowers of Chamomil, Elder, Storax or Lavender, each a pugil; Coriander, Fennel, Caraway, Cummin or Ameos-ſeeds, each two drams; Bay-berries half an ounce, Stœchas, Spike, each two drams; Mace a dram:* boyl them.

To ſtrengthen; Take *Roots of Calamus, Maſterwort, each half an ounce; dryed Citron-peels three drams, Wormwood, Mints, Marjoram, Balm, each a handful; red Roſes and Roſemary-flowers, each a pugil; Cloves, Nutmeg, Galangal, Zedoary, each two drams; Spike, Schænanth, wood-aloes, each a dram; Maſtick ſix drams,* boyl them in red Wine for a Fomentation.

For a looſe Stomach: Take *Citron-peels half an ounce, Pomegranate-peels two drams, Wormwood, Sumach or Myrtles, each a handful; red Roſes three drams, Pomegranate-flowers two drams, wild Vine tops a dram, Myrtle and Coriander ſeeds, each a dram and half; Galangal and Cypreſs-roots, each two drams;* boyl them in *red wine.*

Or of Oyls againſt pains: Take *common Oyl with the fourth part of Sack, or the tenth part of Aqua vitæ,* and foment after it hath boyled.

Uſe other Oyls above mentioned, in the ſame manner, or mixed with Decoctions of Juyces of Wormwood, Mints, Marjoram, with Sack, and the white of an Eg well beaten.

Or uſe Pouders in baggs to the ſtomach, made of Scarlet-linnen quilted with wool, apply them warmed with the vapor of Wine.

Theſe may be made of things mentioned in the cold Diſtemper and Weakneſs, becauſe they rather heat then ſtrengthen.

Or thus for both ends: Take *Mints, Wormwood, each a handful; red Roſes a pugil, Nutmegs a dram and half, Cloves a dram, Maſtick two drams,* with *red Coral* make a pouder.

Another

Another; Take *Maſtick half an ounce, Cloves, Nutmeg, Mace, each a dram; long Pepper or Ginger half a dram, Cinnamon a dram and half, Wood-aloes and Sanders, each half a dram*; with *Muſk* if it offends not, *and Ambergreaſe, or ſpecies of Diomoſchu, Diambra or Gallia moſchata a ſcruple*, make a Pouder for a bag.

When you will aſtringe more, uſe the things mentioned againſt a looſe Stomach.

Or this: Take *Maſtick half an ounce, Frankincenſe two drams, red Coral a dram and half, Cypreſs-roots, Citron-peels, red Roſes, Cypreſs-nuts and Pomegranate flowers, each half a dram; the ſponge of ſweet Dogs-roſe*, which the French call *Eglenteria, Nutmeg, each a dram*; make a Pouder for a bag.

Of the Fomentation-Medicines for wind, you may make baggs.

Or thus: Take *Galangal half an ounce, Mints, Penny-royal, each two drams; Rue a dram, Fennel, Caraway and Cummin, each a dram; Spike, Schænanth, each half a dram*; with Spices make a bag.

You may make a Bag to eaſe pain of the anodyne Fomentations.

Or of this Pouder: Take *Chamomil, Melilot, Dill, Roſes and Roſemary flowers, each a pugil; Wormood half a handful* ſew them in a bag.

Againſt wind and pain: Take *Bran, Milium each half a handful*; fry them for to make a bag with Salt or Mints.

You may alſo ſprinkle Pouders upon the hot Bread wet in wine, as I ſhewed.

As that of Maſtich, with Cloves, Nutmeg and Roſes.

Or ſprinkle them after the uſe of Oyntments, upon the part anointed; or mix them with Oyntments.

Alſo keep the Stomach warm, from the Air or other things by warm cloaths.

And many ſound people wear Stomachers to prevent Cold.

They are made of thick woollen dyed Scarlet, which is alſo cordial, or of double Linnen and Cotton baſted in; or the Doublet is ſtuffed therewith.

Inſtead whereof, they who have weak Stomachs, or have caught Cold therein, uſe Skins and Furrs, of Fox, Hares, young Wolf, Lynx, wild Cats, ſlinke Calfe, and feathered Skins of Birds, eſpecially Vulturs, to which they attribute ſingular Vertue.

And inſtead of Skins they uſe Pillows, which have no Quilts but Down, eſpecially of Gooſe-feathers to the Stomach night and day, if it can endure them, for to help their weak concoction.

And when they are firſt made, that they may work better upon the Patient, they dip them in wine, or ſome proper Decoction or Juyce, and ſtrain them, and then dry them before they are applied. Or they quilt into thoſe Pillows, ſome Stomach-pouders mentioned, but we rather uſe Baggs, as we ſhewed in external Applications.

Hollerius commends twice dyed Purple for a Stomacher, ſhaved or towed to raggs to ſtuff a Pillow inſtead of wool.

It is a good Remedy againſt a cold Stomach, to lay the ſtomach of a wife or husband, or of a child unto it all night (which was *Davids* remedy) or a warm hand.

Or a Dog which is better then another Creature for his Familiarity.

It is good alſo after Evacuation, to roul the ſtomach by degrees to keep it down.

Alſo to draw wind from the ſtomach, apply Cupping-glaſſes to the Navel.

The cure of weakneſs of ſtomach from dryneſs.

If weakneſs come from dryneſs without heat (of which we ſpake in the hot Conſtitution thereof) when the Stomach is bound and hard, and cannot ſtretch, in regard this comes not but from ſome great Cauſe, eſpecially to old folk, when the whole Body is dryed, or in a Hectick, in which the whole Body is extenuated, or long faſting, as in a melancholy woman which would take nothing for fear of being poyſoned, becauſe age cannot be cured, nor Hecticks eaſily, ſo in theſe Dryneſs of Stomach is incurable; in others it is hard, and there is no way but general moiſtning of the Body as in Hecticks: By Meats, Drinks, Conſerves, and other things preſcribed in Hecticks, which moiſten and relax the Stomach. And that will cure if it come from long famine, provided the Stomach be not too dry.

The preſerving of a hot Stomach by Nature, that it turn not to a Diſeaſe.

When the Natural Conſtitution of the Stomach is hot, though it be not yet a Diſeaſe, yet becauſe it is apt to turn ſo from hot meats, which cauſe thirſt and burning, and will eaſily be there corrupted and turn into Choler, it muſt be prevented by good Diet.

They that are ſubject to this muſt abſtain from meats that eaſily corrupt, as Fats, eſpecially of Fiſhes, and Milk, and Eggs, which turns into Choler, and Spawn of Fiſhes, eſpecially of Barbles, which the vulgar think do purge. And from other Mears and Fruits, which though of eaſie concoction, yet are hurtful in this Conſtitution: As other things are good which a weak Stomach cannot concoct.

Spiced Meats muſt be avoided and poudered, and Meats long kept, which are rancid, eſpecially fat of mouldy, as wild fleſh, or Veniſon, or rotten, or mouldy Cheeſe, which are very pleaſant to theſe Conſtitutions, by reaſon of their great Appetites, ſo that they count ſtinking, mouldy and worm-eaten Cheeſe full of Mites, for a great Dainty, which is their great enemy, while their Stomach is ſo burning hot. Alſo ſweet Meats are too hot, and ſubject to corruption, and eaſily turn into Choler, which are Naturally or Artificially ſo, which are known by their Scent, as ſweet wine and Fruits, Melons, Figgs, and the like; and ſuch as have evil Juyce, and that will ſoon corrupt as Cowcumbers. Alſo Herbs as Water-creſſes, wild Parſley, Onions, Leeks, Garlick after the eating of which they belch, Hiccup, and are burned.

Things that are temperate inclining to cold are good for them, as Lettice, Endive, Bugloſs, Spinach and the like, and Fruits. Alſo cold water hurts not them as others, alone or mixed with wine. Sour things are beſt, as ſharp wine and fruits, and ſuch as were mentioned in cholerick Stomachs, Thirſt and Feavers.

Alſo divers medicines are good which are there mentioned, when the ſtomach being hot, inclineth to a diſeaſe.

The uſe of ſharp Spaw-waters changeth often the Nature of ſuch Stomachs and ſucceſſion of Age, but by the uſe of hot things they will be then hurt, though not ſo much as in Youth.

The cure of Cardialgia from the Nerves.

If the Stomach ſuffer from the Nerves when other parts are pained, you muſt apply the remedies to the original of the Evil, rather then to the ſtomach.

If the ſtomach ſuffer from too exquiſite ſenſe, there muſt be more warineſs, leaſt it be quickly diſturbed: And if it be, we muſt ſtupefie the Senſe by Narcoticks.

And if the Heart ſuffer (as they ſay) which is of the ſtomach, from the Nerves in a paſſion of the Mind, the Nerves muſt be refreſhed, and then the *Cardialgia* will ceaſe.

The cure of a cardialgia, from the colick.

VVhen wind or Excrements are retained in the colon, and there is a Cardialgia in the ſaid region of the Heart, when they come away the pain ceaſeth. If they come not away uſe Clyſters, as in the Colick, as that of oyl Honey and wine, when the pain comes from a purging Medicine lying long in the colon.

The cure of cardialgia, from the Midriff.

If there be Heart-ach or pain in the ſaid lodg of the Heart, from the Midriff, becauſe there is difficulty of breathing, which is moſt troubleſome, we ſhewed in *Dyſpnæa* or difficulty of breathing, what is to be done.

CHAP. XII.

Of the Pain of Hypochondria or Sides under the Ribs.

The Kinds.

WE call that the *Hypochandriake* pain, which is in the Sides of the Belly to the Back, or on either ſide, not in the outſide fleſhy, or Muſculous part, of which we take in Superficial pains, but deep under the Baſtard or ſhort Ribs, and thence are called *Hypochondriak*. Of theſe *Hippocrates* often ſpake. The Empericks mention theſe pains in the Diſeaſes of the bowels under the ſhort Ribs, and call it the pain of this or that Bowel. Theſe differ firſt in reſpect of heavineſs or burning, pricking or tearing.

A heavy dull pain in the Hypochondria.

A dull pain which is heavy, which increaſeth ſome times by ſtretching and pricking is in the right or left ſide. And there is either no hardneſs or tumor to be felt or ſeen, or both appear under the ſhort Ribs, or between them And the Ribs are bent outwards more then uſually. And there is alſo a preſſing pain of the ſtomach and difficulty of breathing, and other Symptoms, as want of Complexion in the Face, with paleneſe in a *Cachexy*, yellowneſs and blackneſs in the Jaundies: or a tumor of the Belly and Feet in a Dropſie. Theſe accidents are more terrible then the pain, and therefore we ſhall here ſpeak of them alſo.

Under the right and left Hypochondrion, by the Back bone, ſeldom on both ſides, there is a heavy pain in the ſpace between the Loyns, which groweth greater, this is called the ſtone in the Kidneys or *Lithiaſis*. This pain increaſeth upon motion of the Body, eſpecially when the Back is bent with the body and at lying down, when the part is preſt: and there is a numneſs of the Thigh on that ſide, to the Knee or ſole of the Foot, with great pain, as I have often ſeen: with ſtoppage of Urin or piſſing of Blood, after violent excerciſe, or riding. And the Sediment or bottom is black in the Urinal. This at ſomtimes is white and muddy, like Whey at the firſt, and after ſetling, the bottom is white as Chalk, and much ſomtimes. Somtimes it is gravely and white or ſcaly. This pain is alſo increaſed by new accidents.

The ſtone in the Kidneys is called Lithiaſis.

There is ſomtimes a burning pain in the top of the Hypochondria, before, on the right ſide, this is called the Inflammation of the Liver, which is the cauſe of it, or *Hepatitis*. Or it is in the left ſide backwards, and is called the Inflammation of the Spleen or Splenitis. Somtimes it is below in and about the Hip, and behind about the Back on either ſide, and it is called the Inflammation of the Kidneys, or *Nephritis*.

A burning pain of the Hypochondria, is from the Liver or Spleen.

In all theſe kinds, there is a burning, ſtretching and heavy pain: alſo beating, eſpecially if it be the Inflammation of the Spleen, on the left ſide. In which there is a tumor to be felt, and ſomtimes on the right, when the Liver is inflamed, which appeareth more, when the patient bends to the right ſide, but it is without redneſs, not as the inflamed Muſcles are. In both theſe Inflammations, the pain reacheth to the Throat, and is increaſed by the lying on the contrary ſide: and it is more burninng in the *Eryſipelas* of the Liver.

In all kinds, there is a ſmal dry Cough and in the Inflammation of Liver or Spleen, the Hiccup. And in that of the Liver, choler is vomited, and the Mouth bitter, or voided by ſtool. Alſo from Inflammation of Liver or Spleen there is a Jaundies, and from the Liver, or Bloody flux ſomtimes, and there is often Piſſing with heat, when the Reynes are inflamed.

There is with all kinds a Synoch Fever going afore, or following. With reſtleſneſs, thirſt and dryneſs of tongue. Quick and little breath, ſwift and great Pulſe. High Urin and ſomtimes matteriſh.

Theſe ceaſing, there is a heavineſs in the part mentioned, and other accidents.

A pricking pain in the Hypochondria.

The pain of the Spleen, falſly ſo called.

Somtimes there is a pricking pain in ſound people ſuddenly on the left ſide ſomtimes on the right, which the Germans call *Milkeſteeken*, pricking of the Spleen, falſly. It comes chiefly after meat, upon riding exerciſe; with a Tumor like that of the Cramp from wind, it is pricking and very tearing, when breath is fetched, and lying upon the Belly abates it, and at length it goes away of it ſelf.

In other Diſeaſes of the right or left ſide, there is alſo a heavy pain, with greater Symptoms among which I ſhall ſpeak of that. Thoſe pains that are outward in the Hypochondria and about the Groyns in Ruptures, are refer'd to the Diſeaſes cauſing them.

A cutting and ſtretching pain in the Hypochondria, is from pain of the Womb.

There is a cutting and ſtretching pain in the Loyns, which is called the pain of the Womb, becauſe it is cauſed, from thence, At the time of the courſes, or when they are ſtopped. Somtimes in great bellyed Women, often after child bearing and with other Diſeaſes of the Womb, where it is deſcribed exactly.

A twitching and grievous pain of the Hypochondria.

Nephritis or Stone in the Kidneys.

There is often on one ſide, ſeldom on both, a twitching, tearing and pricking pain moſt grievous in the Reyns, ſomtimes by fits, ſomtimes returning in a month or year, this is called *Nephritis* from the cauſe, which is the Stone or Gravel, it ſomtimes is fixed and

and ſomtimes goes to the Groyns and not the Belly, as the Colick. And the Leg on that ſide is benummed.

At the firſt there is vomiting of flegm and choler and quick and little breathing.

At the beginning the Urin is with difficulty crude like water, then thick and after bloody, and there is red, yellow or white Gravel found at the bottom, growing together ſomtimes. Somtimes they are ſo little, they ſtick in the ſediment and fat and fly up, or ſtick to the pott. All theſe laſt long, or the pain goes to the bottom of the Belly, and then departs in a moment: or there is ſome hurt in the part, as we ſhewed in ſtoppage of Urin. And this either is not, or ceaſeth preſently, if one or more ſtones be piſſed forth: the ſtone is ſomtimes ſandy and brittle, red or yellow or white, long or round, ſmooth or uneven, greater or leſs: or hard and flinty and then white or dunne, ſomtimes of a ſtrange ſhape.

The Cauſes.

The Diſeaſes of divers parts in the Hypochondria under the ſhort Ribs, cauſe divers pains. Theſe parts are either the fleſhy Bowels, as Liver, Spleen, two Kidneys with the Ureters; or parts belonging to them, as part of the *Perinæum*, or Caul, Stomach and Colon: The diſeaſes whereof reatch thither and are felt under the *Hypochondria*.

Some diſeaſes of the fleſhy Bowels cauſe pains, theſe are manifeſt on that ſide, where the Bowel lyeth. If from the Liver, it lyeth on the right ſide foreward, the Spleen one the left ſide, under the Stomach, the Reyns one both ſides with the Ureters, under the other two Bowels. The pain of the right Kidney, is known thus from the pain of the Liver, for when the Liver is afflicted, the pain is more on the right ſide foreward, where the greateſt part of the Liver lyeth, or againſt the lodg of the Heart, where it lyeth, upon the Stomach: but the pain of the right Kidney remaineth fixed backwards, a little lower in the Back. But the pain of the left Kidney, is not ſo eaſily diſtinguiſhed from the pain of the Spleen, becauſe it is higher then the right Kidney. And contrary to the common opinion, the Spleen lyeth more backward, next to the left Kidney. Not on the left ſide ſo forward, as is ſuppoſed. Therefore the pains of theſe parts muſt not be diſtingniſhed by the Scituation, but by other ſigns.

The diſeaſes that may happen to all theſe and cauſe pain, are Inflammation, Weight, Obſtruction or Diſtenſion, from a Humor or Tumor, or from the Stone.

Inflammation of the Liver, Spleen, Reyns, is the cauſe of burning pain in the Hypochondria.

When there is Inflammation in theſe bloody Bowels, Liver, Spleen or Kidneys, it is from pure or fowl Blood, and cauſeth a burning where the Bowel lyeth, on that ſide. For theſe Bowels have but dull ſenſe of feeling, from the outward Tunicle, yet when the Inflammation reacheth to the parts adjacent, which are very ſenſible and Membranous, the pain is great, and the Tumor more appearing, when the Inflammation is in the outward gibbous part of the Liver, or when the Spleen, which lyeth lower under the Ribbs, is ſwollen: and the beating is more, when the Spleen is afflicted, becauſe it aboundeth with Arteries: and there are other accidents, as were ſhewed, When thoſe Bowels that lye upon the Diaphragma are inflamed, for then Breath is hindered, and there is a Cough, and the ſtomach diſturbed: And when the Liver is inflamed, Choler is vomited, or there is a looſeneſs or Jaundies; and the Reins inflamed, make the Urin ſharp. And if an Ulcer follow an Inflammation in theſe parts (as appears by piſſing of matter from the Kidneys, and we ſee in Anatomies in the Liver and Spleen) or if there be a hardneſs left from the Inflammation not well diſcuſſed, there will be accidents that will ſollow accordingly.

A ſtroak or contuſion, or the like, made outwardly upon the parts, may be the cauſe of the Imflammation, as alſo very hot things taken in, may inflame the Liver and Spleen, as well as the ſtomach which lyeth neat them. The chief Cauſe of Inflammation of the Liver is drinking much cold water in a great heat, which makes a ſudden repercuſſion. And the Cauſe of the Inflammation of the Kidneys is the ſtone, which ſeeks a paſſage forth, and gets into the Vreters, and cauſeth great pain and flux of blood: This ſtone increaſeth the Diſeaſe, by being together with the Inflammation. All theſe Cauſes of Inflammation kindle a ſymptomatical Feaver. But when blood is hot in a Synoch Feaver without theſe Cauſes, as we ſhewed in Feavers, and ſent upon any of the Bowels aforeſaid, it may cauſe theſe Inflammations which follow a Feaver as their cauſe. And it may be alſo from plenty of blood, when a Feaver goes not afore but follows after, which blood breaks out of the Veſſels, and cauſeth an Inflammation. If this Blood, if it be in the Liver impure, and not well purged from Choler, cauſeth an eryſipelated Phlegmon, and the great Heat that comes from thence, by which the Bowels ſeem to burn, whence comes the burning Feaver called *Typhodes*. And the ſame things happen, if there be a true Eryſipelas, from pure Choler ſpread through the ſubſtance of the Liver from the Gall. And this may come alſo from the Cauſes mentioned, that produce other Inflammations.

The obſtruction of the Liver, Spleen, or Kidneys, cauſeth a blunt and heavy pain in the Hypochondria.

If the Liver or Spleen be obſtructed by a Humor, ſo that they are more heavy, there is a weight in the ſides. This is ſeldom from a Humor in the Kidneys, but from a Stone or Gravel. This heavineſs increaſeth as if a weight lay thereon, if there be a hard Tumor, Scirrhus or Oedema in the Liver or Spleen. This may be in the Kidneys, from the ſame tumors with great pain and heavineſs. The Cauſes of all theſe ſhall be mentioned in other great accidents: We ſhall not ſpeak of Wind which ſome will have to be a cauſe of pain in the Liver or Spleen, becauſe it cannot be in ſuch quantity there, as to cauſe it by ſtretching, neither is the inſide of thoſe parts ſenſible, neither do we ſee how it can be in the Kidneys.

A ſtone and ſand in the Liver or Gall, is the cauſe of heavy and dull pain in the Hypochondria.

From a Stone bred in the Liver or the Gall, or from ſand or gravel, gathered and returned, there is felt a Heavineſs as from a Tumor. This may be, as I have ſeen in Anatomies, and it hath been obſerved that much red Gravel like Blood hath been voided in a Diſeaſe of the Liver; and by finding ſtones in the Livers of Beaſts: We may collect that the ſame may be in a man. Theſe hapning, cauſe this pain and other Symptoms, ſuch as come from a ſtopped Liver, as we ſhall ſhew, we cannot affirm that Stones may breed in the Spleen, but from that general rule, that they may breed in any part of the Body, becauſe we never ſaw nor heard of any.

Stones

The ſtone or ſand in the kidneys, is the cauſe of heavineſs in the Hypochondria.

Stones of divers ſorts, and gravel in the Kidneys and Vreters, cauſe the Nephritick pain, which is either a Heavineſs only in the Reins, gentle and dull, when the Gravel lyeth ſtill, or the Stones ſticks to the kidney; but the pain is greater when much Gravel is gathered there, or the Stones be great or many, with pricking and cutting, and numneſs in the Leg on that ſide, from compreſſion of the Nerves in the Loins, or piſſing of Blood from great motion, which maketh the ſtone beat upon the ſubſtance of the Kidneys, and ſometimes of matter, and ſome part of the ſtone. Theſe accidents are greater and longer, when the ſtone is long detained, and grows up in one place, and eſpecially when it grows ſo that it fills the Reins and ſwells them, as we have ſeen great branched ſtones in Anatomies: Or when the ſubſtance of the Kidneys is worn away, and the ſtone is wrapt in the Membrane only, as in a purſe where the Kidney was. Hence muſt needs be great pain; and I opened a Woman that in her life time complained for many years of ſuch a pain, and often miſcarried and found it ſo. Alſo I opened a woman that after a miſchance pined away and died, in whom beſides other accidents, I found both Kidneys eaten away, and full of matter, and two great ſquare ſtones in the right Kidney, and two in the left, one like a croſs, another like an almond, with many other little ones. This is uſual, for others have told me as much. I ſaw alſo a ſtone in the outward Fat of the Kidney, that grew to the tunicle which was great, but cauſed no pain, becauſe it was hollow and light.

A Stone and Gravel in the Vreters, is the cauſe of Nephritis.

If the Stone get from the Kidneys into the Vreters, the pain is greater, and hath the aforeſaid Symptoms, firſt Vomiting from the conſent of the ſtomach, and becauſe flegm is vomited, they ſuppoſe that the pain come from that, but that came from the ſtomach, becauſe it could not ſo ſuddenly come from the Kidneys. The Urin is then wateriſh and crude, becauſe the Choler is carried another way by vomiting and pain. That pain which is from the Stone, getting into the entrance of the Vreters, when it returns to the Kidneys again ceaſeth, or is leſs; but it increaſeth when it deſcendeth through the narrow paſſages of the Vreters, by ſtretching them, and ſo it laſteth till it gets into the Bladder, and then it ceaſeth ſuddenly. And this pain may come from Gravel that paſſeth ſlowly through the Vreters, eſpecially in the ſtrait paſſages, which have been ſo enlarged in ſome that I have opened, that they have piſſed Stones and Gravel without pain.

The Cauſe that breeds Gravel and Stones is Flegm, according to the vulgar opinion. which is ſo dry by the heat of the Kidneys, that firſt it is Earth, then a Stone. But in regard Mudd or Slime is rather bred of dryed Flegm, and it cannot be further hardned by any Art or Nature, nor that that chalky matter which is found in the Joynts, comes from Flegm; as we ſhall ſhew in the Diſeaſes of the Joynts, or if it come from it, it cannot be earthy. And if it came from Flegm, Stones ſhould rather breed in the Stomach and Brain, and other places where it aboundeth. than in the Kidneys to which that ſlimy Flegm they ſpeak of, ſcarce cometh, or if it cometh, it cannot ſtay long, from theſe reaſons and others, we cannot be of their opinion.

VVe ſhall rather make an earthy ſubſtance to be the cauſe of this Earthineſs, which we have ſhewed may be in Humors diſtinct from Flegm, as in the ſerum or whey, by theſe arguments. For as water flowing continually through the paſſages of the Earth and Channels, and carrying a terrene or earthy Matter with it, which it leaves upon dry places, cauſeth Mudd and Sand, and the rather when it is impure and full of clay, or when it is Naturally ſalt, nitrous or vitriol, by which as we have obſerved in Spaw-waters, they have cauſed ſtones in the Channels, through which they have flowed. In like manner the Serum receiving a ſalt Juyce and earthy Matter, which is bred dayly of Salt in the firſt Concoction which a man alwayes uſeth, and other earthy things (as you may obſerve in Beaſts which love ſalt, ſo that they lick the walls as Goats, in which when old, many ſtones are found) if the Serum have much thereof, it ſticketh to the dry and ſtrait parts, through which it paſſeth and affords matter for ſand and ſtones. Eſpecially in thoſe parts where the Serum ſeparated from the Blood continually paſſeth through the Kidneys, therefore there Sand is firſt bred. Theſe are red becauſe they breed in the ſubſtance of the Kidneys, and grow into the Stones, if they continue long, and there increaſe by addition of new matter, or if they fall into the Bladder, and ſtay there, there they increaſe. And the older they are, the leſs red they are, but paler and firmer. And while the Serum is in the Blood, it may do the ſame in divers parts fitted for it: As was ſhewed concerning the Liver. And if it be mixed with other Excrements it doth the ſame, and the rather when it takes ſharpneſs and dryneſs from the Choler. Hence it is that ſo often we find Stones in the Gall of the colour of Gold, or Silver, from the yellow Choler. And this is done in the Body by the Serum, ſo when it falls out of the Body, by tears it cauſeth Sand in the Eye-lidds: As was ſhewed in the Diſeaſes thereof. Alſo in the Serum which is purged in the Bladder, namely the Urin, by which the ſtones that fall into the bladder are increaſed, the ſame may be obſerved. But it is more plain from Urine made in a Chamber-pot, for if the ſame Chamber-pot be uſed long and not ſcoured, there will be a ſandy and gravely matter growing unto it, and and if it continue yet unſcoured, it will turn to thick ſcales and ſtones. And as this may be done in time from any Urine, eſpecially the ſalteſt and ſharpeſt, ſo may it be done ſpeedily by Art, when the Urin is boyled. Therefore the Chymiſts make Salt out of Piſs and Lye that hath earthy matter. From which as we ſhewed that Sand and Gravel may come, ſo may they increaſe into ſtones, from a ſalt, ſharp and ſour Juyce mixed with the Earthyneſs which is in the Serum or urin, which faſtneth and ſends them (as the Stone-cutters uſe to make a hard Cement like Iron of Filings of Iron, and Juyce of Vitriol and Vinegar) this cannot be from Flegm as ſome ſay, which cannot ſo glew together the earthy Bodies, that they may make a ſtone.

Neither can the heat of the Reins which they make the efficient cauſe of the ſtone, ſo dry the Flegm, and burn it, that it may be brought as it were to aſhes; in regard ſtones may breed in other cold membranous parts. And that it ſhould breed in certain places, the ſtraitneſs of the part, to which the matter may fix longer and better and the dryneſs thereof, where it may grow hard, is required and ought to be the aſſiſting Cauſe. Therefore they who Naturally have dry reins as ſome Infants, which have in the Cradle ſtones in the Kidneys, with great pain, and piſs them forth, as I have obſerved, eſpecially in one who had a white clear Stone before it was a year old, which ſtuck in the Yard, and ſtopt the Urin, and at length came forth with much Urin after it, and the falling of the horrid ſhining Tumor in the Belly: Or they who have dry Reins from age or other cauſes, are moſt ſubject to the Stone. And

if

if it come from the Parents, it is hereditary, and takes the children at the ſame years as it did the Parents. *Fernelius* (not explaining the quality) calls this a ſandie Conſtitution of the Kidneys.

The ſtretching of the Perinæum by wind, is the cauſe of a pricking pain in the Hypochondria, Oedema, which ſome falſly call the pain of the ſpleen.

Some pains in Hypochondria come from the Perinæum or cawl which is ſpread under the Belly before or behind, and is broadeſt under the Hypochondria, ſides and back. And when that is extreamly ſtretched, and drawn by the parts to whoſe Tuuicles it groweth, it is as it were pull'd aſunder, and hence comes a pricking pain, if it be in one part only, or a tearing and cutting pain, if the largeſt part of it be ſo ſtretched.

The cauſe of this is often wind, which gets between the Cawle and the Muſcles, and ſtretcheth, and cauſeth that pricking pain, which they which uſe Exerciſe after meat, are ſubject to in the ſame manner, as there is a pricking pain in the Breaſt in a falſe Pleuriſie, from the Membrane or Tunicle ſuccingent, or which girdeth it. The ſtrong attraction of the Muſcles of the Belly by ſtrong motion preſently after meat, doth bring this, eſpecially by riding when ſitting in the ſaddle, they bear ſtrongly upon the ſtirrups, and by forcing with retention of breath, conſtringe the Muſcles of the Belly. Even as we ſhewed in the Cramp, how it might come from wind in other parts of the Body, by the ſame kind of ſtraining. For which cauſe, as in a windy Cramp the Muſcles are lifted in the part pained, and cauſe a ſwelling which ſomtimes appears to the Eye. And if the ſides be bound with a garter (as we ſhewed in the Cramp) and the Muſcles drawn down by a contrary ſtraining, as was exactly ſhewed; the pain ceaſeth or abateth. So here is a kind of windy Cramp, and it may be referred to the Diſeaſe of the muſcles and cawle pluckt aſunder (as we ſhewed) This the vulgar calls the pain of the Spleen, becauſe it is more often in the left then right ſide, which is by reaſon of the Stomach that lyeth on the left ſide, and becauſe more Wind is bred in the left ſide, as in Hypochondriack Melancholy, yet it comes ſomtimes on the right ſide.

The ſtretching of the Cawle from the Veſſels and Bowels that are joyned to it, cauſeth ſtretching or tearing pain in the Hypochondria.

Theſe pricking or cutting pains which come from other Cauſes under the ſides, when the Peritonæum or Cawle is ſtretched, are cauſed from the affliction of the Bowels, as Liver or Spleen, which are joyned to the Cawle, or from the Veſſels of the womb which grow to the Back, and by the Cawle. Hence it is that pains of the Womb reach thither; or from the ſtretching of the Peritonæum in a Tympany, or in Women with Child, there is a little pricking, or by continuance a great pain, as in the Hernia or Rupture. The Cauſes of all theſe ſhall be laid down in other great accidents which befal.

A Diſeaſe in the ſtomach, cauſeth a Hypochondriack pain.

The Stomach being on the left ſide under the Hypochondrion, is pained about the lodge of the Heart before, with a pain called *Cardialgia*, on the left ſide; eſpecially in the Hypochondriack Melancholy, when there is rumbling and burning: As is ſhewed in Melancholy.

The Colick cauſeth the Hypochondriack pain.

The pain of the Colon which is placed under the Stomach, from one ſide to the other, is alſo in the Hypochondrion, but ſtayes not, but runs about the Belly: As ſhall be ſhewed in the Colick.

The Cure.

The cure of heavy, dul or ſtretching pain from the Liver, Spleen, Reins or Cawle.

We ſhall mention only here the Cure of thoſe Diſeaſes with pain in the Hypochondria. For the Cure of the Diſeaſes of the Liver, Spleen, Reins, Cawle, which we mention here only for the pain ſake, becauſe the pain in them is dul, ſhall be ſhewed in other Symptoms, as Cachexy, Jaundies, Dropſie, and the like, by which they are more manifeſt then by the pain. Alſo if there be a pain in the Hypochondria from the Stomach, Womb or Colon, reaching thither, becauſe the pains of the ſtomach are more in the region of the Heart, and of the Colon and Womb, more in the lower Belly where they lye, we have ſhewed the Cure of that in Pains of the Heart, and of thoſe Pains in the Belly. And here we ſhall only declare the Cure of the Pain, where it chiefly ſhews it ſelf, in reſpect of its cauſe, as it comes from the Inflammation of the Liver, Spleen, or Kidneys called *Hepatitis*, *Splenitis*, or *Nephritis*: Or from the Peritonæum or Cawle, vulgarly called *Spleneticus*.

The cure of pains from the ſtomach, Colon, or Womb.

The cure of the Inflammation of the Liver, Spleen and Kidneys.

The Inflammations and Eryſipelas of the Liver and Spleen, are dangerous and often deadly, and if they impoſthume, and leave an Ulcer, or be ill cured, and a Hardneſs or Scirrhus follow, they cauſe a Dropſie, and incurable Diſeaſes. The Inflammations of the Kidneys are more eaſily cured, they are worſt, when the Stone is there alſo: If they leave an Ulcer, it is alſo very ſtubborn, as ſhall be ſhewed.

The Method in the cure of all theſe Inflammations is the ſame as in others, that is while they are coming to divert the Blood another way from the part, or by repelling and deriving it, and to allay the Heat and Burning, and to diſcuſs the remainder, or if that may not be to ripen it. And if there be Hardneſs, Scirrhus, or Impoſthume, and after that is broken, an Ulcer, (which may be both in Liver, Spleen and Kidneys) we ſhall ſhew what is then to be done in other Symptomes, that come from thence. Againſt Inflammation, uſe the following Remedies.

Blood-letting diverts the Blood while it is flowing to the part another way, eſpecially in the Inflammation of the Liver or Kidneys which have great Branches from the hollow Vein: And in the Phlegmon of the Spleen, alſo it muſt not be neglected, though it hath Veins only from the Gate Vein, for reaſons ſhewed in Inflammation of the Stomach. Therefore in the Inflammation of all the the three parts, except any thing prohibit, open ſuddenly that Vein which moſt appeareth, on the ſame ſide, and bleed plentifully for Revulſion, and if there be great Plethory or Fullneſs, open the ſame Vein again, or that in the Hand on the ſame ſide, either againſt the Thumb, or little or middle Finger, according to *Rhaſis*. And in the Inflammation of the Kidneyes open the Vein in the Foot.

The Hæmorrhoids being Branches of the Gate Vein if they be opened derive much from the Inflammation of the Spleen, and revell from other Inflammations.

Cupping Glaſſes to the Hipps and Buttocks, or that ſide, do revell and derive in the Inflammation of the Reins. The Ancients did uſe them the day after bleed-

ing, to the right Hypochondrion, when the Liver was Inflamed after ſcarification, and applyed them the next day again to the ſame place. others uſed them only at the Declination, to take away the reſidue without Scarification.

Alſo Ligatures and Frictions of the extream parts are good at the firſt, as in other Inflammations, to revell.

And Clyſters before Bleeding, and when the Body is bound, as it uſeth to be in theſe Inflammations, or Suppoſitories are good.

And Clyſters becauſe they reach into the Colon, and come near to the part, and cool, are beſt at the firſt, and are as altering Topicks; ſuch as are preſcribed in Fevers.

A looſning Clyſter, that a little provoketh. Take *Mallows Roots and all, Beets*, and for the Kidneys *Pellitory of the wall, each an handfull*; *Violets, Bran, each a pugil*; *Lineſeed an ounce, Anniſeed a dram*, boyl and ſtrain them, diſſolve *Honey, Butter* and *Oyl, each an ounce and half*; *Pulpe of ſweet Prunes, or Caſſia an ounce*, with a little *Salt*, make a *Clyſter*.

A cooling Clyſter. Take *the emollient Herbs and Roots, Purſlane, Gourd leaves, each an handful*; *Violets, Mallows, and Chamomile flowers, each a pugil*; *Linſeed, ſix drams, four great cold ſeeds an ounce, Barley a pugil*, boyl and diſſolve, *Honey of Violets halfe an ounce, Caſſia, an ounce, Oyl of Violets, and Water-Lillies, each an ounce and half*.

If they cannot take Clyſters, give a Laxative, take heed of Purgers for fear of more Flux and Inflammation, Caſſia therefore is not very ſafe.

But we give things that looſen without heat and pricking, as Prunes and other looſning fruits, and Spinach, Mallows, Violets boyled in Broaths, Whey, ſyrup of Violets and Roſes, and the like.

In the declination or after the fourth day when heat abates, to take away the reliques, when the Liver or Spleen are afflicted, we give a gentle Purge, becauſe they can diſcharge themſelves by the Meſeraicks into the Guts. And the rather, when the Diſeaſe is in the hollow part of the Liver, into which the Gate-vein branches it ſelf, and if Choler boyling in the Gall or ſent out, cauſeth an Eryſipelas. In theſe caſes we may give Caſſia, or ſome gentle Purger.

Or this Decoction which cleanſeth and openeth. Take *Liquoriſh two ounces, Graſs and Kneeholm roots, each an ounce*; *red Peaſe a pugil, Senna an ounce, Polypody an ounce and half, Cordial-flowers a pugil, Aniſe-ſeed three drams, Fennel ſeed and Dodder, each a dram*; boyl them, ſtrain and add *ſyrup of Roſes an ounce and half, ſyrup of the two Roots an ounce, Cinnamon a dram, Schœnanth half a dram*, for three or four Draughts.

Or this Infuſion: Take *Rhubarb four ſcruples, Cinnamon, Spike, Schœnanth, each a ſcruple*; ſprinkle them *with white Wine*, and ſteep them in *Endive and Maiden-hair-water*, add *ſyrup of Roſes, with Senna an ounce*, make a Potion.

If the Diſeaſe be in the Reins, becauſe they have nothing to do with the Meſeraicks, theſe are not proper, except ſome other reaſon require it, for then it is better to provoke Urin, or when it is in the convex part of the Liver, which hath branches of the hollow Vein, then it is good in the declining to take away the remainder.

In the beginning of Inflammations of Liver, Spleen or Kidneys, we give gentle Aſtringers and Coolers, and which ſtrengthen them, eſpecially the liver and ſpleen. Then we leave out the Aſtringents, and mix Cleanſers with Coolers, and then Openers, which take away the remainder by Urin or Stool. Such as were preſcribed for the Inflammation of the ſtomach.

Or theſe following at firſt to repel. Take *ſyrup of dryed Roſes or Myrtles, each an ounce*; *ſyrup of Currance, or Bar-berries, or of Succory, or of Plantane for the Kidneys, each half an ounce*; *Endive, Roſe and Plantane-water, each an ounce and half*; *red Sanders half a dram*: Drink itin the morning, and make it again for the evening.

A cooling, cleanſing and opening Julep in the progreſs. Take *ſyrup of Violets and Endive, or Sorrel or Bizantine, each an ounce*; *ſyrup of Purſlane, and Water-lillies* in the Inflammation of the Reins chiefly *half an ounce, Straw-berry, Liverwort and Lettice-water, each an ounce and half*.

Or this Decoction: Take *Succory roots an ounce, Endive, Succory, Lettice, Strawberry-leaves, each a handful*; *Violets, Comfrey, Succory-flowers, each a pugil*; *Barley a pugil, the four great cold Seeds, each a dram*; *ſharp Prunes ſix*, boyl them, ſtrain and add *Sugar*.

We cool alſo with ordinary Drink, made of Water, and Barley, and Violets, and other ſuch things, and with Conſerves and Candyes, mentioned in Feavers and Inflammation of the Stomach.

In the Declination, when we will cleanſe, and open and purge by Urin; We take *ſyrup of Maiden-hair, of Bizant, each an ounce*; *ſyrup of Endive, and of the two Roots, each half an ounce*; *Water of Maidenhair, Agrimony, Fumitory, each an ounce*; *Spike and Schœnanth, each a ſcruple*.

Or this Decoction: Take *Roots of Aſparagus, Fennel, Parſley, Liquoriſh, each an ounce*; *barke of Tamarinds* for the Spleen *half an ounce, Maidenhair* for both Liver and Spleen, *Agrimony, Ceterach, each a handful*; *Cordial and Broom flowers, each a pugil*; *Chamomil-flowers half a pugil, red Peaſe a pugil, the four great cold Seeds half an ounce, Aniſe-ſeed two drams, Parſley-ſeed and Agnus Caſtus, each a dram*; *Raiſons an ounce*, boyl them, and in the ſtraining diſſolve *ſyrup of the five or of the two Roots an ounce and half*, with *Cinnamon* make it for three or four draughts.

Pills to diſcuſs the reliques of the Inflamation. Take *Turpentine two drams, Gum Ammoniack diſſolved in Vinegar a dram, Myrrh, Storax, each a ſcruple, Schœnanth, Spike, Aſarum, each half a ſcruple*; with *Sugar* make Pills, take *two ſcruples, or a dram*, with *Barley, Peaſe or Parſley-water*.

Outward Coolers muſt be applied at the firſt which aſtringe and repel; then mix Diſſolvers therewith, and in the Declination, uſe Diſcuſſers alone to diſſolve the remainder, or to ring it to Suppuration, if it will not be diſcuſſed. To all theſe you muſt add Strengthners, when the principal parts are inflamed. And theſe muſt all be applied, not actually cold, but temperate at the firſt, and warm afterwards.

A repelling Epithem to be uſed at the firſt. Take *Roſe-water four ounces, Plantane-water two ounces, Vinegar of Roſes an ounce, Sanders a dram, Camphire a ſcruple* (you may ad Juyce of Plantane or Violet-leaves, or of Pears or Quinces) *Oyl of Roſes half an ounce, or Roſe-vinegar*.

Then uſe this; Take *of Nightſhade-water, Water of Lettice, Violets and Water-lillies, each an ounce*; *Endive or Succory-water* for the Liver *two ounces, juyce of Nightſhade, or Purſlane, or of red Roſes an ounce, Vinegar half an ounce, Sanders a dram*, with *Oyl of Violets* make an Epithem.

Or dip Clouts in Juyce only of Nightſhade, or of Endive for the Liver, and apply with a little Vinegar and Oyl of Violets, Roſes or Water-lillies.

An Oyntment for the beginning of the Inflammation. Take *Oyl of Roſes, Quinces or Myrtles, each two ounces*; *juyce of Plantane and Vinegar, each an ounce*; *or juyce of Endive or Succory* for the Liver or Spleen *an ounce*, boyl

boyl them till the Juyces are conſumed, add *Sanders, red Roſes, each a dram* ; with *Wax* make an Oyntment.

At the firſt uſe the Cerot of Sanders for the Liver or Spleen, and the cooling Oyntment of *Galen* for the Reins. And Oyntment of Roſes for all Parts.

Or this Cataplaſm when the noble Bowels are affected. Take *Quinces four ounces, Plantane and Horſtongue, each an handful* ; *red Roſes a pugil, Pomegranate-flowers half an ounce*, boyl and ſtamp them, ad *Barley-meal three ounces, Oyl of Roſes two ounces, red Sanders two drams*, make a Cataplaſm.

In the progreſs, to diſſolve the Inflammation of Liver or Spleen. Take *Oyl of Roſes two ounces, Oyl of Wormwood, or Spikenard an ounce, Oyl of Chamomil, or Melilot half an ounce, Sanders a dram, Spike half a dram*, with *Wax* make a Liniment.

An old Oyntment for Inflammation of the Liver, made of Poppy tops, Rue, Linſeed and Schænanth, is good at that time.

Or the Cataplaſm of *Galen*, made of Quinces and Dates.

Or this Cataplaſm : Take *Figgs, Dates, Raiſons not ſtoned, each three ounces* ; *Wormwood, Harts-tongue, each a handful* ; *red Roſes a pugil*, boyl them in *Wine* and *Water*, ſtamp and add *Barley and Fænugreek-meal, or Lineſeed, each two ounces* ; *Pouder of Orris a dram, Oyl of Chamomil and Lillies, each an ounce and half* ; *Saffron a ſcruple, Spike and Schænanth, each half a dram.*

In the Declination, the Emplaſter of Melilot, Marſh-mallows, or Dyachylum, with Orris, do the ſame, and alſo maturate.

In the Inflammation of the Kidneys, uſe relaxing and reſolving Ovls, as that of Oyl of ſweet Almonds, or in which Marſh-mallow-roots are boyled, Oyl of Chamomile, Lillies, or the like, and Greaſe or Fats.

Or Oyntments of the ſame as that called Reſumptive.

Alſo a Bath of Marſh-mallows, and Mallows, Lillies, Chamomile, Fænugreek and Lineſeed, and the like, or a Fomentation for the Reins.

The preventing, and curing of Gravel in the Kidneys.

A Pain in the Reins from Stone, or Gravel, is not only to be cured when it comes, but to be prevented, by hindring the breeding of Stones, when we fear it, by reaſon our Parents had it, or are otherwiſe diſpoſed to it. Eſpecially in thoſe who piſſe Sand, we muſt take heed leaſt it cleave to the Kidneys, and breed a Stone. And if we ſuſpect that there is a Stone from former pains, and preſent Heavineſs in the part, we muſt prevent pain, hinder its growth, and labour to expell it. This is by taking them of from things that breed the Stone, and heat and dry the Kidneys, and by giving cleanſers to keep the Stones from growing to the Kidneys, and to break them and bring them down. But in curing of the pain of the Stone, which ſticketh in the Paſſages, we muſt relax the paſſages, break the Stone, and labour to get it forth, all which ſhall be now related, as alſo the Diet and Exerciſe, and Purgers, and Clyſters, and alterers and outward remedies.

There muſt be moderation and choiſe in meats and Drink, which muſt be of good juice, becauſe the ſtone taketh its Original from them, Meat muſt be Temperate, and very little ſalted, very ſalt and dry things muſt be forborne, for from theſe comes the cheif earthly Matter. Alſo very ſharp and hot things that dry and heat the Kidneys, as Sawſages, and Spices, rather then crude glutiners, and things they thought, breed Flegme, for theſe cauſe a thick juice, which maketh Obſtructions but not the earthly Matter, except there be ſome other cauſe, for that is layd aſide in the ſerum, in which they are waſhed, as we ſhewed in the Cauſes Therefore Cheeſe which they forbid ſo earneſtly, as the great Cauſe of the Stone, cannot do it but by its ſaltneſs, and ſharpneſs ; but freſh Cheeſe, Milk, and milkie Meats, and other freſh meats though they be glutinous, cannot breed the Stone.

Modetate Exerciſe before meat is good to remove the Stone, which fixeth by Idleneſs. Therefore they void Stones more after exerciſe, then after Sleep, and the Urine made at that time, is beſt to judg by. Therefore when the Stone is little and ſticks in the Kidneys, Moderate Exerciſe is good. but when great, it cauſeth pain by moving it, and in an old diſeaſe, ſtrong and violent motion of the Loyns, tears the fleſh from the Stone, and cauſeth piſſing of Blood, and an Ulcer. Neither do ſome allow exerciſe preſently after meat, leaſt it be diſtributed before concoction, and carried to the Kidneys, to breed matter for the Stone, but this Crudity will rather breed Obſtructions and other Diſeaſes then the Stone, as we ſhewed. Immoderate Venery dries and weakens the Reins, and diſpoſeth them for the ſtone, and if there be a ſtone, it ſtirreth it, and cauſeth pain. Therefore they who have lived long, without the uſe of Women, when they marry are ſubject to the Stone, which they never formerly perceived, being old men, as we have obſerved often. Alſo looſneſs of Body in orderly going to ſtool hinders the increaſe of Excrements. And not holding of the Urin when it urgeth, prevents the fixing of the Gravel.

If the Body be foul, purge Spring and Fall, and oftner to prevent, not only Flegm, which ſome think is the cauſe of the ſtone, but all humors. And to take away the cauſe of the ſtone, uſe gentle things that carry the ſalt and wheyiſh Matter from the Reins, and cleanſe the Blood, as they ſay ; ſuch as ſhall be mentioned for the Cure.

For when the fit of the ſtone is, we uſe Laxatives or Clyſters to take away Excrements and Wind, then Purges, but not violent, that they may not meddle with the cauſe which is rather to be looked at in the time of prevention, then of cure. But ſuch as may gently move the ſtone drawn, mixed with things that break it, as we ſhall ſhew.

Caſſia is excellent to prevent, and in the fit alſo an ounce or more, with ſyrup of Violets or Sugar candy, or with the Decoction of Liquoriſh, or Sebeſtens, or convenient Waters, or ſeeds of Winter-cherries, or Gromwel, or a dram of Pouder of Turpentine, with Oyl of ſweet Almonds to abate pain.

Alſo Turpentine two drams, with the yolk of an Eg, convenient Liquor, Sugar or Honey, or with Caſſia.

Or with Benedicta laxativa, or two drams of the pouder thereof, with Sugar.

A looſning and cleanſing Decoction. Take *Liquoriſh an ounce and half, Raiſons ſtoned an ounce, Sebeſtens ten pair, Prunes five pair, Peaſe a pugil, the four great cold ſeeds half an ounce, Aniſe-ſeeds three drams, Senna and Polypody, each an ounce* ; *Violets a pugil*, boyl them, and add *Sugar, ſyrup of Violets or Roſes* for two draughts.

It is better to add *Fennel and Parſley-roots, each an ounce* ; *Saxifrage and Marſh-mallow roots, each half an ounce* ; *Mallows, Maidenhair, each an handful : Dill-flowers a pugil, Alkekengi-berries two drams*, and make the quantity *of Senna an ounce and half*, and to add *Rhubarb* and *Agarick*.

A purging Wine : Take *Senna an ounce, Carthamus-ſeeds a dram, Agarick or Rhubarb two drams, Liquoriſh an ounce, opening Roots half an ounce, Violets and Mallows, each two drams* ; *Berries of Alkekengi, Aniſe and Levage-ſeed, each*

each a dram; Currance four ounces, add *Wine three pints,* drink this to prevent the ſtone, and when it begins to purge.

A preventing Electuary, and to be taken in the fit. Take *Caſſia two ounces and half, Prunes and Sebeſtens, each an ounce; juyce of Liquoriſh two drams,* with *ſyrup of Violets* make an Electuary, give *an ounce* with things againſt the ſtone, and ſome ſcammoniate Electuary, as that of Juyce of Roſes, Diaphænicon, Eleſcoph, and Benedicta laxativa a dram and half.

Or give the gentle Electuaries with Rhubarb and Senna, as Catholicon and Lenitive, and the like, alone or with the Decoction mentioned.

Or gentle Pills with things that break the ſtone. Or theſe: Take *ſpecies, Hiera and Benedicta laxativa half a dram,* with *Turpentine* make Pills: Or *a dram of Benedicta.*

Or this Pouder: Take *Senna an ounce and half, Rhubarb two drams, Turbith three drams, Ginger a dram, Cinnamon two drams, Polypody three drams, Gromwel and Burdock-ſeeds, each a dram; Broom-ſeeds half a dram, Orris a dram, the four great cold ſeeds, each a ſcruple;* make a pouder, give *two drams,*

Clyſters ſuddenly take away pain, by taking out the Excrements and Wind, which would increaſe it, by preſſing upon the Ureters and Reins: And alſo by coming to the part being anodyne, and if they be narcotick eſpecially, and which break the ſtone. Then do they help in a threefold reſpect.

As this againſt the Stone. Take *the emollient herbs, roots and all, Pellitory, Bettony, Groundſel, Beets or Mercury, each a handful; Chamomil, Melilot and Dill-flowers, each a pugil; Liquoriſh two ounces, red Peaſe, Bran, each a pugil; Figs ten, Bay-berries three drams, Alkekengi-berries two drams, Gourd, Fœnugreek and Linſeed, each half an ounce; Fennel and Caraway ſeeds, each a dram and half;* boyl them in *Water and Wine, or Broath,* ſtrain and add *Honey or ſugar an ounce and half, Caſſia an ounce, Benedicta or Hiera two drams, Oyl of ſweet Almonds, Nuts, Olives or Butter, each an ounce; Turpentine two drams,* with *Salt* make a Clyſter. If the Pain be great, add *two drams of Philonium Romanum.*

Or you may uſe the anodyne Clyſters for the Colick, adding things proper for the ſtone. Or thus: Take *Oyl of Chamomil, Dill, Lillies, ſweet Almonds, each an ounce and half; Oyl of ſcorpions, Gooſe greaſe and ſweet Butter, each two ounces; Turpentine* diſſolved with *the Yolk of an Egg an ounce and half, Saffron a dram,* with *Milk* make a Clyſter, add *Opium half a ſcruple,* if there be need.

Or this: Take *Turpentine two ounces,* diſſolve it in *white Wine half a pint, with the Yolk of an Eg, Oyl of Butter, Almonds two ounces, Oyl of ſcorpions an ounce, Gooſe-greaſe two ounces.*

Or this to help the ſtone to paſs foreward. Take *Lilly roots two ounces, Lapidium, Smallage, Purſlane, Roots and all, each an ounce; Pellitory, Coleworts, Groundſel, ſaxifrage-roots and all, Bettony, St. Johns-wort, Water-parſley, Crateva, Fennel, Dovefoot, Columbines, Beets, each half a handful or a handful; Lillies, Broom, Elder, Lavender and Stœchas flowers, each a pugil; Juniper-berries an ounce, Alkekengi-berries two drams, Gromwel, ſaxifrage, Parſley, ſmallage, Cummin, Hally-berries and ſeeds, each a dram;* boyl them in *Wine and Water,* ſtrain and add *juyce of Pellitory, St. Johns-wort, Fennel or Purſley, each an ounce; Benedicta laxativa or Indum majus three drams, Oyl of Dill, bitter Almonds, Peach-kernels, ſcorpions, each an ounce; Turpentine* diſſolved with *the Yolk of an Egg two drams,* with *ſalt* make a Clyſter. Add the Electuary called *Juſtinum or Lithontriadon.*

Ureters are given alſo to cleanſe away Gravel, that it ſtick not to the Reins, nor grow to the ſtone, they are good to prevent and cure, they open the ſtreight paſſages where the ſtone is lodged, and make them ſlippery And break the ſtone if it be crumbling or faſtned to the Reins, but if it be old or flinty, it cannot be. Some do it by a cutting quality, and ſharpneſs, or by cleanſing which takes the Gravel from the Kidneys, and ſomewhat alwaies from the ſtone; and the rather, when they are drying and earthy, which they do not by their hardneſs, as one ſtone wears another as they ſuppoſe. for they are not given whol but finely poudered, but by the clenſing quality which is in theſe dry bodies; and by a propriety known more by cuſtome then reaſon, as in other things, which do it by their ſimilitude of which hereafter.

Good broath of red peaſe is approved, with Butter, Sugar, and Honey, or a little Salt. this is uſed to prevent, adding parſley roots, and Coleworts and topps of Sparagus, with Beans and Fitches.

Or Take: *Red Peaſe a pugil, Parſley roots two ounces, Fennel, and Reſt-Harrow roots and Liquoriſh, each an ounce; Colewort or Malowes, a few Melon ſeeds two drams, Aniſeed a dram,* boyl them in *Cock Broath,* til there be two meſſes of it ſtreined, give it Morning and Evening.

Or the Decoction of *Aliſma, Chamomile, Marſh-Mallows, and of Corn Poppy,* according to *Diaſcorides,* is good for ſuch as make thick ſandy Urine. Or the Decoction of white Saxifrage.

To this Decoction of white Saxifrage, Orris, Primroſe roots, Mallows, Venus Navel, and Holly, are added, alſo roots of Valerian, Muſk; and wild flax may be boyled with Wine.

Some ſay that the Decoction of Lignum Vitæ is good againſt the ſtone, by its cleanſing and cutting quality. And therefore they give it in the fit, and to prevent alſo, as ordinary drink for a long time together, with other clenſers ſometimes, as Liquoriſh roots, Reſt harrow, and the wood of the Thorne Tree, with Sugar, or Honey.

Of theſe and others make this gentle and pleaſant Decoction. Take *Liquoriſh an ounce and half, red Peaſe a pugil, Raiſons ten pair, Figgs five pair, the four great cold Seeds, Aniſe and Mallow-ſeeds, each a dram; Violets and Mallow-flowers, each a pugil;* boyl and ſtrain them, add *Sugar or Honey* a ſufficient quantity for two or three draughts.

This is ſtronger; Take *Marſh-mallow roots, Liquoriſh, each an ounce; Mallow-flowers two handfuls, red Coleworts, Chervil, Bettony, each a handful; Melon ſeeds two drams, Fœnugreek or Linſeed a dram and half, ſeeds of Parſley, Alkekengi and Gromwel, each a dram; Chamomil and Broom-flowers, each a pugil;* boyl and ſweeten it, and uſe it as the former.

Or thus: Take *Roots of Aſparagus, Reſtharrow, low Bramble, each an ounce; Pellitory, Bettony, Poli-montain, each a handful; black Vetches a pugil,* boyl them in *Rain-water,* add *Vinegar of ſquills an ounce, Goats blood prepared half a dram, Lapis Judaicus a dram.*

Or this Syrup: Take *the five opening Roots, each half an ounce; Liquoriſh, Marſh-mallows, Dropwort, Burnet, ſaxifrage, Reſtharrow, Ground-bramble, Horſe-radiſh, each an ounce; Roots of Valerian, Dittany, Madder, Nettle, Bayes, Orris, Elicampane, Birthwort, Piony, Vervain, each half an ounce; Roots of Aſarabacca, Cypreſs, each two drams; Sea-onyon a dram, Roots of white Saxifrage, inner Rind of Hazel and Elder, each half an ounce; Mallows, Pellitory, Chervil, Lovage roots and all, Saxifrage of* Dioſcorides (which *Dodon* takes to be wild Time) *Bettony, Pauls Bettony, Maidenhair, Ceterach, Rupturewort, Bupleurus, Ground-ivy, red Coleworts, wild Parſley, Sea-fennel, Celtickna'd,*

each

each a handful; *Flowers of Chamomil, Lillies, Broom, Wall-flowers, St. Johns-wort, each a pugil*; *red Peaſe a pugil, Peach and Cherry-kernels, each an ounce*; *Juniper, Winter-cherry and Ivy-berries, each half an ounce*; *the four great cold ſeeds and of Mallows and Marſh-mallows, each a dram*; *the four great and ſmall hot ſeeds, each half a dram*; *Fœnugreek and Linſeed, each a dram*; *Raiſons ſtoned two drams, Jujubes and Sebeſtens, each five pair*; make a Decoction, add to the ſtraining *Sugar or Honey ſix ounces*, with *a little Cinnamon* make a Syrup: Take *two or three ounces alone, or with convenient Water or Wine*. Some boyl *Lapis Judiacus* and *Lyncis* in it, but in my Iudgement to no purpoſe.

Or the opening and cleanſing Syrups, which are ſeldom given alone but with Powders and Electuaries that expel the Stone, as, Oxymel Hydromel, Syrup of Liquoriſh, Radiſh, or Byzantine.

There is alſo an Infuſion made of Wine to expel the ſtone, as winter Cherries, bruiſed and ſteept in Wine.

Or bruiſed Radiſhes, or Horſ-Radiſhes ſteept twelve houres in Wine, which is very good.

Dioſcorides commends Wormwood-Wine againſt the Stone.

And this is better; Take *Liquoriſh, Reſt-harrow, Burnet, Saxifrage, Lovage, Fenel, Radiſh, each an ounce and half*; *Bettony, and Pauls Bettony, Rupture-wort, Buplæur, Maiden-hair, Ground-ivy, all dried, each three drams*; *Violets, Dillflowers, each a dram*; *Winter Cherries, Ivy berries, each two drams*; *Parſley, Carua, Gromwell, and Broom-ſeed, each a dram*; bruiſe them, and infuſe them in two quarts of Wine.

Groundjvie infuſed in Aqua Vitæ, is a ſingular experiment againſt the Stone.

Or divers Aqua Vitæ's made of Herbs, and other things proper againſt the ſtone.

Or a Lixivium, or Lye, made of aſhes of the ſame is good in four ounces at a time.

As of Vine aſhes, or Bean ſtalk aſhes, when Water or Wine is poured through them, ſo often til it be ſharp.

Another ſtrong enough in half an ounce. It is made of the Aſhes of Bean-ſtalks, Peaſe, Coleworts, Vervain, Wormwood, Garlick, Ivy, Iuniper, Bayes, and Paliurus, if it may be had. Taking as much of them as you can hold in your hand, and letting a pint of Wine, and four ounces of Aqua-Vitæ paſs nine times through them.

Some Juices break the Stone. (as *Hannibal* did the *Alps* with Vinegar) as thin white Wine, and Vinegar, and Water.

A certain man was drunk with white Wine, and held his Water forceably, and then voided abundance of ſtones and Gravel. And another of our Citizens of a good family, by drinking the diuretick Wine in the *Blaſine-ſtreet*, voided often ſtones of half a dram in weight, and hath ſhewed to me many of them which came forth with a little pain.

Hollerius teacheth us that the ſame may be done by much cold water, when the body is hot and dry from the pain, and it is better with Vinegar, alſo the ſpaw-Waters that are ſharp, are drank many dayes together againſt the ſtone.

Or an ounce of juice of Limons alone or with Sugar, or with three ounces of Wine, alſo juyce of Oranges, and the like.

Or the juice of winter Cherries, and Yarrow, or the Water of a Beet ſtalk, taken often in the ſame quantity, according to *Mathiolus*.

Or Take *Juice of Fennel and Purſlane, each half an ounce*; *white Wine an ounce*. Drink it with ſugar, or make a ſyrup thereof.

Or this Potion; Take *Juyce of Pellitory clarified, an ounce and half, of Chamomile, Bettony, Honey, or Sugar each an ounce*, drink it with Peaſe Broath or the like, or make a ſyrup thereof.

Another, Take; *a Horſe-Raddiſh, bruiſe it add the beſt Wine to make it three ounces, or four, ſtrain it and add Blood of a Goat prepared a dram.* this is highly commended, to which other Juyces and Pouders may be added.

The Urine of a Goat of four yeers old, or of a rock-Goat, is highly commended.

Alſo diſtilled waters which pierce to the Reins, in a good quantity as Pellitory water a pint, or Mallow, or Marſh-Mallow water, or of Broomflowers, or Bean flowers, Reſt-Harrow, Aſparagus, Saxifrage, Parſley, Fenel, Oſyris, or that of wild Parſley, ſea Fennel, Raddiſh, Ivy berries, or winter Cherries, or that of Flix-weed called Oſyris, or of Oak leavs, and Leavs and Roots of Brambles, and of Dogs tongue, alſo of ceterach, Vervaine, Chamomile, or that of Peach kernells or that of Turpentine which is oily. *Mathiolus* commends the Water of Mans Dung or Pigeons Dung. The ſpirit of Wine which is thin, breaks the Stone.

Theſe all may be given alone, or with ſugar, or with other Pouders, or diſtilled of divers ſimples mixed together.

Or thus; Take *the Roots, Herbs, Seeds*, of which we make the *Wine* by Iuſuſion, all dryed and bruiſed, and ſo much *Wine*, as it may be like a *Pultes*, and four ounces of *Turpentine*, draw a water by diſtillation from it: give it as the other.

Or add to the dryed ſimples that will keep their Virtue, Roots of *Spargus, Smallage, Parſley, each halfe an ounce*; *roots of Aſarum, Maddir, Valerian, each two drams*; *Pellitory of the wall, St. Johns-wort, Chamomile, and Broom flowers, each two drams*; *Smallage, Lovage, Sparagus, and Raddiſh ſeeds, each a dram*; diſtill a water with *Turpentine* as before.

All theſe are better diſtilled in *Aqua vitæ*.

Or Thus; Take *Peach or Cherry kernells, two ounces, Berries of Brambles, Strawberries, Winter Cherries, Ivy, each an ounce*; *Horſ-Raddiſh three ounces, green Beans with the ſhales, Pellitory, each an handfull, wild Parſly, Sea Fennel, each a pugil*. bruiſe and diſtill them.

Or this; Take *of Peach kernells, four ounces, Sebeſtens, and Jujubes, each five pair, four great cold ſeeds, ſix drams, Winter Cherries, half an ounce, Gith, and Smallage ſeed each two drams, Horſ-Raddiſh, half a pound*, bruiſe them, add *Turpentine and Honey each a pound*, diſtill a Water, give *three ounces alone*, or with other Breakſtone-Medicines.

Or, diſtill this Water of Juyces: Take *Juyce of Raddiſhes, Lovage, each ſix ounces, Juyce of Winter Cherries two ounces, white Wine Vinegar two ounces*, diſtill them give half an ounce.

This is an admirable Water: Take *juyce of Radiſhes a pint and half, of Reſtharrow and wild Tanſey, Saxifrage, Winter-cherries, Pellitory, Burnet, Bettony, Marſh-mallows, Gromwel, each half a pint, Roots of Fennel, Parſley, Eryngus, Reſtharrow, Orris, Elicampane, each two ounces*; *Baſil, Gromwel, Burdock and Parſley-ſeeds, each half an ounce*; *Juniper berries bruiſed half a pound*; infuſe them, and ſtir them often two dayes, add *a pound of Honey, and a pound and half of Turpentine, white Vinegar two ounces*, diſtil them in *Balneo*, give *two ounces, or two and an half*, with as much *ſyrup of Violets*.

It is good to drink Oyls, for we may ſee them ſwim after upon the Urin, and therefore know that they paſs through, and ſupple the Ureters.

Therefore in great Pains, when the ſtone is ſtopped in the paſſages, give Sallet-oyl, or Oyl of ſweet Almonds, or Linſeed new drawn or well waſht, alone, or in Broaths or Cream.

Some commend an ounce of Sallet-oyl with Wine, wherein Flints have been often quenched.

But ſome Oyls are proper for the ſtone, alone given, or with other remedies, as Oyl of Peach, or Cherry-kernels, or of bitter Almonds, or of Scorpions; or that of Citron-ſeeds, or Dock-ſeeds; or of chymical Oyls given by drops with others, as that of Turpentine, or the fat Liquors of Calcanthium, or Vitriol called Spirit of Vitriol.

Or this compounded: Take *Juniper-berries four ounces, bark of the Roots of Aſh three ounces*, beat them, add *Turpentine two ounces, Honey an ounce*, ſteep them and ad *Water*, and ſo diſtil an *Oyl*: Give *ſix or ſeven drops* with any convenient Liquor.

Some Simples are good taken in ſubſtance, Raddiſh and Salt in Sallets, Horſe-raddiſh beaten with ſweet Almonds, Roots of Lovage boyled or raw eaten in a good quantity before bathing. Roots of Fennel, Parſley, tops of Sparagus, Hops, Coleworts, Purſlane, wild Parſley and Water-creſſes in Sallets, Sea-fennel pickled called *Samphire*; alſo Lemmons, Raiſons, Figs or kernels of Peaches, bitter Almonds, Cherries eaten with ſugar, or made into Comfits. Alſo the Fruit of ſweet Briar called *Hepps*, Hares fleſh, eſpecially the kidneys, or Sparrows or Wag-tayls roaſted, or Goats blood boyled or five or ſix ounces of Fox blood, with wine and ſugar which is highly commended.

Some Simples of a Roſin quality pierce and cleanſe the Reins, and make the Urin ſweet as a Violet, and expel the ſtone and gravel in time of the fit, by provoking Urin, as the beſt Turpentine alone not waſhed two drams and half in a Wafer, or with Liquoriſh, Pouder or Sugar; and it is better diſſolved with the Yolk of an Eg, and given with convenient Liquor; or boyled till it may be poudered, two drams.

There are many other Simples for the ſame given in Pouder, in Wine, or the Waters mentioned, as Dittany-roots, Bayes, Knotgraſs, Rupturewort, Buphleurus called the Hares-ears, the ſeeds of Paliurus, Gromwel, Broom, Xanthium, Winter-cherries and Ivy-berries.

And pouder of Goats blood thus prepared. Take *the blood of a young Goat fed with Herbs* good againſt the ſtone, neither that which comes firſt or laſt, but in the middle of the bleeding, preſerve it from putrefaction by a gentle fire, or by the ſun, and give *a dram in pouder with Wine*. The blood of a Hare is as good.

Or the aſhes of a whole Hare-skin, and all a ſpoonful in Wine

Or the aſhes of a Wag-tayl.

Or theſe ſtronger Pouders of ſcorpions, ſows or hog-lice, pouder of Earth-worms or aſhes, which are very ſtrong, and muſt be given warily, and in a ſmall quantity; or of Graſs-hoppers, Beetles, pouder or rather aſhes of Spaniſh-flies, or of thoſe Hog-lice or ſows called *Oniſci*, which *Hartman* ſo commends in his Practiſe of Chymiſtry.

Or the fine pouder of *Lapis Judaicus*, or half a dram of *Lapis prunellæ*, with the thin water of Vitriol, given twice a week in the morning. This is a great ſecret among ſome.

Beſides theſe, there are many Pouders and Electuaries and Pills, made of Roots of white Saxifrage, Burnet, Saxifrage, Dropwort, Reſtharrow, Valerian, Horſe-raddiſh, Madder, Nettles, Lovage, Fennel, Parſley, Graſs, Kneeholm, Sparagus, Bramble, Aſarabacca, ſea-onyons, Orris, Elicampane, Birthwort, Piony, Dancaſonium, Horſe-dock, Acorn-ſhells, middle Rinds of Hazel, the ſaxifrage of *Dioſcorides* (called *Serpillum* by *Dodon*) the Capillars, Celticknard, Bay and Colewort-leaves, Feaverfew, Ground-Ivy, Penny-royal, Organ, Polymontain, Calamints, Hyſop, Southernwood, Germander, Bettony, Pauls-bettony, Groundpine, Leaves of Oak and Willow, Scordium and Empetrum, the Flowers of Royal Comphrey, Chamomil, ſeeds of Fennel, Aniſe, Caraway, Cummin, Smallage, Dill, Carrot, Seſely, Parſley, Lovage, ſiler-mountain, Ameos, Parſley-pert, Coriander, Aſparagus, Kneeholm, Baſil, Raddiſh, St. Johs-wort, white Thorn, Nettle, Aſh-keyes, Gith, Water-creſſes, Burnet, Saxifrage, Lupins, Vetches, Bay and Juniper-berries, Medlar-ſtones, Peach and Cherry-kernels, ſweet Almonds, red Peaſe, the ſpunge in the ſweet Bryar, Cherry-tree and Plum-tree, Gum, Gum of the Walnut-tree, Vine, Gum Arabick Traganth, Elemi, Olibanum, Bdellium and Amber. Alſo the aſhes an an Hedghog, Swallow, Aſſes-liver, Doves-feathers, and pouders of a Hares-kidneys, Mans-skull, Horſe-hoof, Aſtragalus or Hare, Ivory, Picks or pickerel Jaws of Crayfiſh and Snails ſhells; or of Eg ſhells hatched; or of ſtones in Cray-fiſh, Crabs, ſpunges; or of ſtones taken from men, commended by *Paracelſus*, and Oyl of them taught by *Hartman*: Alſo pouder of Mouſe dung. And of Lynx ſtone. Ocher the third Alcyon of *Dioſcorides*, and aſhes of Glaſs. To which we add things to enlarge the paſſages, as Liquoriſh, Marſh-mallows, Venus-navel, Violets, ſeeds of Mallows, Cotton, Marſh-mallows, Fœnugreek, Linſeed, the four great cold Seeds, ſweet Almonds, Piſtakes aſhes of Nuts and Gourds. And things that help concoction, and expel wind and obſtructions, and ſpices that expel the ſtone, and make the Medicines pleaſant; as Ginger, Galangal, Calamus, cypreſs, cinnamon, Wood-caſſia, Wood-aloes, red Sanders, Nutmeg, Mace, cloves, Pepper, carpobalſom, cubebs, ſpike, ſchænanth, ſaffron.

Give of theſe mixed a dram or two, with Wine, Water, Lye, Decoctions or Infuſions; or with ſugar make groſs Pouders or Lozenges, with Gum Traganth, or with Honey or Syrup make Electuaries, with other conſerves or candyes, given from two to three drams. Or if they be unpleaſant make Pills with Turpentine, and give a dram, and after them give a convenient Draught of proper Liquor to help their working. Examples of Pouders, Pills and Electuaries, are theſe.

The firſt pouder: Take *dryed Coleworts a dram, Oak-leaves dryed and Acorn peels, each half a dram; Pepper and Ginger, each a ſcruple*; make a pouder, give *a dram or a dram and half*.

A ſecond: Take *Peach kernels parched half an ounce, Melon ſeeds two drams, Fennel ſeed a dram*: Give it with *Parſley-broath*.

A third: Take *Gromwel ſeed and Winter-cherries, each a dram; Parſley ſeed half a dram*: Give it in *five ounces of Lemmon-water*.

A fourth: Take *Broom ſeeds half a dram, Amber two ſcruples, Sugar candy a dram*: Give it with *Wine*.

A fifth pouder: Take *ſtones of Medlars a dram, Pickrel-jaws half a dram, Lovage ſeed a ſcruple*: Give it as the other.

The ſixth: Take *Crabs-eyes and Aſtragalus, each half a dram; Broom and Baſil ſeed, each a ſcruple*: Give it at once.

A ſeventh: Take *of the ſtones that have been voided by the ſame Patient or others, and Lapis judaicus equal parts*, make a fine pouder: Give it with *Hydromel* or *Water of Sea-fennel*.

The eighth: Take *the aſhes of a Wag-taile or Hare a dram, Eg-ſhels hatched two ſcruples, with Sugar and Cinnamon*, make a Pouder.

The

The ninth: Take *boyled Turpentine half a dram, Pouder of Earth worms a ſcruple, burnt Harts horn two ſcruples, Lapis Iudaicus a ſcruple, Gum Traganth half a ſcruple.*

The tenth: Take *Goats blood prepared a dram, Jews ſtone half a dram, Aſhes of Earth worms a ſcruple* give it as the other.

The eleventh: Take *Goats blood prepared or aſhes of a Hare two drams, or of each a dram; the Spunge ſtone and Jews ſtone, each a dram and an half; Fennel, Parſley, Annis ſeeds, Gromwel ſeeds, Medlar ſtones, each a dram; watercreſs ſeeds half a dram, Mellon ſeeds a dram, Liquoriſh half an ounce, Roots of Burnet, Saxifrage half a dram, Cinnamon a ſcruple, ſugar two ounces* make a pouder, give *a ſpoonful or two*; drink after it ſome convenient Liquor.

The twelfth: Take *Liquoriſh three drams, Reſt-harrow, Dittany, Bays, Horſ-radiſh, Burnet, Saxifrage and white Saxifrage, of each two drams: Aſarum, Orris roots, each a dram; Dodons, Saxifrage* called *Serpillum, Maiden-hair, Bupleurus, Rupturewort, Pennyroyal, each a dram and an half; Fennel, Seſeli, Parſly, Lovege ſeed, Sea fennel, Radiſh Baſil ſeed, of each two drams; Watercreſs and Gith ſeed, each a dram; Medlarſtones a dram and an half; Peach kernels two drams, Plum tree Gum two drams, Crabs Eyes, Pickrel jaws, Egg-ſhels, Wolves Liver prepared, each a dram; Jews ſtone and Spunge ſtone, each a dram and an half; Oker and burnt Glaſs, of each half a dram*: give it as the former.

A thirteenth excellent Pouder: Take *Mouſe dung five or ſeven, Olibanum a ſcruple, Fennel ſeed half a dram, Cinnamon a ſcruple.*

A fourteenth ſtronger: Take *one Graſs hopper of half a ſcruple, Crabs eyes two ſcruple, Cinnamon a ſcruple,* give it with the Decoction of *Juniper berries.*

The fifteenth yet ſtronger: Take *dryed Spaniſh flies four, Spung ſtone two ſcruples, Melon ſeeds a dram and an half, Sugar candy a dram,* give it with the Decoction of *Lineſeed or Whey.*

The great Electuaries of *Nicolai, Lithontribon, Ducis or Juſtinus*: are made of theſe, and that of *Arnoldus de Villa Nova,* and that called *Nephrocathartike* and *Philanthropos,* and the Diuretick of *Baptiſta* and *Montagnaria.*

There is alſo an Electuary called the *Queens* Electuary, which hath Senna and Turbith in it.

And a red Pouder make thus: Take *red Sanders and Cinnamon, each an ounce; Annis, Fennel, Parſley, Gromwel, Creta of the Sea, Winter-cherries, Melon ſeeds, of each two drams; Spunge and Jews ſtone and Lynx ſtone, each a dram; blood of a Goat prepared half a dram.*

The Electuary of Aſhes, by *Avicen* is prepared for the ſtone. Thus: Aſhes of Glaſs, Spunge and Jews ſtone, Scorpions, Hare, Egg-ſhels, Pouder of Goats blood, Aſhes of Coleworts, Calamus, Penny-royal, Parſley ſeed, Carrot, Marſh-mallow ſeeds, Pepper, Wallnut tree, Gum and Gum Arabick made into Pouder and with Honey into an Electuary.

This hath been often uſed by me with good ſucceſs: Take *Liquoriſh, Bay roots, of each two drams; Reſt harrow roots a dram, Winter-cherries, Paliurus ſeeds, Gromwell, of each two drams; Smallage, Parſley and Fennel ſeed, each a dram; Water-creſſes half a dram, Gum of Cherry or Plum tree and Amber, each a dram*; make a Pouder, with *Cinnamon and a little Sanders:* and to mitigate pain, *Henbane ſeeds a dram and an half,* give *a dram with ſugar* or make Lozenges, or an Electuary, or Pills, with *ſyrup* that is proper, with *Peach kernels* and *juyce of Liquoriſh,* inſtead of *Liquoriſh.*

With Conſerves, you may mix them thus: Take *Conſerve of ſmallage roots or Orris an ounce, Conſerve of Broom flowers and Maidenhair, each half an ounce.* The tenth, twelfth or thirteenth Pouder. Or the Electuary *Ducis, Juſtinus or Lithantribon a dram and an half.* Or if you will have it ſtronger, the fourteenth Pouder and juyce of Liquoriſh, *each a dram*; with ſyrups aforeſaid: make an Electuary.

Agarick is ſomtimes added: Take *Agarick a dram, Pellitory of Spain two drams, roots of Dropwort a dram, Gromwel ſeeds half a dram, Madder half an ounce, conſerve of Maiden hair half an ounce, with Honey of Violets*: make an Electuary.

Convenient Pills: Take *ſeeds of Paliurus, Gromwell, Winter Cherries, each a dram; Saxifrage ſeed and Sea fennel, each half a dram; Mallow ſeeds two ſcruples, juyce of Liquoriſh a ſcruple, Gum of Cherry and* Plum tree, *each half a dram; Bdellium a ſcruple, Goats blood prepared a dram, aſhes of Scorpions, or Mouſe heads, Earthworms, Hog lice or Sows, each half a dram; with Turpentine,* make Pills, give *a dram.*

For pain, give Anodynes with the former.

An Emulſion: Take *Peach kernels four ounces, Melon or Gourd ſeeds half an ounce, white Poppy ſeeds two drams,* beat them, *and with half a pint of Pellitory or Mallow water,* make an Emulſion with *Sugar or Honey,* give *four ounces.*

A pouder again pain: Take *white Poppy tops two drams, Henbane ſeeds a dram and an half, the four great cold ſeeds and Mallow ſeeds, each a dram; Gromwel ſeeds and Winter Cherries and Broom ſeeds, each half a dram; Liquoriſh two drams, Reſtharrow roots a dram, ſugar two ounces.*

It is good in pains to add *white poppy ſeeds or Henbane ſeeds,* as I ſhewed in my pouder.

Or to give Opiats, as *Aſyncriton, Philonium, Romanum,* with pouders againſt the ſtone, or others mentioned in the Colick.

And Narcoticks may be given with purgers: As, Take *Aſyncriton or Philonium Romanum two ſcruples or a dram, Diaphœnicon a dram and a half or ſpecies Benedicta a dram and an half or ſix grains of Diagredium with ſugar* make a Bolus.

Or thus: Take *ſenna half an ounce, Carthamus ſeeds two drams, Liquoriſh, parſley roots, each half an ounce; white poppy ſeeds two drams, Mallows and Lineſeed, each a dram*; boyl them and diſſolve *Aſyncriton or philonium a dram, Mithridate two drams, or half an ounce of ſyrup of poppies.*

Or theſe pills: Take *ſpecies Laxativum two ſcruples, Opium prepared* and diſſolved in *ſack two grains, Storax, ſaffron, Caſtor, each three grains; Oyl of ſweet fennel ſeeds a drop with Turpentine,* make pills.

We give Anodynes in Clyſters alſo, as in the Colick.

And outward things to remove the ſtone, by dilating the paſſages.

Sitting in a moiſt and hot Bath takes away pain, if up to the Armeholes, in a Veſſel made on purpoſe called *Lumbrorium.*

In time of neceſſity, hot water alone will do well and better then potential heat, to take away pain, though things potentially hot, may be added to help the Decoction, and which looſen, expel wind, open and move the ſtone, ſuch as Clyſters were made of.

Or theſe, a Decoction of Mallows and parſley and Chamomil flowers in a ſtraight Veſſel, the leſs will ſerve.

Or adding Lilly roots pellitory and Violets.

Or a Decoction of Coleworts, Spinage, Arrage or Turneps

Turneps, or Parſneps, or Scirroots, and Horſe-radiſh, which is beſt.

Or of Marſh-mallowroots, opening Roots, and all three pugils, Fœnugreek and Linſeed a pugil, Smallage, Parſley and Caraway ſeed an ounce.

We add to the former ſome ſtronger things to expel the ſtone, which are mentioned in Remedies taken inward, and may be uſed outwardly, to remove it as ſome think.

Chiefly Madder roots, and ſea-fennel, or Siſymbrium, Columbines, Dropwort, Dovefoot, Bupleur, ſouthernwood, Mugwort, Broom flowers, and of Verbaſcum, Gromwel ſeeds and Winter-cherries, and the like.

For rich people we add Milk, Oyl, Butter to looſen more, and Wine to make it penetrate.

We make Fomentations (when baths cannot be uſed) of the Decoctions aforeſaid, with a ſponge, ſtuphes or bags, with Wine and Oyls.

Some uſe Embrochations or Infuſions upon the pecten if the ſtone lodge there, to remove it; they are made of the aforeſaid Decoctions.

Alſo to bath in, and to drink of ſharp Waters, is good againſt the ſtone, as thoſe of Sulphur.

After Bathing or Fomentation anoint the Reins, Privities and Perinæum, to rake away pain, and open the paſſages warm, ſtroaking the Hand downward.

If there be heat of the Kidneys, this Oyntment will open and cool. Take *Oyl of Violets and Water-lillies*, boyl *Marſh-mallows therein, freſh Butter, or Cream and Gooſe greaſe, each half an ounce*; with *white wax* make a Liniment.

A ſtronger Anodyne: Take *Oyl of ſweet Almonds an ounce and half, Oyl of Chamomil, or Melilot, Dill and wall-flowers, each half an ounce; Conies greaſe ſix drams, Muculage of Linſeed or Fleabane an ounce, Saffron a ſcruple*, with *wax* make a Liniment.

Or anoint with the Oyntment of Marſh-mallows, or that called *Reſumptive*.

When we will drive along the ſtone: Take *Oyl of bitter Almonds an ounce, Oyl of Peach kernels half an ounce, Oyl of Scorpions and Gooſe greaſe, each half an ounce; Turpentine a dram*, with *wax* make a Liniment.

With Juyces thus: Take *juyce of Pellitory and Marſh-mallows, each an ounce and half; wine an ounce, white wine-vinegar half an ounce, Oyl of wall-flowers and Earth-worms, each an ounce; Oyl of Scorpions half an ounce*, boyl them to the conſumption of the Juyces, ad *Goats greaſe ſix drams*, and with *wax* make an Oyntment, or with *Turpentine*.

Another ſtronger: Take *Oyl of Lillies and bitter Almonds, each an ounce and half; juyce of ſea-fennel, Horſe-raddiſh and white wine, each an ounce*; boyl them and ad *Graſs-hoppers, or quick wood-lice, Spaniſh-flies, ſcorpions dryed twelve, or more*.

Or thus: Take *Oyl of bitter Almonds, of Peach, or Cherry-kernels two ounces, Oyl of ſcorpions, or burnt Graſs-hoppers half an ounce*, with *wax* make an Oyntment.

A more compound Oyntment. Take *Oyl of Chamomil, Dill, Lillies, each an ounce; Oyl of bitter Almonds an ounce and half, of ſcorpions an ounce, Goat and Badgers-greaſe, each half an ounce; Mucilage of Fœnugreeck ſeed an ounce, Madder and Aſarum roots, each a dram; water-creſſes, Raddiſh and Lovage ſeeds, each half a dram; Myrrh a dram, aſhes of Graſs-hoppers, or Beetles two ſcruples, aſhes of Beech maſt a dram, ſaffron half a ſcruple, Oyl of Amber half a ſcruple*, with *wax* make an Oyntment.

Trallianus commends the blood of a Goat newly killed to anoint.

This Cataplaſm is good to the pained part. Take *roaſted Lilly roots half a pound, of Pellitory of the wall heated upon the Tiles and bruiſed two handfuls, and of Groundpine ſo prepared three drams, Marſh-mallow roots bruiſed two ounces, Chamomil flowers and Dill tops, each a pugil; Flower of Fœnugreek and Linſeed, each an ounce*; boyl them in *milk*, add *freſh Butter two ounces, Oyl of Lillies and ſcorpions, each an ounce; ſaffron a ſcruple*, make a Pultis.

Alſo the actual Heat of Bags made of dryed ſimples, or Chaff of Milium is good here, as in other pains.

Alſo Pillows, and Skins, or Furrs, Coney-wool, and Hares skins are the beſt.

Alſo ſome Stones tyed about the Waiſt prevent the ſtone. Great folks by a greeniſh ſtone like the Galactites. It is called the *Nephritical Stone*, becauſe it expels ſtones from the Kidneys, and alſo ſtrengthens the Stomach.

It is good to apply a Cupping-glaſs, not upon the Kidneys, leaſt it ſtir the ſtone, and cauſe pain which is not great, till the ſtone gets into the Ureters, and then apply the Cupping-glaſs ſtill a little below the ſtone, and ſo remove it downwards, beneath the place of the pain, till you have brought the ſtone into the Bladder.

The ſame may be done by chafing with the Hand or with Cloaths, and hot Oyls that looſen. Eſpecially after ſo doing you uſe a Cupping-glaſs, alwayes taking heed that we go not too high with theſe things to the part pained, which will increaſe pain.

Some rub the Leggs in time of bathing.

Moderate motion alſo keeps the ſand from ſtopping in the paſſages; and it is good to ſtand upright, or to exerciſe a little to move it.

And if a ſtone from the Kidneys ſtick in the entrance of the Ureters, and cauſe pain, it is good to lay the leg ſo high that the ſtone may get back by a little motion, into the hollow of the Kidneys, this will ſoon take away pain.

Vomiting by its force in ſtraining, doth help to remove the ſtone, therefore at the firſt if it come not Naturally provoke it, or provoke Neeſing.

It is good in great pain, when the Patient is plethorick, to open a Vein in the Foot on the ſame ſide, leaſt it run to the Kidneys by reaſon of the pain, and cauſe Inflammation, or when there is Inflammation.

The cure of the pricking pain, called the ſpleen but falſly.

The pricking pain which is vulgarly called the Spleen, though it be ſharp, yet becauſe it comes from a cauſe that laſteth not long, as attraction of the Muſcles and Wind, it goes away of it ſelf, otherwiſe it muſt be cured.

If it come often or from little motion, reſt preventeth it, and gentle Motion, and good Diet, not windy, but ſuch as expelleth wind, and by keeping the ſide very warm. And if the Party muſt exerciſe or ride, let him not do it upon a full ſtomach, and then bind himſelf about the waiſt with a Swathband.

When this pricking pain comes, alſo it is good to bind, with a Rouler as in a windy Cramp, of which this is a ſort, and by ſo doing the Muſcles will be drawn into their place, and the pain removed by expelling the wind.

If after reſt and binding, or rouling, the pain yet remain, you muſt uſe the ſame way of cure; as was ſhewed in the Cure of a windy Pleuriſie.

Firſt, uſe outward things that are hot actually and potentially that expel wind, and take away pain, as Fomentations, Bags, Oyntments, Plaiſters and Baths dry and ſweating, ſuch as are deſcribed in the windy Pleuriſie, and other outward Diſeaſes from wind.

If for all theſe the pain abate not, you muſt uſe divers

verters and Derivers, as Clyſters and Cupping-glaſſes. And (as is there ſhewed) if the Body be foul, you muſt purge, provoke Sweat, and give Alterers, which by a hidden quality take away pricking-pain.

CHAP. XIII.

Of Pain of the Belly.

The Kinds.

WE call that the Pain of the Belly which is before, where it is ſoft and covered with no bones; for we ſhall ſpeak of other Pains in the parts adjacent, that are in Piſſing and going to Stool, hereafter. Theſe in the Belly are firſt diſtinguiſhed by their Seats, for ſome are in the Abdomen or Panch about the Navel; others below the Navel, or above the Pecten, or reach to the Hips and Loins.

Colick and Iliack-pain. There are pains often about the Navel. Theſe are diſtinguiſhed by Phyſitians according to the Gut affected, as we ſhall ſhew in the Cauſes, and one is called the *Colick*, another the *Iliack-pain*. Theſe are the Symptoms.

Torments. The great pains are called *Torments* they are ſomtimes about the Navel, above or below, or on each ſide; ſomtimes they move with heat burning, and ſomtimes cold; ſometimes they are fixed under the Navel chiefly, and do as it were bore a hole through, but not in the Back, Groins as the Nephritick pains of the ſtone, or in the Hips, as thoſe of the Womb.

There is alſo Rumbling of the Guts to and fro to be heard and felt.

Alſo the belly is bound, and ſomtimes there is an endeavor to belch or fart, but in vain. And if not, or a Looſneſs follow, the Diſeaſe is cured. Somtimes there follows a purging of matter but not of blood, as in a Dyſentery. In one ſort of this Diſeaſe the urin is ſtopped.

There is alſo Loathing and Heart-ach called *Cardialgia*, and Vomiting of Flegm or Choler, ſomtimes of the Excrements which is grievous.

Miſerere mei, a ſort of Iliack-pain. this Diſeaſe is called *Iliacus* from the Gut Ilion, or from the Greek *Eleos* or *Eleenos*, becauſe it deſerves pitty, and therefore called in Latin *miſerere mei*.

There is ſomtimes alſo a Feaver going afore or comming after, or joyned with it.

Somtimes Convulſions and Palſies follow unknown to the Ancients. They are general or in ſome par ticular parts, as we ſhewed in the Hindrance of Motion.

A ſtraining pain about the Bladder. Alſo there is a vehement pain below about the Pecten. Somtimes ſtretching with ſtoppage of Urin; of which we there ſpake.

A hot pain about the Bladder. Somtimes burning with pricking and tearing, with redneſs and tumor outwardly, this is called the Inflammation of the Bladder; and then the belly is bound, and Urin ſtopped, and a Feaver with its accidents, and Dotage alſo ſomtimes. After which follows piſſing of matter, or hardneſs of the part.

Pain of the womb. There is another pain below that reacheth to the Hips and Loins, mentioned in the Hypochondriack pain, called the Pain of the Womb; and it is twofold. Either it is ſtretching in the Belly and Sides, uſually in Women before their Courſes break, or when they are ſtopped: And it is like the Colick, ſo that many times it is taken for it at the firſt. And it hath many ſad accidents that follow in women, as we ſhewed in Suffocation of the Womb.

There is alſo a pain of the womb in women with child chiefly in the Groyns, like that of the Hips, only it is felt before and not behind, when the Leg is moved.

The pain after Child-bearing is a kind of womb-pain. There is another pain of the womb in women not in travel, but after child-bearing, not in the Privities, but in the bottom of the Belly, ſtretching it ſome hours or dayes, this is called the after birth-pain.

A pain after Child-pain, with Inflamation. There is another burning, pricking, ſtretching, beating and tearing pain, called the Inflammation of the Womb before and after Child-bearing, it is like that of the Bladder inflamed, only it extendeth larger, with outward redneſs and tumor, binding of the Belly, and ſtoppage of Urin, and a Feaver, which leaves behind it a ſharp pricking pain, with voiding of matter by the neck of the womb; and hardneſs ſomtimes, and Fainting, and other Hyſterical accidents: As we ſhewed in other places.

The Cauſes.

The Diſeaſes of the Nervous bowels in the Cavity of the Abdomen, cauſe theſe pains, that is of the Guts, Bladder and Womb in Women.

The cauſe of the pain of the Belly from the Guts. The Guts fill almoſt the whole Belly, and they being very ſenſible, the pain is great. They are thick or thin Guts, and the pain is diſtinguiſhed according to the Gut. That which is in the thick Guts which come from the Colon, is called the Colick, that in the Skin is called Iliack. And becauſe the thin Guts are moſt about the Navel, the Iliack pain is more there. But becauſe the thick Guts are placed about them, and reach from the right ſide to the left, as high as the Hearts lodge, down to the Fundament, the Colick is chiefly in them. The Diſeaſes of the Guts that cauſe theſe pains are ſtretching or cold, or flegmon Tumor, or burning, or diſorder of the Guts, from their place.

Stretching of the Guts cauſeth pain of the belly. Too much ſtretching of the Guts, eſpecially with irritation, cauſeth pain; this comes from excrements and wind, when they fill too much, or ſtop, and cannot paſs.

Plenty of Excrements and wind in the Guts, cauſeth pain. Somtimes excrements and wind are in great meaſure carried to the Guts, which fill and ſtretch, and cauſe pain; but if the paſſages are open it laſteth not, but goes away with rumbling, farting, belching or purging. This pain follows eating of raw Fruits, Crudities and taking of a Purge before it worketh. And it is worſe when there is Choler, or other ſharp Humors; as we ſhall ſhew in Diarrhæa.

Somtimes the excrements and wind ſtop in the guts, and cauſe pain, which is fixed ſomtimes in the part ſtop-

ſtopped. Or elſe wandereth and is moſt where the Excrements and wind are moſt.

Excrements and wind ſtopping in the windings of the Colon, cauſe the Colick.

This pain is often in the thick Guts, which are full of thick Excrements and wind, as in the great winding of the Colon on the left ſide in the begining of the ſtraight Gut, when the Excrements ſtay in the crooked paſſage, and when they labor to get out the part ſeems to be bored or peirced, and there is a Tumor to be felt and the pain decreaſeth when the Excrements go back, and increaſeth when they return. This ſtoppage is from Excrements, which ſuddenly ſtop this crooked paſſage: or from dryneſs, hardneſs or toughneſs or ſlymineſs of the ſame; which will not let them riſe up, as we ſhewed in the cauſes of binding of the Belly.

Excrements retained inthe cells of theColon cauſe the Colick.

Alſo in the Cells or hollows on the ſides of the Colon that ſwel forth like a half circle, when the Excrements are hardned and dryed therein, they cauſe pain not only by weight and ſtretching, but by ſtopping and hindering the others from coming forth; Eſpecially if they have lien long. Alſo other hard bodies may do the ſame, if they get in, as ſtones of fruit or Cheſnuts eaten (which have cauſed the Colick to my knowledg) with other hard meats, and binding of the Belly alſo. Alſo little bones taken from Hens Feet boyled, in one that eat many for a Diet, ſtuck long in the Guts of a Woman and cauſed the Colick, and after a Clyſter, ſhe voided abundance of them and was cured. Alſo I knew one that had the Colick from eating much Cheeſe, and voided it by Clyſters, and alſo Mites or Cheeſe worms by Urin. Alſo *Fernelius* ſaith that he hath found by diſſection, that the colon hath been almoſt cloſed up with flegm (if it were not ſome other Excreſcens) and cauſed the Colick. And he writeth that in a certain Embaſſador there was a hard body bored through, in the paſſage of the Colon under the ſtomach, as appeared by the Tumor, which cauſed the Colick, which after ſix years he voided, being a foot long, and then was cured. This may come alſo from ſtones that breed in the Guts, which the ſame *Fernelius* ſaith he hath ſeen as big as Wall-Nuts or Cheſnuts, and voided by ſtool. I once ſaw one Lump like a ſtone, ſo voided.

The Cauſe of the Iliack paſſion, is the ſtoppage of the ſmal Guts.

When the paſſage of the Excrements is ſtopped in the ſmal Guts, it cauſeth the Iliack pain, and this is rather in the ſtraight paſſage over againſt the right Kidney, where they joyne to the thick Guts then any where elſe. Then there is that grievous pain called the Colick vulgarly, both in the right ſide, from the ſtoppage, and in the ſmal Guts about the Navel, from the Excrements, and there is Coſtiveneſs, till Medicines take it away, and it ſo continueth till the obſtruction is quite removed. And if the Excrements rerained are Cholerick, or Evil, or Corrupt by long tarrying, and grown ſharp, or malignant, the Guts will be twiched and the pain the greater. And although they ſomwhat provoke nature to void them by their ſharpneſs, yet becauſe they cannot be carried to the thick Guts, while the obſtruction laſteth, the Belly continueth bound, but if the obſtruction did not hinder them they being many, would cauſe a Diarrhæa or the Diſeaſe of Choler, or by ſticking to the Guts a Dyſentery rather then that Iliake paſſion, with coſtiveneſs. This they cannot do in the ſmal Guts, being ſhut up there, but they cauſe cruel pains, till the obſtruction is removed. And from this choler long detained, come other great accidents, as Jaundies, Fevers, and ſomtimes a Convulſion, from conſent of the Nerves and the like (as we ſhewed) It hapens alſo from the total ſtoppage of the ſtraight paſſage of the Gut, or from neglect, or from its ſtubbornneſs that will not yeild to Medicines, that the Excrements are ſo gathered, that they return back to the ſtomach, and are vomited up with much deteſtation. Hence is the Diſeaſe called *Ileus* or *Miſereremei*.

The cauſe of this obſtruction, whether it be eaſie or hard to be opened, may be hard tough Excrements; And a natural narrowneſs of the paſſage or a continual uſe of hot things, which dry the Guts and make them narrow there: Or hard meats, or hard bodies that breed there, as we ſhewed. As *Fernelius* ſheweth that a Maid that had taken a Medicine of Quinces was ſtopped found in the ſmal Guts that they break.

Rowling together or tangling of the Guts cauſeth Convolvulus.

If the ſmal Guts are rowled together in any other paſſages, ſo that the paſſage is ſtopt, then the Excrements ſtop and the Wind, and heaped together do ſtretch the Guts, and cauſe the Iliack pain called *Convolvulus*, in which when it is not far from the *Duodenum*, they vomit their Excrements, and there is a wandring pain with rumbling about the Navil. The cauſe of this is Inflammation or wind when alone, or with other Excrements it fils the ſmal Guts, ſo that they are like puddings ſtretched and twiſted, as we have ſeen. This can ſcarſe be from wind alone, except there be obſtructions from the cauſes mentioned, which hinder its paſſage, whereby the Guts are filled and twiſted. Alſo the rowling or tying of the Guts, eſpecially the ſmal from over exerciſe or from a fall upon the Belly, when the Stomach and Guts are full of Meat and Excrements, if it be not carefully cured, will cauſe a deadly *Convolvulus*: as it did in a Couſin of mine, who leaping over a Ditch, fel with his Belly againſt the further banke, and the ſecond day after vomited his Excrements and dyed. In whoſe Body I found the ſmal Guts tied in knots, and ſtretched with wind upwards, but empty beneath, when the Guts were put into their places, the wind broak forth by great farts. Another twiſting may be from the failing of the ſmal Guts out the Cavity of the *Peritoneum* into the Cods in a Rupture, when they ſtay long there and cannot be put up. The ſame Symptoms follow, only the pain is then in the Groyn, where the *Peritonæum* or Caule is broken. As ſhall be ſhewed in Ruptures.

Refrigeration of the Guts cauſeth pain.

Great cold in the Guts cauſeth torments, as in the Stomach. Either from outward cold, or from things taken in actually too cold, for the Stomach and Guts joyning to it, and colon that is adjacent. Alſo Clyſters too cold, actually or potentionally, may cauſe the ſame. The ſame may come from cold wind that comes from cold drink or crudities, which may cauſe pain by ſtretching, alſo if they be many. Alſo from a cold and crude humor, from ſharp meats or fruits.

Although flegm be counted the chief cauſe of pain, yet it muſt be only that which is cold, as that called Glaſſie flegm, which being bred in the Guts, is very cold pierceth and knaws, other kinds of flegm can cauſe no great pain, either with their quantity or quality.

Inflammation of the Colon cauſeth the Colick.

Inflammation of the Ileon, or in the ſmal Guts, cauſeth the Iliake pain, in the Colick or ſtreight Gut

the

the Colick. And there is a fixed, inflamed, ſtretching, beating pain, inwardly in the part with a Feaver and other accidents of Inflammation, with Coſtiveneſs, though when the thick Guts are afflicted, there is a vain Needing If the ſmal Guts are inflamed and the tumor is great, then by reaſon of their rowling together, becauſe nothing can paſs, the Excrements are vomited, this is the uſual cauſe of *Convolvulus*, in which Tumor I have obſerved a little blewneſs. And if the Inflammation, Impoſthume and break, matter is voided.

The Inflammation of the thin Guts cauſeth Convolvulus.

The cauſe of this Inflammation is blood ſent from the Meſeraicks into the ſubſtance of the Guts, by reaſon of its plenty or thinneſs, or by reaſon of great pain or other hurt, wound or bruiſe.

Beſides the flegmon or Inflammation of the Guts, there may be a burning in the ſmal Guts cauſing the Iliack rather then Colick (though it be commonly ſo called) which is violent long and hath bad Symptoms, when the choler is not in the ſpace within, but in ſubſtance of the Guts, as I know by long obſervation and certain ſigns. And it infects them and corrodeth and burneth, as we ſhewed might be in the ſtomach and have found upon diſſection, by a yellow ſpot after death both in the Stomach and Guts. This is the cauſe that the choller ſtaies ſo long and ſo faſt, and brings ſuch laſting pains, that return, when they are abated and they are worſe, when the choller is worſe, and is ſo hot and ſo much that it cauſeth Eryſipelas. Hence come grievous accidents, becauſe the Guts are very ſenſible, being Nervous, and the other Nerves ſuffer therewith, eſpecially when the choler gets to the Backbone and Marrow, where the Guts grow to it by the Meſenterie (as *Fernelius* ſaith he found it alſo Convulſions and Palſies, that may come from Choler and evil Humors in the Guts obſtructed. From whence, as we may gather, that Choler is the cauſe, ſo may we conclude it from other ſigns of choler in the Urin and the like. And this Choler ſticking faſt to the Guts, cannot ſo ſoon get down, as that which is there from obſtruction, and cauſeth a looſneſs, as it doth when it gets into the lower parts. Therefore in this caſe, and in the former from obſtruction, though it come from Choler, the Body is not open, as in other Diſeaſes, but bound.

A burning from choler in the Guts, cauſeth the Iliack paſſion.

This Choler ſomtimes coming from the Gall, as it may offend the ſubſtance of the Stomach, as I ſhewtd, ſo it may alſo offend the neighbor Guts, to which it is naturally carried. It comes often from evil chyle or two much juyce, and is mixed with the blood in the Meſeraicks, being not ſufficiently purged in the Gall, by reaſon of the great quantity and obſtructions: when it is carried with the blood to the Guts, through the Meſeraicks and Guts into the ſubſtance of them, as an Eryſipelas. This being gathered and retained in the Meſeraicks, cauſeth divers diſeaſes, and eſpecially feavers (as we ſhewed) and being ſent by nature to the Guts, except it be carried away by a Looſneſs or Diarrhæa through the mouths of the Veſſels (which is uſual) or by the bleeding of the Hæmorrhoids, cauſeth great pains by infecting of the Guts. Theſe pains are joyned with other Diſeaſes, when the Choler is in the Veins; as Iliake paſſions and other Diſeaſes of Choler and Feavers; as I ſhewed, in intermitting Feavers.

The Bladder lying in the lower part of the Belly before, cauſeth pain there, eſpecially when it is ful and ſtretched forth. We ſhall ſpeak of the Diſeaſes of the Neck of the bladder elſewhere, For they cauſe pain in piſſing. The Diſeaſes that cauſe pain in the Bladder, are either diſtention that is ſtretching or Inflammation of the ſame.

The cauſe of the pain of the Belly, about the Bladder, is from the Bladder.

The Urin is the chief cauſe of ſtretching of the Bladder, which when it is in great quantity retained, cauſeth a pain in the lower part of the Belly, with a ſwelling and ſtoppage of Urin, of which we ſpeak in ſuppreſſion of Urin. This cannot come from wind, becauſe it cannot get into the Bladder, though it may be bred there by the crudity of Urin long retained and cauſe a greater ſtretching. This Wind and Urin is ſeldom ſeperated, for the frothing of Urin, when it is rendered or made, comes rather from the external Air, then any internal wind. This ſtretching cannot be from the ſtone, becauſe it cannot grow ſo big, neither doth a ſtone cauſe pain in the Bladder, till it gets into the Neck thereof. And then becauſe it hindereth piſſing, we ſhall ſpeak thereof in the Chapter of painfull piſſing.

The cauſe of the deſtending pain of the Bladder is the ſtretching thereof.

If the Bladder be inflamed in the ſubſtance of it, it cauſeth a pain in the Privities, with redneſs and tumor, alſo when the Bladder is wrapped in the Caule, and the tumor is greater, when the Excrements and Urin want paſſage. This Inflammation ſomtimes turns to an Impoſthume, and then for the time, the pain is yet greater, and when that is broken there is an Ulcer, and painful piſſing of matter. Alſo this Inflammation may leave a Scirrhus, ſuch a one as I ſaw growing very large, in the Bladder of a Cow, that was broken by accident, and cured again. Alſo this Inflammation, if it be not well cured, turns to a Gangræne. And I once ſaw a Bladder black within, when I opened a dead Fryar.

The Inflammation of the Bladder, is the cauſe of the burning pain thereof.

Some external accident, may cauſe this Inflammation of the Bladder, or pain from the ſtone, or an Ulcer to which Diſeaſes an Inflammation is ſomtimes joyned of the Bladder and Kidneys alſo, when the body is Plethorick and fit to receive it.

Becauſe the Womb is in the ſame lower part of the Belly, and lyeth under the Bladder, and the bottome thereof, eſpecially being ſtretched, reacheth into the Belly, the pains are alike in both. And becauſe the Ligaments of the Womb, by which it hangeth, reach to the Hips and Loyns, they are pained alſo; and of them we ſhall here ſpeak, but we have treated of the pains of the Neck of the Womb in its place. But all the pains of the Womb (in the bottom or Body or Ligaments thereof, ſome whereof reach to the Neck, as in the Bladder) come from ſtretching or from Inflammation.

The cauſe of pain in the Womb and the Veſſels thereof.

The ſtretching pain in the bottom of the womb, comes chiefly from outward Cold taken in after Childbearing, while the inward Orifice of the womb is large and open, for want of keeping warm, by which means the Air gets in, and fills and ſtretcheth and weakneth it, and by cooling cauſeth pain

The ſtretching of the bottom of the womb, cauſeth the pain after Childbearing.

pain. This is called the pain after Child-bearing. At another time this pain cannot come from taking in of Air, becauſe before Conception, the womb is ſmal and thick, and the cavity which is to be filled with Seed in time of Conception is very ſtraight, and after conception alſo, when it grows bigger with the Child, the inward Orifice is cloſe ſhut, and the womb full. Nor from wind bred in the Body, becauſe if it get into the ſtraight cavity of the womb or breed there, it cannot ſo ſtretch the womb to cauſe pain, becauſe it is very thick. Neither can water cauſe pain for the ſame reaſons. Though ſome ſuppoſe that the womb may be like a bladder inlarged, and have an Inflammation from wind and water, as they call it. For though the womb be larger in ſome women by Nature, or by much moiſture which looſneth it, yet it cannot be ſo filled and ſtretched that pain may follow. And if the repletion be great, there will be rather a weight and heavineſs then a pain, as it is when the Child is great, but the weight of the Child by ſtretching the Ligaments may cauſe a kind of pain, but it is in the Groins, and not in the Loins as we ſhewed. So then there is no other ſtretching pain of the womb but what is after Child-bearing, cauſed either from the ſubſtance of it, or from the Membranes and Veſſels, by which it hangeth, but from Humors retained, and then it may reach to the ſides (as we ſhewed in Hypochondriack pains) as when the courſes are ſtopped, or diſordered or foul. This foulneſs comes from foul blood and humors in women of evil habit, that want their Courſes; which do ſo fill, ſtretch or provoke the part they that cauſe pain, eſpecially when they are hot, and ſend up Vapors, and produce other Accidents, eſpecially the ſuffocation of the womb, as we there ſhewed.

The ſtretching of the veſſels, is the uſual cauſe of pain in the womb.

The Inflammation of the bottom of the womb, cauſeth the burning pain thereof.

The Inflammation of the bottom of the womb and neck alſo, cauſeth pain with divers accidents, as we ſhewed: This as that of the Bladder may leave an Impoſthume, Ulcer, Scirrhus or Gangræn. And the cauſe external may be a Stroak or Bruiſe, or internal, abundance of blood about the womb, upon ſtoppage of the Terms, when they flow not into the neck, but into the ſubſtance of the womb, and cauſe Inflammation according to the diverſity of the blood. And if the quality thereof be malignant it may cauſe a Cancer, which ſhall be mentioned in Diſeaſes of the Neck of the Womb, becauſe it is commonly in that part. The womb is chiefly inflamed from difficulty of Deliverance, great pain and ſtraining, either while the child or after birth remain, or after they are gone, which cauſeth a Feaver. And this Inflammation is rather the cauſe of many womens death, then the retention of the after-burden, and the pain they have, comes from the Inflammation as well as from the Air that gets into it, and is then greater and more dangerous.

The Cancer of the womb.

The Inflammation of the womb after Child-bearing cauſeth the ſecond ſort of pain after child-bearing.

The Cure.

The Cure is different according to the part affected, and the variety of Cauſes, as the Bowels are ſtretched, cooled or inflamed by Blood or Choler. And is to be applied to the ſtretching or Inflammation of the bladder or womb.

The ſtretching oft he Bowels from what cauſe ſoever, if it cauſe the Cœliack and Iliack pain, muſt be cured the ſame way, as alſo when it comes of Cold. And if it come from the abundance of excrements and wind, with pain and rumbling; if they come forth as they uſe to do, by Faſting, Belching or a Flux, you muſt take the ſame courſe as in Diarrhæa.

The cure of the Colick & pain of the womb & Convolvulus, from ſtretching or cold.

If theſe Excrements cauſe a ſtoppage in the thick Guts, and ſo by ſtretching the Colick, it is eaſier cured then in the ſmall Guts, eſpecially when they are evil, and increaſe continually, for then Iliack paſſion which is ſo deadly, and hard to be cured, will return and cauſe Convulſions and Palſies, and the like, which though the pain ceaſe, deſtroy the Patient. And if the ſtoppage be ſo hard that it cannot be opened, but the thin Guts are ſo full of Excrements, that they are ſent back into the Duodenum, then follows the deadly convolvulus, or Spewing up of Excrements; or Iliack, or knots or tanglings of the Guts.

In all which caſes (except when the Guts are knotted, or an Iliack pain from a Rupture, for then you muſt rather look to the putting up the Gut, then to the Iliack Paſſion) the cure is by ſoftning the Excrements, cleanſing and bringing them forth, by looſning and expelling wind out of the belly, and by abating of the pain. And if Humors be cholerick, ſharp or evil, they muſt be purged and allayed, not with cold and ſharp, but with temperate Medicines: And the pain chiefly reſpected, with Narcoticks to prevent convulſions, and the like. If the pain come from glaſſie Flegm that cools the Guts, it muſt be purged and cut, and the cooled parts warmed; which will cure a ſimple Diſtemper. Theſe things are done by the following means.

Clyſters are the beſt in this caſe, becauſe they go ſtraight to the Guts, for if the cauſe be in the thick guts, they go to them; and if in the thin, their vertue reacheth thither by continuation and vicinity. They are made of Emollients to ſupple the hard Excrements, which cauſe pain by binding and holding in of the wind, and purgers that cleanſe ſtrongly, when there is great ſtoppage by glaſſie Flegm in the Guts; alſo of warm things that expel wind, and comfort the Guts. And when there is great pain, they are made of Anodynes, and at length of Narcoticks. The quantity of theſe Clyſters muſt be from a pint to a pint and half, beginning with leſs at the firſt, while the Guts are ſmall, and ſo enlarging by degrees the Examples, whereof are theſe.

An emollient Clyſter of a pint of Sallet-oyl and a little Butter or Greaſe, may preſently be made.

Or this which provoketh a little. Take *fat Broath of Tripes, or the like*, and boyl therein *Caraway ſeede, Bay or Juniper-berries a pugil, Butter or Oyl three ounces, Honey two ounces*, with a little *Salt* make a Clyſter.

Or thus; Take *Mallows, Marſh-mallow roots and all, Spinage, Arach and Brank-urſine, each a handful; Lilly-roots two ounces, Chamomil and Melilot flowers, each a pugil*; boyl them in *fat Broath*, add *Butter or Oyl three ounces, Hogs greaſe an ounce, Honey two ounces, and a little Salt.*

A ſtronger to expel wind alſo. Take *Mallows, red Coleworts, Mercury, Beets, Pellitory, each two handfuls; Penny-royal or Organ a handful and half, Beet roots two ounces, Liquoriſh an ounce, Chamomil and Elder flowers, each a pugil; Bran a pugil, Fœnugreek and Linſeed, each an ounce; Caraway ſeeds half an ounce, Cummin ſeeds two drams, Figs ten*; boyl them in *Wine and Water*, ſtrain and add

Honey

Honey and brown Sugar, each an ounce; juyce of Mercury or Beets an ounce and half, Oyl of Nuts three ounces, Turpentine diſſolved with the Yolk of an Eg half an ounce, with *a little Salt* make a Clyſter.

It is ſtronger in *Cock broath, with Senna and Carthamus ſeeds, each ſix drams; Polypody two ounces, or Mechoacan, or Briony, or Sowbread roots ſix drams, with Cumminſeed two drams, an ounce of Hiera picra, or Diacatholicon, or Benedicta, or Diaphœnicon, Indum majus, Eleſcoph half an ounce, or an ounce of the juyce of Sowbread.*

When the Obſtruction or Binding is great, or when the Flegm is glaſſie and tough, ſtronger may be uſed, but not otherwiſe, leaſt they increaſe pain; as *three drams of Turbith or Agarick*, and ſomtimes *half a dram of Coloquintida* in a clout, warily, leaſt it burn the Guts, *or three drams of Hiera Colocynthidos, Logadij, Rufi Hermetis.*

The beſt cleanſing Clyſters againſt Flegm, are made of Turpentine two ounces, with the Yolk of an Egg, Honey and Wine, or Oyl alone.

Or thus againſt wind: Take *Boys urin ſix ounces, juyce of Pellitory four ounces, thick boyled Wine three ounces, Oyl of Rue two ounces,* with *two Yolks of Eggs and a little Salt,* make a Clyſter.

Some make Clyſters of Spaw-waters to cleanſe.

Strong Wine healeth, expels wind and pain, as Hippocras and Claret a pint. If you fear the Heat, you may allay it. And if you will make it hotter, add two ounces of the Spirit of Wine.

Or thus to cleanſe and abate pain. Take *three quarters of a pint of the beſt Wine, Oyl of Chamomil, Dill or Butter four ounces, Honey two ounces.* This Clyſter will ſet any purging Medicine a working; as we ſhewed in *Cardialgia.*

Or give true Hydromel, with Wine boyled and Sugar, or Mead, which will heat leſs, and cleanſe more.

Or make a Clyſter of Onion broath, and Oyl.

Or this hot Clyſter to expel wind. Take *Lilly and Marſh-mallow roots, each two ounces; Elicampane half an ounce, Bettony, Southernwood, Wormwood, Calaminta, Horehound, Rue, Organ, Penny-royal, Balm and Hedg-muſtard three handfuls, Chamomil, Melilot, Roſemary, Lavender, Stœchas flowers, each two drams, Fœnugreek and Linſeed, each an ounce;* boyl them in *Wine and Water*, add *Honey of Roſemary two ounces, Oyl of Lillies and Sallet-oyl, each an ounce an half; Hiera picra and Electuary of Bay-berries, each three drams;* with *Salt* make a Clyſter.

In glaſſie Flegm it will heat more, if you add *Roots of Pellitory, Calamus or Orris ſix drams, Centaury flowers a pugil, Gith ſeeds two drams, and an ounce of Honey of Squills, with two ounces of Wine, and a dram of Caſtor* which is very comfortable to the Guts, *or half a dram of Euphorbium, or Galbanum, or Opopanax,* but *Muſk, Ambergreaſe or Civet,* will not change the ſtink of the Excrements, and therefore are ſuperfluous.

A ſpecial Clyſter againſt wind. Take *Organ, Rue, each a handful; tops of Roſemary, Stœchas, Lavender, each a pugil; Chamomil flowers two pugils, Bay and Juniperberries, each an ounce; Caraway and Cummin ſeed, each half an ounce; Fennel ſeed two drams, Ameos, Parſley, Seſely, Carot or Rue ſeed, each a dram;* boyl them in *wine and water*, add *three drams of the Electuary of bay-berries, Hiera picra two drams, Honey of Roſemary an ounce, Oyl of Dill and Nuts, each an ounce and half;* with *Salt*, make a Clyſter.

A pint of Oyl of Rue, with two ounces of Sack is good.

An Anodyne mollifying Clyſter: Take *roots of Lillies and Marſh-mallows, each two ounces; Mallow, Bettony, each a handful; Chamomil and Melilot flowers, each a pugil; Fœnugreek and Lineſeed, each an ounce; Crums of Bread four ounces, Caraway ſeed two drams, Aniſeed a dram,* boyl them in *Tripe broath or Milk*, add *Butter two ounces, Oyl of Dill an ounce and half, Gooſe greaſe an ounce,* with *two Yolks of Eggs* make a Clyſter. Some ſay that Wolfes dung is good in Clyſters *ſix drams.*

Or Oyl of Olives, Walnuts, Acorns, Almonds, Linſeed, Jeſamnie, or of Chamomil or Dill, are good Anodynes in a good quantity, with the Mucilage of Fœnugreek and Linſeed two ounces, two Eggs, and half a dram of Saffron.

To cleanſe and abate pain: Take *Honey, Sugar, boyled Wine two or three ounces* with *Oyl.*

Or thus: Take *Oyl of Chamomil, or Dill and Barley-cream, each half a pint; Sugar or Honey, or boyled Wine two ounces.*

Narcoticks are given ſafeſt by Clyſters; as *Henbane or Mandrake leaves, or two drams of Philonium Romanum, or Requies* Galeni, *or Treacle and Mithridate, each half an ounce.* And as you give Narcoticks at the mouth with Purgers, ſo you may add Philonium here to benedicta, and other purging Electuaries.

Six grains of Opium diſſolved in Wine or Aqua vitæ, is excellent in a Clyſter to take away pain.

Or *half a ſcruple of Opium, half a dram of Caſtor, and a pint of Oyl of Rue or Dill.*

Suppoſitories are good to provoke, alter and abate pain. Some give them to expel wind, which they can hardly do.

The common are of Honey and Salt, adding Hiera, Mouſe-dung, Coloquintida.

They ſay that a Snakes skin rub'd upon a braſs Baſon and burnt, is good to be put into the Fundament againſt the colick.

And to anoynt inwardly, with Juyce of Lettice and Opium; or with *an ounce of Oyl of Dill, a ſcruple and half Caſtor, and a ſcruple of Opium,* put in with wool, or any Suppoſitory of *Opium.*

Purgers are uſeful, when Clyſters are refuſed to remove the cauſe, and open the Belly, when the cauſe is high, but beware of ſtrong, which will increaſe pain; they are good afore clyſters, to draw the Matter down, as I do in colicks.

Purging Wines are beſt for the Guts, when clyſters are refuſed, for they fetch the Excrements out of ſecret places, better then clyſters. And I had rather uſe them for the Wines ſake, that correcteth the Purgers, that they offend not the Stomach and Guts: we give Examples of them in the pain of the Heart.

This is beſt for the Guts: Take *Graſs roots and Fennel roots, each ſix drams; Roots of Calamus, Elicampane, Maſterwort, each half an ounce; dryed Citron peels and wormwood, each three drams; Marjoram, Calaminta, Penny-royal, Groundpine, Roſemary flowers, red Roſes, Chamomil flowers, each two drams; Bay-berries three drams, Caraway and Smallage ſeed, each two drams; Fennel ſeed three drams, Senna two ounces, Agarick half an ounce, Turbith two drams* (theſe are corrected by the wine) *bruiſe and* ſlice them for *four pints of wine or more,* give a Draught when the Belly is bound, of the Infuſion or gentle Decoction thereof.

This wine is good againſt Choler or ſharp Humors. Take *Succory roots an ounce, wormwood half an ounce, Violets and bugloſs flowers, each a pugil; Aniſeeds and Violet-ſeeds, each two drams; Polypody an ounce and half, Senna an ounce, Rhubarb two drams, Spike half a dram:* Uſe it as the former.

Or make a Decoction or Syrup of the ſame.

The Broath of an old Cock with coleworts looſneth the Belly, with a little caraway or Fennel ſeed againſt the wind.

Or thus: Take *an old Cock* after fighting, unbowel and ſtuff him with *Mints, Marjoram, Time, Savory, each two handfuls*; *Chamomil and Roſemary flowers a pugil, Annis, Fennel and Caraway ſeeds, each half an ounce*; *Galangal or Calamus three drams, Polypody, Mock-ſaffron, Senna, each an ounce*; *Tarter half an ounce, with Sal Gem or common Salt*, boyl them in water to Halfes, as I ſhewed in Aſthma, drink a good draught.

Or give *Turpentine half an ounce*, as in the ſtone, with *Hiera Benedicta*, or the like.

Or Caſſia with Annis, Fennel or Caraway ſeeds, to looſen.

Alſo theſe Electuaries, Catholicon, Diaphænicon, Indum, Majus, Eleſcoph, Hiera picra, or of eight or of fifteen things, Benedicta or the like, with a Decoction of hot plants, with ſpiced wine.

Or gentle Pills of Hiera, of eight things, of Spices with half a ſcruple of Caſtor or ſtronger, if the binding be great, bewaring of coloquintida or Agarick or Turbith for they twitch the Guts, when given in ſubſtance.

Two ſcruples or three of Tartar cleanſeth flegm, or cream of Tartar often waſhed and dryed again, as I uſe it, in the purging Decoctions of Senna, Bryony roots, black Hellebor, or the like.

Or that purging Pouder for the ſtone.

A Plaſter of Sea ſpunge, ſeeds hulled and beaten with Wax, and laid to the Belly looſneth it.

To prevent; the Humors muſt be prepared before purging and to cure alſo.

They muſt be ſuch as cut flegm, when it is cold and tough, as that with Glaſſes, as we ſhewed in Heart-ach, by Syrups, Waters, Decoctions.

Somtimes a Vomit prevents the Colick, and is good at the firſt, and in the Iliake, Choler-Vomiting, muſt not be ſtopp'd.

Oyl of Palma Chriſti drunk, doth the ſame and takes away pain.

Let the Dyet be thin and ſparing in the fit and before, bewaring of crude, windy, hard or binding meat, and in the fit when the cauſe is cold, give hot cutting and diſcuſſing Spices; and ſtrong wine without water or at leaſt Spiced water with Cinnamon and Pepper, as in Cardialgia and weakneſs of Stomach. Theſe hot Spices are not good, when there is Cholerick Excrements. And wine muſt be given moderately, becauſe it hurts the Nerves, and a Convulſion is feared; nor may ſower things be allowed, though they temper choler, becauſe they cauſe pain. If the Excrements are ſtill hard, give moiſt fat Meats and Oyls and Butter.

When you fear the *Convolvulus*, give brown bread boyled and the water caſt off, and made into a Pudding with Hogs greaſe or Butter.

Or a Lark roaſted and eaten with Cock broath. Or the broath of an old Cock or of Snails.

Or Decoctions of Calamus graſs, Elder, Calamints, Rue, Chamomil, Dill, Melilot or Rocket flowers, in Water or Cock broath, with Wine, Honey or Sugar. Some commend the Decoction of Southernwood, others Pellitory in Wine with ſugar or Wormwood with Cummin ſeeds or Horſe-radiſh, Wine and Sugar, and Seeds and Spices, as Calamus, Galangal, Nutmeg, Cloves infuſed or boyled gently in Wine with a little Saffron and Sugar, or thoſe for a weak Stomach mentioned.

Alſo the juyce of Sulphurwort with an Egg.

Or blood of an Eele.

Or water wherein a Dears Pizle was waſhed.

Or four ounces of diſtil'd water of Herb Trinity, Dogs tongue, Elder or Broom flowers or flowers of Chamomil, Bean ſhales, or of Tizil, or of Cow dung, or a ſpoonful or two of Cinnamon water.

A Compound water: Take *Ginger half a pound, Cinnamon, Cloves, Nutmeg, Zedoary, Galangal, each two ounces*; *Maſtick half an ounce*, bruiſe and infuſe them in *Wine*, diſtil them and give two or three ſpoonfuls againſt wind, add *two drams of Mints, Fennel and Annyſeed, each half an ounce*.

The Compound Aqua vitæ mentioned in Heart-ach, from a cold cauſe, is good.

Oyls do good alſo by ſlipperyneſs and mollifying the Excrements, as Sallet Oyl well waſhed, if it be old and rancid ſix ounces to aſſwage pain, or Oyl of ſweet Almonds, Nuts or Lineſeed taken alone in a good quantity, or with broath, to which Oyls you may add *Sugar and Sack the third part, or two drams of Aqua vitæ*, or other diſtilled waters.

An excellent Remedy: Take *Oyl of ſweet Almonds, or Salet Oyl* for Poor people *four ounces, of the beſt Sack an ounce and an half, ſyrup of Poppy half an ounce*.

Oyl of bitter Almonds, and of Peach kernels are good againſt the Colick and Iliake, as well againſt the Stone to be drunk, alſo Oyl of Bayes, with ſome drops of the Chymical Oyls of Cinnamon, Cloves or Mace.

Some commend the Oyl of Turpentine or Vitriol, above the reſt.

And ſix drops of the Sky colour'd Oyl of chamomil flowers newly drawn, which is better, when made of Roman chamomil.

There are alſo good pouders mentioned in cardialgia from a cold cauſe, or from wind, or weakneſs of the Stomach, which are good in this Diſeaſe.

Dioſcorides and others uſe a dram of theſe following in Pouder with wine, broath or otherwiſe, as of calamus, Orris, Maſterwort, Sallowwort, Squils, with Dittany, Birthwort, Eryngus, Piony, wild parſley, Roſmary roots, wild Mints, garden Mints, wild Bettony, Groundpine, herb trenity, wild Laurel, Sea purſlane, Spiderwort, cudweed, Wintercreſſes, Fleabane, Roſemary, pennyroyal, Laurel; alſo of the flowers of petty Mulline, alſo pouder of the ſeeds of Ameos, parſley, caraway, cummin, carrots, Annis, Fennel, Seſeli, Lovage, Fennel-Gyant, Baſil, water Mints, coleworts, Momordica, Almonds, peach kernels, Bay and Juniper berries and the pouders of all Spices and Saffron.

Alſo pouder of Orange peels, black Ivy ſeed and ripe Roſe ſeeds and Sagapenum, or Wax given in broath, which is the experiment of *Dioſcorides* and others. Alſo pouder of Amber and Jet.

Alſo the ſtomach of a hedg-Hog or Hens Gizard, or Cocks for men, the inward Skin, Wolfs guts, Harts Pizle, Colt ſtones, and young Harts-horn, bones of Hogs feet burnt, white Hen dung, white Dogs dung, or Wolfs dung in pouder, with a little Cinnamon or Angelica root for the ſcent.

There are alſo Compound Pouders, beſides thoſe in Cardialgia or Heart-ach, made of the things mentioned, with a little Pepper, Cummin ſeed. and Myrrh.

Alſo the Roots and Herbs mentioned are good in Conſerves and Candies.

Alſo Horſe radiſh candyed and given with Mulberry leaves, and the ſtones of Medlars.

Or two drams of the Electuary of Bayberries againſt wind, its made of Rue, Mints, Organ, Bayberries, Ameos, Cumen, Lovage, Caraway, Carot ſeeds, bitter Almonds, Pepper long and black, Caſtor, Sagapenum, Opoponax and Honey.

But

But the Caſtor and Rue, make that unpleaſant, therefore give this: Take *Bayberries an ounce, Mints, Marjoram, Roſemary tops, each two drams; Rue, Organ, each a dram and an half; Fennel, Caraway, Ameos, Lovage ſeed, each a dram; Cummin ſeed half a dram, Pepper and Ginger, each a ſcruple; Sagapenum* diſſolved in *Wine a dram, Caſtor half a dram, with a pound of Honey or Sugar,* make an Electuary.

Alſo *Diacuminum, Dianiſum, Diagalanga, Diacalaminthes, Diatrionpipereon,* and the reſt mentioned in Heart-ach, are good here in Electuaries or Lozenges.

In great pain of the Guts, we give Narcoticks, that preſently give eaſe, when all things elſe fail, and we repeate them as the pain returns. Theſe ingeniouſly uſed do no hurt but good, by abating pain, cauſing ſleep, and preſerving ſtrength, by which the Phyſitian is credited, moreover by provoking ſweat (as I ſhewed) they take away much of the cauſe of the Diſeaſe.

Alſo we give Antidotes called Opiates for the ſame, which do good in two reſpects, when the Humor is evil and venemous, as Treacle and Mithridate and Triphera Magna, and the like; the quantity of two drams, that the Opium may work: or we give a dram with a grain or two of Opium.

The Antidote of *Philo* the Phyſitian of *Tarſus* mentioned by *Galen*, is the beſt, made of Opium, Henbane-ſeeds, with hot things, and correcters of Opium, as Caſtor (inſtead whereof *Galen* uſeth Euphorbium) alſo with Muſk, Pepper, Pellitory root, Spike, Saffron and Honey. To this compoſition, ſome add other hot things, to expel Wind and leave out the Muſk; as Wood-caſſia, Cinnamon, Zedoary, Coſtus, Doronicum, Smallage, Fennel, Carot and Aliſander ſeed; this is called the great *Roman Philonium*. The *Arabians* as *Hamech* and *Rhaſis*, add other things to expel wind, as Rue, Mints, Bay-berries, Ameos ſeed, Gith and cummin ſeed, and Mandraks. We uſe this Anodine of *Philo* when there is great pain to be allayed, but *Philonium Romanum*, or of *Rhaſis* when there is need of more heat to diſcuſs wind; we give from two ſcruples to a dram, as we have the ſtrength thereof by Experience. There is another Antidote to allay pain, called *Requies*. Theſe work better with wine taken with them, or preſently after them, which is Narcotick (as I ſhewed) and we mix them with other Cordials.

Many other Narcoticks are made with Opium, ſome are unpleaſant with caſtor. The chymiſts commend their Laudanum: In making of which new, (becauſe opium hurts not by cold, as ſome without reaſon ſuppoſe, but by a hidden quality, and by the great quantity by which the Brain and Nerves are ſtupefied) you muſt ſee that it be diligently mixed through the whole body of the Medicine, that one doſe have not more Opium in it then another. And make tryal at firſt with a ſmall doſe. In this you muſt be more accurate then in the correction, by hot things (except the ſtomach be cold or windy) for if Opium ſtupefie by cold, thoſe things will hinder its operation. Therefore, if leaving out thoſe hot things, you only add to Opium thoſe that correct its evil ſcent and bitter taſt, and ſo give it in a ſmall quantity, it is ſafe, as I have often experienced with good ſucceſs. How this may be done, I ſhall give you ſome preſidents.

Narcotick Pills inſtead of Philonimm: Take *Opium a ſcruple, white Henbane ſeeds two ſcruples, Pepper two drams, Caſtor half a dram, Saffron a ſcruple,* diſſolve the *Opium in Sack*, and make a Maſs; dry it, and then pouder it, and make a Maſs of it, with *ſyrup of Poppies*. Firſt give *half a ſcruple*, and try it, then advance if you think fit, or decline in quantity.

An opiate Electuary for the Heart and Stomach alſo. Take *ſpecies Diambræ, or Diamoſchi, or Aromatici moſchati two drams, Cinnamon a dram and half, red Sanders half a dram, Sugar four ounces, Opium diſſolved in Wine two drams, Oyl of Cloves, or of Cinnamon ſome drops,* with *ſyrup of Quinces or Citrons* make an Electuary: Give *half a dram* at firſt to try it.

You may make Troches of the ſame with Gum traganth, and give the ſame quantity.

Or thus more pleaſant: Take *Opium two drams*, infuſe it in *three ounces of Wine*, after it is diſſolved and often ſtirred, and ſettled again, pour off the clear Liquor, and filter it, then add *Sugar two ounces, Cinnamon two drams, Muſk half a ſcruple*, with *Gum Traganth* make *Troches*: Give *half a ſcruple* for a tryal.

Many other Narcoticks are good here alſo, as Syrup of Poppies, only we here ſpeak of ſuch as properly help the Guts.

We often mix Narcoticks with purging Medicines in this Diſeaſe, as in the Stone and Heart-ach, to looſen the Belly, and take away pain alſo, becauſe one doth not hinder the operation of the other; as I have often experienced. Nor doth Treacle, (though *Galen* think otherwiſe) ſtop the purging of Medicines. Therefore *Rhaſis* when he deſired to purge and take away pain together, mixed Diagredium with his Philonium.

Dioſcorides bids the Belly be waſhed with Sea-water in fits of the Colick; or with any ſalt water.

Or apply Aqua vitæ with a clout to the Belly.

Or Oyl of chamomil, Dill or Nard, with a Felt.

Or ſit in Oyl, or Oyl and Milk.

Or thus; Take *warm Oyl and Butter half a pound, Turpentine diſſolved with two Yolks of Eggs two ounces, Saffron a dram*, with *Stuphes or Clouts*, apply it to the Belly.

Or in a Decoction of Anodynes and Expellers of wind, as we ſhewed in the Stone. As of Mallows, Marſh-mallows, Penny-royal, Organ, Calamints, Mints, Wormwood, Southernwood, Rue, Sage, Bayes, Chamomil, Melilot flowers, Dill, Elder, Roſemary, Stœchas, Lavender flowers, Fœnugreek, Linſeed, caraway, cummin, Fennel ſeed, Bay and Juniper-berries, more or leſs; with Orris root, citron peels, Mugwort and Rue ſeed, Gith, Seſeli, Smallage, with cloves, Schænanth, Spike, with Sulphur vivum and Salt-peter. Boyl all in water and wine, with a little Vinegar to make it pierce, or Oyl to allay pain. Sometimes boyl it in water and oyl, or in Bath or Spaw-waters, if you have them.

Anoynt with Anodyne, hot Oyls, as of Olives, Nuts, Almonds, Bayes, chamomil, Dill, Rue, Spike, Lillies, Wall flowers, Elicampane; or with Oyl of Lillies of the Vallies, which is chiefly provided againſt pains in children, adding ſomtimes theſe hotter, as oyl of caſtor, Euphorbium, Pepper, Petroleum, Spike.

Or anoynt with the Greaſe of Mountain or Field Mice.

Or thus; Take *Oyl of Chamomil and Rue, each an ounce; Oyl of Spike half a dram, Galbanum diſſolved in Aqua vitæ ſix drams*: make an Oyntment.

Or thus: Take *Oyl of Chamomil and Dill, each an ounce and half; Narde-oyl and of Rue, each an ounce; Oyl of Spike half a dram, Sack or juyce of Mints two ounces, Hens greaſe and Butter, each an ounce; Pouder of Galangal two drams, Cloves, Nutmeg, each a dram; Spike, Gith ſeed, each half a dram*; with *wax* make an *Oyntment*. You may add other Spices, alſo Turpentine and Maſtich, or apply Species to the ſtomach, as Diagalanga.

Or

Or, Take *Oyl of Nutmeg or Mace by expreſſion*, and mix it with *Oyl of Cloves*, or the like. Or for the rich with *Civet*, *Muſk*, *Ambergreaſe*, *or the Algalea of* Hollerius *diſſolved in Oyl de Been*, *or of ſweet Almonds*.

Or the Oyntment of Agrippa or Dialthæa.

Alſo the cawle of a Kid or Lamb or Calf or Heifer, broyled till it melt, and applied to the Belly hot; this is excellent for children: It is better fryed with Oyl of Rue, or the like, and ſprinkled with cummin ſeed or cloves.

Some apply Leaven to the Belly.

Or Goats or Ox dung ſprinked with wine, cummin, Bay-berries, and a little Honey.

Or an Emplaſter of Soap, Butter, or Oyl and Salt.

Or the Plaſter of Bay-berries made of Frankincenſe, Maſtich, Myrrh, Bay berries, cypreſs berries, coſtus and Honey.

Or Wheat flower, or Barley, or Orobus, Fœnugreek or Linſeed, with Greaſe, Butter, or Oyl and Honey.

Or Pellitory, Celandine, the great Mints, Rue bruiſed with Honey and Wine, or boyled; and oyl and meal added for a Pultis, with Cummin ſeed.

Or Juyce of Henbane or Tobacco mixed with meals mentioned, or the Herb bruiſed or fryed.

Or burnt Nuts ſhells, and all added to the former.

Or apply bags hot and dry, or wet with wine or Aqua vitæ. made of Milium parched, Bran and Salt, with Caraway ſeeds, Chamomil flowers, Bay leaves or barberries.

If from the great pain you fear Inflammation, open a Vein in full bodies, otherwiſe it is not good in this caſe, becauſe nothing can be taken out of the Meſeraiks thereby.

A great Cupping-glaſs that will compaſs the Navel, is good againſt wind, if applied with Heat to the belly, eſpecially if it be firſt laid in hot wine, or anoynted with juyce of Garlick.

And in other caſes, it is good to apply it a little below the pained part.

Wind alſo may be drawn out by a clyſter ſyringe, and a clyſter ſet on work by drawing it.

The Amulets are a Girdle to the naked belly, made of the guts of a wolf, or skin of a wolf girt with the hair next to the belly; or a Navel-ſtringe dryed and kept for this purpoſe.

Or apply a young wolves skin, or the dung of a wolf.

Or a Nut-ſhell fill'd with Quick-ſilver, and hang'd about the Neck to the belly, is good to prevent, or which is thought rare, the little bone of the outmoſt joynt of the right wing of an old Crow, killed in the time of his kawing.

Or Wolfes dung in a Nut-ſhell, and they ſay it is better when the ſtring that it is tyed about the Neck which is made of buff, or a thread of ſheeps wool, but this ſheep muſt be firſt kill'd by a wolf forſooth. There are many more which we wilfully omit.

The Cure of the Colick or Iliack from Inflamation, Burning or Eryſipelas.

If the Iliack or Colick come from Inflammation, Heat or Eryſipelas of the Guts, or be in the ſmall guts from blood, ſo that the Excrements are vomited up. It is deadly in old men, and in the thick Guts it is dangerous, when the Urin is ſtopt.

If the ſubſtance of the Guts be hot from choler or Eryſipelas, the Iliack is dangerous, and cauſeth convulſions ſooner, and worſe then when the choler is in the cavities of the Guts obſtructed. In theſe caſes when blood or choler is carried to the ſubſtance of the Guts, proceed thus.

Let blood in the Inflammation, eſpecially if there be a Feaver in the Arm, but if the Inflammation be below and the Urin ſtopped, bleed in the Foot. And in an Eryſipelas when the pain is great, a little bleeding can do no hurt.

A cooling Clyſter alſo is to be given in great Inflamations. As, Take *Marſh-mallow roots two ounces*, *Violets*, *Mallows*, *each a handful*; *Flowers of Chamomil half a pugil*, *water-lillies a pugil*, *Roſes a pugil*, *Linſeed and Fleabane ſeed*, *each two drams*; *cold Seeds half an ounce*, *Aniſeed two drams*, add *Cream and Butter an ounce and half*, *Goats greaſe an ounce*, *Oyl of Roſes at firſt*, *or Violets after*, *two ounces Oyl of ſweet Almonds* againſt the pain *an ounce*, *Honey of Roſes an ounce and half*, *Manna or Caſſia an ounce*. Some boyl *four Apples* therein, and in the Declination, they add *Oyl of Chamomil*, *Dill*, *Lillies*.

In choler thus: Take *of the Emollients*, *each a handful*; *Barley and Bran*, *each a pugil*; *Figs and Prunes*, *each ten*; *Chamomil and Melilot flowers*, *each a pugil*, *Linſeed and Fœnugreek ſeed*, *each half an ounce*; *Fleabane and Quince ſeeds*, *each two drams*; *Mallow ſeeds a dram*, boyl and add *Gooſe or Hens greaſe an ounce*, *Butter or Oyl an ounce and half*, *Oyl of Water-lillies and Violets*, *each an ounce*; *of Lillies half an ounce*, *Honey or Sugar of Violets an ounce and half*: make a Clyſter.

If you will have it purge, add *Polypody an ounce and half*, *or Senna half an ounce*, *the Electuary of the juyce of Roſes half an ounce*, *or Diacatholicon an ounce*.

In both caſes, uſe Aſtringents, as Plantane, Sumach, Roſes, when you fear an Ulcer which follows an Inflammation or Eryſipelas, the cure of this ulcer is mentioned in Dyſentery.

A Clyſter of the Broath of an old cock, with the emollient Herbs is good.

And of new Milk with Sugar, with the white of an Eg, and Mucilage of Fleabane an ounce.

Or of Milk, or an Emulſion of Almonds, or Barley-cream, with ſweet Butter, Sugar and Honey.

Or of Anodynes when the pain is great, ſuch as were mentioned, being temperately hot.

Give only gentle Looſners, if Clyſters may not be given; as Syrup of Violets, Roſes, the Decoction of Fruits, Raiſons, Prunes, Sebeſtens, Violets, with Rhubarb or Caſſia; and other Looſners not too hot.

Let the Diet be ſuch as in Inflammations internal, and in cholerick Diſeaſes, and give no Wine, for fear of a convulſion.

Let it be of things that properly help the Guts, which are not too hot; and Anodyne, and alſo Narcotick at laſt, mixed with Purgers.

In both caſes anoynt with Oyl of Violets, ſweet Almonds, chamomil, Dill, with Butter and Mucilage of Seeds of Fœnugreek and Line, Quinces, and with Fats.

Alſo uſe a ſweet Bath and a Fomentation made of the clyſter and Ingredients.

And a cataplaſm of the reſidents of the clyſters, and of Barley-meal, Lime and Fœnugreek ſeed, with Butter, Fats and Oyls.

It is good in the Iliack, to apply cupping-glaſſes with Scarification, in an Inflammation to the Groins.

And Amulets mentioned.

The cure of the Iliack from Knots comming in the Guts.

If from tumbling or leaping, or a Fall upon the Belly the Guts be knotted, and the Excrements ſtopt, ſo that they begin to be vomited up, you muſt cut open the belly by way of Longitude, where the pain or tumor is, and ſo skilfully place the the Guts in order again. This is the laſt and only Remedy.

If

The cure of the ſtretching pain of the Bladder and urin: and of pains after birth.

If ſtretching of the Bladder and Womb cauſe pain, we ſpake of that in the Bladder in the ſtoppage of Urin, if the ſtone cauſe it: we ſpake thereof in painful Piſſing.

If the Womb be ſtretched by wind or cold external after birth, let the woman be kept very warm, and bound with a rouler below.

If it continue, uſe Medicines for the womb that are hot.

But if the pains of the womb come from evil humors about the Veſſels and Ligaments, ſuch as go before, or follow the ſtoppage of the Terms; or ſuch as is after, they ceaſe by reaſon of age and foulneſs: Then firſt purge away the filth, and make the courſes come, as we ſhewed. The remedies are the ſame for pains in the womb as for the Guts, when we deſire to heat and expel wind. Theſe hot remedies that expel wind and are anodyne, are mentioned in the Pains of the Guts, and are proper for pains in the womb, when they come after Birth, from cold Air, and continue long, or be joyned with other cold Diſtempers of the Womb. And becauſe that the Womb and Guts are refreſhed with hot things the things that provoke the Courſes are to be allowed. Hence it is, that becauſe they obſerved that hot remedies agreed with both the Womb and Guts, they ſuppoſed that theſe pains of the womb came from Cold, but they agree with the womb for other cauſes mentioned, and the rather, when thoſe remedies which heat the Guts, and diſcuſs wind, and aſſwage pain, are mixed with things proper for the Womb, otherwiſe the Womb-medicines differ little from thoſe of the Bowels; but uſe them as followeth, and they will better help the pain of the womb. Hence it is that they called the Pains of the Guts, the Pains of the Womb in both Sexes, Men and Women: And gave things that they obſerved good for the Guts, for the Womb. Theſe remedies being hot, and expellers of wind, and Anodynes are chiefly good againſt pains of the Womb, when they come after Child-bearing, from cold Air, and are joyned with other Diſeaſes.

Bleeding will do little good, except in the Foot to provoke the Courſes, or for other Evacuations in another part.

The ſame Purges preſcribed for pains of the Guts, are good here. And becauſe Turbith doth trouble the Guts, and cauſe pain, it muſt be given for the Womb, from *a dram to four ſcruples in pouder*, with *a ſcruple of Ginger*, and *a little Cinnamon and Sugar, in Nutmeg-water.*

Alſo the Clyſters againſt Pains in the Guts are good here, whether emollient, pricking, heating or expellers of wind, becauſe they go to the ſtraight Gut, and there heat the Womb, which is joyned unto it, eſpecially if you add ſome Womb-herbs thereunto.

As thus: Take *Mugwort, Calaminta, Penny-royal, each a handful; Chamomil and Melilot flowers, and Dill-tops, each a pugil; Aniſeed ſix drams, Fenugreek and Linſeed half an ounce, Bran a pugil*, boyl and add *Honey of Roſemary an ounce, Oyl of Wall flowers three ounces, Benedicta laxativa and Hiera ſimplex, each half an ounce; red Sugar an ounce*, with *a little Salt* make a Clyſter.

Another; Take *Oyl of bitter Almonds ſix ounces, Gooſe greaſe two ounces, Turpentine diſſolved with two Yolks of Egs half an ounce*, give it in *Chicken broath.*

Mugwort-water is as good for the womb as the guts. And Oyl of bitter Almonds drunk in a good quantity. Some give Oyl of Scorpions. And the juyce of Horſe dung alone, or with Wine.

Decoctions to be drunk hot alone, or with Sugar, or Honey and Cinnamon.

The firſt: Take *Schœnanth two drams*, boyl it in *Mugwort-water*, give it hot at twice, or a *Decoction of Spike, or two drams of both*, for four times.

Another: Take *Motherwort half an ounce, Nutmeg two drams*, boyl them in *white Wine*: Give it at twice.

A third: Take *Juniper-berries two drams, Aniſe and Caraway ſeed, each a dram*; boyl it in *Wine*, give it.

A fourth: Take *Motherwort ſix drams, Roots of Devils bit half an ounce, Juniper-berries two drams, Aniſeed half an ounce, Caraway and Carot ſeed, each a dram; Nutmeg half an ounce, Schœnanth and Spike, each a dram*; boyl them in *Wine*, ſtrain it, ſweeten it, for three or four doſes.

The Infuſions mentioned for weak Stomachs, and others in Wine and Aqua vitæ, are here good.

And the things given in ſubſtance, as follow.

Mints, or great Balm called Greek Mints, is good in Broath or Drink, or Cakes, and Juniper-berries.

Alſo Pouder of the Roots of Maſterwort, Zedoary, Gentian *a dram*, or *a dram and half* with *Wine.*

Another Compound Pouder: Take *Roots of Motherwort half an ounce, of Maſterwort and Devils bit, each two drams; of white Dittany, Zedoary, Gentian, each a dram; Juniper-berries a dram and half, Aniſeed two drams, Carot, Ameos, Cummin ſeed, each a dram; Schœnanth two drams, Mace, Spike, each a dram; Ginger, Pepper, each half a dram, Saffron half a ſcruple*: make a Pouder, give *a dram in Wine*, or add *a double quantity of Sugar*, or make Lozenges, or an Electuary with *Honey.*

Diacyminum is good in pains of the Womb, and *Diamargaritum calidum*, when there is Weakneſs.

A pleaſant but good Pouder: Take *Cummin ſeed infuſed in Aqua vitæ and dryed a dram, Ameos and Ginger, each half a dram; Caſtor a ſcruple*, give *a dram with wine.*

Or a dram of the Jaws of a Trout poudered in Water of Chamomil, is excellent when the pain is before the Courſes.

Rondeletius ſaies that the Pouder of a dryed Secundine or After-birth, cureth the pains after Child-birth. And becauſe other Beaſts eat them, they have no ſuch pains; and he ſaith that he took it from his Bitch after ſhe had whelped, and ſhe preſently had pains.

Pills; Take *Opopanax, Sagapenum, each a dram; Caſtor, Gentian, each half a dram, Spike a ſcruple, Saffron half a ſcruple*, with *ſyrup of Mugwort* make Pills: Give *half a dram, or a dram.*

In great Pains, give Opiats as in the Colick, eſpecially *Triphera magna*, proper for the Womb, a dram and half with Wine, or Mugwort-water, with Mace a ſcruple, and Saffron half a ſcruple in pouder.

Or give Treacle, and a little Caſtor therewith.

Foment, make Baths for the Feet, proper for the Womb, with Decoctions of Herbs, Seeds and Spices; as chiefly for the Womb, Mugwort, Motherwort, Bayes, Balm, Nip, Coſtmary, Grapes, Savin, great Celandine, Swallow-wort roots, Wall-flowers, Miſſeto of the Oak, Carot ſeed, and the like.

Or bags mentioned in Pain of the Guts.

Anoynt alſo with Oyls, as that of Bayes, Wall flowers, Orris, Lillies, Water-lillies, Nard, Elder.

Or uſe Oyntments, with Oyls and Juyces of Herbs and Gums, or Plaiſters, as that of Bay-berries.

Or Cataplaſms of the Plants mentioned, and Lillies and Onyons boyled, mixing Oyls: or that of Cow dung, and Cummin ſeed, with Honey and Wine, or with Henbane, if the pain be great.

Uſe alſo Injections made of Decoctions and Juyces of Plants, but they reach but to the neck of the womb, and therefore cannot take away pain, nor Peſſaries, except it be by provoking the Terms.

But Fumes or Smoaks go into the Womb, therefore they are better then Injections, if they be taken into the Body, from a Decoction.

Alſo ſweet things of Musk and Ambergreaſe, put into the womb, refreſh it.

And rubbing of the Feet from the Thighs downwards: Cupping-glaſſes applied to the Hips cauſe diverſion.

The cure of the inflammation of the bladder and womb.

The Inflammations of the Womb and Bladder, if they cauſe pains in the lower part of the Belly, by reaſon of the joyning together of theſe parts are cured alike, as we ſhall here ſhew.

Inflammations are very dangerous in parts ſo exquiſitely ſenſible, eſpecially in the womb, when it is inflamed from hard travail, which cauſeth many Women to die in Child-bearing. Alſo if an Inflammation be in the Bladder from an Ulcer or Stone, it endangers the Patient. In both, if there be an Ulcer or Scirrhus cauſed by it, the caſe is, difficult, and if a Gangræne follow, death is at the door.

The cure of both Inflammations is as of others, by revelling or drawing by the matter when it firſt floweth to the parr, by repelling or driving back, and by abating the Heat, and preſently (after the Flux is ceaſed) by conſuming and diſcuſſing it. And if theſe Inflammations produce other Diſeaſes, as is uſual in the Neck of the Bladder and Womb; they ſhall be ſpoken of in their places: But you muſt do as followeth againſt the Inflammations.

Firſt open a Vein in the Arm to revel, and then in the Foot to derive, in both caſes, except there be any hinderance, as a Flux in Women in Travail, in or after a miſchance.

Uſe Scarification and Cupping to the Thighs and Buttocks. But in the Inflammation of the Womb, if the Terms flow too much, ſcarifie and cup the parts above.

Give Clyſters to open the Belly, cool, and abate pain; and they are good at the firſt. For being given in at the ſtraight Gut, they communicate their vertue to to the womb and bladder, to which they are cloſely ſeated.

They muſt be ſuch Clyſters as are mentioned for the Inflammation of the Kidneys and Guts: And ſuch as abate pain, being made of Milk, to which when we wil cool to ſome purpoſe, we add Juyce of Nightſhade, Violets, Mallows, and the like.

Apply outwardly Remedies before and behind, firſt Coolers and Repellers, but not ſtrong Aſtringents, as in other Inflammations, leaſt Hardneſs follow: Afterwards in the increaſe, we add Diſſolvers, which we uſe at the concluſion alone: And if it tend to Suppuration, we uſe Ripeners.

A cooling and ſomwhat repelling Cataplaſm. Take *Roots of Marſh-mallows, two ounces, Plantane, Shepheards-purſe, Teazel, Vine leaves, and Violet leaves two handfuls*; boyl and ſtamp them, add *Meal of Barley and Lentils three ounces, Fleabane ſeed half an ounce, Oyl of Roſes two ounces*, make a Cataplaſm.

Or eight ounces of the Decoction diſtilled Water or Juyce of the ſaid Plants, with an ounce and half of Vinegar, is a good Epithem for the ſame: And it will be ſtronger with half an ounce of Bole, or Sanguis Draconis.

An Oyntment: Take *Oyl of Violets an ounce and half, Oyl of Roſes, or Myrtles, each an ounce*; add *two ounces of juyce of Nightſhade, or of the Plants mentioned, and an ounce of Vinegar*, and boyl them *in the Oyls*, or make them up with *Turpentine*. You may add *Bole* alſo to make it more aſtringent.

A Cataplaſm to be uſed in the increaſe of the diſeaſe. Take *Marſh-mallow roots three ounces, Lilly roots an ounce, Houſleek, Plantane, Nightſhade and Endive two handfuls, Chamomil, Melilot flowers, each a pugil; Figs and Dates, each ſix pair*; boyl and ſtamp them, add *Bean flower, and of Fœnugreek and Linſeed, each two ounces; Oyl of Roſes two ounces, Oyl of Lillies an ounce, Saffron a dram.*

The Cerot of *Galen* made of Houſleek, is good.

Or this Oyntment in the progreſs of the Diſeaſe. Take *Oyl of Chamomil an ounce and half, Oyl of Lillies and Roſemary and Linſeed, each half an ounce; juyce of Houſleek and Sowthiſtle, each an ounce; Mucilage of Fœnugreek an ounce and half, Conies greaſe an ounce, Saffron half a dram*, with *Wax* make an Oyntment.

You may uſe Fomentations alſo when there is pain, with the Decoction of Henbane, and other Herbs mentioned.

An anodyne Cataplaſm: Take *Crumbs of Bread half a pound*, boyl them in *Milk*, add *two or three Eggs beaten, Mucilage of Linſeed and Fleabane, each an ounce; Butter or Oyl of ſweet Almonds three ounces, Saffron half a dram.*

In the declination of the Diſeaſe, uſe digeſting Plaiſters, as of Melilot, Marſh-mallows, Diachylon, with Orris, and the like.

Or this: Take *Bdellium, Galbanum, Opopanax, each half an ounce; Storax two drams*, diſſolve them in *juyce of Motherwort and Chamomil*, with *a little Aqua vitæ, and* make a *Cataplaſm.*

A Bath in the Declination to take away the reſidue, is made of Mallows, Marſh-mallows, Lillies, Flowers of Chamomil, Melilot, Elder, Roſemary, Seeds of Line and Fœnugreek. And if the Womb be troubled, of Marjoram, Motherwort, Mugwort, Penny-royal, Wall-flowers, Agnus caſtus, Spike or Schænanth.

If it will not be digeſted, bring it to maturation with this cataplaſm. Take *Wheat flower four ounces, Meal of Barley and Linſeed, each two ounces; Figgs ſix pair*, boyl them in *Milk*, and bruiſe them, add *three Yolks of Eggs, and Hens greaſe two ounces.*

Or uſe Ripeners mentioned againſt other Diſeaſes.

Injections, becauſe they come not eaſily to the bladder in men, and cannot be without pain to both Sexes in the uſe of the catheter, cannot be in the time of Inflammation, but when the Urin is ſtopped, to open the paſſages of which we ſpake.

And becauſe the body of the womb, by reaſon of the ſtraight orifice, will not admit Injections; they are not profitable, except but by what they do outwardly to the neck or bottom of the womb, being inflamed.

And then uſe the Decoction of the Herbs mentioned for a cataplaſm, or the waters, or Juyces of them, to repel at firſt, and in the progreſs, uſe the Decoction of the cataplaſm, which we preſcribed to be uſed in the increaſe.

Or make a Peſſary for women, of the Herbs beaten up with Meal.

Pain chiefly requires Injections, as of Milk, and whites of Eggs beaten with Oyl of Henbane, or a little Opium, or of a Decoction of Poppy or Henbane ſeed, or Marſh-mallow ſeed, or the Juyce of it, or other narcoticks mentioned in Pain of the Belly.

Or Triphera Saracenica.

In the Declination make Injections of things that take away the reſidue, and ſoften to prevent Scirrhus, as of *Galbanum a dram and half*, diſſolved in *Oyl of Lillies, or Wall flowers an ounce, Storax a dram Marjoram water four ounces.*

Or: Take *the Decoction of wild Time four ounces*, and add *the aſhes of Mans bones, and two ounces of Balm-water*: make an Injection.

Or this Peſſary: Take *Galbanum, Storax, each a dram; Labdanum half an ounce, Coney, Gooſe or Ducks greaſe* enough, make a Paſte, and put it in a ſilk bag.

Alſo a Fume of Sagapenum, Storax, Benjamin, will conſume the reſidue.

Give Lenitives in both Inflammations, as Prunes caſſia, Syrup of Violets, Roſes, Whey; and no ſtronger till the Declination.

Give coolers in Diet, as cool Herbs and Water, and Syrups, Waters and conſerves that cool, mentioned in Feavers.

And things to provoke urin by a cleanſing moiſture, as Emulſions of the cold Seeds, Decoction of Peaſe or Whey.

CHAP. XIV

CAHP. XIIII.

Of the Pain of the Privities.

The Kinds.

THe pain of the Privities is divers, in reſpect of the Sex (we have ſpoken of the outward pains in their place.)

The pain of the Yard. The pains inwardly in the Yard, being in the paſſage to the Bladder, which is for the Piſs and Seed, and chiefly in the time of piſſing, with diſcharge of Matter, with great ſtraining, ſhall be ſpoken of in things ſent forth. And the pain in the Godds or Inflammation, becauſe it appears outwardly, ſhall be ſpoken of in the Externals, as if there be a pain and tumor from a Rupture in Ruptures.

The pain of the Privities in Women. The pains in the Privities of Women, are either where the two paſſages of the Bladder, and neck of the womb appear, or deeper, and are divers, either with Heat or Ulcer.

The Inflammation of the womb. This pain is either with Inflammation only, or with a Tumor, and that which is in the bottom of the womb is moſt uſual, of which we ſpake in pains of the Belly. This Inflammation is apparent, and turns ſomtimes into an Impoſthume, Scirrhus, or Gangræn.

The Cancer of the neck of the womb. There is another pain with heat and tumor, in the Cancer of the womb, more uſual and apparent, then that in the Body of the womb. In which there is a tumor at the firſt as in other Cauſes, with a little pricking onely, and then increaſing by degrees, it grows heavy and troubleſom with burning; and at length it ulcerateth, and turns to a *Carcinoma*, and then there is a venemous Humor and Blood flowing from thewomb, with other great accidents.

Condyloma in the Privities of women. The third Pain is called *Condyloma*, and is with heat and ſwelling, or excreſcens within the womb: It is worſe when there is an Inflammation. This is ſomtimes both in the Privities and Fundament, and in the Fundaments of Men, of which in its place.

The ulcerous pain of the Womb. A tearing or pricking pain is called the Ulcer of the womb, and it is either inwardly, or more outwardly, and may be touched, and increaſed by Medicines, or Copulation. And then blood, or thin matter comes forth: Or thick white concocted, not ſtinking, or it is crude, and wateriſh, or green, yellow, or black, and the ſame matter is ſometimes piſſed forth. And we have known it come forth of the Fundament, and Excrements come forth of the womb: and ſome have obſerved it is in the Bladder or Panch. What kind of Ulcer it is, whether Excoriation onely, or a profound deep Ulcer, whether creeping, or with ſwollen Lips, hard, or turned in; it may be ſeen or felt, or elſe if deep, ſeen by an Inſtrument. With this are divers other Symptoms. And if the Ulcer comes to the Orifice of the Bladder, there wil be burning, and often piſſing. If it be malignant, the Vital Functions are weakned, or if joyned with other Diſeaſes, as the French Pox, there are many Symptoms.

The Cauſes.

The pains in the Privities of Women, come from Diſeaſes of the neck of the womb or Privities, and they are either Inflammation, or Cancer, or Condyloma, or Ulcer.

Inflammation is the cauſe of burning pain in the womb. Inflammation being chiefly in the neck of the womb, or in the womb, cauſeth pains with heat, burning or tumor, as it is greater or leſs, pure, or impure, or Eryſipelas, where the heat is greater, and no tumor. The internal Cauſe of this Inflammation is Defluxion of Blood, to the menſtruous veins in the ſubſtance of the womb: Or difficulty of travail may cauſe it, becauſe the neck of the womb is very ſenſible, and the Orifice narrow. And ſomtimes there is an Inflammation of theſe parts from the Orifice, which is ſhut in Virgins with the *Hymen* or Membrane, when they are much pained at the loſs of their Virginity, or at other times, when the woman is ſtraight, and the man large. And it may come alſo from Peſſaries, or corroding Medicines.

A Cancer in the hollow of the womb cauſeth pain, with burning, and pricking, and ſwelling, which ſomtimes turns to an Ulcer. And this is cauſed by a malignant Humor ſent to the Neck of the Bladder. The kinds and cauſes of which ſhall be ſhewed in an external Cancer.

A Condyloma in the womb, cauſeth the pain above mentioned, and is in the Fundament: Alſo by reaſon of the ſame Cauſes to be mentioned.

An Ulcer in the womb is the cauſe of an ulcerous Pain. An Ulcer in the Cavity of the womb, or the Privities, cauſeth ulcerous pains, and other accidents that are more, as the pain is greater. For if it be a ſimple Excoriation with the skin off, there will the pain be ſmall, by reaſon of the exquiſite Senſe of the part. If there be a great hurt or wound, the pain wil be greater, and the blood come. If a ſimple Ulcer, the pain will be leſs, but with a Flux of Matter, if it be foul, the Ulcers be eating called *Noma*, or when they are deeper *Phagadænica*, the pain is longer, becauſe there wil be a Flux of Matter. If the Ulcer reach the Neck of the Bladder, there will be painful Piſſing. If it eat through the womb and the ſtrait Gut, there will be Matter by ſtool, and the Excrements that ſhould have paſſed through the Fundament, come through the womb. Or if the Ulcer reach to the Neck of the Bladder, or the Abdomen, the matter will come forth there, and if it continue long, it eats away the neck of the bladder: As we have known in ſome Women, who have loſt all the womb. And if the Ulcer be cancerous, there will be a *Carcinoma*, and more pain then in a Cancer not ulcerated, and the Lips wil be ſwollen, and turned in, and the matter wil flow, and ſomtimes blood, and that much at the time of the terms, in ſo much that ſome have been in danger of death thereby.

Theſe Ulcers come from Hurts, as Inflammations, as in hard Travail, the firſt Copulation, or other that is violent, by which a Vein is broken, as when they looſe their Maiden-heads, ſome bleed from the Terms, by rubbing of the Veins or the neck of the womb, or from hurt of the orifice, which cauſeth an Ulcer. Some think it comes from the breaking of the Membrane Hymen, and take it for a ſign of Virginity, though it happen not alwayes to Virgins at the firſt Copulation, but to ſuch only whoſe Veins are eaſily opened, being tender, and are nigh their Courſes at the time of Marriage, and then no Ulcer follows. This may come alſo from outward Hurts, or uſe of ſharp Medicines which corrode the neck of the womb, as we knew in a woman that lived long after the loſs of the neck of her womb. Alſo Inflammations turn to Impoſthumes, and they into Ulcers, and ſome are very foul, and there is a ſharp flux of the womb that cauſeth Ulcers. Alſo malignant Humors in the Terms in foul Bodies, and other Diſeaſes, as in the Pox, and running of the Reins, may cauſe the ſame. And ſomtimes the Seed of a man that is foul long kept in the womb, may do the like. And in Women that have a dead Child, the womb may be cor-

rupted, as I knew in two, who had the Child cut out with the Membranes and Perinæum, or Cawle corrupted, and one lived long after.

The Cure.

The Cure is divers, as the Diſeaſes that cauſe theſe Pains, which are Inflammation, Cancer, Ulcer. The cure of Condyloma ſhall be mentioned in Diſeaſes of the Fundament.

The Cure of Inflammation of the Womb. When the Inflammation is inward and outward, alſo it muſt be cured as other Inflammations, with reſpect to the part, which is very ſenſible, to prevent pain.

Inflammations in the Womb only muſt be cured as other inward Inflammations mentioned, taking heed that it turn not to an Impoſthume and Ulcer, or Hardneſs, or Scirrhus, or Gangræn, and corrupt the part. Outward things are beſt, as in the inflammations of the bottom of the womb as Baths, and Injections, and other things that come directly to the womb. Revulſion, and Derivation, and things taken inwardly are alſo good; and we muſt prevent a Scirrhus when it tends to an Impoſthume, and if a Scirrhus be, it muſt be cured as ſcirrhous Tumors, without pain. If it gangrene, it is incurable, and muſt be ordered as ſhall be ſhewed in Gangrænes.

The Cure of a Cancer in the womb. A Cancer of the Neck of the Womb, becauſe at firſt it cauſeth little pain or hinderance, or is not known, or regarded, when it grows up, proves often incurable: Nor can it well or conveniently be cut in that ſecret part, therefore it ulcerates, and cauſeth death. But to prevent, you muſt uſe a palliative Cure, by which the Patient may live longer: Such as are mentioned in the external Cancer. As by Revulſions and Derivations, by Bleeding, eſpecially in the Ankle, and Purging, and ſtrengthning, and by drying Topicks, and things that digeſt, as was there declared.

The Cure of a Carcinoma in the womb. The Carcinoma, or Cancers of the neck of the womb muſt be palliated alſo, with reſpect to the part, and the medicines muſt be put in with the finger, or by Peſſaries, or injected, or by Fumes, as in external Cancers.

The Cure of Ulcers in the womb. All Ulcers in the Womb are bad, by reaſon of the tenderneſs and moiſtneſs of the part, of that a little skin off will require a great Cure. The eating ulcers are worſe, which if long laſting, and rooted, and large, are almoſt incurable, as Carcinoma, which deſtroy the whole womb, as I ſhewed: Venereal Ulcers are not cured, except the Pox be cured in general. The Cure differs, in that ſome are to be applied as to cancerous and venemous Ulcers: Others generally as to all Ulcers.

The end in curing of all, except Carcinoma and Pox, is to cleanſe the Body when foul, for Humors will flow to the womb, and moiſten it, and make the Ulcers worſe, eſpecially if they be malignant, and then they muſt be corrected by ſparing moderate Diet, and Bleeding, and Purging, and Sweating, which doth not only take Humors from the whole Body, but from the part affected: As we ſhewed in other Ulcers. And if the Ulcers bleed, the Blood muſt be revelled, as we ſhewed in the Menſtrual Flux. And if in a deep Ulcer, the Matter fall into the Bladder or ſtrait Gut, it muſt be cleanſed as in Ulcers of the Bladder and Fundament.

Theſe things firſt obſerved, for the Cure of the Ulcer, if it be only the skin off, or a ſimple Wound, or Ulcer, it muſt be only dryed with glutinating means, and the blood ſtopt with aſtringents, and the pain abated with Lenitives and Narcoticks, if need be. If the Ulcer be foul and deep, it muſt firſt be cleanſed, then dryed and healed up, and if there be Corruption, uſe ſtronger, as followeth.

We give inwardly ſuch as we give other internal ulcers of the bladder or reins, and ſuch as we give in outward ulcers, with reſpect to the part: As ſhall be ſhewed.

Or this Decoction to heal old Ulcers. Take *Comfrey-roots an ounce, Plantane, Yarrow, Bayes, each a handful; Agnus Caſtus ſeeds a dram, white Wine a quart, Honey a pint:* boyl and ſkum it, till half be conſumed, give to drink often, and apply it to the parts, as I ſhall ſhew.

Dioſcorides ſaith the Roots of Rhapontick, and ſmall Centaury drunk, cure the Pains and Corroſions of the Womb.

Or Turpentine waſh'd in Mugwort-water, or the like, as in Plantane-water, or Roſe-water, for an Ulcer, or taken with Honey or Sugar: Some add Pouder of Hyſop.

New Milk and Sugar, or Honey drunk, doth the ſame.

Or *a dram* of Pills of Bdellium of *Moſue*, or *a ſcruple* every other day, cures the Ulcer of the Womb, and ſtops the Bleeding.

Or thus: Take *Bdellium three drams, Myrrh, Frankincenſe, each a dram; Sarcocol, Storax, Amber, Chabs Myrabalans, each half a dram; red Coral two ſcruples, with Syrup of Poppies, and a little Opium,* (if the pain be great,) make Pills: Give *a ſcruple* every other day.

For pain, the Troches of Alkekengi, with Opium, are good.

Or this Pouder to ſtop Blood, and heal. Take *Acacia, Hypociſtis, each a dram; Sanguis Draconis, Starch, Plantane, round Birthwort, each half a dram; Earth of Armenia or Lemnos a dram, Maſtick, or Sarcocol, each half a dram:* make a Pounder, give *a dram with Milk, Shepheards-purſe, Plantane, Roſe, or ſteeled Water.*

Uſe warm Injections to cleanſe, and dry after, and heal.

As, three ounces of Barley boyled in two pints of water or Whey, with Sugar or Honey, or of Hydromel alone, Honey and Wine, which is ſtrongeſt.

Or a Decoction of Barley, Lentils, Beans, Smallage, Pellitory, Plantane, with Honey.

Againſt Foulneſs. Take *Hydromel half a pint, Juyce of Smallage two ounces, Myrrh a dram.*

Or uſe a Decoction of Orris, Birthwort, and Sowbread, Lupins, Orobus, Horehound, Wormwood, and Centanry.

To cleanſe, add Lye, Urin, and Wine, or a little Allum.

The Juyce of a Nettle, and Urin of a Boy, cures the Ulcers of the Womb.

Alſo the Gall of an Ox, Goat, Carp, with Honey, and Goats Milk.

Or Unguentum Apoſtolorum, or Ægyptiacum.

Or the like Cleanſers uſed in outward Ulcers, and Dryers.

A drying healing Decoction is made of Comfrey, Snakweed, Plantane, Agrimony, Shepheards-purſe, Horſtayl, Sanicle, Mouſear, Pyrola, Yarrow, Knotgraſs, wild Tanſey, Bramble, Myrrh, Olive, Ceterach, Shrub, Sumach, Roſe of Jeruſalem, Wall-ſage, Swallow-wort, Rock Comfrey, Roſes, three handfuls or four, Grape, Plantane, and Myrrh ſeeds *an ounce:* boyl them in ſteeled Water for an Injection.

Or add Galls, Cypreſs-nuts, Acorn-cupps, Peels and Flowers of Pomegranates an ounce; which are good to ſtanch Blood, or red Wine, or Syrup of red Roſes, or Honey to cleanſe.

You may uſe the Decoction mentioned for an Injection.

Or Juyce of the Plants mentioned, with Honey.

Or half an ounce of the pouder of the Plants mentioned, with the Aſhes of Reeds, Gourds, or Spunge, or of Eg-ſhells.

When we deſire to dry exceedingly uſe Litharge, Tutty, Ceruſs, Bloodſtone, Calaminaris, Bole *two drams, and Sanguis Draconis, Acacia, Hypociſtis a dram,* for once injecting.

Or

Or this incarnative Pouder. Take *Orris roots, Birthwort, and Comfrey, each a dram; Myrrh two drams, Aloes a dram, or a dram of Frankincenſe, Sarcocol, Mummy,* put into the Injection.

Or add to this Pouder *two drams of Turpentine, with Plantane-water waſhed, and diſſolved with Honey, and the Yolk of an Eg.*

Or uſe Unguent of Pompholigos, Ceruſs, or Lead, ſix drams for one doſe in an Injection.

To allay pain, and heal alſo. Uſe,

All ſorts of Milk to cleanſe, heal, and abate pain. And they will dry alſo, if you quench Flints therein, and abate pain more, if you add Mucilage of Fleabane, Line ſeed, Quinces, and Infuſion of Gum Traganth, and Arabick, and Whites of Eggs, and Yolks ſomtimes: And in great pain a little Opium. And if you will cleanſe alſo, Honey or Sugar.

A Decoction to allay tearing and burning pain. Take *Barley a pugil, Fœnugreek and Line-ſeed an ounce, Fleabane, and Poppey ſeed, each half an ounce; the four great cold Seeds ſix drams, Roots of Marſh-mallows and Mallows, each a handful; Dill a pugil*: boyl them *in Milk and Water*, adding *Honey and Sugar*,

If you add *Purſlane an handful, Water-lillies a pugil*: the Heat will be better abated, and the Pain leſs, if you ad *half an ounce of Mandrake roots, and Henbane ſeeds two drams* to be boyled therein.

Alſo Juyce of Purſlane, Lettice, Nightſhade, Plantane in Milk, or their diſtilled Waters.

Or the white Troches of *Rhaſis*, with Opium diſſolved in Milk, or the Decoction mentioned, take away pain, and heal.

Add Oyls if need be, as of Roſes, Poppies, Henbane-ſeed; or of Lovage to aſtringe.

Alſo Fomentations and Baths are good, for their ſtrength reacheth to the inward parts, and heals the Ulcers. They are made as the Injections, by chooſing things proper to cleanſe, dry, and take away pain as you pleaſe. And for drying, we add Metals, as Filings of Iron, and the like.

Alſo drying Baths of Allum, and Sulphur in old ulcers, and we ſend the deſperate Women in this caſe to the Spawes.

Alſo we make Peſſaries, and thruſt them with the finger into the hollow of the Womb to cure Ulcers.

Or an Anodine of Gooſe greaſe, or Hens greaſe, or Hogs, or Dears ſuet, or Wool greaſe, with white Wax, and the Yolk of an Eg, and Mucilages, and Saffron, and Oyl of Opium.

Dioſcorides puts into Peſſaries, Leaves of Vervain, cream of Henbane ſeeds, and Juyce of Mandraks.

To cleanſe; Take *Turpentine waſhed with Juyce of Smallage half an ounce, Myrrh a dram, Birthwort roots two drams, Sugar half an ounce*, make *a Peſſary, with Gall of a Beaſt, or Allum*, it will more cleanſe.

You may uſe Anodine Oyntments alſo.

Or Dryers mentioned, with Pouders, or Juyces, and with Mucilages, and Wax.

Or Fumes that pierce into the womb, and dry Ulcers, as in the Noſe, for which are Fumes mentioned, and they which are ſtrongeſt, and of worſt Scent, may be beſt uſed here.

If theſe Ulcers come from the French Pox, they cannot be cured without a general Cure of the Pox. And then the Fume of Cinnabar doth all together. And the Oyntment of Quick-ſilver is good to be put into the part. All which ſhall be declared in the Cure of the French Pox.

CHAP. XV.

Of Diſeaſes in the Fundament.

The Kinds.

THe Diſeaſes or in inward Pains of the Fundament, are ſuch as are in it when cloſed in the end of the ſtrait Gut and Muſcles about it, we mean not the Clefts in the outward part, which ſhall be mentioned in external Cures with thoſe of the Lips. The kinds of the Pains are from the Senſe of the pain and ſwelling.

A burning and hot pain in the Fundaments.

There is ſomtimes a pain there, with Burning alone, or with a Tumor. And this is called the Inflamation of the Fundament, when it is inwardly hot, ſwell'd, and red, and outwardly ſometimes. This pain is increaſed by touching, ſitting, going to ſtool, eſpecially with ſtraining. The Belly alſo and Urin are ſtopped, by the tumor and heat. And this Inflammation leaves ſomtimes an Impoſthume, or the like in the Veins, which coming from other Cauſes, have an Inflammation. As alſo the Falling out of the Fundament hath; which alſo I obſerved in a Child of a year old, turned to a Gangræne, and cauſed death. All theſe may be known by toüching and ſight, when the Gut is turned out.

The blind Hæmorrhoides.

The pain in the Fundament with a ſwelling, and no Inflammation but what is from pain, is called the *Hæmorrhoides*, becauſe it comes from the Veins ſo called, and it is called blind, when they bleed not, but it may better be called cloſed or painful. In this upon ſtraining there is a tumor appears; or elſe it lyeth deep, and is only felt by the Patient. This pain is ſometimes great, from the Excrements going forth, with an Inflammation ſomtimes, which produceth bleeding, or open Hæmorrhoids, which are dangerous from their great Flux ſomtimes. As I have known in two Profeſſors, which from a ſedentary life, had the Hæmorrhoids, and died of their great Flux and Inflammation.

The Tumor called Condyloma in the Fundament.

A Pain in the Fundament with an uneven Swelling, like an Excretion that comes by degrees not ſuddenly as the Hæmorrhoids, is called *Condyloma*, becauſe it is like the Joynt of the Finger, this we ſhewed may be in a Womans Privities alſo, and the Fundament in both Sexes. It is more painful when there is Inflammation. If this Tumor appears outwardly, is called *Ficus*, being like a Fig, or *Verruca*, or a Wart, which hanging down is called *Thymus*: Somtimes it is like a Grape or Mulberries. I have ſeen it rough and hard, like a Cocks Comb. And it is either alone, or joyned with the French Pox.

An ulcerous Pain in the Fundament.

A Pain with ſenſe of an Ulcer in the Fundament is within, and differs from that which produceth a Teneſmus or Needing, becauſe there is not ſo much ſtraining. In this being foul, there is Matter voided alone, or in the firſt Excrement at ſtool. Somtimes it is hollow, and a Fiſtula, as goes either to the Womb and Bladder, out of which parts it after floweth, and ſometimes it is piſſed forth. And when the Patient farteth, it cometh forth of the womb, if the Ulcer be there. Alſo Ulcers of the womb, and neck of the bladder, as was there ſhewed, have gone ſometimes before, and ended in an Ulcer in at the Fundament. Hither are alſo wounds to be referred, which firſt bleed, and after turning to Ulcers, ſend forth Matter.

Diſ-

The Cauſes.

Diſeaſes that Cauſe pains in the Fundament are either Inflammation, or Hæmorrhoids, or *Condyloma*, or Ulcer.

Inflammation is the cauſe of burning in the Fundament.

Inflammation cauſeth burning pain with ſwelling or without, and it is grievous, becauſe the part is very ſenſible. And it may come from the ſame Cauſes, as a Teneſmus or needing when the ſtreight Gut is ulcerated, and from other outward hurts, as a wound or ſtroak or from wiping the Arſe with a paper that hath had Pepper in it, as I knew, or with the Hand that had Ginny pepper, as I knew in one that complained from thence of the fire of Hell, as he ſaid.

The blind or painful Hæmorrhoids, from the Veins in the Arſe, which bleed in ſome, as the Veins of Womens Privities at certain times, is with a ſwelling, not that the Vein it ſelf is pained ſo much, being not very ſenſible, but becauſe the parts adjacent are ſtretched and pained which are very ſenſible: this is greater with inflammation when the part is extended. Therefore when blood is brought to the end of the Veins to be purged by the Hæmorrhoids, if the mouths of the Veins be not open from whence the Hæmorrhoids are called blind, or when they open with difficulty, the blood being ſtopt and increaſed and laboring to get forth, forceth and teareth the Veins more or leſs as it is in quantity And they feel moſt pain when the Hemorrhoids firſt break forth. Becauſe the Veſſels were never opened before. And when the blood would get forth at ſome external Vein in the Fundament, It is hard to be opened, becauſe the Mouth of the Vein is made hard by the hard Excrements. But it gets eaſier forth when it opens a Vein in the broad part of the ſtreight Gut, where they are ſofter. But theſe mouths of Veins may be hurt alſo by hard Excrements or other ſtraining, as we ſee in Women in travil, who have the Hæmorrioids. This pain from the cauſes aforeſaid is greater, when the blood ſtopped, is ſharp or Malignant. And alſo the ſewelling Hæmorrhoids have divers ſorms, according to the diverſity of the mouths of the Veins and Fleſh and Blood thereabouts.

An evil Humor is the cauſe of Condyloma in the Arſe and Privities of Women.

Candyloma cauſeth pain in the Arſe Privities of Women alſo, for the parts are alike Nervous. And we know the Humor to be Malignant, when there are Ulcers in the Privities and Groyns, and alſo *Candylomas* in the Privities and Arſe. This Humor being venemous is infectious and breeds Figgs or Warts or other Excreſcences. And how this comes to paſs we ſhall ſhew in the French Pox, *Bubo* and *Cancer*.

An Ulcer or Wound in the Arſe, cauſeth an Ulcerous pain.

An Ulcer of the Arſe is ſomtimes the cauſe of pain and matter voided, this comes from an Inflamation turned to an Impoſtum that brake, and ulcerated and when it is deep it is foul alſo: or from a foul Ulcer in a Teneſmus, or from the cauſes that produce Inflammation and Ulcer there mentioned. Or from an Ulcer of the Neck of the Womb or Bladder that eateth thither. Or from a wound by external or internal means.

The Cure.

The Cure is in order according to the Diſeaſe, the Hæmorrhoids, *Condyloma*, Inflammation and Ulcer are cured divers waies.

The Cure of the blind Hemorrhoids.

The blind Hæmorrhoids (by which we mean a ſwolen Vein in the Arſe that is ſtopt and ful of pain) if it be not well ordered, will be inflamed and cauſe an Ulcer and other diſeaſes.

This may be prevented when it comes with eaſe and is not hindered at its uſual time but furthered, as we ſhewed in ſtoppage of Hæmorrhoids.

It is cured by turning away the blood which is the cauſe and nouriſher of it, and allaying the pain to prevent Inflammation, and then by drying and diſcuſſing the Tumor. And if it Ulcerate, it muſt be cured, as other Ulcers.

We muſt revel the blood that it may not flow to that part to ſtretch or inflame it, eſpecially if there be then an Inflammation by opening a Vein in the Arm, and then derive it by opening a Vein in the Foot, Ankle, or Ham.

Or by Cupping the ſides, to revel; and the Hips to derive.

Or by Leeches to the Fundament, if pain or Inflammation forbid not.

The Belly muſt be kept looſe that the Excrements may not hurt being hard, and by ſtraining; With fruits and herbs in meat and broaths, or with Caſſia, Manna, or the like. Or with Clyſters, if they can endure the Pipe.

Or with the Decoction of Reſtharrow, conſume them according to *Dioſcorides*.

Or give the Pouder of Moulin with Milk, to abate the ſwelling alone, or with Barley meal as much, or fryed with Eggs and Butter for ſome daies, which is a ſecret.

Or the juyce of Moulin alone, or with Penidics, or in a ſyrup, or with Liquoriſh Pouder, make an Electuary thereof.

Alſo Bdellium and Galbanum ſoftned with ſyrup of Plantane or Mullein and made Pills give a dram.

Or Narcoticks in great pain.

Topickes are applied with a Tent, or if liquid by a Syringe, or by ſprinkling, or blowing them in.

Anodynes abate pain and heat alſo, with Stupefactives, many whereof conſume the Piles.

Boyl yellow Quinces, or Herb True-love in Oyl. Or make Oyl of Gourd ſeed, Poppy, Henbane, or yolks of Eggs, or Indian Nuts, or De-been, or Jeſamin.

Or uſe this Liniment of Oyl of Roſes, Violet water Lillies, Willows, or Lineſeed, or ſweet Almonds, with other Anodynes, or freſh butter, the yolk of an Egg raw or roaſted.

You may add Gooſe greaſe, or Hens, or Hops, or the greaſe of Goats, or Dears kidneys, or Marrow of a Veal bone, Pomatum, or Æſypus, or white Wax waſht to make an Oyntment.

Mucilage of Fenugreek, Linſeed, or white of an Egg.

Pouder of the rinds of Mandrake, Henbane and Poppy ſeed, and if pain be great to four ounces of the Oyntment a dram of Opium and half a dram of Saffron.

Or uſe Populeon with Opium, when there is heat, or Saffron.

Fomentations and injections, are made of Mallows, Marſh-mallows, Mulleine leaves and flowers, Chamomil, Melilot, Dill, Elder flowers, VVater-lillies, and Violets, and Fænugreek and Linſeed boyled in water or fat broath or with Oyls.

And you may make Cataplaſms of the reſidents boyled in Milk.

Thus: Take *crums of Bread and Barley, or Spelt*, boyl them in *Milk and with Oyl of Roſes, Violets or Butter and yolks of Egs*, make a Pultis, you may add *Papp of Apples and Mucilages of Time, Fleabane and Althæa and Saffron.*

Or fry Purſlane, Nightſhade, Poppy and Henbane in Oyl.

The

The Juyce of Veal is a good Anodine.

Give Digeſters to conſume them, and if they prevail not, then Dryers, that bite not, if there be pain.

Or make Cataplaſms of Mullein, Clowns-All-heal, Plantane, black Hawkweed, Scabious, Crownwort, Yarrow, Shepheards rod, Dogs-tongue, Horehound, Leeks, Coleworts bruiſed or roaſted in the Embers, and mixed with Butter or Oyl. *Matthiolus* commends the Oyntment of Scrophularia.

Or this: Take *Lillies two ounces, Orris an ounce, Moullin, Scrophularia, each three handfuls, Flowers of Chamomil, Melilot Dill, St. Johns-wort, each a pugil; Dates ten, with Snails, without ſhells:* boyl them *in ſteeled Water,* ſtamp, and add *Fœnugreek and Line-ſeed, each an ounce; Butter two ounces, Myrrh, Frankincenſe, each two drams; Saffron a dram, yolks of Eggs four,* make a Cataplaſm.

Or apply roaſted Onions, or Leeks, with Oyl of Roſes or the like; or with Dragons, or Cuckow pintles, and Oyl, leaſt they burn, or alone, if they may be endured. All theſe may be mixed with the former Cataplaſms.

You may foment with a Spunge, or a Bag, with the decoction of the aforeſaid, with Dates, and Snails, to nouriſh, and with ſuch as conſume and dry, as Sumach, Bramble, Pomegranate peels and flowers, Galls, Roſes, Myrtle-berries, and the like mentioned in Ulcers of the Neck of the Womb, with ſteeled water, and red wine.

Or anoint with Oyl of Chamomil, Melilot, Dill, St. Johns-wort, Lillies, Olive, in which are boyled Raddiſh-ſeed, Spurge ſeeds, or Earth-worms, or Hog-lice, or Sows, or Wood-lice, or Horſleeches, or red Snails without ſhels, or with Oyl of Bricks.

Or make a Liniment of the Plants mentioned, with Smallage, or Parſley, or Yarrow, Juyces. Or beat them with Turpentine in a leaden Mortar, and wax.

Some fill a hollow Onion with Oyl, and Verdigreaſe, and roaſt it, and anoint with the Juyce.

An Oyntment. Take *Frankincenſe, Maſtick or Myrrh, each two drams; Bdellium, Lycium, or Juyce of Sumach, or Hypociſtis a dram, Saffron a ſcruple, Mucilage of Fleabane, and Gum Traganth, each half an ounce; a Yolk of an Eg, with Oyl of Roſes,* make a Liniment. If there be pain, ad *a dram of Opium, or Oyl of Henbane ſeed,* which alſo conſumes them.

To dry more, add *Ceruſs, waſht Lead, Litharge, Tutty three drams, the Arabian Stone according to* Dioſcorides. *And in a leaden Morter, with Mucilage, and white Wax,* make an Oyntment.

It will be ſtronger with Vitriol, burnt Allum a dram, Verdigreaſe, or Ruſt of Iron a ſcruple, Camphire half a ſcruple.

Give a Suppoſitory, or Suet, the Yolk of an Eg, white wax, and a little Opium.

Or make a Fume of the Decoction hot, or take in only the Fume of Moulin boyled, to eaſe the pain.

Or ſprinkle the Pouder of Darnel, Moulin, Scrophularia upon Coals, or hot Bricks, or Iron, and take the Fume to dry. It is better with Brimſtone, or with Honey anacardine.

Some ſay it is good to ſit upon a Stool, made of Pine-tree, and anointed with Oyl.

The Cure of Condyloma in the Fundament & Privities.

When a Condyloma comes from unclean Copulation without the Pox, then after purging, and bleeding, and ſweating, apply Topicks, as in other malignant Humors. If it be in the Pox, then cure it as the Pox, by purging and ſweating, and if they remain, the Diſeaſe is not wholly cured, and then uſe Topicks in the Cure, mixing things that are proper againſt the pox.

Uſe the ſame Topicks to digeſt and dry, as in the ſwollen Hæmorrhoids, eſpecially the ſtrongeſt, becauſe theſe are harder, and the pain leſs, adding ſtronger Ingredients.

Alſo the Cataplaſms and Fomentations there mentioned, as Scrophularia, Moulin, Plaitane, Bramble, Pellitory, Mercury, Winter-creſſes, Savine, Horehound, Maiden-hair, Roſemary, Time, Savory, Rue, green and bruiſed, or boyled with red Wine, or ſteeled Water, or water and Vinegar, or Lye, and applyed with a Spunge, or Bag: or ad Roots of five leaved Graſs, round Birthwort, and Bay-berries, and other Dryers, as Salt, or Peeter, raw Quinces may be added according to *Dioſcorides.*

Sheeps dung, or Hens dung, with the Gall of a Goat, Soap, and Vinegar mixed, are good.

Or diſſolve Tarr, and Ammoniacum in ſtrong Vinegar.

Or uſe the Oyntments for the Piles.

To which add this: Take *Juyce of Winter-creſſes, Smallage, or Parſley, each an ounce and half; Oyl of Brick two ounces, Bole a dram, with Turpentine* make an Oyntment.

Or, Take *Oyl of Tartar half an ounce, Lapis Calaminaris, Bloodſtone, or red Lead two drams.*

Or, Take *Vine aſhes, and Dill aſhes, each a dram and an half; Gum Ammoniack diſſolved in Vinegar a dram, Allum two drams, Bloodſtone, or Minium a dram, Galls half a dram, Saffron a ſcruple, a Yolk of an Eg roaſted, Turpentine a dram, with Oyl of Roſes and Wax* make an Oyntment.

This is ſtronger. Take *Quick-ſilver two drams, Turpentine an ounce, Oyl of Nuts two ounces, red Lead two drams, Allum, Vitriol, each a dram; Verdigreaſe half a dram, with Wax* make a Liniment, add a little *Sublimate.*

A Pouder to dry and conſume it. Take *round Birthwort a dram, dryed Savine two drams, Aſhes of Hermodactls, and Myrobalans, each a dram and half; Allum a dram, red Vitriol half a dram, red Orpiment a ſcruple, with Opium, and Mandrake roots* make a Pouder.

Or uſe Sublimate boyled in Water, or Oyl of Vitriol, or of Antimony.

A cauſtick Oyl to conſume the Condyloma, Fiſtula, Scrophulus, and any Excreſcens of Fleſh without pain. Take *Oyl of Bricks, Maſtick, and Gum Arabick the beſt, and Turpentine, each three ounces; diſtil them in a Glaſs Alembick, and mix the firſt Water with Aſhes of Ivy,* and ſtill it again, keep the Water.

Fumes taken in, do dry up a Condyloma, ſuch as we mentioned for the Ulcers of the Note. Chiefly of Cinnabar, as in the French Pox.

Somtimes they are cut off, when they are hard, as warts, or if they be long, they are tyed with Hair or Thread to rot.

The Cure of Inflammation of the Arſe-hole.

Inflammation in the Fundament alone, or with Piles, or Condyloma, is cured as other Inflammations in Womens privities, and if it turn to an Ulcer, as an Ulcer.

Therefore we let blood in the Ham, to derive and cup to revel and derive, when we fear a Flux to the part.

We looſen the Belly that the Excrements may not hurt. Clyſters are not eaſily given.

We alter with cold and moiſt Diet and Medicine. *Dioſcorides* commends the Water of Lens paluſtris to be drunk.

We uſe Anodines at the firſt, becauſe the part is very ſenſible of pain, and we cool without binding much, leaſt the part ſhould be exaſperated, with things againſt piles mentioned, that eaſe pain, and ſtupefie, and cool, as Oyntments, Baths, Fomentations, Cataplaſms.

A cool Oyntment. Take *Juyce of Purſlane, Plantane, Groundſoyl, each three ounces, Mucilage of Fleabane an ounce, the Yolk of an Eg roaſted, with Oyl of Roſes, and Violets,*

A Pultis: Take *Comfrey roots, Althæa roots, each an ounce; Plantane, Moulin, Groundſoyl, Sowthiſtle, each a handful; Melilot flowers, and Roſes, each a pugil; Fœnugreek and Line-ſeed, each half an ounce;* boyl and ſtamp them, add *Flower of Lentils a pugil, Oyl of Willows, Roſes, and Violets, each an ounce; Saffron a dram.*

In the end, uſe Diſcuſſers, and if Hardneſs appear, Softners, and conſume the reliquies as in other Inflammations.

The Cure of ulcers and wounds in the Fundament.

An Ulcer or other Solution of Continuity in the Arſe-hole, being a ſenſible part, is very troubleſom, and will ſcarce be cured in ſo ſtrait and moiſt a part: If it firſt ulcerate, it is worſe, and worſe yet, if it cancerate. If it be a wound, cure it as a wound. If the Ulcer come from a wound or Inflammation alone, or with the piles, after purging, by which alone Ulcers are fitter to heal; Do thus,

Drink Milk often and much, or ſuch things as are good againſt wounds, when there is a wound, as vulnerary Herbs. Bettony is highly commended in this caſe, and Mullein any ways taken, is good in al Diſeaſes of the Arſe-hole, & other things mentioned in the Ulcers of the Womb, as pills of Bdellium. And if Blood flow from the wound, uſe the pouder there mentioned.

Topicks may be uſed as in Ulcers of womens privities, becauſe the part is very ſenſible and tender, as they, and will not admit of other Cleanſers and Dryers, then are there mentioned, except ſuch Dryers as are mentioned for ſwollen Hæmorrhoids: And if there be a pain in the ulcer or Inflammation feared, uſe the things againſt pain, preſcribed in Ulcers of the womb and Hæmorrhoids, as peſſaries and Fumes.

Beſides which, the Roots of Carduus boyl'd in wine, cures the Ulcers in the Fundament: And Raiſons beaten up with Rue, if they be foul and cancer'd.

Or Oyntment of Minium, Litharge, or Chalcitis called *Diapalma*.

And if there be a Flux of Blood, uſe ſuch things as are mentioned for ſtopping of Blood in other Fluxes.

CHAP. XVI.

Of Pain in the Habit of the Body.

The Kinds.

VVE call thoſe Pains in the Habit of the Body which are within the Skin, either in the ſoft or fleſhy, or hard, or bony parts. They are of divers ſorts, ſome are greater, and others leſs then their accidents.

Of Pains in the Habit of the Body which have prevailing accidents that are greater then themſelves.

VVe ſhall mention only by the way thoſe pains whoſe accidents are greater, becauſe we ſpake of them in their places. As in Hurt of the Functions, when there is pain joyned, as pain of weakned Motion, mentioned in Lazineſs, voluntary, and after labour; this pain is ulcerated, inflamed, ſtretching, or beating. Beſides, there are ſomtimes in ſome kinds of unmoveableneſs, as in that kind of palſie, where the Senſe of Feeling remains, with a pricking, or vehement pain. Alſo there are divers pains in the Cramp, eſpecially when it is from wind: As we ſhewed concerning a moving pain in the Cramp of many years continuance. Alſo there is pain in Fractures and Diſlocations of Bones: All theſe are ſpoken of in impotent Motion. And in Depravation of Feeling, there is a pain in divers parts from a falſe Senſe of Cold or Heat. And we ſhewed in Feavers, that there might be pains, as if the Limbs were bruiſed or broken. Alſo pains inwardly may come forth as in the Head-ach, the pain may reach to the Eyes, and and other pains may come to the Neck, Breaſt, and Belly, as we ſhewed. And we ſhall ſhew how ſome ſuperficial pains go over the whol Body. And others are from evil Conformity or ſhape.

Of pains in the Habit of the Body which are greater then their accidents.

Thoſe pains which are in the Habit of the Body greater then their Accidents, are chiefly diſtinguiſhed as they are in the Fleſh, Joynts, or Bones.

Of Pains in fleſhy Parts.

The Germans call the pains in the fleſhy parts of the Habit of the Body, *die Fluxe*, from the cauſe that is Defluxion, Diſtillations, or Catarrhs. Of which we ſhall declare divers kinds, in parts not fleſhy, from the Joynts.

Of Defluxions or Diſtillations in the Habit of the Body.

Theſe Pains or Defluxions are ſometimes in the Cheeks, Chapps, or about the Ears, with Swelling, or without.

Or in the ſides, or behind the Neck, with difficult turning of the Neck, or a Creek, and Swelling of the Glandles. And if there be difficulty of ſwallowing, it is a baſtard Quinzy.

Alſo there is a pain from Defluxion in the fleſhy ſides of the Breaſt, heavy, and tearing, that increaſeth with touching, or Motion of the Arms, and hindereth breathing. And if it be pricking, it is a baſtard Pleuriſie, if the breath be much ſtopt, it is to be referred to Dyſpnœa, or difficulty of breathing.

Theſe pains from Defluxions, are alſo on both fleſhy ſides of the Back, either above, towards the Neck, or below towards the Loyns. And are increaſed by Motion of the Back-bone, or by lying down, or preſſing, but if they endure touching; they are ſpoken of in internall Pains.

Theſe pains from Defluxion, are alſo in the fleſhy parts of the Joynts, in the Arms, or Feet, and in the Nervous parts, if they are about the Shoulder blads, or fleſhy parts of the Hipps, they are referred to pains in the Joynts.

Pains in the Joynts, Arthritis, or Joynt-gout.

A pain in the Joynts is called *Arthritis*. And it is either more general in many Joynts, as in the Feet, Arms, Hands, Hips, Shoulders, reaching to the Back, and Neck, and ſomtimes to the Cheeck-bones, and Joynts. Or it is more particular in ſome ſmall or great Joynts, as in the Hip called the *Sciatica*. That in the Shoulder is called the pain of the *Homoplate*; when it is in the ſmall Joynts, in the Toes, or Foot, or Ancles, it is called *Podagra*; when in the Knee, *Gonagra*; when in the Fingers, Thumb, or Wriſts, *Chiragra*. This Diſeaſe ſeldom is conſtant in the Shoulder alone, as in the Knee; and if it be there, it is called *Arthritis*, when other Joynts ſuffer alſo. Some of theſe kinds of Gouts have the ſame accidents.

The Sciatica, or Hip-gout.

Pain of the Homoplate, Podagra, Gonagra, Chiragra.

Sometimes there is a great pain fixed in one or more Joynts. That which is in the Hip is firſt fixed, then moveth from the Thigh into the Foot, and that in the Shoulder, in the Arm. In all kinds, the pain is increaſed by Motion of the Joynt, and touching, except in the Hip and Shoulder, and then when the pain comes outward. Theſe pains come ſuddenly unto ſome.

There is uſually a Tumor with Redneſs, Heat, and beating, in the Podagra, and Chiragra, firſt or laſt; and ſomtimes in the Gonagra, or Arthritis, eſpecially in the Joynts without Fleſh. Somtimes it is an Oedema without Redneſs. But in the pain of the Shoulder and Hip in the fleſhy parts there is no ſuch appearance or tumor.

In continuance of time in the Podagra, and Chiragra, there will be knots in the Joynts of the Fingers and Toes. And when they are opened, there comes forth a thin or tough white Matter, or like Chalk. And ſomtimes they turn to hard uneven ſtones, which hinder the Motion of the Joynt. And I have ſeen ſometimes ſuch knots from the bending of the Arm to the Wriſts, growing as it were together, and when they have been broken, there hath come forth a white Pultis, and in one troubled with the Gout, it was in his Ear. And another Merchant long and greivouſly

vouſly troubled with the Gout. The ſame kind of chalkie Matter was all over his Body, and the very Eye-brows alſo, and it turned to knots, and then came forth.

As we ſhewed in Feavers, there is a Synoch in every general Gout, and often in the *Podagra*, *Chiragra*, and *Gonagra*, and ſomtimes in the Hip and Shoulder-gout. It begins firſt with Chilneſs, and there is Thirſt and Reſtleſneſs, the Pulſe is high, and the Urin red.

There are ſomtimes other accidents in Arthritis. And we have known a Cramp to follow the Joynt-gout which hath been worſe then it ſelf.

Pains about the Bones. The pain about the great Bones (beſides that which is in parts without fleſh, of which we ſpake in the Pain of the Joynts, and that without the Skull of which in Head-ach) is of two ſorts. The one is chiefly about the Head bones, the other is about many other Bones.

An external Cephalæa. There is a kind of pain about the Head or Forehead, which is laſting, which is called an external *Cephalæa*, or Head-ach, differing from the internal mentioned. This is about the Bone, and is augmented by being touched. It ſomtimes ſprings from an internal Head-ach, or is joyned with it, or is alone outwardly on both ſides, or on the right or left, as a Hæmicrania. Sometimes it is like a Nail driven into one part, and called *Clavus*. Somtimes it makes Nodes in the Forehead, like that in the French Pox, and in other Bones.

Clavus.

Outward Heavineſs of the Head. There is another kind of outward pain in the Head, which goes before other pains from Defluxion, into the Joynts and fleſhy parts. In which ſomthing ſeems to lye heavy upon the Head, and there is outward, as if the skin were flead off, and increaſeth with touching of the Hair eſpecially. And oftentimes there is a Swelling ſoft and œdematous, broad, and diſperſed about the Neck, and hinder-part of the Head, and other accidents, as in the Heavineſs of the Head, coming within the Skull, eſpecially when they meet together.

The French Pox or Neopolitane. There is another kind of pain about many Bones from a Diſeaſe not known by the Antients that was brought from the *Indies*, firſt called the *Neopolitane*, then the French Diſeaſe: And becauſe it comes by Copulation, the Venereal Pox. Of which there are divers kinds, as I ſhall ſhew, and this pain about the Bones is one, and is called the contagious Pain or Pox.

The contagious French Pox.

This pain being near about the Bones, is chiefly in the middle Seat without the Fleſh, either in Latitude or Longitude, as in the naked inſide of the Leg, and about the Shoulders, Homoplate, and Arms, and before, in the Breaſt, which bony part can ſcarce ſuffer from another internal Cauſe. And therefore the Pox is known only by this ſign ſomtimes. Alſo there is pain without in the Head, eſpecially in the Forehead to the Eye-brows, and about the Temples, fixed like an outward Cephalæa.

This pain is violent and implacable, pulling as it were the skin from the bones, and not to be touched. It increaſeth towards night, and is not abated as other pains, but augmenteth by heat. And therefore in bed they are worſe, and it comes by degrees, not ſuddenly as Arthritis.

Somtimes there are hard Tumors or Nodes in the Forehead, Skins, and inſides of the Hands, which are unequal and increaſe.

And other accidents, as Falling of the Hair, Spots, Puſtles, and Ulcers, as we ſhall ſhew,

The Cauſes.

It is neceſſary that in all Pains of the Habit of the Body mentioned, that the ſenſible parts be affected as the Muſcles, Membranes, and Nerves, from whence come ſtretching pains, or pains from compreſſion, ſolution of continuity, ſimple diſtemper, congeſtion of Humors, Influxion, or evil Quality.

Diſtention or Stretching, is the cauſe of pain, where other Symptoms are greater. Vehement Stretching of the parts cauſeth this pain, by immoderate Motion in Exerciſe and Labour: Hence comes the ſtretching lazy pain mentioned. And violent motion, when the Muſcles are contracted with the Cramp: As we ſhewed in Spaſmus. Alſo it comes from Extenſion of the Muſcles by ſtraining, which cauſe Bleeding, ſuch as is in inflamed or ulcerated Lazineſs, or ſuch as increaſeth by touching and motion. This pain is ſomtimes in the broad Muſcle of the Breaſt, which moveth the Arm, coming from ſtrong holding of the bridle in riding; ſometimes in the Feet and Knees, from riding in ſhort Stirrups.

Or in the Back, from ſtretching of the Membranes and Ligaments, by the great Bowels, lying upon them; or by a Tumor, as in divers Diſeaſes of the Liver, Spleen, Guts, Meſentery, and Womb, and in women with child, as we ſhewed.

Or it is from wind that is bred by moiſture or weak heat, or coming from other parts, which lifteth up and ſtretcheth the muſcles, as we ſhewed in windy Cramp. And if it be between the membranes, it is a pain like that from Defluxion, but not ſo fixed, but wandring, and ſtretching, and not long laſting. And if it come to the skin, the pain is with palpitation or beating, as we ſhewed.

A Compreſſion is the Cauſe of pain in which the Symptomes are greater. Alſo Compreſſion of the parts may cauſe pain without breaking of the skin which if it is, belongs to Diſeaſes of the skin. As from long lying in a great Diſeaſe, when there is a pain in the Back, and in other ſenſible parts; and from external violence, as when from preſſing of the Elbow, there is a numneſs and pricking of the two Fingers.

Or when the Bones are out of their places, and lye upon the Muſcles, Membranes, or Nerves, there is pain, which is greater and longer, when there is Swelling or Heat, as when there is a great pricking pain, from a violent motion of the Back or Neck, or from Bones out of Joynt, while they lye upon theſe parts, and hinder motion: As we ſhewed in want of Motion from a Diſlocation.

The ſame pain may be from broken Bones out of their place, which tear the parts, and hinder motion, as we ſhewed in want of Motion from a Fracture. Or from the Spondils of the Back broken out, which cauſe Pain, Swelling, and Ulcers, before they come forth; as I knew in a Child of ſeven years old, who was born crook-baked, and had a Tumor in his left Shoulder, out of which came many ſmall bones of his Back, with much matter.

Rupture is the cauſe of pain in the Hernia. Solution of Continuity internal in a ſenſible part, cauſeth pain, as when the Membrane about the Belly is broken: Eſpecially when the guts come forth, and there is an Hernia. As for other ſenſible parts, as Muſcles and Nerves, they can ſcarce be broken without an external force. Of theſe we ſhall ſpeak in the Diſeaſes of the Skin.

Diſtemper cauſeth pain, with other Symptoms joyned. Alſo Diſtemper cauſeth pain, whether cold or hot. If it be outward, it is to be referred to Diſeaſes of the skin; if inward, it comes from Defluxion, or congeſtion of Humors: as ſhall be ſhewed. And in the Fits of Agues, the pain felt in the Back and Members, comes firſt from Cold, and then from heat, becauſe the Cauſe lyeth in the great Veſſels which are near the Back, and inflame the Nervous parts.

Congeſtion of Humors cauſeth an external Head-ach.

An Humor heaped, which is corrupt from evil Nouriſhment or Weakneſs of Concoction or crude, cauſeth pain in the bloodleſs parts, about the Bones, Perioſtium, and Membranes; where by reaſon of Cold, they are more eaſily heaped up, and more ſlowly diſcuſſed. This is often in the Head, between the ſkul and skin, by reaſon of the plenty of Veins, which afford Excrements, which cannot eaſily be diſcuſſed, by reaſon of the thickneſs of the skin: Hence comes Cephalæa or Heach-ach external. This may be in other places upon bare Bones, like that in the French Pox, with Swelling, and Nodes, when the Nouriſhment of the part aboundeth, and turns to a Callus: as ſhall be ſhewed in external Tumors.

Congeſtion of Humors, cauſeth outward Heavineſs.

Alſo when theſe Humors are heaped without the Skull, there comes a pain external, which goes before Defluxions, and Joynt-gouts.

Congeſtion of Humors cauſeth the Joynt-gout.

The ſame Excrements about the bloodleſs Region of the Joynts, not flowing from other parts, may cauſe a kind of Joynt-gout. This comes by degrees, not ſuddenly, as that which comes from a Defluxion, nor doth it cauſe great pain, and the tumor is only œdematous. This Arthritis or Joynt-gout ſeldome comes firſt, but follows the other, which comes from Defluxion, when the part is weakned, from which Defluxions & new Excrements are gathered. Hence they are free from the Gout, but there is ſome ſign of it, either from Defluxion or Congeſtion of Humors. Or if there be another kind of Arthritis from both, as a *Sciatica*: It laſteth long, and hath great changes.

A Defluxion of Humors, cauſeth the Joynt-gout and other pains.

A Defluxion of Humors cauſeth ſudden pains, and they are either ſimple Defluxions, or Arthritical. The Humors either flow from within the Veſſels, or otherwiſe.

Humors congeſted without the Veſſels that cauſe theſe two ſorts of pain, are ſuppoſed either flegmatick or wateriſh, but a wateriſh Humor, or pure Whey flowing to theſe parts, cauſeth reſolution or tumor without pain, rather then with great pain. And therefore it muſt be mixed with other Excrements, and then as it is more cholerick, ſharp, or ſalt, or evil, it ſtretcheth and tearing the part more or leſs, and cauſeth pain accordingly..

The Original of this ſerous Humor comes from the Head, and flows downwards. And it is ſomtimes congeſted in the inward part thereof, within the Skull from the Blood which is plentiful in the Head, when it is crude or impure. And when any part thereof is unfit for Nouriſhment, and will not be concocted, there are Excrements in the Brain, which fall down, and cauſe pain. Before which there was a Heavineſs in the Head, from the Matter heaped up, and other accidents. Alſo excrementitious blood ſent to the Brain, comes from the weakneſs of the firſt or ſecond Concoction, or from its Crudity, and the rather if the Brain be weak. Hence it is that though good blood be bred in the firſt Concoction, yet becauſe it cannot be aſſimilated, or brought into ſubſtance in the third, there are many Excrements, and more when it is not at firſt well concocted, or mixed with Excrements. This cauſe of the weakneſs of the Brain, is either from the Parents, or from age and Diſeaſe, eſpecially from Wine and Venery, the one ſtupefying, and the other ſpending the Spirits, and both weakning the Nerves and Brain, and taking away ſtrength: Of the exceſs of which the Gout is the puniſhment. The plenty of this humor in the brain cauſeth it to flow down, or external cold wind, or moiſtneſs that pierceth the Brain, and ſtraineth and ſqueeſeth it, or heat of the Sun or Baths cauſeth Defluxions, rather by opening the paſſages, and ſtirring up the Faculty to expel, then by melting the Flegm, as they call it. Alſo great motion that ſhakes the Head, by Neeſing, Coughing, or the like, cauſeth the abounding Humor to flow down.

And we have ſhewed that the ſame humor may be without the Skull, and flow down, and cauſe pain, before which was Head-ach, or Heavineſs, and Swelling of the skin. And alſo we ſhewed the Cauſe why Humors are eaſily gathered there. And the ſame Cauſes that made the Humor flow which was internal, may move the external, as cold and heat; and ſooner, as we ordinarily may perceive.

The Defluxion of this Humor, which is both within and without the Skull, is divers. For if that flow, which is in the Skull, it cauſeth Diſeaſes in the Habit of the Body, and others alſo, as it falls into the bottom of the ſkull into the three cavities. For if it fall into the upper chamber next the Forehead, then it is ſtrained through the holes of the ſtraining Bone, and comes like clear water out of the Noſe, and is called *Coriza*. If it fall into the middle Cell or Chamber, which goeth to the Pallate with many holes, it either paſſeth thin preſently, or continueth, and turneth thick into Snot, and ſo is blown out at the Noſe, or hawked out. Or if it flow towards the Eyes, it is turned to Tears: as we ſhall ſhew in things ſent forth. But if it follow the paſſage of the Nerves, in the middle cell, or fall into the hinder Cavity of the Skull, which is lower and larger, through the great hole behind, which contains the the narrow, from whence come the pain of Nerves, it fals into the Habit of the Body, into fleſhy parts or Joynts, and cauſeth the Gout. Alſo when the Humor gathered without the Skull, flows down under the skin, it cauſeth pains according to the parts, as we ſhall ſhew.

If it flow upon the fleſhy parts, either inwardly or outwardly, then it gets between the Muſcles and nervous Membranes, or between the Fleſh and Skin, and Glandles, and cauſeth Heavineſs, when it is much, or ſtretching, or pricking, when it is of evil Quality, or a Tumor occult or manifeſt, like an Oedema, and if the pain be great, and cauſe a Flux of Blood, it cauſeth Inflammation, which ſomtimes is known by heat and beating pain. And if it be outward, there is apparent Tumor and Redneſs. Theſe pains from Defluxions are uſually in the Back and Neck, and Face, and Breaſt ſomtimes, and Joynts, as we ſhewed. And when theſe parts have been uſed to Defluxions, they are weaker and looſer, and more apt to receive them.

If this Humor from within the Skull, flows by the ways of the Nerves into the Joynts, or from without under the skin, as *Fernelius* ſaith it may, then as it is about the Lips, Shoulders, Knees, Arms, Feet, or Finger-joynts, Back, or Cheeks, in one or more places, it cauſeth divers kinds of Gouts. In which they ſuppoſe the Joynt to be the part affected, and ſome think the inward part chiefly, becauſe the pain is felt there, or increaſed by motion. But in regard the moving Joynt is compounded inwardly, of two Bones, which have no Perioſtium in that part, but only a hard Griſtle, and there is no Nerve there, and therefore they are all inſenſible, the pain cannot be within. Nor in the Joynt of the Thigh, where there is an inſenſible Ligament. Moreover in regard the Bones are ſo exactly joyned in the Joynts, that there is no ſpace between, and outwardly are cloſed with Ligaments, ſo that nothing can get in, how can any humor get in to breed the Gout, when there is no paſſage nor Vein. Moreover the Ligaments without that bind the Joynt, are inſenſible, or if they have any feeling, it is from the Perioſtium to which they grow, and that is very little. How then can there be ſo great pain in the Gout, if it be there? Neither can it be from the Tendons, which have little or no feeling. Beſides, the Tumor without, which is at a diſtance from the Joynt, and the pain which is remote, ſhews that the pain is not in the Joynt. Alſo the chalky Matter, and the Nodes in the Gout, are not alwayes found in the Joynts, but in the parts adjacent. And though they grow in the Joynt ſomtimes, yet is not the pain therefore in the Joynts, or in the inſenſible parts whereof they are made. For they are

from

from other Cauſes, and cannot cauſe pain, except it be by hurting the part adjacent, nor other inconvenience, but Deformity and Hindrance of Motion. For no pain can be but from a ſenſible part, which is not in the Joynts. Therefore the Gout-pain is not from the Joynts, but the parts adjacent, as the Nerves, Muſcles, and Membranes. And the reaſon why the pain is ſo near the Joynt, is the meeting of the Nerves there about, where they are comprehended in a little room, and bound about with Membranes, and Ligaments, and folded together to move the Joynt, when in other places they are free, and go ſtraight along the Body. Hence it is that when any matter falls into theſe narrow and crooked places, it eaſily ſtays there, and afflicts the Nerves cauſing pain. Which pain, if there be a Humor, is fixed in the ſtrait paſſages, through which the Nerves run; as in the Sciatica, where the pain is above the Joynt, almoſt in the Loins, where the fourth Nerve goes to the Leg, and is bent outwardly, from the Cavity of the Hip, while the Humor fixeth, and when it removeth, the pain removeth to the Knee, to which the Nerve goes, or to the Foot; the pain is the ſame in the Shoulder. And when the Matter is much the pain is in divers parts, where it is fixed, and in thoſe narrow paſſages, where the Nerves paſs through the holes of the Bone, as in the Back-bone, where it eaſily ſtayes, and cauſeth pain, and chiefly where the net work of the Nerves goes from the Neck to the Arms, and from the Loins to the Thighs.

The Diſeaſe that cauſeth this pain, is either ſtretching from much Humor, ſuch as when it falls in a fleſhy part, differing only in that the humor in this flows to the Muſcles next the Joynts, and cauſeth not ſo great pain, as when the Nerves are afflicted, and there is an Oedema in in the part. And if the humor be evil and infect the Nerves, the pain will be worſe, and heat and redneſs will come from the Flux of Blood, and laſtly a Swelling: as we ſhall ſhew in the Gout, from a Flux of Blood. All theſe ceaſe when the Excrements are conſumed, and return upon a new Defluxion. And after many Defluxions, ſome reliquies remain not diſcuſſed, which if they be glutinous, turn by degrees into Chalk. And if they are earthy, as ſerous humors uſe to be, as I ſhewed in the Stone, they turn to Stones. This is chiefly in the Hands, and Feet-Joynts, becauſe the humor can fall no further.

The Diſpoſition of the part receiving, is a cauſe alſo why the humor goes hither or thither, as when the paſſages of the Nerves, and the places about the Joynts, are too looſe. Or when there is hæreditary Weakneſs in the Nerves or Brain, or when there hath been a Diſeaſe, or is a Defluxion conſtantly ſtretching the paſſages. Hence it is that the humor, though it be not in great plenty in theſe paſſages ſo ſtretched, and made looſe, as it is uſually, when it cauſeth pain, yet it eaſily goes thither. And becauſe it uſeth to go to the extremities by its thinneſs and the openneſs of the paſſages, rather then ſtop by the way; and not only looſen the place, but ſeparate the parts one from another. Hence it is that the Podagra, or Foot-gout, and Chiragra, or Hand-gout, are more uſual then the other Gouts. And why after once, they come again monthy and yearly, and cannot be quite driven away. And the Sciatica, and other Gouts above, though the Matter ſtop in them, yet it is more ſeldom, becauſe the matter deſcends, and the pain will not be ſo looſned as in the Hands and Feet, except there be a continual Defluxion. And a general Arthritis or running Gout, is not ſo uſual as the other kinds, becauſe the humor that cauſeth it, muſt be a great quantity, to go into almoſt all the Joynts. And becauſe the ſeldom coming thereof weakens the parts but little, and alſo becauſe (as I ſhall ſhew) it comes often from another Cauſe then a Defluxion from the Head.

When Blood in the Veins falls about the Joynts, it begets a hot Gout, with a Feaver, and Inflammation, and the like: as it doth Diſtention and Heat in any other part.

This is from the abundance of it, or when it is too hot, and cauſeth a Synoch Feaver, which uſually preſently follows the hot Gout, and attends it. And as an Eryſipelas comes in a Synoch Feaver, from the Blood ſent to the skin, ſo doth the Gout from the ſame ſent to the Joynts, and they who are ſubject to the Gout, are ſubject to a Synoch, with Eryſipelas. And the Patient hopes ſomtimes it will be but an Eryſipelas, when he is ſubject to have both. Alſo the Blood being made more impure and thin by excrementitious Whey, may cauſe an Arthritis, with a ſmaller Feaver. And when the Gout is more general in many parts, and comes oftner, it is from Blood, which eaſily goeth through the Body, and not from a Defluxion from the Head, which is ſeldom the cauſe, but when it is in great quantity. Although a particular Gout, as the Feet and Hip, may be often from blood, with a Feaver. In theſe Gouts from blood, if it be very hot, and inflame the Nerves, the pain and burning is greater, with redneſs and tumor, (except it lye low, as in Sciatica) and with an eryſipelated Phelgmon. But if the blood be wateriſh, the tumor will be ſpread like an Oedema, and the pain leſs, and not very troubleſom, but becauſe it is in divers parts.

The cauſe of the heat and foulneſs of the Blood is mentioned in Synochs, as the uſe of ſtronge wine exceſſively which weakens the brain by aſtoniſhment, and makes the blood increaſe, grow hot and thin, which is eaſily therefore inflamed, to produce a Feaver, by which a part of it is ſent to the Joynts. This is the cauſe and puniſhment of the Gout. Hence it is the rich mans Diſeaſe, who uſeth exceſs in wine, and ſpiced meats, that inflame the blood. And ſomtimes the poor mans from other cauſes, as is the Feaver with Eryſipelas. It comes to all by the Diſpoſition of the Part through weakneſs, and by looſneſs of the paſſages; as we ſhewed in Arthritis from Defluxion, eſpecially if the Flux hath been often, which cauſeth greater weakneſs.

Alſo Blood ſent to other parts that are fleſhy in Synochs, as into the Emunctuaries of the Kernels there, may cauſe pain, with a Tumor and Feaver: as we ſhewed in Feavers. Or diſturb by its plenty and thinneſs, when it goes to any part of its own accord, or by labor or pain.

An evil quality cauſeth the French Pox.

An occult malignant Quality, as appears by the effect, being external, cauſeth the pain about the Bones, which is called the fourth ſort of French Pox. This Quality comes from the Body of another infected, whether totally or in part: Therefore Whores infected, though they walk abroad, and have not great accidents, may infect others. And ſomtimes a Whore takes it, and gives it to the next Cuſtomer, and clears her ſelf. This Quality infecteth by touch, eſpecially of the naked tender Privities in Copulation, and ſo it paſſeth from one Inſtrument of Generation to another, and ſo to the whole Body. Hence it is that it came from the *Indies* to us. And it may come by infected Excrements other wayes, as Sweat in Hankerchers or Shirts, or from Spittle, even as the poyſon of venemous Breaſts is communicated by biting; therefore beware of Spoons and Cups, wherein they drink, and Kiſſes by which Nurſes infect Children. For in my Fathers time in our honeſt Family, my Mother was infected with her Child that ſhe gave ſuck to, by that means, through a Harlot that was infected, and her ſervant. And my Father with the help of a Chyrurgion, cured them both by ordinary means. It may come alſo from the touching of mattery Clouts. And a Midwife of ſixty years old in *Paris*, delivering a woman that had a venereal Ulcer, had an Ulcer in her Hand, by which means ſhe infected many honeſt Women, when ſhe touched their Privities, as *Lewiſa Burgeſia*, the famous Midwife to the Queen of *France*, recorded in her Book. Few Bodies are thus infected, but Infants and very tender People often touched. Nor can it come by breath, for then more would be infected; although many to ſmoother their unlawful Lechery, pretend it.

This Quality is in a Vapor or Humor, and goes from the Body to Body, and infects the Part it firſt toucheth, and ſeldom ſtayes there, but goes like poyſon through the body, eſpecially into the membranous parts; and if it be outwards, it is like an Elephantiaſis, and cauſeth loſs of Hair, Puſtles, and Ulcers: As that ſhall be ſhewed in diſeaſes of the Skin from the Pox. If it be deep in the ſolid parts, then it gets into the Perioſtium and Membranes, and cauſeth pain about the Bones, eſpecially when there is no Fleſh, and where many Membranes and Nerves meet in the Heart, Breaſt, Skins, and the like. Theſe pains are increaſed with heat, and produce Nodes, after the Perioſtium is eaten away; as we ſhewed in Cephalæa, from congeſtion of humors. And few other inconveniences, but no great change in the Spirits and Humors, nor doth any thing appear of that Nature in the Urin, Excrements, and Hurt of the Functions, except accidents do ariſe from great pain, and long continuance, or violent medicines, which we muſt rather ſtudy to cure then the Pox.

An evil malignant quality cauſeth external malignant Head ach.

There is alſo inwardly a ſecret Maligni ty, which being an enemy to ſome parts, cauſeth pain in the Habit of the Body, like this, ſuch as we ſhewed might come from the Pox, taken from without, or a Head-ach external without the Pox, when beſides the diſtemper cauſeth pain, there is alſo Malignity, by which it laſteth longer. And ſome pains of the Joynts that come from Defluxion, when the Humor is malignant, may produce ſomthing malignant, and unknown, formerly in divers Diſeaſes, which is often and laſting, and hath its proper accidents, and can ſcarce be cured. And we may very well conceive that the pain in the Cramp, which runeth through the Body, comes from a perverſe quality that is offenſive to the Nerves, by the wonderful and ſtrange accidents it produceth for a long time, by the Nerves, through the whole Body, to the extremity of them, where the pain is greateſt. And thoſe Diſeaſes which are called Colds and Heats, come from Malignity, as appears by their prodigious Symptoms.

A malignant Quality cauſeth a malignat gout.

A malignant quality is the cauſe of the running pain in the Cramp.

A malignant quality is the cauſe of pain in depraved Touching.

The Cure.

The Cure of pains in the Habit of the Body, when other accidents are greater.

When accidents are joyned with pains in the Habit of the Body, and are greater we ſhewed the Cure thereof to be in the accidents that are moſt urgent. As when pain comes from Diſtention, and from too much motion, it becomes a ſtretching pain with Lazineſs, or a violent with the Cramp: The Cure of one is ſhewed in the Cramp, and of the other in Lazineſs. And if the pain increaſe from too much motion, and a Flux of blood be joyned, you muſt uſe the ſame Cure. And if the pain be chiefly in the Back from inward Diſeaſes, it muſt be cured as the Symptom of theſe Diſeaſes. If Wind cauſe ſtretching pain, cure it as Spaſmus, or Cramp, or Palpitation. If the Members are weary, and broken by long lying and Compreſſion, reſtore them as in Lazineſs. If any part is pained from Compreſſion, the cauſe being taken away, it ceaſeth, except Inflammation follow, which requires a Cure by it ſelf. If pain come from broken or diſlocated Bones appointed for motion that preſs the parts: The Cure is ſhewed in Immobility. If it be in other Fractures, that cauſe no loſs of motion, becauſe other internal and external accidents follow with Tumors, cure it as in Tumors. If pain come from a Rupture, ſee Ruptures and Tumors from thence. If there be evil Feeling from a hot or cold Diſtemper external upon the part, ſee the Diſeaſes of the Skin. If from Feavers, ſee Feavers. If external Head-ach come from Humors, ſee Head-ach. If in a Palſie there be pain from a malignant Defluxion, ſee the Palſie.

The Cure of Head-ach from Humors.

We ſhall diſtinguiſh the Cauſe of Pains in the Habit of the Body, which are greater then their accidents; as the three kinds, either ſuch as are about the Joynts, or Fleſh, or Bones, and cure them in reſpect of their Cauſes. But if the pain be from Flux of Blood, or Water called the pains of the Joynts: We ſhall cure it the ſame way. As if it be arthritis from the congeſtion of Humors, becauſe it come from a Defluxion firſt. And the ſame way of cure ſhall ſhew how a heavineſs of the Head from congeſtion of Humors, that goes before an Arthritis and Defluxion may be cured, and they prevented. And if pain like that from Defluxion, come of wind, becauſe the ſame things that diſſolve a flowing Humor expel wind: We ſhall uſe the ſame way to cure and prevent the breeding thereof. But pains from a malignant quality, will have a particular Cure, as from the Pox, and the like, of which, when we have ſpoken of the Cure of Defluxions and Joynts.

The Cure of Pains in the Habit of the Body which are greater then the accidents.

The Cure of Arthritis from Congeſtion of Humors.

The Cure of external heavineſs of the Head from congeſtion of humors.

The Cure of Pain in the Habit of the Body from wind.

Defluxions that fall generally into the Habit of the Body, though they are uſual, and upon divers parts, moleſting more or leſs, and comming from ſight Cauſes and returning, except they fall upon the inward parts, eſpecially the Midriff, are not ſo dangerous, and are eaſier cured then the Joynts. And pain from wind, is more eaſie to be cured. All Joynt-pains are perverſe and laſt long, and eaſily return. Among which, though the general Gout be the greateſt pain, and ſomtimes dangerous, with other accidents, yet becauſe the cauſe muſt be great, that muſt ſend it to ſo many places, it is not ſo uſual, and it comes ſlower, and ſeldomer then the reſt, and ſomtimes never returns. Podagra and Chiragra are moſt uſual, and return monthly or yearly, and are hard to be cured when fixed, but kill not but by other accidents, for many have lived long with the Gout, and others by the Gout have been freed from greater Diſeaſes, which the Defluxion uſing to fall before, upon more noble parts would have cauſed. The Sciatica and Shoulder-gout, are leſs uſual then the Podagra, and more then the Arthritis, they return ſeldomer then the Podagra, and ſooner then Arthritis, and ſomtimes are away ſome years, and return again, and laſt as long as an Arthritis, for ſome months, but with leſs danger. Theſe things obſerved, we muſt make our Prædictions accordingly, eſpecially in the Podagra fixed or hæreditary, and not promiſe raſhly to cure. But we muſt try if we can make it leſs, or come ſeldomer, and bring it to paſs if poſſible, and comfort the Patient that age abateth the pain.

Prognoſticks in Defluxions in general, and in the Gout.

The Method of curing in Defluxions, and Joynt-pains, is to prevent, and take away the pain: We muſt prevent ſo that they may return leſs and ſeldomer. By hindering the increaſe of blood or water in the Head, or the whole Body, by Diet and Evacuations, and Correcters of Diſtemper and Weakneſs. We divert the Flux from the Joynts and other parts, with things that ſtop, or by derivation of the Humor. And we confirm and ſtrengthen the parts, to which they uſe to flow, when they are looſe and weak, that they may not receive the humors, and amend the diſtemper.

The prevanting and curing of Defluxions, and Arthritis, and its Kinds.

After

After the Defluxion is fallen, and in the time of pain, we cure by ſtopping at the Fountain, or ſtraitning the paſſages, through which the Humor flows, and by Revulſion from the part, and Derivation and Repercuſſion, and we allay the pain, and prevent a new Defluxion, proceeding by degrees, eſpecially after the Humor is fallen down to things that digeſt it, if it be Blood, and diſcuſs, as in other Inflammations. If it be another Humor, let the means be ſtronger, and if it lye deep, more attractive, and conſuming or opening. And in the Declination, we ſtrengthen the part, and conſume the reſidue. Theſe are done divers wayes, as the Defluxion is upon the Joynts, and Members, or Back, Breaſt, or Neck, or Face (of which in Tooth-ach) or as it is a general Arthritis, or a Podagra, Chiragra, Gonagra, Sciatica, or Shoulder-gout, called Pain of the Homoplate, by Diet, or Medicine, by Evacuations, by Stool, Vomit, Spitting, Sweating, Piſſing, Cutting, Burning: Alſo by Alterers inwardly taken, and outwarly applied, as follows.

A Diet to cure the Arthritis, and Defluxions.

The Diet muſt be to prevent Excrements and Humors, or keep them from flowing. Let the Air be temperate and dry, for cold, windy, cloudy, and moiſt Weather and hot, provokes Defluxions, and the more when it ſuddenly alters from cold to hot. Let not the Patient waſh his Hands or Feet in Water, for it is hurtful, whether cold or hot. And Wine is better, as we ſhall ſhew in ſtrengthning the Joynts. Let the Diet be convenient in quantity and quality, with Exerciſe, Sleep, and other Motions of Mind and Body: As we ſhewed at large in Weakneſs of the Stomach, to prevent Excrements. If it comes from Blood, we muſt diet as in Feavers, eſpecially in Gouts, that eaſily return, as the Podagra, and good order of Diet-wine, and Women wil prevent, or abate the Gout: As when there is a ſimple exquiſite Diet, only eating once a day, abſtaining from wine, or drinking it ſparingly, or with water. Inſtead whereof they may have Drinks made fit, or Meath. As for Venery, they muſt either give it over, or uſe it ſeldom, and not ſtanding. And this may be the reaſon why *Hippocrates* ſaith that Women have not the Gout, before they have uſed Venery, and Eunuchs ſeldom have the Gout.

When the pain is begun, let the Diet be thin, and let them faſt as much as they can; and uſe Medicines proper in their Diet, according to the accidents. In the Arthritis forbid wine. And if they be hot, or feaveriſh, give ſteeled water, Juleps, and ſharp Syrups, if the Defluxion be in its Courſe. If they be not hot, give the Decoction of Coriander, with Syrups, or Hydromel, and rub the whole parts, and the oppoſite to derive the Humor inſtead of Exerciſe.

The Cure of prevention of Defluxions, and arthritis by Evacuations.

To prevent Defluxions and Joynt-pains, open the Belly, and purge Spring and Fall, and at other times, if the Body be foul, as the Humor is wateriſh, which requires ſtronger means, or bloody, which requires leſs, with Præparatives if need be: as we ſhewed. If a Podagra comes from Blood, we ſhewed the cure in a Synoch, with Eryſipelas. If Defluxions and Arthritis come from water, there are Purges mentioned in Diſeaſes of the Brain and Nerves. If the Humor now flow, they muſt be uſed warily, leaſt the Defluxion increaſe thereby, chiefly in the Joynt-pains, not only from Blood, in which it is enough to keep the Belly open, but if from other Defluxions, becauſe they are thin, and eaſily ſtirr'd, uſe gentle Purgers, with Binders, and divert the Matter rather then move it with ſtrong Medicines. This muſt be obſerved at the beginning, in the Cure of Arthritis, in the Pains of the Joynts, it is beſt to avoid ſtrong Purging, not only for the reaſons ſhewed, but to hinder pain by violent motion, uſe Laxatives firſt and after ſtrong Purgers.

Thus, give Clyſters to prevent and cure, for they open the Belly, and draw from the Joynts and other parts. Eſpecially in the Sciatica, and pain of the Back and Loyns, from Defluxions, becauſe they come near to the parts affected, and abate the pain, and if they be ſtrong, draw the Humor away: Let them be ſuch as were mentioned in the like caſe.

Or if the pain come from blood, make a cooling and pricking Clyſter of the Decoction of Polypody, Mallows, Marſh-mallows, Violets, Beets, Mercury, Bran, and cold Seeds, with Sugar, Honey, Oyl, Butter, Caſſia, Yolks of Eggs, and the like.

In other caſes of Defluxions and Arthritis, eſpecially in the Hip and Parts adjacent, uſe this common looſning, pricking, and anodyne Clyſter. Take *Althæa roots two ounces, Orris an ounce, Mallows, Blites, Beets, Coleworts, Mercury, Bettony, Calaminta, Penny-royal, each a handful; Chamomil, Melilot, Dill, Stachas, and Lavender flowers, each a pugil; Fænugreek, and Lineſeed, each half an ounce; Caraway ſeeds, and Rue, each a dram; Bran a pugil,* boyl and ſtrain, add *Honey two ounces, red Sugar an ounce, Turpentine,* diſſolved with *the Yolk of an Eg, a dram and an half, Hiera, Catholicon, or Electuary Indi half an ounce, Oyl of Lillies, and Chamomil, each an ounce and half; Sal Gem half a dram*: make a Clyſter.

Another that heats and diſcuſſeth. Take *Orris roots an ounce, Calamus, Elicampane, each half an ounce; Hedg-muſtard, Groundpine, Calaminta, or Balm, Time, Marjoram, Bettony, each three handfuls; Flowers of St. Johns-wort, Stachas, Lavender, and Roſemary, each a pugil; Bay-berries half an ounce, Cummin, and Seſely ſeed, each two drams;* boyl them *in Wine, and Water,* add *Honey of Roſemary an ounce and an half, Juyce of Rue an ounce, Sack two ounces, Benedicta Laxativa an ounce, Caſtor a ſcruple, Oyl of Rue three ounces,* with a little *Sals* make a Clyſter, if you add *half a dram of Oyl of Spike,* or a little *Oyl of Time, Roſemary, Calaminta,* it will be ſtronger.

In the pain about the Loyns, give Oyl of Rue alone.

A ſharp diverting and purging Clyſter. Take *Briony-roots, and Hermodactls, each ſix drams, Agarick, Aſarum, each two drams; Hedg-muſtard, Penny-royal, Wormwood, each a handful; Tops of Centaury a pugil, Rue, and Hedg-muſtard ſeed, each two drams;* boyl, ſtrain, and add *Honey an ounce and an half, Urin of a Boy two ounces, Hiera Logadii, Ruſs, or Colocynthides three drams, Juyce of Water-creſſes an ounce, Oyl of bitter Almonds three ounces,* with a little *Sals* make a Clyſter. If you add *a dram of Coloquintida,* it will be better.

Alſo Decoctions mixed with the Pickle of Fiſhes, and urin alone, makes good Clyſters. Some add Chymical Oyls

And others give Sory in Wine, which corrodes, and the Pickle of the Fiſh Silurus.

Suppoſitories alſo that are ſharp, ſtir up Nature, and derive from the part. As, Take *boyled Honey,* and add *a dram of Hiera, Eſula half a dram, Sal Gem. a ſcruple,* with *Mouſe dung* make a Suppoſitory.

All theſe Purges compoſed againſt the Gout and other Defluxions; if it come from Blood, give gentle things, as Syrup of Roſes, Caſſia, Manna, Catholicon, Diaprunis, Tryphera Perſica, and Broath of an old Cock, *Dioſcorides.*

Or this: Take *Rhubarb four ſcruples, Spike half a ſcruple,* infuſe them in *Water of Iva,* or the like, ſtrain, and diſſolve ſome of the forementioned therein. Or if you will have it ſtronger, *two drams of Electuary of Juyce of Roſes.*

To cleanſe the Blood. Take *Hops and Fumitory, each a handful; Cordial Flowers a pugil, Sebeſtens ſix pair, Tamarinds half an ounce, Liquoriſh three drams, Polypody half an ounce, Thyme, and Epithymum, each a dram; Senna two drams,* boyl, ſtrain, and infuſe therein *Rhubarb a dram, Spike a ſcruple, Citrine Myrobalans a dram and half,* ſtrain them ad *Syrup of Roſes an ounce, or half an ounce of Catholicon, or Triphera*: make a Potion.

Or

Or this Decoction. Take *the Broath of an old Cock, Capon, or Veal,* boyl therein *Bark of Lignum vitæ, or the Wood two ounces,* and infuse in the *hot strained Liquor, Senna two ounces,* let it cool by degrees twenty four hours, add *Syrup of Roses four ounces.* Give it four mornings, with a little *Cinnamon-water,* this draws Water from the part. And some add *an ounce of the Water of Bears Ear* to every Dose.

Or this Syrup. Take *Myrobalans, Chebs, yellow and indy, each an ounce; Polypody an ounce and half, Raisons stoned twenty pair, Cordial Flowers two drams, Spike half a dram,* infuse them in *Wormwood-water,* boyl, and strain, and add *Juyce of Roses six ounces, Manna four ounces, Sugar two ounces,* give *three ounces* at a time.

If it come from a wheyish Humor, give Hiera, Alephangina, Assaieret, or Pills of Rhubarb and Agarick.

An Electuary: Take *Catholicon an ounce and half, Senna six drams, Tartar half an ounce, Anise-seed two drams, Rue seed half a dram, Roots of five leaved Grass a dram, Ginger half a dram, Cinnamon a dram,* with *Syrup of Roses* make an Electuary: Give a bolus every week.

A Potion: Take *Chips of Guaicum half a pound, Roots of Dwarfe-elder, Elicampane, Hermodacts, each half an ounce; Senna four ounces, Agarick half an ounce, Ginger half a dram,* with *Honey, Wine, and Water,* make a Decoction for six doses, every other third day, or twice a week.

A Potion: Take *Agarick two drams, Rhubarb a dram and half, Myrobalans, Chebs, and Citrine, each half a dram; Aloes a dram, Roots of five leaved Grass, of Birthwort, Spike, Mastick, Myrrh, Amber, Cubebs, Ginger, each a scruple;* with *Turpentine* make Pills: Give *half a dram* twice or thrice in a week, add Diagredium, if you will have it stronger.

Or these: Take *Rhubarb, Agarick, each half an ounce; Myrobalans, Chebs, and Citrine, each a dram; Aloes two drams, Sarcocol, Bdellium, Sagapenum, each half a dram; Roots of Birthwort, Valerian, Mum, Gentian, Herb Iva, Germander, Tops of Centaury, St. Johns-wort, Parsley seed, each a scruple; Spike, Zedoary, Ginger, Mace, Sal Gem. each half a scruple;* with *Syrup of Coleworts* make a Mass.

Pills of Hermodacts good in the Joynts, may be used to prevent. The Arabians make them of Hermodacts, Cummin, and Ginger, with Honey; the Greeks add Carthamus seeds, Euphorbium, Myrrh, Mastick, Anise, Pepper. The strongest are these called the lesser, made of Scammony, Hermodacts, Myrobalans, Aloes, and Roses, and are good in a hot Cause. Those called the greater, work strongest, and are best in a cold Cause, made of Hermodacts, Coloquintida, Turbith, Myrobalans, Aloes, Bdellium, Sagapenum, Opopanax, Sarcocol, Euphorbium, Castor, Rue seed, Agrimony, Smallage, and Saffron, with Juyce of Coleworts. Arthritical or Joynt-pills, are made of Hermodacts, Turbith, Agarick, Scammony, Aloes, Sal Gem. with Spices, Gums, and Seeds that break the Stone.

Or make Pills of Hermodacts, choosing alwayes the white, smooth, and easie to be beaten, that have a white Pouder, take heed of the Colchick poyson, whose heads are wrinkled, and are black within, and without, or dark red. Thus, Take *true Hermodacts half an ounce, Aloes, Turbith, Agarick, each a dram and half; Rhubarb, Myrobalans, Citrine, and Chebs, each a dram; Mastick two scruples, Euphorbium a scruple, Ginger, and Cummin seeds, each half a dram; Saffron half a scruple,* with *Honey, or Syrup of Roses* make a Mass, give *a dram,* add if you will make them stronger, *Diagredium a dram, or Troches of Alhandal two scruples,* and to *two scruples,* add *a scruple of Rhubarb,* and with the *Juyce of Iva, Coleworts, or Roses* make Pills.

Or thus: Take *Aloes six drams, Citrine Myrobalans a dram and half, Turbith, Hermodacts, each half a dram; Rhubarb a dram, Sal Gem. Ginger, each half a scruple; Diagredium, Troches, of Alhandal, each three scruples and an half;* with *Syrup of Roses* make Pills.

In Defluxions for to purge strongly, give an Electuary of Citrons, Juyce of Roses, Elescoph (Amoron of the French King, is commended in the Sciatica) and fine quibus Pills, of Myrobalans, and Aggregative. We use also things to purge Flegm from the Head and Nerves, as Diaphænicon, Diacarthamum, Indy majus, Pills of Cochiæ Aureæ, Fœtidæ, and of Sagapenum.

An Electuary commended by *Galen,* and others to take away pain of the Joynts presently. Take *Hermodacts, and Diagredium, each two drams; Ginger, Cloves, Cummin, and bitter Costus, each an ounce,* with *Honey boyled in white Wine three ounces,* make an Electuary, give *two or four drams in a Wafer dipt in Wine,* or drink it in *Wine.*

Or this: Take *Hermodacts, and Turbith, each two drams and an half; Agarick a dram, Aloes, Scammony, each two drams; Lilly roots, and Squills roasted each a dram and half; Tops of Centaury six drams, Olibanum, Galbanum, Ammoniacum, each a dram; Mastick a dram, Anise, Fennel, Parsley seed, each three drams; Cloves six drams, Cinnamon half an ounce, Cubebs, Spike, each two drams; Carpobalsom, and Wood-balsom, each a dram; three Peppers, each half a dram; Saffron a scruple, Castor half a scruple,* make a Pouder, and with *Honey* an Electuary, give it as the other.

Or the Electuary of Zeno.

Tablets for the same. Take *Hermodacts two drams, Turbith a dram and an half, Diagredium a dram, Rhubarb two drams, Spike a dram, Calamus, Cubebs, long Pepper, each half a dram; Sugar four ounces,* dissolved in *Rose-water,* make Lozenges, give *two drams.*

Or thus: Take *Turbith, and Rhubarb, each two drams; Carthamus seeds three drams, Diagredium a dram, Cinnamon, yellow Sanders, and red Roses, each a dram;* with *two ounces of Sugar* dissolved in *Rose-water,* make Tablets.

Much may be done by Vomit to prevent, because it cleanseth and derivesh, if they who are used to it, vomit once or twice in a month, or more two days together, especially presently after Meat, which if it were fat, and strong, and much, and the Belly rubbed, the Vomiting will be easier. In all Defluxions, and kinds of Gouts, Vomits, and Clysters, are better then Purges to divert. And in the Sciatica, it is good to vomit two or three days together.

Asarum and Broom are chiefly commended for Vomits in the Gout; as the Decoction of the Seeds or Roots of Asarum boyled in Water or Whey, or the Decoction of Broom flowers, and the Seeds of Ricinus in Broath.

Also the Decoction of Raddish seed, Atriplex, Dill, Water-cresses, Rocket, Dwarfe-elder, in the broath of an old Cock, with Oyl of Olive, of Chamomil, or Oxymel, or Honey, and Water, and the like.

By much Spitting we draw Flegm from the Head, as the Fountain to prevent Defluxions, especially when by the heavinesse of the Head, we suppose the Humor is gathered there; and when Nature doth not purge that way, we help her with Masticatories and Errhines.

Also Sweating is good to prevent serous humors, breeding the Gout, and they cannot be better sent from the whol Habit of the Body. And because the blood is thereby purged from water, it is good when the Gout comes from blood, to make it thicker.

They are continued a long time for four or five weeks, by a sweating Potion, in the Morning, and before Supper, made of the Decoction of Guaicum, Sarsa, or China, with Water of Iva arthritica, with a sparing Diet, with the Decoction of the same for Drink. And you may make Wine of the same; as we shewed in the French Pox. Also use Baths for a month, this will strengthen the Joynts.

Also it is good once a week, after Purging to sweat, to take away the Defluxion, by a dry bath, morning, and before supper, or in bed, with Treacle, Mithridate, or Rob of Elder a dram, Syrup of St. Ambrose six drams. And with the Decoction of Rupture-wort. Or half an ounce of Dwarfe-elder roots, or four scruples of the Seeds infused a night in white Wine, is good in the Gout.

Also you may sweat by Fumes.

It is not amiſs to diſcuſs the Matter, by ſweating; as I at large ſhewed in impotent Motion. In a Tub that hath had ſtrong Water, and Juniper burnt in it, or in a Cradle made on purpoſe, with an Alembick under it with proper things.

Alſo after Purging it is good to ſweat, eſpecially if Nature move that way, when the Defluxion is but in the beginning of an Arthitis force it not, leaſt the Humor being thin, flow the faſter; but if Nature tend that way, give ſome gentle Helpers mentioned.

By piſſing plentifully, the ſerous humors are carried from the Veins and whole Body, and it is good to prevent Gouts. And ſomtimes we provoke Urin in the Fit to derive, with the Decoction of Peaſe, opening Roots, Aſparagus, Melon ſeeds, and the like in the morning.

The preventing and curing of defluxions, & Gouts by cutting and burning.

We prevent Defluxions and Gouts, by opening a Vein in full and foul bodies, in Spring and Fall, eſpecially when the Gout is from blood. And *Galen* ſaith that he prevented the Gout by purging, and bleeding, and temperate Diet. Open the Arm-vein for generall Evacuation; or that in the Foot, for particular, which is good in Women, when the Terms are ſtopt. And it is acknowledged a ſingular Remedy to prevent the Podagra to let blood twice a year in the Foot. And it deriveth and preventeth, if it be done in the ſound Foot. And ſome open the Vein in the Loyns by the Buttocks, to prevent the Sciatica.

For Cure of Defluxions and Gouts from Blood, it is good to bleed at firſt, for Revulſion in the part diſtant, as in the arm or hand, to draw from the feet, or to derive by the part, near where it is found. In the Sciatica from blood, open a vein in the arm to revel; *Hippocrates* openeth them behind the Ears; and the Arabians opened the Veins by the little Finger. This done, open the Vein in the Ham or Ankle within, to derive, or without, if it appear moſt, which is called the *Sciatica-vein*, for its great benefit: This alone cures ſomtimes. This is done on the ſame ſide the Sciatica is, although we have known by experience, that bleeding on the ſound ſide hath cured. This bleeding in the Foot is good when the pain is not from blood, but then bleed not in the arm before. Otherwiſe you muſt not bleed raſhly in particular Gouts from water, leaſt you move the humors, except from the great pain, you fear a new Flux of blood, and then you may do it for Revulſion.

We uſe alſo Cupping and Scarification to prevent. of what cauſe ſoever it come, in the inſide of the Leggs or Ankles: It is good in Podagra and Sciatica. It is chiefly good every new Moon, to ſcarifie in the ſole of the foot, under the great Toe, to prevent a Podagra. And in the beginning of Defluxions and Joynt-pains; it is good for turning the Matter another way, in the oppoſite ſound part, as in the Sciatica in the Buttocks and Leggs, and in the Shoulder-pain in the Scapulæ. And to bleed by Leeches, in the Hæmorrhoids eſpecially, where there hath been a cuſtom.

Some teach that they can ſtop the Flux to the part, by opening and tying the Vein. And ſome have drawn yellow Water from the Hands and Feet, by cutting, which *Hippocrates* alloweth. But when no certain Matter appears, the way is doubtful and dangerous. And a light Inciſion is good when the Nodes or Knots ſtrive to get out, and the skin is there.

Alſo the Flux of Humors is diverted by burning and bliſtering, this is the beſt to prevent, and to cure by drawing forth the matter; and is to be uſed chiefly when the matter lyeth deep, and will not be diſcuſſed by Medicines, as in the Sciatica, and Shoulder-gout, or other kind, or defluxion upon the Members, when the Cauſe of the Diſeaſe ſticks ſtoutly: This is the laſt Remedy to take it out.

The gentleſt way is to apply things that make the skin red, only in the Hip, Shoulder, and other fleſhy parts, upon the pain. As Sinapiſms made of Muſtard ſeed, and Vinegar one part, and Figgs, or Leaven two or three parts, with Pigeons dung.

Stronger things bliſter and burn, called *Veſicatories* and *Cauteries*, theſe are applied behind the Neck to prevent, or to the arms to cure, to ſtop the Flux a little above the part, or when it is flown below it, as in the Joynt-pains, below in the Joynt, in the Sciatica, in the Inſtep, or to the Buttocks, in the Gonagra to the Ham, or upon the part.

Theſe Veſicatories are Flamula, Crowfoot, Spargraſs, Daphnoides, Capſicum, Dragons bruiſed, or Nettles, or Milk of Figgs, with Bran, and Vinegar.

Or apply a potential Cautery of Spaniſh Flies, and Leaven, and things that take away pain, mentioned in opening Impoſthumes.

This is done ſooner and better, with a hot Iron, and they will not feel ſo much pain, if you clap firſt a Plate of cold Iron upon the part, to be burnt, which hath a hole in it, through which the Cautery Iron may paſs, for by the Goldneſs of it, and preſſing, and ſtupefying of the skin, the pain is not felt.

The preventing and the Cure of the Gout, and Defluxion, by things taken in.

We give to prevent the Gout that returns ſo often, when it comes of blood things to cool and thicken it. Such as we ſhewed in Synochs, with Eryſipelas, as ſharp Waters and Spaws, by uſe whereof many have been kept free from the Gout. I knew a man that was troubled with the Gout, and lived many years after, by the uſe of a Drink made of Bar-berries, Prunes, Plumbs, Apples, and ſour Pears, with a few Juniper-berries; and ſome have been cured by drinking of aſhes, Milk; others with Vinegar, for divers dayes. *Dioſcorides* commends Vinegar, and Honey; others Vinegar of Squills.

If the pain come from a watery Defluxion, then give things to conſume it, and to ſtrengthen the brain and Nerves, by which the Gout is prevented, if conſtantly uſed. And the Podagra from blood, is ſo prevented by temperate things that conſume the Serum, and make the blood purer and thicker, Theſe are mentioned in a Palſie from Flegm, and Weakneſs of Stomach, and other Diſeaſes from Defluxions.

Among which the Water of Groundpine, or Iva arthritica, is beſt, or the Decoction thereof, in Hydromel, Oinomel, or Honey, and Wine, Water, or Vinegar, called Oxymel, if often drunk; or a ſyrup of the juyce of it; or a Conſerve, or a Pouder of the ſame; or of Primroſe, or Cowſlips. Alſo Bettony, Sage, and Stœchas.

Theſe following taken many weeks together, dry up Defluxions, and are excellent.

As Decoction of Althæa roots, Graſs roots, Aſparagus, five leaved Graſs, white Thorn, Echium, Corn-poppey, and Æthiop leaves, are approved of *Dioſcorides* againſt the Sciatica, in wine, or wine and water, with Honey and Sugar.

An Electuary. Take *Conſerve of Groundpine two ounces, of Primroſe, Lilly of the Valleys, Broom, and Bettony flowers each an ounce and half, Conſerve of Roſes an ounce, Cinnamon a dram, Cloves, Galangal, Nutmeg, each half a dram; Ginger a ſcruple, Spike half a ſcruple, Coral a dram, Harts horn, and Ivory, each half a dram;* with *Syrup of Bettony, or Groundpine*, make an Electuary: Give as much as a *Nutmeg*, and drink *Bettony water* upon it.

Another: Take *Seeds of St. Johns-wort, Leaves of Germander, each two ounces; Groundpine an ounce and an half; Bettony half an ounce, round Birthwort roots an ounce and half; Saſſa an ounce, Angelica ſix drams, Saſſaphras half an ounce, Aſphodel roots*, if they can be had *two drams, Ivory, Harts horn, Amber, each a dram; red Coral a dram and half, Cinnamon two drams, Cloves a dram, Saffron half a dram*, add to them poudered being *an ounce, two ounces of Honey*, give *four ſcruples or a dram.* If you would have *Pills*, mix the *Ponders with Turpentine*, and ſome proper *ſyrup*, and give *half a dram.*

Another to be uſed daily. Take *Sarſa four ounces, St. Johns-wort ſeeds, Leaves of Groundpine, and Germander, each eight ounces; round Birthwort roots ſix ounces, Angelica three ounces, Cinnamon two drams, Cloves four ſcruples, Saffron two ſcruples,* with *Honey* boyled in *white Wine,* make an Electuary.

Or theſe Pills: Take *Roots of round Birthwort, and Angelica, each two drams; Leaves of Groundpine three drams, Rupturewort a dram, Spike half a dram, Saffron a ſcruple, Aſhes of dead mens Skuls a dram and half,* with *Turpentine, and Syrup of Betony,* make Pills: Give *a dram.*

Sciatica pills: Take *Pouder of Groundpine ſix drams, Gum Ammoniacum, and Opopanax, each a dram; Myrrh half a dram, Caſtor a ſcruple, Euphorbium half a ſcruple,* with *Turpentine* make *Pills.*

A Sciatica Electuary: Take *Groundpine, and Germander, and Ivy, each half an ounce; Rue, Sage, Mugwort, Savine, Bettony, Thyme, each a dram; Seeds of St. Johnswort, or Aſcyri, or Androſæmum three drams, wild Rue, and Southernwood ſeeds, each a dram; Madder, and Monks-Rhubarb roots, each a dram and half; Pepper, and Cardamoms, each half a dram;* make a pouder, and with a *pound of Honey* an Electuary, give *a dram.*

Or, Take *the Pouder* laſt mentioned *an ounce and half, Roots of Xyris, Polemonium, and white Poplar barks, each a dram and half; of Heliochrys, Arctium, Chamæyſſus,* called *Ground-Ivy, Daſy flowers, and Comfrey, each a dram; Cappar, and Ocimaſtrum ſeeds, or wild Baſil, each half a dram;* with *Honey* make an Electuary: Give it as the former.

An excellent Syrup againſt all ſorts of Gouts. Take *Sarſa two ounces, Calamus, and Roots of five leaved Graſs, and Birthwort, each an ounce; Angelica half an ounce, Aſarum two drams, Groundpine, Rupturewort, and Bettony, and Germander, each a handful; Sage, Thyme, Mints, Marjoram, each half a handful; Primroſe, and Comfrey flowers, each a pugil; Roſemary, Stœchas, and Lavender flowers each half a handful; Aniſeſeeds half an ounce, St. Johns-wort ſeeds two drams, Baſil, Seſeli, and Rue ſeed, each a dram;* boyl them in *Water,* and the third part *Wine,* ſtrain, and add *Honey a pint,* make a Syrup, with *Cinnamon two drams, Cloves a dram*: Give *an ounce* to prevent, alone, or with *Water of Groundpine, or Bettony.*

A Pouder of aſhes to dry up Water. Take *Aſhes of a dead mans Skull an ounce, of a Bulls pizzle, or Caſtor half an ounce, of Swallows, Cuckow, or Kites two drams, of Harts-horn, and burnt Ivory, each a dram; of Amber half a dram, Pearl half a ſcruple, Cinnamon two drams, Diagalangal and Diamoſchum, each half a dram; Sugar of Roſes, and Sugar Candy,* as much as all the reſt: Give *a dram and half,* and drink wine with proper diſtilled water thereupon, or make Tablets with Sugar diſſolved *in Bettony or Groundpine water.*

In the Cure, give things to ſtop the Humor, when it falls. If it be blood, let it be cooled and thickned, with Syrup of Violets, Water-lillies, Endive dryed, red Roſes, Myrtles, Julep of Roſes and Violets, with Water of Sorrel, Plantane, Lettice, Roſes, and the like. Or with a Decoction of Prunes, Sebeſtens, Jujubes, and the things mentioned in Synochs. To ſtop the Humor, uſe things mentioned in Defluxions and Catarrhs.

Somtimes give Narcotick Opiats in both caſes, they are not dangerous, for they abate pain, and ſtop the Flux, as Treacle and Mithridate; and if the Defluxion be wateriſh, ad a little Bole. Alſo Philonium Aſyncritum, and things mentioned in Colicks that heat, if there be pain and watching.

Adding as followeth, to ſtop Defluxions. Take *Maſtick, Frankincenſe, each a dram; Storax half a dram, fine Bole a dram and half, Ivory and Bedeguar, each half a dram; Spike half a dram, Saffron half a ſcruple, Opium five grains,* with *Syrup of Poppies* make Pills: Give two mornings and evening.

The outward cure of Defluxions, & Gouts and Prevention.

We apply Remedies to the head and other parts, ſome at firſt, others in the declination.

In a Defluxion or Gout, from Rhewm from the Head, after decent purging, we apply dryers and ſtrengthners to the head out of the fit after the Defluxion, and in the fit, when we fear not the Return of the Defluxion; as we ſhewed in Diſeaſes from Flegm.

As Lotions for the Head, of Sage, Marjoram, Bettony, Groundpine, Stœchas, Lavender, Roſemary, Agarick, and the like boyled in Lye of Vine aſhes, with other drying things proper for the Head.

After waſhing, that it may not raiſe a Defluxion preſently, dry the Head with a fumed Cloath, with Amber, Maſtick, or Sandarach, and then comb it well.

Alſo Pouders in Caps are good, or for the Hair, made of Head-herbs, and dryers; as Nigella, Maſtick.

We apply to the parts receiving the Defluxion to prevent it, things to ſtrengthen, and to conſume the reſidue, and to confirm the Cure.

The Hand or Foot is to be often waſhed with a Lye of ſteeled water, and aſhes of Beech, Oak, Juniper, Vine, Horſe bones, and Dears bones, and the like, Roſemary, Bayes Hermodacts.

To this Lixivium we add Wine, or Urin, or Salt, or Allum, to make it ſtronger, ſometimes Tartar, and Brimſtone.

Salt-water whether natural or artificial, doth the ſame thing, alone, or poured through aſhes, to which Myrrh added, makes a good Fomentation.

Or the decoction of Juniper, or Salt, or of Rapes, or a Fox inbowel'd.

Or thus, when there is a looſe Tumor in the declination of a Diſeaſe. Take *Roots of Dwarfe-elder a pound, Groundpine a handful, red Roſes, Chamomil, and Melilot flowers, each a pugil; Pomegranate flowers, and Myrtle ſeeds, each a dram; Earth worms many,* boyl them in *four parts of Lixivium, two parts of Wine, and one of Water.*

Or this: Take *Dwarfe-elder roots, and Hemp two ounces, Sage, Wormwood, Bayes, Organ, Penny-royal, Calamints, Mints, Thyme, Groundpine, Bettony, Hyſop, Planſane three handfuls, Moulin, Roſemary flowers, and red Roſes three pugils, Juniper and Bay-berries a pugil, Myrtle berries half an ounce, Cypreſs nuts an ounce, Pomegranate peels and flowers half an ounce;* make a Decoction in *Water,* and the fourth part *Wine,* add *Salt an ounce, Allum half an ounce,* waſh therein to aſtringe more, add *Galls, Acacia, Hypociſtis an ounce,* and for the poor, *Stones, Pears, Services, Medlars.*

Oyntments to ſtrengthen the weak looſe parts, are Oyl of Grape ſtones, with Oyl of Salt, and Oyl of Hazle-nuts, Cherries, de Been, Citrinum Oyntment, and that of Orange flowers.

A ſtrengthening Oyntment. Take *Oyl of Myrtles two ounces, Salt two drams, Myrrh a dram.*

It is ſaid that the aſhes of a Kites head or bones, with Oyl, is proper.

Another: Take *Oyl of Worms, and Frogs, each an ounce and an half; Oyl of Roſes, and Gooſe greaſe* dropt into *Vinegar, each an ounce; Acacia, and Pomegranate flowers, each a dram, Cow dung dryed two drams, Salt a dram, burnt Allum half a dram,* with *Wax* make an Oyntment.

Or this: Take *Bramble tops, Sumach, and Houſleek,* boyl them in *red Wine,* add of *Barley flower* not ripe and parched, called *Alphitum* as much, with the ſixth part of *Pouder of Pomegranate peels* make a Cataplaſm.

This is an excellent Remedy to ſtrengthen and eaſe pain in the Gout. Take an old Boar Cat that is fat and black if it may be had, gut him, and flea him, cut off his Head and Feet, and put him into the paſte following. Take *Gooſe greaſe, that is the dripping of a Gooſe,* which ſell when it is roaſted into a Dripping-pan half ful of *Wine and Vinegar four ounces or ſix, Pitch, Turpentine two ounces, Badgers greaſe, Dears ſuet, each two ounces; Virgins wax four ounces,*

Oyn-

Oyntment of Agrippa an ounce, Frankincenſe, and Maſtick, each half an ounce; make a Paſte, ſtuff the Cat therewith, and roaſt it, keep the dripping for an Oyntment.

It is good to ſtrengthen weak Hands and Feet, to put them into the Wine-preſs, where there are black Grapes.

They ſay *Sextus Pompeius* was cured with Sweating in a Heap of warm Wheat.

Alſo Baths of Sulphur, Salt, or Niter, both ſweat and ſtrengthen. And bucketing of the Head therewith, as the Cuſtom is, cureth the Diſeaſe at the Fountain. And the Mud or bottom of ſuch Waters, applied to the parts ſtrengthneth.

Or artificial Baths of ſtrengthening Herbs mentioned, and the skin of a Dog are proper.

In the time of uſing all theſe, leaſt the humors be ſtirr'd up by heat and moiſture, and ſent to the part which is weak, and apt to receive them, uſe the defenſive Plaiſters mentioned.

For Cure, at the firſt grudging, apply outwardly things to ſtay the Flux. In the Arthritis, eſpecially apply them to the Joynt within, and bind them if you can, and rowle them.

Make them of Bole, the white of an Eg, and Vinegar, and apply it with Cotton or Linnen.

Or, Take *Bole two ounces, Dragons blood half an ounce, Snakeweed roots, Acorn cuppi, each a dram and an half;* pouder them, and with *Vinegar, and whites of Eggs,* apply them, you may add *Pomegranate flowers, Spunge, Roſes, Grapeſeeds,* and the like.

Or make it of Litharge, Bole, Vinegar, whites of Eggs, and Mucilage of Fleabane ſeed.

Add a little Oyl to keep it from drying too ſoon.

Or, Take *Pulp of green Pears, Quinces, Services, Cornilberries, Medlars, Dates, Olives,* boyl them in *red Vinegar,* with *Crumbs of Bread,* and make a Cataplaſm.

Or uſe the Plaiſters againſt Rhewms in the Eyes, mentioned in Ophthalmy.

Bind the part affected very hard: and the Thighs that the Humor fall not down.

Upon the part alſo lay (according to the time of the Diſeaſe, as it is in the beginning or progreſs, or as the Flux is flowing or flowed to the part) Repellers, or Anodynes, or Narcoticks, or Diſſolvers.

At the firſt while the Cauſe floweth, uſe aſtringents and repellers, that bind and are cold, when it comes from blood, and there is Heat in the part. But in the Sciatica and other fleſhy parts, where the humor lyeth deep, they profit little. Theſe we uſe with anodynes ſomtimes and gentle diſſolvers; Thus,

Hippocrates bids us uſe cold Water to repel and cool, or Snow, or cold Vinegar, applied with a Clout often.

Or three parts Water, and one Vinegar, or red Wine two parts, with Bran, and Lineſeed boyled therein, or Lupins, when the diſeaſe is in the increaſe.

Or boyl Vinegar and Water in the ſame proportion, with Wheat, or Barley-meal, and Lineſeed, to a Cataplaſm.

Or uſe Plantane, Lyſimachia, Houſleek, Violets, Purſlane, Endive, Solomons-ſeal, Fleabane, Nightſhade, Pellitory, and Poplar leaves, of Gourds, Water-lillies, Lens paluſtris, or wild Lentils, with Oyl of Greaſe, firſt incorporated with Meals and Vinegar.

Or Coleworts, with Fleabane ſeed, or Fœnugreek, and Vinegar, or roaſted Quinces, and Barley meal.

Or Plantane leaves bruiſed with Barley meal, and Crumbs of bread, and Oyl of Roſes.

Or boyl Bran and Barley meal in ſteeled Water, with Roſes, add Oyl of Roſes, and at firſt Vinegar, and in the increaſe, Flowers or Oyl of Chamomil.

Or mix the Juyces of the Herbs with barley flower, Oyl of Roſes or Violets, with the Yolk of an Eg, and Turpentine and Vinegar.

Or thus; Take *Oyl of Roſes four ounces, Juyce of Lettice,* or the like, *two ounces, Vinegar an ounce,* with *two Yolks of Eggs, and Barley-meal,* make a Paſte.

Or, Take *Oyl of Roſes, and Vinegar, each two ounces; Bole two drams, red Sanders a dram.*

Or a little Ceruſs, with Waters, or Juyces, and Vinegar, or Oyl of Roſes, or Violets, with diſtilled Waters.

Or the Decoction of the Herbs mentioned, with Vinegar, for an Epithem.

Or uſe *Galens* cool Oyntment, the Counteſſes, or Oyntment of Poplar. Theſe are alſo good when there is a hot Defluxion upon the Loyns.

Or a great pain, uſe Anodynes, ſuch as by gentle heat, do rarifie and cheriſh, mixt with Repellers in the beginning, while the Humor flows; and after, when the Matter is flowed or fallen; things that diſſolve more: Thus,

Pour warm Milk thereon, or apply it with a Clout. And at firſt quench Steel in it, and to allay pain, boyl in it Fœnugreek, or Lineſeed, Hermodacts, or the like.

Or add an ounce of Sulphur, or Litharge, to a pint of Milk, it will diſcuſs what is gathered to the part.

Or, Take *an Eg,* and beat it with *Oyl of Roſes, or Chamomil, and Crumbs of Bread,* and apply it with a little *Saffron.*

Or hard Eggs beaten with the fourth part of Myrrh, and Chamomil flowers, and Saffron.

Or foment with Oyl of Roſes and Wool, or of Violets, in which Earth-worms are boyled, and after in the progreſs, with Oyl of Chamomil, and Foxes, Oyl of Eggs allayes pain.

Or, Take *Lineſeed oyl, Oyl of Earth-worms, and Elder, each half an ounce; Saffron three grains, Camphire two grains,* anoint the part, and roule it up with a Rouler dipt in Boys urin,

Or make a Pultis of ſweet Apples boyled, and Oyl of Roſes, or Froggs, or Chamomil.

Or apply Caſſia, with Barley-meal, and Fleabane ſeed, with Oyls of Roſes, or Chamomil, Roſe, Nightſhade, or Plantane-water.

Or ſteep or boyl brown Bread Crumbs in Milk, and add to a pint three Yolks of Eggs, and ſix ounces of Oyl of Roſes, or Chamomil. When you will cool and repel, leave out the Oyls, and add Juyce of Nightſhade, Plantane four ounces, Vinegar two ounces, or boyl the Herbs firſt in Milk.

Or uſe Fleabane, and Lineſeed bruiſed and boyled in Water to a Slime, with Water of Roſes, Nightſhade, and Houſleek, and an Egg, while it is hot, add Mucilage of Lineſeed, Wax, Oyl of Roſes, or Chamomil, and Vinegar.

Or apply Fœnugreek bruiſed and boyled in Oxymel, or Vinegar, and Honey, or with Juyce of Coleworts, and the fourth parts Vinegar, or boyled in Wine, with the Pouder of Chamomil, and Melilot flowers, and Hermodacts, adding Turpentine, Oyls, and Mucilages.

Or add to the aforeſaid, Bean, Lentils, or Barley flower, Oyl of Roſes, and Juyces of Herbs mentioned.

Or thus: Take *Bean and Fœnugreek-meal, each an ounce; Barley and Lineſeed, each an ounce; Marſh-mallow roots, Chamomil and Melilot flowers, each half an ounce; Cumminſeed three drams,* boyl them in *Wine, Vinegar, and Honey equal parts,* add *Hens greaſe two ounces, Oyl of Dill an ounce;* make a Cataplaſm.

Or, Take *Althæa roots two ounces, Turnips four ounces, Mallows, Coleworts, Henbane, each a handful; Pompion two ounces, Flowers of Violets, Chamomil, Melilot, and Moulin, each a pugil,* boyl them in *Water and Wine,* add *Fleabane, Fœnugreek, and Lineſeed four ounces, Yolks of Eggs four, Hoggs greaſe three ounces, Oyl of Dill and Froggs, each two ounces;* make a Cataplaſm.

Narcoticks ſtupifie the part, and take away pain, and by their heat (as I proved) diſſolve the humor, and are not dangerous. Alone, or with Anodynes, and other reſolvers; Thus,

The green Leaves of Henbane, Mandrakes, and Poppies bruiſed or boyled, or Oyls thereof, or their juyces, with Roſe and Water-lilly water to foment.

Or Mandrake Roots, and Henbane ſeed mixed with Bran, or Oyl for a Cataplaſm, or with Greaſe for an Oyntment.

Or thus: Take *Henbane leaves two handfuls, Nightſhade, Houſleek, each an handful; Poppy tops a pugil, Mandrake roots an ounce, Chamomil flowers and Violets, each a pugil; Fleabane ſeed half an ounce, Henbane ſeed two drams,* boyl them in *Milk and Water,* and foment, ſtamp the reſidents, with *Lineſeed an ounce an half, Barley-meal two ounces, Duck and Hens greaſe, and Oyl of Chamomil, each an ounce;* make a Cataplaſm.

Another excellent againſt pain in the Foot-gout. Take *dryed Elder flowers a handful, Leaves of Henbane* wrapt in *Coleworts and baked, four ounces,* bruiſe and boyl them in *Goats milk,* or to a Pultis, ad *Saffron a ſcruple, Yolks of Eggs two or three:* make a Cataplaſm.

Or uſe Opium and Saffron, with Milk, *two ounces of Milk to half a dram of Opium, or two drams* with *the Plaiſter of Bread,* or the like. Or with Oyntments, but it is of leſſer force. With Fats, it is beſt *a dram of Opium,* with *four ounces of Aqua vitæ, a little Saffron, and a ſcruple of Camphire,* and ſafe.

Or apply Mithridate or Treacle, or Philonium.

Or the Skin of a Torpedo, or the Oyl of it cauſeth Stupefaction.

Uſe Reſolvers to conſume the Humor in the progreſs, when the Defluxion is ſtopped: Such as are gently hot, and rarefying, and diſcuſs the Matter, if it be Blood, and hotter if it be Water to conſume it, that it turn not to Nodes. And if it be deep, as in the Hip, uſe ſtronger Drawers and Conſumers, adding things proper for the Joynts, Membranes, and Nerves, and that are approved. Theſe are as follow, and are proper for other Defluxions.

As Oyl of Moulin flowers, mixed with Wine, and made in the Sun.

Or of Elder, or Dwarfe-elder Flowers, or the Juyce or Oyl of Dwarfe-elder ſeeds thus made. Beat them being cleanſed to a paſte, boyl it in Water, and take of the skum, put it in a long Glaſs, and ſet it three dayes in the Sun, till the Oyl which is green be at the bottom. Alſo that of the Seeds ſtrained is good, or of Raddiſh ſeed, Indian roots, Nuts, and Acorns.

Or Oyl of Cyprian, Ligusticum, or Privet, or of Alkanna, or of wild Cowcumbers, in which Flammula was boyled.

Or Oyl of Froggs, and Worms, and Foxes; or Oyl in which a Weezle hath been boyled, or a young Stork, or Swan, or the Livers of the fiſh *Galeus,* or Sows or Hoglice, called *Aſelli* or *Millepedes.*

Or Oyl of Mans bones, or Horſe-jawes, when they are beaten, and burnt, and mixed with Oyl, and then an Oyl drawn by a retort, or the like. Some commend the Oyl of Deers blood.

And other hot Oyls mixed with them, as Oyl of Bays, Coſtus, Elder, Nard, Rue, Orris, Wall-flowers, Lillies, St. Johns-wort, Euphorbium, Caſtor, Bricks, Turpentine, Petroleum. Some add diſtilled Oyls to them, as of Spike, Juniper-berries a dram, to an ounce of the other. Oyl of Guaicum, and Sulphur, and Tartar, are alſo good. The Chymiſts uſe Oyl of Salt, made with red hot Bricks, and Oyl of Danwort berries. Others boyl Salt in Oyl, and anoint.

Or an Oyl made of the Marrow of Veal bone, and as much old Oyl, and Oyl of Worms, Groundpine, and Saffron gently boyled.

Another: Take *Sallat-oyl, and of Bayes, and Turpentine, each equal parts;* add *Maſtick, Myrrh, Frankincenſe, one part,* draw an Oyl.

Or thus: Take *Oyl of Turpentine a pound, Sage an handful,* boyl them in *Balneo,* take out the *Sage,* when it is cold, and add new three or four times, and add at laſt *powder of Sage, Opopanax, and Ammoniacum, each four ounces;* boyl and preſerve it.

After you have anointed the Part therewith, lay on a Plaiſter of Tachamhaca.

An excellent Oyl againſt Sciatica. Take *Oyl of Nuts ſix ounces, wild Cowcumbers, Flammula, or Iberis, or Sowbread roots bruiſed, or three ounces of the Juyces ſliced, Earth-worms twenty, Sagapenum, Ammoniacum diſſolved an ounce, Sack two ounces, Aqua vitæ an ounce,* boyl them till the *Juyces* be conſumed, and ſtrain it.

Or, Take *Pellitory roots, and white Hellebore, each half an ounce; Hermodactls, Turbith, Rue, Wormwood, each two drams; Coloquintida, and Euphorbium, each a dram; Sal, a dram and half,* infuſe them in *old Oyl,* and add *Wine, and Aqua vitæ an ounce,* ſet it in the Sun, and boyl it.

Or uſe *Mathiolus* his Balſom.

Unguents, as of Greaſes of Men, Goats, Sheep, Hogs, Calves, Geeſe, Hens, Ducks, Foxes, Bears, Cats, Serpents; alſo Oeſypus, or Greaſe of Wool, and Marrows of Horſes, Dear, Calves with Wine, and Aqua vitæ, are alſo good.

Prepare Gooſe greaſe thus, and it is excellent. Gut a Gooſe, and fil her with fleſh of a Fox or a Cat, and Groundpine, Sage, Roſemary, Marjoram, Bettony roaſted, receive the dripping into Water and Vinegar, or ſtuff a fat Gooſe with Pitch, and the dripping is rare againſt the Sciatica.

Another, take Dears ſuet, and Ox marrow, and add as much Aqua vitæ, ſet it in a glaſs, in a Horſe dung till fifteen dayes.

Or diſſolve Sagapenum and Galbanum in Oyl.

Or thus: Take *Juyce of Dwarfe-elder, Oyl of Rue, each two ounces, Gum Ammoniack diſſolved in Aqua vitæ half an ounce; Maſtick, Frankincenſe, each a dram; Caſtor half dram, with Turpentine* make an Oyntment. *f*

Or, Take *Juyce of Daneworts, and old Oyl, each an ounce;* boyl them, add *Mummy half an ounce, Camphire a dram.*

Or thus: Take *Oyl of Roſes, Lineſeed, Lillies, Chamomil, each an ounce; Juyce of Smallage an ounce an half, Mucilage of Lineſeed, and Goats greaſe, each an ounce;* boyl them, and with *Wax, and a little Saffron* make a Liniment.

Or uſe the four hot Oyntments, of which Dialthæa is the mildeſt, Martiatum, Agrippa, and Aregon are ſtrongeſt. Or uſe thoſe proper for the Joynts, as Ebulinum, Divinum, Nervinum, Vigonis.

Or theſe: Take *Roots of Orris and Birthwort, each three drams; Pellitory, Turbith, Hermodactls, each two drams; Bay-berries a dram and half, Coloquintida a dram, Pepper, Nutmeg, each half a dram; Saffron a ſcruple, Storax half a dram, Frankincenſe two drams, Bdellium a dram, Euphorbium and Caſtor, each half a dram,* pouder them, and add *Oyl of Bayes, and Gooſe greaſe, and an ounce of Turpentine, Oyl of Spike half a dram, and Cow dung;* make a Paſte.

Another againſt the Sciatica. Take *Oyl of Lillies two ounces an half, Wall flowers, Worms, Fox greaſe or Gooſe, each an ounce an half; Juyce of Elicampane three ounces, Gum Ammoniack diſſolved in Aqua vitæ an ounce, Sowbread roots a dram and half, Pellitory, Orris, Muſtard ſeed, each a dram; Hermodactls, Caſtor, Euphorbium, each half a dram; with Turpentine* make a thick Oyntment.

Or this Plaſter: Take *roots of Elicampane, Coſtus, Orris, each half an ounce; Sowbread and Cookowpints, of each two drams; Hermodactls, Piony and Miſſetoe of the Oak, each a dram; Muſtard, Rocket and Rue ſeed, each a dram and an half; Cummin ſeed and Bay-berries, each a dram; Pepper, Mace and Cloves, of each half a dram; Saffron a ſcruple, Myrrh, Frankincenſe, Storax, each a dram; Niter and Vitriol, each a dram and an half; Euphorbium, Caſtor, each half a dram:* make a pouder, add *Ammoniacum an ounce, Bdellium, Galbanum, Opopanax, Sagapenum, each an ounce;* diſſolved in *Vinegar and Aqua vitæ,* add *Storax liquid a dram, Labdanum, Lacrpitium, each a dram and an half; with Oyl of Lillies and of Rue, Turpentine, pitch, Roſin and wax,* make a plaſter and wrap it in a ſheeps Skin.

Another: Take *black pure and ſhining pitch, Roſin, each half a pound; Sheeps ſewes, Gooſe greaſe, each four ounces;*

Oli-

Olibanum half a pound, add to it *cold Cummin ſeed two ounces, Pepper half an ounce, Oyl of Spike half a dram*, make a plaſter.

Or: Take *the Marrow of Veal, Oyl of Roſes, of each two ounces, burnt Salt a dram and an half, anoynt the feet*, add *dryed Ox lungs two drams*, and it will be better.

Or thus: Take *Oyl of Nuts, Gooſe and Fox greaſe and Calves marrow, of each two ounces; Frogs ten, Earthworms waſhed in wine two ounces, Hog lice thirty, Salt half an ounce, Sack three ounces, juyce of Danewort, Elder, Ivy or Ground-pine two ounces*; boyl them, and add *Turpentine and Wax*, for an Oyntment.

Or uſe, *Diachylon, to a pound* add *Sulphure an ounce, Chalcitis half an ounce.*

Or this: Take *old Oyl a pint, Litharge three ounces, Brimſtone a dram, Chalcitis half an ounce*, boyl them, and add *Mucilage of Linſeed and Hogs greaſe, each two ounces*; make plaiſter, or Oyntments.

Or uſe Apoſtolor.

Or: Take *Oyl of Bayes two ounces, of Worms and Bricks, each an ounce*; *Soape an ounce and an half, Calves marrow an ounce, Turpentine half an ounce, Ammoniacum, Opopanax, Galbanum*, all diſſolved in *Vinegar, each a dram and an half; Myrrh, Frankincenſe, Maſtick, of each a dram*; *Birthwort roots half a dram, Litharge, Sulphure, each a dram*; *Verdigreeſe and burnt Salt, of each half a dram*; *with Wax*: make an Oyntment.

Or thus: Take *Oyl of privet, Elder or Dane wort two ounces, Oyl of Turpentine and Ox greaſe, each an ounce; Glew* diſſolved in *Wine, an ounce, Frankincenſe a dram, Niter and Lime, each half a dram*; ſome add the *ſtone Aſius.*

Or uſe plaſter of Frogs by *Vigo*: in ſtrong Defluxions and Sciatica pains, with more Quick-ſilver and Euphorbium; of which we ſhal ſpeak in the French pox.

For the Sciatita waſh with Sage, Lavender, Balm water, and the like, with as much Aqua vitæ.

Or diſſolve black Sope in Aqua vitæ and anoynt: it is a good remedy in all cold Defluxions.

Or boyl urin of a boy till it be as thick as Honey. Or anoynt with Womens termis, as *Dioſcorides* preſcribes.

Or with Aſhes of a Weezle, Beans, Colo-worts, with Vinegar or Greaſe.

Or with juyce of Nettles, Rue, Sage and Coloquintida or Indian Nuts.

Or uſe pouders of Snayles ſhels burnt, or of ruſt of Iron Jet, with juyces preſcribed.

Or make remedies of other plants, as of Moulin, Nettles, Rue, Mugwort, Smallage, Sun-flower, Scordium, Wall-flowers, Mouſe-ear, Comfrey, Moſs, Seſami ſeeds and roots, Hemp, Birthwort, Dittany, wild Cowcumber, Daffodil with Honey and Vinegar, or boyled in water and wine, or their juyces with meal.

In the Sciatica bruiſed Iberis and warmed is good, or Cardamine, Water-creſſes.

Or Elicampane bruiſed or boyled in wine.

Or wild maſterwort, like Danewort, which is called Goutwort, for its vertue.

Dioſcorides applies Balm and ſalt.

Or to the Sciatica, Sage, Rue, Juniper berries with wine and Boys urin.

Or Linſeed and Chamomil flowers, boyl'd in a bagg in wine.

Or hot bread made of Secaly and Carway ſeeds.

Or Bran boyled with Sapa and Salt in the Knee Gout.

Or uſe Bean, Barley and Lentil meal boyled with Oxymel.

Or Bran flower boyled in wine, adding Aqua vitæ and Butter.

Or Rayſons ſtoned, with Opopanax.

Or Sea moſs, or Pulmo, or Fucus marinus green, or Androſace.

Or Agarick beaten with Goats Milk and Barley meal.

Or Dwarf-Elder, or Elder bruiſed, or fried in Butter, or Hogs greaſe with Plantane roots.

Or Rue and Bettony with Hogs greaſe and Salt.

Or Motherwort with greaſe and Vingar againſt a Defluxion.

Or Briony roots beaten with Aqua vitæ and Hogs greaſe, or Briony and Cookowpints, or Dragons, or Fig leaves with Cowdung and Honey.

Or: Take *Nettles bruiſed a pound, Oyl of Bayes two ounces, Petroleum half an ounce.*

Or Coleworts bruiſed with Marjoram and Bdellium, diſſolved in Aqua vitæ, or Vinegar and Coloquintida.

Or: Take *Turneps roaſted a little, and then boyled a pound, Fenugreek meal two ounces, juyce of Dane-wort two ounces with Honey.*

Or Pouder of hermodacts Barley and two yolks of Egs, and Honey.

Or: Take *Fenugreek and Lupine meal a pound, Pouder of Darnel, Althæa roots, Chamomil and Melilot flowers three ounces, Cummin ſeed an ounce, boyl them in Honey and Wine*: make a pultis.

Or: Take *roots of Althæa, Lillies, Briony, Dwarf-Elder each two ounces, Sage, Ground pine, Wormwood, Marjoram, each a handful; Chamomil, Melilot flowers and bran, each a pugil*; boyl them in *Ale*, bruiſe and add *Barley, Lime, and Fenugreek meal two ounces, Maſtick an ounce, Oyl of Bricks three ounces, Saffron a ſcruple.*

Or thus: Take *dryed Penny-royal, Sage, Savin, Bay-berries, Hermodacts, of each a dram*; *Maſtick half an ounce, Storax two drams, Turpentine three drams, with Honey*, make a plaſter.

Or: Take *pouder of young Nettles a pound, of Sage half a pound, bay Salt a pound, pickled Hering-Rows half a pound, ſpirit of wine a pint with Benjamin three or four ounces* diſſolved therein, make a pultis and repeat it if it eaſe pain, if not, take *four ounces of Roſe water inſtead of ſpirit of wine, with an ounce of Fleabane ſeeds and with Acacia and Oyntment of Litharge*: make a Cataplaſme.

Againſt the Sciatica: Take *leaves of Iberis, Water-creſſes, or Elicampane, each two handfuls; Calamints a handful*, bruiſe them, or boyl them in *wine*, add *Lupine meal three ounces, Honey two ounces, or Greaſe and Oyls, or Vingar, or Aqua vitæ* to make it peirce.

Or: Take *roots of wild Cowcumbers and Bryony, Orris and Elicampane a pound*, boyl them in *wine and Honey*, bruiſe and add *Lupine meal two ounces, Cummin-ſeed an ounce, Goats dung three ounces*, make a pultis.

Another: Take *roots of Althæa, Briony, wild Cowcumber, each two ounces; of Orris and Elicampane, each an ounce and an half*; *Pellitory, Hermodacts, each an ounce*; *Ibery, Lepidium, or Flammula, Calamints, Rue, Penny-royal, Time, Balm, each a handful*; *Sage, Roſemary, Stœchas, Lavander, Chamomil flowers, of each a pugil*; boyl them in *wine* add *Honey, Fænugreek, Lupine four ounces, Bay-berries two ounces, Rue ſeeds an ounce, Gooſe greaſe two ounces, Oyl of worms three ounces, Sulphure an ounce*, make a Cataplaſme.

Or thus: Take *Orris, Pellitory roots, of each two drams; Dwarf-Elder and Dragons, each an ounce*; *Bay-berries an ounce, Cummin ſeed an ounce, Sulphure ſix drams, Niter two drams*, make pouder, add *Barley meal two ounces, with Vinegar, Honey and Turpentine*: make a plaſter.

Dioſcorides commends Scammony boyled in Vinegar and mixed with Barley meal, againſt the Sciatica.

Or: Take *Pitch two parts, Sulphure one part*, pouder them and lay them upon a paper dipt in Aqua vita, lay it on after bathing eſpecially, let it ſtick while it fal off of it ſelf.

Or: Take *Tar half a pound, white Hellebore and Sulphur vive, each an ounce and an half; Euphorbium half an ounce, Aqua vitæ an ounce*, incorporate them with the *Aqua vitæ laſt*. and ſtirring continually, apply it warm.

Or apply Frogs ſpawn, or boyl it in a covered Pipkin and apply the fat that ſwims.

Or apply Snailes, bruised with their shels.

Also put whol live Snails shels and all, into a strainer, a handful, and a handful of salt, and thereupon a handful of Danewort seeds, and then snailes again, and after that salt and seed, four or five laies on upon the other, and hang the strainer in a Cellar and take the Liquor that drops out which is glutinous, and put it in a glass to the sun for four dayes and then anoynt the part.

Or apply the flesh of Cray-fish, boyl'd and beaten with Briony roots, and Aqua vitæ.

Or boyl beaten Harts horn, with white Wine, till it be thick, and apply it.

Or a pickled Herring.

Or Wolfes Flesh, or Veal half roasted.

Or the Skin of a Dog.

Or hot Cow dung, it will presently ease pain, to which add Oyl of Roses at the first, and in the declination, Oyl of Chamomil, or Honey.

If there be a Tumor. Take *Cow dung a pound, Sapa an ounce, Bean and Fænugreek flower, each two ounces; Cummin an ounce,* with *Oxymel.*

Or thus: Take *Goats dung and Bean flower, each equal parts*; make a Cataplasm, with Wine and Oyl, add *Salt* when the pain is abated.

Or white Dogs turd, and Pellitory boyled in strong Vinegar.

Also apply Stuphes, or Spunges, or Baths in the Sciatica and Knee Gout and other Defluxions made of Calamus Elicampane roots centaury and to strengthen, of Cypres Nuts, Calamints, Ground pine, Germander Wormwood, southern-wood, Bettony, Prim-rose, Sage, Marjoram, Rose-mary, Pennyroyal, Mints, Chamomil, Melilot flowers and of Dill, Stæchas, Lavender, boyled in water, adding wine, lie or urin. When you will dry more, add *an ounce of Sulphure vive and of sal Niter, and sal Gem, each half an ounce.*

Or with a Decoction of Turneps and Sowbread, Foment.

Or with distill'd water of Moulin and red wine, or Ox Galls, or Soap distil'd.

Or: Take *Sage, Rue, Groundpine, Wormwood,* and others mentioned in Sciatica for Fomentations, *four handfuls; Sulphure, Sali, each two drams; Wine two measures,* distill a Water and Foment.

Another: Take *green and white Vitriol, each an ounce; Camphire two drams, Aqua vitæ and white wine, each a pint;* Foment with clouts dipt therein.

Or with Salt and Vinegar, Sulphure and Vinegar, water and Niter.

Or quench Lime in urin and foment, or in Vinegar.

Or: Take *Lime and sulphure, each three ounces; and with Oyl made of Bole and wild Cowbumbers,* make an Oyntment, use it hot.

Or bath the feet in a Lie made of Hemp.

Or make bags of the dry Herbs mentioned.

Or of Milium and Bran and salt and Chamomil flowers.

Or rowl the Knee with scarlet spread with salt.

Fumes are good also again the Defluxion and pain and to strengthen, out of the fit, and to dry up the humor, especially in the declination.

Made of a Decoction of proper Plants, as of white Dittany, Pennyroyal, Wormwood, Rosemary, stæchas, Chammomil flowers: boyled in Water, Wine or Lie. In the Sciatica, put green Sage in a hollow Tile red hot and stir it that it burne not, and sprinkle it with Vinegar and and apply the Tile, so that the vapor may come to the Hip.

Or use these drying Fumes with Cotten wooll or clouts as of Mastick, Frankincense, Myrrh and Amber, Labdanum, Benjamin, Storax, Gallia, and dryed Herbs, as Rosemary, and the like, *with two ounces of Cinnabar, and half a dram of Orpiment,* made into Troches, with *Turpentine* in the Sciatica.

If the fourth sort of French Pox, which is with pain about the bones, come from an evil quality, because the Cure is as the other by divers great evacuations and alterations, as in the Pox with Ulcers, and the like, therefore we shall refer the Cure of it thither. *The Cure of the French Pox.*

If there be pains about the bones, from an evil quality, or external Head-ach as in the Pox, you must cure it as an old Head-ach, and if that will not do, use stronge Evacuations and Topicks, as in the French Pox, as those of Quick-silver, which cure this malignant pain, when all things fail. *The Cure of an outward Head-ach from a malignant quality.*

If the humor falling down and causing Arthritis hath perversity in it, it will not be cured, but with strong things and topicks, that have Quick-silver, as Emplaister of Vigo. *The Cure of a sort of malignant joynt Gout.*

As for the malignity, which depraveth the sense of feeling, in regard it is in the humor that is fallen down, such as causeth numness and palsie, it must be cured as they are, with strong means. And therefore we shall not here lay down any new Method of curing the same. *The Cure of pain coming from malignity when feeling is depraved.*

CHAP. XVII.

Of Pains in the Superficies of the Body.

The Kinds.

WE call those Pains in the Superficies of the Body, which are in the skin and part adjacent and near it: of which there are divers kinds: differing in this respect, that some are alone and others have other appearent diseases with them.

Among the solitary pains of the superficies of the Body, without any other diseases, the first is tickling, which though it seems pleasant, yet if it be much it is very troublsom, as in the soles of the feet, under the Arms in the pits, or in the sides, and the like. *A tickling in the superficies of the body without any other diseases apparent.*

Hereunto belongs the Itch in the skin, without other manifest sign: such as goes befor the skab and as is in the parts with Hair, as the Head, Privities, from divers causes, which shall be declared, so troublesome that it causeth scrubbing and tearing the skin with the Nayles. By which means they are so refreshed and pleased that they feel not the pain or hurt. *Itch.*

There are other pains in the superficies of the body without other manifest disease, that come from outward causes, as from heat and excercise, without Inflammation of the skin, but with heat pricking and itching: to which the heat in the palms of the Hands and soales of the Feet, may be referred. *Pain from heat.*

Also there is a tearing and biting pain from cold in the superficies, especially at the fingers end. *Pain from cold.*

To this may be referred the Molestation that comes from touching an uneven and rough body: Which is felt without any manifest hurt, while the skin is pressed and streatched for a time. *Pains from touching of rough bodies.* *Pain from compression and distention.*

There

Pain from Contusion or bruise. There is somtimes great pain from a bruise by a Fall or Stroak, without apparent hurt that pricks and tears; but because usually there is a Tumor or Wound with this pain, we shall speak of them together.

Other Pains that have other Diseases joyned, are distinguished by Redness, Swelling, Pustles, Ulcers, or Corruptions.

Erysipelas. Redness and pain without swelling, is called *Erysipelas*. This comes to many by fits. In this the superficies of the skin, in the Shins somtimes, or Face, or Neck, or other parts hath a broad Redness, which being pressed with the finger, flies away, and presently returns, and then turns yellow after some time, and after pale, and so vanisheth. It is with burning also, therefore it is called *holy Fire*. And because it is pricking, *Avicen* calls it the *Thorn*. After all these Itching use to be and the skin is cleft either of it self, or by rubbing; besides, there are in the parts near, for the most part Glandules or Kernels that swell, and are pained, as in the Groyne and Neck. And as I shewed in Feavers, there is a Synoch therewith, that begins with shivering, and turns hot for a day or two. And somtimes it is without it, or but very little.

Holy Fire.

An Erysipelas with a Phlegmon Besides this simple Erysipelas, there are two compound kinds thereof. One is like the simple, only there is a little rising that is dispersed, and not collected into a true tumor, this is called *Erysipelas Phlegmonodes*. This ends as the other, but is longer. Somtimes there are Pustles in Erysipelas, and Blysters about, blew or black, which breaking, produce matter, and the part is ulcerated, this is called *Erysipelas* ulcerate. And it ends often in a preverse spreading Ulcer, that Gangræns if not well tended.

An ulcerated Erysipelas.

An œdematous Erysipelas. There is another kind that is less hot and red, but higher and broader, called *Erysipelas Oedematodes*, with Blisters somtimes also, that are whitish, which breaking, send forth water or matter. In this kind, though the Eryfipelas cease, yet the Oedema remains long, and falls into the Leggs in some.

Eryfipelas in the legs of them which have the Dropsie Ascites. Also if there be Eryfipelas in the Leggs that were formerly œdematous from an evil Humor, especially from the Dropsie Ascites, which is easie, then it turns into a true Inflammation, which will gangræne, except it be carefully tended.

Small Eryfipelas. We have seen small Erisipelases in the skin, with broad, red, burning Spots, not filled up.

The Humors in the Superficies of the Body. Diseases with Tumor in the Superficies of the Body, are some more usual, and come of themselves, and are in divers parts without difference: or in certain distinct parts external: And are called Tumors in general: Or impostbumes, because they follow Tumors. Others are unusual, and come seldom and are called Cancers of which in order.

Phlogoses. There are painful Tumors indifferently in any part of the Body, that arise of themselves without any manifest Cause, that are raised and deep, and red, with heat, burning, stretching, and beating, called *Phlogoses*.

Phlegmon or Inflammation. One kind hereof is spread as an Erysipelas, but more swollen, and lifted up, collected, extended, and deep fixed, and is called *Phlegmon* or Inflammation in general. In this after the redness and pain, the skin is yellow, blew, with Sugillations or Markes, till the tumor quite vanish. Somtimes with increase of pain, it turns to a greater Tumor or Imposthume, and that broken into an Ulcer, and leaves a Scirrhus or Gangræne, as shall be shewed.

Phlegmon erysipelated. Besides this simple Phlegmon, there are two Compound kinds, the one with a larger tumor, but else in all things like an Erysipelas called *Phlegmon Eryfipelatodes*. The other with a larger tumor, but less hot, red, and burning, called *Phlegmon œdematodes*.

Phlegmon oedematous. This Phlegmon whether simple or erysipelated or œdematous, may be in any part of the Body. If in the Face, it disfigures the Look: If in the Neck or Jawes, it hinders breathing, and makes an outward kind of Quinzie. If in the Breast, and be deep, it is a kind of false Pleurisie; if in the Belly, and deep, it hindereth going to stool: If in the Hands or Feet, it pains and trouble them.

Tuberculus or Pustle. There is another sort of Phlegmon more collected, and acute, or pointed, like an Inflammation in other things in any part, which because it is less then other Inflammations is called *Tuberculum*, rather then a Tumor. One kind most usual, which is like a Wallnut, which ends usually in an Ulcer. These are in divers parts alone, or many together, swelling and red, with tearing and burning pain, which pain increasing, they end in an Imposthume, which opens, and is an Ulcer which hath either white or bloody matter. And if instead of matter there be a lump of flesh, they call it *Furunculus, Clavus*, or a Nail, because it is fixed in the flesh, and the German Chirurgions cal it *Crebstin*, or a little Cancer.

Furunculus, Clavus, or little Cancer.

Tumor from Contusion. Contusions are referred to Tumors in the Body, and are so called from the Cause, which is a stroake or fall, in which there is either a gathered or spread Tumor, lifted up more or less, with, or without Inflammation of the same colour; and somtimes blew, and yellow, with markes, vanishing, or turning to an Imposthume, and so into an Ulcer. If this Contusion hath a Wound, it belongs to Wounds. And if there be pain in Contusion without Tumor or external appearance, it shall be spoken of in Pains in the Superficies of the Body.

Tumors in the Glandules or Kernels. There are often Tumors in the Glandules that are the in Emunctuaries, especially immediately under the skin, which somtimes are lifted up with the skin, with pain and heat, and somtimes Inflammation. And if this be, and dissolve not, it imposthumes, and then ulcerates. This Tumor what soever it is, if there be Inflammation is called *Phygethlon* and *Panus*, and if it be less, and plainer, or evener, and not so red and painful, it is called *Phyma*, which sooner increaseth, and imposthumeth. There is the like tumor somtimes behind the Ears called *Parotis*, that grows somtimes very great. Somtimes it is in the lower Jaw, and is called *Panus*, it comes often in Synoch Feavers, and it is called in high Dutch *Kerwunkel*, though it be not alwayes red, when it is under in the Arm-pits, it doth not so easily imposthume, it is called *Panus* also and *Bubo*: And so it is called in the Groynes. Some of these are simple *Buboes*: Others are from the Cause called *Venereal*: Others malignant from the Feaver and pestilential, they are small at the first, and then grow great, and have often an Anthrax or Carbo with them.

Phygethlon. Panus. Phyma. Parotis.

Bubo venereal and pestilential.

Tumors in the Papps and Stones. Also in the glandulous parts of the Superficies as the Papps and Stones, are outward Tumors as in the Glanduls mentioned, when they are inflamed, swollen, hot, red, and pained. This is called Inflammation of the Papps

and

and ſtones which turnes often to a ſcirrhus. Or ſomtimes theſe pars ſwel, without a manifeſt Inſtammation and are ſtretched and pained as the breaſts with milk and the ſtones in the colick.

Tumors with Inflammation of divers parts.

Alſo theſe kinds of Inflammations are in other ſpungy parts of the body, as in the heels when they ſwel, are rough and hot and then ulcerate and are often loſt, or in the Glans or head of the yard; whoſe Inflammation ſomtimes makes a great tumor ſo that the præputium or foreskin ſtreight binds it at the root. This is likewiſe in the prepuce and in womens Privities and in the Fundament. And in the Mouth and Lips and Eyebrows with great pain, by reaſon of exquiſite ſenſe; and it often turnes to perverſe ulcers and Gangrens.

Alſo in the griſtly parts in the ſuperficies, as in the Noſtrils and Ears there is Inflamation, and the griſtles are made ſoul thereby, when it increaſeth and the Noſe falleth.

But Inflammation in the joynts is with greater pain and hurt: as in the Arms and Legs. And this is often

Paronychia Pannaritium

in the joynts of the fingers and toes about the roots of the Nayles, and this Inflammation is called *Paronychia* and *Pannaritium*, which a Sphacelus often followeth, and corruption of the outward bone and ſomtimes of the inward bone of the finger, whereby it laid bare or loſt and the Nerves and Tendons hurt, this is called the worm: becauſe pain ſeems to creep while it is inflamed and turns to an impoſtume. There is another Inflammation beſween the Thumb and forefinger with a tumor called

Fork or Grippelen.

by the Germans *Grippelen* or fork, becauſe it is between the fingers.

Apoſtume or Impoſtume.

An Impoſtume, is a tumor which follows other humors in the ſuperficies, it is called *Abſceſſus*, becauſe the skin comes from the fleſh: This may come from all ſorts of Inflammations except they be inſenſibly diſſolved; as from a flegmon in general, or from Tuberculum whoſe Impoſtum is called *Furunculus*. And from Phygethlon whether it be a Bubo or Parotis, and ſooneſt from a Phyma. Alſo it may come from ſwelling of the paps and ſtone and other ſpungy parts, or griſtly, inflamed. And from the joynts inflamed, which are very troubleſome; and that from the *Paronychia* or Inflammation in the finger, if it Impoſtumate, is perverſe and deep and corrupts the Nerves and bones. All theſe Impoſtumes coming from divers Inflammations, are divers. If the Inflammation be only ſuperficial the humor greater or leſs ſhining and hard at firſt, and after grows ſoft and pointed, which is called the Eye, out of which the matter labors to get forth, which you may perceive by the motion of it being touched, it is of one ſort. And it is of another ſort when it comes from an Inflammation that lyeth deeper for then it is not ſo eminent, ſomtimes it is almoſt wholly hidden, till by a puſtle breaking, which the Chirurgions cal *Exitura*, or outlet, it appears. This is of

Exitura or outlet of the Chirurgions.

the ſame color with the skin and makes a doubt whether there be an Impoſtume or not, we conclude that there is matter, becauſe pain is ſtill felt there and becauſe it is wet like dew, and being preſſed with the finger the matter ſeems to go back and there is a hollow. When an Inflamation turns to an Impoſtume the pain doth not abate, but increaſe rather, and creaſeth not till it be opened and it itcheth when the matter labors to come forth. Nor doth a Feaver with Inflammation ceaſe, but increaſeth with the pain while the Impoſtume or matter breedeth according to *Hippocrates*. The matter in an Impoſtume is divers as pus, or ſanies or fleſh, which comes from the ulcer.

Cancer.

A Cancer is a tumor which cometh of it ſelf in the ſuperficies of the body that hath more malignity then pain, for which cauſe the Chirurgions cal other perverſe Tumors and Puſtles, as a Furuncle and Carbuncle by the name of Cancer, as that under the Eye, and the Polypus in the Noſe and the Gangreen of the Gums, and Ulcers of the prepuce. And they call an *Elephantiaſis*, with Tumors and Ulcers, in divers parts, a Cancer alſo, as we ſhew'd. From theſe a true Cancer called *Carcinos* differs much. Which is called alſo *Lupus* or *Wolf*, becauſe it devours the fleſh and *Noli me tangere* or touch me not, becauſe it will not endure ſharpe Medicines. This

Wolf or Noli me tangere.

may be in any part, Hips, Legs, Knees, Arms, Neck, Face and Breaſts often, and in the privities, and in the Mouth and Lips. It begins at firſt with a little tumor ſcarſe to be ſeen, then it is as big as a peaſe, then as an Hazel-nut, then as a great Apple, hence it is called Cancer from creeping on and reſembling a crab; not the *Aſtacus*, or Crayfiſh, to whoſe Legs the Veins are compared, but the true ſea Crab called *Gallus marinus*, which is round as this tumor is, uneven and with tubercles or little ſwellings and full of Veins ſwollen about blew and black, hard alſo and with a cruſt like a crabs ſhell, and ſticking cloſe to the part; And *Archigenes* ſaies it is ſo called, becauſe it holds whatſoever it catcheth. The pain is little or none at the firſt, which cauſeth the neglect, but it is known by the pricking of the skin like a needle, which increaſeth with the tumor.

A Cancer ulcerated.

At length this tumor is laid naked, by the opening of the skin, and then it is called *Carcinoma* or a Cancer ulcerated: out of this comes filthy Sanies, or thin matter, ſtinking, yellow, green firſt and then black. The fleſh is uneven and corrupt and grows out like Iceſickles, with hard and inverted Lips, which

Carcinoma.

are ſomtimes ſo big, that they have covered a great part of the face, and made the Ear ſeem to grow thereto, as I have ſeen. When this *Carcinoma* or Cancer ulcerated, is naked, it bleeds, by which through want of ſtrength, with a gentle feaver comes death, which I obſerved in a Dyer in little *Baſil* in 1552. whoſe right Cheek was ſwollen to the great corner of his Eye, with Ulcers, with Lips turned in and ſtinking in the hollow all over, which bled often very much and after great miſery with a gentle feaver brought his much deſired Death.

Puſtles in the ſuperficies of the body.

The chief kinds of Puſtles are ſcabs, Papulæ and Carbuncles, which have divers kinds under them, theſe are leſs then Tubercula, yet they itch with burning and Inflamation and ſomtimes without, with pain and knawing or ulceration of the fleſh.

The common moiſt itch and ſcab.

Scabies or Scabrities is ſo called, becauſe it makes the skin rough and with a cruſt, and is moiſt or dry. The moiſt is with Puſtles that have ſanies and Pus, one is called vulgar, in which many Puſtles called *Ephelides* do ariſe, from which broken ſanies or thin matter cometh; if they be a little inflamed and red, they impoſtume and are covered with a dry cruſt made of the dryed matter, which is blew or black or otherwiſe Colored. The itch goeth before this ſcab, which cauſeth puſtles by ſcratching, which break when the skin is broak, there is after a cutting pain, and if the puſtles be inflamed, there is burning pain. This ſcab or itch is ſo frequent, that ſcarſe one is freed, but in his life time hath it.

The Cruel ſcab called Agria or Fera, in Dutch Herbrolen.

There is Another moiſt ſcab leſs uſual then the former, but worſe with little puſtles out of which cometh a rough humor like Honey alwaies moiſt and covering the parts, with a thick white, green or black ſcab. Some call this

Fera

Fera or *Agria*. The Germans call it *den Herbroten*, or *Harbroten*, when the part affected is like a toaſt covered with hairs. This is often in Infants heads, ſeldom in aged, ſomtimes it is in the Eye-brows, Cheeks and Face, very noyſome, and in other parts.

Running Ulcers of the Head called Tinea, Achores or ſcald.

There is another kind of ſcab, peculiar in the Head, which with many ſmal holes peircing to the Skul, out of which come glutinous matter, that being dried cauſeth a cruſt or ſcab: therefore they are called ſordid running Ulcers, by the Greeks *Achores*, and becauſe the skin looks like Moath-eaten cloth, it is called *Tinea* a Moth. And the Engliſh call it the running ſcab of the Head and the ſcald. And if the holes be large and the matter like Honey, it is called *Favus* from the likeneſs it hath to a Honey comb. This is perverſe and uſual in children ſpoyling the roots of the hairs, which are white and thick, when the hair is pulled off, and after it is cured, it leaves many bear places in the Head, which is ill favoured to be ſeen.

Favus.

There are other puſtles, which may be referred to the moiſt ſcab which have a dryneſs at the top and ſweat and moiſture. Some whereof are with greater Inflammation and Ulceration, as thoſe called *Terminthi*, becauſe they are as big as Lupines or Peaſe. The Germans call them *Hunsblatern*, they are black round and red and inflamed about, very burning and quickly dry: and when the ſcurfe is taken off, or lifted up matters comes forth. They are moſt uſually in the feet and many together, *Galen* deſicribes them to be moſt common in Women, and ſome ſay they are a kind of Phyma. *Epinychtis* is not unlike this, it is as big as a Terminthus, blew and very red round about and burns very much at night, and turns to an Ulcer and ſends forth ſlymy matter.

Terminthus

Epinychtis.

Alſo there are wateriſh puſtles called *Phlyctænæ* that being broken have a ſcurfe and are painful: they are ſmal as bubles or greater like bladders, which broaken ſend forth clear water, with pain, and a cruſt: they may be in any part.

Phlyctænæ.

There is another kind that hath yellow tranſparent bladders, which being whol, itch and burne, and being open yellow water comes forth with great burning and Inflammation and a running Ulcer: it is called *Herpes Phlyctanodes*.

Herpes Phlyctanodes.

The dry ſcab or *Scabrities* is ſo called in diſtinction from the moiſt, which hath dry puſtles without matter and makes the skin rough and itcheth much. It is of two ſorts, one is in the extremity of the skin with little puſtles dry red and corroding, more or leſs ſweating moiſture forth, with intolerable itch called *Prurigo* or in Greek *Cniſmos* of ſome *Impetigo* and *Pſora* or Scab. And *Rubrica*, it is about the Emunctuaries in the Groyns and Arm-pits, and bending of the Knees and Arms, and moſt uſual in the Neek.

The dry ſcab.

Prurigo or Cniſmos.

The other kind of dry ſcab is worſe, called foul, and in high Dutch *Mager*, becauſe it makes the body lean and dry by degrees: it comes of it ſelf or from a Herpes not cured. And is at firſt greater then *Prurigo*, making the skin rough and dry: the Greeks call it *Lichen*, it is chiefly in the Legs and Arms: ſomtimes if the ſcabs creep and make the skin more rough, hard and ſwollen, with chops, and being rub'd bran fals off, and then the Greeks call it *Pſora*. It is not only in the Feet and Arms, but in other parts, eſpecially the Neck and Face and Head, in the Hair like a ſcurfe of Clay or Chalk, from which a dry ſcale falls and it is horrible to behold. If it laſt long it corrods and makes clefts in the skin, and there fals thick ſcales yellow or blew, this is the Greek *Leproſy*, not the *Elephantiaſis* of the Arabians, though they are taken one for the other, but this is more incurable, and returns again, and is as horrible as Elephantiaſis, eſpecially if it eat off the Noſe. We call this the worſt Scab.

The foul ſcab.

Greek Leproſy.

Papula or *Herpes* comes forth with little Puſtles, firſt with itching, and then burning, but with Inflammation or Feaver; and though the Puſtles dry, new come about them, as if they were begotten of the former. Some are like Millium ſeed called *Herpes miliaris*, which creeps but ſooner ſtayes.

Papula or Herpes of the Greeks.

Herpes miliaris.

Others are dry little Puſtles, and are deeper in the skin, and break into Ulcers with one Matter, and when cured, returns with new dry Ulcers, broad and high. This is called *Eſtheomenus*, or in high Dutch *Den worm*, from its creeping and corroding; if it laſt long it turns to *Impetigo*, and then into a *Pſora*, and after into the Greek Leproſie, but not into Elephantiaſis. When it ulcerates, it is like Eryſipelas ulcerated, and call'd the *holy fire* or wild fire but Bryſipelas comes ſuddenly with Inflamation, Redneſs, & Feaver, and being ulcerated hath greater Puſtles or Bladders, and after them a moiſt Ulcer, which is not ſo in Herpes, but dry and without matter.

Holy or wild Fire.

The Carbuncle or Anthrax in Greek hath many Puſtles, ſmal like burnings very hot, called thence *Perſian Fire*, with a black Cruſt like a Cole, and thence called *Carbo* or live Cole, becauſe of the redneſs round about, under which after ſuppuration there is no matter but a blak Lump of Fleſh faſtned to the Roots, with a Feaver and great weakneſs. Like this is the Anthrax of the back between the ſhoulders, with many Puſtles together red, which broken, there comes matter forth, as from a ſpunge which turns to a hollow Ulcer, over all the upper part of the Back, with lumps: This I ſaw in the year 1530.

Carbuncle, Anthrax in Greek or Perſian Fire.

There is another Anthrax or Carbuncle peſtilential, as we ſhewed in peſtilential Feavers, with one or more Puſtles like *Phlyctænæ* or *Clavus* red round about, afterwards blew, green, or black, ending in a black Cruſt, and a lump like fleſh like the former. The pain is not in this ſo great as in the former, at firſt there is itching and a little burning, and after corruption, the skin and fleſh mortifie as I have often obſerved, and there is no feeling, and at length it falls from the ſound fleſh, and leaves a hollow Ulcer. There is ſomtimes a *Bubo* with it, near to the part, as we ſhewed in peſtilential Feavers, where we ſhewed alſo that a Puſtle came at the beginning of the Carbuncle, without a Feaver from the Contagion, and preſently vaniſheth.

The peſtilential Anthrax.

The Diſeaſes with Ulceration by which with *Hippocrates*, we underſtand all Solution of Continuity, are ſo in the Superficies, dividing and hurting the skin, as a Cleft, Excoriation, or Burning; others are deep in the fleſh, as a Wound or Ulcers: Of which in order.

Ulcers in the Superficies of the Body.

A Cleft or Fiſſure or Chinke in the skin, is more or leſs gaping, according to the deepneſs thereof. They are chiefly in the Palms of the Hands, and Fingers, and Soles of the Feet: And if they be in the thick skin, the Lips are hard and ſwollen, they are alſo in the Mouth, Fundament, and Womens Privities, and Nipples, and in the Præpuce, and Eye-brows, and in the Tongue: As we ſhewed in the inward Diſeaſes of the Mouth.

Clefts and Fiſſures called Rhagæ.

There is another kind of Chapps or Clefts which are high, by reaſon of the thick skin, with hard Lips, and end in perverſe Ulcers, it is called *Pernio* or *Chimelon*, it comes from great Cold in the thick skin of the

Pernio or Chimelon.

Soles of the Feet, especially in the Heel; sometimes in the Palms of the Hands, and Nostrils, and Ears, as shall be shewed in the Causes.

Excoriation or Interrigo. Excoriation, Abrasion, or Attrition, is called *Interrigo*, when the supreficial part of the skin is separated from the quick, with pain when it is touched. It differs from a Wound, because that is deeper, it is from divers internal and external Causes, especially from Riding, when men are galled; or from long keeping in bed; and in Children from piss, and the mattery Pustles in the Privities, are Excoriations which itch so grievously.

When the scarse skin only comes off, and the true skin is not bare, it causeth no pain, but falls off like Bran, and is called *Furfur* or Scales, as in the Palm of the Hand.

Burning. Ustion or Burning is when the scarse skin, or skin, or flesh also is hurt by actual or potential Heat. And it differs chiefly, in that some is more superficial; others deeper, raising a Blyster, and then there is pain, or burning the true skin, and making a Crust or Eschar, after which is an Ulcer: Or the skin and flesh also are burned and consumed. And then the pain is greater with Inflammation sometimes and Suppuration, leaving a great Ulcer.

Wounds in the Superficies of the Body. A Wound is the Solution of continuity in the Body, from an outward Cause, it is simple or Compound.

Plaga or Cut. A simple Wound not accompanyed or changed into another, is by a Cut, it is greater or less, even or uneven, or deeper. A wound by a stab is a Puncture or prick, it is with a great or little Orifice. Gun-shot is of a sudden, with great or small Orifice, deep, dividing, unequal, bruising and breaking the parts, and sometimes taking off.

Punctura.

Gun-shot.

All these may be in divers parts, and wound the Skin, Flesh, Membranes, Nerves, Vessels, and Bones, making lame, and reaching inward to the Brain, Lungs, Heart, Stomach, Guts, Bladder, Liver, Spleen, &c. and cause divers Accidents following.

In all three kinds of Wounds there is bleeing first, large if it be great, or where the Veins are large, or in the Arteties, but little when small, or in the little Vessels, or a narrow prick, through which sometimes, little or no Blood can come. And when the Puncture is large, it may also come to pass that no blood may come forth, because it all falls inward.

When bleeding is stopt, there is Sanies, or Blood, and Matter, and then it grows foul after, like an Ulcer, into which it turns, as we shall shew.

Sometimes other Matter comes forth of a Wound, as Meat and Drink, when the stomach is hurt, and Excrements, when the Guts are wounded, or Urin, when the Bladder is wounded, or some part of the Body comes forth, as the Brain, Lungs, Liver, Spleen, Guts.

There is pain in all more or less, and the greater as the part is more sensible.

The part sometimes swells without Inflammation, or withers, or is otherwise deformed or lame.

And the Functions are hurt, as when there are Convulsions, Resolutions, Cramps, and Contractions, from Wounds, and when the inward parts are hurt, they are worse.

A contused Wound. A Contusion is from a stroak or fall, not only with a Tumor, but without, and with pain only, as we shewed in Tumors, and is with a wound, in which the skin and subject parts are more or less unequal, bruised, and cut, with little or no bleeding, and a tumor round about, and colour'd as a Contusion with a Tumor only, and it is more easily suppurated, and turned to an Ulcer.

There are also Wounds, partly bruised, partly cut and pricked; these are when the edge is blunt, or from a bite when the wounds are many and deep, according to the length of the Teeth, and the flesh bruised by the broad Teeth: These are easily inflamed, and turn to perverse Ulcers.

Uneven Cut. There are also uneven wounds with Saws and Instruments, which cause perverse, and sometimes incurable Ulcers.

A Wound with a Phlegmon. There are also Compound Wounds, as when there is an Inflammation with a wound, then it is called a Wound with a *Phlegmon*: This is oftnest from a Puncture or Gun-shot. And there is then a Tumor with an Ulcer and new pain, and it may gangræne.

A Wound ulcerating. When a Wound grows foul with matter or humors, it changeth its Nature, and is an Ulcer.

A Wound with a Fracture or bone-hurt. And the Ulcer is Compound when the wound is is with a broken bone.

Poysoned wounds. Others are venemous from a poysoned Sword or Bullet, or from biting of Beasts, as a mad Dog or Serpents, and then there are great accidents and dangerous. Also men fasting, especially if they be cholerick, or come from fury, are venemous, if they bite.

Stinging. To these may be referred the stinging of Bees, Wasps, and Spiders, in which though there is no wound, yet there is pain, redness, and swelling, especially if the Breast be venemous, as the Phanlangius Scorpion.

Ulcers in the Superficies of the body. An Ulcer is the foul solution of continuity, that divides the skin and flesh also, this comes not at first as a wound from an external Cause, but from a Pustle, or Tumor, or a Wound, or of it self. We spake of Ulcers, with Tumors or Pustles, in Cancer, Carbuncle, Herpes, and Scab. Here we shall speak of Ulcers after Inflammation and Imposthumes, broken with matter or flesh, or after an Erysipelas, when the Blysters are broken: Or of such as come from foul Wounds or Humors. They are all simple or Compound.

Simple sordid ulcers plain and cavous. A simple Ulcer is when there is onely foulness, when it is not hollow, it is called a plain Ulcer, when there is hollowness from lost Flesh, as when it follows an Imposthume, and is round, it is called a cavous Ulcer. If it be long, or like a Burrough or Channel coming forth, it is called *sinuous*; and if the passage go strait, a fistulated Ulcer. All have filthy matter, but the hollow most; it is white of a mean consistance, called concocted, sweet, and equal: Or discoloured, waterish, or crude, unequal, or stinking. There are also thick slimy Matter about Ulcers and Wetness. The pain is not so great in them as in Inflammations or Imposthumes breeding, only it is lancing and increased with touching or tenting. And if Ulcers be in the parts ordained for motion or go to the Bowels, they hurt the Functions.

A sinuous ulcer.

Compound ulcers. Compound Ulcers are divers, especially that with proud Flesh which would be ill cured, if before it be removed.

Growing ulcers without flesh. Other Ulcers are sinuous and girt about with a Tunicle within, sending forth no humor from the flesh which is not naked, and cannot be cured till the Cavity be filled with flesh. They are called *Fistulaes*, especially if they be large and strait; as I have seen one that began at the neck and went down the Back to the Hip, voiding much matter. And I have seen many little Fistulaes in the Perinæum that when to the Bladder, through which the Urin alwayes dropt. And I saw in my Fathers dayes in a Palatinate Begger a horrid Fistula in the lower Belly, with ma-

Fistula.

ny

ny holes that ſent forth matter like ſeed. And 1652. I ſaw a Woman with a Fiſtula in her Privities and ſtrait gut, with a Tumor and many Holes, who went to a ſimple bragging Chirurgion who by Cauſticks cauſed Inflammation and Death.

Callous ulcers. There are alſo Ulcers with hard Lips called *Callous*, and cannot be cicatrized or healed, theſe are called *Dyſcpuloſa*. And they which are malignant ſhal be ſpoken of hereafter.

Ulcers of evil Habit. There are other to be cured called *Cacoethe*, not of themſelves, but by reaſon of the part to which they cannot be fixed as a corrupt or rotten Bone, as we ſhal ſhew there.

Phlegmonous Ulcers. They are worſe when there is Inflammation or Eryſipelas, with Redneſs, Tumor and Pain, if the tumor be an Oedema, it ſwells with leſs pain, but is harder to be cured.

Eryſipelated oedematous Ulcers. *Corrupt Ulcers with water.* The corrupt Ulcers whoſe fleſh is white like Bacon are worſt, and when it is ſoft and ſwollen, and when clear water comes forth. Theſe Ulcers come from wounds in the Joynts, where it is membranous and nervous without Fleſh. The German Chirurgions call them *Glidwaſſer* or water of the Joynts, and fear leaſt it gangræne, by reaſon of the pain, Contraction, and Corruption. Of this ſort is *Paranychia* or the Inflammation in the Fingers end that corrupteth the Joynt, as we ſhewed in Inflammations.

Paronychia ulcerated. *Foul ulcers.* To theſe are referred Ulcers with ſtinking Fleſh, and ſuch as corrode when the Fleſh is yellow, green, or black, with ſtinking Matter, and Worms, called *Verminous*; theſe ſomtimes gangræne.

A verminous ulcer. *Perverſe ulcers.* Beſides theſe, there are Ulcers from malignant Humors or other Ulcers, or from Eryſipelas ulcerated; theſe eat and are hollow called *Nomæ*, and when they eat the ſkin only *Phagedænica*, and becauſe they ſpred *Serpentia* or creeping, when they are hard to cure, they are called *Cacoethe*.

Eating Ulcers. *Nomæ.* *Phagadænica*

Perverſe Ulcers in the Leggs. Theſe are in divers parts, but eſpecially in the Leggs, which are apt to receive Humors and Eryſipelas, above the Ankle, they uſe to be broad there, and to eat the fleſh away. This may be laſting for many years in old men full of Humors, which wets mens clouts, and bleeds upon the leaſt occaſion, and is full of pain, with Heat, Redneſs, and Tumor round about, and ſomtimes with an œdematous Swelling. Somtimes the Vein upon the Ulcer is ſwollen and blew, which comes thither, with many windings in the Leggs, and feeds it: this is called a *varicous Ulcer* from *Varix*, a Vein dilated.

A varicous Ulcer.

A malignant pockie Ulcer. *A Cancer in the Yard.* *Leprous Ulcers.* Eating Ulcers that are malignant from the French Pox, beſides thoſe in the Jawes, Noſtrils, and Privities of Women, are in the Præpuce and Glans of Mens Privities alſo, which deſtroy the Yard: this is called *Cancer*. And that is a leprous Ulcer, which is in Elephantiaſis, in the Jawes, Noſe, Soles of the Feet, and Palm of the Hand and Arm-pits, and other parts of the Arms and Feet, which are Phagadænous that is devouring, and have ſwollen hard Lips without pain, as we ſhall ſhew in Elephantiaſis.

Corruption in the ſuperficies of the body Corruption in the Superficies is either in the Fleſh or in the Bone.

Gangræne. Corruption in the Skin, Fleſh, Membranes, Nerves, and Compound Veſſels is called a *Gangræn*, uſually it follows Inflammations, ſomtimes it comes from other cauſes. In this the part begins to loſe its natural color and wax blew ſuddenly, or by degrees and then black, with ſwelling of the part and pain very great before a total corruption from which poyſon conſtantly flows, that wets the skin and fleſh and makes it ſofter, which being corrupted, either opens of its ſelf and ulcerates, or with Scarification, by which we labor to cure. The wounds lye deep and ſwell with lips, and at laſt, if it be not prevented, the part is deſtitute of all natural heat, pulſe and ſenſe, and is very ſtinking and hollow. And then it is called *Sphacelus* and *Syderation*.

Sphacelus, Syderation.

Corrupt bones Caries. If there be foulneſs of bones, they are either corroded in parts and made rough and uneven, or corruption is ſo manifeſt that the part is black and comes from the found and quick part, or corrupts the whol bone, as in *Paronychia*, the joynts of the Fingers and mortifyeth, and is called the *Caries* of the bone. This corruption of the bones is with an Ulcer in the skin and fleſh, from which it cometh for the moſt part and through which it is to be ſeen, being deep and to the bone. And therefore though of it ſelf, a corrupt bone feel no pain, yet the Ulcer joyned thereto and which cannot be cured whiles the bone is foul, may be painful. Of which as the ſhape is divers, we ſhall ſpeak in Deformity.

The Cauſes.

The Cauſes of all pains in the ſuperficies of the Body. (as tickling, itching pains of cold or heat, compreſſions, roughneſs, contuſion, all without an appearent Character alſo of redneſs or *Eryſipelum*, Tumors, Inflammations, Impoſtumes, Cancers, Puſtles, Scabs, Cleſts, Corroſions, Wounds and Ulcers, in which there are ſigns, which are the diſeaſe it ſelf) are cold, or hot, or dry diſtemper of blood, or other Humor gathered in thoſe parts, or Solution of continuity.

Want of uſual touching cauſeth tickling. When the parts are not uſed to be touched, as the ſoals of the Feet, ſides, Arm-holes and Privities, they are ſubject to ticklishneſs, or when any thing toucheth the Face gently, or creepeth, there is tickling, or titillation.

Cold cauſeth pain. A cold diſtemper, cauſeth the cold pain in the ſuperficies of the Body, from Air, Wind, or Water, or Snow, or Ice, and not ſolution of continuity, by freeſing that preſſeth forth, the thin moiſture. This pain is greater, when the part is Nervous, or not uſed to cold, or Air. Therefore the Face, becauſe it is not covered, though it be very ſenſible, yet it is not ſo ſenſible of cold as other parts, that are uſualy covered. Alſo cold is very grievous to Ulcers or wounds that have the skin off. And this pain is greateſt, when there is a ſudden change from very hot to very cold. If this happen to the Hands as it is uſual, there is that great pain in the Fingers ends, called in high Dutch *Kuneglen*.

Heat cauſeth pain. A hot diſtemper cauſeth a hot pain, from the Air, made hot by the Sun or otherwiſe, or from water, or the like, when there is burning in the body and not Inflammation. Alſo this hot pain may come from too many cloths, which diſturb and cauſe ſweat. Alſo the body is inflamed with excerciſe. And there may be preternatural heat in the Hands and Feet, from internal cauſes, which ſome attribute to the heat of the Liver. Alſo in hot diſeaſes, eſpecially Feavers, there is a perplexing heat internal and external.

Dryneſs is the cauſe of pain from touching of rough things. Dryneſs of the skin cauſeth that roughneſs, which offendeth the touch, in tender people eſpecially. This roughneſs may alſo come from external Air

Air that is dry, or from the touching of dry and aſtringent things. When the skin is made hard by labor, it rather diminiſheth the ſenſe of touching, then depraveth it. Somtimes the skin is extraordinarily cleft; as in the Hands, Feet, Lips, Fundament, &c. This dryneſs may come from the cauſes mentioned, or from cold or heat, as in Feavers we find the skin cleft and the Lips, from the heat of breath. And there may be clefts in the Hands and Feet, from cold Air and water. And in extraordinary cold that is long, when it beats upon a part where the skin is thick, there may be great clefts, which turn to Ulcers, they are called *Perniones*. As in the ſoals of the Feet and Palms of the Hands and in the Ears and Noſtrils, becauſe they want fleſh to defend them. This the cold doth by aſtringing, drying and wrinkling the Skin. And if it extinguiſh the heat, it is moſt dangerous.

Dryneſs is the cauſe of clefts.

Blood flowing to any ſuperficial parts, as to the Skin, Fleſh and Glandules, cauſeth divers diſeaſes; When it doth not only moiſten the parts, which is natural for nouriſhment, but fil and inflame them. And if blood flow to the skin, except the ſcarf skin which admits no blood, it cauſeth Eryſipelas, in which there is redneſs from the blood, ſhining through the ſcarfe skin: and before it is fixed or ſwollen, the part being preſſed the redneſs flies away and returnes again, as we ſee in other parts, it comes to paſs from the blood coming and going in the Cheeks. But if the blood be hot, the burning is the worſt pain, and it is as the blood is. For if it be thin and hot, there is a ſimple Eryſipelas which comes and goes ſooner. If it be thick, there is a great Eryſipelas Phlegmon, if wateriſh, there is Eryſipelas œdematous: this is gentler but longer. If the blood be Cholerick, the Eryſipelas turns yellow, and burns more, and eats off the ſcarf skin. If the choller be green or black it is ſeen by the color and ends in perverſe Ulcers, or malignant if it be infectious.

Blood flowing to the skin is the cauſe of Eryſipelas and its kinds.

If the blood be gathered in the fleſh and skin, it cauſeth ſwelling and Inflammation with redneſs and pain from diſtention and heat, and when the blood is diſcuſſed the Tumor is gone. If it ſuppurate or grow ripe, it is an Impoſtume, which breaking makes an Ulcer, and the matter is more, when the blood is much and the ſubſtance of the part corrupted. And if the Inflammation increaſe and the humor be perverſe, and corruption follow, eſpecially a wound in the Nerves, that pernicious Ulcer, called in high Dutch *Slidwaſſer*, which gleets with Water is begotten, and the Nerves being corrupted, there is leſs of motion. But if the Inflammation increaſe and there comes no ſuppuration, but corruption of the natural heat be extinct, a *Sphacel*.

Flux of blood to the skin and fleſh, cauſeth Tumors and Inflammations.

Suppuration, cauſeth Impoſtumes.

Slidwaſſer, from a corrupt wound.

Corruption of the part, cauſeth Gangren.

Natural heat extinct, cauſeth a Sphacel.

If blood flow upon the fleſh rather then the skin, as upon the Muſcles outward in the belly, breaſt, neck or back there are Inflammations, but not red or manifeſtly ſwollen, as in other, as in the Pleuriſie and Quinſies. If the blood flow to divers places there will be puſtles, as I ſhewed. And if it be in the pores, there will be many little ſcabs.

These Inflammations are divers in reſpect of the blood, if it be pure, the Inflammation is ſimple. If thin and not only gathered, but diſperſed partly upon the skin, it cauſeth a Phlegmon with Eryſipelas, if thick the Inflammation will be blewer called a Scirrhus, which rather follows, then accompanyeth an Inflammation. If the blood be wateriſh, the Phlegmon wil be Ædematous, in which the Serum ſent further into the skin, makes an *Ædematous* tumor about: as we ſee blood doth, when ſprinkled upon linnen. If other humors, as choller, yellow, green or black, or ſharp and malignant, be in the blood, the Inflammation is worſe, and the heat of the blood, when the Inflammation lyeth deep, will make the rotten fleſh part from the ſound, in a Coate which will be in the tumor, when opened, as in furunculus,

If Blood flow upon other parts diſtinct from the fleſh and skin, and gathereth together, it cauſeth a hot tumor and inflammation: as when it fals upon the kernels or glandules in the Emunctuaries. This is uſual becauſe nature ſeather diſchargeth her ſelf in ignoble parts, eſpecially being ſpungy and placed by the diviſions of the great veins. Hence comes the pain and hot tumor in Bubo and Parotis behind the Ear, and Inflammation and ſuppuration in *Phygethlon* or *Panus*: as we ſhewed. Theſe differ as the blood is pure or impure, thin or thick, crude, ſimple, or mixed, with other crude humor or wateriſh, from whence come *Phyma*, or with pernitious and infectious humors, from whence comes the Peſtilent and Pocky Bubo.

Flux of blood upon the glandules, cauſeth the Bubo, Parotis, Phygethlon, Phyma.

If Blood flow into other parts, as into the breaſts or ſtones, into which it eaſily floweth, by reaſon of the plenty of Veins, or into the ſpungy parts, as the Privities, Fundament and Mouth, or into parts that have griſtles, as the Noſe and Ears, or into the joynts: it cauſeth hot tumors and Inflammations in them, which differ as the blood is pure or impure, and as the parts are more tender, nervous and ſenſible.

Flux of blood into other parts, cauſeth Tumor and Inflammations in them.

The efficient cauſe of blood thus flowing into the ſuperficial parts, is the expulſive faculty, when it is troubled with it, either offending in quantity or quality. The helping cauſe, is the diſpoſition of the blood being apt to flow, and the readineſs of the parts to receive it. Theſe cauſes whether one or more come from theſe following.

As Plethory or abundance of blood, which is burthenſome to nature, and therefore ſent by her, both to inward and to outward parts. Somtimes it flows of it ſelf and ſomtimes from ſome light cauſe. Therefore young people that grow, have ſwollen or waxing kernels, from abundance of blood; and by handling, they break into *Buboes*. Or when the blood is too hot or thin, it is apt to flow, and being much it ſtirs up the expulſive faculty to ſend it forth, and then it cauſeth Eryſipelas or divers Inflammations, according to its nature. So in a Synoch Fevers, Eryſipelas, as comes from hot blood ſent from the Veins into the skin.

Alſo another humor or quality offenſive to nature, may provoke her to ſend out blood, while ſhe expels the humor: and thence tumors may be. So when the cauſe of the diſeaſe is ſent from the Veins with the blood in the Criſis of a Fever: there is a tumor in the declination of the diſeaſe. And when the Peſtilent quality is ſent to the Emunctuaries with the blood in a Peſtilent Fever, there is a Bubo Peſtilent: and when the poyſon of the Pox is ſent to the Groyn, there is a Venereal Bubo: as we ſhewed.

Pain cauſeth Tumors and Inflammation, (not by attraction, as it is uſually thought) but by ſtirring up nature to expel the cauſe, by which means the blood floweth: this is in the outward parts, when they are preſſed, ſtrook or bruiſed, by which is pain. Or if pain come from any diſeaſe, and if the Inflammation be increaſed a new by the pain, if there be Impoſtume, Puſtle, Wound, burn Ulcer or Inflammation therewith, or with any other diſ-

Pain is the cauſe of divers Tumors and Inflammations.

eaſe

epsie causing this pain. Also Pustles inflamed from scratching come from pain which follows, though at the first it seems pleasant. Also it often comes to pass, that not only the part pained swelleth, but the adjacent parts if they be apt to receive Defluxions, as the Kernals in the Groins, Arm-pits, and behind the Ears, when there is any pain from the Causes or Diseases mentioned. And a troublesom Scab in these parts, hath commonly a Bubo accompanying it. And the pestilential Bubo comes as I shewed, not so much from the Plague, as from the burning and pain of the Carbuncle near it.

Also these Pains are longer and worse, when the blood easily and constantly flows thither, and the part is continually pained. As when there are swell'd Leggs in a Dropsie, if the skin be open, there is a constant Flux of water which by its corruption through long abiding in the Body, is pernicious and corroding; And also of blood being thin, which causeth the perverse and ulcerated Erysipelas which so easily gangrænes.

External Heat causeth Erysipelas, or Phlegmon, and their kinds.

When outward heat doth long or much afflict the skin, it doth not only make it thin, but inflames it, and the blood near to it, and makes it flow, causing Erysipelas or Inflammations, especially in tender and sanguine Constitutions, and such as are subject thereto. As when they sit too long by the fire and burn their Shins, or inflame themselves by long suning. As I did by riding in a hot day when I was young, my Boots were so hot that they made my Leggs burn, and look red two dayes after. This I have had often, and it came at first with red Spots, which turned first blew, after yellow, and then vanished. They may also come from hot water, and after bathing, as the pustles called in high Dutch *Eyssen*, when in the time of the Bodies being hot, they use cold water, which causeth a sudden repercussion, so that the Blood flies back suddenly and returns with pain. Also other moderate heat may cause Itch, and that scratching, and so pustles. Also Inflammation of particular parts may cause them, as of the Roots of the Nails. Then they are called *Paronychiæ*, as when Maids by washing their Hands in foul hot water often, do cause their Nails to be crooked, and the Roots inflamed.

Flux of Humors causeth pustles.

Also other excrementitious and preternatural Humors thrown to the skin, and there fixed cause pustles, as blood dispersed into divers parts, and these may grow greater, and turn into Ulcers, small or great, or corroding, or venemous, as the quality is.

Humors that have an occult quality that is malignant, produce a little swelling or pustle, according to their Venom.

A pernicious and venemous quality, causeth the Cancer.

A venemous Humor so infecteth the parts, that sometimes at first there is a little Tumor which only causeth a little pricking, but is most dangerous, in that it will not away; because while it is nourished with the other parts of the Body, it makes the Nourishment like unto it self, and converts it into Venom, and so increaseth by degrees, and grows broader and deeper, and at length becomes a Cancer, consisting of a fleshy substance full of Veins, with no Inflammation or Tumor, but Blood in the Veins, which itcheth and pricketh, which shews its malignity by its constant increase, till there is an Ulcer, and then it goes no further but with its Claws that come from the Body it creeps on, we know the whole to be malignant, because if it be not taken out by the Root, it cannot be cured, and the least portion remaining will grow again.

It is a hard thing to know whence this Matter and Poyson first comes, or to describe the Nature of it but by the effect. But that it came by Touch and Infection, because the Elephantiasis whose Cause is the same with that of the Cancer, and therefore is called the general Cancer comes from Contagion, but the Cancer is worst, because the Humors are all in one place. And as there are few that have Cancers, so are there few Lepers, for the Venom lyeth lurking in the Veins, and comes to the part infected with the Blood, and when the Cancer increaseth, it weakneth the Body by degrees. And this may be an argument, that there is a Contagion in the breeding of a Cancer, because I knew two Women that attended upon two other that had Cancers a long time in their Breasts, that consumed them which were themselves infected with Cancers, and perished therby after long torment, the one being near of kin to her Mistris. But we cannot yeeld that it comes from Melancholy, for these reasons: For if it comes from Natural Melancholy, which they say is the Dreggs of the Blood, there would some signs thereof appear, and such blood would be there gathered out of the Vessels, if there shoul d be a Tumor or Inflammation, which are not. And if it come from preternatural Melancholy, there would be at the first coming a burning, corroding, and blackness, as in the Carbuncle which is not so, but a Cancer is like Flesh, and not very painful.

A pestilent Poyson causeth Carbuncles and pestilent Bubo.

A pestilent Pustle comes from poyson of another Nature, which we call a *Carbuncle*, with venemous force, and with little burning, but with itching and pricking, only as I said of a Cancer; sometimes with Inflammation round about, and a Bubo hard by, which corrupteth the part, and mollifieth till it falls out back from the sound.

This poyson comes from that pestilent Poyson that got into the Body, and caused a pestilent Feaver by its destructive quality and heat, as I shewed when it gets outward. And we shewed in pestilential Feavers, that I and others have been infected with pestilent Pustles taken outwardly.

Cholerick, salt, and sharp Humors cause the Scab, and creeping Itch, Carbuncles, and Phlyctenæ

Some Humors cause Scabs, Itch, and Carbuncles, by a manifest quality that corrodes and burns, and Pustles with Ulcers; these are either preternatural, yellow, and green, and black Choler, or salt, sharp, or malignant, and go the Superficies of the Body, with the blood and serum, and cause pustles and inflammations, if they come with blood or pain; or they come without this Flux from the Veins by sweat, according to the diversity of these Humors, are different Scabs, Itch, and Carbuncles, as we shall shew.

If in the common moist Scab, there be Itch and corroding without great burning, the Humor is not so hot but salt, and gentle Choler, or tempered with water, is fallen from the Veins upon the skin, when there is no redness or Inflammation: But if there be, they shew it come with blood moved by scratching or pain, as also may appear by the suppuration that follows. When those things are as in the worst Scab, with yellow or green Matter, it comes from thicker and worse Choler, as the colour shews, as in *Terminthus* and *Epinyctis*, the pustles are very burning, with Inflammation and Suppuration following. Especially in a Carbuncle are the pustles very burning, which shews that they come from very hot Choler, and the Feaver shews they come from Blood, and their sudden appearing shews that they come from Defluxion. And we cannot gather that black Choler was the Cause, by their blackness, because others are black when they are dry. But from the great Heat that burns and corrupts the skin, and makes it black, and will not let them suppurate, we may conclude that either black Choler or green was the cause.

This shews that the pustles in Herpes come not from a Flux of Humors, but from a Collection made there, because they come by degrees without Inflamation. And if the Herpes be called *Miliaris*, there is great Heat and Pustles dry, and therefore the Choler was yellow, milder, and thinner, and went to the Superficies of the skin. If in the *Herpes Esthiomenus* the Choler is worse and green, and it

it is deeper in the Flesh. The malignity appears by its corroding and creeping on, and when it creepethno farther, it causeth *Impetigo*.

In that kind of dry Scab which is called the Itch, because no moisture appears, we conclude that the Choler is pure, but thinner then in Herpes miliaris: Or that the Humor is salt and dryed, the skin shews which grows red by scratching. And the like Humor is in Impetigo, deeper and broader. This by continuance turns worse, and causeth *Psora*, which cometh from salt water that is infectious and corroding, as appears by the constant sweat, which vaporing away, wet not but rather dry the skin. This Venom may come from a long continuing Scab, which infecteth the skin when it turneth the Nourishment into corrupt Humors; this is the worse sort of Scab called the Greek Leprosie or Arabian Leprolie, which cannot be cured by reason of the fault in alimulation or nourishment.

As for Phlyctænæ, it is plain that they come from water carried under the scarse skin, which divides it from the true skin and maketh Blysters, because water comes forth when they break. If this water be pure, there is no pain while they are whole but when they break, and the true skin is hurt.

But if the water be salt as appears by itching, or mixed with Choler, as appears by the yellowness, when they open, the heat is greater; and if this Humor sweat forth long, they creep, and then it is called *Herpes phlyctænodes*.

These salt, sharp, cholerick Humors which cause the Herpes and Carbuncles, come from Diet when it is apt to breed such or turn into Choler, as we shewed in Feavers. For if in the first or second Concoction they are not separated from the Blood, but lye long in the Meseraicks, they grow worse, and either get into the hollow Vein, with the Blood and Serum, and so to the Superficies of the Body, or there they are heaped up. Therefore intemperate Livers, and such as use bad Diet, and are Chacochymical, are subject to these. Also the same Excrements may be gathered from Distemper of the Bowels, or be derived from the Parents: And some think they come from the menstrual blood. And they go to the skin by Natures benefit, which expels them when they are bound, and by other Causes, as heat and motion. As we shewed speaking of Tumors from Blood.

Solution of Continuity causeth divers kinds of pains in the Superficies of the Body, with Ulcers, as Excoriations, and Wounds, and Clefts, or without Ulcers; as the cause was internal or external.

Compression, Distention, and Contusion cause pain.

The external Causes of Solution of Continuity, are Compression, Distension, or Contusion, with outward hurt, but inward separation of the final Veins which causeth pain, which we call Distention or stretching, as from a stroak or weight or pulling the Hair: Hence comes the Rhagades or Clefts in the Fundament from hard Excrements.

Friction is the cause of Scabs.

When the skin is scratched off there is Intertrigo or Rawness, this comes after riding as galling, or long Diseases and lying, and from scratching with the Nails. And the moist Itch is when the skin is most scratching, and Humors that are salt or cholerick come forth, and it is worse when there are little Tumors from rubbing and they break. Intertrigo or Pustles of the Privities come so, from cholerick sweat which putrefieth in these parts easily, and causeth itching.

Outward Cuts, Pricks, Contusions, cause Wounds.

Of poysoned Wounds.

Cuts, Pricks, Stroaks, cause Wounds, all these when they suppurate are ulcers. These are with a sharp or blunt Tool. If the Instrument be infected with poyson, the Wounds will be venemous, or rusty, or if the weapon be toucht with Garlick, or a bullet dipt in grease, or if a sword or tool be otherwise poysoned, the wound will be venemous.

Corrosion of the skin.

Taking off the skin by Medicines or the like, ulcerateth and inflameth, and also sharp Urin doth the same in Childrens Hips.

Of Burning.

Burning separates the scarse skin from the true skin, and causeth a bladder or blyster, which breaketh and leaves the skin bare; when it is deeper it causeth an Ulcer or Eschar. This may be from heat of the Sun, which blysters the naked Body, or from hot or sclading Oyl and Water which takes off the skin, inflames and brings perverse Ulcers; or from Fire which makes Blysters and Ulcers; or from burning Medicines, Vesicatories and Cauteries, among which some mortifie, and cause an Eschar without pain. Also a Nettle sends in fire with its prickles, which causeth first Heat, then Blysters.

Biting or stinging of venemous beasts.

Biting of beasts causeth uneven and deep wounds, which suppurate and turn to ulcers; and these are worse when the spittle is venemous, as in some beasts. And it is known that the biting of a man hath caused dangerous wounds by his spittle, especially when he hath been fasting and angry, because the spittle is most cholerick, as appears by the same. I knew a Fisher-mans Wife that was bitten by her angry Husband in her right hand, and dyed of a venemous Ulcer caused thereby with a Feaver. And I knew two more that lay long sick, and were with great difficulty recovered of Feavers, by bites given by their fellow-drunkards in their fingers. There is from biting of a mad Dog or other Beast, not only a venemous wound, but other horrid symptoms: As we shewed in Hydrophos. Also if the bite be very small, if the Venom of the spittle get in, as of a Weezle or Mouse, there may be a perverse wound, or of a Viper or Serpent, or the like, the whole Body is poysoned.

The stinging of beasts causeth venemous wounds.

When beasts by their stings or otherwise make wounds, though solution of Continuity scarse appear, yet because there is a burning or evil quality sent into the part, there is a great pain, inflammation, and tumor; as we see in stinging of Bees or Waspes, when they leave their horny stinges in the wounds: If they come from worse Creatures, as from the crooked stinge of a Scorpion, then the poyson infects the whole Body. And as *Nicander* and *Dioscorides* shew the same may be from divers other venemous beasts, whereby the Body being only prickt in one part, may suffer in divers. These we shall not speak of, because they are not troublesom in our Countrys: As also we shal not speak of the Harms, stinging of Flies, Gnats, and Fleas, which are only itching, with a red spot.

The Humors which cause ulcers that follow Impostumes, and are joyned with pustles.

The internal Causes of these Solutions of Continuity, are Humors which while they cause tumors and pustles, do also corrode and ulcerate: Or those Tumors ulcerate, and cause it as we shewed. Namely how matter bred of Inflammations suppurated, produceth Impostumes and then Ulcers, which with other Humors coming to them, grow worse, as by blood inflamed, or by other malignant Humors, malignant. And also how from this pernicious Matter breeding a Cancer, it may be ulcerated, and how a hollow Ulcer may follow the burnt and corrupt Flesh, that falls out of the pestilential Carbuncle. And how from cholerick Serum and sharp Humors that produce Carbuncles, Herpes, and Scabs of all sorts, there may arise malignant Ulcers, as in Carbuncle, and corroding as in Herpes, and foul with Matter as in the moist Scab, and dry with Clefts, as in the dry Scab: And also how the skin comes off from the Serum that causeth Phlyctenæ.

Humors cause Fissures or Clefts

Also without Pustles or Tumors going before, the skin may be cleft by a sharp, salt, drying Humor, when the part is tender or spungie as the Lips,

Funda-

Fundament and Privites. Hence come the *Rhagades* or clefts, which by reason of the exquisite sense of those parts are very painful and burning.

Humors that cause Tinea Favus or scald Head.

When a thick Salt humor is gathered between the thick skin of the Head and the Skul, and there long kept till it putrefie about the roots of the Hairs, and eates through the skin in divers places, there is a *Tinea, Favus* or scald Head. And the Humor is Malignant, because it is infectious in Children.

Humors that cause Corroding and Varicous Ulcers.

Corroding *Phagedenical* Ulcers breed and are nourished with sharp and malignant waterish Humors. Which are cheifly in the Legs, by falling down of the Humors. Also these Humors carried with the blood to some Vein near to an Ulcer and enlarging and washing the Ulcer; keep it from healing, as we shewed in a Varicous Ulcer. The Original of these Humors, is as of those that cause *Herpes* and Scabs.

Malignant humors, cause Malignant Ulcers.

When the Privities are infected by Malignant Humors, from unclean Copulation, there are Ulcers, as in the Glans and Præpuce. And the Ulcers in the French Pox and Leprosie are alike. But the nature of these humors are known only by the effect, being infectious.

The Cure.

The Cure of solitary pains which have no Character external but themselves, as itch and tickling, hot and cold pains, or roughness of Skin, because they are not great, nor last long, but depart with the cause removed, is not hard. As thus.

Cure of tickling.

If tickling come of it self it is not long, but if it be by outward force it is a torment intolerable and it weakneth and causeth convulsions, which must be cured.

Cure of itching.

A light Itch will cease of it self, if you be patient and forbear scratching. If it be great, it is cured by a pleasant scrubbing. If it continue or return and the cause be external, as Lice &c. It shall be cured as in them. If it be internal from a humor, because it hath with it commonly scabs or pustles, it shall be spoken of in them. But if it be without other manifest disease in divers parts and continue, use Evacuations, Baths, as in the scab. If it be in Womens Privities, you must put Oyntments or the like into them.

The Cure of pain from cold.

If pain come from cold Air, Wind, Water or Snow, and cease not when they are gone, you must by degrees bring the body to a natural heat, least the sudden change, from extream cold to extream heat, bring inconveniences, or that called in high Dutch *Runeglen* or pain in the Hand. It is good to come into a temperate room, or to exercise violently if the feet be cold from riding, or heat the Arms like Watermen; or to apply skins, furrs or feathers, or put the Hands into the Hair, or wash them in warm water before you come to the fire. If after these the native heat be weakned, use Fomentations, Baths and hot Oyntments, as in astonishment and Palsie, as Oyl of Euphorbium and Peppers: Or take *Pellitory of Spain, Pepper, each two drams; Euphorbium a dram, Oyl of Wall-flowers and Wax and Oyl of Spike and Spices with Musk, Amber and Civet.*

Oyl of Nettles, or wherein Nettles are boyled, is a singular remedy: and to preserve the Hands against cold, and also Goose grease.

The Cure of pain from heat.

If a hot pain come from heat of the Sun, or motion, or baths and cease not, the cause being removed, you must not suddenly cool which is dangerous, as we have known some who in violent heats have staied long in Cellars under ground and caught Feavers and dangerous Defluxions and Apoplexies. Therefore it is best to go first into some temperate place or Arbor. If the heat continue to Inflammation or Synoch, Cure that. If it be in the palms of the Hands or soals of the Feet, because it comes from internal causes and foresheweth or accompanyeth diseases, Cure them.

The Cure of pain from touching of rough things.

If there be roughness or hardness of the Skin, which hinders and troubles touching in dainty people, use moistners, as in Deformity. If there be clefts see Ulcers.

The Cure of pain from compression and distension.

If there be pain from pressing or stretching without manifest solution of continuity, it ceaseth with it, but if you fear Tumor or Inflammation, we shew you how to prevent them in a Phlegmon.

The Cure of pains in the superficies, that have manifest diseases, is as Erysipelas, Phlegmon and Tumors from contusion or glandules, or as Impostumes from Inflammation, or as a Cancer, or as Pustles, as Carbuncles, Herpes, Scab, or as Ulcers, or corruption of parts, as Gangreen, or foul bones.

The Cure of Erysipelas and its kinds.

If an Erysipelas be without a Feaver from an external cause, or if the Feaver be little, only Cure the Erysipelas. If a Synoch follow look first to the Feaver, as in Feavers first you must be sure to prevent the Carbuncle, if it be customary, as in old people. And after you must regard the Feaver, if it be not prevented, by sweating, bleeding, purging, altering heat, and other accidents.

But as to Erysipelas as alone, when it burns not much, it must not be over much cooled, but kept warm to disperse it with gentle means, by wrapping it in Linnen that is soft and a little unctious, as some think.

Or wrap it in a Saffron clout: Take *Saffron a dram, plantane, Privet, Night-shade, Roses, each an ounce; Rose vinegar half an ounce*: let them stand warm till the water is dryed, then dip a clout in it, apply it wet at first and warm. Or apply scarlet, which doth dissolve and strengthen the part.

Or Fume the part with Mastick, Frankincense, Amber, or Juniper or Sanders burnt.

These gentle remedies are most usual, because the patient feareth strong and moist means.

When an Erysipelas with a Phlegmon or alone, is very burning, or hath Pustles or Blisters. Take heed of an Ulcer, which is dangerous, at first stop the Flux of blood from the part allay heat and abate pain, and then by degrees consume and digest the matter.

At first to repel and allay heat, use coolers with a little astringents, by Fomentations. This is approved of others, but ours will not wet the part and think that wet, causeth all accidents. They are deceived from hence, because they hear that a Gangreen comes from a cooled Erysipelas, that suppose it is from moisture. But the Refrigeration in a Gangreen, is rather a Mortification and Extinction of the native heat, from two great Inflammation, then from the introducing of a cold quality.

Therefore cold water with the third part Vinegar, may be used as in Arthritis from blood, with a clout or woollen. *Dioscorides* bids use Vinegar alone with the white of an Egg to allay pain, or Juyces, or distil'd waters of Plants, or Vinegar of Roses.

Apply these Herbs green, bruised, or heated, or boyled, or with Bran and Vinegar, as Plantane, Nightshade, Shep-heard purse, Knot-grass, Purslane, Sorrel, Housleek, Vine leaves, Endive, Lettice, Grundsill or Lens-Palustris, Cotyledon, Liver-wort, Lonchytis, Willow leaves, Alder, Reeds, Privet, Cypress, Myrtle, Bramble, Sumach, Fleabane, flowers of Roses, Violets, Water-lillies, the great Antirrhinum and of Ras-berries.

Or

Or uſe the juyces with Plantane and Roſe water, as an Epithem or Vinegar and red Wine, the white of an Egg, Camphire and red Sanders.

Or the Decoction of the five-leaved-Graſs, Plantane, Houſleek, Purſlane, Vine leaves, Privet, Myrtles with Barley: and in the increaſe, Chamomil, Melilot flowers, Roſes, Fenugreek, Ointment of Roſes, with Camphire and *Galens* cool Ointment, or that of Houſleek, Oyl of Violets, Gooſegreaſe and Saffron.

Or: *Take Oyl of Roſes two ounces, of Water-lillies or Violets an ounce, juyce of Plantane and Nightſhade, each an ounce and an half; Vinegar of Roſes an ounce, Camphire a dram with the white of an Eggs or Mucilage of Fleabane an ounce and an half, and Turpentine.*

Plates of Lead are good to repel.

When you fear an Ulcer, add dryers to your coolers, as Ointment of Ceruſs, Album made of Ceruſs, white Wax and Oyl of Roſes with the white of an Egg and Camphire, or with Ceruſe and Oyl boyled, and Lytharge.

Or: Take *Litharge an ounce and half, Ceruſs two drams, juyce of Plantane or Nightſhade two ounces, Vinegar of Roſes half an ounce, Oyl of Roſes two ounces,* mix them well in a Leaden Mortar, dip clouts and apply them, *or with white Wax,* make an Ointment.

Or thus: Take *the white Troches of Rhaſis two drams, Sarcocol a dram, Lytharge burnt and waſhed Lead, each a dram and an half; Oyl of Roſes two ounces, juyce of Plantane an ounce, white of an Egg and Mucilage of Quince ſeeds an ounce,* add *half a dram of Opium* to abate pain.

Or to allay pain uſe Cowcumbers, Anguria, deadly Nightſhade, Herb true-love cut and bruiſed, or pulp of Caſſia.

Or Henbane leaves or Tobacco, crude or roaſted; Poppy heads, roots of Mandrakes with Bran and Vinegar to repel. *Dioſcorides* uſeth juyce of Hemlock, we uſe juyce of Henbane.

Half a dram of Opium with half as much Saffron, may be added to the former. And this is the cauſe why the Chirurgions uſe Treacle in Ointments.

Populeon cooleth and eaſeth.

Or thus: Take *Populeon an ounce and an half, Oyl of Henbane, Mandrakes or Poppy ſeeds half an ounce, Mucilage of Fleabane ſeeds an ounce, Saffron a ſcruple,* and a little Opium.

Or this Epithem: Take *Milk three ounces, Oyl of Roſes an ounce and an half, white of an Egg or Mucilage of Fleabane ſeed an ounce, Vinegar half an ounce, Opium half a dram, Saffron a ſcruple.*

In the progreſs when the heat abates, to diſſolve, when the part looks not ſo red and is yellowiſh, or at firſt if the heat be little: Uſe Colesworts, Pellitory of the wall, Mallows, white Lillies, Mullein, alſo leaves of Ricinus, Stratiotes, Acinos, Fetherfew or Parthenium, roots of Althaea and Lychopſis, and of Clowns-Allheal with the ſame ſtalk, which is ſo highly commended: bruiſe and apply them.

Or dip clouts in Oyl of Roſes and Wine, and ſqueeze and apply them to eaſe pain and diſeaſe.

Or boyl Oyl and red wine: thus, Take of them equal parts, cover them in a cloſe Veſſel, boyl them gently till they make no noiſe.

It is good to diſcuſs, to anoynt with hot blood, eſpecially menſtrual, as ſaith *Dioſcorides*.

Or with Urin to ſtop itching and to dry. *Dioſcorides* uſeth the Sediments, or fetling thereof, adding Vinegar and Eggs.

Dioſcorides alſo commends Goats or Sheeps dung boyled in Wine or Vinegar.

Others commend Ink, but it is too ſharp without cold waters or juyces. And I know an Impoſtor that concealed a Gangreen thereby. *Dioſcorides* uſeth ruſt of Iron and burnt Vitriol, or Chalcitis, or Silk and Vinegar.

These ſtrong Medicines are beſt in ignoble parts, not on the Face and Nerves: when there is need of great drying.

Diſſolve the reſidents with Fomentations and Ointments, and ſtrengthen the part as we ſhewed in Arthritis, as with Lyes of divers ſorts, and ſpaw waters to prevent.

Waſh the Feet with water wherein Vitriol, or Oake or Ivy leaves, or red Roſes, or Sloes, or Grapes are ſteeped.

Or put them into the Wine preſs, or into Grapes ſtamps with Iron water and Vinegar.

If there be Eryſipelas in the Face, waſh it often with red Wine, Roſe, Plantane and Nightſhade water, and Vinegar.

If the Legs have an *Oedema* after the Eryſipelas, uſe things as in *Oedema*, if it ulcerate or grangreen. See them.

The Cure of divers ſorts of Inflammation.

Phlegmon or Inflammation is of divers kinds, but we ſhall ſpeak only of them, which differ not much. Such as are in the skin, as Phlegmon with Eryſipelas or *Oedema*. Or with little Tumors, or Puſtles that ulcerate and turn to ſcabs. Alſo of Inflammations in ſpungy parts, as Privities, Paps, Bunchment, Mouth, and in the Griſtles of the Noſe and Ears. And of thoſe in the joynts and ends of the fingers called *Paronychia*, preſcribing to all their particular remedies. Of the Tumors and Inflammations of the Glandules, we ſhall ſpeak hereafter, and of the Impoſtume that comes from all Tumors.

Of theſe phlegmons the greateſt and fulleſt of pain are the worſt, and they which are in noble parts, or near to them, as in the Face, Organs of ſenſe, or in very ſenſible parts, as in the Fundament, Yard, or Womb, or in the joynts, or Fingers. Many of theſe Impoſtumate, and then ulcerate, and hurt the noble part, other gangreen and cauſe loſs of parts or deaths. Others turn into a Scirrhus, which hinders the bending of the joynts.

Blood-letting, is the chief remedy againſt all, if there be plethory, both to prevent and cure. Alſo it revels and derives from the part, and helps the Feaver if it be there.

Alſo we revel and derive with Scarifications, Cupping, Ligatures and Friction. And it is good in plethory, when the Terms or Hæmmorrhoids breed, and to divert.

If the body be foul, looſen the Belly and purge to prevent, eſpecially when people are ſubject to Inflammation. And the Cure will be the eaſier when the body is clean. Alſo ſome Laxatives do revel the blood flowing to the part, they muſt not be ſtrong to ſtir or inflame the Body.

Alſo uſe alterers againſt the phlegmon and Feaver in meats and Medicines that cool the blood.

Topicks are to be uſed in all, firſt they muſt repel the blood flowing to the part, and abate heat and pain, and then diſſolve the matter; and if it tend to ſuppuration, they muſt Cure the Impoſtume and Ulcer. And they muſt be choſen according to the Inflammation, as it is great or little and according to the part.

We repel the humor flowing with aſtringents and coolers, chooſing the ſtrongeſt when the heat is great, eſpecially in Parenculus; And if the Flux be great and the Inflammation alſo, and in the Face, or Joynts and noble parts. In the other we uſe more gentle repellers. Eſpecially if the Inflammation be about the Jaws or Breaſt, leaſt it cauſe a Quinſie or pleuriſie. To theſe re ethers, when the Deſtuxion abateth, we add gentle reſolvers and anodynes, if there be pain: Thus,

Actual coolers are vulgarly uſed, if we fear Inflammation, from a ſtroak, or bruiſe, to prevent ſwelling, as a cold Stone, Iron, Lead, or Ice: Or cold water. This

muſt

muſt not be done, but at the firſt, leaſt the blood congeal and will not after be diſcuſſed.

Some commend the putting the Finger preſently in cold water, in Paronychia or Fellon: or in hot Vinegar, but boyling water is beſt.

Make repellers of green Herbs, that are both potentially and actually cold, as of Plantane, Nightſhade, Houſleek, knot Graſs. With Vinegar, Oyl of Roſes, Myrtles, Quinces and Barley meal.

Apply Acrons bruiſed and Sloes.

Or Bran fryed in Vinegar, or Rice, and Water often.

Or red Roſe Cakes, with red Wine and Vinegar, or Roſes.

Or: Take *the Juyces of the Herbes mentioned ſix ounces, Roſe vinegar and red Wine three ounces, Oyl of Roſes, Myrtles, or Privet an ounce and an half, with ponder of Biſtort roots and Pomegranate peels, each a dram; Myrtle or Barberry ſeeds, Bole three drams,* after you have ſtir'd them in a Leaden Morter, make an Oyntment, or with Vinegar and whites of Egs and Barley meal, a Pultis.

The uſual defenſative againſt Inflammations, is of Bole Vinegar and whites of Egs and Oyl of Roſes. You may add Sanguis Draconis, Blood-ſtone, and ruſt of Iron and ſealed Earth, Coral and Camphire.

When there is pain, repel thus, add the fourth part of red Wine Vinegar to Milk, Bole, and the white of an Eg.

Or waſh with Vinegar and Water.

Three or four pound of Quick-ſilver allayeth heat and pain, being in a Bladder and applied.

So doth Juyce, Decoction and diſtilled water of Herbs, with pouders aforeſaid.

Or foment with Oyl of Roſes, or Violets, and rowl the part.

In Paronychia or Fellon, make a Bath for the Finger of five leaved Graſs, Wormwood, Agrimony, Straw-berry leaves, Myrtle-berries with Wine.

A repelling Oyntment: Take *juyce of Plantane, Houſleek two ounces, Vinegar an ounce, Oyl of Roſes two ounces and an half, Vinegar an ounce, Bole half an ounce, with the white of an Egg, and a little Turpentine,* afterwards to digeſt, add *Ceruſs, Cadmia and Litharge.*

Or: Take *juyce of ſower Pomegranates two ounces, of Nightſhade and Roſe water, each an ounce and an half; Camphire a dram,* anoynt; add *Barley flower* to make it ſtick. This is approved in Inflammation of the Noſe.

As in Eryſipelas, ſo here you may uſe Oyntments of Roſes, Poplar, and Ceruſs, and plates of Lead alſo.

In great Inflammations, and when they are parts exquiſitely ſenſible, uſe chiefly things to aſſwage pain. As Anodynes that cheriſh with their temperate heat. Or Narcoticks that dull the ſenſe. Theſe are not to be uſed alone, when we fear ſuppuration, but in caſe of neceſſity, becauſe they digeſt, but at the firſt, add repellers and in the progreſs reſolvers. But when you deſire to digeſt, you may uſe Narcoticks alone, ſafely.

The ſame Narcoticks and Anodynes may be uſed, as in Eryſipelas and theſe following: As Snayles not beaten, with the ſhells, leaſt they be too rough; but taken out may be applied

And leaves of Henbane and Mandrakes baked in the Embers with Hogs greaſe and a little Saffron.

Or uſe this Cataplaſm: Take *white Bread or Flower a pound,* boyl it in *ſpringe Water and Proper ſtilled Water and Milk with Mucilage of Fleabane two ounces, three Egs, Oyl of Roſe three ounces, Hogs greaſe an ounce, Saffron a dram.*

This is proper againſt a Paronychia or Fellon: boyl crums of Bread in Milk with the white of an Egg and a little Turpentine, and to eaſe pain, add Mucilage of Fleabane ſeed, with Barley meal, Opium and Camphire, and after to heal, add Pouder of Galls

Or this Cataplaſm againſt any Phlegmon: Take *the Emollient herbs two handfuls, Althæa two ounces, flowers of Chammomil, Melilote, Roſes, Bran, each a pugil:* boyl and bruiſe them, add *Oyl, Butter, Greaſe and Saffron.*

Or bruiſe Fleabane, or its ſeed, with Oyl of Roſes and a little Vinegar, and apply it, or boyl it with Milk and Althæa roots and add fats.

Or uſe the Mucilage of Fleabane with the white of an Egg, Juyces and fats.

The Plaſter of Diachylon the leſs by *Meſue* made of Mucilages of Fleabane and Henbane eaſeth pain and digeſteth.

Oyl of the Apples of Strychnodendron, and of the fruite of the Balſamine tree called *Momordica,* is an approved remedy, and ſo is Oyl of Henbane ſeed.

The Chirurgions eaſe pain with an Egg raw beaten with Oyl of Roſes and Bole to repel.

And to digeſt alſo they uſe Oyl of Roſes, yolks of Egs and Ceruſs.

There is an Oyntment called *Anodynum,* made of Oyl of Lillies, Dill, Chamomil, Ducks and Hens greaſe to take away pain.

Or this; Take *Juyce of Henbane, Tobacco, Hemlock, or Poppies, Mallows, or Marſh-mallows, each two ounces; Oyl of ſweet Almonds, and Roſes, each two ounces;* boyl them, add *Mucilage of Althæa,* or the like *two ounces, or of Mucilage of Henbane ſeed,* which is beſt, *Butter an ounce,* make an Oyntment.

The Water of Frog ſpawn is highly commended, and Juyce of Hemlock applied with a Clout, alſo raw Crayfiſh.

Alſo we muſt diſſolve or diſcuſs the Humor which is flown to the part, leaſt by continuance it turn to Matter, and ſtink; which though Nature doth of her ſelf, if it be thin, yet if ſhe be ſlow in her work, ſhe muſt be helped with diſſolvers, which in the beginning of the increaſe of the diſeaſe mixed with Repellers, does it rather by dryneſs then heat; and after they muſt be uſed alone, and the rather if the Phlegmon be œdematous, eſpecially towards the Declination, when the heat ceaſeth, adding Emollients to gentle Healers, that may diſcuſs the Reliques, and prevent a Scirrhus.

This is done by Herbs mentioned againſt Eryſipelas, as Pellitory, Mallows, Marſh-mallows, Orage, Coleworts, Henbit, Coltsfoot, Vervain, Moulin, Scarlea, Bindweed, Elder, Dan-wort, Penny-royal, Feaverfew, Achillea, Wormwood, Seſamum, Nettles, Lilly roots, Orris, Briony, wild Cowcumber, Aſphodel, Lyris, Docks, Rhapontick, wild Hemp, Chamomil, Melilot, Dill, Elder flowers, and Water-lillies, Fœnugreek, Lineſeed, Barley, Wheat, Lupins, Orobus, and Flower of Millium Panicum.

You may apply one or more of them bruiſed or boyled, as Pellitory and Scabious; or lay the whole Leaves thereon, without the Stalks.

Or make an Anodyne Oyntment of Dwarf-elder to anoint the part inflamed. Thus, Take *Dwarfe-elder cut ſmall, put it in a Glaſs phial, roule it in Dough and bake it, then take out the glaſs, and you ſhall ffnd a thick rediſh Oyl, anoint therewith.*

The Herb called *Paronychia* is good againſt a Felon from whence it had its Name, the Felon is an Inflammation at the Root of the Nails; as alſo five leaved Graſs, or the skin of an Eg ſhell, or Dandelion, milkie Stalks, roule about the Finger.

Phlegmons may be waſh'd with Juyces, Decoctions, or ſtill'd Waters of Herbs; as that of Moulin which is beſt, with Roſe-water.

Aqua vitæ doth ſo diſſolve, that it takes away Tumor and Inflammation preſently, allaies pain: when Labourers hurt themſelves, they uſe it.

Dioſcorides commends the Lyes of Wine in all Inflammations, it is good to diſſolve and to aſſwage pain.

Alſo uſe Oyl of Chamomil, Lillies, Orris, ſweet Almonds, or Roſes, or Fats, as Oeſipus of Wool or Propolis.

Or bruiſe or boyl the Plants mentioned, with Vinegar at firſt, then Wine, Honey, Oyl, Fats, Turpentine, and Brans, or Meales.

Or apply Raiſons as in Furunculus, with Salt, &c.

Or chew Wheat or its Flower, with Water and Honey, or with Leaven.

Or Roſe cakes boyled in Lye to diſſolve, adding Oyl of Chamomil, or Dill.

Or Smallage, and Henbit beaten with Tartar, and Oyl of Chamomil.

Or this Cataplaſm. Take *Roots of Althæa, Docks four ounces, Lillies two ounces, Pellitory, Vervain, Coltsfoot, each an handful; Feaverfew, Wormwood half an handful, Chamomil flowers and Roſes, each a pugil; Barley meal, and Fænugreek four ounces, Figgs five pair,* boyl them in *Water*, bruiſe and add *Oyl of Roſes, Chamomil, each two ounces; Hens greaſe an ounce and half.*

Or make it of *Bran or Wheat flower a pound, Peaſe, or Lupine flower two ounces,* boyl them in *Water and Honey*, ad *pouder of Orris, red Roſes, each two drams; Myrtle ſeeds a dram, Saffron half a dram, Oyl of Roſes and Chamomil, each an ounce and half.*

A Cataplaſm to digeſt more, and to be uſed in the Declination: Take *Lilly roots three ounces, Orris, and Briony roots two ounces, Mallows, Moulin, Bindweed, Dane-wort, each a handful; Chamomil, Melilot, Elder and Roſemary flowers, each half a handful; Meal of Lupins, or Orobus and Fænugreek, each two ounces; Dates ſix,* boyl them in *Honey, and Water*, add *Oyl of Lillies and Orris, each an ounce and an half; of Roſes an ounce, Hogs greaſe an ounce and half, Oeſipus an ounce, with Saffron half a dram,* make a Cataplaſm.

Or this of Juyces. Take *Juyce of Pellitory, Coltsfoot, Plantane, each two ounces; Mucilage of Mallows, Fænugreek, or of whites of Eggs three ounces, Honey an ounce, Oyl of Roſes two ounces,* anoint and add *Brans, Litharge, Ceruſs, Saffron,* or apply the *Aſhes of Box tree, with Honey.*

Or, Take *Cow dung half a pound, Juyce of Houſleek, or Nightſhade two ounces, Oyl of Chamomil and Roſes, each an ounce; Bole half an ounce,* anoint or apply it with *Meals or Bran.*

Or apply Olibanum, with Fœnugreek, Meal, Roſin, and Honey.

In Furunculus, eſpecially anoint with Scammony, Honey and Oyl, or with Juyce of Thapſia, or of Mulberry-roots.

Or with Sandarack, and Greaſe, or Earth Cimonia, and Vinegar, or make Plaiſters of the Stone *Aſius*, with Pitch and Roſin, according to *Dioſcorides.*

Who commends Earth Cimolia, Samia, Burning Stone, Oſtracites, Alabaſter, and get alſo the pouder of a Whetſtone, when it comes off by whetting Iron alone, or with Honey.

Dioſcorides commends pouder of Ivory for a Felon.

And *Hartman* commends Balſom of Sulphur, with a Clout to be uſed before and after Suppuration, and opening for the ſame.

You may alſo add Urin, Lye, and white of Eggs, to the Juyces mentioned.

Or uſe a Decoction of Litharge in Vinegar, with whites of Eggs added, and Ceruſs.

Or the Oyntments of Ceruſs and Litharge mentioned in Eryſipelas.

Or Diachylon magnum, or Ireatum, or Diapalma, or Colcother, or Plaiſter of Calcitis of *Avicen* to digeſt, or Triapharmacum, of Litharge by *Meſue.*

Dioſcorides ſaith that the Root of Lyons foot is a good Amulet againſt Furunculus.

The Cure of a Contuſion with Inflammation, or with Tumor not inflamed.

If there be a little Tumor from a Contuſion, without a manifeſt or great wound, (for of wounds with contuſion and inward Fractures we ſpake elſewhere) it goes of it ſelf away, or by diſcuſſers, and the blewneſs vaniſheth. If it be great, and an Inflammation feared, or come firſt, uſe Repellers, then Diſcuſſers, not as in Phlegmon, but with reſpect to the bruiſed Fleſh and congealed Blood. And if it will not be diſcuſſed but ſuppurate, then uſe Ripeners as in Impoſthumes, and after cure it as an Ulcer.

To hinder the Flux of Blood at the firſt after Blood-letting and other Revulſions mentioned in Phlegmon; If you will uſe Repellers (when the fleſh is bruiſed and hath much Blood, you muſt not cool as in a Phlegmon, and bind) but apply them to the circumference of the part conſused, not upon itt leaſt the blood by them by congealed and ſtopped.

Therefore apply Repellers and Diſcuſſers alſo, ſuch as are preſcribed for an Inflamation in the progreſs; as Oyl of Roſes and Myrtles, with whites of Eggs, or Mucilage of Fleabane, with aſtringent Pouders of Myrtles, Roſes, Pomegranate flowers, Snakeweed roots, Tormentil, Dragons blood, Bole, Maſtick.

Or thus: Take *Lentils two ounces, Myrtle ſeeds, and Pomegranate flowers, each two drams; Roſes, Sumach and Tamariſk, each a dram; Acacia, Maſtick, each two drams; Frankincenſe, Aloes, Dragons blood, each a dram; with Oyl of Roſes, Turpentine, and Wax,* make a Plaiſter or Liniment.

If there be no fear of Inflammation, diſcuſs the congealed Blood, though no Tumor appears but pain only, for then to be ſure the matter lyeth deep. And give internal Potions if you fear any part to be broken, or blood to flow into the Cavities or part conſused, and there to congeal. Theſe internal Potions do cure alone very often in that caſe, when there is pain, and little or no tumor. Theſe ſhall be ſpoken of with vulnerary Potions, but theſe following are the external Remedies.

Cataplaſms and Emplaſters of Wormwood, Chamomil, Melilot flowers, or Roſes boyled in Oyl and Wine, adding Bean flower, or Mummy, Sanguis Draconis, each a dram to a pound.

If the Head be bruiſed, add Bettony, and Head herbs, but not too hot, if you fear Inflammations from the pain.

Or uſe pouder of Wormwood, with the white of an Eg.

Or Bran boyled with pouder of wormwood, and Vinegar, adding Oyl of Roſes or Chamomil.

Or Lilly, Dragon roots, with Honey, and Goats dung.

Or Bean flower, with Oxymel and Tar, if the Nerves be bruiſed, or Orobus meal.

Or Snails bruiſed, with Fœnugreek or Bean flower.

Or Cow dung, and Oyl of Roſes.

An excellent Cataplaſm to take away blewneſs in contuſions. Take *pouder of Comfrey roots,* boyl them in *water and Honey to a pound,* add *Juyce of Rue and Wormwood, each an ounce and an half; Cummin ſeed two drams.*

Or, Take *Comfrey roots in pouder a pound, Pouder of Chamomil, Melilot flowers and Wormwood, each an ounce; Bean and Fænugreek meal, each three ounces; Butter and the Oyls mentioned two ounces, Saffron half a dram,* make a Cataplaſm, add *Juyces and Cummin ſeeds.* This diſſolves the contuſed mortified Fleſh.

Anoint with hot Oyls, as of Chamomil, Dill, Lillies, Elder, Dane-wort; or add Repellers, as Oyl of Myrtles.

Or, Take *Capons greaſe and Turpentine diſſolved in Honey and Aqua vitæ.*

Or uſe the Oyntment made of a Gooſe in Podagra mentioned, with a little Cummin and Wormwood in pouder.

Or uſe Dialthæa, with Oyl of Violets, Earth-worms, Rue, Chamomil, Gooſe greaſe, Butter and Mummy; and it is beſt when after anointing, you ſprinkle upon the part pouder of Cummin ſeed.

Or Oyntment of Alabaſter, Agrippa, Ceruſs, or Oxycroceum.

Or a Lixivium of Vine aſhes, with Vinegar, Salt and Honey.

Or the Aſhes of Vines applied with Vinegar.

Or waſh with Urin or Aqua vitæ, applied with a clout hot,

hot, and quickly after will hinder the ſwelling, and diſcuſs the blood.

At the concluſion to diſſolve the matter, foment with the Decoction of Dwarf-elder roots, Oſmond, Sanamunda, wormwood, Penny-royal, Mouſewort, Chamomil, Melilot, Elder flowers, and Roſes.

Or wrap the part in a hot Sheeps skin new flead off, or in an Ox skin, or put the part into a hot Dunghil.

In the concluſion of the Ears, *Dioſcorides* anoints with Sulphur, Honey, and wine, and applies Onions and Bran.

If the Glanduls ſwell or be inflamed, or the Stones, you are inſtructed what to do in the Tumors of the Glanduls.

The Cure of Bubo and Parotis, with Inflammation which is called Panus & Phyma.

The Swelling of the Glanduls with pain, chiefly in the Groyns and Armpits, or behind the Ears called *Parotis*. If it be without Inflamation with pain, as in young people that are growing, or when they ſwell from ſcabs and pains in the part adjacent, they are not much to be regarded. But we muſt prevent the Flux, and keep them from being handled, as Children do, and uſe revellers and derivers, if need be.

If the Tumor and pain be great or the Inflammation is begun or in being. And comes from pure blood, it is called *Phygethlon* or *Panus* when great, if it be leſs and from impure blood it is called *Phyma*, *Bubo* or *Parotis*. And theſe either come alone, or with long acute and malignant Diſeaſes, or in the French Pox or Plague, with, or without, Inflammation. And then firſt of all we evacuate, revel and derive by Blood-letting and purging, in reſpect of the Diſeaſe accompanying the Tumor, by which means alone, the body being handſomly purged, Veneral Buboes are cured ſomtimes.

As for Topicks at firſt, if there be great Inflammation by reaſon of the pain, you muſt uſe Narcoticks and Anodynes. But you muſt not uſe repellers, as in other Inflammations, except there be an Inflammation in the Adenes, from an external cauſe, becauſe the venemous humor, which cauſeth the Diſeaſes, is commonly purged forth by theſe Emunctuaries. Therefore this motion of nature is rather to be helped and the tumors to be drawn forth with looſners to make it flow, and gentle heaters that abate pain. And you muſt uſe ſtronge and very hot drawers, when the Bubo, or Parotis are Peſtilential; theſe things being applied at the firſt, you muſt then mix things to reſolve the Humor gathered, or to ripen it, mixing in Peſtilential cauſes things that attract poyſon and abate its force and work by a certain propriety. Alſo in the peſtilence to draw poyſon out of the Body, we uſe Scarifications and burning. And when there is an impoſtum, you muſt cure it, being broken, as an Ulcer.

As for the remedies, if the pain be firſt to be cured, uſe the Anodynes mentioned in phlegmon and the Narcoticks which alſo diſſolve, as I ſhewed, as Herbs Narcotick, Aqua vitæ and Lees of Wine.

As for other remedies to Relax, Attract, Diſſolve, Ripen, Open, and Correct, and Reſiſt malignity by potential or actual propriety: They are as followeth.

The greaſie wooll of Sheep, that hath *Oeſypus*, may be applied to the *Bubo*, *Parotis*, behind the Ears, which repels by its filth, and ſo not only abateth pain in Inflammations, but repels and relaxeth, eſpecially if it be firſt dipt in relaxing Oyls.

℞ A common relaxing Oyl to eaſe pain: Take *common Oyl, or Oyl of ſweet Almonds and freſh Butter two ounces, Hens or Hogs greaſe an ounce, mucilage of Fleabane, Lineſeed or Althæa half an ounce, with the yolk of an Egg.*

Another to digeſt, alſo is made of Oyl of Chamomil, Melilot, Dill, Elder, Wall-flowers, Lillies, Orris, Jeſamin, bitter Almonds, with Hens, Duck or Gooſe greaſe, with Mucilage of Fenugrek and Saffron.

Or make a Relaxing, Attracting, Digeſting, Fomentation of the Decoction of Mallows, Lillies, Camomil flowers, and Melilot, as the Inflammation of the Papps and Stones. Alſo you may apply often a hot Spunge boyled in Wine and Water.

Or Althæa, Mallows, Pellitory, Lillies, Chamomil, Melilot, to relax and diſſolve the Bubo and Parotis; or the Roots of Daffodil, Swordgraſs, Rue, Bulbus, and Perſonata, or Aſter Atticus, which is called *Bubonium*, or Inguinalis, becauſe it is proper for Buboes. Or Scabious, which is ſingular in the peſtilential Bubo. Or Moulin roots and and all Maidenhair, Plantane, Arage, Brookline, Elder, Yarrow, Hareſoot, Sclarea, Southernwood, Galiopſis, Acinos, Iſatis or Wood, Coriander, Onobrychis, Conyza, Pycnocomum leaves, of wild Olive, or the Flowers of Panax aſclepias. And when you will diſſolve and attract more, Rocket and yellow Crowfoot, and Leaves of Conſiligo, Nut-tree bark; and black Briony, bruiſed and boyled in Water or Wine, or Oyl and Water, with Vinegar, Honey, or Oyl of Roſes; Chamomil or Fats. *Dioſcorides* applies it beaten with Salt; or with Treacle or Mithridate, when the Bubo is peſtilential.

Or with Meal of Barley, Peaſe, Lineſeed, Fœnugreek, Lupins, Darnel made to a Cataplaſm.

Or the Brans alone, with the Liquors mentioned, with Oyls and Honey often applied warm.

Or make Cataplaſms of Onions, Lillies, Althæa, and Briony roots, and Orris, with Butter, Greaſe, or Oyl, and with Figgs, Fœnugreek and Lineſeed.

Or in the Plague with Treacle, Mithridate, and other Antidotes; or cut the top off from an Onion, and fill it therewith, then cover it, and roaſte it, and bruiſe it, and lay it on, with Vinegar, Juyce of Citrons, or Pomegranates, Oyl of Scorpions, St. Johns-wort and Saffron.

Raddiſh is good in the plague, if it be ſliced and laid on after, with a hole in the middle, to let out the Venom.

Or apply green Crab-apples in the plague.

Or a Pomegranate ſliced and boyled in Vinegar, adding Juyce of Scabious, or Sorrel, or the diſtilled Waters thereof.

The Yolk of an Egg and Salt, draws and diſſolves the Juyce of Scabious. And if the Bubo be peſtilent, with Antidotes, or ſalt Bacon.

Or black Soap with Lye and Ammoniack, diſſolved in Vinegar, to diſcuſs a Phyma.

In the venereal Bubo drink and waſh with Water of Celandine.

A Cataplaſm to attract, diſſolve, and ripen. Take *Lillies, Onions, Althæa roots, Raddiſh, all peeled and cleanſed four ounces, Mallows and Scabious, each a handful and an half; Chamomil and Melilot flowers, each a pugil; Figgs five pair,* boyl and ſtamp them, add *Fœnugreek meal two ounces, Gum Ammoniack and Galbanum, each ſix drams;* diſſolve them in *Wine, and with Oyl of Lillies and Greaſe* make a Cataplaſm.

It will be ſtronger, if you add Muſtard ſeed, pigeons dung.

This is an admirable Cataplaſm in the plague. Take *a great Onion, and make it hollow, and fill it with Treacle, roaſt it in the Embers, take off the outward Skins, and bruiſe it with Meal of Secalis, Honey, Yolk of an Egg, Gooſe dung, and a little Turpentine,* apply it hot.

Emplaſters to attract, and then diſſolve, that muſt be cut in the middle to let out the Vapors, are Diachylon magnum, and Ireatum, or Melilot, or Althæa, with Roſin, Galbanum and Ammoniack.

Or apply Galbanum alone to the Groyns, when the pockey Bubo appears, and then vaniſheth, to draw the Venom to the part.

Or, Take *Galbanum, Ammoniacum, Bdellium, Opopanax diſſolved in Vinegar of Squills, or Aqua vitæ, and with Oyl of Lillies, and half an ounce of ponder of Orris to four ounces thereof, and two drams of Scabious, or a dram of Euphorbium or Cantharides,* if you will have it ſtronger.

Or Treacle, with ſpirit of Sulphur, and Oyl of Juniper is good to draw out Venom.

Ano-

Another proper for a *Phyma*: Take *Labdanum, Bdellium, Ammoniacum*, diſſolved in *old Oyl with an ounce of Proplis*, or other diſſolver, *Turpentine half an ounce, Honey and Hogs greaſe, of each an ounce; with Pitch and wax*, make a Plaſter.

At the firſt in the Plague, eſpecially uſe theſe to draw out venom.

A Cock, Hen, or Cicken, or a Puppy, or a Frog, or Toad, which is beſt divided, or Sheeps lungs hot and bloody, often applied.

The Chymiſts in the plague, take Toads and make a hole in their Heads and hang them in the Air to dry, and keep the dry being beaten flat. Theſe they lay upon the Bubo to ſuck out the venom, for they will ſwel, being laid on, as if they would break. See *Paracelſus* in his book of the plague.

Or take a Cock, Hen, or Pidgeon, make the rump bare and caſt Salt thereon, and hold the bill faſt, that as the vulgar ſuppoſe they may ſuck the poyſon in backwards.

A Cupping-glaſs with great flame, is good alſo to attract poyſon, applied upon the part, or about it.

Or Houſleeks to ſuck out venemous blood.

Somtimes we ſcarifie or cut a peſtilent Bubo, to make way for the poyſon, or uſe an actual or potential Cautery.

Some cut it clean off. Theſe are dangerous remedies to be uſed with deliberation, for they draw not much out of the body, and endanger the patient, eſpecially if there be Inflammation.

The Cure of Inflammation of the Paps and Stones.

If Tumors be in the Breaſts and Stones without a true inflammation, from abundance of Milk, there is rather a diſtention with pain in the Breaſts, this is to be refer'd to magnitude increaſed, or when the Stones ſwel without Inflammation, as in the Colick, it ceaſeth with the Colick.

But if there be a Tumor in them from other Cauſes and Inflammation be feared or begun. Which cauſeth perverſe Ulcers, often in the Breaſts, and hardneſs or Scirrhus in the Stones. The Cure of them ſhall be ſhewed, as in the Inflammation of them.

If blood flow much to them, preſently open a Vein, if the paps be inflamed in the Arm, and then in the Foot, eſpecially if Terms be ſtopt. If the Stones be inflamed, firſt open a Vein in the foot, then in the Arm to revel and derive, and apply Cupping-glaſſes to the Arms and Hips with Scarification and Repellers to the part, and Anodynes. Then diſſolve that which is flowed to the part, leaſt it turn to matter and cauſe an Ulcer, which in thoſe parts is not eaſily cured.

Uſe the repellers mentioned in *Phlegmon* and the digeſters alſo, ſuch as have meals in them.

Or thus: Take *Plantane, Groundſoyl, mallows, each a handful*; boyl them, and add at the end *water of Night-ſhade and Roſes*, ſtamp, and add *Barley, Riſe, Bean and Peaſe meal, each three ounces; Oyl of Roſes two ounces, Oyl of Chamomil an ounce*, make a Cataplaſm *with Bdellium*, diſſolved in *Vinegar half an ounce*.

Alſo take remedies preſcribed in Phlegmon againſt pain ſuch as are Narcotick and digeſt rather then Anodynes, which will cauſe Suppuration, which muſt here be prevented.

And uſe diſſolvers as in Phlegmon adding the roots of Coriander and Daſies.

Or apply Coriander, Rayſons and Honey beaten.

Meal of peaſe and Beans is beſt here, if boyled in Wine or diſſolving Oyls mentioned in Phlegmon with Honey, Vinegar and Cummin ſeed.

Or mix Mucilage of Althæa, Fœnugreek, Linſeed with Farines or Meals and Oyl.

Dioſcorides commends Wallnuts, with Rue and Honey.

And you may uſe Rayſons ſtoned, or Figs and Dates, boyled in Wine, or the pulp thereof a pound with peaſe and Bean. Meal, each two ounces; Fœnugreek half an ounce, with digeſting Oyls, Orris pouder half an ounce, and ſeeds of Irion a dram, Honey two ounces, to diſcuſs Better.

Dioſcorides applies Vine leaves and Salt.

And Leaven with Organ and Salt.

Alſo dryed Cow dung, boyled with Honey and Wine, is good.

Or Treacle with Saffron, Honey and Oyl.

Or Foment, as in Flegmon, with Althæa, Mallows, Wormwood, Orris roots, wild Cowcumbers, Melilote, Chamomil, Roſemary, Elder, Stæchas flower, Roſes, Fœnugreek, Linſeed, common Figs boyled in Wine, adding Honey and Vinegar.

Or dip Wooll in digeſting Oyls, and apply it.

Or this Oyntment: Take *Oyl of Chamomil and Lillies, each an ounce and an half; Galbanum and Labdanum*, diſſolved in *Vinegar, each half an ounce; Cummin ſeed a dram, dryed Cow dung two drams, Saffron half a ſcruple, with Wax*.

Live Crabs, or unboyled Cray-fiſh, bruiſed and applied are highly commended.

If the Inflammation of the Paps, or Stones tend to Suppuration, Cure it as impoſtums.

The Cure of Impoſtums.

Impoſthums coming after Inflammations, are a like Cured in all parts. By ripning, and opening, and curing the Ulcer.

An Impoſtume muſt be ripned as ſoon as it comes, as when the matter flowed in the Phlegmon, cannot be diſſolved, that ſo it may be turned to *Pus* or *Quinor* and voided by an Ulcer. Such an Ulcer is not very difficult, if well looked to, but when we know and perceive that an Inflammtion tends to an Impoſtume, we muſt help nature, and the more, when it is apt to ſuppurate preſently, as moſt little Puſtles do. And we muſt be more diligent, if the ſuppuration be difficult and long, as in Furunculus, in which inſtead of matter there is a lump of fleſh that is long fixed, and eſpecially in parts of moſt concernment, or noble, where the matter may prejudice by being long kept in, as about the joynts and in *Paronychia* or Fellons except the matter be preſently concocted, and get forth the bones in that place, and the Nerves grow foul. This Maturation or Suppuration, is commonly done by the benefit of Nature only, which concocts the Humor, and therewith ſome part of the part afflicted, in which the blood is without any putrifaction, only it turnes to a white matter. Which ſtinks not, for putrefaction differs much from Suppuration, and follows it when nature ceaſeth to Maturate or ripen, or doth it ſlowly or imperfectly, as in Furunculus, therefore to help her, the Phyſitian applyeth Suppuratives or ripeners, which are temperate or gently hot, and Emplaſtick, which by nouriſhing the natural heat, makes Maturation. This is done by Anodynes, which after the ſame manner, as I ſhewed, cauſe Maturation. And many Suppurative Medicines, would be Anodyne, if the breeding of matter did not cauſe new pains.

Alſo many diſſolving Medicines, being not too hot or dry, but gently hot, when they cannot diſſolve matter, by reaſon of its incapacity and unfitneſs, help Suppuration, when nature tends that way, or at leaſt hinder, if not. All theſe maturating or ripning remedies, being actually warm and gently hot, doth thereby haſten Suppuration.

Alſo concocting remedies ripening or Suppurating are applied, that they may better operate in forms of Cataplaſms or plaiſters, as *Triapharmacum Galeni*, made of Wheat floure, Oyl and Water boyled to a pultis, and colored with Saffron to make it concoct the better.

Or inſtead thereof, uſe this: Take *wheat flour, or of Zea, or Maizi*; (which are outlandiſh grain privatly commended) *or crums of Bread*, boyl them in *water, or fat broath* not

not ſalted, *or milk* if there be pain, *and to a pound*, add *Oyl or Butter, or Hogs greaſe, of each an ounce and an half; two yolks of Eggs and mucilages*, if you pleaſe.

Or make it of crums of bread or flower, with Lillie roots, Onyons and Milk, adding Butter, Oyl or Greaſe. You may boyl alſo Mallows, Althæa roots, Ground-ſill Figs.

Or: Take *Marſhmallow roots and Lilly roots, each two ounces; Bryony roots an ounce, Emollient herbs, Groundſoyl, Coleworts, Eryngus three handfuls, Violets a pugil, Figs ſix pair, Rayſons ſtoned ten pair, wheat flower or Bread three ounces, powder of Fænugreek or Linſeed two ounces*, boyl and bruiſe them, add of the fat mentioned *two ounces, Oyl of Lillies, Violets ſweet Almonds an ounce and an half, Saffron half a dram*, make a Cataplaſm.

Or: Take *a white Onyon* (which becauſe it is not ſo ſharp as the other ſort, doth more maturate or ripen and digeſt) *and Figs ſliced*, boyl them, mix them with *Butter or Oyl and flower, yolks of Eggs and Turpentine.*

Or: Take *Figs two ounces, Labdanum, Frankincenſe, each a dram, Storax Liquid and Turpentine, each half a dram, with Flower, Oyl and Hogs greaſe*, make a pultis.

Or roaſt Henbane leaves in the Embers, and apply it with fats and digeſters, for the fats being temperate, will moderate their Heat.

The roots of Dogs Tongue bruiſed, is good againſt the Plague, and ſuppurates well.

Some apply Bird-lime others liquid Verniſh.

Dioſcorides applies Birdlime, Wax and Roſin, equal parts.

Or Bird-lime with Mallows, Wormwood, Linſeed, Honey and Oyl boyled,

Or ſweet Butter and Wax.

Or Pitch, or Wax, or both with Oyl, Turpentine and Frankincenſe.

Others apply yolks of Eggs or with the whites, with Oyl or Butter, or Suet, or Marrow and Turpentine, with Frankincenſe and Saffron.

Or Mucilage of Althæa roots, Fænugreek and Linſeed with Oyl of Butter or Greaſe, and yolks of Eggs.

The uſual Maturating plaſters, are *Terapharmacum Galeni* made of Pitch, Roſin, Wax and Cows greaſe, or Oyl, if there be pain, and then it is called the little Baſilicon of *Meſue*. Alſo common Diachylon: or the little Diachylon in pain. Or the great, which digeſteth moſt, and if it will not be digeſted, it will help maturation, if there be much Oyl, and you uſe other mollifiers, as Oyntments of Althæa reſumptive and Aureum. *Actius* uſeth Unguentum Macedonicum, to ripen the Furunculus.

Or foment with Water and Ovl, or Oyl alone, or apply it with wooll, before you uſe other application.

The juyce of Colewort, or the mucilage of its ſeeds, is good.

Or Fleſh, or Fiſhes, or Crayfiſh, cauſe Suppuration, or a warm hand often applied. Therefore we prohibit handling of any Tumors, when we will not have them Supperate.

When the Impoſtume is ripe, it muſt be opened, that is when there is matter, which you may know by its ſoftneſs and point, as we ſhewed.

Somtimes it muſt be opened, before perfect maturation when it is about the joynts, or noble parts, leaſt the matter retained ſhould hurt them. And when the Bubo is from a peſtilent or malignant humor.

Nature or things that ripen do open, when the Skin, Fleſh and Blood are concocted, and made more tender and ſoft by boyling as it were.

Or we open by violence and cutting or breaking the skin, with potential or actual openers.

They which potentially open, are ſome milder, which ripen and open, alſo theſe we uſe when we deſire to open by degrees, others are ſtronger and ſuddenly corrode, burn or pierce the Skin.

Leaven added to the above mentioned maturatives, or ripners, or yolks of hard Egs and meal, or Greaſe and Onions, will mature and help to open.

Scabious, Coleworts, Daffodil roots, Bugloſs, onyon do the ſame.

Alſo rotten Nuts, and Watercreſſes, and Smallage, which are ſharp, bruiſed and applied with Figs, Meal and oyl.

Or Danewort bruiſed with Hogs greaſe, is good, if often applied in the Impoſtums of the breaſt.

Or rotten Apples, ripe Bramble berries, or ripe berries of Herb-true-love open impoſtums, or an Onyon, or Garlick.

Or aſhes of Colewort roots, Figtree with Vinegar open ſtrongly, but gently with greaſe.

All dungs are approved to ripen and open impoſtums, as Ox dung, eſpecially fodder, or Goats dung for the parotis, Gooſe dung is highly eſteemed in the Fellon, or Paronychia, being new and hot, for it preſently breaks it. In other Impoſtumes, uſe Cow dung, Hogs Goats and Dogs dung. And when you will open quickly and forceably apply Pidgeons and Hens dung. All theſe may be applied alone, or boyled in Wine, adding Vinegar or diſſolved in Oyl and mixed with meal.

The Cataplaſms made of the things mentioned, will be ſtronger. If you add to the Plants bruiſed or boyled, as much Leaven and the part of Doves dung with ſtrong Vinegar, which will boyl the skin, and make it open. And they will be ſtronger yet, if you add *Muſtard half an ounce, or Nitre and Sulpher vive, each two drams.*

A Plaſter that preſently breaks all Impoſtums though venemous and peſtilential: Take *Load-ſtone half an ounce, Turpentine and Oyl of Scorpions, of each an ounce; Maſtick, Amber, Myrrh, Sarcocol, Ammoniacum, Cantharides prepared, each two drams; Roſin four ounces, wax half a pound*: make a Plaſter, ſpread it upon Leather, or new cloth, and apply it hot.

Or mix Honey Anacardine, with Pitch and apply it.

Or Euphorbium boyled a little in oyl, becauſe it burns, add dungs and a little Ammoniacum.

Or uſe Sal Armoniack with Leaven and yolk of an Eg, Saffron and a little opium.

Or quick Lime with Soap, Honey or faſting ſpittle.

Potential cauteries open the skin ſooner by burning, with pain, but without when they mortifie and black the skin. And though the eſcar ſtaies long, yet round about where it ſeperates preſently from the ſame skins there is paſſage for the humor, till it fall off. Theſe are applied in that part of the Impoſtum, where it is ſofteſt, or pointed in a plaſter having a hole in the middle, where they are placed, leaſt they ſhould ſpread and inflame, and if there be pain it muſt be after aſſwaged, and the part muſt be defended round about with the defenſive oyntment mentioned in phlegmon

Galen preſcribes many as Cauſtick balls of *Polydus, Andro, Muſa, Dyſinus*, made of Calcanthum and Allum and the like. Alſo the two cauſtick oyntments of Andromachus.

The Arabians have many. *Falopius* and *Paræus* mention the chief, which work quickly without pain and without Opium, which is uſed but to little purpoſe, as I obſerve.

Among which that is wholly without pain, which is made of Capital Lye boyled by degrees to a ſtone. This Lye is made of three parts of unſleaked Lime, and two parts of Wine Lees burnt, with water poured on, and often ſtrained or boyled, and it is ſtronger, if inſtead of water, you uſe a Lye of Bean ſtalks or Oak.

And it will burn the skin ſooner, if you add the fourth part of *ſal Armoniack*, or Allum, or Calcanthum to the Lime and Lees of Wine, but then it is more painful and therefore they add *Opium*.

You may boyl up a Cauſtick ſtone alſo of Soap, Lye with Chalcanthum, ſal Armoniack or Allum.

Sublimate made into a paſt with Populeon to abate pain, and Blood-ſtone to allay Inflammation, doth the ſame.

Or Cantharides, with Leaven and Vinegar, and Verdigreese, or Chalcanthum, or a little Orpiment; which wil work sooner, and the pain will be less.

Some wet the part with Aqua fortis, and six parts Water.

A caustick Water: Take *Vitriol and Arsnick, each two ounces; Sublimate half an ounce, Juyce of Briony six ounces, pouder of Cantharides two drams,* distil them, and apply one drop to the place to be opened.

Or a drop or two of Oyl of Vitriol: This is the way of *Nicolas Massa.*

Actual opening is quickest, with a Knife or Lancet in the place that is soft and pointed, where we feel the matter thrusting it in til they come forth, and let the Orifice be large enough. If it be about the bendings, observe the wrinkles, that you may cut according to the lines of them.

When the Imposthume is deep, especially about the Joynts or other parts, where the matter remaining may do hurt, you must open it presently before the parts be corrupted, before the matter is concocted, or the Imposthume appear manifestly. Therefore in Paronychia or Felon if there be great pain, though Suppuration appear not, yet cut it open from the fingers end on the side of the Nail, to the Bone, down to the Joynt, for so shall it prevent the corruption of the bone from the matter.

A ripe Imposthume is somtimes opened with a hot Iron either burning through the skin, or making only an Eschar as a potential Caustick doth, but sooner. Also in a Felon we burn the corrupt bone, as shall be shewed in Ulcers.

The Cure of a Cancer.

A Cancer being a Tumor differing from a Phlegmon, growing by degrees without Inflammation, and of a fleshy substance deeply fixed; and when it is ulcerated differing from other Ulcers by its fixed lump of Flesh, and the claws and turning in of the Lips, hurting by its venemous quality rather then by pain and heat, hath a different Cure from other Tumors and Ulcers.

First you must prognosticate, for if it be newly begun and be little, it is not to be known but by skilful Physitians, and it is usually neglected: And therefore you must declare that the growth thereof is hard to be hindered. And if it be grown, it is worse, and if it be at the height, it can never be cured; and if it be ulcerated, it is deadly, except it can be taken out by the Roots.

Therefore at the first beginning there is hope, when it is confirmed, there is less or none, especially if it be ulcerated, therefore palliate it thus.

And in regard we have no certain known Antidote against the malignant quality and matter that produceth and nourisheth a Cancer, we cannot resist it: For if that were known, we could cure it as other tumors, but it will not be discussed. And if we should go about to soften and suppurate it, as unlearned Chirurgions do, we should make it worse, and sooner ulcerate. Therefore let us endeavor by al means to hinder its growth, while it is growing, and after to keep it from an Ulcer, and if it be ulcerated, to keep it from corruption while it may be, or let us at first while there is strength, utterly root it out, or after when it is desperate. In the mean space all the time, let us keep the Body clean, and preserve the strength, and oppose Symptoms.

To hinder its growth while there is strength in the beginning, and when the Body is plethorick, let blood scarifie, and cup in the parts distant, or near to revel and derive. Against this also the Flux of Hæmorrhoids and Terms, is a good help.

We purge also from the beginning, to take away the plenty of Humors, and hinder the growth of the Cancer, than to abate Melancholy, which is thought to be the cause of the Cancer; for purging cannot take away the venemous quality thereof, as of others, as in the French Pox, wherein we purge strongly to cure it, therefore in a Cancer the Body being weak, it is not safe, nor profitable. Forms for Purges are described in other Diseases, therefore we shall not here repeat them.

The Patient must be refreshed with very good Diet as in Hectick Feavers, chiefly with Meats made of Cray-fish or Broath thereof, which hath a propriety as they suppose, from the Name rather then thing, for it is nothing like a Cray-fish in the shape. They must forbear salt and sharp meats, that it may not ulcerate: wine is good for them. And they must have Cordials inwardly given and outwardly applied, as in Hectick. Especially such as resist Venom mentioned in pestilent Feavers, and such as shall be mentioned in venemous Ulcers, they are better then vulnerary Potions, which are ordinarily given in this case of a Cancer ulcerated. And they highly commend that of Pyrola and ground Ivy, boyled in Wine against Cancers in Womens Breasts,

As for Topicks while the Cancer is whole, we labour to hinder the growth and ulceration thereby, by Dryers and Astringents, which have a propriety to fix and harden it.

This is done by many Repercussives mentioned in Erysipelas and Phlegmon, made of Plants and their Juyces, besides the Anodynes and unctious Medicines.

Polytrichum is the best Herb in this case, and Herb Robert which is called divine, and Cancer-healers. Also Ceterach, Coriander, Agrimony, Polygonum. And Moulin, Plantane, Endive, Nightshade, Shepheards purse, Comfrey, Sanguisorba, Dock, Galiopsis, Housleek, Moonwort.

These are to be bruised and applied, with Vinegar, or Juyce of green Grapes.

Or thus: Take *Roots of Moulin and Docks, each two ounces; Polytrichum two handfuls,* stamp them with *Vinegar,* add *pouder of burnt Cray-fish half an ounce,* make a Cataplasm.

Another: Take *Meal of Lentils, or Pease a pugil, Kernels of rotten Nuts, or parched, bruised six,* boyl them in *Vinegar,*

The Flesh of Sea-crabs which are more like a Cancer, or Cray-fish, or Snails, or Froggs, is good boyled and applied.

You may apply the Juyces of the Herbs mentioned, with Vinegar.

Or thus: Take *Juyce of Plantane, Nightshade, Endive, Housleek, and of the rest two ounces, Rose-vinegar an ounce, Oyl of Roses, or Myrtles two ounces, Turpentine half an ounce,* stir them in a leaden Mortar, add *Pomegranate and Citron peels, each a dram; Bole two drams, burnt and washt Lead a dram, Camphire half a dram,* anoint often therewith.

A Plate of Lead is good to keep down a Cancer.

The Cure of a Cancer ulcerated.

In an ulcerated Cancer we dry and astringe more, to abate the stink and putrefaction, and constant gleeting of blood which bring death. And if any part be corrupt, we must endeavor to take it off with Medicines, and to root out the Cancer by manual Operation.

The Plants mentioned are good to dry, and ridw in an Ulcer, add Nettles, Rue, St. Johns-wort, Daneworf, Scabious, Knotgrass bruised.

Or use the Juyces or Pouders, with Oyl of Roses.

Pouders also, or Ashes of Cray-fish, or Crabs, Snails, Froggs, Weezles brains, Mans dung dryed in an Oven, and other Dryers, as Stones of Myrobalans, or Olives, or Shoo-soles; or of the Herbs mentioned, or of old Willow Psithia, Pomegranate flowers, Seeds of Irion, Galiopsis, pouder of Harts horn; also of Lead burnt and washt, of Ceruss, crude Antimony, Tutty, Pompholix, Litharge: Also of Bole, Milstone, Gypsum burnt, and the rubbing of Wherstones. These may be mixed with Juyces, or stampt Herbs, and applied.

Or apply stampt Raisons, and Rue, and Colewarts boyled in Milk, with Sugar to drive away the stink, or lay on Bay leaves.

A good

A good Oyntment. Take *Juyce of Moulin, Herb Robert, or Polytrichum an ounce, Honey three ounces, pouder of burnt Stones of Myrobalans two drams, Ashes of burnt Crabs a dram,* make an Oyntment.

This is better: Take *Juyce of Plantane, Shepherds purse, Agrimony, and Vinegar five ounces, Oyl of Roses, or Myrtles four ounces, Turpentine an ounce,* stir them in a leaden Mortar, add *Litharge half an ounce, Lead burnt and washt, Bloodstone, each two drams; crude Antimony a dram, Coral burnt and washt two scruples, Pearl a scruple, Camphire a scruple, Ashes of Crabs a dram,* make an Oyntment, to which you may add the pouders above mentioned, especially that of Mans dung.

Also use Oyl of Eggs stirred in a leaden Mortar.

Or Diapompholygos or plaisters of Lead, to dry a cancer ulcerated.

Keep it clean washt with Vinegar and Juyces of Herbs, or with stronge Lye of Fig-tree ashes, or Willow, or Juniper, or with Urin: They will be stronger if you add Vitriol.

The distilled Water of Mans dung and Coriander, is highly commended.

This following pouder preserved an old Man many years in a Cancer, from putrefaction, stink and bleeding, it was all over his Cheek and Neck. Take *Galls and Pomegranate peels, each an ounce; Gypsum burnt two ounces; Bole an ounce, Litharge and Cadmia, each half an ounce; round Birthwort three drams, burnt Lead two drams, pouder of Crab shells a dram,* make a fine pouder, or a plaister of them, with *Honey* and *Turpentine.*

We use Sal Gem or Allum, to take away corrupt Flesh, with an equal part of pouder of Earth worms.

Or mix therewith Juyce of Briony, or Dragons.

Or Ægyptiacum to resist putrefaction.

These are stronger, Orpiment and Tartar, equal parts, steep them in Vinegar, and make a pouder.

Or, Take *Crystal, Arsnick two drams, Cookowpint roots, an ounce,* make a pouder.

Or, Take *Orpiment a dram, Verdigreese two drams, white Wine a pint,* infuse them, pour of the clear, and boyl it till the third part remain, use it with a little Rose-water.

Or, Take *Sublimate a dram, Rose, Plantane, and Nightshade water four ounces,* boyl it a little.

The last Remedy is cutting it forth by the roots, if strength will permit. It is in vain to try when it is deep, and grows to the Flesh, Membranes, and Veins; for if a portion remain, it will grow again. And if it be great, and near great Veins, there is danger of great bleeding, which is dangerous, if it be not presently stopt. But sometimes it may be wholly cut out, with a part of the sound flesh: As when it is in the Thigh or Arm. And if you cut a great space above the Cancer, and take it away, it will grow again; as I observed in a Maid who had a cancer cut from her Knee. The Cancer in the Breast is taken away with cutting the breast clean off: But if any Root remain in the Ribs, it will return.

Give me leave to relate the Cure of a Cancer, which was told me by a Friend. Take *white Arsnick finely poudered one part, Roots of Cookowpints poudered four parts, Chimney-soot* as much as will make it grey or ash coloured, keep this pouder for your use, the older the better, it will last five years. Sprinkle this pouder as thick as the back of a knife upon an ulcerated Cancer, taking heed that it touch not the sound flesh, lay it thickest in the middle, because the middle Root of the Cancer is commonly biggest, then lay thereon a pledget wet with spittle, that it may stick with the pouder, otherwise it will not work. The Patient must be dressed thus after meat, and touch not the the cancer, but with wooden Instruments. There are some cautions to be used in the application of this pouder, by reason of its divers operations; for in some it causeth pain, in others not it pierceth to the Veins or Roots of the cancer, and there it sticks fast, so that it cannot be taken away without breaking of them. It must therefore be used but once, because its force remains till it takes all away with it. And no other medicines must be applied but round about in the circumference as broad as two fingers, you must lay Defensives or Repellers to hinder Inflammation. As, take *Bole, Arsnick, Oyl of Roses, and Vinegar.* Also there is a great flux of blood sometimes from the piercing force of the medicine which breaks the Veins, with yellow and sharp matter, apply then nothing but dry double clouts, as often as they are wet, for it will be but a day or two, and will take away all pain. This done, expect the Cancer to fall from the sound flesh of its own accord, within eighteen or twenty dayes; for if the least Root be broken by force, before that time the cure is dangerous to be begun again. The separation being made of the cancer from sound flesh, use this pouder to the Ulcer. Take *fine Olibanum, Mummy, Mastick, Myrrh, Aloes, Sarcocol, each a dram; Opopanax half a dram, wash them in Plantane, and Rose-water,* and make *a fine pouder,* you may increase the quantity *of Mastick, Olibanum, Myrrh, and Sarcocol* to make it sharper. After you have laid this pouder thick upon the Ulcer, use this Oyntment upon a pledget. Take *Litharge of Gold two ounces, Mummy an ounce, Oyl of Roses an ounce and half, with a little Rose-vinegar,* stir them in a leaden mortar, and make it a soft Oyntment, *with Oyl of Roses.* It is sufficient to cure the Ulcer, if you apply these two once a day, at first there will come forth a slimy, white, thick matter, which must be dayly wipt away till the Cure is by Gods assistance compleat.

The Cure of a simple Anthrax or Carbuncle pestilent.

A Carbuncle or Anthrax if it be not pestilent, weakneth and is difficult and dangerous, when it is near the Heart, when it is dry or sends out venom and not matter, with great Inflammation. A pestilent Carbuncle destroys by the pestilent Feaver which goes with it, and hurts the Joynts, and destroys if it be in the noble Parts.

For cure of both, cleanse the whole Body, and use alterers when it is pestilent, look to the Feaver rather then the Carbuncle, and let blood according to the part it is in: As we shewed in pestilent Feavers. In other Carbuncles bleed and purge in respect of the Plethory, and Cacochymy, and Inflammation to revel and derive. Use coolers agreeable to the Feaver; and Cordials inwardly and outwardly, and a refreshing Diet, and cause sleep if it be wanting, though in a carbuncle it is forbidden, least thereby venom should be drawn to the Heart; but by heat external and sweat in time of sleep, we see the contrary that the heat goes outward: Therefore keep them not from sleep, as is usual.

When a Carbuncle is not pestilent, we use Topicks to repress the Inflammation; when it is we attract the Venom, we open and ripen it in both cases, and then cure it as an Ulcer.

In an Anthrax not pestilent we only lay Repellers round about where the Inflammation is, and that at first; such as are in Phlegmon mentioned, as the Defensive of Bole, and that of Juyces or the Oyntments, as that of Ceruss.

Or we use the Emplaster of Arnoglos to cool and concoct at first, or all a long the Cure, it is made of Plantane, Meal of Lentils, or brown Bread, adding Galls at first to repel more, and to concoct more, Meal of Orobus, and Beans, and Honey.

In a pestilent Carbuncle at first we attract poyson, as in a Bubo pestilent as we there shewed; with a Cock cut in two, or a Pigeon, or Frog, or Toad, or with the Rump of a Cock or Pigeon; after the part is scarified, or with Cupping-glasses, or Horseleeches, or with the mouth of a desperate Fellow to suck it, or with the Instrument by which Womens breasts are drawn.

We open both sorts of Carbuncles to let out the venom or humor at first, by scarifying and in the progress, especially when it waxeth black with deep cuts, least they gangræne, which will cause death, and wash them with salt Water.

We

We alſo uſe Cauſticks to attract the venom, in both. And when it begins to corrupt, we uſe an actual Cautery with Gold, or Steel: or potential, as in Impoſtums, as the part of *Galen*, or Cantharides. It is uſual to lay Sublimate or Arſenick upon it, in the middle of a plaſter with a little hole in it: Or take *four grains of it with a ſpoonful of the white of an Egg well beaten*, and ſo touch the Carbuncle therewith.

We Maturate or concoct it both, as ſoon as the fleſh where it is, begins to corrupt, ſo that a part of it being turned to matter, where it is joyned to the ſound fleſh, the reſt may come forth whol, or by piece meal. You muſt chooſe things for this, that are proper againſt poyſon or malignity.

As Scabious and Comfrey of both ſorts, which are chiefly commended: After them Mullein, Dogs tongue, Mouſ-ear, Yarrow, Horſtayl, Shep-herds purſe, Goats rue, Coleworts, Althæa roots and Lillies. And according to *Dioſcorides* Motherwort, Savin, Cypres, Privet, Hercules, Panax ſtampt and applied with Salt, or their juyces,

Alſo Garlick, Leeks, Lilly roots and Radiſhes, Rocket, Water-creſs, Nettles with Salt and Pepper.

Alſo Pomegranates ſliced, and boyled in Vinegar, and bruiſed, do take off putrifaction and malignity from a Carbuncle.

Or the ripe berries of Herb-true-love, cut or bruiſed, are good in the plague, and ripe olives dryed are good in both.

Or dried Figs, or Rayſons, or kernels of Wallnuts, or ſmal Nuts, which are rotten with Salt and Leaven.

Dioſcorides commends Rayſons and Rue, with Honey and Pitch, to take away the Carbuncle round about.

The yolk of an Egg with a dram of Salt, doth the ſame, to which you may add Honey, Figs, Meal, and juyce of Scabious: or diſſolve the yolk well ſalted in Vinegar and other proper juyces.

A convenient plaſter: Take *two cloves of Garlick, Rue, a pugil, Figs four, Leaven half an ounce, Salt a dram and an half, Pepper half a ſcruple*, ſtamp them.

Or thus: Take *roots of wild Cowcumbers or Bryony two ounces, ſal Niter a dram, the Gall of a Hog a little dryed half an ounce, meal of Lupines a dram, with Turpentine.*

Another: Take *Muſtard ſeed half an ounce, meal of Lupines, or Orobus two drams, Figs an ounce, Gum Ammoniack diſſolved in Vinegar three drams, with Turpentine.*

Alſo the dung of Hens, Pidgeons, Sparrows, Sheep, Oxen, are good to ripen alone, or with Honey, Vinegar, meal or yolks of Eggs, or Leaven: Somtimes we mix Soap, Dung and Vinegar. If you will uſe mans dung, which is ſo highly commended, let it be dryed and mixed with the reſt.

Alſo ſoot of the Chimney, Leaven, yolks of Eggs and Salt are good, or Charcole of oak. Or this oyntment: Take *Allum two drams, ſal Gem half a dram with Honey.*

Or uſe Niter and Turpentine.

Or juyce of plants mentioned, as Scabious, Comfrey, Mullein with meal, or yolks of Eggs.

Or oyl of Nuts, or Roſes with Salt, Honey and Vinegar.

Or Gum Ammoniack diſſolved in Vinegar with oyl of Lillies and Wax, diſſolves a Carbuncle and draws out his poyſon.

Or you may uſe Treacle or Methridate alone, or in a roaſted Onyon, or with other herbs, to draw out poyſon in the Plague, or to ripen in both.

Some affirme that the Saphire ſtone bound upon the Carbuncle, doth good.

They ſay alſo that if you bind Scabious bruiſed to a ſound part, and lay *Athanaſia* upon the Carbuncle, it will remove where the Scabious is.

The Ulcer left after a Carbuncle, ſhall be cured as other Ulcers.

Herpes miliaris ſomtimes goes away of it ſelf, by drying up, or with little help, as faſting ſpettle, as alſo *Phlyctenodes*. *Eſthiomenos* is more hard to be cured, and through neglect turns to *Impetigo* or *Pſora*.

The Cure of Herpes miliaris and Eſthiomenos.

The cure of theſe coming from a Cholerick, Salt and ſharp humor, is much a like, As for Evacuations they muſt be ſuch as purge thoſe humors that cauſe them. Firſt gentle to drive out the Excrementitious, and then ſtronger to purge the blood of its filth. Theſe are to be given by way of prevention to them that are ſubject to theſe Diſeaſes. The forms of them are mentioned in Cholerick diſeaſes and Fevers, and we ſhal ſpeak more of them in the ſcab. As for Blood-letting it will not be neceſſary, except other Circumſtances invite.

We correct the heat and ſharpneſs of humors, by alterers mentioned in Fevers and with good Diet, and we uſe Topicks in both ſorts of Herpes, from the beginning, which are very dry, and cool the ſharp humors. By which a miliaris is eaſily cured, and ſome times *Eſthiomenos*, but if it creep on, we uſe ſtronger dryers and things that cleanſe the foul fleſh, or eat it off from the ſound, that it may no further corrupt it,

To dry and abate ſharpneſs, uſe Plantane, Polygonum, Agrimony, Shep-herds purſe, Bramble leaves, Privet, Vine leaves, Nightſhade, wild Lentils bruiſed.

Or thus: Take *Agrimony, Plantane, or Myrtle, or Olive leaves two handfuls*, ſtamp them, add *Sumach and Pomegranate peels, of each an ounce and an half; Barley or Lentil meal two ounces*, boyl them in *ſharp Wine, or Wine and Vinegar*, bruiſe them for a Cataplaſm.

Or uſe the Emplaſter of Arnogloſs, or Lambs tongue mentioned in Carbuncle with Galls, Pomegranate peels, round Birthwort in *Herpes Miliaris*, or them of the three Pomegranats,

Or uſe the juyces of the plants mentioned, or of pomegranats alone, or with the fourth part Vinegar, or the diſtil'd waters of them, with Roſe water and Vinegar, with *two drams of Camphire*, to half a pint.

Acacia and *Hypociſtis*, diſſolved in *Juyces or Vinegar*, do dry and aſtringe excellently, and hinder creeping.

Or the liquor that comes from green wood while it burns, as from Vine or Oak, to which you may add other dryers.

Theſe following dry more: Take *juyce of Plantane, Polygonum four ounces, Vinegar an ounce, with Barley meal*, make an Oyntment.

Theſe dry better, if inſtead of meal you add *the pouder of Galls or Pomegranate flowers two drams, Bole half a dram.*

Or thus: Take *juyce of the herbs mentioned with Vinegar, Oyl of Roſes and Myrtles, of each four ounces*; let them boyl till the juyces be conſumed, then add *the pouders mentioned, or of Pomeganate peels, or Acron cups, of each two drams; Birthwort a dram, and with Wax* make an oyntment.

In *Eſthiomenos* to dry more and keep it from creeping, uſe this: Take *the juyces mentioned with Oyls*, boyled or not, for juyces are ſtrongeſt then, add *Litharge half an ounce, Tutty burnt and waſht, Lead, Antimony, Bloodſtone, Cadmia, each two drams; burnt braſs, or ruſt of Iron and Aloes, each a dram; Coral and Spodium, that is burnt Ivory*, ſtir them in a Leaden mortar with the *juyces* and *Oyls*, and a little *Turpentine*, or if they be boyled, add *a little wax* for an oyntment.

A ſtrong cleanſer: Take *juyce of wormwood, Celandine the great, or Pellitory, or Elicampane, or of Rue three ounces, Myrrh two drams, Frankincenſe half an ounce, Sals a dram, with meal of Lentils*, make an oyntment; or with *meal of Lentils, Beans, or Barley, or an ounce of Oyl Omphacine*, to take away putrefaction more powerfully.

Or thus: Take *Litharge two drams, Sulphur two drams, Niter or ſal Gem a dram, Verdigreeſe half a dram, with Honey*, make an oyntment.

Or

Or make an oyntment of Allum and Wine Lees.

Or uſe Ink to dry, becauſe of the Allum, Vitriol and Galls.

Or *Pompholygos*, white oyntment of *Rhaſis*, with dryers, as Allum, Niter.

Or wild Goats dung, as *Dioſcorides* preſcribes, or Cow dung with Wine and Vinegar.

Or pouder of the heads of ſalt-fiſh, as Herrings, or wooll and Leather, and pine tree bark burnt to a pouder dry well, when they are ſprinkled upon a Herpes or Teter or mixed with oyl.

Or: Take *two drams of thoſe burnt pouders, roots of round Birthwort, Pomegranate flowers, Myrrh, each a dram; Olibanum a dram and an half*, ſprinckle it upon the Teter, firſt rubbing it, and anoynting with *Oyl of Aſh tree*. *Dioſcorides* commends the pouder of Snayl ſhells.

A good fomentation for both ſorts of Herpes or Teter is a diſtil'd water of Dock roots ſliced and ſteep'd in Vinegar a day or two, or of Citron peels with Allum.

Or thus: Take *of plants mentioned three handfuls, with myrtle leaves or Olive, Dock roots or Birthwort, each an ounce, Pomegranate peels and Galls, each ſix drams; Lupine ſeeds an ounce, myrtle ſeeds half an ounce, Acacia, Hypociſtis, each ſix drams*; boyl them in *Forge water* with *a little ſharp wine*. to waſh the *Herpes Eſthiomenus*, add *Frankincenſe and myrrh, to cleanſe more, half an ounce*.

Or waſh with Lye and old Wine, wherein the things mentioned have been boyled.

Or with Vitriol diſſolved in Vinegar and Water.

Or: Take *Sublimate a dram and an half, Lytharge two drams, Borax half a dram, Camphire a ſcruple*; boyl them in *two ounces of proper water* and waſh the Teter: or we ſtop the eating thereof with things that ſhall be mentioned in corroding Ulcers.

Or: Take *Dock roots three drams, great Celandine a handful, Allum, Sulphur, each an ounce; Salt a pugil with Wine and Vinegar*, boyl them and let the vapor be received, ſo that it touch the Tetter.

Or apply plates of Lead after the Tetter is anoynted and ſteep them firſt in Vinegar, Salt, or Allum water.

In the Tetter called *Eſthiomenus*, it is good to rub it til it bleed. And then the clenſers appled, will work the better.

Or burn of the corrupt fleſh, with an actual or potential Cautery, as in Carbuncles.

The Cure of the common Scab, Itch, Scald, Terminthus, Epinyctis, Impetigo, Prurigo, Pſora and Greek Leproſie.

The Scab is of many ſorts, as the moiſt Scab, which is either ordinary, or feirce, ſpreading, as *Tinea* or Scald, *Terminthus*, *Epinyctis*: or the dry Scab, as the Itch called *Prurigo*, *Impetigo*, or *Pſora*, *or Greek Leproſie*, we ſhall ſpeak of the Cure of all together, in the Cure of the Itch. The *Phlyctænæ* are bliſters, when the ſcarf Skin is ſeperated from the true, and are cured as the corroſions of the Skin.

Of moiſt Scabs the vulgar is moſt gentle and eaſie to be cured, but when it often returns it is ſtubborn, and if not cured will turn to a worſe ſort. The next called *Fera* is worſe, but curable, and if neglected, it turns to a worſe ſort. That which is worſt is called *Manans*, or ſpreading, it is difficult to be cured, and is infectious in Children, and deformeth the Hair by eating it off. The *Terminthus* and *Epinyxis* are eaſily cured. Among the dry Itches *Prurigo* is eaſieſt to be cured, and *Impetigo* more hard, and *Pſora* is moſt difficult, and they are turned from one into another if neglected, and eaſily return in Spring and Fall. And at length they turn to the Greek *Leproſie*, which is incurable, though it ceaſe, it will return with an ugly cruſt conſuming the patient and itching. And it is taken for the *Elephantiaſis*, by them that cannot diſtinguiſh.

Alſo thoſe may be cured alike, as for general helps, Evacuations and Alterers, becauſe they come from Cholerick, ſalt, ſharp and malignant humors (as in the Cauſes) they muſt be purged, and let blood, and the alterers muſt be greater or leſs, according to the diſeaſe, with reſpect to the conſtitution, and the Excrements abounding, as followeth.

In the moiſt Itch you muſt let blood, if Age or other things forbid not, becauſe the Anticedent cauſe is ſalt ſerum, which is cholerick and ſharp in the blood, and this will partly come forth by bleeding. Which muſt be rather done, when there is Plethory or fulneſs, which cauſeth puſtles. The Vein opened muſt be for general or particular Evacuation of that Member, which is moſt infected. In the dry Itch, though there be not ſuch moiſt puſtles, yet becauſe the blood is very unclean, you muſt bleed alſo, eſpecially if the skin be red, as in *Prurigo*, which ſhews heat. This muſt be done before purging often, and every month you muſt Cup and Scarifie, or apply Horſleeches. And the Terms and Hæmorrhoids muſt be provoked, in them that are uſed to them, as we ſhewed in the want of them.

In all kinds of moiſt or dry Itches, you muſt purge often, when the body is foul, and in *Pſora*, which is worſt, if every day, or every other day, for a long time, eſpecially Spring and Fall. And this muſt be by fit Medicines, that purge cholerick, ſalt and ſharp humors, from the Guts and Meſeraicks and ſo from the Maſs of blood, adding alwaies things that reſiſt ſharpneſs of humors. And chooſing ſuch as inflame not the body too much.

Theſe purges are to be found in other diſeaſes of choller and melancholly ſtronger or weaker. Eſpecially in intermitting feavers and continual putrid. As well ſuch as are preſcribed before bleeding to cleanſe the Excrements in the belly, as ſtrong purges, and the preparatives to be taken before them. As that Apozem mentioned in a Synoch with Eryſipelas, and the purges preſctibed againſt Melancholly: or theſe.

Let them drink whey morning and evening, eſpecially of Goats Milk, ſo much as may purge, this is pleaſant for children.

Or diſſolve ſome pleaſant things therein, as Manna or ſyrup of Roſes, or Violets, or of Peach flowers; with a little Diagredium, if need be. Or give ſome other purging ſyrup therein, that may be taken.

Or give of Roſes, Fumitory, Hops, and of Bugloſs, Docks and Apples.

Or make a little at a time, becauſe it will ſoon decay, as of whey or old Cock broath two pints with Mercury, Beets, Fumitory, Hops, Elder flowers or Danewort buds, Senna, Polypody, Epithymum, Damask Roſes, with a little Sugar or Honey.

Or give uſual ſyrups to purge unclean blood, as the gentle ſyrup of Roſes, Violets, Peach flowers, made of their infuſions or juyces with Sugar or Honey. Juyce of Fumitory, or Hops, or Mercury, or Rhamnus ſolutive, or the juyce of its berries. Thus: Take *the grains, or ſeeds of the drying thorn called* Merla, through ripe, bruiſe them, and keep them in an Earthen veſſel eight daies warm: take *a pint of the juyce and as much fine Sugar*, mak a ſyrup with *Cinnamon and Ginger, of each ſix drams; Cloves two drams*. This ſyrup, is not good only for Scabby people, but Gouty, and ſuch as have flegmatick and ſerous humors.

Or give ſyrup of Roſes with Rhubarb, of Eupatorium with Rhubarb, of Apples by King *Sabor*, of the juyce and Senna, or that of Fumitory, Epithymum, Polypody, Myrobalans, Tamarinds, Caſſia of Epithymum compound: or that of Fumitory, Myrobalans, Tamorinds and Agarick, of Succory with Rhubarb: of Diaſereos, and the like.

Or that of Apples and Hellebore. Thus made: Take *Bugloſs and Borage roots and all, each two handfuls; Fumitory, Eupatory, Chamæpytis, or Groundpine, Germander, Madenhair, each a handful: Bugloſs, Borage and Sæchus flowers, each a pugil; Raiſons ſtoned an ounce, tops of Time and*

and Epithymum, each half an ounce ; Senna an ounce and an half, Polypody two ounces, black Hellebore ſteeps in white wine three drams, Schænanth two drams, boyl them, and add to the ſtraining *Juyce of ſweet Apples twelve ounces, Sugar two pounds* make a ſyrup.

Another by *Montanus* made of *Senna, Rhubarb, Myrobalans, Epithymum, Polypody, bark of black Hellebore ſix drams, with an ounce of Cloves, and four ounces of Liquoriſh boyled to five pints.*

Or this purging Decoction for five or ſix doſes. Take *Dock roots three ounces, Graſs, Aſparagus, Kneeholm, Elicampane, Liquoriſh, each an ounce and half ; Fumitory and Mercury two ounces, Polypody four ounces. Succory, Dandelion, Sowthiſtle, Bugloſs, roots and all Scabious, Fumitory, Hops, Mercury, Maidenhair, Eupatorium, Endive, Liverwort, Sorrel, Violets, Lettice, Balm five or ſix handfuls, Cordial flowwers, Water-lillies, Moulin flowers four pugils, Budds of Hops tops, of Thyme and Epithymum, each a pugil ; Aniſeſeed two drams, Seeds of Dodder, Melons and Sorrel, each a dram ; Carthamus bruiſed three ounces, Raiſons ſtoned two ounces, Prunes ſix pair, Sebeſtens or Jujubes eight pair, Tamarinds an ounce and half,* infuſe the Seeds and Roots in a pint of white-Wine, then add as much Water with a little of the Decoction of Lignum vitæ, or Wormwood-water. boyl and ſtrain, ad ſugar and Cinnamon, give it often as Iſhewed

If you will have it work more, infuſe *three ounces of Senna or four,* or make it into a ſyrup, *with half a pound of Sugar,* give it as you find it works, or mix it with *Water of Bugloſs, Fumitory, Maidenhair* or the like, or with *Pulp of Caſſia or Tamarinds* make an Electuary, you may add alſo Diagredium to make it ſtronger.

You may alſo boyl Soldanella, with the Decoction of Senna or for the ſtronger people, *three or four drams of black Hellebore,* and add *an ounce of Myrobalans* at the concluſion, rub'd with *Oyl of Rhubarb, or Agarick, or Mechoacan,* with their Correctors, and after ſtraining, add *Sugar* to make an Apozem or Syrup, and it will be better.

Or add to the Decoction Syrup of Fumitory, Docks, Hops, Apples, Bugloſs, Roſes ; or take a good quantity of the Juyces of them, and infuſe therein Senna, Rhubarb, Agarick, or make a Syrup.

Or, Take *Juyce of ſweet Apples four ounces, Juyce of Roſes three ounces, Juyce of Fumitory and Hopps, each two ounces ; Juyce of Dock roots and Beets, each an ounce and an half ; Juyce of Mercury, Borage, Bugloſs, Sorrel, each an ounce ;* boyl them with as much *Sugar* and with *Cinnamon* make a ſyrup : You may if you pleaſe add *Senna* and *Rhubarb.*

A purging Wine for five doſes. Take *Dock roots, or Monks-Rhubarb two ounces, bark of the Roots of Tamariſk, or Aſh and Danewort, each an ounce ; Fumitory, buds of Hops, Mercury, Agrimony, Maidenhair, Wormwood, each two drams ; Peach, and Cordial flowers, each a dram ; Aniſeſeeds two drams, Senna two ounces, Thyme, and Epithymum an ounce, Mechoacan, or Briony roots half an ounce, Ginger a dram,* bruiſe them for *five or ſix pints of Wine,* and ſteep them therein, you may ad *Sodanella* and a little *black Hellebore,* which is ſafeſt in Wine.

Or, Take *eight meaſures of new Wine,* add *twelve ounces of Senna, Mechoacan, Sarſa, Saſſaphras, each three ounces ; Wormwood two handfuls.*

Another Decoction for other Diſeaſes, and the Scab to be taken thirty dayes, it prevents and cures. Take *Guaicum an ounce, Sarſa ſix drams, Roots of Succory and Liquoriſh, each half an ounce;* boyl and ſtrain them, and for one doſe infuſe *Senna half an ounce, Mechoacan a dram, Ginger half a dram,* ſtrain and add *Syrup or Juyce of Roſes half an ounce, Balm water an ounce :* Give it at once.

An Infuſion or Decoction of Hellebore is good as in other ſtubborn Diſeaſes, made of the ſmall Roots of Hellebore, that which is called *black Aſtrinia,* or that with a green or purple Flower, which are greater then the white Hellebore, though this may be uſed in ſtrong Bodies, take off the Bark and caſt away the Pith, which may be ſoſtned in Wine, if it will not come off. Take *a dram or four ſcruples of this bark, two drams of Senna,* infuſe them in *wine or Oxymel,* if it be *white Hellebore or Aniſeſeed water,* add *Cloves, Cinnamon, Ginger,* boyl gently, and ſtrain them, add *the Decoction, or Raiſons, and Prunes, or Syrup of Polypody, or of Roſes.* Or you may make *an Extract of black Hellebore* by often Infuſion, and give a little thereof.

A certain Emperick cured all Scabs and other ſtubborn Diſeaſes, with the Decoction of Stibium calcined and Sarſaparilla.

You may alſo uſe Potions and Electuaries, as of Tamarinds, Caſſia, Manna, Lenitive, Diacaſſia, Diaprunis, Diacatholicon, or ſtronger with Scammony, as Diaprunis ſolutive, Diaſebeſten, of Juyce of Roſes, Diaphœnicon, Troches of Violets, or Electuary of Lapis Lazuli, Confectio Hamech, Diaſenna, Pills of Fumitory, Agrimony, Rhubarb, and Pills of Lapis Lazuli, or of the five Myrobalans.

After Purging ſweat to ſend out the ſharp Humors in both moiſt and dry Itch, for though it dries the Body more, yet it takes away the cauſe. For Nature in Impetigo and Pſora tends that way, as we may obſerve.

Therefore uſe not only hot Houſes often, but when the Itch is ſtubborn and returns, continue them a month, with Decoctions of Guaicum and Sarſa as in the Pox, but not with ſuch ſlender Diet, leaſt by drying the Body within, you ſharpen the Humors, alwayes Purging every third day, by which we have often cured them.

Uſe Alterers to amend the Conſtitution, and a ſparing Diet, but not ſo as to exaſperate the Humors. Let the Diet be of good Nouriſhment, temperate and moiſt rather then dry, and cold rather then hot. Take heed of ſalt, ſharp, and ſpiced Meats, and Wine that inflames the Body too much. Let the Air be good, the ſleep temperate, and let them exerciſe often to breath out the Excrements by inſenſible Tranſpiration.

Medicines muſt be given to alter the ſharpneſs of the humors that are cold and moiſt, to correct the Diſtemper of the Liver, and open Obſtructions : As Conſerves, Candyes, Syrups, Waters of Bugloſs, Violets, Roſes, Succory, Water-lillies, Maidenhair, Citrons, Pouder of Trionſantalon, and Diarrhodon : And others mentioned in hot and melancholy Diſeaſes. Alſo give ſharp Spaw-water for many dayes ; or Troches of Vipers, with Conſerves in Pſora and Elephantiaſis, and a dram of Gum Lac, with three ounces of the Decoction of Myrtles, is good to preſerve againſt Impetigo.

Many in Pſora and other ſtubborn Scabs, uſe Chickenbroath, and Vipers fleſh boyled therein, and made into balls, with Crumbs of Bread, and gilded with Gold.

Let the topical Remedies be ſuch as draw out the Humors faſtned in the skin, and abate their ſharpneſs, and diſſolve them, and that purge the skin from matter, cruſt, ſcurfe and ſcalds ; and heal it, and take away the Inflammation. They muſt be drying, and cleanſing, and healing, mixed with cold and ſharp things, in both moiſt and dry Itch, to abate cholerick and ſharp Humors, and Itching and Inflamation ; as in the vulgar Itch, or that which is called *Fera,* or *Cruel,* or *Terminthus,* or *Epinyctis.* Alſo add Emollients to take away the Scabs in the wet Itch, and the ſcurfe and ſcalds in the dry. Thus ſcratching is delightful, till the skin be torn to let out the itching Humor, but it ends in tearing pain ; and though it ſo hurteth, and is the firſt cauſe of the ſcab breaking out, yet becauſe it allayeth the Itch, and brings out the Humors, it is not amiſs, if it be with diſtinction of the parts, and not ſo much in ſome places as in others.

Baths are much uſed againſt the Itch, both natural and artificial, dry and moiſt ; and if it be in a particular part, they muſt be uſed to that alone.

Among Natural Baths it is good to ſwim in freſh water, which allayes the Itch by its coldneſs, and mollifies the ſcurfe by its moiſtneſs, and by its earthy quality, which I ſhewed in the Cauſes of the Stone, to be in all Waters, it dry-

dryeth. And the rather if the Water be muddy, or have any chalk-like ſubſtance in it when it is boyled. Such are in divers places, although they are ſweet and ſeem pure and clear, and are good againſt other Diſeaſes as well as the Itch. Hot Water doth all things better, if the Patient continue long in it, and go in often, for thereby the Humors are better drawn forth and purged; and by the uſe of it not only the ſmall Itch but the ſtubborn Scab, hath been often cured.

Sulphur-waters or ſuch as are ſalt or ſharp, which by the bitumen ſwiming at the top, and by their ſcent declare they are from Minerals, are the beſt baths. That of Sulphur which is hot upon which Bitumen ſwims like greaſe, is beſt againſt all ſorts of Scabs, becauſe it dries cleanſeth, and digeſts, and mollifies by its fat, therefore it is good againſt dry ſcabs as the laſt remedy. Salt Waters hot or cold are beſt for the moiſt ſcab, for they dry ſtrongly. And all other Mineral Waters are good.

Or Artificial Baths, ſuch as are called dry or hot Houſes to ſweat in, by which the humors that cauſe the ſcab ſweat out with the ſerum, which takes away the ſcab by its moiſtneſs, and the heat dries up the Excoriation. Theſe do it alone ſomtimes, but moiſt baths or other applications when the Pores are opened, do better being joyned therewith.

You may make moiſt Baths to ſit in, to cleanſe, dry, mollifie and cauſe ſweat of Herbs, Roots, and all, as of Docks, Scabious, Blicampane, five leaved Graſs, Snakeweed, Tormentil, Plantane, Fumitory, Moulin, Fern, Dwarf-elder, Mugwort, Dill, Oak leaves, Ivy, and Willow tops: tops of Briony, Dragons, or Cookowpints, wild Cowcumbers, and to dry more, of Sorrel, Soapwort, Pellitory, Beets, Mallows, Borrage, Marſh-mallows, Lillies, Organ, Sage, Chamomil, and Roſemary flowers, Beans, Peaſe, Vetches, Lupins, Barley, Bran. Fœnugreek, Gourd and Lineſeed, and the like. Boyled in freſh Water, or Salt, or mineral Water, adding Lye, or Smiths Forge-water, or Sulphur, Salt, Allum, Vitriol, Tartar burnt, Gypſum, Bole, and the like.

Thus: Take *Lapathium, and Briony roots a pownd, Elicampane four ounces, Dragons, or Cookowpints two ounces, Scabious, Plantane, Fumitory, Pellitory, Mallows ſix handfuls, Bean and Lentil meal four pugils, burnt Gypſum a pound, Sulphur half a pound, Salt four ounces,* with Water to fill the Veſſel, boyl it and add Lye.

In a dry Itch when by uſe of Oyntments the skin is dry. Take *Mallows, Violets, Docks, Beets, roots and all, Pellitory, Scabious ſix handfuls, Line, Fœnugreek, Bran, Pompion ſeeds an ounce or more, Chamomil flowers three pugils, Brimſtone a pound,* boyl them.

Another for the ſame. Take *Sulphur two pounds, Salt a pound.* pouder them and mix them with *two pints of Oyl,* boyl them gentlv, put them into a hot Water for a bath, let him ſit and ſweat there, and after that ſweat in his bed, do thus three dayes, and be cured.

It is good once or twice a day to rub and anoint before and after bathing, the Pores being open.

Rub the Body with Dock roots boyled in Vinegar, in both Itches; or bruiſe Dock roots, with Salt and Vinegar, and rub in the bath therewith, that he may be waſht after this is a common remedy.

In Impetigo uſe Briony and Gentian roots, after the ſame manner, with Dragons and Cookowpints.

Or ſtamp theſe Plants, Roots and all, with Vinegar, Salt and Brimſtone, as Elicampane, five leaved Graſs, Snakweed, Tormentil, Alkanet, wild Cowcumbers, Daffodil, Coleworts, Bugloſs, black Charlin, Crowfoots, black Hellebore, Plantane, Scabious, Fumitory, Agrimony, Elmleaves, leſſer Celandine, and againſt Itching, uſe Potamogetum and Mercury.

Add Meal of Lupins, Darnel, Peaſe, Barley, Juniper, and Bay-berries; or wild three leaved Graſs, and Watercreſſes, with Honey according to *Dioſcorides.* Or Coriander, Wormwood, Rue, Cowcumber leaves, and Leeks, Rhus, Coleworts and Plantane, with Bran, Raiſons, Honey, againſt the Epinyctis.

Or an Apple called *Adams-apple* cut in two, ſprinkled with ſulphur within, and then roaſted in brown Paper under the Embers, is good to rub with, or an Orange.

Muſtard-ſeed, Turnep, Rocket, Nigella, Staphiſager, Briony, Tamariſk, with Vinegar and Oyl, or Glans unguentaria, with Urin or ſeeds of ſunflower, are uſed by *Dioſcorides* againſt Epinyctis.

You may rub the Plants mentioned, adding Greaſe, as with Dock or Gentian roots, bruiſed or boyled with bitter Greaſe, Oyl of Bayes, and Ginger.

Or, Take *Roots of Docks, Elicampane or the like, two ounces, Dragons, or Cookowpints two drams,* ſlice and boyl them *in Vinegar,* bruiſe and add *Hogs greaſe, or Butter three ounces, with Salt and Brimſtone.* If you add *a little Quick-ſilver or Sublimate,* it is excellent in Impetigo and Pſora.

Or, Take *Roots of black Chamæleon two ounces and half,* bruiſe them with *fine Hogs greaſe or Oyl three ounces,* add *Sulphur half an ounce, Allum two drams, Vitriol a dram.*

Or boyl a pugil of Juniper-berries, and a ſpoonful of ſalt bruiſed in fine Hogs greaſe or Oyl, and ſtrain them for an Oyntment.

Or uſe Juyces of Herbs mentioned, or of Mercury. Xyris, Agrimony, Southernwood, with ſalt, ſulphur and Vinegar; or Juyce of Oranges, Lemmons, Citrons, Oyl omphacine and Acacia, or Juyce of Sowbread, Thapſia, Fig milk is uſed by *Dioſcorides.* Juyce of Henbane takes away Itching

Or Vinegar made of the Infuſion of Oleander, Olive-leaves.

Aloes diſſolved in Vinegar is good againſt Impetigo.

Storax with Vinegar and Oyl of Roſes, cures the ſcab.

Or Turpentine, or Gum Arabick, of Plum-tree, Almonds, Vines, with Vinegar and Oyl.

Dioſcorides applies Bird-lime, with a pledget to the Epinyctis.

Or the Water that comes out of burnt Olive or Cornil-tree, or the Tears of Vines, when they are cut off, or pruned.

Or ſheeps or Goats dung with Vinegar, cures the Epinyctis according to *Dioſcorides.*

Or the Gall of an Ox, or Blood of a Gooſe, takes away itching.

Or faſting Spittle, the Herpes and Impetigo.

Or Oyl of Yolks of Eggs, or Wheat or Nightſhade-berries, or Oyl in which live Coals have been quenched. *Dioſcorides* commends Oyl of Cedar, or wild Olives, and Oyl of Rocket, Tamariſk, Aſh, Juniper, or Oyl of Henbane ſeed, Populeon oyntment. Some uſe Petroleum in the Scab *Terminthus,* or Oyl of Tartar, with a little Oyl of Vitriol.

A Liniment uſual againſt the Itch. Take *freſh Butter, or Oyl of Roſes four ounces, Turpentine diſſolved with Yolks of Eggs two ounces or three, Salt ſix drams,* mix them well, you may add *Sulphur,* or which ſtinks leſs, *ſix drams of Ceruſs, or an ounce of Juyce of Oranges or Lemmons.*

Or, Take *Oyl of Roſes, Violets, Nuts, Lineſeed, Lillies, Bayes four ounces, Juyce of Docks, Scabious, Plantane, Fumitory, Oranges, Lemmons, with a little Vinegar four ounces, Turpentine three ounces, Salt ſix drams:* Or boyl *the Oyls and Juyces* till the Juyces be conſumed, and with *Turpentine* and *Wax* make *an Oynment,* but the firſt is better.

Or make an Oyntment of Sulphur and Litharge, Oyl and Juyces aforeſaid; or with Juyces and Vinegar without Oyls.

Or uſe the common Oyntment of Litharge or Ceruſs, made of Oyl and Vinegar, or without Vinegar; or uſe Unguent of Roſes, or white Oyntment, with Camphire, adding Litharge and Sulphur.

You may quickly make an Oyntment of Gun-pouder which conſiſts of ſulphur, Niter and Charcole, with Oyl or Greaſe: This is the ſoldiers Oyntment againſt the Itch.

Or,

Or: Take *Litharge, Sulphur, of each ſix drams; roots of Dragons or Cookowpints two drams*: mix them with the former Oyntment, *And half an ounce of Storax.*

Or: Take *Ceruſs, Tutty or Pompholyx, or Cadmia, Litharge, Bole or Chalk, each two drams; Sulphur three drams, Tartar a dram and an half, Gum Sandrack or Sarcocol or Maſtick, each a dram*; make a pouder with *burnt Lead and Antimony* and mix it with the oyntments mentioned.

In a ſtubborn Itch, add *Chalcitis or wine Lees burnt half an ounce, or a dram of Oyl of Tartar, a ſcruple of Oyl of Vitriol, or half an ounce of Quick-ſilver*, diſſolved with *Turpentine* with is excellent, or as much *Sublimate.*

Oyntments for Rich and dainty people, are made of Unguentum Citrinum, which makes the skin fair, and it is beſt in the face: and *Lac Virginis.*

Or: Take *Ceruſs half an ounce, Borax two drams, Tartar a dram and an half, Gerſa Serpentaria a dram, Frankincenſe, Niter, each half a dram; with juyce of Limons*, make an oyntment.

For the worſt Itch: Take *Calcanthum, or Miſie, or Chalcitis each half an ounce, ſcales of Braſs two drams, or Verdigreeſe half a dram, Allum three drams, Sulphur an ounce, Aloes, Frankincenſe*, Myrrh, *each a dram and an half; Acacia a dram, with infuſion of Gum Arabick in Vinegar. Galen* adds *Amurca or Lees of Oyl and Roſin.*

In Tinea, which is the ſpreading ſcab or ſcald: Take *Tartar, Niter and Allum, each half an ounce; Litharge an ounce, Sulphur vive ſix drams, both Hellebors three drams, Orpiment two drams*, pouder them, and with *Soap and juyce of Docks or Sowbread*, make an Oyntment.

Or: Take *Litharge an ounce, Allum, Niter or ſal Gem, Tartar and Sulphur, each half an ounce; aſhes of Nuts with the ſhels and Garlick burnt, each three drams; Soot* whoſe blackneſs doth no hurt to the Hair, *two drams, both Hellebores and Staphſagre, of each a dram*; make a pouder, and with *Honey, ſtrong Vinegar, and three heads of Garlick and two drams of Ivy or juniper berries*: make an Oyntment.

Or with Oyl of Nuts, Juniper or Bayes, and if you boyl the Oyls with juyce of Garlick, Centaury, Docks, Oranges and Vinegar, to the conſumption of the juyces, it will be ſtronger.

This Oyntment for a ſcald Head will be ſtronger, with *half an ounce of Quick-ſilver*, diſſolved in *Turpentine or with Cinnabar, or red Lead, or with red Chalcanthum, or Chalcitis, or yellow, which is called* Miſy, *or three drams of Verdigreeſe, or a dram of Orpiment, or Sublimate*, and if they be mixed with the Oyntment made of Honey and Vinegar without Oyl, it will be ſtronger, becauſe unctious things abate the force.

Many ſcald Heads have been cured with this: Take *the Oyntment that Carters greaſe their wheels with, called in Dutch* Rarenſalve, *a pound, leaves of dryed ſavin an ounce and an half, Bay berries half an ounce, white Hellebore two drams, ſulphur an ounce, Quick-ſilver half an ounce*, diſſolve it with *Turpentine*, and make an Oyntment.

Add the aſhes of a Hedghog, or Hippocampus, or aſhes of Juniper and Aſh, pouder of Earth Cimolia, Adarces and Cardamom and Camphire, they abate the Itching.

To take away the ſtink of the Brimſtone and the reſt, add Storax liquid, or Oyl of Spike, or Juniper, or pouder of Orris.

Or let it be made with flower of Brimſtone and beſides Storax, add flower of Belzoin, which are ſweet aud clenſe and dry.

A Cataplaſme for a ſcald Head: Take *three ounces of Garlick, Rue, Savin, Ivy, Nettles, each a handful; roaſten Nuts five, Juniper berries an ounce and an half, Pigeons dung an ounce*: boyl them in ſtrong Vinegar.

Or mix meal of Fænugreek with Pumice ſtone and juyce of Garlick and milk of Figs.

I have known poor people cure the ſcald, with the fat Earth that lies about ſpaw waters, laid all over the Head.

Or uſe pouders after you have anoynted the Head with Honey and Oyl aforeſaid.

Dioſcorides ſprinkles on Niter and Frankincenſe.

Or: Take *Pumex ſtone three drams, Borax two drams, Salt, Allum, Chalcitis burnt, of each a dram; Frankincenſe and* Myrobalans *each half a dram; Galls, Cypreſs, Nuts burnt a dram and an half*: make a pouder.

You may take of the ſcab and the Oyntments with Decoction of five-leaved-Graſs, Docks, Scabious and Meal of Lupines.

Or with the Decoction of Hens Dung, ſheeps or Goats dung, adding Docks, Plantane, Agrimony, Mallows, Bettony.

Or diſſolve burnt Gypſum in Forge water, it cures all ſcabs, for beſides drying it mollifies, and the Hands will not be rough when they are waſht therewith, but ſoft as we ſee when work men uſe it, for making Plaiſter.

Common Salt, or Allum, Niter, or Gem, or Armoniack, diſſolved in Vinegar allaies itching, or Tartar, or burnt Allum, you may if it be too ſtrong add water of Myrtles, Roſes, Docks, or the white of an Egg, and Oyls.

Or thus: Take *burnt Gypſum a good quantity, Bole pondered three ounces, Salt two ounces, Allum an ounce, vitriol a dram with vinegar and Wine*, make them as a Lye, or boyl them, waſh the mangie parts.

Lac Virginis made of Litharge and Vinegar and Salt or Allum water with juyce of Limons, Oyl of Tartar doth the ſame in the Face beſt.

For a Scald waſh the Head with Lye or Forge water, wherein are boyled Mallows, Beets, Pellitory, Southernwood, Wormwood, Horehound, Centory, Bettany, Maidenhair, Savin, Bramble leaves, Peaſe, Vetches, Beans, Lentiles, Lupines, Fænugreek, Juniper and Ivy berries, Muſtard ſeeds, Cypreſs Nuts and both Hellebors, adding Vinegar.

In a ſtubborn ſcab and Impetigo: Take *Litharge of Gold half a pound, Allum an ounce, juyce of Plantane, Docks and Limons, of each an ounce; Vinegar a pint and an half*: boyl and filter it off, it is ſtronger with *three drams of Quick-ſilver, or half an ounce of Chalcitis.*

Or boyl Litharge, ſublimate, Ceruſs, Vitriol, equal parts; in Plantane, Dock or ſpring water.

Or diſſolve ſublimate in Aqua fortis and mix a ſpoonful thereof with Roſe or plantane water, try the ſtrength firſt upon ſome part and then uſe it.

Or uſe the diſtil'd water of Docks mentioned in the Tetter.

Or: Take *juyce of Docks four ounces, of Plantane two ounces, of Limons an ounce, Roſe water an ounce and an half, pouder of Sulphur and Salt, each an ounce; Litharge half an ounce, Ceruſs two drams, Sublimate a dram.*

Or: Take *Dock roots three ounces, Bryonie, Elicampane, Gentian roots, each an ounce; Sulphur an ounce and an half, Quick-ſilver half an ounce, Vinegar eight ounces*, diſtil a water.

A Lixivium cures the ſcab, if it be uſed in time of bathing with ſoap, this is beſt in the ſcald, to get the ſcabs from the Hair and other filth. It is beſt made of vine and colewort aſhes and of Bean ſtalk, juniper aſh with unſleaked Lime, adding Forge water, Urin, vinegar or pickle, ſalt, Allum, ſulphur, Calcanthum.

Or waſh with ſtale Urin, that hath ſtood long in a braſs pot or that which is red and is made by a cholerick perſon.

Some commend that Water found in the cavities of Oaks.

Or uſe Medicines mentioned in the Elephantiaſis.

Or uſe a Dropax, that is a plaſter of pitch laid on, and forceably drawn off, to pluck out the Hair by the roots

roots which hinder the cure of a ſcald Head this is the laſt Remedy: make it of Pitch, Roſin and oyl diſſolved, one Plaſter over the whol Head is better than many.

The Cure of Ulcers in general.

Excoriation, Clefts, Wounds, and Ulcers are cured alike, when the skin, fleſh, and other parts divided grow again together: this is Natures only work, and the Phyſitian doth only remove the impediments by actual or potential means: and becauſe Driers are chiefly uſed they ſay all Ulcers are cured thereby; but they vary according to the ſorts of Ulcers, as we ſhal ſhew, firſt we ſhall ſpeak of the cure of ſuperficial abraſions, and Fiſſures, or Clefts, then of Burnings, then of deeper Wounds and Ulcers.

The cure of Abraſions of the Skin, Chaps, or Gall cal'd Interrigo, and of Fiſſures or Clefts, or Perniones, Kibes or Chiblanes.

Abraſions called *Interrigines* or Galls by Riding, long lying, Piſſing in Infants and Poſe or *Coryza* in the Noſe, or from *Phlyctenæ*, or Bladders broken, alſo Fiſſures or Clefts, or Chinks, or chaps called *Rhagades* in the Hands, Feet, Lips, Fundament, Paps, Privities, Prepuce of Men, Eye-brows, Noſtrils, Ears, come from Heat or Cold, or Drineſs, or ſalt and ſharp Humors, as *Perniones* or Kibs and Chilblanes uſe to be in the Heels in time of great Cold. they are cured alike, and when Kibes turn to Ulcers, they are cured as Ulcers.

Firſt take away that which cauſed them, or hinders the Cure of them, as by removing outward Cauſes, and cleanſing inward. as ſalt and ſharp Humors, and preventing their Increaſe, as we ſhewed in the Scab, if the cauſe cannot be wel taken away let it be abated, if it come by riding, mend the Saddle, if by long lying, lay ſoft things under, and if Children be gall'd by Urine, defend the part.

As for the reſt of the Cure, although Nature by Nouriſhment wil make new skin, and glew up Clefts or Chaps, yet becauſe the torn skin grows rough round about where it preſently drieth, eſpecially where it is thicker then ordinary, and moyſture falls thereon, which hinders action, you muſt apply Topicks to mollify the hard and dry Circumference, and things that dry gently without biting, and moiſten and ſo dry as it is rough or wet more or leſſe, Thus.

All Suets leniſie and heat, the chief are Dears, Kids and Goats. You muſt anoynt a Clout and apply it.

Candle droppings are good againſt galling by riding, and they are better when they are dropt into Water, or white Wine, this oyntment is called *Candle-droppatum*, it is eaſie to be had for Travellers.

When you wil Leniſie more, uſe Gooſe, Duck, Hens Greaſe, or *Oeſypus* which is Greaſe of Wool, or uſe Bears Greaſe, againſt Kibes or Chilblanes.

Or oyl of Roſes, Myrtles, Quinces, bitter Almonds, or yolks of Eggs, for chapt Lips or Nipples, or oyl of a burnt Nutſhel, or of Wheat, the oyl of a roaſted Turnep cures the Chilblanes.

Or the oyl of Sowbread or Daffadil roots made hollow, and then roaſted, or oyl of Nettle ſeeds, or of Nettles, boyled in oyl with Salt.

Or Mucilage of Gum Tragacanth in Roſe-water, or of Quince ſeeds, or the white of an Egge, Glew, or Size, made of Leather ſhreds boyled, cures the Chaps of the Nipples and the Greaſe thereof alſo.

The *Valeſians* uſe the Gum, that comes from the Bark of the Larch tree called *Drambech* in Dutch, or Turpentine.

Pomatum made of Kids Suet is Good for all Chaps, and it is ſweet for the Lipps and Nipples.

You may of thoſe ſewets, and oyls, and white Wax, make an oyntment with Mucilage, and a little Turpentine.

Or make oyntment of hard yolks of Eggs, with Goats ſewet, oyl of Roſes, and Greaſe that is ſweet.

Or for the Chaps of the Lips, uſe Honey, or Syrup of Roſes, or Sugar pellets, or Sugar of Roſes, or Diatragacanth frigid made into a Liniment.

To dry more uſe juyce of Plantane and Turpentine, with the oyls mentioned wel mixed together.

Or with Starch and Infuſion of Gum Tragacanth, with other driers.

or juice of ſweet Pomegranates, with Starch, and Butter; when there are Chaps in the noſtrils, from *Coryza* or *Poſe*, or Uſe the Emulſion, of the four great cold ſeeds.

Or Uſe the iuices of Comfrey, Cotyledon, Elder, Rue, made as the reſt into an oynument; or juyce of Gooſe-Graſs, againſt the Chaps of the Nipples, or *Acacia* againſt Kibes or Chilblanes.

Or Juyce of Briony with Salt, is good againſt Clefts.

Or leaves of Beech, or Briony, applyed to chapt Lips cures them.

Or a roaſted Leek, or Onion, with honey and oyl, or a Squil or Sea onyon, with oyl or Roſin, againſt Chilblanes.

Or add Starch to the Mucilages, or to oyntments, of Sewet, or of Yolks of Eggs.

Or Pouder of Galls, or Turpentine, and Honey.

In Chaps and Kibes, add Aſhes of Bran, Squils, Figgs Aſſes Hoof, Horſe-tayl, Cray fiſh, to Honey of Roſes, ſuets, or oyls.

Or burnt Shoe ſoals, or Paper with ſuet, or Tallow, is good, or to be added to Candle droppatum, for Galls by Riding, being at hand.

Maſtich, Frankincenſe or Pitch poudered and mixed with oyl of Roſes or Greaſe and Wax make a good oyntment.

Or thus. Take *Sorrel, Sarcocol, Maſtich, each a dram; Gum parched half an ounce*: pouder them, and with *Oyntment of yolks of Eggs mentioned two ounces*, or with that of *Mucilages* for chapt Lips make an *Oyntment*.

Sulphur and oyl mixed cure the Chaps of the Hands, or if you tie Sulphur in a Clout, or the flour of it, and boyl it in common oyl, or oyl of St. Johns wort or Moulin.

Or Litharge with the white of an Egg, or Mucilage, or oyl, or Greaſe ſtirred long in a Leaden Mortar, cures the Excoriations by Piſs and other chaps.

Or mixed with the oyntments made of Juyce of Plantane: alſo Ceruſs, Tutty, Starch, and oyl of Yolks of Eggs.

Or thus. Take *Litharge, Myrrh, Frankincenſe, each a dram; Galls or round Birthwort half a dram, Camphire a ſcruple, Oyntment of Suet two ounces*.

Or uſe the uſual oyntment of Litharge, Ceruſs, Pompholyx, with Allum or *Unguentum Citrinum*.

When the chaps are ſtubborn, uſe ſtronger Driers. Take *Litharge, Ceruſs, each a dram; Allum, red Lead, each half a dram; Sublimate four grains*, with *white of an Egg* make a *Liniment*.

A Water for the ſame. Take *Tartar three drams, Allum half a dram, Sublimate four grains, Ceruſs, Litharge, each a dram; Frankincenſe, Maſtich, each half a dram; Pomegranate flowers two ſcruples*: boyl them, mix them in twelve ounces of *Roſe, Plantane, Limon*, or *Mouſe-ear water* till a third part be conſumed, waſh therewith.

Or waſh before anoynting with *Decoction of Lillies, Mallows, Henbane, Poppy, Violets, Purſlane, Groundſil, Houſleek, Chamamel, Melilot flowers, meal of Fenugreek and Line ſeed* with *Sheeps ſuet*, let it be of *Milk* or *Water*.

It is good to waſh chapt hands in their own Urin.

For Kibes and Chilblains foment with a Decoction in Wine and Water of ſharp Herbs, as Dragons, Sowbread, Crowfoot; or Clenſers, as Turneps, Beets, Orrobus ſeed: or Aſtringents, as Myrtle, Verbaſcum the leſs, Arction and Pomegranate peels. Alſo Allum water is good againſt Kibes and Chilblains.

Or: Take *Melilot a handful, red Roſes a pugil, pulp of Quinces two ounces*: boyl and ſtamp them, add *meal of Len-*

ſils an ounce, Pomegranates peels half an ounce; with *Oyl of Roſes, Frankincenſe and Aſhes*, make a *Cataplaſm*.

I have ſeen the thick lips in a kib'd Heel ſtitched together, that it may heal the better.

You may cure chaps in the Hands and Feet with ordinary Glew ſpread upon a Clout.

You may uſe againſt Burning, things againſt Bliſters and Excoriations from them, being broken.

Burning, whether it be from any thing red hot, or from flame, or from Gun-powder (for a Bullet cannot ſo quickly grow hot as to burn as ſome ſuppoſe) or from ſcalding water and the like, or from potential Cauſticks or Nettles the narrower and ſhallower it is, the ſooner and eaſier it is cured; if otherwiſe, it is difficult, and leaves an ugly ſcar, and I have ſeen Gun-powder ſtick in the skin after the Cure. That Burning that is in or about noble parts or the Face, or which is very large from falling into the Fire is dangerous and often deadly.

If the skin be burnt by a Cautery, we labor to keep it open, by cutting the Bliſter and taking off the Eſchar, and uſe nothing but things mentioned in Flegmon againſt pain and Inflammation, and they may be uſed againſt other Burnings with Blood letting.

As for the place burned that is hurt and pained, firſt we take out the Fire, which is thought to be done by hot things, and therefore the Vulgar hold the part to the Fire, but they are moſt agreeable which have moderate heat and are therefore called Anodynes, and dry without Biting, and digeſt without great heat, and which hinder the Bliſters from breaking. this done at the firſt, we muſt uſe ſtronger Driers, and ſuch as heal Excoriation and Ulceration. ſuch as are againſt the skin flead off, and mentioned in the Itch. But if it turn to a deep Ulcer by ſuppuration, it muſt be cured as an Ulcer. and if the Weapon or Inſtrument made a Wonnd alſo you muſt firſt uſe things againſt Burning. and then cure the Ulcer. againſt Burning uſe theſe.

Plants bruiſed or boyled in Water, Wine-vinegar, or Oyl, or Hogs Greaſe are good, as Leeks, Onions, Daffadil, Hemerocallis, Lillies, Danewort roots, Hemp, Alkanet, Thorn roots, or leaves of St. Johns wort, Androſæmus, Pellitory, Althæa, Mallows, Ivy, wild Verbaſcum, Mulberry, Myrtles, Poppies, Hounds-tongue, wild Rue, Seſamus flowers, of Spear-graſs, Ivy, Ciſtus, Typha, or apply Beets roots and all.

Or anoynt with the Juyces eſpecially of leaves and Berries of Ivy, Onyons, Turneps, Nightſhade, wild Lettice which hath a milky juyce according to *Dioſcorides*. with Allum or yolks of Eggs, *Mucilage* or Gum Traganth or Cream.

Or: Take *the juyces mentioned three ounces, Oyl of Roſes, freſh Butter, Hogs greaſe, each an ounce*; *ſlaked Lime half an ounce, mucilage of Quinces an ounce*: with *Turpentine* make an *Oyntment*. or boyl away the *Juyces* and put *Wax* to it.

The Vulgar apply Elder leaves, but the middle rind is better.

Or: Take *the middle rind of Elder an ounce and an half, the juyce of Elder buds an ounce, Lineſeed Oyl two ounces, Oyl of Roſes and Hogs greaſe, each an ounce*; *Wax an ounce and an half, Frankincenſe an ounce*,: boyl them in *Water* a little and when it is cold, take of the *Oyl* at the top. *Mathiolus* uſeth *liquid Varniſh*: but we *Lineſeed Oyl*.

Or apply the root of Fennel ſtampt with Cream, but firſt take off the black skin or coat.

Or the middle bark of the Tile tree, which in Roſe water makes a *Mucilage* which is excellent in Burnings.

Or uſe Oyls by Infuſion of the fruits of *Momordica* or Nightſhade, Apples, or of red Poppy leaves. or by Decoction the Oyl in the hollow roots of Daffodil, or Ivy boyled in Oyl and Wine til the Wine be conſumed. alſo Oyl of Elder, Quinces. or by expreſſion, as Oyl of Gourd ſeeds of Nuts or yolks of Egs.

Or Oyl of Whelps and Worms which is approved againſt Gun-ſhot fire.

Or Hogs Greaſe wel clenſed and dropt into Water, with the application of a hot Iron. others ſtick Straws into Bacon and ſet them on fire to make it drop: but it is better to wrap them in a double paper that is larger and ſet on fire, and ſo let it drop into water, thus they ſeaſon roaſt meat inſtead of Larding it. Bacon alone ſo prepared cureth Burnings, and eaſeth pain with Cream or Yolks of Eggs.

Againſt Gun-powder fire, uſe Butter or Hogs Greaſe dropt into Frog-ſpawn water, or of Gray-fiſh, or Earth-worms boyled.

When there is an Ulcer, uſe pouders, or otherwiſe anointing firſt the part that they may ſtick, with Oyl, Mucilage or Milk. as Aſhes of Gourds, Coleworts, Barley, Shoe ſoals, ſhels of Frogs, or as *Dioſcorides*, pouder of Cinabar and Cimolian Earth.

The Vulgar wet the part and apply meal to take out the fire.

To abate pain uſe whites of Eggs and Oyl of Roſes with Lint. or with white Wax make an Oyntment, adding mucilage of Quinces and Hogs Greaſe or Barley meal, and in an Ulcer Bole and Frankincenſe.

Or: Take *Leeks or Onions roaſted*, ſtamp them with *yolks of Eggs or Elder Deers or Goats Suet and Turpentine*; make a *Plaſter*.

Or uſe the Oyntment of Quick Lime, ſteep Lime in water til it diſſolve, pour off the water and add freſh, ſeven, ten, or twelve times: keep the Lime in the bottom dry, or uſe it preſently.

This waſht Lime with Oyls of Roſes, or freſh Butter and white Wax makes an Oyntment. or with whites of Eggs, mucilage of Quinces or Fleabane, Ceruſs with Milk and a little Camphire. or Citrine oyntment, Pomatum or Populeum, for the Face.

Or mix this waſht Lime with Hogs Greaſe, with Oyl or Lineſeed and Barley meal for a Liniment.

Oyl of St. Johns wort with waſht Lime is excellent eſpecially in Gun-ſhot.

Or it is good to mix the water of waſht Lime with Oyl of Roſes; and apply it.

Or uſe this Lime water againſt Gun-powder fire. Take *Flints burnt to Lime*, pour *Water* upon them in a *wooden Veſſel*, and there wil be *Fat* ſwimming at the top, uſe this upper *Water* with *Oyl of Roſes* and a *Clout* hot.

Some uſe Sope againſt Burnings.

Dioſcorides ſaith that Glew diſſolved in hot Water hinders Bliſters.

You may make Oyntments of the Aſhes, Pouders, Oyls, Hogs Greaſe, whites of Egs, and Mucilages aforeſaid. adding ſeeds of wild Rue, St. Johns wort, Acacia, fine pouder of Glaſs, Phrygian Stone according to *Dioſcorides*, who applieth alſo Stimmi with freſh Greaſe.

Or Aſhes of Myrtles and yolks of Egs, as alſo Salt peter and Oyl of Roſes, hinder Bliſters from riſing.

Or Ceruſs and oyl of Roſes waſht with Roſe water, the white of an Eg and Camphire. or the white oyntment of *Rhaſis*, or of Ceruſs.

Or Sheeps Dung, Hen or Pigeon Dung, with Oyl of Roſes or Line ſeed. the Vulgar take out Fire with Cow dung.

Dioſcorides ſaith that Salt and Oyl prevent Puſtles. others uſe Niter and Oyl of Egs.

Dioſcorides uſeth Milk and Water.

Or Foment with Coleworts or Cabbage Broath, or with that of Turneps. or uſe the diſtilled Water, lay Colewort leaves on to hinder the Inflammation and diſcuſs.

Or uſe the Decoction of Ivy, Privet, Plantane, Henbane ſeeds to cure Itching.

Or diſtilled Water of Flowers of Verbaſcum, Plantane and Henbane ſeed to hinder Puſtles from riſing with red Sanders and Camphire.

Aqua vitæ is good againſt Bruiſes, and alſo Burnings.

And cold Water hinders Bliſters from riſing.

And

And ſo doth Juyce of Fennel and white Wine.

You muſt not forcibly pul off an Eſchar from a Burning, for the pain and bleeding wil increaſe and the hurt wil be larger: but with Lenifiers and Ripners applied, let it fall off of it ſelf. we can ſcarce get it off in eight daies, and then we take it off with Forceps with little cutting.

Butter ſpread upon a Colewort or Mallow leaf makes the Eſchar fall off.

Or the yolk of an Egg, and Butter or Oyl of Roſes, or Hogs or Hens Greaſe. you may add Althæa roots, or Colewort leaves ſtamped, or other Emollients.

Or: Take *Colewort leaves, and Althæa roots* and other *Emollients* crude or boyled.

Alſo *Triapharmacum Galeni*, and *Tetrapharmacum* are good to make an Eſchar fall off.

The Cure of Wounds in divers parts, made by Cutts, Blows, or Gunſhot.

A Wound is larg, or narrow, or both, or venemous, of theſe kinds we ſhal ſhew divers Cures. We ſhal ſpeak hereafter of a Wound compounded with a Phlegmon, which may happen to an Ulcer: Firſt then of the large Wound, whither by a Cutt, or Prick called a Puncture, or by Gun-ſhot, or the like or by Contuſion, we ſhal ſpeak together.

Among which, that which is broad and dividing the part perforating, and laming, the more ſuperficial and æqual it is, and hath leſs hurt the part, the ſooner it is cured, that which is otherwiſe is more difficult, eſpecially a Contuſion, for in that the fleſh bruiſed, and Blood flowing thither preſently ſuppurateth and ulcerateth. and a wound in the Membrane, and Nerves, about the Joynts, and when the Nerves, or Great Veins, or Arteries are divided, theſe are dangerous by reaſon of Bleeding, Reſolving, or Contraction. They are commonly deadly with pain, through the Scull, and to the Brain, and Membranes, or through the Breaſt or Belly, to the Bowells, yet we have cured Wounds in the Lungs, and Guts, and Bladder, and Womb, leaving it open below, for Dung and Urine to paſs out, and ſome ſay they have cured Wounds in the Brain, and other noble parts.

For the Cure; Let the Diet be ſuch, as may keep the Body clean, the Belly be kept open, and a Vein opened if need require, and the Strength preſerved, and the accidents removed, as Bleeding, in large Wounds, and loſs of Parts, or Inflammation from Gunſhot, or Bruiſe, or great pain. this is don by Blood letting, and other Revulſions, and things mentioned in Wounds with Inflammations, and by binding Plaſters, and Blood ſtanchers. And in reſpect of a wound, if there be any thing within that hurts it, it muſt be removed firſt of all, and then if the lips of the Wound be farr diſtant, they muſt be united, and laſtly you muſt labour to make them grow together, Thus;

If any part or peice of a Sword, or other Inſtrument, or Bullet, which often falls deep, or peice of Glaſs or Splinter, it muſt be taken out with Forceps with Teeth, or a Cranes bill, and if you cannot lay hold of it as being a Bullet, open the wound to come at it, ſo you muſt alſo do by broken Bones that are looſe. And if any part be ſo cut away that it cannot be united to grow together, it muſt be cut off, afterwards if the wound be in a hairy part, it muſt be ſhaved off, that it fall not into the wound, and all duſt or Filth muſt be wiped or waſhed away with a clean Sponge dipt in red Wine, which will repell and glutinate, you may for a ſhift uſe hot water.

When parts cannot grow together, we joyn them togethet, nor in ſmal wounds, when the Lips are not farr aſunder, and when the Skin grows to the parts beneath, though it be cut; Therefore in Head wounds there needs no ſtitching, nor in longe Cutts, as when a Stone is taken out of the Bladder: In other parts the remote lipps of the Skin that is divided, alſo the Muſcles and Tendons, and whatſoever is at diſtance, muſt be joyned together, and ſo kept ſome dayes: This is the firſt buſineſs for a Chyturgeon, in dreſſing of Wounds.

Sometimes by Ligatures alone, ſometimes by Plaſters alſo, we joyn and keep the lips of wounds together by a Rowler made of old ſoft Linnen, not ſo ſtreight as to cauſe Pain and Imflammation, which ſometimtes Gangreens, nor ſo looſe, that the Lips may not exactly meet together, according to the Longitude, and Latitude of the Wound. The Chyturgeons make a threefold Ligature, the firſt is called retentive, which is made in thoſe parts, where we muſt not bind hard, as in the Neck and Breaſt, or in Wounds that are ſo full of pain, that they cannot abide it. This is done by a ſingle Rowler, which is laid at the end upon the Wound, and ſewed on the otherſide. Another Ligature is called glutinating, or incarnative, with a double rowler beginning at the part againſt the Wound about the middle. where it muſt be be ſtreighter, and ſowing it, rather then tying a knot. The third Ligature, is called expulſive, this belongs to hollow Ulcers, and ſhal be mentioned in them.

The Lipps may be joyned together for a time, with little Buckles or Hooks, but they fall of too eaſily, and therefore cannot be ſufficient for the glutinating of the Wound, which requires ſome time.

When Wounds are long, and their lipps farr divided, they muſt be joyned, for otherwiſe it cannot grow well together, without an ugly Scarr and Deformity, and if then the Tendons can be ſtitched together, the motion wil be leſs hindered. And if the great Veins can be ſtitched, there will be leſs danger of Bleeding, and want of Nouriſhment to the part, this is done in the ſkin as other ſtitches, by drawing a needle through both Lipps of the Wound, and drawing a Thred through, and tying it, in diſtant ſtitches and knots: The Silk muſt be ſlender, but ſtrong and even without knots, and the Needle ſharp, long, and three ſquare, with a ſtitching quil, but when Veins and Arteries are ſtitched, or the Guts, or other internal membranous parts: then you muſt make the Glovers ſtitch, bringing the ſilk oſten about the lipps of the Wound.

Sometimes we joyn the lipps of wounds with Needles, by paſſing them through and faſtning them about.

You may cure wounds alſo by Conglutination, and the Scarr will be leſs then by ſtitches, this is for the face, and there are two ſorts of Conglutination, the one is by two Plaſters on both ſides of the wound, ſtitching them together when they ſtick faſt, they are made of Glew, Gum Tragacanth, whites of Eggs, and Chalk or Pitch.

The other is by joyning the lipps together, and laying upon it a ſticking Plaiſter, that wil not fall of till they grow together. they are made of Blood-ſtanchers, and Glutinaters, and you may ſtitch the skin withall, at the firſt while it bleeds, Theſe plaſters are made of fine pouders, whites of Egges, and Gum Traganth or arabick, or Izinglaſs diſſolved in Wine, adding the Furr of a Hare cut ſmal, or the downe of a Willow or Reed flowers, or of Grunſel, or dried Muſhrooms, or Spiders webs, apply them with Linnen and a Boulſter.

The Pouder of which this Plaſter is made, is of Bole three parts, Frankinſence or Sarcocol, or Varniſh. one part, with half a part of Dragons blood, and Hares, as I ſhewed.

Or of Quicklime, and fine Flower with the teſt.

Or of Lime alone, and the white of an Egge, and Maſtick, to keep it from burning, or of Carpenters Glew, over all the wound, or a plaſter of Pitch.

Other Plaſters that are more proper for Ulcers, ſhal be mentioned there.

Though nature attempts the Conſolidation of Wounds by bringing nouriſhment to the part, and glutinating ſmal Wounds her ſelſe, yet becauſe though there be no Ulcer, there is in many a continual Moiſture, which hinders Glutination, we muſt uſe things to ſuck it up and help Nature by removing her obſtacles (which a Dog doth only by licking) and applying glutinating Medicines. Theſe beſides their drying qualities, muſt aſtringe and make the

lips

lipps of the Wound grow together by ſticking, they are for this called Glutinaters though other wayes they cannot do it. And the demonſtration that Comfrey boyled in a pot with peices of fleſh gleweth them together, cannot prove it to be otherwiſe.

Theſe alſo ſtop bleeding, ſo that we need no other except the wound be in great veſſels. by the uſe of theſe glutinaters, fleſh and skin alſo will grow in Wounds, ſo that nothing will ſeem to be loſt, except they ulcerate, nor need we uſe any other Medicines to breed fleſh, or make a Scarr, as in hollow Ulers. Moreover thoſe Medicines cauſe a Glutination of the Callus, which Nature makes a nutriment of Bones, when any thing is loſt by Wounds or Contuſions. Theſe Glutinaters are outwardly and inwardly applied in ſmal great and deep Ulcers, in theſe formes.

Some are Plaſters ſuch as we mentioned to hold the lips together. or of Pouders following with whites of Eggs and Hares Furr and Downs, at the firſt.

As: Take *Frankincenſe, Myrrh, each equal parts, Aloes twice or thrice as much, with Sarcocol.*

Or thus: Take *burnt Bones waſht with Roſe water, to two ounces add Pomegranate peels and Horſ-tail pouder, each two drams; Allum and burnt Vitriol, each a dram*: make a *Pouder.*

Or: Take *Galls, roots of Birthwort, Comfry, Pine barks, or roots of five-leav'd Graſs, each two ounces; Sideritis, Gooſe-graſs, Sumach, Myrtle berries or Grape ſtones, each two drams; burnt Spunge or wool a dram,* make a *Pouder* for an *Emplaſter.* you may add pouder of *ſtones of Myrobalans, red Kermes, Molochitis ſtone or Milſtone.*

Or: Take *Colophony, Mummy, Dragons blood, each half an ounce; Ceruſs, Litharge or Tutty, each two drams; Lead two drams, Blatta byzantine, Moloch ſtone or Galactites, each a dram; fine flower an ounce,* with *white of an Eg* make a *Plaſter.*

In moiſt Wounds, uſe Emplaſters of Maſtich, Mummy, Aloes, and ſome of the aforeſaid with Turpentine.

Or this uſual. Take *Birthwort roots half an ounce, Sanguis Draconis an ounce, Gum Elemy two ounces, Roſin three ounces,* with *Turpentine* make a *Plaſter.*

Or: Take *Bitumen, Colophony, Frankincenſe, each an ounce; red Lead, Sulphur, Ceruſs, each half an ounce; burnt Allum two drams, Coral a dram, Barley flour an ounce,* with *Gum Traganth* or *Izing-glaſs* in *water of Horſ-tail,* or *Plantane* and a little *Vinegar*: make a *Plaſter.*

Alſo Oyntments: As, Take *Maſtich, Sarcocol, Frankincenſe, Aloes, each two drams; Saffron a dram, Turpentine ſix ounces, Roſin two ounces, Wax three ounces.*

Or uſe *Ungentum Aureum* made of Frankincenſe, Maſtich, Colophony, Turpentine, Saffron, Oyl and Wax.

Or: Take *Bole an ounce, Sanguis Draconis, Comfrey roots, each half an ounce; Maſtich, Frankincenſe, Gum Arabick, each two drams; Mummy three drams,* with *Oyl of Roſes and Roſin* make *a Plaſter.*

Or: Take *Aloes, Sarcocol, Sagapen, Ammoniack, Galbanum, Bdellium, Maſtich, Frankincenſe, Pitch, Bole, Sanguis Draconis equal parts; with Turpentine and Oyl & Blood of a red haird man,* boyl them to an *Oyntment.*

This is a great Drier. Take *Turpentine and Wax, each half a pound; Oyl of Juniper and Bayes, each an ounce; Oyl of yolks of Egs an ounce, Frankincenſe two ounces, Maſtich an ounce, Load ſtone and Calaminaris, each half an ounce; Vitriol and Allum, each ſix drams, Ceruſs and Litharge, each half an ounce*: with *Roſin* make a *Plaſter* or *Oyntment.*

Oppodaldoch. Take *Litharge a pound, Cadmia three ounces, Colophony four ounces, Wax a pound, Oyl a pint and an half,* boyl them, and add *Ammoniack, Galbanum, Bdellium, Sagapen, Opopanax diſſolved in Vinegar an ounce and half, Oyl of Bayes and St Johns wort, or Worms, an ounce, Turpentine half a pound*: boyl and ſtir them. when they are taken off from the Fire, add *Maſtich, Frankincenſe, Myrrh, Mummy and Aſphaltum each an ounce*; with *Oyls, Crocus Martis* and *flour of Antimony, each half an ounce; Amber and Load ſtone* to draw out things fixed *an ounce,* make a *Plaſter.*

Or: Take *both Comfreys roots and all, five-leav'd Graſs, Plantane, Shepherds purſe, Mouſ-ear, Burnet, Yarrow, Vervain, Dogs-tongue, Bettony, in all ſix handfuls; Earth-worms thirty*: cut and bruiſe them, add *red Wine a pint, Aqua vitæ an ounce*: boyl them to the conſumption of the *Wine,* ſtrain and add *Gum Elemi, Frankincenſe, Maſtich, Sarcocol, each an ounce and an half; Izing-Glaſs, Sanguis Draconis, each an ounce; Myrrh half an ounce, Turpentine two ounces,* with *Pitch* and *Wax* make a *Plaſter.*

Or thus: Take *Birthwort roots, Comfrey, five-leav'd Graſs three ounces, Horſ-tail, Cypreſs Nuts, Myrtle berries, Galls, Pomegranate flowers, red Roſes, St Johns wort flowers each two ounces, Gum Elemi, Sarcocol, Pine, Galbanum, Ammoniack, Mummy, Opopanax each three ounces, Colophony, Sanguis Draconis, dried Goats blood, each an ounce; Oyl of Roſes omphacine, Olive or Myrtles, Greaſe of a Badger each an ounce,* with *Roſin, Pitch,* and *Wax,* make a *Plaſter.*

Oyntment of Tobacco. Take *green Tobacco Leaves eight ounces, Plantane four ounces, freſh Butter ſix ounces*: Infuſe herbs bruiſed, in *red Wine* all night, in the morning boyl them with *Butter* at a gentle Fire till the *Wine* and *Juyces* be conſumed, add *pouder of Gentian half an ounce,* with *Wax* make a Saffron colored *Oyntment.*

Another good in Nervous parts: Take *Comfrey roots two ounces, Birthwort roots an ounce, Sulphur-wort roots half an ounce, Plantane, Bugloſs, Vervain, Burnet, Yarrow, Dogs-tongue, Anagallis with the red flower, Agrimony, Horſ-tail, each a handful*; cut, and bruiſe, and boyl them in *Sack* till it be thick, ſtamp them and heat them again, adding *Wax, Roſin, Pitch a pound,* ſtir them til they diſſolve, boyl them, and when they are off the Fire, add *Maſtich an ounce and an half, Galbanum diſſolved in vinegar an ounce, Turpentine a pound*: ſtir them til they be like a *Plaſter.*

The Plaſter made of Worms. Take *ſix handful of the herbs mentioned roots and all, Earth-worms half a pound,* boyl them in *Wine* and *Oyl,* ſtrain them, and add *Gum Ammoniacum, Galbanum, Opopanax, each an ounce and an half; Pitch and Aſphaltum, each two ounces; Turpentine half an ounce, Stags Suet eight ounces,* boyl them again to an *Emplaſter* add *Maſtich* and *Frankincenſe each half an ounce.*

Againſt the Tendons cut. Take *roots of Daffodil an ounce, roots of Calamus half an ounce, Coſtus two drams, flowers of Chamæmel, Roſes, Lavendar, Stœchas, St. Johns wort, Sage, each a pugil; Earth-worms, thirty,* boyl them in *Wine* and *Oyl,* adding *Oyl of Indian Nuts,* ſtrain them, and add *Labdanum an ounce, red Storax and Calamita, each an ounce*: with *Wax* make an *Oyntment.*

Pouder of Earthworms and Honey is good in wounded Nerves.

And pouder of burnt Bones, eſpecially of Men, with pouder of burnt Lead is good alſo to be ſprinkled on, or with Honey.

Or Snayls ſtampt with Frankincenſe and Myrrh.

Theſe following are good in wounds of the Head.

Emplaſter of Bettony, or Cerot of *Nicolas* made of Bettony, Maſtich, Frankincenſe, Mummy, Roſin, Turpentine, Wax.

Or the ſame compoſition, except Mummy, with Burnet, Agrimony, Sage, Pennyroyal, Yarrow, Comfrey, Gallitricum, Orris roots, Birthwort, Gum Elemi, Oyl of Fir tree and Vine.

Or an Emplaſter of the juyce of Bettony, Wax, Roſin and Turpentine.

Or *de Janua Moſues* made of Juyce of Bettony, Plantane, Smallage, Roſin, Turpentine, Pitch, Wax.

Or *Gratia Dei*, or Cerot of *Nicolas* called Divine good for all wounds, made of Bettony, Vervain, Burnet, Maſtich and Wax.

Or that of *Peter de Argelata*, that beſides the laſt hath Comfrey, Centaury, St. Johns wort, Hedg-hyſop, Olibanum, Myrrh, Ammoniacum, Galbanum, Birthwort.

Or *Catagmaticum of Andromachus* by *Galen* is good againſt broken Bone in the Head, or the Emplaſter of Squils by *Criſo.*

They

They know if the Skull be broken, by laying a Plaſter of Frankincenſe, Labdanum and Wax, after the Head is ſhaven upon the Contuſion, if it be dried in any part, there is the fracture.

Theſe are the uſual Plaſters for wounds in the Nerves.

Nervinum of *Vigo* made of roots of Madder, Bettony, Roſemary, Horſ-tail, Centaury leaves and ſeeds, of St. Johns wort, Earth-worms, Litharge, red Lead, Maſtich, Gum Elemi, Sagapenum, Galbanum, Amoniacum, Pitch, Roſin, Turpentine, Calves Suet, and Goats; Oyl of Chamæmel, Roſes, Maſtich, Turpentine, Linſeed, Vinegar and Wine.

Galen mentions alſo Ægyptiacum of *Andromachus* and that of *Philogonus*.

And the green Plaſter of *Dinus*, and that of Machæron. And *Avicens* Plaſter of Flax, and that of *Minium* by *Vigo* and *Maſſa*.

If the Bones be hurt any waies, Oxycroceum is good, as that of *Nicolas* made of Ammoniacum, Galbanum, Myrrh, Frankincenſe, Maſtich, Colophony, Roſin, Pitch, Wax, Vinegar, Saffron.

Or the Oxycroceum of *Leyden* that hath beſides the former, Litharge, Bole, Allum, Storax, red and liquid.

Vigoes Oxycroceum is made of Litharge, Minium, Bole, ſealed Earth, Myrrh, Frankincenſe, Maſtich, Roſin, Suet, aſtringent Oyls and Juyces, Aſh, Myrtle, Comfrey.

Or the Sparadrap of the Chirurgeons for hurt Bones, which is Linnen dipt in Oyl and Wax, Ceruſs and Labdanum, Litharge and Myrrh, Allum and Camphire, or Sanguis Draconis, Mummy, Minium, Maſtich.

Or Natural Balſom, or that which is like it, which is of excellent virtue to heal wounds.

Or Artificial Oyls with Lint or Tents to keep the wounds open called *Balſoms* by the Chirurgeons.

Oyl of Nut, being greaſie will rather hurt than heal uſed alone: except it be old, and mixed with Wine and Salt Alſo Oyl of yolks of Egs is good, or Oyl of Myrrh and Roſins which are good alone.

In great wounds, uſe Oyls with theſe drying Glutinaters, as Oyl of St. Johns wort, Adders tongue, Moulin, Sanicle, Lemmons, Pauls Bettony, Pyrola, wild Sage, Fruit of Monordia, Olive, Lineſeed, Roſes omphacine, Myrtles, Maſtich boyled and mixed with Turpentine and Wax.

Or make this Balſom of Pouders of Herbs. Take *Comfrey roots, bark of the root of Elm, each three ounces; tops of St. Johns wort and Centaury the leſs with the flowers, each two handfuls; Self-heal, Bettony, Yarrow, each a handful; red Roſes a pugil, Earth-worms ten, Sack four ounces, Turpentine two ounces:* let them Infuſe hot, or boyl and ſtrain out the *Oyl*. or ſtill out a *Liquor*.

Or add *Horſ-tail, Celondine, leaves of Arbutum and Elm flowers, of Chamæmel and Verbaſcum*, and in Head-wounds *Sage, Roſemary a handful, Nutmeg half an ounce*: with more *Wine* and *Turpentine* and *Oyl*: boyl or diſtill them.

Or: Take *flowers of St. Johns wort in Oyl and Wine*: put them in the Sun, then in a *Horſe Dunghill* fourteen daies, add *Turpentine, Myrrh, Maſtich*: let them boyl, ſtrain out the *Oyl*: this is *Balſom of St. Johns wort* ſo excellent in Wounds.

Or take the Ingredients of the firſt or ſecond Balſom, and mix them with the following, and make an *Oyl* by boyling or diſtilling.

Or thus: Take *Frankincenſe, Myrrh, Galbanum or Bdellium. Gum Elemi or Ivy, Myrrh, Aloes poudered, each half an ounce; Oyl a pint, Turpentine two ounces, Aqua vitæ an ounce and an half*, boyl them gently, and ſtrain off the *Oyl*, if at the concluſion of boyling, you do add half an ounce of *Verdigreeſe*, it wil be green and beter.

Or: Take *the pouders aboveſaid three ounces*, add *Mummy, Gum Arabick, Sagapenum, Sarcocol, Sanguis Draconis, Opopanax, each half an ounce; Labdanum, Benjamin, Storax Calamita, each two drams; Amber ſix drams, Spike three drams, Storax liquid two drams, Turpentine as much as all*: diſtil them. This *Balſom* will be better with *Verdigreeſe*.

Some add Spices, that Balſomes may be good in cold Diſeaſes, and pleaſant, as Nutmeg, Cloves, Cinnamon, Galangal, Cubebs, Wood Aloes, Zedoary, which do little for wounds: alſo Muſk, and Ambergreeſe, others ad Caſtor and Euphorbium, for cold Cauſes.

So make a Balſom of Rhubarb, oyl of Roſes, or Worms with Frankincenſe, Maſtick, Opoponax, Camphire by boyling and ſtraining. Or Take: *old Oyl a pint, Wine half a pint, juice of Daffadil, and Sideritis, each three ounces; Turpentine two ounces, Gum Elemi, Frankincenſe, Maſtick, each an ounce and half; Sanguis Draconis, Aloes, each an ounce; Roots of Comfrey, and Birthwort, each ſix drams; flowers of St Johnswort, halfe an ounce*, boyl them gently, and ſtrain out the oyl.

Or, Take *Common Oyl, or of Linſeed, eight ounces, Oyl of Bayes two ounces, Oyl of Turpentine an ounce, Oyl of Juniper berries diſtilled, or of Spike, or Petroleum, half an ounce, Turpentine, two ounces, Colophony, Maſtick, each an ounce; Aloes, three drams, burnt Braſſe two drams, white Calacanthum, a a dram*: Set them hot in a braſs Veſſel ſtirring them till they are green, ſtrain it, or boyl it and add *Verdigreace three drams*, add *Oyl of Cloves*.

Another Balſome that cures preſently, Take *Liquid Storax, Myrrh, Sanguis Draconis, Carpobalſome, Gum Arabick, Sarcocol, Bdellium, Opopanax, Aloes Hepatick, each a dram; Oyl of Maſtick two drams, Venice, Turpentine, as much as all, digeſt them eight dayes in a hot place*, then diſtill them.

The Chymiſts Balſamum: Take *flowers of Sulphur thrice calcinated, two ounces, Camphire, a dram and half*, pouder them, add *Oyl of Turpentine, four ounces*, diſtill an Oyl.

Liquid Varniſh is added ſuch as Joyners uſe; A Balſome, Take, *Oyl of Linſeed a pint, Gum of Varniſh, Maſtich, each an ounce and half; Frankincenſe half an ounce, Litharge an ounce, Chryſtal poudered or burnt Bones, half an ounce, white Calcanthum, three drams*, boyl them gently, add *Turpentine, oyl of Spike or Petroleum, each half an ounce*; and ſtrain it adding *Verdigreaſe two drams*, this is our Balſome and it is excellent.

Turpentine with Yolks of Egges, and Honey, cures final Wounds.

Or uſe Juyces of Herbs, with Honey, Yolks of Egges, and Turpentine, with drying Pouders mentioned.

Or, Take *Juice of Roſes, Plantane, each two ounces; Vinegar an ounce, Oyl of Roſes Omphacin, three ounces, Oyl of Yolks of Eggs and Turpentine, each an ounce*; boyl them to the Conſumption of the Juyces, add *Litharge, Ceruſe, Tutty, each two drams, Allum, a dram, Omphacium, three drams, and a little Wax*.

Or uſe Juice of Tobacco, with oyl, and Turpentine, Pitch, and wax boyled, this is in great requeſt.

Juice of Nettles and Urine cures wounds wonderfully.

For Head wounds, Take, *Juice of Bettony ſix ounces, Oyl of Roſes, Turpentine, Wax, each two ounces, Womans Milk, or Butter, Wine, or Vinegar, each an ounce and half*; boyl them to an oyntment, or with Roſſin make a Plaſter.

Another for the Head, Take *Topps of ſmal Centaury, Leavs of woodbine, dryed Bettony poudered, each two ounces and an half*; Steep them in *Wine*, boyl them, and add *Honey two ounces, Milk an ounce, Turpentine and Wax, each ſix ounces*, boyl them till the juices are gone, add *Frankincenſe, Maſtick, Gum Arabick or Elemi, each an ounce, and with Turpentine*, make a Plaſter.

If the Skull be broken, Take *Juyce of Vervain, Bettony, Burnet, Periwinkle, Celandine, Smallage, each an ounce; Turpentine, four ounces, Wax two ounces*, boyl them til the Juyces be conſumed; add *Comfrey roots, and round Birth-*

wort, each half an ounce, Orris roots, two drams, Sarcocol, Myrrh, Mumy, Amber, each a dram and half, make a Plaſter,

Or Take, *Honey of Roſes two parts, Oyl of Roſes or of Eggs, one part, Turpentine half a part,* mix and dip a *Scarlet Silk* therein, and put it into the Fracture, the Chymiſts uſe Oyl of *Turpentine,* and Oyl of *Myrrh.*

Some uſe the inward bark of the Tile Tree, to roul the Wound, or Paper wet in Wine.

Or Sponge.

Or Spiders Webs to glew ſmal Wounds, and ſtanch Bood.

Or Puffoyſt which drieth, and glutinateth.

Or boyl, or ſteep a Rowler in Allum water.

Or Bruiſe Herbs with Meal.

Or thus, Take, *Comfrey roots and Alkanet, Celandine, Centaury, Acrons,* beat them with Oyl of *Roſes, and Greaſe.*

Fomentatations are made or Injections of Comfrey, Bugle, Selfeheal, or Saracens conſound, Rock Comfrey, Sideritis, St Johns-wort, Pyrola, Adders tongue, Crowfoot, Yarrow, Achillea, Mouſear, Dogs tongue, Burnet, Agrimony, Horſtaile, Vervain, Strawberry leaves, Pauls Bettony, Hedg-Hyſſop, Scordium, Woad, five leaved Graſs, Centaury the leſs, Eupatorium, Lyſimachia, Groundpine, great Celandine, Tobacco, alſo of Birthwort, Tormentile, Snake-weed, Smyrnus, Lycopſis, Centaury the great, Poterium, Daffadil roots, bark of Elme, Tile Tree, Pine; Leaves of Cypreſs, Myrtles, Oaks, Elm, Medlars, Cornil, pear tree, Sumach, Ciſtus, Helianthemum, Verbaſcum, Shepherds purſe, Plantane, Lonchitis, Moonwort, Vitex, Polyenemus, wild Coleworts, Anagallis, Solomans ſeals, Polygonum, Gooſgraſs, Clymenus, Argemone, great white Bottles, Herb Trinity, Balſam, Conyza, Erigerus, Goats beard, Bettony, Sage, Polymontane, Roſemary, and Roſes, Flowers of Labruſca, Myrtle ſeeds, Juniper Berries, Acrons, Dates. Boyl them in Water or Wine, adding Vinegar, and drying Pouders and Allum.

Or waſh Wounds with the diſtilled water of them.

Or diſtill this, Take, *Juice of Plantane, Agrimony, St Johns-wort, twelve ounces, white Wine, three ounces, Allum, three ounces, Maſtich, Frankincenſe, each half an ounce, Orpiment a dram, whites of two Egges,* Deſtill a water.

Or you may ſtill a water with a ſtrong Fire out of pouder of Bricks, and Wax waſhed often in Wine.

Some uſe the water that is in the Leaves of Elme.

You may make fine Pouders with Allum, to ſprinkle upon Wounds of the Ingredients, for the Plaſter.

Or for the Head, eſpecially if the Skul be broken, of Orris, Birthwort, Flower of Orobus, and Frankincenſe, Myrrh, and Sarcocol, or Aloes and Sanguis Draconis, or of bark of Pitch tree, and of All-heal roots, and Capers, and Cypreſs roots, and when there are ſcales of Bones, in the wound, uſe ſcales of Braſs, Pumice ſtone, and Crocus Martis in pouder, and for the Head, grains of Kermes, Saunders, Cypreſs nuts and Myrtles, and when you will dry more, Tutty and Antimony.

If the Brain appear, Sprinkle Aloes alone.

Mans Blood, or Goats dryed, is a good Pouder to glutinate wounds.

Or the red Liquor of the Blood-ſtone, rubbed upon a whet-ſtone, or the white Liquor of the Galactitis dryed.

There are alſo Potions to cure wounds, called Vulnerary, good not only when they peirce to the Stomach, and parts whither they can reach, but for wounds in the Breaſt, and other parts; and ſome ſay theſe Potions are of that force that they wil ſweat out at the wound, and they wil be under the Skin, til it is opened to let them out, if they be given to men not wounded. this miſtake came from ſome Humor, that they ſaw like the Potion about the Wound, but experience teacheth us, that they are of great force to heal wounds, but how we doubt. but it is probable they do it by a drying quality, which though it comes more eaſily to inward wounds, may come alſo to outward.

Theſe Decoctions are made of experienced Plants, boyled in white Wine, and taken Morning and Evening, or as much of the Pouder as you can take up with three fingers, in white Wine boyled to the third or fourth part, or in Ale, Honey is uſually added, and they may be made nt oSyrup.

The Decoction of *Pyrola* alone is the beſt, or with Sanicle, or Saracens conſound, or Ladies-mantle.

Or of wild Angelica in Wine uſed inwardly and outwardly, which is good againſt Ulcers.

Or: Take *Saracens conſound, Sanicle, Mugwort and Burnet*: boyl them.

Or Saracens conſound Beets, wild Angelica ſtalks Sanicle, Ladies-mantle, *Pyrola.*

Or: Take *Comfrey, Tormenil and* Madder *roots, Pyrola, Ladies-mantle, Strawberry leaves, Agrimony, Yarrow, Horſtail, Dogs-tongue, Avens, Bettony, Periwinckle, Burnet, Mouſ-ear, Golden-rod*: boyl them.

Or add to them Conſolida the leſs, Adders-tongue, Knot-graſs, Solomons-ſeal, Herb-trinity, Birthwort, Snakeweed, white Dittany, roots of Coſtus, Sun flower, Valerian, Sowbread, Balſamina, Lungwort, wild Tanſie, Solſequium, Bears-ear, Moonwort, Sion Craterae or wild Parſley, Moutain-ſage, Nep, Hyſop, Pennyroyal, the leſſer Centaury and Gentian, ſome boyl Cray-fiſh therewith.

Or: Take *Pyrola, Saracens conſound, Beets, wild Angelica, Carduus, Agrimony, Bettony, ſprigs of Savin:* take a ſpoonful of theſe in *Pouder,* boyl it in *Wine,* drink two ounces thrice a day faſting. this wil drive away any thing out of a Wound, and cures Ulcers.

This is approved by the *Italians.* Take *Comfrey, Plantane roots, Dove foot, Dogs-tongue, each a handful; Burnet, Mouſ-ear, Avens, red Coleworts, Agrimony, each half a handful:* boyl them in *red Wine,* add *Honey,* ſtrain and drink thereof every morning.

Or thus: Take *red Coleworts,* Madder, *Herb Robert, Plantane, Hemp, Southernwood, Tanſie, Rockes ſeed, Smallage, Parſley and Fennel ſeed:* bruiſe and cut them: boyl them in *Wine,* add *Honey*; give it morning and evening.

Another: Take *the ſtalks of red Mugwort, leaves of white Daiſies, Sanicle, Pyrola, Ladies-mantle, Bettony, Sage, Lavender, Mummy half an ounce*: boyl them, ſome add *Caſtor* with great ſucceſs.

A rare ſecret experienced in Gun-ſhot. Take *Bayberries, roots of round Birthwort, each a dram; Cray-fiſh dried in an Oven a dram and an half, Self-heal dried half an ounce*: make a *Pouder,* boyl it in three pints of *white Wine,* to the conſumption of one pint, drink an ounce thrice a day, and waſh or inject into the Wound.

Another againſt Gun-ſhot when the bones are broken: Take *Comfrey roots an ounce and an half, Birthwort an ounce, Sowbread and Serpentaria roots, each half an ounce; Selfheal and Herb Robert, each a handful; Savin half a handful, Mummy two drams, Crabs Eyes half an ounce, Galangal two drams:* boyl them in *white Wine.*

In Head-wounds uſe the the Decoction of Bettony, Lilly of the Valleys, *Pauls* Bettony, Celandine, Perſicaria, Periwinkle, Centaury the leſs, Nutmeg, Mace and Galangal.

For wounds in the Breaſt, boyl five-leav'd Graſs, Avens, Comfrey, Madder, *Pauls* Bettony, Burnet, Mugwort, Pellitory of the wall, Hemp, Creſſio, red Coleworts, Chamæmel flowers, Violets, purple Aramanthus or Marjoram, Raiſons.

In wounds of the Stomach, give things to ſtop blood and heal, as Bole, Comfrey, Galangal in red Wine.

In Wounds of the Inteſtines, give Horſ-tail roots and all, and Ground Ivy, boyl them in Water according to *Dioſcorides.*

Mathiolus gives Heifers dung, and the hair under the belly of an Hare boyled with Honey the quantity of a Bean, often.

You

You may give the Juyces of Herbs mentioned, or ſteep them in Wine or Water, as Comfrey roots and the like, adding Honey.

Or ſtamp red Coleworts and Hemp in Wine and drink the ſtraining.

Stilled Waters are not ſo ſtrong but they do ſomething eſpecially a draught of Water of St. Johns wort, or Saracens conſound, morning and evening.

Or ſix ounces of the water of Horſ-tail or Sowbread with Sugar for wounds in the Inteſtines according to *Mathiolus*.

You may put pouders into the Decoctions mentioned, as of *Hedg-hyſop a dram, Crabs Eyes half an ounce, Spermaceti ſix drams, Nux Vomica a dram and an half*, with *Zedoary Mace and Galangal*.

In Breaſt wounds give pouder of Egſhels, and Crabs Eyes with Poppy water.

When the Entrals are wounded, give a ſpoonful of pouder of Momordica.

You may give alſo every morning half a dram of theſe Plants conſerved with Honey.

Or Oyl of Juniper in Drink to cure inward wounds.

Or Oyl of Crocus Martis and Eſſence of Coral, each a ſcruple; with water of Frog-ſpawn is given by *Quercetan* to ſtanch inward bleeding.

This red Oynment is excellent to be drunk in internal wounds. Take *Sanicle, Pyrola, Agrimony, Horehound, each two handfuls; Tormentil roots two ounces, Comfrey roots, Caſtor, each an ounce; Alkanet roots half a pound, freſh Butter ſix pound, red Wine twenty two ounces*: boyl them according to Art, and add *Sperma cæti two ounces*: make an *Oynment*.

Here we may ſpeak of Drinks againſt Bruiſes, by Stroaks or Falls, which are to diſſolve congealed blood, and to begin at the firſt, when there is a wound, or only a tumor from the Contuſion, or a pain without any appearance, as we ſhewed in Tumors and Contuſions. They are made of the following ingredients.

Aſhes of Tile tree with Mummy, or mummy alone.

Or: Take *Mummy two drams, Rheubarb a dram and an half, or Monks Rheubarb or Centaury rinds, of citrine Morobalans, Madder roots an ounce*: make a *Pouder*, give two drams with the *Broth* of a *black Chicken* boyled with the Feathers on after, it is gutted.

When we ſuſpect clotted Blood to be about the meſaraicks, Stomach or Guts, then we give a dram of the Pouder or four ſcruples with Caſſia, Diaprunis ſolutive an ounce, ſome add Agarick.

In fear of a Fracture and Bleeding to five drams of this we put a dram of Bole, Sanguis Draconis or ſealed Earth, with half a dram of Sperma cæti. or pouder of Snakeweed, Tormentil, flowers of St. Johns wort, great Cyanus or White-bottle, Crabs Eyes a dram, with a Decoction of Wine, and Nutmeg, Fennel ſeed and Sugar.

Decoctions alſo of Comfrey roots, Birthwort, Madder, Vincetox, Snakeweed, Tormentil, Baccharus or Ladies-Glove.

Or Yarrow, Self-heal, Sanicle, Bears-ear, *Cyanus major* or White-bottles, Mouſear, Shepheards-rod, [illegible] Tanſie, Ladies-mantle, Ophris, Moonwort, Plantan.

The pouder of *Vinca pervinca* or Periwincle and Mugwort are approved with Angelica and Coleworts if a Rib be broken.

Some boyl wound herbs in freſh Butter and a little Wine, and give a dram of it ſtrained, in hot Broath or Ale, and anoynt the part pained with the ſame.

And Waters of Plantane, Sowbread, Comfrey and Bettony.

Diſcorides gives a dram of the Juyce of Gentian.

The Cure of ſmall Punctures in divers parts, and in the Nerves.

A ſmall wound with a little orifice is a puncture, and muſt be cured as a Wound, if it be only in the skin and fleſh it is leſs difficult, but if it be in the Nervs or Membranes, for any nervous part very ſenſible, it is worſe, becauſe it eaſily cauſeth Convulſion, and hurt of motion. If a Nerve be pricked it is ſeldom becauſe it is little and round and gives way, except the Puncture be in the back parts, where the Nervs are larger, as in the Arms, and Leggs, therefore Chyrurgeons ſay that wounds behind are harder to be cured then before: But if a Puncture be in the great Muſcles, or the Heads thereof, Punctures may be oftner then in the Nervs alone, but theſe are called Punctures of Nervs alſo. When Punctures reach into the Belly or Breaſt, they are dangerous or deadly, if they hurt the Entrails as we ſhewed in large wounds, and not only ſo, but by reaſon of the blood falling into the Cavites of the body, and congeals and putrifies and therefore the Chyrurgeons ſay it is an evill Signe to bleed inwardly.

For Cure you muſt uſe Evacuations, and Revulſions, by bleeding, if need be as in large wounds, and keep the body clean by a good Diet.

The Method of curing a Puncture, is if any thing ſtick there to take it carefully away preſently, or by degrees, or to draw it out by applications, and if they be deep in, they will not come forth til there is ſuppuration, and then they will come forth with the matter. Then you muſt not cloſe the Orifice, as in large wounds, but rather enlarge it, and keep it open, leaſt the blood that flows thither being in a ſtreight place, ſhould cauſe Inflammation, or the moyſture or Excrements reteined, ſhonld hinder the Cure, and cauſe Accidents, and that whatſoever remains, may come forth more eaſily: Thirdly you muſt conſolidate with driers that conſume the moiſt humors, and ſo help nature, which wil as I ſhewed cure all wounds alone, if Impediments be removed; theſe are called Glutinaters, neither need you uſe ſuch ſtrait Ligatures as in large wounds, let the Medicines be Emplaſtick and Unctious, to keep open the Orifice, til it be cured; For if they be bad dry and binding, they would too ſoon cloſe the Orifice, and hinder the cure: And with theſe Remedies, we may mix things that draw things out, they are as followeth,

We pul out things by Mannual operation, and Inſtruments, as Thorns and Darts, and the broken peices that ſtick in the body, by pricking the skin and forcing them out with ſome of the fleſh, and then ſuck the wound: by this means the Vulgar cure all ſmall ordinary Punctures.

And if the things ſtick faſt and deep, and cauſe great pain and fear of Inflamation, and other miſcheif, we cut the Orifice larger.

If the wound will endure it without pain, keep the Orifice open with a ſmall Tent armed with Medicines.

Punctures are commonly cured with Plaſters alone, which Mollifie the ſwollen Lipps, and Orifice, and dry it by degrees, and keep it open til it fall away of it ſelfe, after the wound is healed: Theſe plaſters muſt not dry ſo much as in great and foul wounds, but keep their ſtrength and not be ſo often changed, but one may ſerve many dayes, and I have known that ſame plaſter to cure a ſecond wound, and if the Puncture paſs through the member, a Plaſter muſt be before and behind.

There are Emplaſters a purpoſe for Punctures which dry and draw out things that ſtick in them, the Germans call them ſtitch plaſters. we ſhall tell yon the beſt and eaſieſt way to be made, Take, *Frankincenſe, Maſtick, Myrrh, Colophony, Mummy, each an ounce, Camphire two drams, Saffron a dram, Thymalus greaſe an ounce, Wax four ounces, Pitch an ounce*, melt the three laſt, and add the reſt, and make a Plaſter.

Or, Take *Litharge a pound, Cadmia four ounces, Oyl Olive, a pint, Oyl of Bayes four ounces*, boyl them to a thickneſs add *Gum Galbanum, Ammoniak, and Bdellium, each two ounces* boyled in Vinegar til it be conſumed, *Wax and Turpentine, each half a pound; fat of the fiſh Thymalus an ounce*: ſtir them hot, and add by degrees *Frankincenſe, Maſtich, Myrrh, each an ounce*; make a *Plaſter*.

Or: Take *Wax, Pitch, Roſin, Turpentine, Oyl, each four ounces; Oyl of Bayes or worms or Eggs, fat of Thymalus, each, an*

an ounce and an half; melt them, and while they are hot, add *Galbanum* and *Opopanax* diſſolved in *Aqua vitæ*, *pouder of Colophony*, *Bitumen*, *Mummy*, *Maſtick*, *Frankincenſe*, *Myrrh*, *each an ounce*; *Litharge*, *Ceruſs*, *each ſix drams*; *Lapis Calaminaris*, *Load ſtone*, *Blood-ſtone*, *Coral or mother of pearl*, *Bole or ſealed Earth*, *Chalcanthum*, *Camphire*, *each half an ounce*; *roots of Birthwort*, *Comfrey and pouder of Earthworms*, *each two drams*; *Saffron a dram*, moiſten them with *fat of Thymalus*: make a *Plaſter*.

Another to draw out ſplinters that are fixed: Take *Litharge Sulphur each an ounce*; *Minium and ſcales of Braſs*, *each ſix drams*; *Allum*, *Chalcitis*, *half an ounce*; *Load-ſtone*, *red Coral*, *each two drams*; *ſealed Earth a dram and an half*, *roots of Birthwort*, *Dragons*, *Sowbread*, *Juniper berries and Nettle ſeed*, *each a dram*; *Galbanum diſſolved in Vinegar an ounce*, *Amber ſix drams*, *Frankincenſe*, *maſtich*, *myrrh*, *mummy*, *Opopanax*, *each half an ounce*; *Propolis an ounce and an half*: with *Turpentine*, *Pitch*, *and old wax* make a *Plaſter*, if you add *Oyl of Turpentine*, *Myrrh*, *Sulphur*, *Amber*, it wil be better.

The Plaſter of *Andromachus* draws out things, as *Avicen* with other things hath the head of a Lizard, milk of the Mulberry tree, and Berries found in the Palm-tree.

Half an ounce of Verdigreeſe makes theſe Plaſters ſtronger, or two drams of Oyl of Juniper, Spike, or Cloves.

The black Plaſter for the ſame is made of Olibanum, Myrrh, Mummy, Sanguis Draconis, Corals, Load-ſtone, Ceruſs, Roman and white Vitriol, Earth-worms, Camphire, Oyl of Roſes and of Eggs, of Spike, Juniper, greaſe of a Hen or Thymalus, Colophony, Turpentine, Pitch, Wax.

Againſt Punctures in the Nerves and Nervous parts at firſt: Take *Bean flower or of Lentils*, *pouder of Althæa roots each three ounces*; *Daffodils*, *two or three roots*, *Lilly one root*, boyl them in *Wine* and ſtamp them with *Turpentine* diſſolved with the *Yolk of an Eg half an ounce*, *Honey two drams*, *Saffron half a dram*, *Oyl of St. Johns wort* and *wax*, make a *Plaſter*.

Or: Take *St. Johns wort and Centaury the leſs*, *each two handfuls*; *Betony*, *Roſemary*, *Self-heal*, *Plantane*, *mouſ-ear*, *each a handful*; *Chamæmel and Dil flowers*, *each a pugil*; *Daffodil*, *Comfrey and madder roots*, *each an ounce*: ſlice them, *Earthworms waſht in Wine twenty*, *Oyl of Sack*, *each a pint and an half*: boyl them, ſtrain off the *Oyl*, add three ounces of *Deers*, *Goats*, *or Sheeps Suet*, *Turpentine three ounces*, *maſtich two ounces*, *Gum Ammoniack*, *Galbanum*, *Sagapenum diſſolved in Aqua vitæ*, *each an ounce*; *Litharge an ounce and an half*, with *wax* make an *Oynment*, or with *Pitch* an *Emplaſter*.

Or uſe *Guido's* Plaſter of Worms or Diarrhæa.

Or Oyls and Punctures of the Nerves.

If the pain be great, pour in hot ſallet Oyl, or of Chamæmel, Dil, Rue.

Or drop or lay on with a pledget Oyl of St. Jhons wort, Turpentine, Worms, Maſtich or Savin, or if the pain be great, Oyl of yolks of Eggs, or the fruit of Momordica.

Or Oyl of Lovage with Greaſe of a Lyon and Wax makes a rare Oyntment.

Or Oyl with Turpentine, Roſin, Opopanax, Sagapenum, Euphorbium or Sulphur vivum diſſolved in it.

Or other Balſoms mentioned in Wounds.

Or apply Turpentine with the yolk of an Egg and Saffron.

Or Leaves of Groundſil, with Frankincenſe, according to *Dioſcorides* and leaves of the leſſer Dracunculus with Coutchineel.

When the puncture is by a Thorn or Needle, make a Pultis of Hemp leaves with the white of an Egg and Vinegar.

To draw things faſtned in a puncture, uſe the Plaſter of Garlick by *Aetius* made of Garlick, Niter, Pitch, marrow of a Deer, Wax and Oyl.

Or Leaven and Propolis with Honey and wax.

Or Snails taken out of their ſhels, and Earth-worms bruiſed or boyled in wine, and mixed with meal.

Ordinary Flies bruiſed and applied draw out ſplinters.

When a Thorn is drawn out, waſh with the Decoction of red Peaſe, or with old white Wine when the vein is pricked.

Or apply pouder of Crabs Eyes, Harts-horn and Earth-worms, with Honey and Turpentine.

Or give the Wound-drink mentioned, for they work ſo ſtrongly that they wil not only expel from inward but outward parts.

If a puncture ſuppurate, cure it as an Ulcer.

If there be Inflammation, cure it as a wound with Inflammation. If a Convulſion or Palſie, or Contraction follow, cure it as is ſhewed in them.

The Cure of venemous and poiſoned wounds Strokes and Bites.

Wounds or Punctures poyſoned from a Sword, weapon, Dart, or Bullet poyſoned with evil juices, or otherwiſe: or from biting of Serpents, weaſels, mad Dogs, of which in *Hydrophobia* or fear of water, or from Scorpions, Spiders, are according to the Venome better or worſe: As when it is from a Scorpion, it is moſt dangerous, or when the wound is great which cauſe great Accidents, and leave ſtubborn Ulcers, ſome have only Heat, and a little Pain, and are not ſo bad except that cauſe inflammation, and ſo a ſtubborn Ulcer, ſuch come from our Snakes and Spiders, which are not ſo dangerous as theſe from Vipers and Phalangies; And the ſtinging of Bees is ſuch, in all which, though the Hurt be ſmall, the pain is great.

If the Venome be great you muſt labour to draw it out, and then cure the wound; Thus.

Give Antidotes ſuddainly, to reſiſt poyſon, and proper, as Treacle, Mithridate, Antidote of *Eſdras*: Alſo that of Skinkey, Bloods, Earth of Lemnos, mentioned by *Galen*. The Electuary of Aſa by *Meſue*, and others mentioned by *Dioſcorides* and *Nicander*.

Or that of *Mathiolus*, and that ſo much comended made of Laurel called the Saxon Antidote, and others mentioned in the Plague and in Madneſs. And in a poiſoned wound, if you uſe Bole, earth of Lemnos, and Mummy, they both reſiſt Poyſon, and heal.

Or this Decoction that heals and reſiſts poyſon, made of Roots of ſwallow wort, Valerian, Tormentil, wild Angelica ſteept in Vinegar, and Leavs of Scabious, Nettles, ſmall Valerian, Flowers of Conval Lillies, and Perwincle; boyled in wine.

Or Juice of Dittany, Scorzonera, and Gentian.

Some ſay that Cocks or Hens dung boyled, expels poyſon.

That rare Oyl of Scorpions of *Mathiolus* to anoynt the pulſes and Arteries, reſiſts all poyſons as he ſaith.

Divers things are applied outward to draw forth poyſon, as we ſhewed in peſtilent Carbuncles, and when we ſpake of the biting of mad Dogs, and againſt ſtinging of Scorpions and Spiders, Burning, Cutting, and Cupping are g[illegible]

And things applied that reſiſt Venom.

As this plaſter. Take *Pigeon or Hens dung an ounce*, *pouder of Dittany two drams*, *Niter a dram*, *with Hares greaſe Oyl of bitter Almonds*, *and VV ax* make a *Plaſter*.

Or this: Take *juyce of Scabious*, *Rue*, *Onyons roaſted*, *each two ounces*; *juyce of Anagallis with the purple Flower*, *Sowbread*, *each two drams*; *great Spurge ſeeds a dram*, *Galbanum diſſolved in Vinegar ſix drams*, *Oyl of Amber*, *Sulphur*, *each half an ounce*; *Oyl of Saffron a ſcruple*: with *Treacle*, *Mithridate and Turpentine* make a *Plaſter*.

Galen mentions divers plaſters for venemous wounds and punctures called *Icoſij*, their Ingredients are to cure wounds.

But this plaſter called *Diadiſtamnum* is more proper to draw out ſplints and poyſon, and ſo is *Unguentum Macedonian*.

You

You may find in *Dioſcorides* and *Nicander* ſpecifical medicines againſt particular Venoms, as a bruiſed Scorpion or the Oyl thereof againſt the ſting of a Scorpion. of biting of mad Dogs we have ſpoken.

In other Bites or ſtingings which cauſe burning rather than, Venom with tumor and dolour, you muſt uſe things accordingly. for ſtinging of Bees, uſe Potters Earth and herbs that abate tumor mentioned in *phlegmon*, and things mentioned in Burnings are good againſt ſtinging.

For Biting of Fleas and Gnats they cauſe but a little itching, and a ſpot and ſmall tumor, therefore we ſhall omit them.

The Cure of wounds unequally divided.

In wounds with Saws or rugged weapons the torn fleſh muſt be cut away preſently or taken away with an actuall or potential Cautery, and the wounds made even and cured as others.

The Cure of plain, hollow, filthy, louſie, eating, ſpreading and malignant Ulcers.

If an Ulcer come frm a wound or an Impoſthume which we call ſordid, whether it be plain, hollow or ſinewous, and not covered over, or putrid, louſie, or that ſweats out water, or follows a *paronychia* or Felon; or comes of foul Juyce and nouriſhed therewith which is eating, or ſpreading, or malignant, as in the French pox and Elephantiaſis, they muſt be cured alike becauſe iu many things they agree. afterward we ſhal ſhew the cure of Ulcers that have a *Callus* or covering, or fleſh, or preternatural tumor.

We ſhewed the cure of Ulcers with Cancer, Carbuncle, Ring-worm and Scabs in the Cure of Tumors and puſtles.

Thoſe Ulcers which come from wounds or Impoſthumes the leſs hollow they are the ſooner they are cured. Foul & louſie Ulcers are hardeſt eſpecially in Nervous parts that gleet water, becauſe they make the joynts unmovable or Gangræne, or the Fellon-ulcer that eats off the Joynts of the Fingers when they are nouriſhed with evil Jnyce, they are worſt; as Eating, corroding or ſpreading Ulcers, theſe laſt long, and are ſomtimes incurable, eſpecially if they be in a part depending, as in the Foot ſo that the humor deſcends continually to them, and when they are nouriſhed with a vein adjoyning, they either muſt not be cured, leſt the humor being ſtopt cauſe worſe accidents, or cannot. Aud ſuch as take off the skin, as rotten bark of a tree, are dangerous by reaſon of the Bones or Griſtles which they ſoul, as in the Noſe and Ears which deſtroy the parts. Alſo malignant Ulcers in Womens privities or Mens yards are long a curing, and ſomtimes conſume the part. They which from the French pox are not cured til the Pox is cured, Ulcers in Elephantiaſis continue, increaſe, and are deſperate, as the Diſeaſe is.

For Cure of all theſe you muſt thus proceed, firſt with general helps, as Evacuations when the body is full or foul, by bleeding or purging. then you muſt look at the Cauſe, whether it be a ſalt, cholerick, or wateriſh humor, and give things particular for that. as particular Purges often in ſtubborn Ulcers, as in the Scab and other Diſeaſes from evil juyce. ſweating is good to through out the humors, and cures the French pox and the Ulcers alſo. And a ſpare Diet as ſhal be ſhewed in the Pox. If a Vein dilated called Varix do nouriſh an Ulcer it muſt be opened to bleed. or the Vein cut off which is more neceſſary, as we ſhal ſhew. In all ſorts of Ulcers keep a good Diet and the body, clean that it may cure the better.

Topicks are to be uſed to remove impediments, for Nature alone muſt cure as in other excoriations and wounds. theſe Impediments are either moiſture or filthy humors, theſe removed, Nature nouriſheth the part and heals it up. ſome medicines that remove Impediments are Clenſers or Driers up of humors more or leſs, the gentle Driers breed fleſh, the ſtrongeſt make an Eſcar. we ſhal ſpeak firſt of them that breed fleſh, next of them that make the skin grow.

Medicines that breed fleſh are Clenſers and Driers that purge the matter that fouls the Ulcers or eats it away.

The next are dryers, which ſuck up the moyſture which remains in Ulcers after they are cleanſed, theſe put it into a condition fit to be cured, and breed fleſh, theſe are called breeders of fleſh, as if they did it, as we ſhewed in wounds; for the Impediments removed, Nature makes fleſh of the ſame Nouriſhment, which fils up the Ulcer.

Others are ſtronger dryers, which deſtroy the evil Humors that corrupt the Ulcers, and make them ſpread; theſe are ſeldome uſed alone, but with clenſers, that alſo kill Wormes if there be any, ſo that we ſhal not mention a private Cure for Wormes.

To theſe Cleanſers we add Dryers, which are ſo moderate that they take away that Gleeting which remains in Ulcers, after they are cleanſed, and make it fit to produce new fleſh. theſe are called incarnatives, as if they did of their own force breed it, when Nature did it by being freed from the Impediment of Moyſture, and making a Glew of the Nouriſhment of the part which is hurt in a Wound, and fleſh in a hollow Ulcer, that grows to the ſound part and ſo fills it up by degrees, and unites that which was divided. Theſe Incarnatives muſt not dry ſo much as to dry up the Nouriſhment with the moyſture, that is the Impediment, as when they are to conſume a foul Humor, or make a Scarr, nor muſt they cleanſe nor bind as in wounds, for Ulcers muſt be filled up with fleſh, and not united as wounds, but of ſome that cleanſe not much nor bind but dry, Incarnatives may be compounded and one and the ſame Medicine may cleanſe and heal, more or leſs, as we ſhall ſhew.

Unguents or plaiſters which are applyed or put into Ulcers cleanſe or dry, ſtrongly or moderately, and are as followeth.

The oyntment of the five Meals is the chief cleanſer for Ulcers, that is of Lupines, Orobus, Beans, Wheat, Barley, with Honey, or Sugar, and Vinegar, if you will cleanſe more.

Or this of Smallage, Take *Juice of Smallage one part, Honey of Roſes two or three parts, with Turpentine diſſolved in the Yolks of Eggs*: make an Oyntment.

Or boyl the Juice with Honey and Beanflower, to an Oyntment.

Of Milky Juyces, as of Endive, Succory, Dandelion, Sowthiſtle, with Juice of Smallage, Beets, Plantane, Roſes, Pellitory, Avens, you may alſo make cleanſing Oyntments.

Or this of bitter Juyces, as Horehound, Wormwood, Centaury, or ſharp as Arſinart, Celandine, Orris, Onyons, or Squills, with as much Honey of Squills, Turpentine, and Meal.

To theſe three you may add Myrrh and Frankincenſe, to cleanſe more, and when it begins, to be clean; Sarcocol, or when you will cleanſe more, Allum, or Calcanthum, or burnt Virriol.

Or of the Juyces mentioned, you may make Oyntments with Oyl as much, with Honey and Vinegar, boyling them with other Clenſers, til the Juices are conſumed, and adding Pouder of Gentian, Birthwort, Myrrh.

Aloes with Beaſts Gall, and Honey, is a great Cleanſer in corrupt Ulcers and louſie.

You may make cleanſing Oyntments of Plants thus: Take *Radiſhes, Onyons, each an ounce and an half; Gentian and the green bark of Dwarf-Elder, each an ounce; bark of Capars and Hermodatils, each half an ounce; Wormwood, Horehound, Celandine, Smallage, each a handful*; ſcape and bruiſe them, boyl them in *white Wine* then bruiſe them again and boyl them in a pound of *Butter* or *Oyl* with the fourth part *Honey* to an *Oyntment*.

Or: Take *green Orris roots, Colewort leaves and Rue*: bruiſe them, add *Fænugreek meal, Salt*, and *Honey*, and *Vinegar*.

Or boyl Colewort leaves with Bean flowrs for Ulcers in

the Breasts, or apply the roots of *Asclepias* or Swallow-wort, or Clensers bruised.

Or Herb Robert roots and all, in pouder boyled in Wine and Oyl to a Cataplasm is good in watery Ulcers. or Rose-cake, or Horse-dung.

Of the Astringent pouders following and Honey you make Oyntments with Vinegar and Oyl, or wax and Oyl of Roses.

Or when you wil clense more: Take *roots of Orris, Briony, Sowbread, Dragons,* and use them as before.

Or use Oyntment of *Agrippa* made of Briony, wild Cowcumbers, Squill, Orris, Fern, Dwarf-Elder.

Or this: Take *the pouder of the roots mentioned half an ounce, meal of Lupins, Frankincense, Aloes, Myrrh, each a dram and an half; Oyl omphacine two drams, Honey of Squils an ounce, Oyl of Mastich an ounce and an half, Oyl of Turpentine half an ounce*: with *Wax* make an *Oyntment*, add to make it stronger, *Tartar* and *Verdigreese*.

Or thus: Take *Briony roots three drams, Cuckompint or Dragon roots a dram and an half, Galls, Savine or Pine bark burnt, a dram, Verdigreese half a dram*, with *Honey* make an *Oyntment*.

Or this green plaster. Take *Verdigreese three drams Myrrh, Frankincense, each half an ounce; Wax, Rosin, Turpentine, each four drams*; make a *Plaster*, or with *Oyl* or *Suet* an *Oyntment*.

Or boyl Tartar with Honey.

Or Verdigrease with Honey and Vinegar. or use Ægyptiacum which is best in filthy Ulcers.

Or Oyl of Antimony to clense, which because it cures wounds almost incurable, is called the *Wound-oyl*, it is thus made. Take *Aqua vitæ rectified three or four ounces, Glass of Antimony, Mastich, Frankincense, Aloes, Myrrh, each an ounce*: pouder them and let them stand in a warm place in a close vessel, til they putrifie them, distill them by an Alembick increasing the fire by degrees. first you wil have a *stinking spirit*, then a *sweet*, keep them close stopt.

Or mix burnt Sal Armoniack with Tartar, Verdigreese and Honey.

There are Oyntments called *Incarnatives* which heal Ulcers when they are clensed, Sarcocol and Honey is the chief, to produce flesh by drying.

Or you may make five sorts of Oyntments of the five incarnative pouders mentioned, and of other greater Driers, with Honey of Roses and Turpentine, or Oyl of Mastich, Myrtles or Roses, with wax and Rosin.

To these you may add Colophony, Pitch, Bitumen and Opopanax as much as any of the rest.

Or you may mix the flesh of Snails with the second and sixth pouder, to cloath the bare Bones with flesh again.

Or use that of *Nicodemus* by *Mesue* it is made of the first and second pouder of Aloes, Myrrh, Sarcocol, and Honey and Wine, or the great Basilicon of *Mesue*; made of Frankincense, Myrrh, Pitch, Turpentine, Rosin, Wax. That called *Aureum* of *Mesue* is so called made with Colophony and Saffron, and that called *Unguentum Fuscum* of *Nicolas* is like them, which hath Galbanum and Sagapenum, and the Tripharmacum of *Mesue*, and Tetrapharmacum of *Galen* with Myrrh, Sarcocol, and Orris added, or you may use Ceroneum made of many of the same ingredients and of Litharge and Allum.

You may use other Plasters and Oyntments which glutinate wounds by drying, choosing the least astringent or those that hinder fluxes of humors which make the Ulcers ill habited.

As, Take *Galls, Pomegranate flowers, each half an ounce; Frankincense, Aloes, each two drams* with *Honey*.

If Ulcers are wel clensed you may cure them with Plants.

Thus: Take *Daffodil and Comfrey roots, each two ounces; Vervain, Burnet, Mouse-ear, St. Johns wort, and small Centaury, each a handful*: or other *Wound-herbs*, boyl them in *Wine*; then take of the *thinnest part* after they are well stampt six ounces: add *Honey* and *Turpentine, each two ounces; of the first, second or third Pouder an ounce and half*; make an *Oyntment*.

Or thus: Take *Burnet, Betony, Vervain, each a handful*; cut and boyl them in *Wine* to the consumption of *two parts*, strain it, add *Rosin half an ounce, Goats Suet two drams, Wax five ounces*, boyl them thick. when they are cold, ad *pouder of Mastich two ounces and an half, Aloes half an ounce*: make a *Plaster*.

Or thus: Take *juyce of Agrimony Vervain, Plantane and Daffodil roots four ounces, Wine two ounces, Oyl of Mastich two ounces, Oyl of Roses an ounce, Honey an ounce and an half, Turpentine an ounce*: boyl them a little, add the *second* or *third Incarnative pouder half an ounce, Gum Elemi a dram*: make an *Oyntment*.

There are others that clense and dry more or less, which alone cure not only small, but foul and malignant Ulcers. As,

These following dry more than clense. the gentlest is made of Litharge and Cerus with Oyl of Roses or Myrtles, stird in a Leaden Mortar, with a little Camphire and Gum Traganth infused, if there be pain.

Or of Litharge a pound, Oyl and Vinegar two pints boyled to a Plaster, or an Oyntment, this is cal'd *Galen's Oxeleum*. If you take Wine instead of Vinegar, it is called *Ointeleum*, if Water, *Hydreleum*.

This dries more. Take *Litharge and Oyl, each a pound; Cadmia an ounce*: boyl them, add *Gum Ammoniack and Bdellium, each an ounce; Galbanum and Opopanax, each half an ounce*; dissolve in *Vinegar, Wax half a pound* at last, add *roots of Comphrey, round Birthwort, Frankincense, Mastich, Myrrh, each an ounce*: make a *Plaster*.

Or: Take *Litharge an ounce and an half*: boyl them til they are a little black, add *Galbanum, Ammoniack, Bdellium, Opopanax dissolved in Vinegar, each half an ounce; Colophony Myrrh, Mastich, Frankincense, each two drams; Tartar a dram*, with *Wax* make a *Plaster*.

Or use the Plaster of Lapis Calaminaris made of Cadmia, Litharge, Tutty, Cerus, Frankincense, Mastich, Myrrh, Camphire, Turpentine, Suet.

Or the Oyntment called *Unguentum Rubrum*, thus: Take *red Lead three drams, Litharge two drams, Cerus a dram and an half, of both Cadmias, each a dram; Oyl of Roses three ounces, Turpentine half an ounce, Camphire a scruple*.

Another of Dogs Dung: Take *white Dogs dung two ounces, Litharge, Cerus each an ounce; Bole six drams, Frankincense, Mastich, each two drams; Bean meal an ounce, with Honey, Goats Suet and Vinegar* make a *Plaster*.

Or: Take *Tutty prepared two drams, Litharge, burnt Lead, Blood-stone, each a dram; Aloes a dram and an half, Sanguis Draconis, Sarcocol, Galbanum, each a dram*; with *Oyl of Roses* and *Wax* make an *Oyntment*.

Or: Take *Litharge, Cadmia, or Tutty, Cerus, burnt and washt Lead or Antimony, each a dram; Pumice stone two drams, Sarcocol, Myrrh, Colophony, each three drams*: with *Honey* or *Suet* make an *Oyntment*.

Or the Oyntment of Lead made of burnt Lead, Antimony, Litharge, Cerus, Oyl of Roses; is good in maligant Ulcers.

For a venemous Fellon: Take *Antimony a dram, burnt Lead, and washed Cerus, each half a dram; Tutty prepared half an ounce; Oyl of Mastich, and Omphacine, each two ounces; white Wax and Rosin, each an ounce*: make a soft *Plaster*.

These Plasters wil dry more with two drams of burnt Brass, Verdigreese a dram, or burnt Vitriol.

These clense more than dry. Take *Litharge boyled in Vinegar two ounces, burnt Brass a dram, Bole two drams, Rosin, Wax, each two ounces*; with *Hogs grease four ounces*, make an *Oyntment*.

Or: Take *Oyl of Roses an ounce and an half, Oyl Omphacine half an ounce, Cadmia and Tutty, each a dram and half; rust of Brass and Vitriol, each a dram*; with *Rosin*.

Or

Or: Take *Cadmia, Litharge, Ceruſs, Maſtich, Frankincenſe, mother of Pearl, Coral, Vitriol, each alike* 3 to four ounces, add five ounces of *Wax, Colophony, or Turpentine four ounces:* make a *Plaſter.*

Or: Take *Oyl of Antimony, Wax, Myrrh,* digeſt them in *Balneo* fifteen daies, it is a good Balſom againſt malignant and perverſe Ulcers.

A Brain-drying Oyntment. Take *Oyl, May-butter, Deers ſuet, marrow of Ox bones, Turpentine, each two ounces; Litharge, Cadmia, each an ounce and half; Antimony, burnt Lead and burnt Braſs, each an ounce; Load-ſtone, Maſtich, Frankincenſe, Myrrh, each three drams;* 3 *powder of Earth-worms two drams,* or other drying pouder, add *wax* if need be.

Or: Take *of the pouders mentioned a dram, Pomgranate peels, flowers of Labruſca, Fennel ſeed, Aloes, Myrrh, Acacia, each a half dram; Bole, Cadmia, burnt Braſs, each a dram; Oeſypus or greaſe of wool, Infuſion of Gum Traganth in Plantane water, each half an ounce* with *Oyl of Roſes,* Wax, *and a ſcruple of Saffron* make an *Oyntment.*

Or of Plants thus: Take *roots of Orris, Birthwort, Turmerick, each two drams; Pomegranate peels, or flowers, and Galls, each a dram and an half; flowers of Labruſca, Roſe ſeeds, each a dram; Gourd peels, Savin and Earth-worms burnt, each a dram; Sanguis Draconis and Bitumen, each two drams; ruſt of Iron three drams, burnt Allum and Chalcitis burnt, each a dram and an half; burnt Coral two drams, Oyl and Suet, each ſix ounces; Roſin three ounces,* with *wax* make a *Plaſter.*

Or: Take the Wound Herbs mentioned, *Roots, Leaves, and Flowers:* boyl them in *Wine and Oyl:* take ſix ounces ſtrained; add *Honey* and *Roſin:* and boyl them again a little, when it is thick, add *Powders mentioned, Litharge ſix drams, burnt Braſſe or Ruſt of Iron two drams:* with *Wax* make an Oyntment.

Quick-ſilver makes theſe Oyntments better againſt any Malignity, eſpecially the French Pox. Or: Take *Quick-ſilver an ounce, Turpentine an ounce and half, Hogs Greaſe three ounces:* ſtirr them well, then add *Cadmia, burnt Braſs, each two drams; Sulphur vive three drams, ruſt of Iron half an ounce.*

Another excellent Plaſter with which I have often cured perverſe Ulcers in the Legs. Take *Litharge, Cadmia, Ceruſs, each two drams; Frankincenſe, Maſtich. each a dram and an half; Birthwort roots a dram, ruſt of Braſs, Sublimate, each half a dram; Quick-ſilver three drams:* with *Turpentine an ounce and an half, Honey half an ounce, Oyl of Roſes and juyce of Plantane, each two ounces:* make a *Plaſter.*

When an Ulcer is clenſed, heal it with Quick-ſilver, Turpentine, Sarcocol and Honey.

Apoſtolorum of *Avicen* is the ordinary Clenſer and Dryer, and it is better mixed with Ægyptiacum, or with a little Allum or Vitriol when the Ulcer is very foul, it is made of Verdigrece, Litharge, Birthwort, Gum Ammoniack, Bdellium, Galbanum, Opopanax, Myrrh, Frankincenſe, Roſin, Oyl and Wax.

Apoſtolicon Meſue is the ſame with Aloes and Sarcocol added.

Apoſtolicon Nicolai is of the ſame Ingredients with burnt Braſs and Scales, Lapis Calaminaris, Dittany, Sarcocol, Maſtich, Mummy, Colophony, Propolis, Birdlime, this wil draw any thing forth of an Ulcer.

The *Emplaſtrum* called *Gratia Dei* or Divine made by *Nicolas* is like theſe to draw out things faſtned, it is made of Litharge, Verdigreece, Birthwort, Blood-ſtone, Olibanum, Myrrh, Bdellium, Maſtich, Oyl.

Some add Galbanum, Ammoniacum, Opopanax, and Load-ſtone.

Diapalma alſo clenſeth, it is made of Chalcitis, Litharge Oyl and Greaſe.

There are more Clenſers and Driers made of Scales of Braſs, Aſhes, Verdigreece, Allum, Vitriol, by *Galen*; as the red Greek Plaſter, or the black Ægyptian Iſis, or Plaſter of *Aſclaupius, Melium* of *Serapio, Diabotanon* of *Crit onis,* the Plaſter of *Terentinus,* the Green Plaſter of *Andromachus* or *Panacea Hirx* and other Arabian Plaſters, and the Oyntment of *Guido* againſt corroding Ulcers: They muſt be looked for in Diſpenſatories.

There are alſo ſtrong, drying and clenſing Oyls, as that of the wild Olive, of Wheat, Acorus, Spurge ſeeds, Radiſhes by *Dioſcorides.* and others for wounds which wil cure cleanſed Ulcers, they are called *Balſamelæa.* that of *Mans dung* is commended by ſome, and that which comes from a Linnen Rag dipt in Oyl and burnt.

The ſtronger are Oyl of Myrrh and Sulphur, or a Plaſter of Myrrh, Colophony, and Wax mixed with them.

Or Oyl of Tartar by *deliquium* or melting is a great Clenſer, and againſt eating Ulcers, Oyl of Vitriol Antimony and Talcum.

Or this: Take *crude Antimony two ounces, unſlaked Lime a pugil, Tartar an ounce,* boyl them in *Lye,* then add *Vinegar* and the *Oyl* will ſwim, this is good in foul *Ulcers.*

Balſom of Sulphur is a mighty Drier and Clenſer thus made, Take *Brimſtone a pound and an half,* boyl it in *ſpirit of Wine,* digeſt it ſome daies in a *Limbeck,* take it from the *Fire* and put it in a ſtrong veſſel, add *Vitriol in pouder an ounce and an half, Tartar an ounce,* it makes a *red Balſom. Ruland* makes Balſom of Sulphur thus. Take *Oyl omphacine a pint, ſpirit of Turpentine two ounces, Sulphur ſix drams,* digeſt it in *hot Embers* til it be *Red,* ſtrain and keep it.

There are alſo Waſhes, Injections, Fomentations, and Bathes to clenſe and dry Ulcers.

Old Wine is a good Clenſer.

Or Vinegar and Water and Wine is a gentle Clenſer.

So is Whey wherein Barley is boyled, with Honey or Sugar.

Poſſet Curd applied warm is good againſt the weeping Ulcer, called in Dutch *Slidwaſſer.*

Water of diſtilled Honey or Turpentine clenſeth, and more if they be ſtilled together with Vitriol.

Or a Lye of many Aſhes, as of Vine ſtalks, or Fig-tree or Savin, adding Lime before you ſtrain, or boyl the Lye with Wine and Honey.

The Lye of Soap clenſeth more, called *Soap-water* thus made, of Vine Aſhes three parts, unſlaked Lime one part, boyl them to a conſiſtence for an Oyntment, uſe a little, and let it lie til the Ulcer be clean, and then heal it with other things.

This Soap-Lye is made ſtronger with Sal Armoniack.

Water wherein Quick-ſilver hath been often quenched, taken clean from the Lime, wonderfully clenſeth filthy Ulcers, eſpecially that which is made of burnt Flints, of which we ſpake in Burnings.

A pound of Vitriol and a good quantity of Water is a good Fomentation in the weeping Ulcer, called in Dutch *Slidwaſſer.*

Or Urin, eſpecially if old and ſtinking.

Or diſtilled water of Urin, with Allum and Tartar diſſolved therein.

Alſo all ſalt Waters, with ſalt Armoniack eſpecially, alſo Brine or Pickle.

Or Allum water and Camphire, which is good againſt Ulcers in the Privities.

The Water found in the cavities of old Oaks is thought to cure Ulcers.

There are divers Decoctions of Plants for Fomentations or Baths to clenſe and dry Ulcers. ſuch as are mentioned for wounds, ſome are applied green, and bruiſed or boyled. The chief Decoctions is of Agrimony, Yarrow, Ivy, Avens, Ladies-mantle, Horſ-tail, Strawberry leaves, Burnet, Bears-ears, Pyrola, Pauls Bettony, Sun-flower, wild Tanſie, Vervain, Carduus, Spondylium, Solomons ſeal, Woad, Perſonatum, Anagallis, Butterbur, Houſleek, Carrots, Colymbades, Hemlock, Plantane, Shepheards-purſe, Scabious, Gallitricum, Dogs-tongue, Gelandine, Wormwood, Centaury, Horehound, Smallage, Polymountain, Mugwort, Nettles, Cypreſs, Savin, Oak leaves, wild Olive,

Olive, Maſtich tree, Rhamnus, Barberries, Sumach, Ceterach, Coriander, Roſes, Maudlin, Coſtus, *Æſculapius* his Allheal, Pomegranate flowers, Comfrey roots, Birthwort, Orris, black Chamælion roots, Allheal, Sulphurwort, wild Parſneps, Aſtragalus, Fern, Anemone, Thaliſtrum, Alkanet, Daffodil, Pomegranate peels, Aſh leaves and Beets: Alſo Guajacum, which is proper in pocky Ulcers. alſo bark of the Palm tree, alſo Galls, Acron cups, Cypreſs Nuts, Myrobalans, Lentils, Barley, Myrtles, Roſes, Barberries, Plantane, Coleworts boyled in Wine and Water, and water with Vinegar in foul Ulcers, to Dry and cleanſe, with Acacia and Hypocyſtis to dry more.

To theſe Decoctions when you wil cleanſe more. Take *Smallage, Plantane, Agrimony, each a handful*; *Wormwood, Centaury, each half a handful*; boyl and diſſolve in a pint thereof *Honey of Roſes four ounces*, or in hollow foul *Fiſtulaes* and *Ulcers*, add *Orris, Hellebore*, or *Cuckompint roots* boyled in *Lye* or *Urin* for to inject or waſh.

Or this Injection. Take *Genian roots an ounce, Hermodactis ſix drams, Hellebore three drams, Wormwood and Centaury, each a handful*; boyl them in two pints ſtrained, diſſolve *Honey of Roſes three ounces, Ægyptiacum an ounce*: add *pouder of Orris and Birthwort, each half an ounce*; *Agarick, Myrrh, each two drams.*

Or: Take *Smallage, Sage* (which allaies Itching in Ulcers) *Bettony, Horehound, each a handful*; *Radiſhes an ounce and an half, Onyons an ounce*: boyl them, and to two pints add *Allum half an ounce or Salt of Tartar two drams, Honey of Roſes three ounces.*

To dry and heal. Take *Comfrey, Plantane, Shepheards-purſe, Horſtail, Ceterach, Jews herb, each a handful*; *Agrimody and five-leav'd Graſs, each half a handful*; *Galls, Cypreſs Nuts, Pomegranate flowers, each an ounce*; *red Roſes, Bayley, each a pugil*; boyl them, and to two pints of the ſtraining, add *Frankincenſe, Maſtich, Sarcocol, each two drams*; *Honey of Roſes three ounces.*

Or: Take *Litharge a pound*, boyl it in *Vinegar* and dip *Clouts* therein for Ulcers of the Legs.

Or: Take *Cadmia or Litharge two ounces, Maſtich, Frankincenſe, each half an ounce, Camphire half a dram, Saffron a ſcruple*: boyl them in *Vinegar.*

Or, boyl Allum, Tartar and Maſtich in Vinegar, or Tartar and Aloes in Vinegar.

Take *white Vitriol, Allum, Bole a pound, Camphire an ounce*, boyl them in an *Earthen veſſel*, keep the third part of the *Water*, boyl the reſt til it may be *poudered*, to an ounce of which, add a pint of water, ſtrain it, uſe the *Water.*

In Ulcers of the Leg. Take *Chalcanthum, Vitriol, Allum, Ceruſs, eaqual parts*, boyl them in *Vinegar* til they are hard, diſſolve a little in *Water* or *Lye* and *Wine* and waſh the *Ulcer.*

Take *Allum half an ounce, Tartar two drams, Camphire a dram, Verdigreece, half a dram*: beat them, and diſſolve them with *Aqua vitæ eight ounces*, and *three Yolks of hard Egs*, ſtrain them, this is good in Ulcers of the Privities.

Take *Peaſe, Wheat, Salt, each a pugil*; *Wine a good quantity*: let them ſtand in a *braſs Kettle*, and ſtir them ſome daies, add *Verdigreeſe an ounce, white Vitriol, Aloes, each half an ounce*; ſtir them ſome daies, and then ſtrain off the *Liquor.*

Or: Take *Litharge, Lapis Calaminaris, each half an ounce*; *Salt, Allum, Vitriol, each an ounce*; boyl them in *Water, Wine*, or *Lye*: add *Sulphur, Ceruſs, Sanguis Draconis* and an ounce of Verdigreece.

You may uſe diſtilled waters to dry Ulcers, or the Juyces of Plants with Allum and whites of Egs, before it is diſtilled.

That of Docks and Vinegar mentioned in Tetters or *Herpes* cures Ulcers after an *Eryſipelas.*

This is better in pocky Ulcers, if the Dock roots are boyled in Guajacum water.

Pouder for hollow Ulcers which cauſe fleſh by drying, and are therefore called Incarnatives, or ſtronger Driers when the Ulcer is very foul and eating.

The Incarnative pouders are firſt: Take *Frankincenſe, Myrrh, Aloes*, to glew as in the firſt *Wound-plaſter.*

A ſecond: Take *Sarcocol and Myrrh.*

A third: Take *one of the former pouders*, add as much *Sanguis Draconis, Orris, and Birthwort.*

A fourth: Take *of the firſt or ſecond pouder one part*, add *meal of Orobus, or Lupints roots, of Sulphur-wort, All-heal, Centaury the leſs as much.*

A fifth: *as much Litharge, Cadmia, filings of Iron, and Pumcie ſtone to the firſt or ſecond pouder.*

The ſixth that wil cloath naked bones with fleſh again is made of *Orris, Daffodil, Sulphur-wort, All-heal roots, Frankincenſe and Myrrh.*

There are other glutinating Incarnatives.

When you wil dry more in moiſt Ulcers, uſe pouders of drying Plants, as of Savin, Cypreſs, Horehound, Vervain, Groundpine, Germander, Juniper berries, Pomegranate peels, Cypreſs Nuts, Bediguar, Gooſe-graſs, Parſneps, Securidaca, Coriander, Roſemary, Sage, Myrtle leaves, or pouder of Coral, Cryſtal, Eole, ſealed Earth-Eretria, waſhed Lime, of the ſtone Æſius, Earth-worms, and Hoglice, rotten Poſts, and other Driers.

Or Aſhes of burnt Southernwood, Dill, Cypreſs, Savin, Tamarisk, Hemp, Gourd peels, Olives, alſo of Shoe ſoals, Paper, Silk, Purple, ſhels of Oyſters, Hedghogs, Snakes, Snails, Corals.

To all theſe pouders, add Frankincenſe, Maſtich, Pitch Gum of Nut-tree, Almonds, &c.

The white troches of *Rhaſis* with Camphire, Aloes and Myrh cures Ulcers in the Yard.

Or this experienced. The pouder of Barba ſylvatica, with half a part of Maſtich and Frankincenſe, and a fourth part of Cuttle Bone.

When you wil dry more uſe pouder of Capar roots, Reſtharrow, Fern, Birthwort, Gentian, Hermodacts, Or Cuckowpints or Dragons, Briony, Celondine, Hellebore, Agarick, Dogs dung, theſe cleanſe Fiſtulaes alſo, eſpecially if you add Chalcitis or Verdigreeſe.

The pouder of Snails is good againſt the gleeting Ulcer cald in Dutch *Slidwaſſer.*

Or this to dry and cleanſe. Take *flowers of Pomegranate or peels half a dram, burnt Bones or Coral a dram, Aloes a ſcruple, Salt or Allum a dram and an half*, make a *Pouder.*

Or mix filings of Iron or Braſs with fat clay waſht with Allum water, and burn it to pouder.

Salt of pickled Fiſh, or flower of Salt is good againſt moiſt Ulcers.

Or Tartar, or Borax, with Crabs-eyes.

Or burnt Allum, or parched Salt, or burnt Braſs.

In a Fellon called *Paronychia* when the fleſh is foul: Take *Sal Armoniack half an ounce, Verdigreeſe two drams*, make a *Pouder*, add *Aqua fortis*, dip *Cotton* in it, and dry it, and apply it to the root of the *Nail.*

Dry Lint is good in moiſt Ulcers often changed.

Or Sparadrap, which is good alſo in the French Pox in the Privities, thus made. Take *Guajacum pouder four ounces, roots of Genian, Birthwort, Maſterwort, each an ounce*; *Rhubarb half an ounce, Centaury tops, Scordium, Bettony, each a handful*; *Roſemary flowers and Roſes, each a pugil*; *Bay and Juniper berries, each half an ounce*; *Myrtle berries and Fennel ſeed, each two drams*; *Allum three drams*: boyl them in *red Wine*, ſtrain them, and to a pint and an half, add *Mythridate an ounce*, diſſolve it in three ounces of *Aqua vitæ*, dip a *Pledget* in it often and dry it again, apply a bit of it.

Somtimes we open the Ulcer that the matter better come forth in the lower part, and rouling it above, and wounds alſo, when we fear the Bones wil be infected, and in the Fellon we open the Impoſthume at the firſt before the bone is foul.

Or we take away rotten fleſh with an actual Cautery,

or

or a potential, especially in that malignant gleeting Ulcer called *Slidwasser* in Dutch, a Corrosive must presently be applied to that.

You must use the expulsive Ligature to hollow Ulcers to retain things put in, and let the matter come forth notwithstanding.

Remedies to heal up and make a scar are in wounds with loss of flesh and skin.

And the last of all when the Ulcers are fil'd with flesh, and the Superficies only bare they cure them.

And though Nature doth breed this skin of nourishment that feeds the skin, as it doth breed flesh in hotter Ulcers, yet because a preternatural flux of moisture hinders her, we must use Driers that Nature may do her work and make skin. This Scarf-skin differs from the true, because it is neither sensible nor porous, not made of seed as before, but of nutriment that sweats from the true skin and grows to the flesh, and then it is not called a true skin bnt Callus, and Cicatrice or Scar, and the medicines that cause it are called Epuloticks.

These must be stronger driers than Incarnatives to make the superficies better turn into a skin orScar, and they must be more, and therefore are to be used in a dry form rather than a moist and unctious.

Therefore Incarnatives which astringe not so much must not be used when the Ulcer is healed but changed, lest they make proud flesh, for skin they cannot make, nor Glutinaters except some of the chiefest Driers and Binders, which when they have glewed the lips of a wound heal with a final scar without any more ado, as Cicatrizers called Epuloticks do glutinate small wounds.

Pouders are best for such strong drying, if very fine and sprinkled upon the superficies, and better when burnt and not washed, for things that corrode lose their force by being burnt if they be after washed. The pouders follow.

The first: Take *Galls, Pomgranate peels and Birthwoort*, burn them and they are stronger.

The second: Take *one part of the first pouder with as much Cypress Nuts or Acorn Cups, Roses, Horse-tail, Centaury, burnt Spurge.*

The third: Take *one part of the first pouder*: add as much *Tormentil roots, or of Snakeweed, or of Pine bark, or Elm, or Oak, or Sumach, or burnt Paper, Clouts or Leather, Bones or Eg-shels.*

The fourth: Take *one part of either pouder*, add *as much of bark of Frankincense and Sanguis Draconis.*

The fifth: Take *any of the former with as much Litharge, Cadmia or Lapis Calaminaris burnt, with Bole or Chalk.*

The sixth stronger. Take *Litharge, Tutty, burnt Lead or Cerusi, each half an ounce; burnt Allum a dram, half an ounce of the first pouder, and a dram of burnt Pumice stone.*

The seventh which is strongest. Take *Brass burnt and washed two drams, Chalcitis burnt and washed a dram and an half, an ounce of any of the pouders aforesaid.*

Or use the following alone, or with the former, as Pouder of burnt Rosemary, or drying plants, barke of Goards, Plantane roots, Capet barkes, Cypress, Oak, Pear-tree, Myrtle, Fruits of the Ægyptian Thorne, or pouder of burnt shells, Coral, Ivory, sealed Armenian, or Cimolian earth, Bloodstone, Jews stone, Loadstone, and Asius.

Or Use Crocus Martis, which is a strong dryer.

Mathiolus comends Tartar burnt, with the pouder of Plantane roots, others Sulphur vive.

Of these pouders you may make Ointments with astringent Wine or Honey, or oyl of Roses, Myrtles, or Sweet, but they will dry less, except you use the sixth or seventh Pouder.

Or Thus. Take *six drams of the sixth Pouder*, add *Antimony, Scales and Flowers of Brass all burnt and washt, each two drams; Chalcitis or Borax, and Vitriol, each a dram, with Honey* make an Ointment, or with *Oyls*, if you will have it gentler.

Dioscorides useth Verdigrease with Oyl and Wax.

Or use this of Juices. Take *Juyce of Plantane, Vervain, Agrimony, Pears, or Quinces, four ounces*, add *red Vinegar, two ounces, Acacia, half an ounce, Aloes two drams, Litharge an ounce and half, Honey an ounce*: boyl them to a thin Ointment.

Oyl of Vitriol in Water makes a Scarr, by strong drying.

The usual Epulotike Ointments and Plaisters, are nutritum, or triapharmacum, or that black of Avicen made of Litharge, Oyl of Vinegar, or Litharge and Ceruse, or the ointment of Quick-Lime, often washed, as we shewed in burnings, or the white Ointment with Ceruse, and Litharge, or the Citrine Ointment, that of Tutty, or of red lead, or that of Lead, or the plaster of *Lapis Calaminaris*, mentioned in Glutinaters, or *Emplastrum Diacadmiæ*, of *Gallen.*

Before yon use these Epuloticks, wash the wounds or Ulcers with Wine by Urine or Allum water, or Decoction of Sumach, or Currans, Rhus which thickens their Leather, and dryes, and thickens the Skin.

You may further the Cure of Ulcers, as well as Wounds by Wound Drinks, for they cleanse and drie, they are mentioned in Wounds.

These following are best in hollow Ulcers, or in Fistulaes, which be most dryed, therefore they are good in all foul Ulcers: Thus made.

Give Agrimony boyled in Wine, with Solomons-seal, Feather-wood, Burnet, *Spanula fœtida*: to drink some daies.

Or Wine of red Coleworts, with the Seeds and Madder.

A Water called the Mother of Balsom, for hollow Ulcers. Take; *distilled water of Rosemary and Sage, steeped in white wine one pint.* give it with Sugar.

Or add *Turpentine two ounces, Gum of Ivy, Frankincense, Maslike, Myrrh, Aloes, each half an ounce; Cloves, Cinnamon, Nutmegs, Cubebs, Galangal, each two drams; Saffron, a dram.* give the distilled water to drink.

An excellent water made of *Pyrola* roots and all and and ground Ivy, cutt small and steept in old Ale, two daies, with as much Album Græcum as an Egg, distill a water, and add it to the dreggs, and still it over again, give three spoonfull a morning, before Supper, and at bed-time.

In hollow ulcers, in the *Perinæum* under the stones, when they pierce to the bladder. Take *Comfrey roots, Fennel, Liquorish, each an ounce and half, Birthworts, half an ounce, Sanicle, perfoliata, or through wax, Saracens Consound, ground Ivy, Betony, each a handful; Hyssop half a handful, winter Cherries half a pugil.* boyl them in wine and water each a pint, give it with *Sugar.*

The Cure of a Fistula.

A Fistulated Ulcer whose inward circumference grows together, by a skin or tunicle, with Hollowness called a Fistula, is thus cured. it must be filled again with flesh, and therefore the tunicle must be taken away, and then you must use the means mentioned to beget flesh, and a Scarr, or Skin; and give things mentioned in Ulcers, to keep the body clean, that the Cure may be the easier.

Therefore for taking away of the Tunicle, use cleansers which may take it away, with the thick Excrements while it is soft and slimy. but when it is grown hard, it cannot be taken away, but with strong cleansers, all the kinds of which were mentioned in Ulcers. If the Tunicle be hard and confirmed, eat it away with things that consume proud flesh as in Ulcers, applied with Tents which will keep it open.

These are the cheif takers away of Skin in Fistulaes.

Of Juyces, that of Orris is sharp and burning, and that of Dragons Cookowpints, and Spurge, and Juice of milky Figgs, they may be corrected with milder Juyces, or mixed with Vinegar or Honey.

Oyl Omphacine cleanseth, and more with Juice of Spurge, or the like.

Olive, Maſtich tree, Rhamnus, Barberries, Sumach, Ceterach, Coriander, Roſes, Maudlin, Coſtus, *Æſculapius* his Allheal, Pomegranate flowers, Comfrey roots, Birthwort, Orris, black Chamælion roots, Allheal, Sulphurwort, wild Parſneps, Aſtragalus, Fern, Anemone, Thalictrum, Alkanet, Daffodil, Pomegranate peels, Aſh leaves and Beets: Alſo Guajacum, which is proper in pocky Ulcers. alſo bark of the Palm tree, alſo Galls, Acron cups, Cypreſs Nuts, Myrobalans, Lentils, Barley, Myrtles, Roſes, Barberries, Plantane, Coleworts boyled in Wine and Water, and water with Vinegar in foul Ulcers, to Dry and cleanſe, with Acacia and Hypocyſtis to dry more.

To theſe Decoctions when you wil cleanſe more. Take *Smallage, Plantane, Agrimony, each a handful*; *Wormwood, Centaury, each half a handful*; boyl and diſſolve in a pint thereof *Honey of Roſes four ounces*, or in hollow foul *Fiſtulaes* and *Ulcers*, add *Orvis, Hellebore*, or *Cuckowpint roots* boyled in *Lye* or *Urin* for to inject or waſh.

Or this Injection. Take *Gentian roots an ounce, Hermodactis ſix drams, Hellebore three drams, Wormwood and Centaury, each a handful*; boyl them in two pints ſtrained, diſſolve *Honey of Roſes three ounces, Ægyptiacum an ounce*: add *pouder of Orris and Birthwort, each half an ounce*; *Agarick, Myrrh, each two drams.*

Or: Take *Smallage, Sage* (which allaies Itching in Ulcers) *Betony, Horehound, each a handful*; *Radiſhes an ounce and an half, Onyons an ounce*: boyl them, and to two pints add *Alum half an ounce or Salt of Tartar two drams, Honey of Roſes three ounces.*

To dry and heal. Take *Comfrey, Plantane, Shepheards-purſe, Horſtail, Ceterach, Jews herb, each a handful*; *Agrimody and five-leav'd Graſs, each half a handful*; *Galls, Cypreſs Nuts, Pomegranate flowers, each an ounce*; *red Roſes, Barley, each a pugil*; boyl them, and to two pints of the ſtraining, add *Frankincenſe, Maſtich, Sarcocol, each two drams*; *Honey of Roſes three ounces.*

Or: Take *Litharge a pound*, boyl it in *Vinegar* and dip *Clouts* therein for Ulcers of the Legs.

Or: Take *Cadmia or Litharge two ounces, Maſtich, Frankincenſe, each half an ounce, Camphire half a dram, Saffron a ſcruple*: boyl them in *Vinegar.*

Or, boyl Allum, Tartar and Maſtich in Vinegar, or Tartar and Aloes in Vinegar.

Take *white Vitriol, Allum, Bole a pound, Camphire an ounce*, boyl them in an *Earthen veſſel*, keep the third part of the *Water*, boyl the reſt til it may be *poudered*, to an ounce of which, add a pint of water, ſtrain it, uſe the *Water.*

In Ulcers of the Leg. Take *Chalcanthum, Vitriol, Allum, Ceruſs, equal parts*, boyl them in *Vinegar* til they are hard, diſſolve a little in *Water* or *Lye* and *Wine* and waſh the *Ulcer.*

Take *Allum half an ounce, Tartar two drams, Camphire a dram, Verdigreece, half a dram*: beat them, and diſſolve them with *Aqua vitæ eight ounces*, and *three Yolks of hard Egs*, ſtrain them, this is good in Ulcers of the Privities.

Take *Peaſe, Wheat, Salt, each a pugil*; *Wine a good quantity*: let them ſtand in a *braſs Kettle*, and ſtir them ſome daies, add *Verdigreeſe an ounce, white Vitriol, Aloes, each half an ounce*; ſtir them ſome daies, and then ſtrain off the *Liquor.*

Or: Take *Litharge, Lapis Calaminaris, each half an ounce*; *Salt, Allum, Vitriol, each an ounce*; boyl them in *Water, Wine*, or *Lye*: add *Sulphur, Ceruſs, Sanguis Draconis* and an ounce of Verdigreece.

You may uſe diſtilled waters to dry Ulcers, or the Juyces of Plants with Allum and whites of Egs, before it is diſtilled.

That of Docks and Vinegar mentioned in Tetters or *Herpes* cures Ulcers after an *Eryſipelas.*

This is better in pocky Ulcers, if the Dock roots are boyled in Guajacum water.

Pouder for hollow Ulcers which cauſe fleſh by drying, and are therefore called Incarnatives, or ſtronger Driers when the Ulcer is very foul and eating.

The Incarnative pouders are firſt: Take *Frankincenſe, Myrrh, Aloes*, to glew as in the firſt *Wound-plaſter.*

A ſecond: Take *Sarcocol and Myrrh.*

A third: Take *one of the former pouders*, add as much *Sanguis Draconis, Orris, and Birthwort.*

A fourth: Take *of the firſt or ſecond pouder one part*, add *meal of Orobus, or Lupines roots, of Sulphur-wort, All-heal, Centaury the leſs as much.*

A fifth: *as much Litharge, Cadmia, filings of Iron, and Pumcie ſtone to the firſt or ſecond pouder.*

The ſixth that wil cloath naked bones with fleſh again is made of *Orris, Daffodil, Sulphur-wort, All-heal roots, Frankincenſe and Myrh.*

There are other glutinating Incarnatives.

When you wil dry more in moiſt Ulcers, uſe pouders of drying Plants, as of Savin, Cypreſs, Horehound, Vervain, Groundpine, Germander, Juniper berries, Pomegranate peels, Cypreſs Nuts, Bediguar, Gooſe-graſs, Parſneps, Securidaca, Coriander, Roſemary, Sage, Myrtle leaves, or pouder of Coral, Cryſtal, Bole, ſealed Earth-Eretria, waſhed Lime, of the ſtone Æſtus, Earth-worms, and Hoglice, rotten Poſts, and other Driers.

Or Aſhes of burnt Southernwood, Dill, Cypreſs, Savin, Tamarisk, Hemp, Gourd peels, Olives, alſo of Shoe ſoals, Paper, Silk, Purple, ſhels of Oyſters, Hedghogs, Snakes, Snails, Corals.

To all theſe pouders, add Frankincenſe, Maſtich, Pitch Gum of Nut-tree, Almonds, &c.

The white troches of *Rhaſis* with Camphire, Aloes and Myrh cures Ulcers in the Yard.

Or this experienced. The pouder of Barba ſylvatica, with half a part of Maſtich and Frankincenſe, and a fourth part of Cuttle Bone.

When you wil dry more uſe pouder of Capar roots, Reſtharrow, Fern, Birthwort, Gentian, Hermodacts, Or Cuckowpints or Dragons, Briony, Celondine, Hellebore, Agarick, Dogs dung, theſe cleanſe Fiſtulaes alſo, eſpecially if you add Chalcitis or Verdigreeſe.

The pouder of Snails is good againſt the gleeting Ulcer cald in Dutch *Slidwaſſer.*

Or this to dry and cleanſe. Take *flowers of Pomegranate or peels half a dram, burnt Bones or Coral a dram, Aloes a ſcruple, Salt or Allum a dram and an half*, make a *Pouder.*

Or mix filings of Iron or Braſs with fat clay waſht with Allum water, and burn it to pouder.

Salt of pickled Fiſh, or flower of Salt is good againſt moiſt Ulcers.

Or Tartar, or Borax, with Crabs-eyes.

Or burnt Allum, or parched Salt, or burnt Braſs.

In a Fellon called *Paronychia* when the fleſh is foul: Take *Sal Armoniack half an ounce, Verdigreeſe two drams*, make a *Pouder*, add *Aqua fortis*, dip *Cotton* in it, and dry it, and apply it to the root of the *Nail.*

Dry Lint is good in moiſt Ulcers often changed.

Or Sparadrap, which is good alſo in the French Pox in the Privities, thus made. Take *Guajacum pouder four ounces, roots of Gentian, Birthwort, Maſterwort, each an ounce*; *Rhubarb half an ounce, Centaury tops, Scordium, Betony, each a handful*; *Roſemary flowers and Roſes, each a pugil*; *Bay and Juniper berries, each half an ounce*; *Myrtle berries and Fennel ſeed, each two drams*; *Allum three drams*: boyl them in *red Wine*, ſtrain them, and to a pint and an half, add *Mythridate an ounce*, diſſolve it in three ounces of *Aqua vitæ*, dip a *Pledget* in it often and dry it again, apply a bit of it.

Somtimes we open the Ulcer that the matter better come forth in the lower part, and rouling it above, and wounds alſo, when we fear the Bones wil be infected, and in the Fellon we open the Impoſthume at the firſt before the bone is foul.

Or we take away rotten fleſh with an actual Cautery,

or

or a potential, especially in that malignant gleeting Ulcer called *Slidwasser* in Dutch, a Corrosive must presently be applied to that.

You must use the expulsive Ligature to hollow Ulcers to retain things put in, and let the matter come forth notwithstanding.

Remedies to heal up and make a scar are in wounds with loss of flesh and skin.

And the last of all when the Ulcers are fil'd with flesh, and the Superficies only bare they cure them.

And though Nature doth breed this skin of nourishment that feeds the skin, as it doth breed flesh in hotter Ulcers, yet because a preternatural flux of moisture hinders her, we must use Driers that Nature may do her work and make skin. This Scarf-skin differs from the true, because it is neither sensible nor porous, not made of seed as before, but of nutriment that sweats from the true skin and grows to the flesh, and then it is not called a true skin bnt Callus, and Cicatrice or Scar, and the medicines that cause it are called Epuloticks.

These must be stronger driers than Incarnatives to make the superficies better turn into a skin orScar,and they must be more, and therefore are to be used in a dry form rather than a moist and unctious.

Therefore Incarnatives which astringe not so much must not be used when the Ulcer is healed but changed, lest they make proud flesh, for skin they cannot make, nor Glutinaters except some of the chiefest Driers and Binders, which when they have glewed the lips of a wound heal with a final scar without any more ado, as Cicatrizers called Epuloticks do glutinate small wounds.

Pouders are best for such strong drying, if very fine and sprinkled upon the superficies, and better when burnt and not washed, for things that corrode lose their force by being burnt if they be after washed. The pouders follow.

The first: Take *Galls, Pomgranate peels and Birthwoort,* burn them and they are stronger.

The second: Take *one part of the first pouder with as much Cypress Nuts or Acorn Cups, Roses, Horse-tail, Centaury, burnt Spurge.*

The third: Take *one part of the first pouder:* add as much *Tormentil roots, or of Snakeweed, or of Pine bark, or Elm, or Oak, or Sumach, or burnt Paper, Cloues or Leather, Bones or Eg-shels.*

The fourth: Take *one part of either pouder,* add *as much of bark of Frankincense and Sanguis Draconis.*

The fifth: Take *any of the former with as much Litharge, Cadmia or Lapis Calaminaris burnt, with Bole or Chalk.*

The sixth stronger. Take *Litharge, Tutty, burnt Lead or Cerus, each half an ounce; burnt Allum a dram, half an ounce of the first pouder, and a dram of burnt Pumice stone.*

The seventh which is strongest. Take *Brass burnt and washed two drams, Chalcitis burnt and washed a dram and an half, an ounce of any of the pouders aforesaid.*

Or use the following alone, or with the former, as Pouder of burnt Rosemary, or drying plants,barke of Goards, Plantane roots, Capet barkes, Cypress, Oak, Pear-tree, Myrtle, Fruits of the Ægyptian Thorne, or pouder of burnt shells, Coral, Ivory,sealed Armenian, or Cimolian earth, Bloodstone, Jews stone, Loadstone, and Asius.

Or Use Crocus Martis, which is a strong dryer.

Mathiolus comends Tartar burnt, with the pouder of Plantane roots, others Sulphur vive.

Of these pouders you may make Ointments with astringent Wine or Honey, or oyl of Roses, Myrtles, or Sweet, but they will dry less, except you use the sixth or seventh Pouder.

Or Thus. Take *six drams of the sixth Pouder,* add *Antimony, Scales and Flowers of Brass all burnt and washt, each two drams; Chalcitis or Borax, and Vitriol, each a dram, with Honey* make an Ointment, or with *Oyls,* if you will have it gentler.

Dioscorides useth Verdigrease with Oyl and Wax.

Or use this of Juices. Take *Juyce of Plantane, Vervain, Agrimony, Pears, or Quinces, four ounces,* add *red Vinegar, two ounces, Acacia, half an ounce, Aloes two drams, Litharge an ounce and half, Honey an ounce*: boyl them to a thin Ointment.

Oyl of Vitriol in Water makes a Scarr, by strong drying.

The usual Epulotike Ointments and Plaisters,are nutritum, or triapharmacum, or that black of Avicen made of Litharge, Oyl of Vinegar, or Litharge and Ceruse, or the ointment of Quick-Lime, often washed, as we shewed in burnings, or the white Ointment with Ceruse, and Litharge, or the Citrine Ointment, that of Tutty, or of red lead, or that of Lead, or the plaster of *Lapis Calaminaris,* mentioned in Glutinaters, or *Emplastrum Diacadmiæ,* of *Gallen.*

Before yon use these Epuloticks, wash the wounds or Ulcers with Wine by Urine or Allum water, or Decoction of Sumach, or Currans, Rhus which thickens their Leather, and dryes, and thickens the Skin.

You may further the Cure of Ulcers,as well as Wounds by Wound Drinks, for they cleanse and drie,they are mentioned in Wounds.

These following are best in hollow Ulcers, or in Fistulaes, which be most dryed, therefore they are good in all foul Ulcers: Thus made.

Give Agrimony boyled in Wine, with Solomons-seal, Feather-wood, Burnet, *Spatula fœtida*: to drink some daies.

Or Wine of red Coleworts, with the Seeds and Madder.

A Water called the Mother of Balsom, for hollow Ulcers. Take; *distilled water of Rosemary and Sage,steeped in white wine one pint.* give it with Sugar.

Or add *Turpentine two ounces, Gum of Ivy, Frankincense, Mastike, Myrrh, Aloes, each half an ounce; Cloves, Cinnamon, Nutmegs, Cubebs, Galangal, each two drams; Saffron, a dram.* give the distilled water to drink.

An excellent water made of *Pyrola* roots and all and and ground Ivy, cutt small and steept in old Ale, two daies, with as much Album Græcum as an Egg, distill a water, and add it to the dreggs, and still it over again, give three spoonfull a morning, before Supper, and at bed-time.

In hollow ulcers, in the *Perinæum* under the stones, when they pierce to the bladder. Take *Comfrey roots, Fennel, Liquorish, each an ounce and half, Birthwoort, half an ounce, Sanicle, perfoliata, or through wax, Saracens Consound, ground Ivy, Betony, each a handful; Hyssop half a handful, winter Cherries half a pugil.* boyl them in wine and water each a pint, give it with *Sugar.*

The Cure of a Fistula.

A Fistulated Ulcer whose inward circumference grows together, by a skin or tunicle, with Hollowness called a Fistula, is thus cured. it must be filled again with flesh, and therefore the tunicle must be taken away, and then you must use the means mentioned to beget flesh, and a Scarr, or Skin; and give things mentioned in Ulcers, to keep the body clean, that the Cure may be the easier.

Therefore for taking away of the Tunicle, use cleansers which may take it away, with the thick Excrements while it is soft and slimy. but when it is grown hard, it cannot be taken away, but with strong cleansers, all the kinds of which were mentioned in Ulcers. If the Tunicle be hard and confirmed, eat it away with things that consume proud flesh as in Ulcers, applied with Tents which will keep it open.

These are the cheif takers away of Skin in Fistulaes.

Of Juyces, that of Orris is sharp and burning, and that of Dragons Cookowpints, and Spurge,and Juice of milky Figgs, they may be corrected with milder Juyces, or mixed with Vinegar or Honey.

Oyl Omphacine cleanseth, and more with Juice of Spurge, or the like.

Paracelſus his balſom for Fiſtulaes. Take *Oyl of Bricks two ounces, Oyl of Turpentine ſix ounces, Oyl of Cloves half an ounce,* infuſe *Maſtik, Myrrh, Frankinceſe, each two ounces; Mummy three ounces,* diſtill them, pour it in twice a day.

The Chymiſts commend in Fiſtulaes, Oyl and Sugar of Lead, or Oyl or Water of Mercury.

As ſtrong Vinegar conſumes Egg-ſhels if they be laid therein, So doth it Fiſtulaes, mixed with Oyl omphacine, and Labdanum, as *Dioſcorides*, and with other Oyntments to avoid corruption.

Or uſe Ægyptiacum diſſolved in lye with a Tent.

Or this Infuſion: Take *Verdigreaſe three drams, Allum an ounce and half, Sugar half a pound, with Wine,* boyl and uſe it.

Or Take *Orpiment a dram, Verdigreaſe half a dram,* boyl them in *half a pint of wine, and four ounces of Plantane water,* Or uſe the green Water mentioned againſt Ulcers of the mouth.

It is excellent to diſſolve a little Orpiment, in Plantane Roſe, or Nightſhade water.

Or to uſe a little Sublimate with Populeon, to abate its ſcrce, or Orpiment and Honey.

A Fiſtula-water to take away and cure. Take *Frankincenſe, Maſtike each half an ounce; Verdigreaſe, Orpiment, each 10 drams; Allum two ounces, Honey and Turpemine, each an onnce an half; wine a pint and half.* diſtill a Water.

Or diſtill a water of Euphorbium diſſolved in Juyce of Plantane, with Myrrh, and Frankincenſe.

Or uſe the diſtilled water of mans Dung.

An Oyl to eat away Fiſtulaes. Take *Antimony two ounces, Sublimate an ounce, Honey four ounces,* diſtill an Oyl by a retort.

Orpiment alone thus prepared cures all Fiſtulaes. Take *yellow Orpiment, an ounce, calcined Tartar two ounces,* powder and calcine them in a crucible twenty four hours, powder it upon a Tile, and boyl them in water, till it is evaporated, there will be a white Chalk in the bottome, which is Orpiment prepared, the pouder of it doth cure Fiſtulaes to a miracle.

This white Orpiment ſo prepared, and put into a Glaſs, and ſet in a moiſt Cellar, turns to an oyly Liquor, which put into Fiſtulaes, is excellent.

An Hellebore root put into a Fiſtula, takes away the Tunicle.

We put a dried Spunge tyed or waxed into Fiſtulaes, or a root of Gentian or Birthwort, as a Tent to enlarge the Orfice rather then to clenſe, and the ſtretching makes the Callus thinner and ſooner come of.

If you burn a Fiſtula with an actuall or potentiall Cautery, there wil be an Eſchar, and that falling off, the Tunicle is gone.

If after this, quick fleſh appears in a Fiſtula, it muſt be cured as other Ulcers, by Incarnatives injected, and then by Cicatrizers.

They ſay that Fiſtulaes are cured by Drinks mentioned in Ulcers, but they mean hollow Ulcers not yet covered with a tunicle, for when there is a skin grown in a Fiſtula they cannot ſend their vertue ſo far as to eat off except at the firſt while it is warm, or work upon the Fiſtula when the skin is off.

Paracelſus commends this Drink againſt fiſtulated Ulcers. Take *Sowbread two handfuls, Sanicle a handful, Sophia Chirurgorum half a handful,* boyl them in *Wine,* to the ſtrained *Liquor* cold, add *Oyl of Cloves diſtilled an ounce and an half,* give it thrice a day ſhaking it firſt that the *Oyl of Cloves* may be in evey draught three or four ounces at a time.

The Cure of a Callus Ulcer.

A Callus Ulcer with hard Lips muſt be mollified and clenſed.

This Cataplaſm doth both, made of Dock and Comfrey roots boyled in Water, bruiſed after and mixed with Butter.

Or uſe a plaſter of Ammoniacum with ſtrong Vinegar.

Or this Oyntment. Take *Gum Ammoniack, Bdellium or Galbanum diſſolved in ſtrong Vinegar two ounces, Turpentine half an ounce:* diſſolve it with *Oyl of Roſes,* add two drams of *Verdigreeſe,* and three drams of *Allum.*

Or uſe other ſtrong Clenſers or Eaters mentioned if the Callus be hard.

Dioſcorides ſaith that Spurge boyled in Honey or pieces of Sphondilium laid upon the Callus take it away.

Cut with a Knife or Lancet, and it will more eaſily heal.

The Cure of an excreſcent Ulcer.

An excreſcent Ulcer is when the fleſh which fil'd the Ulcer grows out for want of ſoon making a Scar or Skin, hanging forth and deforming, this muſt be made even.

By taking away Plethory if that be the cauſe, by ſpare Diet and bleeding, and uſing of medicines outward that cauſe a ſcar as ſoon as the fleſh riſeth. theſe by drying cauſe a skin and hinder fleſh from growing, but if the fleſh is grown out, you muſt not uſe them, leſt it cauſe deformity, becauſe they wil not conſume it. but then uſe ſtronger Driers and Clenſers, or things that take away fleſh, called Cathereticks, ſuch as we mentioned for Fiſtulaes, and theſe are good in Fiſtulaes.

Pouders are carried in Borax pipes for the ſame, as pouder of black Hellebore and Hermodacts, of Birthwort, Galls, Aſhes of Date ſtones, Wooll, Spunge, Salt Fiſh, Smaris and Sea-Hedghog, Purple ſhels, and Snails burnt.

Or ſprinkle ſmall cut Hemp thereon.

Or the yellow pouder of dregs remaining after the diſtillation of Honey.

Or pouder of Borax.

Or of Pumice Stone, Okar, Ætius Stone, Diphryges.

Or of Allum, Chalcitis burnt, or not mixed with other weaker.

As, Take *Allum burnt three drams, with Pomegranate flowers and Bole as much.*

Or, Take *Vitriol half an ounce, Allum two drams, Pomegranate peels and Galls, each two drams; Myrrh, Birthwort burnt, each a dram;* make *Troches* for your uſe.

Or you may add burnt Tartar to other pouders.

A Corroſive pouder. Take *Vitriol four ounces, Allum and Verdigreeſe, each half an ounce, Vinegar ſix ounces,* calcine them in a luted Veſſel.

Or make it of red Arſnick, Allum and Galls boyled in Vinegar ſtrained and pour upon as much quick Lime, dry the Lime with the reſidence of the Decoction till it may be poudered.

Or make quick Lime into Troches with Honey, and then burn them.

To make Precipitate or Sublimate to conſume fleſh without great pain, Take *one part of Quick-ſilver, two parts of Aqua fortis,* let it be ſtir'd in a *great Alembick* with a *great Receiver* and *hot Fire under,* till the *Water* is gone, and the *Alembick* broken, leave that which is *white* and *yellow,* and take it in the neck of a Glaſs, pouder it, and ſet it upon the fire till all the *ſume* be gone.

The Troches mentioned in Cauteries to open Impoſthumes, and many things that burn the skin, are good here.

And Troches of *Vigo* made of crums of Bread, Sublimate, red Lead, and Roſe water.

Ægyptiacum is the beſt Oyntment to take away fleſh.

Or this, Take *Hermodacts or Agarick, black Hellebore, burnt Spunge and Pumice ſtone, each two drams; burnt Braſs and Allum, each a dram and an half; Verdigreeſe and Chalcitis, each a dram; with Honey and Oyl of Tartar an ounce,* make an *Oyntment.*

Or thus: Take *Antimony and filings of Iron, each two ounces; Allum, Sal Armæniack, Sulphur vive and Chalcanthum, each an ounce and an half; Verdigreeſe and Orpiment, and Quick-ſilver, each an ounce; ſtrong Vinegar, and*

Lye

Lye of Barbars, with Lime each two ounces: calcine them in a *Potters veſſel*, and keep the *Pouder* cloſe ſtopt in a *Glaſs*. Anacardine Honey anoynted doth the ſame.

Or Oyl of Sulphur, Tartar, Vitriol, with Liquor or upon a Plaſter.

If nothing wil help, cut or burn away the fleſh.

My Cauſtick doth it wel and quickly.

We have mentioned compound Ulcers with tumors and Puſtles, we ſhal ſpeak now of ſuch tumors as do preſently follow both Wounds and Ulcers when the tumor is red, as Phlegmonous eryſipelated and Oedamatous Ulcers.

The Cure of phlegmonous and eryſipelated Ulcers.

Phlegmonous or eryſipelated Ulcers or Wounds which are ſo from flux of Blood cauſed by pain or the like, muſt be ſo ordered that blood be firſt revelled as we ſhewed in a Phlegmon.

Then uſe repelling Defenſatſives about the Ulcers and after Digeſters as in a Phlegmon.

The Driers that are put into Wounds or Ulcers muſt firſt cool, alſo as in the Repellers in Phlegmon ſuch as have Litharge, Cadmia, Ceruſs.

Or thus againſt Inflammation and Ulcer. Take *Juice of Dogstongue, Plantane, Willow, Nightſhade, or Houſleeke, four ounces, Juice of Pomegranates, an ounce, Vinegar, half an ounce, Oyl of roſes or Myrtles, three ounces, Ceruſs half an ounce, Lead burns and waſht, two drams, Camphire half a dram, with Turpentine* make an oyntment.

You may uſe dryers onely when the Inflammation is gone.

The black Cerot of Vigo. Take *Litharge, red Lead earth, Roſsin, Camphire, Oyls, and Greaſes, with Poplar oyntments, wine of Pomegranates, Decoction of Myrtles, Barley, Plantane, Nightſhade, wood-lime.*

In Gun-ſhot, this Plaſter is good at the firſt. Take *Bole two ounces, Sanguis Draconis, an ounce, Ceruſs, or Litharge, halfe an ounce, Barley meal an ounce and half, pouder of Earthwormes, half an ounce (eſpecially if the Nerves be hurt) dried Centaury two drams, Sewet* diſſolved *in oyl of Roſes an ounce. with Turpentine*, make a plaſter, you may add white *Diachylon* to it.

Or this, Take *Juyce of Plantane, Nightſhade, Houſleek, each an ounce, Vinegar half an ounce, Oyl of Violets, Roſes, water-Lillies, and* Turpentine, *each an ounce*; boyl them till the Juices be conſumed, add the Pouders of the Plaſter afore mentioned.

Againſt a Prick with a Thorn. Take *Juyce of Plantane, Shepherds-purſe, Nightſhade, Oyl of Roſes, each four ounces*; boyl them till the Juices be conſumed; add *Litharge, Ceruſs, Cadmia, of both ſorts, each half an ounce*; *Lead burns and waſhed, Scales of Braſs, each two drams*; *with Turpentine ſix ounces and an half.*

In an Inflammation of the Puncture of a Nerve, uſe this Plaſter. Take *Barley and Lentil Meal, each two ounces*; *Bean or Lupine, or Orobus flower, each an ounce*, boyl them in *wine Vinegar and Honey, or Oxymel*; to a plaſter. Then add things againſt pain, and proper for a Punctures as was there ſhewed.

For Ulcers of the Leggs with Eryſipelas, uſe Unguent of Roſes, Turpentine, and yolks of Eggs, with Oyntment of Line.

Againſt Pain in Ulcers or Wounds, from Inflammation, or Medicines, you muſt uſe Anodynes round about, as in Inflammations, as that of Cow Dung, and Narcoticks if need be. In the Puncture of a Nerve, wee ſhewed what was to be done againſt pain from thence.

If there be fear from the Puncture of a Nerve of a Convulſion, as often there is, it is good, to prevent Death, to cut in the place pricked or a little above.

The Cure of Oedematous Ulcers.

If a wound or Ulcer be Oedematous, we muſt labour to drye up the Moiſture about them which cauſeth tumor, with the ſtrongeſt driers, and then apply about things, againſt the Oedema.

A Gangreen is the Beginning of the Corruption of a Member: and is hardly cured. Sphacelus is a perfect mortification ſo that the part is dead, and muſt be cutt of, leaſt it infect the quick, and cauſe death.

The Cure of a Gangreen.

While there is any hope, and there is Pain and Senſe ſcarrifie quickly, with many and deep Scarrifications.

Or uſe Horſleeches, or apply them after Scarification.

Let the part ſcarified be fomented with hot water thrice a day.

Or with ſtrong lye of Barbers of Decoction of Lupines, or Lye of Fig-tree aſhes.

Or with Sea, or other Salt water.

The Chyrurgeons uſe ſuddain Fomentations before or after Scarification, as follows. Take *roots of Briony, Raddiſh, each two ounces*; *Leavs of Galeopſis, and ground Ivy, each a handful*; *Juniper topps a pugil*, boyl them in *Wine*, add *Vinegar* for a Fomentation with *Syrups.*

In a Gangreen in the Privities, foment with Decoction of Mugwort, Wormwood, Violets, Strawberries, Althæa, in Wine, it hath made the Corrupt Part fall from the Sound.

Or Take *ground Ivy, and Juniper topps*, boyled in *Milk* it is a rare experiment.

Dioſcorides uſeth boyled Coleworts, with Honey or Lettice beaten with Meal of Darnel.

Old Wallnutts, or the green Rinds, are alſo good.

Or Galeopſis and Briony roots and all.

Or Agrymony and Roſes beaten with Vinegar, or Raddiſhes and Salt.

Or flower of Orobus, Darnel Peaſe, Barley, with Honey and Salt.

Or this Cataplaſme. Take *Meal of Lupines, Lentils, Beans, ſix ounces, Pomegranate peals two drams, dryed Roſes a dram, Bole, Myrrh, each half an ounce*; *Salt an ounce, Juyce of Wormwood, or Nettles, ground Ivy, or Pomegranates three ounces, Vinegar an ounce, with Honey and Turpentine, and three Yolks of Eggs, and Oyl of Nuts, or Roſes*, that it dry not to ſoon.

Or add to the reſidence of the Decoction, for a Fomentation, *Old Wallnutts kernells an ounce and half, Meal of Orobus and Peaſe, each two ounces, Honey an ounce and half, Salt half an ounce*, make a Pultis.

Unctious things as Oyls and Oyntments are not ſo good, for they cauſe putrefaction, except it be a little to digeſt and keep the Pultis moiſt. An experienced Plaſter is made of Savin pouder, with Leaven, oyl of Lineſeed, Nuts or Yolks of Eggs, or of Tartar.

After waſhing, lay on Ægyptiacum with Allum.

Uſe Cauſticks as Milk of ſpurge, if putrefaction continue.

Or mix Arſenick, with the Pouder of Mans Bones and Mandrake roots are added, to prevent Pain, I ſuppoſe others add roots of five leaved Graſſe.

After the foul fleſh is gone from the ſound, cure it as a wound.

You may uſe ſtrong cleanſers, and that take of fleſh mentioned in excreſcent Ulcers.

The Cure of Caries or foulneſs of Bones

When the Bones are corroded Careous or black, there is Cares or rottenneſs of them in evil deep and hollow Ulcers that reach to the Bones and defile them, and it hinders cure of the Ulcer and hurts the member if it continue. To take it away at firſt you muſt thruſt medicines to the bottom of the Ulcer, opening it firſt, if it be ſtrait by a dry tent, which when it is moiſtened from the wound will ſwel and dilate it, as with a Gentian root, which alſo clenſeth, or with a ſponge bound hard, firſt take a Suppoſitory or the like, or open it by cutting.

This done put in Clenſing medicines and Cathereticks or Eaters that wil take away corruption from bones as wel as corrupt fleſh.

The chief Scaler of a Bone is Oyl of Vitriol and Antimony, Aqua fortis and Aqua Regia, all theſe I have uſed with

with happy ſucceſs in foul bones and venemous Ulcers w.th foulneſs of bones, and in the French Pox.

[i]But if this cannot be taken off, as when there is roughneſs upon the bone, we lay the bone bare and make it even with a ſharp Inſtrument for that purpoſe, or we cut off that which is above til the bone be ſmooth and clean again.

Somtimes we burn the foul bone with actual Cautery, and then the burnt part fall off, from the ſound of it ſelf. This is done in divers parts where the bone is foul, and alſo in the end of the Fingers where the bones uſe ſuddenly to be corrupted by *Paronychia* or Fellon, it muſt be done preſently that the foul joynt being taken away the next may be preſerved.

This done, and the Bone made clean, you may cure the Ulcer with its proper Remedies, as the nature thereof requireth.

F I N I S.

THE THIRD TOME IN TWO BOOKS; Which are the FOURTH and FIFTH OF THE Whole Work.

A TREATISE OF HUMANE INFIRMITIES.

THE FIRST BOOK Containing the Infirmities, or Diſeaſes of the Body.

THe Infirmities of the Body are called Organical, Symptomatical, or ſuch as cauſe Diſeaſes; and many of them are to be ſeen and felt. Some deſtroy the ſhape and faſhion of the Body: Others change the colour thereof, and are known either by the enlarging and increaſing, or by Pollution and Infection, or by the decreaſe and Conſumption of the Body.

The Diſeaſes which deſtroy the ſhape comprehend all Organical Diſeaſes, which are called either Diſeaſes that abound in reſpect of number, as when the Parts are too many, or the Body is double, or any Part is doubled or trebled; as when there are ſix Fingers, too many Teeth, &c.

Or they are called Diſeaſes where number is wanting, as when any Part, Tooth, Hair, or Nails are wanting, when there is Baldneſs, or the like.

Or they are called Diſeaſes in reſpect of magnitude increaſed and augmented, as when Nails, Hair, or the whole Body, or any part thereof is over large, the Orifices too wide, or the Fleſh, as Breaſts, and the like, grown too large.

Or they are called Diſeaſes in reſpect of Magnitude diminiſhed, as when the Orifices are too little, or the Body, or any Parts thereof decreaſed and grown leſs.

Or they are called Diſeaſes in Reſpect of unſeemly Figure and Proportion, as when any Member is deformed.

Or they are called Diſeaſes in reſpect of the Diviſion of Parts, as a Hare-Lip, broken

with happy ſucceſs in foul bones and venemous Ulcers w.th foulneſs of bones, and in the French Pox.

[1]But if this cannot be taken off, as when there is roughneſs upon the bone, we lay the bone bare and make it even with a ſharp Inſtrument for that purpoſe, or we cut off that which is above til the bone be ſmooth and clean again.

Somtimes we burn the foul bone with actual Cautery, and then the burnt part fall off, from the ſound of it ſelf. This is done in divers parts where the bone is foul, and alſo in the end of the Fingers where the bones uſe ſuddenly to be corrupted by *Paronychia* or Fellon, it muſt be done preſently that the foul joynt being taken away the next may be preſerved.

This done, and the Bone made clean, you may cure the Ulcer with its proper Remedies, as the nature thereof requireth.

F I N I S.

THE THIRD TOME IN TWO BOOKS; Which are the FOURTH and FIFTH OF THE Whole Work.

A TREATISE OF HUMANE INFIRMITIES.

THE FIRST BOOK Containing the Infirmities, or Diſeaſes of the Body.

THE Infirmities of the Body are called Organical, Symptomatical, or ſuch as cauſe Diſeaſes; and many of them are to be ſeen and felt. Some deſtroy the ſhape and faſhion of the Body: Others change the colour thereof, and are known either by the enlarging and increaſing, or by Pollution and Infection, or by the decreaſe and Conſumption of the Body.

The Diſeaſes which deſtroy the ſhape comprehend all Organical Diſeaſes, which are called either Diſeaſes that abound in reſpect of number, as when the Parts are too many, or the Body is double, or any Part is doubled or trebled; as when there are ſix Fingers, too many Teeth, &c.

Or they are called Diſeaſes where number is wanting, as when any Part, Tooth, Hair, or Nails are wanting, when there is Baldneſs, or the like.

Or they are called Diſeaſes in reſpect of magnitude increaſed and augmented, as when Nails, Hair, or the whole Body, or any part thereof is over large, the Orifices too wide, or the Fleſh, as Breaſts, and the like, grown too large.

Or they are called Diſeaſes in reſpect of Magnitude diminiſhed, as when the Orifices are too little, or the Body, or any Parts thereof decreaſed and grown leſs.

Or they are called Diſeaſes in Reſpect of unſeemly Figure and Proportion, as when any Member is deformed.

Or they are called Diſeaſes in reſpect of the Diviſion of Parts, as a Hare-Lip, broken

Teeth, falling of the Nails, Clifts or Fiſſures in the Hands, &c.

Or they are called Diſeaſes in reſpect of the Separation of Parts to be united, as when the Gums are ſeparated from the Teeth.

Or in reſpect of Concretion when an Orifice is cloſed, or when parts which ſhould be aſunder grow together, or are joyned together, as matted Hair.

Or in reſpect of the evil Scituation or Poſition of Parts, as when crook backed, or the Eyes ſtand too far out, the Teeth or Nails, looſe, &c.

All theſe Diſeaſes ſhall be explained in the Chapter of Deformity, *which is the* firſt Chapter, Page 501.

Secondly, Diſeaſes which change the colour comprehend under them, Cachexy or evil Habit, Jaundies, Redneſs, Paleneſs, Blackneſs, Spots, Diſcolourings, *and all ſorts of* Blemiſhes, *and among theſe are the* roſie Drop *called* Gutta roſacea, Itch, Inflamation, or Eryſipelas, ſmall Pox, ſpotted Feavers, blew Eyes, ſpotted Nails, diverſe coloured Hair. *Theſe ſhall be ſpoken of in the* ſecond Chapter, *which treats of* Diſcolouring, Page 513.

Thoſe Diſeaſes which come from the increaſe and augmentation of the Body, comprehend under them, the Dropſie, Swelling with Wind, *the* Aſcites, Tympany, *the* Swelling of the Belly by a Mole, *or* Retention of the Terms, Wens, proud Fleſh, Ruptures, Polypus, Swelling of the Yard, Condyloma, *or* Tumor in the Anus, Gums ſwollen, Epulis, Encanthis, Oedema, Phyſodeis *or* windy Tumors, ſwelled Feet, *by* Wind *or* Water, Codds ſwolleh, Head ſwollen *with* Water, Swellings in the Groins, Hydromphalon, Bronchoceten, *or in the* Throat, Phlyctænas, Hydroas, Breaſts ſwollen, Warts, Cirſocolen, Aneuriſm *or* Swelling of a Nerve, Glanduls, Scrophula's, Struma's, *both* Swellings *in the* Throat, Buboes *in the* Emunctuaries, Parotis *in the* Ears, Stones, Hardneſs, external *and* internal Hardneſs *of the* Liver, Spleen, Womb, Steatoma, Atheroma, Meliceris, *theſe three ſorts of* Tumors *which ſhall after be deſcribed: the* Frog *under the* Tongue, *the* Teſtudo, Garglio *or* Wen, Mole *of the* Head, *called* Talpa, Nodes *in the* Bones, Joynts, Calloſity *of* Bones, Nails, Skin, Scars, Extenſion *of the* Navel, Warts, Moles, Cornes, Hordeoli *like* Barley Cornes *in the* Eye, Grando, *or like a* Hail-ſtone *in the* Eye-brow, Ruptures and Herniæ. *Of all theſe we ſhall ſpeak particularly in the* third Chapter *of Diſeaſes in* Extuberance *or* Swelling *by* Accreſion, Page 540.

In the fourth Chapter of Defœdation, Page 580. *Or Diſeaſes that come by Infection, when many Diſtempers or Infirmities come together. We ſhall ſpeak of* Elephantiaſis, *which is a kind of* Leproſie *ſo called; the* Pox, *and the like Infections.*

The Diſeaſes which manifeſt themſelves by a decreaſe or decaying of the Body, are Leanneſs, Conſumption, Tyſick, Maraſmus, Colliquation *or* Melting *of the* Body, Atrophy *or want of Nouriſhment generall, or particular, in any Member, ſhall be treated of in the* fifth Chapter of Conſumption, Page 598.

CHAP. I.

CHAP. I.

Of Deformity.

The Kinds of Deformity.

BY Deformity we here mean, the Deſtruction or Perverſion of the Naturall Form of the Parts of the Body; and this comes to paſs, when the Parts of the Body are divided either in reſpect of Quantity, as number and magnitude, or of quality and uncomly Figure, and ſo become deformed by theſe organick Diſeaſes. As to diſcolouring we ſhall ſpeak of that in the Chapter of diſcoloration. But if the parts ſwell any other way, or any thing groweth unto them, or if they be conſumed, theſe ſhall be deſcribed in the proper Chapter of Extuberance and Conſumption; but if theſe be within the Body, as *Galen* writes of a double *Porus cholidocus*, others of one Kidney, of the want of a Liver or Spleen, or the like Diſeaſes in Number Magnitude or Figure, by which the Body is over large or decayed, if they be within the Body, and not be ſeen they ſhall not be ſpoken of, in this Chapter of Deformities, but in the Chapter of Actions hurt, and though externall Deformities do often hinder theſe Functions, yet becauſe they appear more to the Eye we ſhall ſpeak of them in this Chapter only.

A double Body.

Many Deformities are in the Body from number abounding, ſome come from the Birth which if they are great are called monſtrous, as when two bodies are borne knit together in divers parts. I have ſeen a Man which carried with him another of the ſame bigneſs compleate in all his Members, except the Head which was as it were grafted to the Neck into his Breaſt, and he lived ſo from his birth a long time in very good health. The like unto which *Stumpfius* in his Helvetian Hiſtory ſaith he ſaw. I alſo upon the fourteenth of *Auguſt Anno* 1645. ſaw naked in mine own houſe, another, who had his Brother hanging a little below his left Pap, faſtned unto him by his breaſt, he had a great Head, with much curled Hair, his Eye-brows moved, but never opened, his Mouth was open and alwayes full of ſtinking ſlimy Flegm, his hinder part of his Head fell down to his Brothers belly, his Face being upwards his Breaſt was crooked and the Ribbs plain to be ſeen, and bent like the Keele of a Ship outward, his Shoulders were very deformed, both his Arms trembled and were bent backwards his left Hand had the three laſt Fingers; his right, a great Thumb and two Fingers, that next to the Thumb was leaſt and grew thereto, from his left ſide his left Thigh hung downwards bowed, with a ſhort crooked Foot, and onely four Toes, his Heel being turned outwards, you might plainly have perceived his right Foot to be incloſed in his Brothers left Thigh, as if he had two thigh bones, between the Thighs were the Buttocks and a cleft but not open, his brother cloathed him with a ſhirt doublet Breeches and Stockings. This Monſtrous man, was very active, of good Habit of body, well coloured, witty, long winded, he told me he was Son to a noble Merchant of *Genua*, his Fathers Name was *Baptiſta Collaredo* and Mothers *Belerina Fraginesa*, of the Family of the *Forum Julianum*; and becauſe his Parents and the Prieſts ſaw that he was a double Man, he was baptized by the Name of *Lazarus* and *John Baptiſt* he was then twenty eight years of Age, when I heard from him and ſaw theſe things.

Double and treble Parts.

Hiſtories alſo witneſs that ſome are born with double Members, Heads, Arms, and Feet and other leſſer parts, it is uſuall to

Six Fingers.

ſee ſix Fingers upon a Hand, two Thumbs one leſſer growing to the greater, ſomtimes

Three Stones.

ſix Toes upon one Foot and ſeven upon another, ſome have three Stones one Cod, (theſe are called *Trioreheis*) and this is very probable to be as well as in other parts of the body: but this I have found by Experience, to be a hard excreſcens growing to the ſemenaries being inſenſible, but like a ſtone.

The Teeth do not alwaies keep the ſame number, ſome have two ranks of Teeth beneath which doth not deform or hinder.

Hairs becauſe numberleſs, are diſorderly when they are in places improper for them and ſo are a Diſeaſe in number increaſed; but when they abound they are a Diſeaſe in magnitude increaſed, where we ſhall treat of them, becauſe then hairs do not grow anew, but they which were before in the Pores, (for there is no Pore but hath a hair in it) hidden and concealed, do then grow manifeſt.

The Want of Parts.

The greateſt and moſt uſuall Deformities are in the deficiency of number, as when ſome Inſtruments are wanting in the birth: as we have ſeen ſoune monſters wanting both Arms, who have written and done other things with their Feet inſtead thereof, as I ſaw *Anno* 1652. *Nov.* 29. a Woman born without Arms, which gave her Child ſuch and carried it like a Nurſe, making alſo divers things with her Feet and with more dexterity then many could do with their hands. Her Name was *Maudlin Rudolphs* of *Thainhut*, in the chief City of *Sweedland* being above forty years of age, and the year after *February* 20. I ſaw one that way a crooked Dwarf born without Arms, that exerciſed all things with his feet which were to be done with hands with dexterity to the admiration of the Beholders, his Name was *Theodorick Stieb* of *Vienna* an Auſtrian. Theſe are rare, but the number of the parts is more uſually by chance then by birth, as by imputation which happens to parts that are moſt extended, as have Feet, Fingers, Noſe, and Ears, or when the Eyes are put out or fleſh is loſt from them, which is called Rhyas. Hither may be referred gelding,

Rhyas.

which though it be not in an apparent part and brings no Deformity apparent, yet becauſe when both Stones are cut out, other Deformities follow, eſpecially if it be done in Youth, which will declare them to be Eunuches, as a womanlike voice, want of a beard, ſo it cauſeth Deformity apparent.

Want of Teeth.

The Teeth are often defective in number, not only in age which is common to all, but many looſe their fore teeth, which is an uncomely ſight when the Mouth is open, but this is no defect in Children for they will have others ſucceed. The grinding teeth are alſo often taken out for Rottenneſs by which their number is fewer.

Fall of Nailes.

We have obſerved that the whol Nailes both of Toes and Fingers have fallen off of their own accord, and ſometimes others have grown up and ſometimes not, theſe are difficultly taken of by force.

Want of Hair. The loſs of Hair is uſuall, eſpecially in the Head, where being longeſt they cauſe the greateſt Deformity being wanting, as when there is Baldneſs all over, this is ordinary to old and ſometimes it befalls young People.

Alopecia. The Diſeaſe called Alopecia, is a falling of the hair from ſome long and violent diſeaſe aforegoing, leaving the head bald in

Ophiaſis. divers parts or equally about the hinder part of the Head and the Temples when it comes from the Pox, or when two bald places reach on both ſides from the hinder part of the head to the fore-head as in Ophiaſis.

The ſame happens to the Beard, the hair falls off inordinately and leave it thin or the Chin bare, and this is when the hair of the Head falls moſt uſuall, and it is ſo with the Eye-brows and Eye-lids: and eſpecially in an Elephantiaſis or Leproſie, the ſame ſometimes befalls all other hairy Parts.

The over largneſs of the whole Body. The Deformity which is from magnitude increaſed hathtwo kinds, firſt the increaſe of parts beyond their preſcribed bounds which is commonly originall and this ſometimes happens to the whol body, not when one Man is bigger then any in that Country with Proportion and ſtrength agreable without impediment, this is not I ſay preternaturall, but when the body is ſo exceſſive long or big as the party is burdened therewith and cannot exerciſe his functions. deforming rather than ſetting forth the ſtructure. Such monſters are ſomtimes ſeen and I ſaw a wench in *Durner* in *Baſil*, not five years old bigger then any ordinary fat Woman.

Over great parts and over large Orifices. The parts alſo of the Body are often bigger then ordinary and ſo bring Deformity and hinder action; ſome are born with too big a Head, ſome whereof we find to be ſools, ſome have Necks, Feet, Fingers diſproportionable, a long Noſe, broad Ears, great Eyes, long and large Teeth, eſpecially when one Tooth groweth into the cavity of the oppoſite Tooth whith is loſt, hitherto belong the over large Orifices a wide Mouth, Noſtrils, and other parts too large, theſe are Deformities but not Diſeaſes except they hinder actions, as when the Tongue is ſo big they cannot ſpeak, and Nayles ſo thick that they cannot take up ſmall things; beſides which fault if they grow too long they are inſerviceable, this is rather from neglect of cutting then any other

The too great increaſe of Nayles and Hair. thing. The like may be ſaid of Hair if it grow too long for want of trimming, either in parts where it uſually or not uſually groweth, as when it covers the Forehead which is vulgarly counted more comely when bare; eſpecially it is counted very unſeemly for a Woman to have a beard, in which places if the hair be ſhaved yet the roots remaining it will grow again and ſhew the Deformity, ſometimes one are more hairs growing in a Wart, deform the Face, if they grow where hair ſhould not be, as upon a womans Chin reſembling a beard.

Too much Fleſh. The other kind of Deformity from magnitude increaſed, comprehends Carnoſity and Fatneſs, and this is when from the aboundance of fleſh or fat, the Body or any parts thereof are ſo increaſed, that it lookes not onely unſeemly but is ſlow, heavy and unwildy to perform duties, theſe are for the moſt part idle ſloathfull and drowſy, and if they be ſo when yong they live not to be old, as *Hippocrates* ſaith fleſhy Men are ſhorter lived then lean: this may be in ſome parts ſo that a Deformity and an impediment may ariſe, as when the belly is ſo fat that it extends it ſelf without meaſure, or when the Papps are too large, and

Great Breaſts. cover the whol Breaſt and would go farther if not reſtrained, and hinder breathing by their weight: ſuch are thoſe fat Men who have great breaſts; and which is more preternaturall, thoſe which have breaſts grow very large as well as Teats being men not grown or other wiſe diſproportioned.

Hitherto may be referred the Sarcomata which are not other but the ſame Fleſh over grown as rank Gums, the Caruncles of the Eyes too large which is called *Encanthis*. But becauſe theſe are like the other Sarcomata, they are deſcribed in the Chapter of Extuberances.

A Deformity ariſing from magnitude diminiſhed hath two kinds, as that of magnitude increaſed. The firſt whereof if when the wholl body is little from the birth and they continue all their lives like pigmyes, are maintained in Princes Courts for admiration being unfit for any imployment by reaſon of the weakneſs of body.

Smalneſs of Body and its parts with narrow Orifices. The ſecond is when the parts are diminiſhed as when the Head is too little as is ſeen in fools often: when the breaſt is too ſtraight, by which means they are ſhort winded; and other parts which from their originall have not a due proportion with the reſt, if they bring any Deformity or impediment.

Phimoſis. Hitherto is referred the ſtraightneſs of Oriſices, as of the Womb, the Skin of the Yard (in that Diſeaſe which is called Phimoſis) when it is too ſtraight ſo that the Glans cannot be uncovered by reaſon of the ſtraightneſs of the præpuce or foreskin.

Lame Parts. The greatneſs of parts is often made leſs, when ſome is taken off, and the Members are partly lamed, which brings the more Deformity, by how much it is more viſible as in the Noſe and Ears; and the action is moſt hindered when it happens in a neceſſary part as the Fingers, which being quite taken off there is a hurt which belongs to thoſe that are in number defective.

Breaſts conſumed. Hitherto belongs the want of Papps in Womens breaſts, which is not only unſeemly, but hindereth their giving ſuck.

Gums rotten. The conſuming of the Gums is under this Head, when the Teeth are bare at the Root, cauſing them to be looſe and fall out.

Shorn Teeth and Hair. Hitherto may be referred thoſe Teeth which are ſhorter then the reſt in the ſame rank, and Nayles when ſhorter then the fleſh, for then they cannot take up ſmall things.

Wool-like Hair. Hairs alſo when they are ſo thin and ſhort, as happens when they grow again after fallen off; ſo that they look rather like wool then Hair. Or if in thoſe parts where they ought to be thicker and longer in due time, as the chin where mans beard ſhould grow hair come forth ſlowly and make them who are men ſeem ſtill Children, this is a kind of Deformity: eſpecially if by reaſon of Gelding before the beard grew, it never come forth; and they remain beardleſs, it is uncomely and makes them wrinkled in the face as years increaſe, and as the Comædian ſaith look like old Women.

Beard long growing.

Wants of beard in Eunuchs.

Slenderneſs of Body. The ſecond kind of diminiſhed magnitude is Slenderneſs, which is oppoſite to Fatneſs and Fleſhineſs, and this is ſeen in thoſe parts which ſhould be fleſhy and are not; and it happens ſometimes to the whol Body, not when it decayeth of which we ſhall ſpeak in the Chapter of Conſumption nor when it is naturally ſmall, for then it is not out of order ſince lean folks as we ſhewed from *Hippocrates* are longeſt lived: but when it is ſo lean, that it is ugly to be beheld, and cauſeth weakneſs, eſpecially when the Thighs and Arms are withered, the Cheeks fallen, the Shouders blades ſtick out, and the Belly ſhrunk in. Hitherto is referred the thin-

Sendernes of Limbs.

neſs

Soft and lank Breasts. nesse of Womens breasts which is a Deformity, not when they are little, for that is accounted an ornament, but when they are lank and hang down this in young Women especially is accounted unseemly.

That Deformity which comes from the undecent figure and proportion of parts is manifold. The first is when the Figure is altered in number and magnitude, chiefly from inequality: sometimes from the Birth sometimes by accident. As when the Head is too sharp pointed or otherwise deformed, the Forehead wrinkled, the Nose crooked the Mouth and Lipps awry, or any other part is disproportioned. To describe all these punctually would be very superfluous, and ask much labour.

The indecent Figure and shape of Parts.

Hairs too curled. Hitherto may be referred the over curling of Hair like black Moors, which if a little curled is an ornament, and hair hanging straight down is unseemly; also Nayles if wrinkled and standing forth are ugly.

Nayles uneven.

The second kind of the Figure of parts deformed, is when that continuity by which they ought to be united is divided, or the connexion dissolved. This we spake of concerning wounds and ulcers, but if after Cure the same Division and separation remain which spoils the Figure and Proportion, that may be referred to this Head.

Division of parts which ought to be united.

The division of the upper Lip or hair lip by nature. As also the which comes from the birth. Among which is the hair Lip when the upper Lip is divided originally called in dutch *Hasenscharten* from the hare, whose Lip seems naturally divided as if cut, this deformeth the Mouth by making the Teeth alwaies appear.

The Rottennesse and breaking of Teeth. Hitherto may be referred the inequality of Teeth when they are broken and rotten, by which Women seem uncomely. To this the Poet alludes in his Remedy against love.

If Teeth shee want then cause her often to laugh.

This is worst when the teeth are black, and when there are only stumps remaining.

The Rottennesse, roughnesse clifts and dividing of Nayles. The Nayles having continuity divided bring Deformity, especially in the hands because most visible, and this is worst if it go not away as the Nayles grow and are cast off; Roughnesse and corrosion is worst when the Nayles are black and blew or too thick; to this head may be referred, the cleaving or clifts of the Nayles when they are divided long wayes or transverse, these are the signs of Elephantiasis French Pox and the like.

Fissures of the Hair. Also the fissure or cleaving of hair in the head or beard is uncomely, because it causeth inequality and folding, especially if many be so cloven.

Dandruff. To these are added those deformities which proceed from the scarse Skin separated from the Skin, not as they cause pain but uncomlinesse, of which we speak concerning excoriation and galling: they are called Furfures because they fall off as dandrow from the Head scratched or combed. This if usuall, and falling thick upon the cloaths, is a Deformity especially if it fal from the beard or Eye-brows, or from other places where hair groweth not.

The Scales in the palm of the hand called in French Palatella. Hitherto, is referred the Disease in French called *Palatella*, as when the skin is unequally divided in the Palm of the Hand, and full of Scales, which though it itch not they are alwaies picking which is noysome.

The separation of the Jaws from the Teeth. Those Deformities which come from the dissolved connexion of parts, if thereby the part be wholly taken off, they belong to the Diseases of number deficient: but if they still stick to the Body, they belong to this kind, as when the Teeth are loose and bare at the Root and will not be fastned to the Gums.

The cominuation or growing together of parts that should be divided. The third kind in which the Figure and proportion of parts deformed, is when parts that should be divided, continue and grow together as comes to pass by birth as well as by accidents divers waies, by which the Functions are hindered, as when any Orifices are closed as the Nostrils, Lipps, Eye-brows, Fundament, Womb, the hole of the prepuce, when either by birth or other accident, breathing, eating, seeing, evacuation or generation is hindered. As also the glewing together of some parts, though it be not hurtfull, it is ugly, as when two Toes grow together, which often is from the birth, but it is less offensive then the growing together of the Fingers.

An indecent and firme conjunction of parts. To this preternatural continuation of parts, may be referred that by which the parts are conjoyned, so that they cannot be separated. As when from a Convulsion the Mouth continueth closed, which because it rather hinders and takes away action then deformeth, shall be mentioned in hurt Action. Hitherto belongs the mutuall and close intrication of hair which cannot be separated, but is like a love-lock which the Germans cal *Scherlocin Sopf* because it is supposed to be done by the fayries and the incubi.

The Deformity of situation from luxations and fractures. The fourth kind of Deformity in Figure, is when the situation of a part is perverted or transinuated, and one part inclined or translated into an other, by which the continued Figure of the Member is destroyed.

Vari crooked Leggs. Such is that which happens to the Feet, when they bend inward or outward. And that in the Toes, which are continually used to straight Shoes, and so in time are bent awry, and sometimes laid upon the Foot. As also abreviation, elongation and crookednes of Members from luxations and breaking of Bones in divers parts belong hereunto: these spoil the Figure of the part as well as hinder the Functions.

Gibbous or crooked Backs. But chiefly Crookednes of back which destroys not only the shape of breast and back, but makes the whol body short, crooked and unhansome, brings Deformity to Mankind.

Hitherto may be referred the Rupture or Falling of Entrals into the Cod, or other parts, causing Deformity. But because then the tumour and falling forth is rather to be thought upon then the deformity, it shall be spoken of in Diseases of Excretion, in Extuberances, Tumors, or things thrust forth of the Body.

Gogle Eyes. Also to this Deformity which comes from the perversion or altering of the situation of parts; belongs, Eyes sticking forth, or prominency so called, when the Eyes are too much outward; and yet without offence or hurt, but yet uncomely whether it be from birth or accident. Also here we may comprehend the looseness of Teeth especially those before. We have seen some who could bend the whol row of Teeth before, foreward.

Loose Teeth.

Teeth hanging forth. Also Teeth hanging forth, though fixed, are unseemly, and when they are not placed even, and Nayles also when out of place or moveable, though they presently fall not, yet are a Deformity.

Loose Nayles.

The Causes of Deformity.

All the immediate Causes of the Deformities mentioned, depend either upon adherent, as adventitious causes; those

thoſe are inherent which come from the birth, as we have declared and they conſiſt either in number or magnitude abounding, or deficient; or in uncomly ſhape, when parts are not rightly proportioned or divided, or when they are continued or grown together.

The indiſpoſition, plenty or want, commiſtion or permutation of the parents ſeed is the cauſe of Diſeaſes naturall in number, magnitude and figure, in the Body or members as in the Teeth Nayles, Hair.

And this comes chiefly from the ſeed of the Parents, of which all parts are made, and Children ſometimes reſemble the Father ſomtimes the mother in likeneſs and ſex; and if the ſeed be unclean, not only the externall members of fleſh and skin receive the ſame, but alſo the hair and the Nayles; becauſe as I have ſhewed in my Anatomy, they are cartilagenous parts, neither do they come from Excrements, as is the vulgar Opinion of hair: but from that ſeed in the firſt procreation, as is to be ſeen in Infants or Embryons. But after what manner the Father or Mothers ſeed ſhould propagate theſe Deſormities to their Children, is a hard Queſtion, nor otherwiſe to be defined, but from ſome indecent indiſpoſition of the Seed, which coming from all parts, it receives from the corrupt; and as they offend in figure, magnitude or number, ſo doth it impreſs the ſame in the Childs formation, in the ſame parts, producing either the like in part of the ſame Deſormities. But this doth not alwaies happen, that when any parts exceed or are defective in number or magnitude, the Child ſhould have the ſame, for often children have their Members compleat, which the Parents have wanted by birth or by amputation; though in ſome they are weaker. But in the hair of the Head and beard, we ſee often that they are more or fewer, thinner or thicker, and of divers colours like their Parents in the Children, as we ſhall ſhew in the Chapter of diſcoloration. And it is plain that it comes from the Seed, and is hereditary becauſe black Moores have black and curled hair all by Nature, and the cauſe is the Seed which produceth an obliquity in the Pores of the Skin, ſo that the hairs which comes through thoſe Pores not directly but obliquely, are curled, ſo doth the Seed cauſe theſe matted locks which ſome have by the formation of the Pores, when many oblique Pores are joyned together in the skin, from whence grow more hairs in a little place, being curled and wound together, and they are born ſo.

It may alſo come from the plenty of Seed, that more and greater parts then are needfull be produced as the contrary from the defect thereof which as it may be in any part, ſo in the Teeth and Hair that they may be more or fewer. Alſo the Child may have an unnaturall ſhape from ſome other tranſmutation and commixion of Seed, as by the commixion of two ſeeds conceived, and their mutuall concretion in certain places, (except they be ſeparated) it may chance that two Children may be brought forth of divers figures: which permutation and commixion of ſeed, as it may come from divers cauſes, ſo from ſome impreſſion which the Mother conceives either in time of conception, or when ſhe was great with child, from fear or other affection, or from ſtrong meditation or imagination. As ſhe which being great with child and longeth for ſome kind of meat which is not fit, produceth a Child which deformity either in number, magnitude, or figure. By which means ſometimes it hath as it were new parts reſembling others, or ſomething reſembling the thing deſcribed; adhering to the body from the birth. And among others, we have ſeen a child have hairs like thoſe of a Mouſe upon the Thighs, becauſe the mother being great, ſtrook upon that part with her hand when ſhe drove away a mouſe. Many monſtrous births have been by theſe means, which happened from imagination divers wayes, ſo that Children are many times unlike their Parents, becauſe in the time of conception, and when the Woman is great, they have thought upon other people.

This diſſimilitude or unlikeneſs is more incident to be from mankind then any other creature, becauſe it is ſubject to more intent and ſtrong meditation and phanſie, other creatures only exerciſe their ſenſes or things before their Eyes in the time of copulation, and ſo cauſe a reſemblance in ſhape and colour: as we ſhall ſhew in the Chapter of diſcoloration.

The Mothers Blood is the cauſe of ſome Diſeaſes naturall in magnitude increaſed or diminiſhed or indecent Figure.

Some originall Deſormities may ariſe from the Mothers blood becauſe the child is there with nouriſhed while it is in the womb; not ſuch as are in number of parts increaſed or diminiſhed; (becauſe every part proceeds from the ſeed,) but ſuch as are in magnitude exceeding or defective, or in uncomely figure or ſhape. Theſe Deſormities come from the Mothers blood either being too much or too little, or from the change or commixion of the ſame, as we ſhall declare when we ſpeak of internall cauſes.

Divers kinds of deſormities come from externall cauſes as when any hurt or wound divideth the continuity of parts and ſo ſpoils the ſhape, if it be in a ſenſible part and cauſeth pain: we have ſpoken to them in the diſcourſe of pains. Alſo an unſeemly figure may come from an outward force which diſlocateth the parts, or breaketh them in regard that there is then a loſs of motion in the part, we have ſpoken thereof in the Chapter of immobility where we ſpake of Luxations and Fractures.

Other deſormities of this kind which are in number magnitude and figure come from divers cauſes either internall or externall.

A wound or an Ulcer is cauſe of the lameneſs or taking off of a part, or ſeparation or diviſion.

The diſtempers and faults of the parts which produce deſormity from externall cauſes come after divers manners: as when by a wound they are cut off or lamed, either by chance, or by chyrurgery through neceſſity for preſerving life, as when the parts are conſumed by an Ulcer, by exulceration, or often rubbing or when the dead part is cut off in a Gangrea; or when in a Rupture the Stones are cut off as ſometimes they are, or when the continuity is diſſolved by wound, and the wound healed there remains a ſeparation of the parts, or when by externall force, the Teeth either through pain, or other affliction are pulled out. The hair falls either by accident externall or by induſtry, or by Diſeaſe called *Tinea*. The Eyes by violent paſſion, ſometimes thruſt forth themſelves. Or when by maſtichation and biting of hard things, eſpecially if of long continuance, the Jaws are ſeparated from the Teeth; by which the Roots of the teeth being made bare, they are leſs firm then before; and ſometimes fall forth, eſpecially the Foreteeth, having but one Root, when others will ſcarce fall out except there be an attenuation of the Roots, as we ſee in dead mens Skulls the Teeth firm and unmoveable when all the fleſh is gone. The teeth alſo are broken by ſtrong biting of Bones cracking of Nuts, &c. It often falls out that they which pick their Teeth with a Knives point from a fooliſh cuſtome, very often, do not only take away their ſmoothneſs, and make them rough, but wear away their ſubſtance by continuall ſcraping.

Force externall cauſeth falling out of Teeth, or looſeneſs or treating of them, the fall of hair, and gogle Eyes.

As the other cauſe was violent, ſo may often uſe of very hot Meats, ſo burn the teeth that they may be dryed up at the Roots and be no longer firm, but very looſe in their places, and then they offend in ſcituation, or in number if they fall out from that cauſe. Or, if by the ſame Heat of meats the hard ſubſtance of the teeth be over dryed, and at length burnt they fall out, or ſome part crumbles of, and the reſt remains broken and weak, or they

An outward vehement heat is the cauſe of looſe Teeth, or falling off them out, or breaking of them.

they become hollow.

And this is the uſuall cauſe that young people have ſo many hollow and unſound teeth, eſpecially when they eat very hot meats and broaths, which leaſt they ſhould burn their mouths they commonly blow upon firſt. This is the chief cauſe why our Germans which love hot broaths ſo much, have ſooner bad Teeth then other people: which is imputed through ignorance to defluxions of Rheum when, as we ſhewed in the pain of the teeth, defluxions cannot fall upon the ſubſtance of the teeth. The ſwallowing of hot meats and preſently drinking cold Drink thereupon while the teeth are hot which many have uſed from their Infancy, cauſeth teeth to rot and fall out, before they are old, or at leaſt by the ſudden change of heat into cold to turn back.

Great heat the cauſe of falling of Hair.

From the like Heat the Roots of Hair being dryed and extenuated, the hair can no longer ſtay in its Pores, but fall out by the leaſt combing; this is cauſed by hot water or fire coming to near, therefore when they have killed a Swine they uſe hot Water to take off the hair, and to take off the Feathers from Poultery, by which means the Roots of the Quills are ſo dryed that the Feathers fall off; and ſome looſe their Hair after the ſame manner, provided that there be not ſuch a heat as to ſtop the Pores and aſtring the Skin ſo that they muſt come both off together; as it often befalls them that dreſs Hogs with too hot water, this miſtake is called in dutch *Berbrnen*, theſe are the cauſes, neither can hair fall by moiſtning the Skin and opening the Pores only, except the water be very hot, though it be long uſed with a moderate heat it will not do the like, and after the other way the teeth will alſo come forth.

Alſo Nayles and beaſts Hooſes with greater heat will come off.

Corroding and putrefying Medicines are the cauſe of conſuming of the parts and fal of Hair.

The tender parts may be conſumed by knawing and rotting Medicines as the Jaws and fleſh in the Eyes &c. and there are things called *Pſilothra* or *Depilatoryes* which take away hair by Art; theſe do it rather by conſuming the Roots of the hairs then by opening the Pores.

Some of the Deformities mentioned come from internal cauſes namely, from divers Humors and Diſeaſes or by one part forcing another, as I have ſhewed, as by Blood, ſince the parts are not only nouriſhed and augmented by it ſo long as a Man groweth, but after whatſoever is conſumed is reſtored by the ſame. And this conſuming of parts comes from the Blood divers waies, either in reſpect of its Quantity and the Fatneſs of the parts; if the Blood abound in quantity it makes the parts too fleſhy by too much Nouriſhment, and this is not only when Bodies are growing but afterwards, and then they grow exceeding fleſhy, and if this come not hereditary from the ſeed and blood of the Parents it muſt needs come from Blood. Hence it is that plethorick Bodies are ſo carnous or fleſhy, of which Plethory or Fulneſs as there are divers cauſes, ſo often and plentifull feeding is not the leaſt. This Appetite is ſtirred up by exerciſe of body, becauſe by that Meat is quickly diſtributed; therefore Men that exerciſe moderately grow fleſhy and groſs, as it was with the wreſtlers in old time. Reſt alſo which is the contrary may cauſe the ſame, for they which are idle and ſedentary, and given to much eating, ſeeing they ſpend little of the ſubſtance of their Bodies, and ſtill are devouring grow very big and groſs. This groſſneſs may alſo come from the ſuppreſſion of Naturall Evacuation of blood. Hence Women at that time when their courſes leave them, although formerly when they had them conſtantly and nouriſhed their Children they were lean and ſlender, grow very corpulent and groſs. From theſe cauſes you may gather that as from

Plenty of Blood is the cauſe of much Fleſh.

the aboundance of Blood fleſh is produced ſo by the want hereof there is Leanneſs and Slenderneſs.

The want of blood cauſe of leanneſs.

But as the blood cauſeth fleſh to be more or leſs ſo it maketh ſome parts to be greater or leſſer, as when the Juyce made thereof, is more proper or leſs agreeable to ſuch a part. This is ſo in that time wherein people grow as then both ſoft and hard parts as bones increaſe, but after only thoſe parts increaſe which are decreaſed by externall injuries, as in the teeth Nayles and Hair, but after a divers manner, for in the Teeth if one be not worn away by another which is oppoſite, in chawing, then the nouriſhing juyce aſounding makes the tooth that hath no oppoſite to grow longer then the reſt; but in the Nayles and Hair if they have too much Nouriſhment, they grow not only ſoon longer but thicker. The cauſe of Nayles growing ſo, is ſtrong motion about the Roots thereof, when the Hands are often violently exerciſed, and there is an extraordinary attraction of Juyce, hence is it that labouring Men have thickeſt Nayles. This alſo may come by often paring, eſpecially if before they be bathed in warm water, for then the juyce attracted makes them by degrees more thick. The ſame is in hair which when it firſt comes forth like down upon the Chin if it be often ſhaved growes apparently thicker and longer. It may alſo happen that from the defect of that juyce which nouriſheth Nayles and Hair, that that which growes after cutting is thinner then the former. But it is more uſuall that they ſhould fall from the dryneſs of the Roots for want of Nouriſhment, eſpecially hair, wherefore when Medicines are made for growing of hair they attract juyce by their heat, as we ſhall ſhew in the Treatiſe thereof, by which the Root is mantained, for the want of juyce is the cauſe of baldneſs; for though hair grows upon the Skin of the head and continue ſome time there, yet after ſome long before aged, ſome at the aproach of old Age grow bald, becauſe the Head grows leſs fleſhy and is made up of bones, skin and membranes, therefore that part is ſooneſt dry, and ſo becometh bald. This may come alſo from externall injuries which dry the body, as from internall Cares, from which Hiſtories mention that Men have not only become gray ſuddenly by drying the hair, but alſo bald by drying up the Moiſture. In other parts of the Body, as the Nayles if from the ſame juyce which nouriſheth other extuberances ariſe, in regard they are tumors we ſhall ſpeak of them in their order.

The abundance or want of nouriſhment is the cauſe why ſome parts are bigger then others as Nayles, Hair which grow thick and long or fall.

There is alſo another Fault in the figure of parts from the aboundance of Nouriſhment, for by the nouriſhing juyce, ſome parts that ought to be disjoyned are united; for if the Skin be taken off, and parts by Nature ſeparated be laid together, the juyce which cometh forth from both will unite them: for this like Glue, conjoyneth wounds and bones.

The nouriſhing juyce ſweating forth is the cauſe of uniting the parts.

If the Blood be fat the body is fat, if lean it is lean, for ſeeing all blood conſiſts of a fat matter, as Milk of a buttery matter, and thatby ſweating from the Veins in the membranous parts and not by congealing through cold as it was ſuppoſed, in regard the Body is alwaies actually hot inwardly, but of its own Nature grows together, being ſeparated from the Blood, and ſo joyns to the Members as Glue increaſing the ſubſtance of the Body; as there is more or leſs of it in the Blood ſo there is more or leſs of it gathered together for the increaſe of the Body, from which cauſe rather than from Fleſh are bodies greater or leſs: but this happens not to the whol Body but to thoſe places in which Naturally fat is uſed to be more then in others, as in the Belly

Fatneſs in blood is the cauſe of fatneſs in body and the contrary.

and breasts of Women &c. The reason why there is more or less fat in Blood is from the quantity of blood, for in much blood there must be much Fat, and hence Bodies grow more fat and fleshy, or more lean and thin. But if Blood, not only in regard of its aboundance hath much Fat in it, but also of its own Nature, though it abound naturally in quantity, be over fat, which appears by that which swims at the top after it is taken out, which the vulgar Chyrurgions call Flegm, then those Bodies are more fat than fleshy, which Fatness comes not only from the constitution which is inclinable thereunto, but from eating fat Meats with which some are much affected.

Evil ulcers are causes of consumption of parts.

Also divers kinds of Deformities proceed from Humors and Diseases, as Diseases of number deficient, if not from externall causes, as in Ulcers some parts are consumed by suppuration and corruption; which as in other parts, so in the Eyes and Nose, and Gums, which usually are separated from the teeth by the gravell that grows underneath upon them, and by which they are hindered from uniting together. Also the Loosness and Falling of teeth, comes from a Defluxion into the the holes where they are set, which moistneth and loosneth the Fibres and Membranes by which they are knit. And also when any corrupt Humor is in the places where they are set, it causeth them to fall out by corroding of their Roots. As we have observed in great Diseases, that the Teeth have afterwards fallen out. And in the Pox by the use of Quick-silver after a Flux of spitting, the teeth have been loose and sometimes fallen out.

The Gravel of the Teeth makes the Gums separate.

The cause of loose Teeth is a defluxion into the places where they are set.

Also a corrupt Humor about the Roots of the Teeth causeth their looseness and falling out.

A Feaver causeth Hair to fall off.

Also the Falling of hair come from Diseases and evill Humors, when the roots are dried or made less and consumed thereby. This comes from burning Feavers, which do not onely dry the Body, but the Roots of the Hairs which are soft, and so they are attenuated and consumed, as we may observe in the declination of Feavers; In the Alopecia and Ophiasis, when evill Humors are gathered about the Pores of the Skin, they eat and consume the Roots of the hair, and make them fal: this they do by their sharpness and maglignity; and not by loosning them with their moistness as some suppose, becaus such Humors as are only moist and not malignant and sharp, do never cause Falling of Hair. Which Humors as they may come from divers causes so especially they be sent thither by an acute Disease, and by Heat the Root of the hairs may be dried, which may cause the Falling of hair. And it is manifest that this comes from malignant Humors, because in those Diseases which are venemous and six more upon the Skin then upon other parts, and produce divers Deformities thereon, as in the Elephantiasis and French Pox, the hair chiefly falls away in those places whereunto the Humors have most resorted.

An evil humor about the roots of the Hair causeth is to fall off.

The heat of a Feaver is the cause of impression upon the Nayls and of their looseness.

In the Nayls also, as we have said since they are of the same cartilaginous Substance with the hairs, and stick only to the Skin as they do, the same thing may happen: and may suffer from the same causes, with the hair, and fall wholl off from the Fingers, but more seldom, because they are Naturally more firm: yet somtimes from the heat of a Feaver they grow dry about the Roots, or partly consume: and after when the Feaver is gone they grow again with an Impression upon them and a kind of separation.

Also from an evill quality such as takes away hair in the Elephantiasis and French Pox, the Roots of the Nayls may be infected, and receive such a blemish, by which though they fall not off alwaies, as hair doth, or be consumed, yet they may have such a filth that they may appear ugly and deformed thereby.

An evil Humor is the cause of the corrosion and filthiness of the Nayls.

Also the number of parts is diminished by another part thrusting off the former; as in the teeth, which in young people grow up by degrees till they throw out the old. This is also but seldome in Nayls, a new growing will cast off that which is above, and this is from aboundance of Moisture.

The teeth and nayles throw themselves off by new.

The Cure.

That Deformity which ariseth from number abounding if it come from the Birth, either in the body or any Member and cause no impediment, in regard it cannot be cured but by cutting off, must not be attempted, except it may be taken off without danger of life or lameness, But if it hinder not much and may be taken off without danger, then you may adventure; as when there is a Tooth too many, which hinders chewing, which is seldom, you may pull it out. A sixth finger being yet finall and weak may be taken off with a Rayfor or Pincers, which done, as we said in wounds, you must presently stanch the blood, and cure it accordingly.

The abounding of some parts.

The taking off of the sixth Finger.

If any parts be wanting either from Birth or chance, as when the Stones are cut out, they can no waies be restored, neither in Man or Beast, as they may in Plants whose branches being cut off grow again, Nature doth this but not Art. Therefore here is no need of a Physitian but for the preventing of the perishing of a limb by keeping off external injuries, and diverting of other Causes.

The cure of the want of some parts as of the Stones.

Yet there are some who rectifie Deformities, by artificiall Instrument, to supply parts that are lost; make new Feet, Arms, Hands artificiall, which are sometimes so flexible by Joynts that they afford some use for going and holding. That horrid deformity of a lost Nose, is repaired by a painted one: and I have seen an Eye so artificially made of Ivory, to be taken out and put in again without pain, and constantly to be worn so that none could imagine it to be other then a true Eye, only it moved not, and the place was moister.

The artificiall reparation of parts lost as a Foot, a Hand, an Arm, a Nose, an Eye.

The teeth falling by chance or otherwise, in Infants, while the Roots remain, or by Reason of new Teeth which thrust out the first which are without Root fastned in the holes, but held by only a membranous Substance, in Children about six or seven years of Age, and in Horses and other Creatnres, about three, four or five years of age by which we know their Age, is repaired by Nature and others come in their Rooms: but if this chance to people in years, when the Roots are fixed, which are also carried away when the tooth falls or is drawn out, or if any stump remain it is unprofitable, and they cannot grow again. I knew one who is now alive, who is as a rare Example, being a Man, that had two new grinders in the place of teeth that were before plucked out. And although while they are sound, the teeth grow as they are worn away: yet when they are rotten and taken out, they will not grow again. Yet this defect, when one or two teeth are wanting, which causeth Deformity if from before, may be supplied with artificiall teeth made of bone, which I have known

The Cure of Teeth lost.

known ſome conſtantly to wear; and they have not been diſcoverable from true.

The Cure of Nayls fallen off.

The want of Hair, being a Diſeaſe in number deficient, when the Roots are gone cannot be repaired, becauſe it is impoſſible to reſtore any part of the Body being quite taken away. Alſo when the Pores of the Hairs grow together, that defect cannot be cured. Wherefore in a true Baldneſs, and Scar in the Skin, or when the Pores any waies unite, or in an Alopecia, when the hairs are gone at that Root, to labour to reſtore them is to waſh a black More white.

The Cure of the Beard fallen off.

But in the want of hair, when they are ſo fallen that none appear, yet if the Roots and Seeds remain, then they may be reſtored by Art, or grow again of themſelves. But if this defect be in magnitude wanting, as we ſaid, when the hair grows no more, as in Eunuchs, or ſlowly the Pores being little, as in ſome, this cannot be cured by Art; in others it is difficult to be attempted, though divers things are uſed, yet the ſucceſs is ſlow and not before Nature attempts it of her own accord.

In the Cure of theſe defects, a prognoſtick being alwaies preſuppoſed, leaving that which is deſparate we muſt begin the Cure of the reſt at the cauſe which is firſt to be removed, whether externall or internall if it come from evill Excrements which muſt be evacuated by purging, or by the habit of the Body; then we muſt proceed to topicall Medicines to the part fit for the Generation of hair.

If it come from evill Juyce the cauſe muſt be purged away, and that which is in the Blood muſt be clenſed, and the evill Concoctions amended, and good Blood be produced for nouriſhing the wholl Body, and alſo for the Hair; which purges if they be often and ſtrong, by drawing from the Habit of the body, the cauſe that corrupts the hair, and the malignant quality in the French Pox, will cure both the falling of Hair and the Diſeaſe that cauſeth it.

Purges are to be adminiſtred according to the Excrements that abound: and becauſe theſe ſharp and ſalt Humors are carried with blood and water by the Veins to the Pores of the Skin, where they deſtroy the Roots of the hair, let the Purge be proper for theſe Humors: ſuch as is given againſt Scabs, Itch, and the ring Worms, in treating whereof we have ſhewed divers Forms; as when an evill quality in the French Diſeaſe, hurteth the hair, you muſt uſe the ſame Purge which is good againſt that. Evacuation by the Habit of the body, doth more directly throw off that filth which lyeth at the Roots of the hair; and ſweating or breathing by inſenſible tranſpiration doth it: but firſt purge, then ſweat, principally in the falling of Hair in the Pox which comes from Venom, you muſt cure it by the habit of the Body, and ſo you will cure the Pox alſo as we ſhall ſhew hereafter, where we ſhall preſcribe divers Sudoriſicks by things taken in, we can hardly produce Hair, although it may be done by ſome things which throw the Excrements to the Skin and this is the judgement of thoſe who think the hair proceeds from Excrements: and therefore they preſcribe ſuch things which may effect that. As Figs which by a proper Faculty do ſend Excrements to the Skin; they conclude them ſo from the vulgar Opinion that Figs beget Lice which they ſay come from filth in the Skin cauſed by Excrements driven thither by the Figs, when the filth that produceth Lice, comes rather from externall things cleaving to the Skin. The cauſe of this opinion was; becauſe the ſeeds of Figs in ſhape and multitude reſemble Lice, and they alſo crack in the teeth and between the Nayls; others for the driving of Excrements to the Skin to produce hairs give Treacle, by reaſon of the troches of Vipers which is in it: ſuppoſing that Vipers fleſh taken into the body, can caſt off, as Vipers do their Skins and throw the Excrements to the skin for producing of hair.

It is certain that Treacle by cauſing ſweat, doth rather throw out the Excrements that are about the Skin than bring them thither. And if Vipers fleſh can throw off a skin, it will rather drive Excrements from the Body, then lodg them there, as we have ſhewed in the Cure of Elephantiaſis. Laſtly, ſince it is certain as we have ſhewed at large, that Hair is not nouriſhed of Excrements or Vapors unknown, much leſs are they made of the ſame; but they rather fall away by Excrements when they come to the Roots, and they as other cartilaginous Bodies and Nayls are nouriſhed from the Blood with a Juyce proper for them, we cannot perſwade our ſelves that Excrements being driven to the Skin can produce Hair, but contrarywiſe you may produce Hair better by removing of Excrements and throwing them out of the Body. The chief end in curing fallen hair by the French Diſeaſe, is to expel that Venom outwardly by ſweat, and ſo you muſt do if you will cure any kind of Baldneſs which comes by congeſtion of Excrements.

The hair of the Head, Beard, Eye-brows is to be reſtored by things outwardly applied to the part; ſuch which increaſe hair by an occult quality as are many things fetcht from living Creatures and known by Experience; or ſuch as be drying and aſtringent, as moſt are which are uſed for this purpoſe; and the reaſon is becauſe they dry and make thicker the Juyce that is brought to the Roots of the Hair which makes it a more fit Nouriſhment for them. Or by ſuch as raiſe Bliſters bydrawing the juyce to the Superficies, and apply to the Roots of the hair to nouriſh the ſame; of which either ſingle or mixed you may make Medicines for growing of hair.

In the beginning of hairs to fall, to prevent it, and preſerve what remains if it be far gone we muſt mix very ſtrong aſtringents with the other that the Pores may be cloſed. And we add ſtronger dryers and digeſters to theſe, when evill Humors lie about the Roots to deſtroy the Hairs; ſome teach that the hair may be preſerved from falling in a venemous Diſeaſe as the French Pox by uſing Lenitives as Milk which tempereth the Venenoſity. All theſe Medicines of what kind ſoever, whether they bring hair again or produce and preſerve it, are applyed divers waies, or they are uſed as waſhes and Fomentations many made of Plants are diverſly applied, as the Root of *Water-lilly, Leaves of Beets, and Coleworts, with Salt, the Daffodill Root, with Vinegar, the Dogs tongue leaves with Swins Greaſe or the like*: and when you will bring Nouriſhment to the Hair, mix *Onions, Garlick, Squills and Raddiſhes, or the Root or Leaves of Cronfoot, or Watercreſſes, or wild Muſtard and the like.*

The Pouders of divers Plants are mixed with Honey and Oyls greaſe, Pitch and Roſin: ſometimes to be anointed and ſometimes applied Plaiſterwiſe: as the *Bark of Reeds, or Roots of Maiden hair, leaves of Godlylocks, Southernwood, Mirtles, Wormwood, berries of Myrtles, Juniper, and Myrobalans*; and to draw them out, *the ponder of the Roots of Aſarabacca, Hellebore, Thapſia, Rue, the ſeeds of Muſtard, Staphſager, Watercreſſes, Rocket, Rue, Henbane ſeeds*, with Oyl, of Flower-de-luce, are ſaid to bring hairs on the eyebrows and Chin. Alſo the aſhes of ſome of the aforeſaid Plants calſined do the ſame being made into the Form of a Liniment, as the aſhes of Hazel Nut ſhells, alſo *of Southrenwood, Maiden-hair, Goldilocks, Reeds barks or Roots: the Barks of Pine-tree, Roots of Daffodill, Sowbread, Garlick, leaves of Myrtle, Wormwood, Miſcelroe, Cypreſs-Nuts, Date-ſtones and Line-ſeed, burnt with Straw, alſo Barley.*

The juyces of Plants either are uſed alone or mixed as when you will attract, *of Onions, Garlick, Squills, Raddiſh, Thapſia or of Sowbread.* When you will dry. *The juyce of Reeds, Southrenwood, Docks, Myrtle or Willow-leaves:* and of other Plants aforeſaid.

Alſo Aloes diſſolved in Wine is very good. Alſo the Liquor that comes from the ſtock of a Lenden-tree being cut, is very good: the Milk of Gumſuccory will fetch hair upon the Eye-brows ſaith *Dioſcorides.*

The water of Honey diſtilled, eſpecially that which is made

made of the comb with the Bees in it, adding, Ants and Hog Lice that are found among ſtones, is good as alſo *Aqua vitæ*. The Mucilage which is expreſſed or ſtrained from the Roots of an Elm which are firſt boiled is good alſo: Honey they ſay alſo will bring hair eſpecially honey Anacardinum.

Divers Oyls are for the ſame uſe, as that which preſſed out of Nuts, Almonds, Peaches, or Nut-kernells, or let Nut-kernels be bruiſed and applied; alſo old Oyl Olive or lamp Oyl, or rap Oyl, or that which is diſtilled of Juniper-berries or Spike; or Oyl of Myrtles Roſes in which Southernwood or Coloquintida, have been boiled, and alſo ſort of hot Oyls are uſed by practitioners, To make hairs longer ſome have privately uſed Oyl in which the Roots of Oſiers and Embick Myrobalans have been boiled of Gums Labdanum is the beſt diſſolved with Honey, or when hair is to be faſtned, with oyl of Myrtles or of Roſes or with old Wine and juyce of Myrtles to which ſometimes Myrrh is added; alſo Frankincenſe, Maſtich, Sandarach is and other Gums with Roſin, and when we will attract, we add Euphorbium.

Divers things taken from living Creatures are uſed to bring hair, as Bees with their combs ſtamped, or the pouder of them or of Waſpes; the little Cantharides, which are red and have black ſpots, and are black bellied which the French call *Gellines de noſtre Dame*, and are found upon the ſtocks of Trees, being dryed, poudered, and mixed with Oyl of Spike are very efficacious. The pouder of the Cantharides in the Shops are attractive but you muſt mix them with Oyl of Violets or Almonds, leaſt they ulcerate.

Uſe the Pouder of Lizards their head and tayle taken off, with Oyl of Yolks of Eggs. The dung of a Mouſe with Vinegar, and alſo other dungs are very attractive. The filth that comes from Bee Hives and the pouder of Bees half or wholly burnt are good with Honey and Oyl of Spike, Juniper or Myrtles or the like; or with Greaſe of a Bear or the like, or with Pitch and Wax, or with Wine and Vinegar; alſo aſhes of Waſpes, Cantharides, Graſs-hoppers, Flies, Hog-lice, of Moles, or of their skins of Mice or their heads, of Hares head of Lizards, Froggs, Horſe-leeches, of a Sea-horſe, or Sea-vrchin, the Hoofes of a Mule, of Goats, of Bears skins, of a Fox, of a Hedghog, of Snaks skins, of Mans hair, of Bears or Hogs briſtles, of Mouſe or Goats dung.

Greaſe is commended eſpecially of a Bear, then of a Mole, of a Spike fiſh, of a Duck, Gooſe, Hen, Goat, Hog, Coney, Dioſcorides Anoynts, with Oeſypus or Greaſe of Wool. They ſay that Oyl of Worms increaſeth hair, alſo Oyl of Egs, or that in which Lizards have been boiled. The Mucilage which come, from Snails bruiſed with ſome Bees and Waſpes: and that Water which runs out when Snails are pricked brings hair upon the Eye-brows. The blood of a Sea-turtle a little dried is commended, alſo the Galls of Hogs, Goats and Bulls: of earthly things. The Froath of the Sea made hard with the Sun, mixed with Vinegar, or the aſhes of it; alſo ſalt Peter, quick Brimſtone, Oyſter ſhell, the pouder of a Grindſtone mixed with ſome ſharp Juyces. The Armenian ſtone or *Lapis Lazuli* beaten applied with ſome Liquor fit, brings hair upon the Eye-brows, Lead filed and Antimony mixed into pouder and applyed with Greaſe is good to bring hair upon the Eye-brows, if uot, it doth by blackneſs keep the want of it from beeing ſeen, others commend burnt Stibium of compound Applications, to bring hair or to cauſe a Beard theſe following are the beſt: a good Liniment. Take *Oyl of Myrtles, and ſweet Almonds, of each one ounce and an half, or the barks of the Roots of Canes or Reeds or of Colwort ſtocks burnt, of Maiden hair or Goldilocks, and of Southernwood burnt each two drams, of the heads of Mice burnt and Bees burnt with their Combs one dram and a half, of Labdanum two drams, of Honey one ounce: make a Liniment.*

Or take *of Oyl wherein Southernwood hath boiled two ounces, of Honey one ounce, of the aſhes of Mole skins and Hedghoge one dram, of the aſhes of Bees and Waſpes half a dram, aſhes of Nut ſhells two ſcruples, Mice dung one ſcruple, of Bears Greaſe one ounce, of Labdanum three drams: mix them for a Liniment.* To which add Gallia moſchata for the ſent, or Musk or Oyl of Cloves. Or,

Take *of Oyl of Nuts and Bays each one ounce and an half, Oyl of Juniper-berries or Spike half a dram, the juyce of Docks and Southerwood or of Myrtles leaves each one ounce: boyl them a little add one ounce and an half of Honey, pouder of Bees half a dram, of Labdanum half an ounce, of liquid Storax a little:* it will attract more ſtrongly if you add the aſhes of *red Cantharides, with black ſpots half a dram, of the pouder of Cantharides of the ſhops one ſcruple.* To draw Nouriſhment to the hair you may make it thus. Take *of the Juyce of Raddiſh one ounce, Juyce of Onions half an ounce, of Honey one ounce and an half, Labdanum two drams, Myrrh one dram, Euphorbium half a dram, of the Sea Foame one dram, or inſtead thereof one dram, of Samon ſalt or of ſalt Peeter, of Pitch or Roſin be diſſolved in Wine ſix drams: mix them for a Liniment.*

When the Eye-brows or Beard falleth this is experienced to reſtore the hair. Take *of Henbane ſeeds two drams, of Mouſe dung one dram, of the pouder of Goldilocks and Nigella ſeeds each half a dram, of Spikenard half a ſcruple, of Oyl of Juniper as much as will make an Oyntment:* you may make many Oyntments of the aforeſaid Simples for the ſame uſe.

To preſerve the Hair from falling when you are afraid thereof uſe this. Take *of Oyl of Myrtles or of Maſtich two ounces. of Labdanum and Hypocziſtis or Acacia diſſolved in ſharp Wine or Vinegar two drams, of Allum or Salt two drams, of Wax as much as will ſerve to make an Oyntment,* or; Take *of Oyl of Roſes and Quinces each one ounce, of Labdanum diſſolved in Verjuyce two ounces, of Maſtich one dram and an half, of the pouder of Galls, Cyprus Nuts and Myrobalans each one dram: mix them for an Ungnent* to theſe you may add, *the aſhes of Filbirds, Nuts, and Bees* and other dryers above mentioned. If you deſire hair to grow again or to come forth, we may uſe Fomentations, with Liniments before and after or alone; and they are made of the Decoction *of Southernwood, Maiden-hair, Goldilocks, Horehound, Vervain, Myrtle leaves, four Docks, Roſemary flowers-Chamæpyts or Groundpine, Roſemary topps, and Sage:* if the Head be to be waſhed, Take *the Roots of Reeds or bark of an Elme, the herb Ferula* if you can get it, *Linſeed, torrefied and Spikenard* according to *Dioſcorides.* And if the Hair fall by reaſon of bad Humors, we muſt add thoſe things which cleanſe them away, *as Senna, Guiacum, roots of Briony, Wildgourd, Snakeweed, Spinage, Lupins,* Beans, Bran, boyling them to a Lixivium, or make a Lixivium or Lye *of the aſhes of Juniper, Southerwood, Horehound, Nuts, Almonds, Snails,* ſometimes adding other aſhes as before, and boyling other things aforementioned in the ſame; ſometimes Fomentations are made of ſtilled Waters, *as of Southernwood, Maiden-hair, Goldenlocks, with diſtilled Honey,* which you may uſe with *aſhes of Labdanum.* Alſo *a Water of Lard and Honey* with other proper Plants is good. There is another *of boys urine, Wine and Milk,* diſtilled in equall parts, to which add *Southernwood, and other proper herbs, and ſometimes Muſtard ſeed to make it ſtronger.* The aſhes of Tobacco boyled firſt in Boys urine do cauſe hair to grow, and kill Lice wonderfully. The urine of a Cow or Mare in which Fænugreek ſeed hath been boyled is alſo uſed. To prevent the Falling of hair, make more aſtringent Decoctions *in ſharp Wine or Lye, or ironed Water, leaves of Myrtles, and berries of the ſame, Elme barks, red Roſes, Galls, Cypreſs Nuts,* with other things.

The Falling of hair from the French Pox is cured by a Fomentation of Milk, as we ſhewed, adding Butter, the Oyl of ſweet Almonds and the like Lenients, to attemper the acrimony of the Humor; beſides theſe externall Medicines. That ſoote which comes from Pine-tree burnt or Frankincenſe or other Gums eſpecially Storax, which ſends a ſweet ſent, doth cauſe the growing of hair in the Eye-brows often and hard rubbing of the part while it grows red with the Figg leaves or rough cloaths, helpeth

to

to cause hair by drawing forth the moisture: or rubbing with sharpe Juyces as of Raddishes, Onions, Garlick, Squills and the like. If the down be first shaved off or the thin hairs very often, it helps much to make them thicker and longer. This will cause the nourishing moisture to come to the part, and the hairs come forth better, this is the best way to produce a Beard, and when hair falls it will grow stronger; the smoothness of the Eye-brows is amended if with blacking or Soote, with Oyl of Nuts and vernish you make a paint.

The Cure of the over largeness of the body of magnitude of parts increased, of over-large Orifices.

When the Body or parts thereof grow too big, or the Orifices too large, if they be originall from the Birth, they cannot be cured: nor can we cut off any thing from a part too large or sew up large Orifices, or conglutinate them, for then they would loose their use, which is of more concernment then Deformity. Yet for to astring some Orifices if they be not too wide by Nature, but caused by Force without Rupture, Women have some Medicines for the externall Orifice of the womb, to make them conceive the better, and to conceal the loss of Virginity, by often applying astringents which make the parts straighter. A Fomentation or Inception is used for this purpose made of the Decoction *of Galls, and Pomegranate peels in Rain or Smiths Water, with red Wine, Vinegar, and Allum:* sometimes they add *Comfrey roots, leaves of Sumach, Plantane, Oak, Cypress Nuts, Pine barks* and other astringents and sweet sented as Cypress, writing Inke applyed with clouts doth strongly astring or this following. Take *of Pomegranate flowers half an ounce, Mastich or Frankincense and Dragons blood each two drams, of Asphaltum or Mummy Arabick, in red Wine and Juyce of unripe Pears or Sloes make a past and apply it, or sprinkle on the pouder of Bole, Galls and Mastich,* to which add *Antimony and Scales of Iron.* To strengthen the Privities, and help Conception this water is most proper: Take *of the great Comfrey roots, Galbanum, Roman Vitriol, Pine-gum, Ammoniacum, sweet Almonds, Cypress Nuts, grains of Sumach, Terra sigillata each equall parts,: pouder them and mix them with Sloe-water, boyl them a little, and with water being warm foment the Privities with a linnen cloath.* This following is of the same if not greater Vertue. Take *of the leaves of Myrtles, Swine-cresses each four handfulls, of green Medlars, Sloes and Pears each two pugils and an half, of Hens Gizards thirty, distill them in Balneo mariæ, and let the Water be put into the Privities with a lock of Wool often.* If the Nayls grow continually thick it cannot be cured, for if you shave some from them the next wil be as thick.

The Cure of Nayls that are too thick or too long

But when the Nails are too long, although it be Naturall, in regard they bring Deformity and hinder, they must be cut to the quick, so that they be even with the flesh for to cure long hair. This is done by trimming according to the custome of the Country: but when they grow too long in a place they should not as in the Forehead, or in the upper Lip of a Woman which is usuall or upon her Chin which is monstrous; or when they are too many in the Privities, then they must be taken and prevented from returning which is most difficult; but it is to be done by outward applications a preparative going before; either by pulling forth, or cutting them off or burning the skin, when there is a Plethory you must prepare by letting blood, if you intend to burn them off, to prevent Inflamation and pain: you must also purge. Some use sweating before either in a dry Bath or with hot Water, that the Pores being opened the Medicines applyed may have the better Operation. But this is not so necessary because it will be done without; bnt they do well after to clense the skin from the Liniments and filth especially when they stick fast in the Privities: Topiks are divers, to make the skin clean from hair called *Psilothra*; this they do by a caustick Power by burning, and if they burn strong as we said of hot water the Roots will be taken off and a Scar will be in the Skin, so that they never will grow again. This is to be done warily and if the place be burnt, cured as a burn. Some Medicines work otherwise then by caustick or burning, by a secret propriety; which are mixed with causticks to keep hairs from returning: besides these there are some which have an astringent Faculty by which they hinder hair which do drive back the Nourishment. And cheifly to keep hair from growing again, they use Narcoticks or Stupefactives, supposing that they repel them by their great coldness, but they being not cold must do it by another way of Digestion, which we have shewed to be their property, or they are used to take away the pain by Causticks, so they were used, mixed with other things at first, and after they were supposed to be applied for the hindering of that groweth of hair. These Medicines which take of Hair or hinder it from growing, either by way of Oyntment or Pouder are made of the Simples following. First from Plants, as the Roots of Osmund-royall, of Cypress, take off hair according to *Dioscorides*: the Meal of Lupins with Oyl and Vinegar: the red Berries of Briony take away hair, hence the Plant is called a *Psilothron*, to which you must add Vinegar when they are bruised, least they cause Ulceration. The juyce of Spurge doth it excellently, but it inflameth easily, therefore it must be mixed with the white of an Egg or Oyl: the Juyce of the wild Cowcumber doth the like: other Juyces keep them from growing as of Fumitory, Coleworts, especially Narcoticks, as of Henbane, Hemlock and Poppies. The distilled Water of the same doth the like, as also the Water of Stonecrop and Housleek: the water that drops from a Vine that is burnt is good also: also Gum of Ivy dissolved in any proper Water is much commended.

The Cure of the mouth of the Womb being too large.

The Cure of hair growing too long.

From living Creatures these are good the sea Hare and the Urtica, beaten and laid on saith *Dioscorides*. Also Ants beaten together with their Eggs are commended if applied. Also Ants Eggs with the Milk of a Bitch or meal of Lupins with strong Vinegar, Moles, green Froggs and Horsleeches poudered, or burned, and applied with Oyl or Grease are also good: also Salamanders and Glowworms mixed and beat together with Ants Eggs are of much force: also Swallows Dung and Vinegar: also Batts blood, Frogs blood, Snails with Vinegar, Moles with Vitrioll, Bitchs Milk, Ox Gall, black Chickens and Dogs pisse. The Decoction of a Mole with salt Water, till the water be almost gone, takes away hair but brings white in their stead.

Dioscorides commends the Oyl wherein a Salamander of the Sea hath been boiled. They say Salt often thrown upon the Head takes away hair; and the crocus of Iron with Oyl. Of Compounds this following is the best. Take *of quick Lime one ounce, of Orpment one dram or one dram and an half,* add a little of the white of an Egg and Barbers Sudds anoint the place with your Finger, and a quarter of an hour after wash it with the Sudds, if they go not off, increase the quantity of Orpment, and so continue till you have done it; some mix these with French Soape. The Turks have a thing called *Rusma*, it comes out of the Earth and is like skales of Iron, but lighter, black and as it were burnt, which is best of all, and the Women use it much as *Bellonius* saith, because it makes the parts smooth without burning, leaving no sign of hair; they take the half of this Pouder & half of the Pouder of quick Lime, and steep them in Water and wash therewith, and afterwards in the Bath they wipe the part and the Hairs comes off. This *Rusma* is a kind of Shoemakers black or vitrioll called *Sory* or *Melanteria*, it is like it by Description: other things to take off hair are made thus. Take *of unslaked Lime one ounce, of Orpiment half a dram: pouder them and boyl them in water or Lie, then use it: others use the ashes of Harts-horn with as much Orpiments boyled in Rain-water: the Pouder of Orpiment mixed with*

with juyce of Henbane takes off hair and they will not grow again, and the Juyce is to prevent pain. Another; Take *of Orpiment one dram, of Gum, of Ivy five drams, of Ants Eggs bruised one spoonefull and mix them with Vinegar*; you may add *the blood of a Bat or of Froggs, or Juyce of Henbane*, least they should grow again; some use the Decoction *of Spurge in Vinegar with Quick-lime, and least they should excoriat they boyl Mallows therewith or add Milk.* This water takes off Hair and keeps it from growing again; Take *of salt Peeter eight ounces, of Allum six ounces: beat them together and distill a water with which wash the part, and when it is dry wash it again. A Lye in which Neule roots have been boyled, and a rusty Horse-shoe steeped doth the same, if after the part be shaved you wash the place there with thrice every day.* To hinder their growing again this is the chief Medicine. Take *of the Juyce of the Narcotick herb afore mentioned two ounces, of the blood of a Bat half an ounce and add thereto Gum of Ivy, or half an ounce of the Mucilage, of Fleabane, or of pouder of Ceruse and burnt Lead each one dram.* or; Take *of Opium half an ounce, of Sanguis Draconis one ounce and an half: boyl them in Vinegar, adding the Juyce of Henbane, a distilled Water of Henbane, Poppy, Hemlock, Housleek, and Stonecrop with the bloods afore mentioned and Allum and Vinegar is approved.* Hair cannot be pulled off, otherwise many together would cause pain, and one by one require much time; therefore a very sticking Plaister laid some time upon the part, and drawn off, will do it; for this purpose. Take *of the Rosin of the Fir-tree or of the Larix-tree four spoonefulls, of Mastich pondered as much as a small Nut; dissolve and boyl them a little, always stirring them, and then powr them into cold water and make a Plaister.*

It is otherwise made *with Colophony and a little Gum Ammoniack or Galbanum*, for so the Skin being mollified and enlarged the hairs come forth more easily.

If you add something which will pull hairs forth it will work both actually and potentially as Gum of Ivy or thus,

Take *of Pitch half an ounce, of Mastich or Gum of Ivy three drams, of Orpiment one dram and an half: with Rosin make a Plaister.*

You may take hairs off with Scissors, but better with a Rayfor, first washing with warm Sudds, but then the Roots will appear, and arise suddenly again, and the oftner you shave, the thicker they will grow; therefore shaving will but palliate and not take away this Deformity.

The skin must be a little seared, not to take away the hairs, because they may better be cut away, but to hinder their growth, for so the Roots will be consumed, and the Pores stopped: which as we may do it with Medicines so may we with an actuall Cautery; and this is done with a Plate of Gold burning hot suddenly clapt on, for so though there be a burn, yet after the healing thereof no Scar will remain.

The Cure of the carnosity and fatness of the Body and parts thereof.

It is better to prevent then take away grosness of Body which is burdensome, because a Body that hath been great when made less will be wrinkled, uneven and deformed; as the Breasts when fallen are lank and flaggy, so the Cheeks, Calfes of the Leggs and Belly, if formerly distended, will wrinkle when they are fallen.

But to prevert this burdensome flesh, or to stop it that it proceed no further, we must hinder the increase of that fat which is Naturall in the Blood: first by a more spare Diet, or such as nourish little. But if a more sparing Diet only be used then formerly and it be of good Juyce, there will be rather an increase of better Blood, then a less quantity, which will little avail for abating of flesh. And though a sparing Diet doth abate, in regard men will not long endure it, we shall do little by that means. But if we prescribe a Diet of little Nourishment of Herbs rather then flesh, and water instead of Wine or very thin Wine or other Drink, they shall so grow lean, and this is the best way: great and constant Labour taketh down the flesh and Fat of the Body in time, especially if the Diet afore mentioned be used; but ordnary Exercise makes a better Concoction, and rather increaseth then diminisheth the Flesh.

Great and often Evacuations by which the Blood and nourishing Juyce is taken away from the parts and their increase or groweth hindered, as great Sweats by strong Exercise, or Baths or the like are very proper as Bloodletting and Cupping which Scarification and often Purging; which as they are prescribed with good advise, so by chance when there is a Flux of blood, or of Seed by much Venery, or of the Belly, or an acute Disease, corpulency is taken away and the Body made lean. And this will be so also by old Age.

It may also be done by altering Medicines which keep the Body hot and dry constantly, this way will prevent and diminish Corpulency, and the constitution may be thus altered by Diet as well as Medicines, Decoctions are cheifly commended for abating corpulency, *as of the Huskes of Filberds boyled in Wine, Roots of Polypody, Avens, wild Chervill: Rosemary with a little Ginger.*

Or the distilled Water of these often drunk.

Also Vinegar often drunk doth the same thing.

Pouders made of these things following and taken in Wine are said to do the same, *as the seeds of Ash, Hil-wort or Pol-montane, Parsley.*

Also Tartar or Wine-leaves often taken, or Gum Sandarach half a dram, with Oxymel, also the Salt of Vipers.

It is said that *Pepper* often used will cause Leanness.

Pills of bitter things taken every morning half a scruple are good, as of Birthwort Roots, Gentian each one dram, of Madder roots, and tops of the lesser Centaury each half a dram, of Allum one scruple, with Juyce of Polypody or Avens make a mass.

The Cure of too great Breasts.

Women which desire to be handsom labour much to hinder their Breasts from being over large, they affect to have them little for Ornament, and fear they will be unhandsome when they are big.

This is done not only by using such means as extenuate the whol Body (which we have declared) but by outward Applications: which by repelling, cooling and binding, or consuming the Nourishment by a digesting and drying Quality, keep the breasts comely.

The same Medicines which we spake of in the Chapter of Milk over flowing, which hinder the coming of it to the brests, or dissolve that which is there, being applied to the breasts will also make them less.

A Fomentation often repeated with a Sponge or Linnen clout, and left at the Breasts till dry will do it. This is made *of red Wine, Vinegar, Ladies mantle, Horstail, Myrtles, Plantane, Roses, Balm, Mints, Galls, and other astringents.*

Or make it *of Sal ammoniack and Allum boyled in Wine. Stilled Water from the foresaid may be also used with Allum; also a Water distilled of green Pine-nuts: also that which is made by Distillation of Eggs, Allum, and Pouder of Chalk.*

Quinces, Apples, green Pears, Medlars, Service-berries, Sloes beaten together with Vinegar, or boyled in it do the same; or boyled with Oyl of green Olives and Galls.

Hemlock fresh gathered beaten by it self or with Vinegar, Henbane leaves, Mints and Balm do the same.

This Plaister following is also good. Take *of Mastick and Frankincense each half an ounce, of Galls and Cypress nuts each two drams, of Bole or Fullers Earth or red Okar three drams: pouder them and mix them with the white of an Egg and Vinegar or Honey and so apply them.* or,

Take *of Pomegranate peels three drams, of Acacia hypocistis or Conserve of Sloes half an ounce: mix them with Vinegar and the Mucilage of Fleabane seed.*

Or this Oyntment. Take *of Ceruss three drams, of Alabaster or white Wax two drams, of Camphir one dram, of Borax half a dram, of the Infusion of Gum dragant half an ounce, of Oyl of Mrytles as much as will make an Oyntment.*

They commend the Pouder of two Whetstones rubbed together mixed with Vinegar, *Dioscorides* saith that the Cyprus Whetstone called *Naxia*, keeps Breasts from growing a Squate or skale Fish laid to the breasts doth the same by astriction.

When

When the Body or any part is too ſmall by Nature, it cannot be cured, nor a Member reſtored by an artificiall Inſtrument, or by making the like, this is a Diſeaſe in number deficient; but that which is deficient in magnitude may be ſupplyed in ſome.

The Cure of a ſmal Body or ſmal Limbs, and of ſuch parts are lame.

When any part of a Member is loſt, inſtead thereof new fleſh may be added, which may be faſhioned like unto the former; which divers ingenious Chirurgions ſay they can do when part of the Noſe is taken off: firſt they take away the skin in the extream part of the Noſe, then they make a wound in the muſculous part of the Arm of the Patient, into which they place the remaining part of his Noſe having the skin cut off as aforeſaid: firſt putting a Tent in each Noſtril, then they bind his Head to his Arm, and ſo let it remain till the fleſh groweth to the Noſe, this done they cut off as much of the Arm as is fit to make a Noſe, and faſhion it like the former and then take the Tents out of the Noſtril, and after heal it up. If this may be done by a Noſe, why not by other Members, and though this new fleſh ſhould ſerve for no uſe, yet it would take away Deformity.

The Cure of breaſts conſumed.

To make new Breaſts and Papps ſo that the Child may ſuck: women uſe to apply an Acorn cup or half a Nut ſhell filled with Roſin of the Larix tree: to the place where the Niple is wanting and let it ſtay on ſome time.

The Cure of Gums conſumed.

The Gums being naked as it were without a thick Skin, being worn away may be reſtored. This is done firſt by taking away any thing that is rotten about them, then rubbing them often with Vinegar of Squils, or Oyl and Honey which is ſtronger, with the pouder of Dragon roots and Honey or with Ægyptiacum and Wine, and the like clenſers and reſiſters of putrifaction mentioned in the Ulcers of the Mouth.

Afterwards let them often rub the Gums with drying things that breed fleſh and glew the ſame to the Teeth, as with this Pouder. Take *of Orris Root one dram, of the Meale of Oroby two drams, of Frankincenſe or maſtich one dram, of Sarcocol half a dram, of burnt Allum one ſcruple, of Angelica Roots for to give a Sent or Cipreſs roots as* Dioſcorides *will have or Cloves, or of Moſch or Ambergreeſe a little, ſo make a Pouder.*

Birthwort roots may well be added, but they are bitter, and Mirrhe but it is unpleaſant, therefore inſtead thereof: Take *Benzoin or Storax, Sanguis Draconis is good to be mixed therewith and alſo Blood ſtone.*

The aſhes of Pennyroyal are good according to Dioſcorides, *burnt Harts horn or Ivory* and things aforeſaid which fix Teeth, eſpecially when they are looſe by reaſon of the conſuming of the Gums: there are alſo things to rub the teeth mentioned in the Rottenneſs of teeth, that are good.

Calcine Frankincenſe and Maſtich, and mix them with Honey, a little pouder of Coral with Salt and Allum, and rub therewith.

The Troches made of Orobus and Honey are uſed.

The Pouders may be made up with Honey or Oxymel of Squills into Troches, and ſo dryed and kept for uſe.

The Cure of ſtraight Orifices.

The ſtraigtneſs of Orifices as of the Womb and Præpuce or Foreskin if it be ſuch, as doth not only bring Deformity; but hinder Action, is to be dilated by inciſion. This may be done ſafely in a Phimoſis by cutting off the Foreskin which is uſuall in Circumciſion.

The Cure of Phimoſis.

When the womb is too narrow, a diviſion made by Inſection hath been often practiſed, though it be more painfull and difficult then the other.

Therefore firſt you muſt begin with the ſafer way of practiſe, by fomenting the part with things that looſen moiſten and molliſie, as Fomentations and Baths, Oyntments or Peſſaries ſuch as are preſcribed in the hardneſs of the womb; which while you uſe you muſt put in a Tent ſomwhat large made of a dry Gentian root or a Sponge tyed cloſe together, that as it ſwells it may enlarge the Orifice, by often uſe.

The Cure of the Leanneſs of the Body and its parts.

That Leanneſs which is not by a Conſumption but Naturall; is ſeldom altered. Otherwiſe fleſh or fat may be cauſed by things that increaſe blood and nouriſhing Juyce; as good Diet and reſt, Natural Evacuations, Motions of Body and Mind; theſe will bring a better Habit to the Body.

The Cure of lank and looſe Breaſts.

When Breaſts are lank and hang down. they are unſeemly, and women that love to be neate, deſire their Cure; this is done by applying things that make them harder and firmer, ſuch aſtringent and drying things which we ſaid would hinder the growth of Breaſts.

The Cure of the uncomely Figure of parts.

When parts are diſproportioned and cauſe Deformity, beſides what is from number or magnitude, of which we have ſpoken, as a Head, Noſe or Mouth imſhapen, if they be ſo Naturally, they are incurable as alſo the Teeth and Nayls.

The Cure of over curling Hair.

If the Hair be too curling and much, we cut it off, if little pluck it out; but this being not very unſeemly is not to be tampered with, except it be troubleſome, as when in the Eye-brows and from thence they bend into the Eyes.

Theſe hairs are to be rectified by often touching them with the ſlime of a Snaile, or with Glew.

They ſay they will grow again when pulled out if the Pores be anointed with Oylin which a Lizard hath been boiled; or with Frogs blood, eſpecially if it be mixed with the pouder of Laurel root or the aſhes of Organ.

Things that cauſe Hair to curle.

Some deſire their Hair may curle, and this is done by the uſe of ſtrong aſtringents ſuch as were mentioned among thoſe which black the hair, *as the Decoction of Galls, Pomegranate peels, Cypreſs Nuts, Pomegranate flowers and the like made into a Lixinium,* to which they ad things that cauſe curling *as Daffodill roots, and Dwarfe Elder roots and Leaves with the ſeed of Henbane.*

Alſo Oyntments made of the ſame are uſed, as: Take *of Oyl of Myrtles and Maſtich two ounces, Oyl of Henbane half an ounce, Juyce of Myrtles and Vinegar each one ounce: boyl them, then add the aſhes of Cheſtnuts, Hedghog and Pine nuts each half a dram, the ſhavings of Rams horns, Gum Arabick and Dragonth each one dram, Myrrh half a dram, Honey as much as will make an Oyntment.*

They ſay Mucilages boyled in Water or Lye will do the ſame, if made of Marſh-mallows roots, Linſeed, Fænugreek and Fleabane ſeed, and Gum Arabick, this they beleeve will ſo ſoften the hair that they will be fitter to curle or the Pores being looſned thereby and made larger, the hairs will come forth more crooked. Others add *Fern-roots, Beets and Lythargy,* and when the hairs are dry anoint with Oyl of Myrtles. Some anoint with the Roots of Dwarf Elder mixed with Oyl. Women do more certainly with criſping Irons; and when they go to Bed, they twiſt them, and with great pains put them under their Head geare, and in the morning being combed out, they continue curled the whol day.

The Cure of the ſeparation of parts which ſhould be united as of the hare Lip.

If there be a Diviſion of any part which ſhould be united whether after the Cure of ſome wound, or Naturall, if it be in a fleſhy part it may be united; as that of the upper Lip which Children are born with called a hare Lip in Dutch *Haſenſchart,* it will be united if it be cut on both ſides, and after the Lips be joyned together with Needles wrap about with Silk or with ſowing and a Plaiſter laid

over

over till it be cured; this you may try in any other part where there is Deformity or Hindrance, and in fleshy parts it will be done, but scarsely in other parts. Also these may be artificially united, if you first take of the skin upon each side, and apply sticking Plaisters to the sides with double or treble Clouts and Buttons, with which and good Ligature, the parts divided will be drawn together and united.

The Cure of Gums separated from the Teeth.

If the Gums be separated from the Teeth by biting hard things, you must chew upon the sound side; if from gravel upon the Teeth called *Tophi*, they must first be taken off, otherwise flesh will not grow but being taken off the flesh will grow at the Roots of the teeth, and so be united unto them. Therefore the Remedies are such as clense, of which we spoke in the Foulness of teeth, and of things that breed flesh in the consumption of the Gums, for it is done by clensing, breeding flesh and drying which causeth Glutination.

Mouth waters which dry and astring are good as: Take *of Comfrey roots, five leaved Grass, Orris each one ounce, of Birthwort and Alheal each half an ounce, of Angelica and Cypress roots each two drams, of Burnet, Vervain, St. Johnswort, Pennyroyall each one handfull, of red Roses one pugil, Pomegranate flowers two drams, yellow Myrobalans three drams, Oroby seeds two drams, Mastich and Frankincense each one ounce: boyl them in Wine and Honey adding a little Vinegar of Squills and Cinnamon*, let him wash his Mouth often therewith, you may also add a little Allum.

The Cure of broken hollow and rotten Teeth.

When teeth are broken or divided or hollow and rotten, they cannot be repaired, and therefore if they offend must be pulled out; but if they be usefull in regard the next Teeth are gone you may keep them provided that you prevent farther Corruption.

This is done by washing the Mouth often with the Decoction *of Capar leaves, the leaved Grass, Birthwort, Cypress, Leaves of Mints, Galls, Nigella seeds, Bay berries, made in Wine and Vinegar, or with Smiths water.*

The Decoction of Spurge root in Vinegar is the best, and if Allum be added it is the stronger.

Or let him wash his Mouth with Sage or Rosemary Water mixed with Salt and Wine.

Or with Vinegar of Squills if it be not strong enough.

Rub the corrupt Teeth with the things mentioned, for clensing in that Chapter, which by drying take away Corruption or this Pouder. Take *of Cuttle-bone two drams, burnt Coral and Harts horn each one dram, Mastich and Allum each half a dram: make a Pouder.*

Or with the ashes of Organ, Rosemary and Pellitory of the wall mixed with Honey and Salt.

We put into a hollow Tooth the pouder *of Galls roots, of Sulphur-wort, Staphisager, Penny-royall and sometimes Borax.*

To take away Teeth when unserviceable, the Cyhrurgions use Paces and the like Instruments among which that like a Goats hoof is best; some are so active that the standers by, think they do it without Labour, and they are wondered at, and go about deceiving the poeple with expectation of far greater things which they profess; some cannot be drawn out as easie as those that are loose, especially when they are broken or rotten.

This may be done by Burning for so the Roots become dry, or the Teeth broken, so that they may easily be taken out. And this is done by an actuall Cautery or potential, or *Aqua fortis* or Milk of Spurge, Sory, as in the pain of the Teeth is mentioned: *Dioscorides* saith that the Root of Ranunculus, or Juyce of Sowbread doth the same.

And other things though they are not caustick as the *Root of the black Chamæleon, the Juyce of Celandine, the Lyes of Oyl, the Liquor of that comes out of the Cedar, and the prickle of a Forkefish.*

They suppose that a Tooth will fall out, if you put *Gum of Ivy into it, the fat of a green Frog or of a Cookow, or with the blood of a Lizard.*

If you deffend the other teeth with Leaven or wax and apply to the hollow Tooth, the pouder of the root of a *Mulbery tree* which hath been first infused in Vinegar it will fall out.

Also the Root and Leaves of *black Henbane*, laid hot to the Teeth.

Also *wild Coloquintida* infused in Vinegar then poudered and boyled with Honey. or,

Take *the grease of Froggs, Juyce of Celandine, and Aqua vitæ in equall parts, and apply it.*

Or the Juyce of Celandine and Mugwort with Vinegar.

The Coleworts worm applyed doth the same, and the water of Sal Ammoniack.

The teeth will fall out if rubbed with the pouder of *Nettle seed* and *Galbanum* equall portions.

The Roughness and clefts of the Nayls.

Though the ruggedness and clefts of the Nayls cannot be made even and smooth, yet as they grow they may vanish, which that it may be better done, and the like not succeed, first use gentle means.

As *Pitch, Wax, Rosin melted and applyed, also Mastick, Colophony, and Turpentine dissolved, adding sometimes Sulphur or Brimstone.*

Also *Raisons by themselves or with Opoponax.*

Dioscorides commends *Dock roots in Vinegar, and the lesser Celandine and Cypress.*

Also *Watercresses and Linseed are approved.*

To which add *Cummin, Costus roots, with Honey and the Pulp of Raisons or Grease, sometimes Allum and Salt.*

The stronger Medicines are the *Roots of Crowfoot.*

Arsnick with Bird-lime, or Gum Serapine, or Wax or Suet or Oyl.

Or *Cantharides with Oyl of Roses, or the like.*

The cleaving of the Hair.

If the hair be not all cleft it is usually neglected, but to cure, you must pluck away that thin part and anoint the ends of the remaining Hairs with the Gall of a Beast: and then use a Decoction to cause Hair, *of Southernwood, Capillar herbes and Cane roots*, and others aforementioned.

They spend time in vain who joyne them together with *Mucilage, or Bird-lime or Glue.*

The Cure of Dandrough.

When the Dandrough falls not but with Rubbing it is neglected, or it falls away with only combing, rubbing and washing with Soap; But when it abounds and falls continually upon the cloaths, as when it is to be seen in the Beard then it must be cured; first by purging, if it comes from Excrements, or the Disease cured that causeth it.

The Topick Medicines are to be such as consume and clense filth which causeth it, and they must be strong or weak as it is fixed, alwaies mixed with Lenitives, least they exasparate the Skin too much.

Washings are divers, first common Lye or Barbars Sudds with Soap and Rubbing.

Or Sudds with Juyce of Beets and a little Vinegar; also Honey and a little Gall of a Beast.

Or Urine, or salt Water, or Wine alone, or with the things mentioned.

Washing with hot water, will asswage the smarting of the Skin after the use of clensers; if afterwards you wash with water in which Mallows and Fœnugreek have been boiled.

The Decoction of Willow leaves, and bark is commended.

Or the Decoction *of white Spinage, Coleworts and Roots or of Mallows, Pellitory of the wall, Sopewort, Lupines, Beanes, Fœnugreek, Melons, and berries of the Spindle tree, also Roots of wild Cowcumbers and Squills.*

Divers Oyntments are used, as this. Take *of the Oyl of bitter Almonds or Nuts two ounces, of Oyl of Violets, Flower-de-luce or Wall flower each one ounce, the juyce of Spinage two ounces and an half, Vinegar half an ounce: boyl them a little and add the gal of an Ox three drams, Brimstone two drams, Vitriol one dram, Niter half a dram, make a Liniment, which will be stronger with half a dram of Coloquintida.* or,

Take *Almonds and Nuts rosted at a fire each one ounce and an*

half

half: beat them into a paſt, or the Meal of Lupines and Fænugreek with half an ounce of the Powder of Brimſtone, of Bole or other fat Earth two drams, of Dreggs of Wine one dram, Ox gall one ounce, as much common Honey, or Honey of Squills as will make a Liniment: you may add one dram of Muſtard ſeed or Staveſacre.

The *aſhes of Lilly-roots or of Garlick with Honey.*

The *Powder of yellow Myrobalans, with Juyce of Spinage and Vinegar.*

The white and yolk of an Egg pow edup on the Head after waſhed, doth qualifie well after the uſe of ſharp cleanſing things.

Pomatum keeps the skin from chopping.

A good Water is made *of the Tops of St. Johns-wort, Groundpine, Pellitory, or Soap-wort each one handfull and an half, the Meal of Lupines and Fænugreek each one ounce, Brimſtone, ſix drams, Tartar three drams, Niter one dram, red Wine one pint, Vinegar two ounces, Roſe-water one ounce.*

Rub the Head with *Salt, Niter or the Meal of Lupines.*

By combing Dandrough will fall.

The cure of the ſcales in the Hands.

The Scales in the Palmes of the Hands called *Palatella*, in French, is cured as Dandrough with Clenſers and Emollients.

The Cure of parts to be divided and Orifices that are cloſed when they ſhould be open.

The growing together of parts which ſhould be aſſunder or of Orifices which ſhould be open coming by Birth or chance, cannot be but by force. Therefore if they hinder not actions, let them alone with a little Deformity: but if they hinder the Functions as cloſing of the Anus, womb, and the like, then Section muſt be uſed or Cautery, by reaſon of the Neceſſity: and this is eaſier done, if there be only a concreſſion by a Membrane interpoſed or Fleſh not thick.

A ſhutting only of the Orifices without growing together of them as of the Mouth in a Convulſion of the Mouth, which hinders actions, we have ſhewed how it ſhould be opened formerly.

The Cure of matted hair.

Another Conjunction is leſs ſeemly and that's in the folding of the Hair is cured with combing: if they bring only Deformity, and no impediment ought to be omitted, becauſe it is not eaſily diſcerned, and if cut off, they will come ſo again: and they who have ſuch matted hair, take little pains therewith, but think them an Ornament and Sign of Manhood.

The Cure of Scimation of parts diſordered.

The Deformity which is in perverting of the Situation or poſition of the Body, if it hinder the Function or be painfull as in Luxations, Fractures and Ruptures. We ſpoke of their cure before, as alſo of Crookedneſs, which deformeth moſt of all.

When the Toes are awry, ſince it cometh from the ſhoes as we have ſhewed, firſt they muſt not be too ſtraight, and that will prevent that Deformity which can after ſcarce be cured.

The Cure of Gogle Eyes.

The ſtarting forth of the Eyes too far if from the Birth is incurable: but when it comes from a ſtrain, when that ceaſeth they return, ſo that they need no aſtringents; for if they ſhould be aſtringed gently they could not be put back; if ſtrongly they would more hurt the Eyes by wrinkling them. And ſince neither wind nor any Moiſture by filling the inward parts of the Eyes can thruſt them forth, we ſhall in vain apply Topicks as ſome do to conſume wind and water.

The cure of looſe Teeth.

To cure the poſition of the Teeth altered by motion, and fix them again in their places, and to prevent their falling forth, we muſt uſe Dryers and Aſtringents; ſuch as do not black the teeth as ſome do, and add things that have a gratefull ſcent.

Waſhes for the Mouth in this caſe, are made *of Roots of five Leaved graſs, Snakeweed, Capars, Moulin, Myrtle leaves and Maſtich tree and Olive leaves, Bindweed, wild Tanſie, Strawberry leaves, Medlars, Cornil tree Service, and Roſe leaves, Pomegranate flowers, Galls,* theſe black the Teeth, *Elm barks, Acorn cupps, Sponge, Mary Thiſtle, Moſs growing upon trees boyled in Rain water, Iron water, red Wine and Vinegar.*

If *Allum* be added the Decoction will be ſtronger.

To take away the Moiſture which is common there, you may boyl with the reſt *the Roots of Pellitory of Spain, and make a good ſirrup, Angelica roots, Topps of Roſemary and Sage and ſome Spices.* Some boil Gums therein from whence there is but little aſtriction, as *Maſtick* and the like.

Other waſhings are made *of Allum, Vinegar and Honey.*

Dioſcorides commends the *Pickle of Olives, and Sory.*

Alſo *Waters of Roſes, Horſe tayle and Vinegar* are good to waſh the Mouth.

Some things being chewed do the ſame *as Elicampane, and Berries of bloody Rod, and Barberries alſo Maſtich chewed.*

Dioſcorides teacheth that the Oyl of the wild Olive tree kept in the Mouth fixeth the Teeth.

Pouders are made to rub the Teeth and Gums, for the ſame purpoſe, as of Coral and other dryers, which we deſcribed in the whiting of teeth, adding Salt or Allum, which being burnt doth more aſtring, ſometimes they add the *aſhes of burnt Roſemary, Sage, Myrtles, Maſtich tree, Olive-tree, alſo of Dates ſtones and Cray fiſh or other aſtringent Pouders as of Cypreſs roots, Nuts, Sponge, Mary Thiſtle, Roſes, Hypocciſtis acacia, or of Sloes and Maſtick, Bole or any fat earth alſo Spices as Cinnamon, Cloves and Lignum, Aloes.*

The Cure of looſe Nayls.

When looſe Nayls cannot be faſtned, the Deformity from thence is cured as if they were quite fallen off; eſpecially when other grow under: For if they be not and thoſe places be not left bare, a worſe Deformity ariſeth. That therefore looſe Nayls may fall from the skin there is no other Art to be uſed, becauſe they will fall off, *Dioſcorides* teacheth to apply a raiſon thereunto.

CHAP. II.

Of Diſcoloration.

WE call that the diſcolouring of the Body, when it hath another Colour in the Skin, Eyes and Teeth, Hairs and Nayls.

The diſcolouring of the Skin, which appears only where it is naked and hairleſs, is either generall of the whol body, or particular of ſome places only.

A generall Diſcolouring of the skin is, when it hath all over, and not in one place only, a different Colour from the Native, when it is more or leſs red or white; as when it looſeth its fleſh Colour, and contracteth another or becomes uncomely in an evill Habit, Jaundies, Palneſs, Rednes and Blackneſs.

Cachexy or evill Habit.

An evill Habit is a Diſcolouration in which the flouriſhing Colour of the Skin being loſt, the decent Habit of the body called *Euexia* is changed into an evill Habit called *Cachexia*: in this the skin is too white and pale, or turnes from white to blewiſh, inclining to the lead Colour, and the ſuperficies of the body appears full and more ſwollen. This Diſeaſe is accompanied with a ſhortneſs of breathing, which troubleth them when they exerciſe or go up anyſteep place, with beating of the Arteries about the Throat and ſides of the Neck, beating of the Heart and Faintneſs, eſpecially in the Feet, and firſt there is a pricking pain at the Heart, of which they complain much. This Diſeaſe though it be incident to all, yet is it moſt common to Virgins, eſpecially at that time when their termes ſhould begin, and it begings then and continues after many Months and ſometimes years, while the Terms are ſtopped, or if they

who have their terms, have alſo this Diſeaſe, they are ſtopped. Alſo a lingring Feaver as we ſaid in Feavers is joyned herewith, ſometimes other Diſeaſes come upon it, as of the Stomake, Liver, Spleen, and the Urine except changed by ſome other Diſeaſe accompanying it, is white, wateriſh and crude. And if it laſt long, the Body will grow bigger and a Leucophlegmatia will follow, as ſhall be declared.

An evill Habit is the beginning of a Dropſie.

There is another kind of Cachexy, which with Palneſs of Body and other accidents mentioned, hath ſwelling of Feet, which if it continue long, the belly alſo ſwells and is extended; and this goes before the Dropſie Aſcites, and is the beginning thereof, as ſhall be ſhewed in the Dropſie.

Evill Nouriſhments, or Cachochymia is a kind of Cachexy.

There is a third Kind in which the Palneſs of the Body is not ſimple, but inclines to an evill Colour as yellow, green, black, yet is not full coloured in the Jaundies, it ſheweth it ſelf with a preſſing Pain at the Heart, and beating of the Arteries, and other Symptoms as before. This they call Cacochymia or evill Nouriſhment, from the cauſe. This is turned into a Jaundies or ſome kind of Dropſie.

Cachexy with a Dropſie or want of Nouriſhment.

One of theſe Kinds is when there are not only uncomely Colours and other Symptomes, but the Habit of body rather decreaſeth than increaſeth, and the Body groweth lean and thin, and therefore it is called evill habited, if this continue long and the body conſume, it is turned to an Atrophy, which is ſo called from the Cauſe, as ſhall be ſhewed in the Diſeaſes of the Body diminiſhed.

Jaundies.

The Jaundies is a Diſcolouration in which the ſkin is dyed of another Colour; this Name comes from the Bird *Ifterus*, by the look of which this Diſeaſe was thought to be cured, it is otherwiſe called *Arcuatus*, becauſe the Colour of the Rain-bow is in the Eyes, and the kingly Diſeaſe, either becauſe it is uſually with great Men, by reaſon of their Intemperance, or becauſe it was cured with Meade, which was in time paſt the Kingly Drink.

Arcuatus.

This Diſeaſe is divers according to the diverſity of Colours, ſometimes it is yellow and called the yellow Jaundies, by the Germans *Geibſuchs*, ſometimes it is more Saffron like and full coloured, ſometimes it ſhines and then it is called *Aurigo* from the colour of Gold: ſome time it is greeniſh, ſometimes black, which prevails over the yellow, and then it is called the black Jaundies. Theſe colours appear firſt in the Eyes, then in the Face, ſometimes they are over moſt parts of the Body, or over all, ſometimes the Urine is of the ſame Colour, and they ſeem ſometimes Saffron colour'd ſomtimes black, ſo that they will diſcolour a linnen cloath, in the mean time their Excrements which ought to be coloured, are white or aſh coloured, and therefore do not provoke the Patient to void them. This Diſeaſe ſometimes begins of its ſelf, and the colour firſt grows bright or ſhining, with preſſing pain about the Heart, this commonly goes before the Jaundies, and is its forerunner, and this Paine before any Yellowneſs appears is called in Dutch *Selbſuchs*, becauſe it follows ſo eaſily; ſometimes worſe diſeaſes accompany the Jaundies with their accidents, or follow as a Dropſie, ſometimes the Jaundies follows sa Feaver and other diſeaſes as the Colick, as it hath been declared.

Aurigo.

Redneſs.

Redneſs is a Diſcolouration very ſudden, in thoſe that are angry, or ſhamfac'd or bluſh, it continues longer in thoſe that are hot, or have hot Diſeaſes eſpecially Feavers: and this Redneſs appears moſt in the Face.

Paleneſs.

Paleneſs is a Diſcolouration in which the ſkin looſeth its flouriſhing Colour, and becomes leſs coloured then is beſeeming. This is uſuall in thoſe that are very cold, or ſorrowfull and greived, and it comes quickly to thoſe that are affrighted, and to thoſe that faint or ſwone, in whom the Image of Death is ſeen till they come to themſelves. Sometimes a conſtant Paleneſs is the fore-runner of a Diſeaſe, and often the Companion of Diſeaſes, and continueth ſome time after recovery: which Paleneſs appears in the whol body, but cheifly in the Face, and in thoſe places which formerly were moſt red, as in the Lipps and Cheeks there is Blewneſs: alſo Paleneſs will be in the Nayls and Yard, when it needs not or cannot, bluſh, or be red,

The Blackneſs of Moors.

Blackneſs is a Diſcolouration in which the ſkin appears black: and it is either perfect, ſuch as ſome have been at their birth, as the Æthiopians; or it is when the ſkin is not white but tawny, which they call black: which although Naturall to ſome, yet becauſe uncomely in their Eyes, which eſteem that neareſt colour to white the beſt, they count it a Diſcoloration and Labour to cure it.

Tawny Skin.

Hitherto may be referred the evill Colour of a wrinkled skin in old Age: for that which comes from a Diſeaſe and Leanneſs, continueth not long.

A particular Diſcolouration is only in ſome parts of the Skin: by reaſon of ſpots or defilements.

They which are from externall Cauſes, make Impreſſion of a ſtrange colour, or are ſuperficiall.

As that blackneſs which is from the Sun burning in the Face, and Hands and Breaſt, in thoſe places where they are uſed to be naked.

There is alſo an evill Colour from filth in unclean Perſons which ſticks to the skin and ſpoils the colour.

The colouring of the Skin.

Some are dyed in the skin by externall Colours and Paints, this is uſual with them that trade in ſuch Commodities; and thoſe that touch them.

Hence the skin is ſometimes black, red, yellow, green, &c. which ſometimes ſuddenly vaniſh, othertimes ſtay longer and are more fixed and cannot eaſily be waſhed out, in regard of the Cauſe which we ſhall all at large declare.

The skin is diſcoulored with divers ſpots, which ſometimes are diſtinguiſhed only by their colour, ſometimes by their bigneſs and bunching forth; ſome come with, and ſome without Diſeaſes.

They which ariſe of themſelves without a Diſeaſe accompanying them, are originall ſpots, as Freckles, Pimples, Fleabites, Eryſipelas or Anthonyes fire, blood ſpots, Gutta Roſacea, Ring-worms, Morphew, black and Blewneſs.

Originall ſpots as Moles.

Originall Spots are ſuch as we bring into the World, as Moles, theſe are called Signs and Marks, and are divers and are of divers Colours and Shapes, as like Strawberries or Cherries, ſome are depreſſed broad or little, and are manifeſt only by the Colour, and they are in the Face ſometimes and ſometimes in other parts of the Body.

Freckles.

Freckles are dark ſpots as big as ſmall or great Lentiles, and of the ſame colour onely they bunch not out, therefore are they called Lentigines from Lentiles: theſe are ſometimes more abundant ſometimes fewer, without pain or trouble, only diſcolouring the body eſpecially the Face, ſometimes the Hands and the open Breaſt, being expoſed alwaies to the Air: ſometimes they are in the Arms and Feet, and the more manifeſt when the body is more white, ſometimes they appear in Summer, and are gone in Winter, they are conſtant.

The broad dark Spot.

Of the ſame Colour are ſome dark Spots as broad as the Hand in divers parts, and they come and go at certain times

Flecbitts.

They are called Fleebitts which becauſe they reſemble ſuch, for they are little and round, and are about the Pores, and they only itch a little.

Bryſi.

Spots like Anthonyes fire. Eryſipelata or Anthonies fire, are little ſpots like the great Anthonies fire, but without Heat and only itch a little; they are larger ſometimes with a redneſs over all the Legs, and differ from the true Anthonies fire, in regard there is no Inflammation or Burning but only itching. As I often found being a Youth, by Experience, that when I rid forth, that Leg which was next the Sun was ſo burnt throw my Boote, that it was very red and itching, yet it was gone in the ſpace of two daies.

Blood Spots. Theſe blood Spots are very like in the Face, Neck and Breaſt, large and ſmall ſometimes, depreſſed ſometimes elevated, continue long, but trouble not but by itching.

The roſe Spot. The roſe Spot is when the Face or at leaſt the Forehead, Cheeks or Noſe are ſprinkled as it were with red Drops, the French call this *Coupe Roſe* which ſignifies Copporas or Vitriol, though it be nothing like it; ſometimes the Face is ſwollen with them and full of Puſtles, and the Noſe very large and full of Rubies.

Ring-worms called Impetigines. Ring-worms or Teters are red about the Edges and the Skin is rough, like that of the Chin, which is ſcabby called *Lichen*, only they itch not ſo much, but are as broad and as many, continuing long in the Face, Hands or other parts without Moleſtation: The Germans call them *Zinermahl* or *Eſtechs*, and the French *Darters*.

Morphew or Vitiligo. Vitiligo or Morphew or Alphi are ſo called becauſe they change the Colour of the skin, theſe are whiter then the ſpots called *Leucæ*, the Arabians call them *Albaras*; others are blackiſh called *Malæ*, both are ordinarily called *Malum mortuum*, or the dead Evill: others call one white the other the black Morphew. Theſe are not together but diſperſed like Drops through the Skin, changing their place and creeping, yet not rough nor ſcaby or ulcerated, and without Senſe, and if they be rubbed they are but reddiſh, or if you prick them being deep in the skin, yet they cauſe no pain, nor doth blood come from them but onely Water; when they are where Hair groweth they cauſe it to fall, and other white thin down comes up inſtead thereof.

Sugillations, Ecchymoſes, Vibices, Stigmata, Peliomata. Sugillations are blew ſpots after contuſion, which when they are nouriſhed by a Humor, are called *Ecchymoſes*; if they come from a ſtroake Vibices in Dutch *Senatthen*, and *Stigmata* in Greek, and by reaſon of their blewneſs, Peliomata, and becauſe they are Skie-coloured, the Germans call them *Blawmahſer*, ſometimes they grow blackiſh, and are yellow about. They are uneven, narrow and large, with a Tumor at firſt, and pain when they come from a ſtroake, and continue long after the Tumor is gone.

In Diſeaſes there are divers ſpots which are either plain or like Puſtles, as in Feavers, Pox and the like.

Eryſipelas. In Feavers called *Synochi*, there is often a red ſpot broad and ſpreading called *Eryſipelas*, ſometimes in the Face and Hands, this is deſcribed in thoſe pains which it cauſeth by burning.

The Meaſles or Exanthemata. In Feavers, eſpecially in Children, there are divers red ſpots in the Face, Breaſt and all over in the Pores, about the bigneſs of Lentiles which they call *Exanthemata*.

Ecthymata or ſmall Pox. There are other ſpots like the former in Feavers, as big as half Peaſe or Lentils upon Children that grow up to Puſtles, or fall in again or grow blew and itching and turn to matter, and then to a black Scab, by which being innumerable, either ſtanding together or a part, the body is ſo defiled, that it is ugly to behold. And when theſe are cured, the face is all their life after filled as it were a Honey comb with the impreſſions thereof; they call them *Ecthymata*, becauſe they break forth with violence, alſo *Variolæ* or little Puſtles, *Morbili*, or *Papulæ* that is Puſhes, Wheales or Bliſters: The Germans, becauſe Children have them uſually call them *Kindsblattern*, of which we ſpake in Feavers which produce them. Theſe are not only in the Skin, but Eyes, Noſtrils, Mouth: as we ſhewed in the Diſeaſes of thoſe parts.

The ſpots of peſtilential Feavers. In malignant Feavers that are venemous and infectious, we have not only thoſe ſpots mentioned but others called *Petechiæ*, ſometimes red like Fleabitts, ſometimes like Violets, dark and blackiſh as we ſhewed in Feavers.

The ſpots of the Elephantiaſis Pox, Scurvy. In the Elephantiaſis there are red and blew Spots in the Face and other parts; and in the French Pox there are the like of another kind: in the Scurvy called Stomacace or evil of the Mouth, there are ſpots of divers colours in the Legs, and ſometimes in other parts, all which are exactly deſcribed in the Chapter of Infection.

Of the yellow Spot in the Convulſion. We have ſhewed in the Treatiſe of the Convulſion, that one who had the Spaſmus or Convulſion, had a yellow Spot that quickly grew up and quickly vaniſhed from his finger.

The Eyes are ſometimes diſcoloured, when from the natural Colour they decline by Redneſs or Yellowneſs.

The Natural colour is in that called *Iris* or the Raine-bow, black in the Center bigger or leſs round about, grey or brown, and without the Circle all white; alſo when they are ſpotted or otherwiſe ill coloured.

Redneſs of Eyes. Sound Men have often red Eyes by outward heat, or too great Motion, or the Eyes are red from hot Diſeaſes of the Head, or of the Eyes themſelves, as in an Opthalmy, or Inflammation or Epiphora a Rheum, in which the Eye-brows rather then the Eyes are redder then uſuall. In the Elephantiaſis beſides other Deformities, there is Redneſs of Eyes: as we ſhewed in Diſeaſes which cauſe red Eyes.

Yellow Eyes. In the Jaundies the Eyes are yellow, as was ſhewed in that Treatiſe, and more in the white part of the Eyes, then in any part of the skin, becauſe no part of the skin is ſo white, as the thick Tunicle of the Eye, and therefore the yellow wil not appear ſo ſoon in other parts, as in this moſt white ſubject.

Blew Eyes. Divers ſpots diſcolour the Eyes, as thoſe that are red or blew in Sugillation, or *Hypoſphagma* called blood ſhot: theſe are not only in the white but in the Rain-bow of the Eye, and they appear more bloody then in the Skin.

Pox and Meaſles in the Eyes. Exanthemata and Ecthymata, that is Meaſles and Pox, as they infect the whol body, ſo ſometimes the Eyes and hurt the ſight; and if many Puſtles be within the adnate and horny Tunicle called *Cornea*, they cauſe blindneſs.

The white ſpots in the Eyes. The Cornea or horn Tunicle of the Eye is hurt with white ſpots; if theſe be right before the Pupilla or ſight they cauſe blindneſs, but if in the white of the Eye, they neither change colour nor hinder ſight, as was ſhewed in the Pin and Web Scar, and Suffuſion or filme in the Treatiſe of ſight depraved or hurt.

Grey and black Eyes. The common people think the Eyes uncomely if too grey, becauſe the clear part about the Pupilla, which uſeth to change colour, is grey: and the blacker it is by conſent from the Pupilla, which is alwaies black, the more comely are the Eyes. Although Ancients commended grey Eyes and called *Minervæ Glaucopis* from thence, yet our age alloweth them not for the beſt, and would change them if it could.

Yellow and black teeth. Alſo the Teeth, being Naturally white, are eaſily infectly, and diſcoloured: as when they are yellow with filth ſticking to them; or when they grow black from their own Corruption, or from Vapors in great Diſeaſes.

The

The ſpots of the Nails. The Nayls are diſcoloured and ſpotted by eroſion; ſometimes they are too black and blew, ſometimes too red, which Colour is not in the Nails, but ſhineth from the fleſh beneath through the Nails, as if it were in the Nails; as bruiſes being under them, are ſeen through, and blackneſs in the topps from filth: but in young people eſpecially, there are ſmall white ſpots in many places of the Nayles, which firſt riſing from the Root, grow with the Nayles and are pared off, and others grow in their Room. The vulgar think that theſe are a ſigne of long life in men and women.

White downy hair. The hair is counted diſcolored only when it is turned exactly white from a Diſeaſe, which took off the former. Or when young people grow grey too ſoon, it is Natural and honorable for an old man to be ſo, hence the Poet ſaid: In old time grey Hairs were of much eſteem.

Baldneſs. This Greyneſs comes ſooneſt in the beard, though that come forth long after the hair of the head: very red and black hairs are not counted diſcoloured, although they are by Common People accounted leſs comely; on the contrary, they that have yellow or gold coloured hair are counted comely, becauſe they are according to Nature, and black alſo except curled and like the Moores.

Red, black and yellow hair.

The Cauſes.

All the Cauſes of Diſcolouration whether it be general or particular in the Skin, Eyes, Teeth, Nails and Hair, come either from Humors, as Seed, Blood; nouriſhing Juyce, Choller, or from evil Humors or Filth or other defilments: or from Heat, Cold, or Dryneſs, as ſhall be in order explained.

The Parents ſeed is the Cauſe of Diſcolouration. and ſpots original in the Skin, Eyes and Hair. As we ſhewed in Deformity, that it came in reſpect of Number in Deformity, that it came in reſpect of Number of Parts, Magnitude and Figure from the Parents ſeed many times; ſo from the ſame comes Diſcolouration, and hereditary Spots; which alſo as the Diſeaſes in form and figure, come from the ſeed; and the Natural colour of the skin is derived from Parents to Children, as that blackneſs which is counted uncomely, comes Naturally from Parents of the ſame colour: and Children are grey or black eyed like their Parents, and haired, black, yellow or red like their Parents. And as in men often ſo alwaies in Beaſts, they produce their like in colour. This hath been obſerved to be true alſo in Birds eſpecially Pidgeons, of which if one or two only be black or different in colour, all the reſt being white, there ſhall be ſo many and no more of that colour: and if the Eyes of the Pigeon be black, yellow or cryſtalline, the young will have the like. They that ſtudy Pidgeons, are ſo obſervant therein, that they remove thoſe whoſe colour they like not, leaſt the young ſhould prove of the ſame.

As this ſimilitude of Natural colours, comes from ſeed rightly and Naturally ordered and diſpoſed, ſo if it be otherwiſe, divers colours and ſtrange ſpots, may come as we ſaid concerning Deformity; namely by tranſmutation or permiſtion and divers Cauſes, amongſt imagination can do ſo much, as that if a woman in the time of Conception or after when with Child, apprehended any thing ſtrongly by ſight or imagination, the ſame ſhall have impreſſion upon the Child: as Hiſtories report a Woman to have brought forth a black More, by beholding the Picture of a black More in the time of Copulation; alſo other ſpots come from hence, as of Mulberries, Cherries, and the colour of a Peacocks Neck and other repreſentations, which we have obſerved to be Natural (from Parents imaginations) in their Children; ſome have taught that Beaſts have the ſame imagination to produce the like to what they phanſie. As the Scripture witneſſeth of *Jacob*, who that he might get Cattel from his Father *Laban*, uſed an Art, by barking and peeling Rods, that they might be of divers colours, to cauſe the ſheep which looked upon them at the time of Copulation, to produce party coloured young. *Pliny* ſaies that Pidgeons will produce Pidgeons of divers colours, if the Dove-houſe be painted with divers colours.

Blood in the ſuperficies of the Body is cauſe of Redneſs. From the Blood which is over the skin and the fleſh, (which in the Deſcription of a Phlegmon I ſhewed to be Natural, in regard it is not only gathered in the ſmall Veins of the skin, but the ſubſtance of fleſh and skin covered therewith) as I ſay, there ariſeth from the blood, a proper colour of the Skin inclining to Rendeſs, to be ſeen through the Cuticula or ſcarſe Skin; or as there is a perfect Redneſs in ſome parts, as the Lips and Yard by reaſon of their ſpungy fleſh containing more blood, and in the Yard by reaſon of Arterial blood, and in the Cheeks, in which the blood is more frequent then in other parts (eſpecially in ſome conſtitutions): ſo, if this blood ſhould be carried more to the Superficies or outſide then ordinary, there will be a redder colour but chiefly in the Face, which by reaſon of its tenderneſs and looſeneſs receiveth blood more eaſily. As we ſee, when the blood is drawn outward with the ſpirits by external heat, the Body begins to be red, and the Face to bluſh, and the very white of the Eyes to be dyed therewith: or by the paſſions of the Mind, in which the blood with the ſpirits being raiſed is thrown outward; as from anger the Face will be inflamed and from ſhame bluſh, which yet when the blood returns, do all vaniſh away; in ſome ſooner in ſome later. For I have obſerved in ſome, that redneſs coming from anger and ſhame, hath continued a long time after burning in the Cheeks.

Want of blood in the ſuperficies of the body is cauſe of Paleneſs. As theſe things come by Blood in the Superficies of the body, ſo when it is there wanting, the flouriſhing colour is gone, and Paleneſs follows, which turns blew in thoſe parts which ought to be red by Nature as in the Face, Cheeks, Lips and Yard as alſo the Nails, which when by reaſon of the red fleſh beneath ſhineing through them they are red, if blood fails are ſeen to be blew.

Theſe parts are deſtitute of Blood, through Hunger, Sadneſs, Bleeding, and Diſeaſes; or if the blood flie from them, they are pale till it return, as the Yard is pale when there is no occaſion for blood. And as it is when external cold repells it, the skin is not ſo well coloured as when hot.

And in them whoſe Cheeks being red, the Blood being congealed with cold, ſeems to be of a livid and lyad color, laſtly, the ſame thing happneth when the blood with the Spirits is ſuddenly down in, as in Fear, Terror and other Paſſions or in ſwoundings and faintings, which cauſe Paleneſs till the blood and ſpirits return.

Alſo divers ſorts of ſpots proceed from Blood, either as it is in the true Skin, or in the Pores, or as it is under the ſcarſe Skin.

The blood ſpread into the true skin, is cauſe of Eryſipelas, Meazles, Pox, and blood ſpots, the Roſe drop and Teter. In the Feaver ſynochus hot and burnt blood ſpread into the true Skin, cauſeth that Redneſs which joyned with heat is called *Eriſipelas*, ſometimes Meazles and ſmall Pox, how this was done was explained formerly.

And if blood throw it ſelf to the skin by any other cauſes internal or external, which expel it or draw it forth, it cauſeth other red ſpots; as thoſe Eryſipelata which are in one place, and that Redneſs of Legs which comes from the heat of the Sun, which we formerly ſpake of.

Alſo through plenty of Blood, Thinneſs and Heat, and ſometimes Impurity of the ſame, thoſe blood ſpots do come into the Face and other parts into which Nature ſends it.

And

And firſt the Redneſs of face called *Gutta roſacea*, as it may proceed from the aforeſaid cauſes, ſo from often and immoderate uſe of Wine, it is uſual with Drunkards, becauſe by Drunkenneſs the parts ordained for ſanguifying or making of Blood, and the blood it ſelf being both too hot: that blood being ſent in great Quantity and often, into thoſe parts which are ordained by Nature to receive it, doth at length by often ſupply, cauſe this continual redneſs and Puſtles. This Infirmity is of long continuance, for Blood not falling from its Natural part is not ſuppurated, nor is it eaſily diſcuſſed other waies; alſo it anoys the Face cheifly, becauſe that ſeems more to abound with blood then other parts, and Redneſs is more Naturally there, eſpecially in the Cheeks, which in ſome are red Naturally, or ſpeedily grow red by bluſhing, and this ſhews that Blood can eaſily go to the Face, and return, if Nature be not hindered: but this is ſeldome done when it either offending in Quantity or Quality is often ſent thither, but being there fixed it begets this permanent and laſting Diſeaſe.

It happens alſo that if any Portion of blood which is ſharp come to the Skin, it cauſeth thoſe red and uneven ſpots by exaſperation and corroſion, which we call Ringworms, and the Germans *Zittermahl*.

The blood which is about the Pores, is the cauſe of red, little, and bloody ſpots.

The blood being carried to the Pores of the skin, and ſpreading it ſelf a little ſpace about them, ſometimes produceth ſmall ſpots. Alſo in ſweating, the Blood being carried to the Pores with the water, and there fixing ſuch ſpots remain: and we may perceive the ſame to be done by ſtinging of Creatures and biting of Flees, ſuch ſpots are left, which are ſoon diſcuſſed becauſe ſmall.

Blood under the ſcarſe Skin, the cauſe of black and blewneſs.

If Blood get out of the true skin, in which we ſhewed that it Naturally is under the ſcarſe skin, then being out of its place and not able to return, there it lies and ſhineing through the ſcarf skin, cauſeth thoſe ſpots of the color of blood out of the place, and left by Nature and therefore black and cloddy, ſuch as are in a bruiſe, and they are little broad, or long according as the ſtroke was, and theſe will laſt long, if the blood corrupt not as it often happens when it is incloſed; ſometimes when the blood is thin and ſpreads abroad, they are yellow and broad and when it is diſcuſſed they vaniſh, ſometimes the blood corrupts and eateth through the ſcarf Skin.

The cauſe of Blood thus breaking through the skin is uſually a contuſion made in the Veins or true skin, by which its continuity being divided within, the blood is carried from thence to the ſcarſe skin, for which reaſon, there are divers ſorts of Marks, as from a whip or rod, they are long according to the ſtrokes. And the Eyes are black from a ſtroake, becauſe the blood by that gets out of the Veins of the adnate Tunicle, or into the horn Tunicle. After blood-letting you may ſometimes ſee ſuch ſpots, when the Vein is pricked through, the blood doth not all come forth but ſome remains under the ſcarſe skin: there are none but theſe violent cauſes which divide continuity, which bring the blood under the ſcarſe skin.

Yet from great heat inwardly or outwardly in Diſeaſes, when the skin is thereby dilated and the Blood diſperſed, we have ſeen bloody ſpots under the skin.

And this alſo may come from thinneſs of blood, if when it is come to the Pores it ſweat not forth, but ſtaies there by drops; and this is rarely ſeen as alſo ſweating blood although we ſhewed in the Treatiſe of Excrements that hath ſometimes been ſo.

A general Diſcolouration and divers ſpots come from the nouriſhing Juyce, which is made of blood turned into the parts by aſſimulation, according as it is conveighed (when changed) either into the whol body or to ſome parts.

When crude and unconcocted Juyce, goes through the Body to nouriſh it, the flouriſhing colour thereof is deſtroyed, and another acquired as is ſhewed in Cachexia or evil Habit, of which there are divers ſorts, as the Juyce is only crude, or alſo ſerous and filthy; for if it be crude ſuch as is Naturally in the maſs of Blood, and makes the part which is called Flegm, and that nouriſheth, being carried with the blood through the Body for the ſame purpoſe, if this abound in the blood, or if the greateſt part of the Blood be ſuch becauſe not perfectly made red, and yet not ſo corrupted but it is fit to nouriſh the Body; then this being joyned to the ſubſtance of the Body for to nouriſh it, ſtill it makes the fleſh and skin of the ſame colour pale and white; and the colour is as far from the true Complexion as the blood is, being ſo, or when mixed with evil Juyce or water from evil Concoction. In Women, eſpecially Virgins, when that thick Blood flows not ſo plentifully to the Veins of the womb, nor Nature, which allots the pureſt blood for nouriſhing of the Child, and for monethly Evacuation, doth not continue her courſe to carry it thither, and ſend out the crude and evil Blood; there will be an evil Habit, and want of Terms (as we ſhewed,) the defect or want of the Terms, not being the cauſe of that evil Habit, but the evil Habit the cauſe of the want of Termes.

If the juyce which nouriſheth the whole body be crude, it cauſeth evil habits; if bad it cauſeth ill Digeſtion, or Cacochymia.

But if with the evil Habit, Cachexy and Cacochymy, there be alſo evil Humors about the Spleen which are carried from hence to the meſeraick Arteries; there will alſo be as I ſhewed, a Palpitation of the Heart and other Symptomes, by reaſon of the Cacochyma and Diſeaſes of other parts.

But if this Juyce be crude, and plentiful, and long before it nouriſh the Body, ſo that it ſwell therewith, the cachexy is turned into a Leucophlegmacy or white Flegm; and if there be much water, the Leucophlegmacy will be ſerous: or if the water abound in a Cachexy, there will be tumor of the Feet, and of the Belly and Body growing leſs, and the Dropſie called Aſcites wil follow the cachexy or evil Habit.

Or if this Juyce, which ought to nouriſh the body, be ſo bad, that it will not nouriſh, or be very little in Quantity, there will be a decay of the Body, and the Cachexy will be turned into an Atrophy. As we ſhall ſee in the Dropſie Aſcites and Atrophy how they follow a cachexy.

This crudity of Blood, if there be ſeroſity or waterishneſs, or cacochymy or ſuſpicion of a Dropſie: comes often from the Nouriſhment, if ſuch things be taken which produce crude Juyce or Water: as we ſaid in the Imbecillity of the Stomach, as Summer fruicts that will not laſt, which if they be taken immoderately by young People, make them ſubject to a Cachexy, eſpecially by Virgins being weak and uſing Exerciſe.

This crude Blood which cauſeth a Cachexy, and evill Juyce which cauſeth a cacochymy, or water which cauſeth a Dropſie comes from the Diſtemper of thoſe parts which are ordained for Sanguification or making of Blood and Chyle; as from the Stomach, Liver, Spleen, and the Veſſels and Membranes thereto annexed. And if the concoction be made imperfect, by the Diſtemper, Weakneſs or other fault of the Stomach; the Chylus be crude and imperfect, or foule and watery, which after in the ſecond concoction produceth the like Blood, becauſe it cannot be ſufficiently boiled, and the rather if the parts ordained for the ſecond concoction are alſo infirme. We have ſhewed treating of the pain of the Heart what kind of Diſeaſes are from the Stomach, and cauſe pain.

Blood that is crude, unconcocted, foule and watery, is made by the Infirmities of the Liver, Spleen and Veins, becauſe theſe parts are ordained for the Generation of blood. The Liver is the Inſtrument of Sanguification. And that Sanguification may be hindered by the Diſeaſes

of the Spleen, (many former Arguments being omitted, by which we ſhewed that the Spleen alſo is the Inſtrument of ſanguifying, and that it may be hindered by the Diſtemper of the ſpleen) we can prove, becauſe as appears by Anatomies, when the Liver is ſound, and the Spleen rotten, there have appeared thoſe faults of Sanguification which have been mentioned, and have cauſed a Dropſie, ſo that we need not make the conſent between the Liver and the Spleen, to be the cauſe. Moreover from the Diſtemper of the Veins, (ſeeing they help to make Blood, whether principally, as ſome think, or make it better after it hath been wrought by the Liver, which all conſeſs,) the Blood is leſs concocted and more crude. And this cheifly cauſed by the Diſtemper of the meſeraik Veins, that come from the Liver and Spleen, becauſe the firſt change of the Chyle and preparation of it for Blood is by them, for they ſnatch it and retain it firſt; the Diſeaſes which befal the Liver, Spleen or Veins, by which the ſanguification being diminiſhed, the blood becomes crude, and thence comes the Cachexy, either alone with Cacochymy, or Weakneſs, Diſtemper, Obſtruction, Hardneſs or the like.

Weakneſs of the Liver, Spleen and Veins (which by conſent with the Bowels unto which they are joyned, ſuffer with them) is properly that which comes from want of Natural heat, if it hinder the Functions, ſo that the blood be not ſufficiently wrought, and therefore too crude. Thus it is the cauſe of a Cachexy, in which the Native colour of the body is loſt, and it grows bigger, there is a ſhortneſs of breathing by reaſon of the Diſtemper of thoſe parts, and a preſſing pain of the belly, the Urin by reaſon of crudity is waterish, eſpecially if through the plenty of Water they cannot be tinctured with Choller; if this Weakneſs laſt long it turns the cachexy into a Leucophlegmacy by aboundance of crudity, which if it come from other cauſes alſo will make a Leucophlegmacy ſerous or watery. Alſo if from the weakneſs of the attractive faculty of the Liver, there be aboundance of Water not ſufficiently attracted by the meſeraik Veins, the Dropſie Aſcites, as we ſhewed in the Treatiſe of the Dropſie, will follow; but if their weakneſs be ſuch, that the Blood be not only crude, but not enough to nouriſh the Body, it will produce a cachexy, in which the Body is rather leſs then bigger: or if by this weakneſs the ſanguification is loſt, an Atrophy will follow. A cachexy is known to come from this weakneſs, if there be no other accidents or Diſeaſes in the Bowels, it appears by the evil colour of the whole Body that they are weakned, and the Patients ſo affected, are called Hepatick or Splenetick.

This weakneſs comes from this diſperſing of the Natural heat, which is from inward Cauſes from Birth or through Age: or from exrernal cauſes, and remaineth after divers Diſtempers of the Bowels, or other long and acute diſeaſes. Among which are Feavers, after which the Bowels being weakned by too much heat, or cold Drink which is uſual, there follows a Cachexy which by continuance cauſed the Feet, Belly or whol body to ſwell Moreover great loſs of blood, eſpecially of the Menſtrual cauſeth a cachexy, not only by the loſs of Spirits, but becauſe the Veins want refreſhment by their emptineſs, and want of heat with which they were nouriſhed · not onely by reaſon of that crude Juyce which is then produced, but becauſe the Body being exhauſted looſeth its flouriſhing colour. And if the loſs of blood were great the body would rather grow leſs then ſwell. Alſo other Evacuations by which the Spirits are conſumed do the ſame; among which too much Venery in Man eſpecially.

The Diſtemper of the parts and Veſſels ordained for ſanguification, may produce a Cachexy, either ſimple or mixed with Leucophlegmacy, or the Dropſie Aſcites; by cauſing the weakneſs which we mentioned to continue, and by hindering the Actions of the parts. The firſt is a cold Diſtemper which chiefly hinders the Functions, and proceeds by over much and long uſe of cold things: from external cold to which the Body hath been expoſed; from which the conſtitution is known to be ſuch and in regard there is no Thirſt, and the body appears colder with all ſignes of a cold cauſe.

But although the hot Diſtemper of theſe parts, eſpecially of the Liver, doth not at the firſt, nor by long continuance produce this cachexy or evil Habit, Paleneſs or ſwarthy colour, but it appears rather in a freſh colour, (as we ſee in the faces of Drunkards) and brings no great hurt as yet, but only a conſtant Thirſt by which this hot and dry Diſtemper of the Bowels is diſcerned: yet in continuance of time, in ſome ſooner, ſome later; by weakning the bowels, and making them unfit for action (the Sanguification being ſo hindered) the body is thereby diſcoloured and of evil Habit which is a cachexy. And this is turned into a Dropſie (which appears firſt by ſwelling of the Feet and ſhortneſs of Breath, after by other ſigns) becauſe by continual heat the bowels grow hard, dry and cloven; as we ſhewed in the Dropſie Aſcites, whoſe cauſes are chiefly conſtant uſe of hot Wines and Meats or hot Diſeaſes.

The ſtoppage of the Liver eſpecially of the porta and hollow Veins, may be the cauſe of a Cachexy or cacochymy, becauſe it gives occaſion to the production of evil and cholerick Humors eſpecially; which we declared (in the cauſes of Feavers) to be mixed with the blood in the meſeraick Veins, by reaſon the exact ſeparation of them from the blood by the ſecond concoction is hindered; if impure blood be ſent into the body, there is rather a foul then a white colour, and it is brown, ſwart, green or yellow, yet not ſo yellow as when the Pores that conveigh the choler are obſtructed, and the choler is not ſeparated from the blood as we ſhall ſhew in the cauſes of the Jaundies, by which means the Urine in that is not ſo watery as in a cachexy, but it is ſomewhat high coloured. But if this cholerick filthineſs retained by the ſame Obſtruction, and ſent back into the Meſeraiks, be not much diſperſed through the body, there is rather a ſtrange Paleneſs then a colour in the cachexy, alſo the Urine is more crude and wateriſh, and by reaſon of the plenty of choler in the Meſeraiks, there is a looſneſs rather than binding of the Belly, and the Excrements will ſeem rather chollerick then white, contrary to the Jaundies. And if from the Obſtruction mentioned, there ſollow a weakneſs of the Liver, as it may be from thence, or other cauſes; then becauſe the working of the Blood is leſs, there wil be a cachexy of crude blood; in which crude Juyce nouriſhing the Body makes it ſwell. But if the Obſtruction be ſo great, that by reaſon thereof, the diſtribution of the blood, whether crude or concocted cannot be made into the hollow Vein, or ſuch foul blood is produced that it cannot ſufficiently nouriſh the Body, it will decreaſe: as we ſhall ſhew how an Atrophy comes either when the diſtribution of Blood is hindered by a great Obſtruction, or when the blood is unfit for to nouriſh.

The cauſe of this Obſtruction in the Liver, is either thick or vicid Chyle, made of the like the food when it is faſtned to the paſſages, and grows more condenſed and ſtops the parts; or, as ſome ſay, crude chyle, by reaſon of heat raiſed through violent motion or baths uſed after Meat, which gets too ſoon into the Veins, and is there retained til it ſtop them. And this may come alſo from dryed and burnt Blood, as we have obſerved by looking into the Liver of beaſts which hath produced ſuch Obſtructions by being hindered, and burnt into the aſhes in the Veſſels. The ſame Obſervations in Man and Beaſt, have taught us that Obſtructions of the Liver may come from a ſerous or watery Humor. For we have found, in them that formerly by urine have voided Gravel, the ſame red Gravel to be in the Veſſels of the Liver, ſometimes turned to a brittle ſtone, which being diſperſed through the Veſſels are like white Coral or Ice-ſickles. And theſe came from the Earthineſs of the Serum which fixeth it ſelf in the ſmall paſſages, as we have ſhewed in the Treatiſe of the Stone in the Kidneys. It is generally concluded that theſe Obſtructions come chiefly from Flegm, which if it be not bred as other

ther Excrements in the Liver of crude chyle and blood, and there laid up; it comes from the Stomach and Gutts, where it is uſually abounding, being brought thither by the meſeraik Veins with the chylus, and there continuing it cauſeth theſe Obſtructions, and the ſooner if it be ſlimy, or thin and wateriſh, which will more eaſily get into the Mouths of the Meſeraiks, if by long continuance in the Veins, it grows thick by the heat of the Liver, and ſo become viſcous or ſlimy.

Alſo an Obſtruction in the Spleen may cauſe a Cachexy and ſuch is cacochymical, which declares it ſelf by a filthy colour, in which if the evil Juyce get into the Arteries, there will be beating of Heart and Arteries; and the reaſon is, becauſe when the Spleen is ſtopt, Sanguification is hindered, and evil Humors are heaped up in the branches of the Spleen and gate Vein, which may from the left ſide thereof go to the right, and ſo into the Liver and then be diſtributed with the Blood.

A crude or cacochymical Cachexy, as from other Obſtructions, ſo it may riſe from the Hardneſs of theſe parts or Scirrhus which grows in the ſubſtance thereof, or other hard Tumor which turns to an Impoſthume, for then the paſſages are either partly or totally ſtopped. And this turnes to the Dropſie Aſcites, if from the Diſtemper or Hardneſs the parts be not only ſtopped but left open. And becauſe it is uſual ſo, we ſhall ſhew the cauſes of the dropſie Aſcites more at large hereafter. And in an Atrophy how it cometh, as alſo thoſe hard Tumors of the Liver and Spleen, what are the cauſes of them, and in what manner they are, how they come either from too much drowth of the Bowels, or too thick Juyce which nouriſheth them.

They write that beſides theſe Tumors, the ſpleen may ſwell from wind; but I perceive not how wind can be there to blow it up when it is not hollow. It may be when the wind is gathered into the left ſide, and ſtretcheth either the ſtomach which is moſt on the left ſide is ſwollen with wind, or the colon which reacheth to that part, and this they think to be in the ſpleen.

The nouriſhing Juyce being communicated to divers parts, cauſeth divers ſpots, as it inſinuates either into the Pores of the skin or ſome diviſion.

The Juyce which nouriſheth the hair, being diſperſed into the Pores is the cauſe of ſpots or freckles.

When the Juyce which ſhould nouriſh the Hair, comes to the Pores of the skin where they grow, it produceth theſe ſpots which are like Lentils viz. Freckles called Lentigines; for being like them in colour, it ſpreads about the Pores, it produceth ſpots: dark coloured or like the Hair. This ſpreading of the Juyce in the Pores comes from the Heat too much attracting it, and dilating the Pores: if then the juyce which nouriſh the Hair, is not only faſtned to the Roots of it, but ſpread further, and there ſtaies to produce ſpots browner or lighter according to the colour of the hair. And theſe appear moſt in a white skin, eſpecially in thoſe Men that have red hair; on their Head, Eye-brows, Face, Breaſt, and eſpecially Hands becauſe theſe are openeſt to the Heat of the Sun. And theſe depart not while the weather is warm.

The too much openeſs of the Pores may cauſe this alſo, by which means the Juyce doth not only nouriſh the hair, but infect that part of the skin which is about them, which is hardly taken off, by reaſon of the continual coming of the ſame Juyce to nouriſh the part, and being juyce that is ſo fit for Nouriſhment, it will neither be ſuppurated nor corrupted. This openeſs of the Pores being moſt where the skin is tender, is the cauſe that Freakles grow there and are moſt conſpicuous: and we ſee that they are more in the back of the Hands then in the Palm.

Alſo the ſpots may grow from the abundant Juyce, which is ſent to nouriſh thoſe Hairs which are plucked up by the Roots of thoſe parts which are moſt often waſhed or rubbed, as Face and Hands.

Juyce nouriſhing the hair if evil, it gets into the Pores cauſeth Morphew.

If the Juyce be evil which nouriſheth the hair and goes into the Pores then it produceth the Morphew, when brought to the Pores, it is unfit to nouriſh or produce hair, but ſpreads it ſelf upon the skin: as we ſhewed concerning freakles. So this juyce as it is qualified, produceth ſometimes white ſometimes blackiſh Morphew which cauſeth the hair there to fall for want of Nouriſhment and if they grow again, there are imperfect from the fault of the Juyce, thin and like down, and otherwiſe coloured then formerly, and the skin being corrupt and inſenſible, thereby ſends forth being pricked not blood but matter, and theſe break forth ſometimes in one place, ſometimes another, whereſoever Nature ſends this juyce to the Pores.

And this evil Juyce by the depraved aſſimulation of the part where theſe ſpots are, by which aſſimulation that Blood which is brought thither for Nouriſhment, is changed not into convenient Juyce, but into evil juyce like the part corrupted, of which it is nouriſhed, as in the Elephantiaſis, which we ſhewed to be large in many places of the skin, but this is in a narrow ſpace and fewer places. And as in that by a peculiar Infection of the skin other diſeaſes come, ſo do theſe ſpots come from others yet not ſo different from that of an Elephantiaſis, becauſe Morphew often foreruns an Elephantiaſis. A certain venemous force is cauſe of this depraved aſſimilation as of an Elephantiaſis either like it, or unlike it coming from the ſeed, or lying hid in the Blood and other Humors or by Contagion of the body; for by no other means, can either Flegm or Melancholy which they ſay produceth theſe ſpots cauſe them by their qualities; nor can they be produced of crude Blood, as ſome ſay, for in a Cachexy which comes from thence, there is no ſuch ſpots, and if they ſhould come from thence, as the whol Body grows great with crude blood, ſo would it be all over ſpotted.

Choller ſent to the ſuperficies of the Body, is the cauſe of Jaundies.

Choller being high coloured, if it be ſent to the ſuperficies of the Body, it wil ſtain it, and cauſe the Jaundies. And it appears more the whiter the place is, as in the white of the Eye, and a clear Skin, as in the Palms of the Hands and under the Nayles.

This is not done by that Natural choller which is in the Veins, and is the thinner part of the blood, and is not yellow but red, but by that which is called Excrementitial, which being in the Meſeraiks, is ſeparated from thence into its proper bladder; and it is yellow, or is preternatural, and is green or black. This kind of choller if it be carried from the meſeraik Veins by the Serum, which is the Vehiculum of all Humors, and therewith carried with the blood into the hollow Vein, and from thence by the benefit of the ſame Serum, carried with the blood by the Veins to the exterior parts of the body, and be there ſpread upon the skin and other Membranes, as the Tunicle of the Eye, not by points, as when it produceth ſpots and Puſtles, but all abroad; then inſinuating it ſelf gives it a colour, not being mixed with Serum or Whey doth it burne, as it doth when it breeds Puſtles of it ſelf, onely it cauſeth ſometimes itching in places very ſenſible: alſo part of this choller carried with the ſerous part to the Reins and ſo to the bladder, makes the Urine of the ſame colour and thick.

There are divers cauſes, why when this choller is carried from the Meſeraiks to the branches of the hollow vein, and thence is fixed in the skin and outward parts, that it is not diſperſed by ſweat. The chief cauſes are Segregation and Excretion.

The Segregation of choller in the Meſeraik Veins when it is done in the Liver and from thence by the gate Veins carried to the branches of the chollerick Pore, and the Bladder adjoyning if it be hindered by any Diſeaſe of the Liver, or cannot be perfected by reaſon of the great quantity, being retained in the branches of the gate Vein, at length

length as we ſaid it breakes into the branches of the *Vena cava* or hollow Vein.

This comes often from the Obſtruction of the paſſages of the Choller in the Liver, for then although it be ſeparated from the Blood in the Veins of the Liver, yet by reaſon of the Obſtruction of the Pores, it cannot be refined in the Gall, and therefore being ſent with the Serum and Blood into the hollow Vein, and diſtributed though the whol body, it gives it a tincture of its own colour. This Obſtruction we have declared to come from the cauſes of other Obſtructions in other Veſſels which cauſe a Cachexy; from Chylus, Blood, Whey or Flegm, if theſe while the choller doth diſtribute it ſelf into the Pores, go in with it, and being there detained grow thick, or turn to ſand, as we have ſeen in Anatomies. The ſame Obſtruction may come from thick ſlimy Choller, which ſticks long in the narrow Pores, eſpecially if it grow as hard, as it doth ſomtimes in the Ears, whereby they are ſtopped while it is drawn out, and this may be either from the clammineſs of the Choller, or from the heat of the Liver which burneth it: and alſo it may be in the Gall and in the Pore that reacheth to the Guts, and ſomtimes be turned into a ſtone, if there be an Obſtruction as we ſhall after declare.

Alſo Tumors and Scirrhus of the Liver, as they ſhut np the Veſſels of the Liver, and a Cachexy ſo when they ſtop the Paſſages of choller they cauſe a Jaundies, which foreruns a Dropſie: as ſhall be ſhewed.

And if any Impoſthume or Filth happen in this part, it may be then, that the humors not being ſeparated but confuſed, there may follow both a Dropſie and Jaundies.

Alſo an Inflamation of the Liver, by making the paſſages in like manner ſtraighter, and by inflaming the choller, and driving it into the hollow Vein, doth couple a Jaundies with its Symptoms.

Sometimes it falls out by the plenty of choller and its abundance in the Meſeraiks, that when all cannot be ſepared into the Gall, and it cannot receive it, although it be ſometimes very large, then ſome of it carried into the hollow Vein, and thence carried outward, being yellow, if it keep the Nature of excrementitious Choller, or otherwiſe green or black, doth infect the Skin with the ſame colour, and cauſe either a black or yellow Jaundies. And this it doth ſometimes before it cauſe another Diſeaſe, when it is plentiful there, and breaks into the Veins, it produceth a jaundies a forerunner of other chollerick Diſeaſes. Otherwiſe when it lies and putrifieth and produceth intermitting Feavers, becauſe in the fits thereof there is ſome part thereof alwaies ſent into the Veins, it is diſperſed by Sweat, and if this be not enough it joynes a jaundies to the Feaver: or if all the matter of the Feaver be ſent by a criſis from the Meſeraiks to the skin, it produceth a Jaundize that cures the Feaver. And this may be in other Diſeaſes that come from corruption or abounding of Choller in theſe Veins, and ſo a Jaundize may either accompany or follow them, as we ſaid it was often in a cholick pain from Choller, if it partly be carried to the Gutts, and partly remain it joyns a jaundize with the cholick, or when the Cholick ceaſeth being not ſufficiently purged by Nature or Medicines, it leaves a jaundize behind which is eaſily cured, as is mentioned in the Treatiſe of theſe Diſeaſes. For often by Nature help which will not endure that which is hurtfull being ſtirred up by a ſharp Humor, which while it is in the Veins is tempered with Blood, and ſo may lie longer concocted, it is carried into the great Veins if not to the Guts in which the Meſeraiks end, as is uſual by purging.

And this may be the cauſe why a jauudize may come after Poyſon taken, Nature ſo diſturbing and moving the Humors, except it doth it by ſome other occult or hidden Quality, by which in Poyſon it attempteth divers Operations eſpecially in thoſe who are very chollerick.

From which cauſe as divers kinds of jaundies do proceed, as aforeſaid, ſo it will be ſooner produced if any diſeaſe of the Liver aforementioned do hinder the ſeparation of choller.

Some have taught that this ſeparation may be hindered in the Spleen, by its Diſeaſes, as by Obſtruction and hardneſs as in the Liver; and then black choller which they ſuppoſe to be lodged in the Spleen will run into the veins, and cauſe the black jaundies. But ſince we can perceive no ſuch choller in the Spleen, nor any place to receive it, it cannot be ſo, nor if it were there could it be carried into the hollow Vein which toucheth not the Spleen with any branch thereof; and if it ſhould be carried into other Veſſels, it ſhould be into the branches of the Artery which are annexed to the Spleen: and then greater accidents would follow then a jaundize. Therefore it is not neceſſary to ſeek for this black choller in the Spleen, ſince it is contained in the branches of the gate Vein, the right whereof is carried to the Liver, the left to the Spleen, (by which we do not deny but ſome Portion is carried to the Spleen) if it be preternatnral, as is ſaid, and be yellow, green and black, nor can it be by any way either on the right ſide or the left, ſent into the hollow Vein but by the Liver. And except this be, the Diſeaſe only of the Spleen will never cauſe the jaundies: we have ſhewed that the cauſes of this black choller, or green or yellow abounding in intermitting Feavers, which come from thence are (as a quartan) from Choller, and not from that choller which is in the Spleen.

If there be not a voiding of Choller by the *Porus choliducus* into the Guts, then it will riſe from the Gall, and aſcend by the top of it into the Liver and its Veins, and is not ſeparated, but goes into the hollow Vein and cauſeth a jaundize, and then the Excrements of the Belly being not died with Choller, are not coloured, nor do they provoke the Belly to diſcharge them.

And this may be done by the ſame cauſes, by which the ſeparation is hindered through Obſtruction of the Veſſels, as Humors, when they fall into the Pores and obſtruct them; or Tumors if they preſs upon the Neck of the gall-or the Pore that deſcendeth: or by the proper Diſeaſe of the Gall, or its Inflammation or Tumor; or ſtones thereinwhich are ſometimes found of a Gold or Silver colour, as alſo when the Choller is made more ſticking and thicker, as that in the Ears, the like whereunto we have found in the Gall being diſſected; and theſe if they get into the narrow parts of the Gall, and ſtick in the Pore, wil hinder (as I ſaid) the deſcending and purging of choller.

But the Jaundies is not only from the coming forth of the choller, after this manner, but being thrown from the hollow Vein to the skin, which may be evacuated by the Pores by which Sweat with the Serum, as is uſual, but if not, it will ſtay there and diſcolour the skin, and the leſs if any be ſpent by ſweat, and not at all, if all be drawn forth by ſweat. This ſuppreſſion of ſweat, comes from the binding or cloſing of the Pores of the skin, from divers cauſes otherwhere mentioned. Hence is it that in a chollerick ſweat, where it is abounding and when it hath been cauſed by heat and Baths, if they ſuddenly go into the the cold, they have often their skin yellow, which with ſweating again will be gone. I had lately a Patient which was often all over of a Saffron colour, and this went away as often as he did ſweat, and returned again preſently after.

The ſpots of which we here ſpeak are not of pure choller, nor the Freakles, which we have ſhewed to proceed from Nutriment; as other ſpots and Puſtles, which rather trouble with heat and pain then diſcolour, as Anthonies fire; of which we ſpake concerning pain.

Evil Humors in malignant Diſeaſes, are the cauſe of evil ſpots in infectious Feavers and the Pox.

Divers ſpots riſe from evil humors in malignant Diſeaſes, as in pure, putrid, malignant, peſtilential and venemous Feavers and in the ſmall Pox, Elephantiaſis, Scurvey and the like: as we ſhewed. Which Humors or Poyſons by what force they do it in thoſe Diſeaſes which they cauſe, as well as ſpots, we have ſhewed as much as we could find out in ſuch hidden Cauſes.

The

Filth is the cauſe of an evil Colour in the Skin, under the Nails, and of the Tellowneſs and Blackneſs of the Teeth.

The colour of the Skin is poluted by filth adhering, as we ſhall ſhew when we ſpeak thereof in things caſt off.

Alſo the dirt that gets in between the Nail and the Skin, where they are divided, ſhining through the Nails make them look black and filthy.

The teeth are very ſubject to pollution, and either yellow, or blew or black, and when they are moſt white it appears ſooneſt, the cauſes whereof we ſhall ſhew hereafter in things rejected.

External colours are the cauſes of Diſcoloration of skin, Nails and Teeth.

The Skin, Teeth, and Nails, and Hair may have divers Colours from divers fouling things, or that diſcolour. So the skin of the Hands is made black by touching of Walnuts, and ſo continueth for ſome daies: ſometimes it is made yellow, red, blew, or the like by herbs and Paints. And the Americans do paint themſelves being naked, that they may be comely. And wanton Boys with us, ſcarifying the skin and rubbing in Gun pouder, do make certain Markes and Characters thereupon very artificially. Alſo the Teeth are ſo coloured, among which aſtringent things do chiefly black the Teeth. The Nails are diſcoloured, and made black, in Curriers by often touching Lime and Lye or Lixivium and it laſteth long.

Heat which enlargeth the skin, is the cauſe of a red and lively color. Cold which thickneth the skin is the cauſe of a dull Colour.

Heat, as we ſhewed, by attracting the Blood makes a lively red Colour, and cold by repreſſing the Blood makes Paleneſs, alſo Heat by dilating the skin makes the red colour ſhine forth better, and cold by aſtringing makes it leſs clear, and this is the cauſe that they which are hot have a freſher Colour; and they which are cold are more ſwarthy.

The dryneſs of the skin is the cauſe of a worſe Colour, as black.

Alſo over dryneſs of the skin changeth the Colour and makes it more obſcure, becauſe by Dryneſs the skin is made thicker, and by aſtringency or binding it wrinkled; becauſe thickneſs makes it black, and Wrinkles making a ſhaddow render it more obſcure: as we ſee the skin being burnt and dryed by the heat of the Sun becomes blacker, and being withered by age it is more duſty and black. The ſame comes to paſs, if the skin be made by a Diſeaſe or looſer by the Conſumption of the fleſh under it becomes wrinkled, which before was ſtretched out; or if over moiſtned with bathing it will wrinkle.

In the Eyes there are white Spots or Scars, by reaſon of the horny Tunicle dried and made hard.

The dryneſs of the Membranes of the Eye is the cauſe of the white ſpots therein.

And by reaſon of the drying of the watery Humor this white ſpot or ſuffuſion, appears through the ſeat of the horny tunicle that is nigh againſt it, when the preſpicuity with which the Tunicle and Humor ought to be adorned is loſt, and that Whiteneſs follows it. And we ſee the raw white of an Egg is clear and bright, but being boiled or roſted it becomes exactly white, and looſeth its preſpicuity. We have ſufficiently declared in the defects of the ſight, which come from ſpots what is the drineſs and hardneſs in the bright parts of the Eye, and from what cauſes it cometh.

The dryneſs of the Nails is the cauſe of the white ſpots in them.

There are alſo white ſpots in the Nails, where their tranſparency is loſt in a point from the like cauſes; and this comes from the Nouriſhment, if there be in it the leaſt portion differing from that which ſhould repair and preſerve the clear ſubſtance of the Nails though it be fit to nouriſh otherwiſe, being different from the thick Nouriſhment of the Bones, and mixed with this more bright Nouriſhment of the Nails, the Nail makes that portion which is contrary unto it obſcure, white, and not clear white as the reſt is. And this is moſt uſual in young People, becauſe while their Bodies grow, their bones grow alſo, and it is then more plentiful becauſe they abound with Nouriſhment, and there may eaſily cauſe theſe ſpots; as we have declared, divers hard Tumors to grow from the confuſion of nouriſhing juyce.

Moreover, we have obſerved that the Nails have not been only ſtreaked with white ſpots in ſome parts, but that in ſome old people they have been all thick white, they being ſo dryed by age and hardned, that they have totally loſt their cleaneſs and tranſparency; from this reaſon we may obſerve that Hornes, Bones, and Quills, being burnt grow white.

The dryneſs of Hair is the cauſe of Baldneſs.

The ſame is in hair, they grow white and grey after they have loſt their clearneſs (which the hair hath as well as the Nails and the horny Tunicle although by reaſon of their ſmaleneſs it is not ſo apparent, but it may be known by the ſplendor and ſhining) through dryneſs and hardneſs. And this happens often to them as to the reſt more often, becauſe they are very dry: and therefore in age they grow dryer as other parts, and they are dryed firſt about the Roots, and ſo grow altogether grey, and ſome ſooner, ſome later, as they grow dry ſooner or later, and they are grey either in the beginning or progreſs, or end of their age. This is not done by other cauſes, becauſe the hair is not eaſily altered, albeit it is ſuppoſed by the vulgar that care and griefe wil make them grey, which can ſcarſe be done but by their haſtening of age: although it be recorded that ſome have ſuddenly turned grey. That hair is white in divers places diſtinct, in ſome and not in others, the uneven Diſpoſition of the hair and the skin wherein they grow, may be the cauſe. And this is to be obſerved, that the thicker the hair is the ſooner it turnes grey, and black ſooner then red, becauſe when grey hairs appear they are ſooner diſcerned. And this is the Cauſe that the Beard being younger then the hair of the Head, yet is ſooner grey.

The Cure.

The Cure is divers, as the Diſcoloration is either in the Eye or skin, Teeth, Hair or Nails.

The convenient Cure of Diſcolourations of the skin is applied firſt to generals and particulars.

The Cure of Generals is directed at the cauſe whether it be the nouriſhing Juyce, Choller, Blood or Seed.

The Cure of Cachexy or evil Habit of body.

That Cachexy which comes from crude and imperfect juyce, in which flouriſhing Colour is loſt, and Paleneſs is brought in, or the like, if there be a Cacochymy or evil digeſtion there with, and it come from the weakneſs of the Liver or ſpleen not yet confirmed, or from Obſtructions; from Humors not yet fixed, is eaſier cured. But if this weakneſs of the Bowels in Sanguification, or Obſtruction is fixed, then it is eaſily turned into Leucophlegmacy or white Dropſie, or into the Dropſie Aſcites; of which two ſorts of Dropſies the firſt is eaſieſt cured, except ſome other Diſtemper be joyned therewith.

A Cachexy is moſt difficult and can ſcarce be cured if there be exceeding weakneſs of the Bowels or great Obſtruction, coming from a hard fixed gravelly Matter, as alſo if there be Hardneſs, Scirrhus or any Tumor in theſe parts which cauſeth the Dropſie Aſcites it is incurable.

A Cachexy muſt be cured according to the cauſe, which we ſaid is the weakneſs of the Liver, Spleen, Meſeraiks, a cold or hot Diſtemper, an Obſtruction, and hardneſs or Tumors in the ſame: which if they have been brought by any external or internal cauſe that muſt firſt be removed, as evil Diet: great loſs of Blood, too much Venery and

the like which we know have been the Original of theſe Diſtempers, and do ſtill nouriſh the ſame. Then the Filthineſs which is brought thereby muſt be purged: and in the mean time if it come from Weakneſs we muſt ſtrengthen, if from a cold or hot Diſtemper, we muſt alter that; if from an Obſtruction we muſt open, if from a Hardneſs or hard Tumor we muſt endeavor to mollifie and diſſolve it by Medicines internal and external, uſing thoſe things eſpecially which are proper for theſe parts affected: and are therefore called Hepatical or Splenetical Medicines or at leaſt you muſt mix them with others, and add thoſe things which ſtrengthen the Stomach if it be weak. All theſe Medicines we ſhall reduce to two Heads, becauſe one Medicine if compounded of divers things, may be applied to divers Cauſes. And under one Head, we ſhall lay down thoſe things which are proper to one or more of the Cauſes, in Imbecillity or Weakneſs, in a cold Diſtemper, Obſtruction, Hardneſs or hard Tumor: under the other Head we ſhall propound thoſe Medicines which are fit for the cure of a Cachexy coming of a hot Diſtemper, becauſe this requires a cure by it ſelf ſomething different from the other. We ſhall begin with that cure which is to be done with the Medicines under the firſt Head, by this way following.

In theſe kinds of cachexies, ſometimes you may open a Vein, if the Liver be ſtopped and full; by which the blood being moved, the evil Humors in the Veſſels of the Liver may with the Blood be a little abated, eſpecially if there be a cochymy in the Blood, it will be convenient to draw it forth: and this is done in the right Arm, where the loweſt Vein is moſt convenient, and therefore is called the Liver vein, which alſo may be opened in the Hand; or in the Foot if there be Suppreſſion of the Termes; in the like Diſeaſes of the Spleen, if there be a cacochymy alſo in the Veins, you muſt open the Vein in the left Arm, or the *Salvatella* which is proper when the Spleen is diſtempered.

The opening of the Hæmorrhoids is very profitable by drawing from the Meſeraiks in the ſtoppage of the Liver, Spleen or Meſeraiks, and alſo by letting forth the cacochymy or evil Juyce.

Vomiting in the Obſtructions of the Liver or Spleen, is good, not only by taking away crudities, but by ſtirring up Nature to ſend them forth, and this is beſt and eaſieſt after Meat.

Clyſters which mollifie, provoke, and open Obſtructions are to be injected, and are made of the common Decoction with the opening Roots, *red Vetches, the four great cold ſeeds*, and diſſolve therein ſome *purging Electuaries* and ſometimes *a quarter of a Pint of Vrine, and half an ounce of the ſharpeſt Leaven, beſides common Oyls or of Cappars and flower-de-luce.*

Or you may uſe the Glyſters mentioned in Leucophlegmacy.

Purges are appointed in Obſtructions, ſo Nature being moved may alwaies thruſt ſome of the ſtoppinges forth; alſo they are good in weakneſs of the parts, Diſtemper or Hardneſs becauſe many Excrements are gathered. And they are made of ſuch as purge choller or Flegm, and Melancholy in the Diſtemper of the Spleen, becauſe it is thought Melancholy Juyce doth abound there, and you muſt add ſuch things as reſpect the Stomach and diſcuſs wind, if it tend to a Leucophlegmacy or white Dropſie, or things that expel Water if it tend to the Dropſie Aſcites, as is mentioned, but here theſe following are good for a cachexy. A Decoction proper in the Obſtruction of the Liver.

Take *of Liquoris Roots one ounce and an half, of Succory and Flower-de-luce Roots each one ounce, of Smalage Roots half an ounce, of Aſarabacca Roots two drams, of Chamæpytis or Ground-pine, Germander, Agrimony, Maiden-hair each one handful, of Fennel ſeeds two drams, of Parſley and Rocket ſeed each one dram, of Elder-flowers one pugil, Raiſons two ounces, Senna one ounce and an half, of Carthamus ſeeds bruiſed and Polypody of the Oak each one ounce:* make a Decoction in Water and the third part Wine, and infuſe in the ſtrained Liquor *of Rhubarb half an ounce, Agarick three drams, Ginger one dram, Spikenard half a ſcruple.* ſtrain it and add as much Sugar as is ſufficient, and aromatize it with *Cinnamon and Cloves for three doſes.*

Of the ſame things dry a Wine may be made by infuſion in four or five pints which will work better, and it will be ſtronger if you add *Wormwood two drams, Topps of Centaury one dram, Birthworth Roots and Squills prepared two drams.*

Another Decoction for the Spleen.

Take *of the bark Cappar Roots and Tamariſk each one ounce,* macerate them in Water and the third part of *Vinegar, Germander, Ceterach each one handful, of both the Bugloſs-flowers and Broom flowers, each one pugil, of Fennel ſeeds two drams, of Park leave ſeeds one dram, of Raiſons ſtoned ſix drams, of Polypody one ounce and an half, Senna one ounce:* make *a Decoction, for three doſes, aromatized with Cinnamon, and ſweetned with Sugar or ſyrup of Maiden-hair, or the like.*

Or thus, Take *of Capar bark one ounce, Pot Mercury, Fumitory, Time, Epithimum each one handful, Broom flowers, Tamariſk, Roſemary, Borrage, and Bugloſs flowers each one pugil, of Raiſons ten pair, Sebeſtens five pair, Senna one ounce, Polypody one ounce and an half:* make a Decoction in the ſtrained Liquor infuſe *Myrobalans, Chebs or others half an ounce, Rhubarb two drams,* ſtrain it and add as much Sugar as is ſufficient for three doſes, *if the barks of the Roots of black Hellebore* be added it is the better.

A plainer Decoction for the Obſtructions of the Spleen is made *of Mercury and Fumitory* new gathered, in *Whey,* or *Broath of an old Cock* to which you may add others, you may alſo give the Decoction and Wine, deſcribed in the Leucophlegmacy, eſpecially if you perceive that it tends to that.

A Potion *of four ſcruples of Rhubarb* made with Wormwood wine or opening water is good, or the powder drunk with thoſe Liquors or with Plantane water, if the Termes flow and cauſe a cachexy, to which you may add *two ounces Syrup of Roſes ſolutive.* Or give the Potion preſcribed in Leucophlegmacy.

Other Potions made of altering Decoctions after to be mentioned are given, by infuſing *Rhubarb, Agarick* and the like, and diſſolving purging Electuaries for choller in the Liver and Melancholy in the Spleen.

Pills often taken being bitter and Gummy are excellent in a cachexy.

Theſe are convenient in Obſtructions and Hardneſs.

Take *of Gum Ammoniacum diſſolved in the juyce of a Flower-de-luce and powder of Rhubarb each half a dram, with Oxymel make Pills for one doſe,* you may add *Agarick* and they will work the better.

Or theſe; Take *Aloes two drams, Rhubarb, Agarick and Mechoacan each one dram and an half, Gum Ammoniack diſſolved in Vinegar of Squills half a dram, Maſtick one ſcruple, Gentian and Birthwort roots, or Madder topps of Centaury two ſcruples, Aſarum roots, Smalage ſeed each one ſcruple, Ginger and Spike each half a ſcruple, with the Extract or inſpiſſat, Juyce of Wormwood, or Flower-de-luce, or Syrup Byzantine, or Turpentine:* make a Maſs, you may quicken it with *Diagridium* if you wil have it purge more.

Or thus, Take *Turbith one dram and and half, Rhubarb one dram, of Gum Lack, Bdellium or Sagapen, and Maſtick each one ſcruple, of Aſarum roots, and Agnus Caſtus ſeeds each one ſcruple, of Schænanth, Spikenard and Saffron each half a ſcruple:* mix them as the former into a Maſs, and you may make them work better with *Diagridium.*

Or thus; Take *of the beſt Aloes two drams, of Rhubarb and Agarick each one dram, of Scammony half a dram, of the Troches of Eupatorium or Rhubarb, or any other opening powder each one ſcruple, Spikenard half a ſcruple, Maſtick one ſcruple, Gum Ammoniack diſſolved in Vinegar half a dram, with ſyrup of Vinegar make a maſs.*

The *Pills of Maudlin* preſcribed by *Mesue* are uſually good, they are made *of Rhubarb, Myrobalans, Aloes, Maſtich,*

ſtich, Saffron, Juyce of Maudlin, Wormwood and Endive.

Or the Pills of Rhubarb made like thoſe of Rhubarb, Myrobalans, and inſtead of Aloes, of Hiera Picra, and Maſtick, and ſeeds of Smalage, Fennel, Troches of Diarhodon, Juyce of Wormwood, Liquoris and Fennel water.

Alſo in flegmatick Men the Pills of Agarick, as in the ſtoppage of the Terms, which have Agarick, Turbith, Hiera picra, Coloquintida, Myrrh, Sarcocol, or Maſtich, Orris-root and Horehound.

Or Pills made of ſtronger things to all which you muſt add Gum Ammoniack diſſolved in Vinegar, if there be a Hardneſs; and they may be made up with the Juyce of Orris or Wormwood, they uſe ſtronger in the Spleen, of the five kinds of Myrobalans, and other things to purge Melancholy.

In great Obſtructions theſe following are very efficacious. Take of Coloquintida four ounces, Extract of Tincture with ſpirit of Wine, to which after add the ponder of Aloes, Myrrh and black Hellebore each one ounce, let them ſtand in the Sun till they are as thick as Honey, then add Saffron, Cinnamon and Brimſtone each one ounce, then ſet them again in the Sun till they are dry, then pouder them, and with Honey make a Maſs, the Doſe is from a half a ſcruple to one ſcruple, and to half a dram in the ſtrongeſt Bodies.

Theſe Pills are beſt, when the Terms alſo are ſtopped.

Take of Aloes one dram and an half, of Mirrh, Madder or Birthwort each half a dram, of Agarick and Turbith each one dram, of Gum ammoniack diſſolved in the Juyce of Flower-de-luce half a dram, with ſyrup of the five Roots: make a Maſs, let her take them often.

If the Terms of Hæmorrhoids flow too faſt, make Pills thus. Take of yellow Myrobalans one dram, Rhubarb one dram and an half, of the Pouder of Diarrhodon and of the three Jaundies each half a dram, with the Juyce of red Roſes, make a maſs, give half a dram or more ſometimes.

An Electuary in Obſtructions. Take of Mechoacan three drams, Turbith one dram, Rhubarb two drams, Cinnamon one dram and an half, Ginger one dram, Spike one ſcruple, of the ponder of the three Sanders or the like one dram, the Pulp of Raiſons boiled with Sugar as much as will make an Electuary, Diagridium may alſo be added.

Rhubarb alone founſcruples in pouder with the Pulp of Raiſons made into a Bole is excellent for the Liver, and it is called the Soul of the Liver: ſome eat it.

Tablets for the ſame. Take of Rhubarb one dram and an half, Mechoacan one dram, Gentian one ſcruple, Maſtich and Gum ammoniak diſſolved in Wine each half a dram, Sugar diſſolved in the beſt Wine, and Juyce of Flower de-luce one ounce, boil them to Lozenges, if Turbith or Diagredium be added they will purge the more

Theſe altering Medicines which are in the cauſe of weakneſs of the Liver, muſt be ſuch as repair the Native heat which is loſt: and ſuch as are proper for the parts, rather temperate then hot, or cold. In Obſtructions we uſe openers and abſtergents or cleanſers the ſtrongeſt in the Spleen, adding alwaies ſome things which gently bind both for the Liver and the Spleen to ſtrengthen them, or that can open Obſtructions by propriety, as Endive and Succory which open and cool, the opening Quality appears by the bitterneſs. To theſe add things againſt the ſtone if there be a ſuſpicion of the ſtone in the Bladder.

For Hardneſs and Tumors we uſe Emollients, mixing alſo thoſe things which diſſolve and conſume what is mollified, or uſing them by turns: which Emollients, if a hard Tumor which may be converted into an Impoſthume be in the parts will be alſo good when it is ripe. Beſides theſe in Diſeaſes of the Spleen, we uſually mix things that diſcuſs wind, becauſe the ſpleen is eaſily diſturbed with wind, and ſometimes ſwoln therewith. And this Opinion was becauſe the wind was in the Hypochondria, Stomach or Neck as I ſhewed, therefore if the Liver or Spleen be ſtopped or hard, and there be wind in thoſe parts you may mix the aforeſaid. But theſe are given in divers forms, ſometimes ſimple or ſolide, ſometimes mixed.

Among the liquid things which are drunk are divers Decoctions, which are ſo taken or boiled into ſyrups and ſo kept for uſe.

We boil in Broaths the Roots and Herbs of Parſley, and Fennel, Spriggs or roots of Aſparagus, Graſs, Veiches, Melonſeede and in the Spleen Purſlain.

Phyſical Decoctions which may be taken before for preparatives to Purges, or after, which open the Obſtructions of the Bowels are divers as follow.

The uſual Decoction which is kept in form of a ſyrup is of the two Roots ſo called, of Parſley roots and Fennel roots with Sugar.

Of the five opening Roots you may make it thus. Take of Smallage roots, or Marſh, Smallage of the Chops of Parſley roots or true Smallage, of the Chopps of Fennel roots ſteeped in Wine each two ounces, of Graſs roots, Aſparagus and Butchers Broom each one ounce: make a Decoction with Sugar or Syrup.

Alſo thus, Take of the five opening Roots each one ounce, or Orris, Liquoris, Calamus, Elicampane each half an ounce, of Endive, Succory with the roots, Dandelion with the roots, Maudlin, Germander, Groundpine, Veronica each one handful, of Elder-flowers one pugil, of the four cold great ſeeds three drams, of Endive and Purſlain ſeed each one dram and an half, Aſparags ſeed one dram, of Aniſe-ſeed two drams, of Fennel, Smallage and Parſley ſeeds one dram, of Raiſons ſtoned one ounce and an half, of red or black Veiches one pugil: boil them in Water with the third part of Wine, eſpecially if the Roots were not ſteeped in Wine, and in the ſtrained Liquor add Sugar as much as will ſweeten, for ſome doſes, and aromatize it with Cinnamon one dram, Spike and Shenanth, each half a dram: make an Apozem, or boil it to a ſyrup with more ſugar and keep it for uſe.

This will be better for the ſpleen, if you add to ſome or all the aforeſaid; Barks of Cappars, Tamariſk, or Aſh, ſcraped from the outſide each one ounce, of Aſarum and Madder roots half an ounce, of Maiden-hair or Goldylocks, Celtarach, Dodder, both Bugloſſes, Fumitory, Hops each one handful, the Flowers of both Bugloſſes, Tamariſk, Broom each one pugil, of Agnus Caſtus ſeed or Rue, one dram: mix them with the reſt for a Decoction when we will open more violently we uſe bitter things, as Birthwort roots, Squills prepared, Wormwood, Horehound, Topps of Centaury.

If the ſtomach be alſo weak, or windy, you may add the roots of Maſterwort, Calaminth, Mints, Marjoram, Roſemary, Polymountain, Carua ſeeds, Cummin, Bay-berries, alſo Maſtich.

The Decoction of the roots of Fern, Rhapmick, Eryngus, Valerian, Chamælion, Carduus, Oſiers, five leave Graſs, Wild-ſage, Alkanet, Lovage, Water-lillies, alſo the herbs of St. Johns-wort, Scordium, Mouſear, Burnet, Dropwort, with the roots, Pine leaves, Capar ſeeds, Woodbine, Spurgewort, ſquare Parſley, Rocket, of which one or more may be boiled or mixed with the former Decoctions.

If there be fear of a Dropſie, add Ivy-berries, Gum Lac and things that purge water, as ſhall be ſhewed in the Dropſie.

In Hardneſs and Scirrhus the ſame things are good adding ſome ſoftners, as Althea roots, Mallows, Violets, Figs, Chamomel and Meliot flowers and the like.

Some ſyrups are made of the Juyces of Plants, as of ſharp Juyces, when there is heat, and Drought, ſyrups of Sorrel, and Vinegar, made of Vinegar water and ſugar.

The ſimple Oxymel is made of Vinegar, Honey and Water, the Oxymel of Squills of vinegar of Squills, Oxyſaccharum is made of Pomegranate Juyce, Vinegar and Sugar.

Theſe Syrups are in uſe which are compounded of the Decoctions and Juyces which are ſharp.

That of the five roots of Meſue. Take of the Decoction of the five opening roots, Sugar and Vinegar.

Oxymel ſimple is made of Vinegar, Honey and Water, and compound of the Decoction of Smallage, Parſley, Fennel, Butchers broom, Aſparagus roots, of Smallage, Fennel and Parſley ſeeds.

The Oxymel that provokes Urine. Take beſides the Vinegar, Honey, the Decoction of the roots of Smallage, Parſley, Fennel, Raddiſh, Aſarum, Lovage, Broom flowers, ſeeds of Fennel, Parſley, Aſparagus, Butchers broom, Coriander, Cummin.

The Compound Oxyſaccharum of Nicolas *is made of the juyce of Pomegranates, in which are infuſed roots of Fennel, Aſparagus, Butchers broom, Graſs, Maiden-hair, Harts Tongue, Golden locks, Ceterach, Liver-wort, Violets.*

Compound aceteſus or ſyrup of Vinegar is, Take *Vinegar-water and ſugar, which is the ſimple, and beſides theſe roots of Fennel, Smallage, Endive, Aniſe ſeeds, Fennel-ſeeds, Smallage and Endive,* ſome add *the Juyce of Endive, Smallage, Liquoris, Roſes and Spike.*

The Byzamine ſyrup Compound of Meſue *is,* Take *of the aforeſaid ſyrup of Vinegar with Aniſe ſeed, Fennel and Smallage ſeed, Juyce of Endive, Smallage, Liquoris, Roſes, Spike and Juyce of Hops and Bugloſs.*

The uſual ſyrups are made *of bitter Juyces of Endive, and Juyce thereof boiled with ſugar.*

Of Fumitory ſimple, with the Juyce thereof and ſugar, of Hops, of the juyce of them, of Fumitory and ſugar.

Byzantine ſimple of Meſue, *is made with the juyce of Endive, Smallage, Hops, Bugloſs and ſugar.*

In like manner other Syrups may be made of Juyces and named from them, *as of the Juyce of Smallage, Parſley, Fennel, Maudlin,* and other openers proper for the Bowels.

The ſyrup of the juyce of Water creſſes, and Brook-lime aromatized with Saffron and Cinnamon and made ſharp with a little Roſe-vinegar, is excellent to open Obſtructions.

Simples Compound of Juyces and Decoctions are theſe in uſe, the three firſt for the Obſtructions of the Liver, the three laſt for the ſpleen, the two laſt purge.

The Compound *ſyrup of Endive is made of the Decoction of wild and garden Endive, Liver-wort, Bugloſs, Lettice, Maudlin, Balm, Cordial flowers, great cold ſeeds, white and red Sanders, the juyce of Endive, Pomegranates and ſugar.*

The ſyrup of Succory with Rhubarb and its Correctives, of Spikenard, of Nicholas *is made of the Decoction of wild and garden Endive, Succory, Dandelion, Sow Thiſtle, Liver-wort, Lettice, Fumitory, Hops, Maiden-hair, Alkekengi or winter Cherry, Ceterach, Fennel, Smallage and Aſparagus roots, Barley and ſugar.*

The ſyrup of Eupatorium Meſue *with Rhubarb is thus made.* Take *of the Roots of Smallage, Fennel, Endive, Liquoris, white Thorn, Rhubarb, Aſarum, Dodder, Wormwood, Maiden-hair, Eupatorium or Maudlin, Flowers of Roſes, Bugloſs, ſeeds of Anniſe, Fennel, Schænanth, Spike, Mace, Maſtich, juyce of Smallage and Endive.*

Syrup of Harts Tongue is made of the Decoction of Harts-tongue, both Endives, Liverwort, Dodder, Wormwood, Maiden-hair, Flowers of both Bugloſſes, Roots of Fennel, Parſley, Butchers broom, the great cold ſeeds, Mace, Spike, Caſſia Lignea, Gum Lac and ſugar.

The Compound ſyrup of Fumitory is made of the Juyce of Fumitory, the Decoction of Myrobolans, and ſugar, Dodder, Wormwood, Violets, this is called the leſſer ſyrup. To the greater they add purging things, *Epithimum, Polypody, Tamarinds, Prunes, Raiſons, Liquoris, Flowers of both Bugloſſes, Roſes, and pulp of Caſſia,*

The ſyrup of Epithimum of Meſue *is made of the ſame things with Fumitory, the greater, except Caſſia, adding Agarick, Time, Calamints, French Lavender, Aniſe ſeed, Fennel ſeeds and Sapa, or boiled Wine.*

Some Juyces may be ſtrained and drunk crude, but they are better in ſyrups.

Wine alſo if clear and thin, eaſily makes way and opens Obſtructions.

Theſe are very good Phyſical Wines by infuſion or maceration of ſome things with a little boyling in a double Veſſel, as of Wormwood, ſome ſteep it in a little *Aqua vitæ* to take away the Bitterneſs, or burn the *Aqua vitæ* ſo ſteeped and quench it again before the ſtrength is gone.

Tinctures of ſpirit of Wine and Aqua vitæ are made alſo of Zedoary, Maſterwort, and Saffron, which altogether or alone are given with good ſucceſs, or make this.

Take *of Succory, Smallage, Orris each one ounce, of Wormwood two drams, of Groundpine, Germander, Maudlin, Marjoram each one dram, of Fennel ſeed one dram and an half, of Parſley ſeed one dram,* to theſe being dryed and cut add five pints of Wine.

And if you will have it for the ſpleen; Take *the barks of Capar Roots, the Middle Rinde of Tamariſk, Aſh, and Elder each ſix drams, of Ceterach, Broom flowers, and Elder flowers, and Agnus Caſtus ſeeds each one dram:* they may be ſteept in Vinegar before they are put to the reſt, or you may add Vinegar to the Wine in the Decoction.

It will be better though very bitter, if you add *of the tops of the leſſer Centaury one dram, or of Gentian or Birthworth Roots two drams, of Aſarum Roots one dram, or as much of Squills prepared.*

You may alſo add other things mentioned in the Decoctions, *as Roots of Rhapontick, Fern, Valerian, the bark of an Aſh, Madder, Calamus, and the like;* which being dry keep their Vertue, or you may make Wine of theſe only.

Wine of Rayſons is ſaid by a Propriety to help the Liver, and ſtrengthen it being weak, and this doth reſemble in part the Colour and Taſt of ſweet Wine. Take *of the ſmaler Rayſons five pound, of Cinnamon bruiſed two ounces,* put them into a Veſſel and pour upon them ten meaſures of boyling hot Water, ſtop it up till it work, to this you may add the opening Roots that are not unpleaſant in taſt.

Like to this is made an excellent Drink to open Obſtructions *of Juniper-berries, and Juniper Chipps, to which if Currance* be added it will be better.

Wine of Steel in which ſteel was quenched, is of the like Vertue, and is chiefly for the ſpleen, or which is beſt. Take *half an ounce of Steel prepared with Vinegar, infuſe it in three or four pints of Wine: or if the Pouder of ſteel* be added to the aforeſaid Phyſick Wines.

It is thought that if you drink Wine that hath been infuſed ſometimes in a cup made *of Tamariſk* or *of Aſh,* it will open Obſtructions, eſpecially of the ſpleen.

Diſtilled waters of Smallage, Wormwood, Centaury the leſs, Gentian Roots, and of other the like are good either of themſelves, or to drink after an Electuary.

The *Chymiſts* ſay, that a water diſtilled from *Vitriol* and *Tartar* and a double quantity of Flints calcined to Pouder, and burried in a cave till they are diſſolved, if it be thrice caſt upon the Ingredients and diſtilled, a ſpoonful will open Obſtructions in the Dropſie to admiration.

Spirit of Tartar and of Salt is highly commended for old Obſtructions.

Oyl of ſweet Almonds if drunk doth mollifie the Hardneſs of the Bowels, and *of bitter Almonds* (which alſo opens Obſtructions) *alſo Oyl of Olives, Lineſeed, Seſamine, baſtard Saffron.*

Other Liquors drunk which are made by infuſion *as Lyes or Lixivia,* ſuch as are mentioned in the Dropſie Aſcites, by piercing and cleanſing take away Obſtructions.

The Urine of a Man drunk by cleanſing and piercing, opens Obſtructions, as we ſaid Lyes do.

Alſo water wherein ſteel or Iron is quenched as we ſaid of ſteel wine.

Sharpe Vitriol waters which are Natural, if drunk cure old cachexyes, and this is uſual, and is the reaſon why people flocks ſo much unto them; drinking them faſting Morning and Evening to twenty or thirty daies, riſing every day a pint till they have drunk a Gallon at once if poſſible; by the uſe of which either they purge much black Matter; or if they exerciſe preſently after they ſweat much: which ſweats not only that water drunk cauſeth cure, it frees from Obſtructions, being piercing by its ſharpneſs and gets into the Meſeraiks and the Veſſels of the Bowels, and carryes the Filth thereof by ſtool, the thinner part by Urin and ſweat.

Of Meats and Sauces, that bread is beſt which is made with *Parſley ſeeds and Eggs, or Roſemary, or Fennel ſeed, herbs, made into Salſes of the ſame being boyled, with Butter and Vinegar,*

Vinegar, among the which Beets with Muſtard and Vinegar is chiefly commended, Water, Parſley and Fennel Roots, the Spriggs of Aſparagus, and the ſmaleſt Crops of the black Vine boiled and eaten are the like.

Pickled Cappars are uſed moſt for the Spleen.

And bitter Almonds often eaten: boiled Orobus and Lupines with Rue and Pepper, as Dioſcorides.

The often uſe of Rayſons are ſo proper for the Liver, that they are ſaid to make people fat, by increaſing of Blood; albeit other ſweet things are hurtful to the Liver, and make it ſwell.

The Liver of a Wolf, Hare, Gooſe and Snails are alſo commended.

Theſe Conſerves are commended *of Succory, of Flowers and Roots of Smallage, of Flower-de-luce Roots, the Roots and Flowers of Capilar Herbs, of Wormwood, Iringus Roots, of Valerian, Sea Wormwood Leaves, the Roots of Elicampane, Broom, Elder, Dwarf-elder, and Flowers of Tamariſk.*

The Juyce of Elder, Dwarf-elder, and of Juniper Berries in the form of a thick Juyce, are given either alone, or with Electuaries, they are made by Decoction of the Juyce from divers Plants, *as of Wormwood, Juyce of Flower-de-luce, and the like of Rhapontick, and juyce of Sowbread,* theſe are good when the Bowels are hard.

There are divers Pouders, ſome whereof which are ſtrongeſt, are taken alone with Wine or other Liquor, are put into other Compoſitions, and are ſometimes made into Troches; of the ſimple Plants as *of Fern Roots, Cappar Roots, Rhapontick, Birthwort, Ceterach, Dodder, Topps of Centaury, Wormwood.*

Some ſorts of Plants are good, *as of Wormwood, Tamariſk, Broom, Agrimony and the like.*

Pouders made of the parts of Beaſts, are thought to be good to ſtrengthen the Liver and Spleen, *as the Entralls of Cocks and Wolves, firſt waſhed in wine, and dryed in an Oven, till fit to be pouldered; or burnt to pouder, and made into an Anniſpodium, and given in wine or water or any convenient Liquor, or with Cinnamon or other Spices, or with Diamber, Diamoſcu, and Sugar of Roſes, or let them be given with Conſerves. The inward skin of Hens Gizards ſo poudered is excellent, mixed with the aſhes of Crabs.*

The Liver of a Wolf poudered is accounted a proper Medicine for the Liver; and of a Hare.

The Milt of a Horſe and of a Wolf, is the ſame.

The aſhes of Cockles are good for the Spleen, with the Pouder of Linſeed and Nettle ſeed, Gooſe Dung, Peacocks Dung, dryed, to which they put other things that they may not be known.

The Pouder of Steel infuſed in Vinegar or Wine, and Vinegar, with Sugar and Cinnamon, is excellent in Obſtructions eſpecially of the Spleen; with Sugar, Cinnamon and Gooſe dung, alſo the Pouder of ſteel from a Grindſtone is excellent becauſe it is finer: or if it be waſhed with Aqua fortis and brought into very fine, yellow Pouder called Crocus Martis, but it muſt be often waſhed to take away the force of the Aqua fortis.

If the Steel pouder be ſteeped in ſtrong Vinegar, or Juyce of Lemmons, till it be turned to ruſt, this is the beſt; or thoſe ſcales which fall from a Gad of ſteel quenched in Vinegar.

Matkiolus commends the Quinteſſence of Iron.

Dioſcorides commends *the Cyprus whetſtone and the Foam of the Sea hardned, alſo Coral.*

The uſual Compound Pouders of which Troches are made or Electuaries; are the Pouders *of the Troches of roſes of* Meſue or Galen. *Alſo* Nicolas *his pouder of Saffron, of Wormwood of* Meſue, *of Rhubarb of* Actuarius, *of Agrimony of* Meſue *and* Actuarius, *of Capars of* Meſue *and of Harts-tongue and Lacca; and theſe Species for Electuaries, as Dialacca, the greater, of* Meſue, *and the leſſer, and both Diacurcumas.*

Of theſe Pouders are made by taking thoſe which are moſt for the purpoſe, and are given either with Liquor or made into Lozenges, to be kept with *Sack, Juyce of Agrimony, Wormwood or Fennel, or Endive or Syrups, or with Sugar or Honey made into Electuaries,* theſe Pouders are made as followeth.

The firſt. Take *of red Roſes, two drams, of Wormwood one dram, of Cinnamon or Caſſia Lignea two ſcruples, of Spike and Schænanth each one ſcruple, of Maſtich half a dram.*

Inſtead of this you may give *the Troches of Roſes* according to *Meſue,* they have the ſame things and are made up with *ſyrup of Agrimony.*

It will be better with *one ſcruple of Myrrhe, and half a ſcruple of Saffron,* of which *Galen* makes his *Troches of Roſes and Schænanth.* And *Nicholas* makes *his Troches of Saffron* after this manner.

The ſecond is; Take *of Rhubarb two drams, of Aſarum Roots and Madder each half a dram, of ſea Wormwood, or common Wormwood one dram, of red Roſes two ſcruples, Anniſe ſeed one dram, Smallage ſeed half a dram, Spikenard one ſcruple:* make a Pouder.

Of theſe are made that *Troches of Rhubarb, of* Meſue, *with bitter Almonds, and Juyce of Wormwood or Fennel, or Dodder water, or the Troches of Wormwood* according to *Meſue* which are like *the Troches of Rhubarb,* only they want *Dodder Roots,* and have *Maſtich, and Mace,* and are made up with *the Juyce of Endive, or the Troches of Agrimony,* which have *Rhubarb, Aſarum, Roſes and Annis ſeeds* as the former, and have beſides *burnt Ivory, or Spodium and Manna,* made up with *the ſyrup of Agrimony.*

The third is; Take *of Gum Lac one dram and an half, Maſtich, Bdellium or Myrrh, each half a dram, Rhubarb one dram, Madder roots, and Aſarum roots each half a dram, and Birthwort and Gentian each one ſcruple, of Anniſe ſeed and Fennel each one dram, of Smallage and Anniſe ſeed each half a dram, of Saffron one ſcruple, of Cinnamon or Caſſia Lignea half a dram, of Spike and Schænanth each half a ſcruple:* make a Pouder.

The Compoſition *of Dialacca major* Meſue hath the ſame things and beſides *Coſtus, Savin, Hyſop, bitter Almonds, Pepper, Ginger,* and may be uſed inſtead of the other. And they are made into *an Electuary with Juyce of Wormwood or Agrimony, and Honey.* There is a leſs *Dialacca* made only *of Lac,* Myrrh, *Bdellium, Rhubarb, Coſtus,* Madder, *Birthwort, Liquoriſh, Saffron, Schænanth or ſweet Ruſh, Pepper and Honey, and the Troches of Lacca* by Meſue are made *of Lac and Rhubarb,* and a few other Ingredients. And we uſe theſe leſſer Compoſitions ſafer then the great, bycauſe it is too hot by reaſon of the ſpecies; yet it is good in Dropſies.

There is alſo another Compoſition good in a Dropſie called *Diacurcuma* Meſues or *Diacrocuma,* becauſe it hath great ſtore of Saffron, that it may be better againſt the Obſtructions of the Liver, eſpecially of the Gall in the Jaundies, which Saffron doth open. This is very proper which hath ſomthings like *Dialacca, as Saffron, Rhubarb, Aſarum, Coſtus,* Madder, *Aniſe, and Smallage ſeed, Spike, Schænanth, Caſſia Lignea, Cinnamon,* Myrrh, and beſides *Spignel, Valerian, Calaminth, Scordium, Ceterach, Parſley ſeed, Carrot ſeed, Juniper-berries, Carpobalſamum, Traganth, Opopanax, Juyce of Liquoriſh, Wormwood and Agrimony,* made into an Electuary.

The leſſer *Diacurcuma* is made only *of Saffron,* Myrrh, *Coſtus, ſchænanth, Caſſia, Cinnamon and Honey.*

The fourth Pouder, moſt proper for the ſpleen is this. Take *of Capar roots three drams, of round Birthwort one dram, of Gentian half a dram, Ceterach one dram and an half, of Broom flowers, half a dram, Agnus Caſtus ſeeds one dram, Rue ſeed half a dram, of Gum Ammoniack one dram;* which infuſed in Vinegar will make them into Troches.

Inſtead of this uſe *Troches de ſcolopendrio that is of Harts-tongue,* which have the ſame, or *the Troches of Capars* according to Meſue which have alſo *Acorus, Cummin, Calaminth, Nigella ſeeds, and of Water-creſſes, bitter Almonds, Juyce of Agrimony.*

Of theſe and other Pouders for the Liver and ſpleen, you may make others by adding of other Ingredients as, Take of ſome of the former for your turn, *one dram and an half of the ſpecies of the three Saunders or Diarhodon one dram,* or inſtead of it *of the three ſaunders half a dram, of the four leſs cold ſeeds one ſcruple, of Ivy berries two ſcruples, of the aſhes of the*

Guts of a Cock or of a Wolf one ſcruple, Cinnamon half a dram: make a Pouder, give it alone or with *Sugar*; *or in Lozenges, with Sugar diſſolved in Wormwood water, or Dodder water.*

I cannot paſs by my cachectick Pouder by reaſon of the happy ſucceſs it hath had in the evil Habite of Infants accompanied with a gentle Feaver, it is uſual given by the ſhops: it is as followeth.

Take *of the Roots, and cleanſed ſeeds of Piony, one dram, of red Roſes half a dram, of Nutmeg a little torrified two ſcruples, of Bay-berries a little dryed by the fire half a dram, of Spike and Schænanth, and Saffron each one ſcruple, of the skins of Hens Gizards prepared one dram, of opening Crocus martis one dram and an half, of the beſt Cinnamon one ſcruple:* make a fine Pouder.

The Troches of Myrrh open Obſtructions and provoke the Terms, they are given alone or with other Pouders.

To theſe, when the ſtomach is diſtempered you may add *the ſpecics of Diagalangal, Diacalaminth,* and to ſtrengthen it, *Diambra.*

Of theſe, Liquors, and Pouders and the like are made Potions, Electuaries and Pills.

Potions are made like Juleps by mixing ſyrups with waters, baths to prepare before purging and to alter, as *of Succory, Endive, Liver-wort, Agrimony, Dodder, Hops, Fumitory, both Bugloſſes, Tamarisk in the ſpleen.*

If there be any heat and thirſt give this Julep.

Take *of ſpring Water three pints,* to theſe add *ſtilled waters and one quarter of a pint of Pomegranate wine, of white wine vinegar two ounces, of Sugar or Honey three quarters of a pound clarifie it for uſe:* and you may boil them a little.

Or make this Julep. Take *ſome Juyces of the aforeſaid Herbs one ounce and an half, of the diſtilled water of the ſame twice as much add Sugar to clarifie and Cinnamon to aromatize it,* and you may put ſharp Wine thereto.

The milk like Potion made of Turpentine, or Roſin of the Larix-tree, or Fir-tree one or two drams diſſolved in white wine, and the Yolk of an Egg, doth not only cleanſe the Reins, but opens the Liver and Spleen, and purgeth the Belly.

There are Divers Electuaries for the ſame as,

In the Obſtruction and Weakneſs of the Liver; Take *of the Conſerve of Succory flowers, and the candied Roots of the ſame each one ounce and an half, of the Conſerve of candied Roots of Smallage one ounce, of the pulp of Raiſons, boyled a little, two ounces of the ſpecies of the three Saunders one ſcruple:* make an Electuary.

If you fear a Dropſie; Take *of the conſerve of Succory flowers one ounce and an half, Conſerve of Smallage roots, one ounce, Conſerve of Broom flowers half an ounce, the boiled juyce of Danwort or Elder one ounce, of bitter Almonds ſix drams, of Melon ſeeds cleanſed one dram, of the pulp of Raiſons one ounce and an half, of Ivory, and Harts-horn ſhavings half a dram, Aſarum roots two ſcruples, of Spike, and of the aſhes of the inteſtines of a Cock, or Wolf or of Earth worms each one ſcruple, of ſyrup of Wormwood ſix drams:* mix them for an Electuary.

In the Diſtemper of the ſpleen.

Take *Conſerve of Maiden-hair, Ceterach, and of flowers of Tamarisk each one ounce and an half, conſerve of Broom flowers one ounce, the Bark of Capar Roots one dram, Purſlain, and Agnus caſtus ſeeds each half a dram, with the ſyrup of the five opening Roots, make an Electuary;* you may add *half a dram of the Pouder of ſteel, and after let ſome water be drunk* that is good againſt the ſpleen.

There is another called the *Cyphoides of Androchus* proper againſt the Weakneſs of the Liver, it may be called the Electuary *of Raiſons made of Raiſons, Bdellium, Myrrh, Turpentine, Honey, Wine, Calamus, aſpalaton, Caſſia, Cinnamon, Schænanth, Spike, Saffron,* and ſome by adding *ſeeds of Henbane, and Opium,* make an Opiate thereof.

We make an Electuary of Raiſons like it, thus; Take *a quarter of a pound of ſtoned Raiſons, boil them in wine adding three ounces of Honey, then beat them to a Pulp, and add the pouder of Calamus, Cinnamon, Caſſia each one dram and an half, Spike and Schænanth each half a dram, of Saffron one ſcruple:* make an Electuary.

The Confection *of Raved ſene of* Meſue, is good againſt Obſtructions; it is made *of Rhubarb, Juyce of Wormwood, Agrimony, bitter Almonds, Fumitory, Aniſe ſeed, Smallage ſeed, Spike, Saffron, Caſſia Lignea, Schænanth, Myrrh and Honey.*

Alſo this Decoction of Meſue made *of Coſtus, Birthwort, Rhubarb, Aſarum, Caſſia Ligna, Cinnamon, Smallage and Aniſe ſeed, Schænanth, Myrrh, Saffron and ſugar.*

The Electuary of Pouder of ſteel by Rhaſis is good in the ſpleen *of Myrobalans, and prepared ſteel, Fankincenſe, Spike, Schænanth, Ammi, Honey, Ginger Pepper.*

Pills may be made of the Pouders that are unpleaſant and ſo ſwallowed or a in Bolus.

Or thus, Take *of the Liver of a Wolf prepared one dram, of the aſhes of the Guts of a Wolf, or Cock half a ſcruple, of dryed Goose, or Pigeons Dung one ſcruple, with the Juyce of wormwood: make a Maſs.*

Let him take it often, you may add the Pouder of ſteel.

You may make *Extracts of bitter Juyce and ſo ſwallow them,* or rowl them in Pouders if too ſoft, thus, Take *of the Extract or inſpiſſate Juyce of Gentian roots, or of the Topps of Centaury the leſs, and of Wormwood:* mix them with the *Pouders of Aſarum roots, half a dram, of Smallage and Parſley ſeeds each one dram, of Spike and Schænanth each one ſcruple.*

When there is Hardneſs of the Bowels or an Obſtruction *half a dram of Ammoniacum or two ſcruples diſſolved in Oxymel, or Vinegar of Squills, or Juyce of Flower-de luce, or Briony,* is an excellent Bolus.

You may mix other things therewith as, Take *of Gum Ammoniack diſſolved in Juyce of Flower-de-luce one dram, of the Pouder of Fern root half a dram, of Leaves of Ceterach and Agnus Caſtus ſeed, each one ſcruple, of ſteel prepared half a dram, of a Wolfes Liver prepared one ſcruple, with Oxymel or the Gall of a Bear,* (which doth excellently diſſolve Hardneſs) make a Maſs *of Pills, give two ſcruples at a time.*

Other Gums given as the former do the ſame thing as *Galbanum, Bdellium, Sagapen, and Pine Gum, alſo Lacca* when the Cachexy tendeth to a Dropſie, taken with *Opopanax.*

In Obſtructions of the Spleen, Take *of Pine Gum half a dram, of Miſſetoe of the Oak one ſcruple, with wax make Pills.*

Maſtich, Myrrh, Storax are given alſo with other things alſo *Aſphaltum or true Bitumen, and Get.*

Or theſe Pills may be uſed rather then the bitter Electuary. Take *of Myrrh and Bdellium each two drams, Saffron half a dram, Spike and Schænanth each one ſcruple, with Turpentine make Pills.*

Outwardly, if the Cachexy comes from the weakneſs of Liver or Spleen, or from their Hardneſs, you muſt apply Medicines to the Hypochondria under the ſides, if the Liver be worſt to the right ſide, if the Spleen to the left, more backward becauſe the Spleen lyes under the ſtomach and more upward becauſe the left kidney lies under the ſpleen; ſometimes to the whole Belly if the ſtoppage be in the Meſeraiks, or if the Glanduls of the Meſentery be hardned, they muſt be ſuch things that will diſſolve Obſtructions by attenuating and cutting, or if there be Hardneſs you muſt firſt mollifie, then diſcuſs, chooſing the ſtrongeſt if the ſpleen be diſtempered, becauſe the ſubſtance of it is more compact; adding ſomthing proper to ſtrengthen, by gentle aſtriction: and if there be wind, which is moſt uſual in the left ſide, from the ſtomach rather then the ſpleen whoſe ſubſtance cannot be filled with wind, you muſt uſe things that diſcuſs it, and ſtrengthen the weak ſtomach, for which there are divers uſual Remedies.

There are divers Oyntments eſpecially in the Obſtructions of the Liver. Take *Oyl of bitter Almonds, and of Spike, each one ounce and an half, Oyl of Wall-flowers one ounce, Oyl of Roſes or Maſtich half an ounce, Juyce of Smallage, Parſley and Vinegar each half an ounce: boyl them till the Juyce be conſumed, add Aſarum Roots, Smallage or Parſley ſeeds each one dram, of all the Sanders half a dram, of Spike*

and Schænanth each a ſcruple: you may add Pouder *of Cypreſs Roots, or red Roſes, and as much Wax as will make in Oyntment.*

The Oyl in which the Liver of a Wolf ſliced hath been boiled, uſed to the Liver ſide doth ſtrengthen it, and help its Sanguification, and an Oyl made of the Liver of thorn black or ſcale Fiſh doth the ſame.

In the Obſtruction of the ſpleen make it thus, Take *of Oyl of Capars two ounces, of Wormwood and bitter Almonds or Peach kernels, Juyce of Danwort and ſtrong Vinegar each one ounce, of the Pouder of Birthwort Roots, Aſarum and Agnus Caſtus ſeeds each half a dram, of both Spikes each one ſcruple, of Wax as much as will make an Oyntment.*

Or boil them in two parts of common Oyl and one part of Wine, and half a part of Vinegar, the flowers or leaves of Tamariſk, Capar Roots, Genian, and Ceterach, and make an Oyntment.

In the Scirrhus eſpecially in the Liver, Take *of Oyl of Lillies, Flower-de-luce each two ounces, Oyl of ſweet Almonds, Chamomil, Dill or of Melilot each one ounce and an half, of Hens or Ducks Greaſe, the Marrow of a Calf or Deers ſhank each one ounce, of the Juyce of Flower de luce two ounces, of the Juyce of Smallage, or Parſley one ounce, of Gum Ammoniack diſſolved in Vinegar ſix drams, boil them till the Juyce be conſumed, and add the Pouder of Sowbread and Briony Roots each one dram, of Aſarum Roots, half a dram, of Spike one ſcruple, of Wax as much as will make a Liniment.*

That Oyl wherein the Roots of wild Cowcumbers, Briony, Sowbread, Lillies have boiled with a little Wine and Vinegar is excellent.

If the Spleen be hard, Take *Oyl of Flower-de-luce three ounces, of Capars one ounce and an half, Juyce of Mercury, Danwort, or Elder and Vinegar each one ounce, of Gum Ammoniack diſſolved in Aqua vitæ, Bdellium and Galbanum each ſix drams, of Opopanax half an ounce: boil them till the Juyces be conſumed, add the Pouder of wild Cowcumber Roots, of Sowbread Roots, each one dram, of Aſarum Roots half a dram, of Wax as much as will make an Unguent.*

Or, Take *of Sowbread Roots one ounce, of Briony Roots half an ounce, of Capar Roots two drams, of Aſarum Roots one dram, of Spike half a dram, of Bay-berries two drams: bruiſe and boil them in equal parts of Wine and Vinegar,* Take *of this Oyl four ounces, of the Mucilage of Line ſeed and Fœnugreek ſeed each one ounce, of Gum Ammoniacum diſſolved in Aqua vitæ one ounce, of Liquid Storax one dram, of Hens Greaſe one ounce, of Wax as much as will make an Unguent.*

The Emplaſter of Ammoniacum with other Gums, diſſolved in ſtrong Vinegar, and applyed hot to the Spleen, doth mollifie the Hardneſs of it, and with a little Oyl of Spike it pierceth better.

The uſual Oyntments for hard Bowels, and Emplaſters are the Oyntment of Marſh-mallows, the Emplaſters of Melilot, theſe will be ſtronger if the aforeſaid Gums be added. alſo the Emplaſter *Diachylon with the Flower-de-luce, Oyl and Gums, Ceronium, and Polyarchon, Galeni.*

Cataplaſmes are uſed chiefly for the Hardneſs of the Spleen, which when we will have them ſoften exceedingly; we make *of Lilly Roots, Onions, Garlick, Squills, Briony, Sowbread, dragons, Flower-de-luce, Raddiſh, Line-ſeed, Fœnugreek, Colewort leaves, Ivy, Wormwood, Centaury, Elder flowers, Melilot, Chamomil, Figs, Raiſons, boiled in Wine, Vinegar and Oyl, with Meal of Vetches and Lupines,* and for the ſpleen, *Capar Roots, Ceterach, Tamariſk;* and when we diſcuſs, *Wood, Arſmart, wild Germander, Dogs Tongue, Nettles, Penny-royal* · boil them all in *Vinegar and Oyl, and* beat them up with the *Meal of Lupines.*

The Root of Mandrake boiled in Oyl of Line-ſeed, and of ſweet Almonds and Vinegar is an excellent Remedy, and *Hemlock, and Henbane* ſo applyed, *alſo Lilly Roots* ſo boyled and beaten, to which you may put proper Gums, Oyls and Pouders.

The Spleen of a Fox or Goat applyed to the Spleen either whole or bruiſed, is thought good. The Blood which comes from the Vein behind the Ears doth cure the ſpleen, ſay the Antients.

The Grindſtone or Fire ſtone or other hard flinty ſtone red hot, and quenched in ſharp Vinegar, and wrapt in cloaths, if applyed often to the ſpleen will mollifie it; or if the vapor that riſeth from the ſame being ſprinkled with Vinegar be taken into the cloaths and applyed to the ſide, it will do the like.

The ſtone called *Aſius* or *eat-fleſh* mixed with Quicklime and Vinegar is commended by *Dioſcorides* to be apto the ſpleen for ſtoppage of the Liver: we make Fomentations thus, Take *Wormwood, Agrimony, Topps of Centaury each one handful, of Aſarum Roots half an ounce, of all Sanders thirteen drams, of Spikenard and Schænanth, each one dram, of Smallage ſeed and Dodder, each one dram and an half,* make a Decoction in equal parts of wine and water for a Fomentation.

For the ſpleen ſtopped, we make Decoctions *of Water, Wine and Vinegar, of Capar Roots, Aſh Bark and Tamariſk, Elder, Wormwood, Ceterach, Dodder, Chamomel and Broom flowers, Tamariſk and Elder flowers, Purſlain ſeeds, Agnus Caſtus, Fennel and Smallage ſeeds,* adding a little *Cypreſs root, Spike and Schænanth, and the Juyce of Smallage.*

For Hardneſs and Schirrus we make Decoctions *in wine, water and Vinegar, or Tripe Broath, of theſe Plants, Marſhmallow roots, Lillies, Briony, Flower de-luce, Althealc, Elm, Mallows, Marſh-mallows, Herb Robert, Horchound, Wormwood, Chamomil and Melilot flowers, Dill, Elder, Violets Linſeed and Fœnugreek, Figs and Raiſons, with Roots of Aſarum and Spike,* and if you muſt mollifie more *the Roots of wild Cowcumber, Sowbread, Mandrakes,* if diſcuſs more, *Calaminth, Penny-royal, Organ, Balm, Time, Stœchas or French-Lavender flowers, or Lavender,* if it be in the ſpleen, you muſt mix ſome of the former Fomentation, which is better, *with Juyce of Briony,* or *Flower-de-luce.*

Fomentations made for the ſpleen to ſoften it *of the juyce of Sowbread, wild Cowcumber, Smallage and Oyl of bitter Almonds, or of Capars, with wine and Vinegar, either very ſharp or of Squills.*

Or if you quench Marcaſites in Vinegar and wet in a cloath or piece of a hat therein and apply it to the ſpleen it is excellent.

Epithems are good for the ſtoppage and hardneſs of the Liver and ſpleen thus, Take *of Endive and of Succory water three ounces, of Smallage water two ounces, of Wormwood water, Topps of Centaury or Gentian roots each one ounce, Vinegar of Roſe two ounces, all the Sanders one dram, Aſarum roots half a dram, Spike, Schænanth each one ſcruple.*

You may make baggs of the ſame and ſo foment.

They muſt keep a good Diet, beware of Peaſe, hard, and crude Meates, ſummer Fruits too much cold Water, eſpecially if the Cachexy came from thence, and alſo from variety of Meates; their Meat muſt be ſeaſoned with things that help concoction, preſcribed in the weakneſs of the ſtomach, in regard the ſecond Concoction doth not mend the faults of the firſt, and the Meat muſt be boiled and ſtuffed with things that open and cleanſe, mentioned in the Cachexy, among which ſugar is good not only for ſweetneſs, but cleanſing, and to be commended for one ſingular propriety which few obſerve, that is the reſiſting of Putrefaction. If it ariſe from a hot which will cauſe a dry Diſtemper in the Liver or ſpleen, which will eaſily turn to the Dropſie Aſcites, you muſt prevent it by ſtrengthening the Liver, and uſe Remedies inwardly and outwardly to open Obſtructions, with things that by cooling do ſtrengthen, eſpecially the Liver, leaſt they be hurt with too cold things therefore things that are hot and a ſittle aſtringent and do preſerve the ſtrength of the Bowels as Spike, Wormwood are to be mixed with the cold, and if there be Obſtructions we uſe opening and ceanſing means. But if now the Bowels being hard and cleft, and the Dropſie is fixed then you muſt proceed to cure it as we ſhewed in the Hydrops Aſcites, but before you muſt cure the Cachexy thus,

If there be aboundance of Excrements you muſt purge Choller eſpecially with Rhubarb and things that inflame not the Liver chooſing thoſe things which are mentioned in the firſt cauſes of a Cachexy.

For

For Alteration they boyl in Broath, *Endive, Divels bit, Succory, Lettice, ſow thiſtle*, or let them be eaten boiled in ſalets, let them eat ſharp Fruits boiled, or ſeaſon them in Meate with the Juyce, *as Juyce of Pomegranates* which after working is called *Pomegranate wine*, or *the Juyce of currance, Barberries, Grapes, Lemmons, Citrons &c.*

Let the ordinary Drink be thin, white Wine daſhed with boiled water, or if there be great thirſt let them drink water, in which Vinegar or ſharpe Juyce is mixed. The Decoction *of Succory roots*, is uſed inſtead of Drink, either alone or mixed with wine: as alſo the Decoction *of the Roots of ſorrel, Fern, and Graſs*, by themſelves or with wine, which if they are made ſharpe with a little ſpirit of *Vitriol* or *ſals*, will be more pleaſant and effectual,

This Julep is to be taken ſometimes, Take *of ſharpe Juyces one or more one quarter of a pint, Juyce of Endive two ounces, Vinegar one ounce, Roſe-water two ounces, ſugar* as much as is ſufficient boil it into the form of a Julep, ſome add a little *Camphire*, which doth good rather by penetration then refrigeration.

A Phyſical Decoction is thus made. Take *of Endive one handful, of ſorrel, Lettice, Maiden-hair, each half an handful, Tamarinds one ounce, of ſharp Prunes twelve, of the ſeeds of Purſlan, Endive, and Dodder each one dram, of the four great cold ſeeds two drams, of Barbery ſeeds one dram and an half, of Roſes and Violets each one pugil:* boil them in water, adding *two ounces of Roſe Vinegar*, and when it is ſtrained put to it ſome ſyrup of the aforeſaid Herbs, and as much ſugar as is ſufficient, and when you will make the Body looſe, put *Manna* or *Rhubarb* thereunto.

The uſual ſyrups are *of Endive and ſuccory ſimple and compound, and ſharpe ſyrups of Vinegar*, which were preſcribed in the Cure of the former cachexy, to which for cooling, you may add *the ſyrup of the Juyce of Citrons, of Lemmons, Pomegranates and the like, as the Violets, Purſlain, Waterlillies, and other of the Juyce of Currance, Barberries and other ſharp Juyces.*

Waters muſt be mixed with *the ſyrups, as of Endive, ſuccory, Liver-wort, Dodder*, with which to ſtrengthen the bowels we mix *water of Agrimony and Wormwood.*

Pouders of ſpecies, which are given by themſelves, or *in Troches, Lozenges, Electuaries, Pills* may be uſed as followeth, of which this is excellent to open Obſtructions. Take *of red and white ſanders, each one dram, of yellow ſanders half a dram, of red Roſe leaves two drams, of Violets half a dram, of the four great cold ſeeds one dram and an half, of Purſlain and Endive ſeed each half a dram, of Antiſpodium, of Ivory ſhavings two drams:* make a pouder and *with Gum Traganth diſſolved in Roſe-water or Juyce of Barberries make Troches,*

If you add *Rhubarb and Camphire* it will be like *Diatrianſantalon Nicolai*; which hath beſides the things herein, *Juyce of Liquoriſh, Gum Arabich and ſtarch*, and ſomtimes the *Rhubarb* is double in quantity: and this uſual compoſition may be uſed for the former.

There is another Compoſition of more Vertue, called *Diarhodon Abbatis Nicolai* uſed againſt Obſtructions, which is leſs hot, it hath in it *ſanders, Roſes, Violets, the four great and little cold ſeeds, burnt Ivory, Gum arabick and Traganth, Juyce of Liquoriſh, Rhubarb and Camphire, as Diatrianſantalon, and beſides Aſarum, Bar-berries, Aniſe ſeeds, Fennel, Baſil ſeeds, Poppy-ſeeds, Maſtich, Saffron, Spike, Cardamoms, Lignum Aloes, Cloves, Cinnamon, Muſk, Pearl, the Bone in in the Heart of a Hart or ſtag.*

The Troches of Diarhodon Nicolai, of Roſes, ſanders, burnt Ivory, ſaffron and Camphire, are not ſo large as the former.

And the Troches of the ſanders which are more binding, they have *ſanders, Roſes, the great cold ſeeds, Purſlain ſeeds, Bar-berries, burnt Ivory, Camphire, and Bole Armenick.*

Or other aſtringents *as the Troches of Bar-berries*, inſtead of which we may uſe theſe leſs binding, Take *of the three ſanders, add Roſes each one dram, of Rhubarb one dram and an half, of ſpodium, of Ivory one dram, of Endive, Purſlain, and ſorrel each half a dram, of Melon ſeeds one dram and an half, Camphire one ſcruple, Sugar and Manna two drams:* Make a Pouder with the infuſion *of Gum Traganth in Endive waters*; Make Troches,

The Pouder of the leaves of Endive and Succory taken often in Wine, with the ſeed of *Hatch-vetch* and a little Cinnamon to make it pleaſant, is approved.

Alſo Lozenges made of theſe ordinary pouders Diatrionſantalon and Diarhodon, and of other things with the conſerve of Succory flowers.

We make of the Juyce of Bar-berries pleaſant Lozenges which allay the Heat as, Take *of the Juyce of ripe Bar-berries, three ounces, of Sugar one pound, as much water of Endive, or Roſes* as will boil them into a conſiſtence for Lozenges.

Thus are made the Lozenges of the Juyce of currance, Pomegranates, Lemmons, citrons, and they are as good as the former.

Of theſe conſerves, and Pouders may divers Electuaries be made as, Take *of the Conſerve of Succory flowers, and the candied roots of Succory each one ounce and an half, of Conſerve of Violets, Maiden-hair and Bugloſs each half an ounce, of Melon ſeeds one dram and an half, of Trionſantalon one dram, with ſyrup of Sorrel*, make a moiſt Electuary, or make it thicker with ſugar of Roſes.

Some give Opiats to cool the Liver but to no purpoſe being hot things are therein, as Philonium.

Vitriol waters drunk for ſome weeks as we ſhewed in the cure of the former cachexy, beſides other benefits there mentioned, do cool the Liver, if they be taken in time before the Dropſie be great, and while the water is only in the Belly and Feet, but when it gets out of the Veins it wil increaſe it, eſpecially (as is uſually) if they make little Urine, and Drink much; therefore it is better for thoſe Drinkers who by their continual thirſt ſhew the heat of their Liver, before the cachexy grow great, to mix their wine with water.

The heat of the Bowels and eſpecially of the Liver, and the dryneſs alſo is cured by outward things that cool and moiſten; adding alwaies thoſe things that are aſtringent as theſe following.

A cooling and moiſtning Oyntment. *Take* Oyl of Violets, Lillies, Guords, or of Oſiers, waſhed in Vinegar or Juyce of Endive, two ounces, Oyl of Quinces, Roſes, Myrtles, or Maſtich, each one ounce; of the leſſer cold ſeeds, and of Sorrel and Roſe leaves each half a dram, of al the ſanders one dram, of ſpike one ſcruple, camphire half a ſcruple, Wax as much as will make an Unguent.

Theſe are more proper for the Liver. *Take* of Oyl of Roſes and Violets, each one ounce and an half, of Oyls of Water-lillies and Wormwood, each one ounce, of the juyce of Endive one ounce and an half, of the Juyce of Agrimony, one ounce, of Vinegar of Roſes ſix drams: boil them till the Juyces be conſumed, and add red and white ſanders each one dram, of Endive, Purſlaine each half a dram, of ſpike one ſcruple, of Wax as much as wil make an oyntment: to theſe add camphire, or Troches of camphire.

The Oyntment of ſanders is uſual againſt the Diſtemper of the Liver, which is made of the three ſanders, Roſes, ſpodium, Bole Armenick, camphire, Oyl of Roſes and Wax.

Alſo Oyl of Roſes made of Roſes and their Juyce and Oyl of ſweet Almonds: to which ſome add Opium which becauſe as we often ſhewed that it doth not cool, will do no good in that reſpect, but if there be hardneſs it wil mollifie, as we have ſhewed ſtupefactive things do.

You may alſo uſe *Refrigerans Galeni* with ſpike, you may alſo apply an Epitheme to the Liver, made thus, *Take* of Endive, ſuccory and Liver wort water each three ounces, of Violet-water, or Lettice or Nightſhade, and Roſes each two ounces, of Wormwood water, one ounce, of Roſe Vinegar, of four Wine, one ounce and an half, of all the ſanders each half a dram, of ſpike one ſcruple, of camphire half a ſcruple: mix them. Juyces of Endive and ſuccory may be added, alſo Waters of ſorrel, ſmallage, and

Dod-

Dodder, pouder of Purſlain ſeed, Endive, Smallage, and red Roſes ſeeds, burnt Ivory, and Maſtich, of becauſe the ſtomachs being ſo near to the Liver.

A Fomentation may be made with the Decoction of ordinary or ſtilled proper Water, and Roſe Vinegar or wine, with Endive, Succory, Wormwood, the four great and ſmall cold ſeeds, with Cypreſs, Spike, and Schænanth, and other Pouders mentioned.

Or theſe mentioned, boiled in a bag and ſtrained, and applyed. Alſo theſe Pouders of cold ſeeds, Violets, Roſes, Water-lillies, Spodium, and Spike tyed in a clout, and ſprinkled with proper waters and Vinegar.

Purſlain new gathered and beaten with Roſe-water, and Vinegar, with Camphire is fitly applied.

Or a Cataplaſm of Barley meal, or of Lentils made thick with Juyce of Endive, or Purſlain, and Oyl of Roſes.

In their Diet let them take heed of ſtrong wine, ſharpe Meat, ſpiced, or ſalt, let them eat moiſtning Broaths rather and fleſh ſuch as were preſcribed in the Treatiſe of Hectick Feavers, to correct the dryneſs of the Liver, which is difficult when fixed.

The Cure of the Jaundies. That Jaundies which comes from Choller, in which the whole Body is dyed; if it come from much Choler without any other Infirmity joyned, in regard Nature doth disburden her ſelf by an inconvenient way you muſt bring the Choller back into the Guts; and this muſt be done when there is a Feaver alſo adjoyned. But if it follow a Feaver, and cureth the Feaver by ſweating, you muſt help this Motion of Nature rather than hinder it. In other Diſeaſes joyned with the Jaundies, you muſt conſider theſe Diſeaſes chiefly, alwaies purging the Choller forth by proper waies, and drawing it back by ſtool and Urine, but if the ſeparation be hindered by reaſon of the Obſtructions of the Liver, Hardneſs, Scirrhus, Rottennſs, from whence cometh a Dropſie, or if there be Inflammation, you muſt cure it with conſideration of theſe; if the Excretion or voiding of Excrements be by reaſon of the Obſtruction of the *Porus Cholidochus*, we apply the ſame things which we uſe in the Obſtruction of the Liver, and if there be Inflammation the ſame.

If the Jaundies proceed from Poyſon taken, this muſt preſently be voided by Vomit, Gliſters, if from a ſtroak or bite of a Beaſt, you muſt uſe things that draw the venom out, as Cupping-glaſſes and the like, and give things that reſiſt venom, Antidotes and the like, of Harts-horn and Ivory, which alſo cure the Jaundies; and if the Colour which is but a ſymptom remain after the cauſe is removed, we take it away with Topick Medicines.

Blood-letting is good if there be much Choller in the branches of the *Vena cava*, and nothing elſe hinder, becauſe it takes away part of it; which when the blood is cold, will be ſeen by its yellow water.

Some to little purpoſe open the Veins of the Fore-head, and under the Tongue to take yellowneſs from the Eyes and Face.

Otherwiſe, when there is not much Choller in the veins, Blood-letting is of little profit in the Jaundies, except there be ſome other Diſeaſe that requires it, for when the *Vena cava* is emptied, the meſeraik Veins ſend blood and Choller the eaſier up into it. And this is to be underſtood in the provoking of Terms; for theſe come from the *Vena cava*, and if they be ſtopped in the jaundies as in a Cachexy, they will not be provoked by Blood-letting, except the jaundies be firſt cured, becauſe the ſtoppage of them comes from the jaundies, not the jaundies from them, as we ſhewed.

The Hæmorrhoids, becauſe they purge both Choller and Melancholy from the Meſeraiks, if they bleed of themſelves, or by conſtraint, are profitable.

Glyſters are excellent when the Choller cometh not to the Guts to provoke ſtools, nor diſcolloureth the Excrements: for by forcing they do not onely fetch out the Excrements, but by ſtirring up Nature, and opening, they fetch Choller from the Meſeraiks and the *Porus Cholidochus*.

Therefore firſt give emollient Glyſters, then ſharpe, and ſuch as purge Choller, (mentioned in the Colick and in Feavers) adding things that open, as Roots and opening Herbs: after uſe the ſtrongeſt, if the other prevail not, vomiting is good ſometimes, eſpecially if it come from Poyſon.

General Purges for carrying Choler out of the Meſeraik Veins where it is firſt gathered together, and ſent to the other Veins from thence, are good; theſe may be only ſuch as purge Choller, if choller alone can be purged by them, but in regard things that purge Flegm do the ſame as Experience teacheth, we muſt not ſtand much upon that, ſo long as Obſtructions are opened which are the cauſe, many ſuch Purges are preſcribed in the Cachexy that comes from the Liver, and may here be uſed, and to which theſe may be added.

Very bitter things are uſed to cure the Jaundies which come from Obſtructions, becauſe they do not only open obſtructions, but alſo they open the Mouths of the meſeraik Veins, that the choller which cannot go to the Guts by its uſual paſſages, may go that way back again and ſo may not be brought too much into the hollow Vein; therefore they give Aloes, both in form of Pills, as Pills of Hiera with the ſame quantity of Rhubarb and Agarick, that they may purge the better, or mix ſtronger with them, as Pills of Rhubarb, and Aggregative.

Or give theſe like then approved by *Galen*. Take *of Aloes half a dram, of Epithymum, or Senna, or Polypody one ſcruple, of Euphorbium, and Brimſtone each half a ſcruple, with wine or water make Pills.*

Hiera picra is given for the ſame end in a Potion, and it is beſt in the Jaundies, and to kill Worms, which ſomtimes by reaſon of the want of choller in the Excrements, being they are then leſs bitter, grow there.

Take *of Hiera picra ſimple*, (in which is *Saffron* which is thought to be proper againſt the jaundies.) *one dram and an half, of Rhubarb, and Senna each one dram, of Mechoacan half a dram, of ſhavings of Ivory, and of Harts-horn, each one ſcruple*: make a pouder, give *one dram with Whey or Wine*, and if you add *one ſcruple of Diagridium*, it will work the better.

Hiera Coloquinitidos given inſtead of the other, by reaſon of the double Bitterneſs of Aloes and Coloquintida will open the paſſages more violently, and ſtir up Nature; and therefore they give Wine infuſed in the Apple of coloquintida made hollow, or the like.

The Extract of Aloes Roſate with Rhubarb is chiefly given in a jaundze as a purge, the preparation whereof we ſhewed in the pain of the Heart, from weakneſs of the Stomach, or this, Take *of the eſſence of Aloes* preſcribed in the Chapter mentioned *three ounces, of the pouder of Rhubarb ſprinkled with Cinnamon water one ounce, of the Extract of the ſame ſix drams, and with Syrup of Wormwood* make a Maſs for Pills.

Potions are made of catholicon, Diaphænicon, of the Electuary of the juyce of Roſes, Diaprunis, Diapſyllium, diſſolved in Wormwood water, or the like, adding proper Syrups.

The Electuary of Sowbread purgeth and ſweateth.

Potions are made of the infuſion of Rhubarb, with ſpike, and cinnamon in wine or water, of Troches of Agarick in Honey with water, Syrups and Electuaries aforementioned, with purge.

Or of a preparing Apozeme, with Polypody, carthamus and Senna, in the Decoction, and then with Rhubarb, Myrobalans, and Agarick infuſed make a purging Apozeme for ſome daies.

Or the Aggregative pills, or pil aureæ alone or mixed with Pills of Rhubarb.

Sweating doth ſend the choler with the Serum or Water from the branches of the gate Vein, and alſo takes away that which was in the skin by the Pores, which maybe good

after that Choler which was in the Meſeraiks Veins, and cauſed the Jaundies, firſt is purged away, leaſt it be by ſweating carried into the Veins; and it is done by Baths and other things mentioned.

It is good alſo to provoke Urine, to bring Choler out that way, which otherwiſe uſed to colour the Urin, and is often plentifully ſo voided: which is done by things that open obſtructions, and better if Diureticks are added thereunto, Thus,

Take *of red Vetches, one pugil; of Melon ſeeds one ounce and an half, of Fennel ſeed two drams, of Dodder ſeed, one dram, of red Sanders one dram and an half, of Spike, and Aſarum roots each one dram*, boil them in convenient ſtilled water, till there remain *one pint and an half*, Take of the ſtrained liquor aromatize it with cinnamon, and yellow Sanders and ſweeten it with Sugar, for ſome Doſes.

You may uſe things that alter before and purging to prepare and open Obſtructions, and to diſſolve Tumors, if ſuch be in the Jaundies, many of them are deſcribed in the Cachexy, and they that are good for the Liver in the like caſe may be here uſed in the jaundies, the cauſes being obſerved; chooſing ſuch things as heat not over much and breed choller; beſides which theſe following are proper for the jaundies.

Decoctions made in Water or water and wine, and Vinegar are made divers waies to be drunk three or more Mornings together: as thus of many things, which may be alſo made of few.

Take *of the five opening Roots, of Dock-roots each half an ounce, of Orris roots, and round Birth-wort, and Aſarum each two drams, of Tamariſk barks an ounce, of Succory, five leaved Graſs, Dropwort, with the Roots, Groundpine, Germander, and the Capillary Herbs, of Endive, Liver-wort, Agrimony, and Dodder, each one handful, of the Topps of Wormwood, Roſemary, Horehound, and the greater Celandine, each half an handful, of Elder flowers, and Broom flowers each one pugil, of red or black Vetches one pugil, of the four great cold ſeeds, each one dram, Aniſe ſeeds half an ounce, of Caraway ſeeds three drams, of Parſley, and Turnep ſeed each one dram, of Prunes and Figs each five pair:* boyl them in water and wine, in the Liquor ſtrained being one pint and an half, diſſolve Sugar as much as fit, and aromatize it with Cinnamon, caſſia lignea, Spike, or Sanders for an Apozeme for four or five Doſes.

Beſides theſe the Decoction of wild Flax, St. Johns wort, Samphire, Penny-royal, Organ, Polymountane, wild Mints, wild Marjoram, Ground Ivy, Chamomil, Fleabane and its flowers, and the Roots of Alkanet, Hog Fennel, and Perewinkle, or Swallow-wort, Eringus, Carduus, and Aſh barks.

Alſo the Decoction of Celandine Roots, with Elicampane, Oak Moſs, and Saffron.

If theſe ſimples be ſteeped in Wine, and then the Wine given at ſeveral times it will work more ſtrongly.

Or make this wine, of Succory, Fennel, and Aſparagus Roots each ſix drams, of Aſarum Roots three drams, of Horehound, Wormwood, and the leſſer Centaury dryed each two drams, of the Tops of Roſemary one pugil, of Lavender flowers half a pugil, of Indian, and Celick Spikenard, and Schænanth each half a dram: ſlice them and put thereto three pints of white Wine, add two drams of Rhubarb to make it purge, and if you add two drams of ſteel it will be admirable.

A ſimple Wine in which half an ounce of Aſarum roots, or ſteel hath been infuſed is good, *Dioſcorides* commends Squill wine; ſome ſteep the fore Teeth of a Beaver in wine and drink it.

Another is made thus; Take *of Sarſa two ounces, of Fennel, Parſley, Burnet, Orris, and Rhapontick roots each half an ounce, of Elicampane two drams, of Genian, and Aſarum roots, and Pellitory of Spain each one dram, of Agrimony, Wormwood, Dodder, Horehound, Germander, Groundpine each half an handful, of Topps of the leſſer Centaury one pugil, of Aniſe, Fennel, and Smalage, Senna each one dram, of Cinnamon* and Galangal each one dram and an half, infuſe them in eight pints of white wine, if you add Turbith two drams, Rhubarb, and Agarick each three drams, of Ginger half a dram, it will alſo purge.

Theſe alſo may be boiled in water and wine, with or without the purges, and ſo taken ſome commend a diſtilled water of the ſame taken two ounces and an half at a time.

The juyces alone drunk from one ounce and an half to two ounces, with ſugar and wine is good, eſpecially the juyces of five leaved Graſs, Dock-roots, dead Nettle, Horehound, Lemmons, Sowbread, Succory with the Roots, or you may make them of ſuch Plants as are good by Decoction; *Mathiolus* gives the juyce of Cowcumbers, Raddiſh water is highly commended in the Jaundies.

Other Potions are made of divers things, as of pouders with wine, and water, ſyrups and Decoctions; the more ſimple are the pouder of Orange peels, Ivory ſhavings, ſteel, Earth-worms, the ſtones in the Gall of an Ox, and Brimſtone which *Dioſcorides* gives in the Yolk of an Egg.

A Pouder may be made of many things thus,

Take of the Roots of the greater Celandine, and Swallow-wort, and Madder each two drams; Roots of Gentian, Birth-wort, and Aſarum each one dram; of Wormwood, Horehound, Vervain, and Maiden-hair, of Broom flowers, carthamus, Roſemary, of carva ſeeds, Endive, Germander, and columbine ſeeds each half a dram; of ſhavings of Ivory, and Harts horn each one dram, of ſteel prepared with Vinegar one dram and an half, of dried Earth-worms one dram, of cinnamon, Nutmeg, Mace, Spikenard, each half a dram, of Myrrh. Maſtich, and Frankincenſe each one ſcruple, of Saffron half a ſcruple: make a Pouder, give one dram or more, with ſugar, or without, with wine or other convenient Liquor.

This Pouder is bitter but excellent. *Take* of Gentian Roots one dram, of the Tops of the leſſer centaury, Orenge peels, Ivory, and Harts horn, ſhavings of Cinnamon, each half a dram: make a pouder, give one dram in wine or other Liquor.

Theſe Troches are good in a jaundize that tends to a Dropſie, *Take* of Rhubarb two ſcruples, of Aſarum roots, Gum Lac each half a dram, of cinnamon, Spikenard, ſchænanth, caſſia lignea each one ſcruple: make them in Troches with juyce of Wormwood, or Agrimony, or Triphera Saracenica, give it in wine or water.

The uſual Pouders to open Obſtructions, are of the troches of Rhubarb, Agrimony, Wormwood, alſo Trionſantalon, Diarrhodon Abbatis, Diacarcuma, Dialacca, in which ſometimes Rhubarb is doubled in quantity, they are given alone or mixed with wine.

That Pouder which ſome commend ſo highly in the Jaundies which they divide into three parts, and give at three Mornings together, in the Decoction of Vetches is this,

Take of columbine ſeeds, Harts horn, and eaſtern Saffron each one dram: make a fine pouder for three Doſes.

There are Potions made of cray fiſh beaten with celandine and water, and then ſtrained, five ounces of the urine of a Boy drunk often doth it by Experience, with ſugar or Honey to ſweeten it.

Others boil Gooſe dung in water or wine, and ſtrain it, and give it to be drunk.

Cummin ſeed eaten preſently after bathing is approved. And this the German Women uſe ſtill, and beleeve it to be of great force; *Dioſcorides* gives May-weed after bathing, its yellow flowers, I ſuppoſe.

The Leaves of Sage often drunk have cured ſome, and the Leaves of wild Rocket often eaten.

Others beleeve that eleven Lice drunk down will cure the jaundies.

This Electuary is convenient. *Take* of the conſerve of the flowers or Roots of Succory, of Maiden-hair each one ounce, of the conſerve of Smallage Roots, Orris, Orange peels each half an ounce; of ſhavings of Ivory, and Harts-

horn

horn each one dram and an half, of the uſual Pouders one dram: make them into an Electuary with ſome of the aforementioned ſyrups, let him take a Bolus and drink the Phiſical Wine or water after it.

It will be of more force if you add to this Electuary *two drams of Bitter Almonds, one dram, of the great cold ſeeds, of Rhubarb one dram, of Steel prepared two drams, of Pouder of Earth-worms half a dram, of Saffron one ſcruple and an half, Cinnamon, and Nutmeg each half a dram, and with Oxymel of Squills make an Electuary.*

The Pills of ſimples which are hard to be taken by Reaſon of their evil ſent and taſt in pouders, are made thus, Take *of Gentian roots, Birthwort, Madder, and Rhubarb, and Myrrh, each half a dram, of ſteel prepared one dram, of Hogs dung dryed one ſcruple, of Saffron half a ſcruple:* mix them with juyce or ſyrup of Wormwood, or of Horehound, and make pills. The Doſe is one dram.

And the uſual Pouders may be ſo made into Pills.

Outwardly Medicines are applyed to the Liver, if that cauſe the jaundies, either by Obſtruction or Hardneſs ſuch as are mentioned in the Cachexy, alſo Oyntments, Emplaſters and Fomentations, which need not be repeated being there mentioned.

To other parts of the Body which are diſcoloured Remedies may be uſed, as Baths, for taking away Choler that remains over the Body after the cauſe is removed, and will not breath it ſelf forth, as at other times. And they muſt be dry when we intend to ſweat: with Flax aired with *Elder* and *Juniper burnt*, alſo they muſt take an inward Sudorifick before bathing.

Moiſt Baths are made by boyling theſe following to cleanſe and diſcuſs, *as Pellitory of the Wall, Beets, Mallows, Marſh-mallows, Soapwort, Centaury, Wormwood, Horehound, Fumitory, Chamomel, Sorrel, Elicampane, Melilot, Roſemary, Organ, Miſleto of the Oak, the greater Celandine, golden Flowers*, which three laſt having yellow juyce, are thought to be proper againſt Choller, *with Beans, Lupines, Bran and Barley.*

Waters to waſh with are uſed at the comming forth of the Bath: made of cleanſing Herbs.

For the face which is moſt viſible, to recover its colour, it muſt be waſhed in the Bath, and after with this Decoction or the like, *with Wine, Vinegar, Water of Roſes, Beans or Sorrel, or with the Juyce of Pomegranates, Lemmons, Citrons, or Syrup of Sorrel, Vinegar diſſolved in waters or Decoctions.*

To take away the yellowneſs of the Eyes, waters muſt be dropped into them, *with the Juyce of Pomegranates, or wine and water, or Juyce of Coriander.*

You may put into the Noſe things that by neeſing diſperſe choller, from the Face and Eyes, anoynting the Noſtrils within with Scammony, which becauſe it attracteth Choller is made choice of, but we uſe it becauſe by Experience we find that it provokes Neeſing, mixed *with Honey*, but *Elaterium* mixed with Milk doth it more violently, other Errhines do it more mildly, *as the Juyce of Horehound, white Beets, and Gith ſeeds*, and the Decoction thereof.

Alſo the Sent of *Nigella* or *Gith* when it is eaten, and of Vinegar do the ſame.

Rubbings after bathing and otherwiſe are good to take away the Reliques of choller from the skin.

Applications made to the ſoles of the Feet, have been cryed up by the vulgar, as the greater *Celandine* and *Miſleto of the Oak*, whole, or bruiſed with *Horehound* ſomtimes wine and Vinegar, and ſalt, and theſe applyed to the wriſts work more ſpeedily.

One told me for a certain truth, that many have been cured of the jaundies by piſſing upon new made Horſe dung while it is hot.

Let the Diet be proper: let the Drink be thin, white wine mixed with the Decoction of Roots of Graſs, and Aſparagus, or other openers, and let other things be anſwerable.

The Cure of Redneſs. That Redneſs which comes from Blood, which is chiefly in the Face, if it be either from Baſhfulneſs or Anger, as it quickly comes ſo it goes away with the paſſion. And that which continueth long, which either comes from external Heat, or a Diſeaſe, hath no cure but by abating the Heat.

The Cure of Paleneſs. Paleneſs if it be from want of blood, by the loſs of the flowriſhing colour only, and from cold, it will continue only while the Body grows hot, as that which comes by fainting returns afterwards; and that which comes from a Diſeaſe, will ceaſe with the Diſeaſe, and there is no peculiar Direction for it.

Blackneſs. Blackmores. That Blackneſs which is Natural and comes from the ſeed, if it be like a Blackmore, to go about to cure it is to make a black More white according to the Proverb, which is impoſſible.

Ordinary Swarthineſs, the Cure of it. There is another vulgar Swarthyneſs, when the skin is darkiſh and duſty Naturally, is nothing ſet by, of them who think true Beauty doth not conſiſt in whiteneſs, and therefore they think a Man is not diſcoulored thereby, and will not require cure.

But ſuch as love to be neat, and think themſelves leſs fair, and acceptable to others thereby; deſire to mend it if they cannot cure it.

When the skin is black by wrinkles that ſhadow it, and make it dark, when the wrinkles are not confirmed, as when they come from an external cauſe or Diſeaſe that hath made the skin looſe, when the cauſes are removed they will ceaſe and the skin will be ſtretched and its wrinkles and return to its former Complexion; but if the skin be dryed and ſtraightned eſpecially by Age as in old people, though they ſeem impoſſible to be taken away, and the Phyſitian that permiſeth to do it ſeems to be mad, as the Poet ſaith,

He's worthy of a filthy aged Queen,
That wrinkles from her body taketh clean.

Yet for the taking away if not diminiſhing of the ſame, there are Remedies, which old Men deſiring to ſeem yong do much affect.

Medicines by the beautifying Art. Theſe are done by a two fold Art, by one called comptorian Art which is for Neatneſs, making an artificial white, but inſtable and fading over the black which is Natural, ſo deceiving the Spectators, and this is called a Fucus; the other is called the coſmetick art, and doth not add another colour nor deceives, but only amends this dull colour of the skin, making it more neat, bright, and conſtant in colour, taking away or mending the wrinkles, and correcting the dark complexion. Afterwards that there may be more Beauty, with red colour applyed to certain parts called then *Fuci*, by the comptorian Art, they make the Body of better colour. We ſhall ſhew how this is done by Remedies that whiten, cleanſe, take away wrinkles and make red.

Fucus.

Medicines made by the Coſmetick Art.

The white Medicines called Fucuſes, with which women that affect to be beautiful (and which would be unſeemly in Men,) do paint their Face, Hands, and other places that are naked and ſeen, are made of white ſtuff, and that is choſen for the moſt part which is cleanſing and digeſting, or ſuch things are mixed therewith: for ſo they make fair not only by whiting which is but of ſmal continuance, and little Ornament, but maketh a new colour in the skin, by ſucking continually forth that Moiſture which makes it black: and it attenuateth the skin by clenſing, and ſo makes it more clear and neat. And therefore when the skin is thicker and harder then uſual, ſofteners are mixed, not only to procure a decent colour, but to mollifie the Hands and Face which is commendable, for which cauſe that the Face may alwaies ſhine, which is accounted comely, they add ſome fat things.

Theſe paints being thus made in form of a Liquor white

as Milk or of an Unguent muſt be applyed and ſuffered to dry on. And if they be diſcoloured by their thickneſs which women of the honeſt ſort do fear exceedingly, before they go forth do uſually waſh with ſome comely decoction, which is no paint, as ſhall be declared, ſo gently that ſome of the white ſtill remain with, and that when the paint ſeems to be quite gone will reſtore it, and it will continue long, and therefore they waſh often after it, before they go forth into view.

The matter of theſe is taken from divers white things as follow, of Ceruſs, which being very white, and ſticks well by reaſon of its fineneſs and Fatneſs, is proper, if firſt it be poudered and ſeifted, waſhed often, and dryed; or boiled in water till it may be made into Troches, one whereof being taken in the palm of the Hand with a little convenient Liquor, will ſerve to paint the Face.

Of the white Dragon Roots there are made Troches as the former, like Ceruſs and white Starch, called *Gerſa*, which beſides the whiteneſs it makes, doth cleanſe very much, and it is made of the Juyce of Dragon Roots, dryed gently by the fire or Sun, and ſo brought into Balls or Troches.

Or take the Roots aforeſaid, and after they are cleanſed beat them, and then with warm water or other convenient Liquor diſſolve it, and ſtrain it and ſo let it ſtand till there be a white cream at the bottom; from which pour of the water at the top, and pour on freſh, which after a little time you muſt alſo pour off from the reſidence at the bottom as before, and this being three or four times done, let that which remains be dryed, and made up for your uſe into ſmal Troches.

The common way of preparing this Gerſa is of the dryed Roots of Dragons, which being firſt peeled from their external black coat, muſt be beaten into pouder, and then diſſolved in water, and gently dryed again, and then again poudered, and waſhed after this manner three or four times, and made into Balls or Troches, and kept for uſe.

The ſame way may be made as well of the great Aron, or Cookow pintle Roots, in defect of the other, as white and as forcible, or of both together.

Of the white Brittle root, of the wild Cowcumber you may alſo make the ſame.

You may make other forms of Dragon Roots and Ceruſs thus: Take *of Dragon, Gerſa prepared as before one ounce, of Ceruſs prepared, of Borax two drams,* and if you pleaſe *of Camphire half a dram, with the Infuſion of Gum Traganth made in Roſe water, make Troches* for your uſe; you may mix ſome things that are in *Unguentum Citrinum* therewith.

Sometimes you may mix prepared *Ceruſs and Dragons with Oyl of ſweet Almonds or de Been,* and a little white, if you pleaſe to make it into an Oyntment.

Of ſublimate Mercury there are excellent waſhes made, which cleanſe and make white, which are divers waies prepared leaſt they ſhould exulcerate, mixing things which work the ſame effect more gently; and leaſt any part of it ſhould touch the Teeth and make them black, as is uſual, ſhe muſt keep water in her Mouth while ſhe uſeth it.

A water like Milk is made thereof, which is more plain and profitable, thus: Take *of finely poudered Sublimate half an ounce, two or three whites of Eggs well beaten, of the Emulſion of white Poppy ſeeds made of one pound of the ſeed and ten pints of water,* ſtir them very well in a ſtone Mortar, firſt putting in the whites of an Egg by degrees, then the Emulſion, as is ſufficient which is known by a Pin, or put therein for when it is not diſcoloured after ſome continuance there it is right, but if it be then pour on more Emulſion.

To this we add *two ounces of Borax, or of Sugar Candy.*

Another white waſh is thus made: Take *of the whiteſt Barley flower, or Starch made into a paſt with Goats Milk, bake it gently in an Oven and when it begins to be hard take it out, and mix it with ſo much Goats Milk, as will make it all like thick Milk, take five pints of this, and two drams of Sublimate, mix them well together, more or leſs, till by the proof above mentioned with a pin you find it right, then uſe it, adding ſometimes Ceruſs one dram, Borax two drams, of ſea Snails calcined half an ounce, with a little Camphir.*

A dry paſt made of Sublimate, like Chalk or Starch is often uſed; a portion whereof being tempered in the hand with a little wine out of your Mouth, or Roſe-water, may anoint the Face: or mingled with *Pomatum, Oyl of Gourds ſeeds, or ſweet Almonds,* it is made thus,

Take *of Sublimate poudered one ounce, of Quick-ſilver two or three drams, of Juyce of Lemmons, or Vinegar a little,* ſtir them till they wax white, and then ſtir them well faſting, ſpittle of one that cheweth Sugar Candy, then with whites of Eggs ſtir them into the form of a paſt or Liniment. Then waſh it with a good quantity of Spring water, and let them boil together a little, and then ſtand to ſettle, and let the clear water at the top be poured off by degrees, and freſh water be poured on, and then after boyling and ſetling be poured of as formerly. Do it thrice, but the laſt time with Roſe-water, or Bean-water or of Myrtles, and boil it till it be almoſt conſumed and let the bottom or reſidence be ſet in the Sun or in an Oven till it be dry: ſometimes this infuſion is made without boiling only by long ſteeping, and changing the water ſometimes, and then drying the reſidence.

Sometimes *a dram of Camphire* is added to the ſublimate and Quick-ſilver, the quantity of a dram, and to make it more dear, rather then for profit, as much of the pouder of Pearls, or ſea Snails calcined, with ſome Leaves of gold and ſilver, to repreſs the malignity of Quick-ſilver, and of ſublimate.

There is the like made by the women of *Monpelier*, which is, Take *of the beſt ſublimate four ounces, of Quick-ſilver mixed with the faſting ſpittle of one that chewed Sugar Candy half an ounce: beat them well in a ſtone Mortar, with a wooden Peſtil, till it be white; then tie it in a white ſilk Clout, and put it into a new glaſſed earthen pot full of water, and ſet it upon the Embers, and after the water is grown hot, pour it off, and add freſh, and do ſo the ſecond time, and let your Mercury be ſweetned with ſo doing nine times, and let the Body that remains in the ſilk Rag be dryed and made into formes as big as Vetches, dry them in the ſhade and keep them for uſe.* The way is to take one piece and diſſolve it in *Oyl of ſweet Almonds* for a Liniment for the Face.

There is a white waſh made of Litharge, by ſteeping or boyling it, which they call Virgins Milk, this gives the Face a good Colour, but becauſe it doth take Redneſs away too much, we ſhall ſpeak of it hereafter, in Redneſs.

Waſhes may be made alſo of Borax, which the Goldſmiths uſe, and is made of water, being finely poudered and mixed with Oyl of Guord ſeeds or other Oyl.

Or with the Infuſion of *Gum Traganth*, to anoint, and you may mix *Ceruſs with Borax.*

Of ſtones as white Marble, Alabaſter, Amiantum, ſpecular ſtone, Loadſtone, which is called Talcum, Cryſtal; white Coral, and divers Sea-fiſh ſhells either crude or firſt calcined, made up with Oyl, Liquor or Pomatum, are made alſo Oyntments, and theſe Waſhes, as: Take *of ſome of the aforeſaid half an ounce, Ceruſs two drams, Borax one dram, white Frankincenſe, and Camphire, each half a dram, of Juyce of Lemmons one ounce, of Oyl of ſweet Almonds or other Oyl as much as will make a Liniment.*

Or let her uſe inſtead of theſe *the Unguentum citrinum which is made of the ſtones aforeſaid, Alabaſter, the ſpeculiar ſtone, or Talcum, Chriſtal, Coral, and ſhells, the Navel ſhell Fiſh, the purple Fiſh, the Trumpet Fiſh, Ceruſs, Borax, white Frankincenſe, Camphire, and Gerſa of Dragons, Niter, Starch-Traganth, Hogs Greaſe, and Hens Greaſe, and the Juyce of Citrons, from whence this Oyntment is named Citrinum.*

The Face or Hands being rubbed with the fine Pouder of Talcum, it makes them wonderful white, ſo that if it continue any time, it will not eaſily be taken off.

Eggs ſhells calcined and poudered finely, make an oyntment with the things mentioned, alſo very excellent. Alſo a good Oyntment is made of Starch incorporated as before

fore, and you may add the white flower of dryed *Melon* and *Pepon-ſeeds*.

Alſo an Emulſion of *Melon-ſeeds* and *Almonds* with their water, doth beautifie the Face.

Some Women uſe it thus. They take one or two *bitter Almonds* and put them in a Clout and chew them faſting, and ſo anoint the Face with the Spittle mixed with the white Emulſion.

Thoſe cleanſing Remedies external, which differ from a *Fucus* only in that they paint not white, are made as the other, and are as follow, with which the Face is to be waſhed or anointed.

Stilled Waters are moſt uſual, as of theſe Simples, *Solomons Seal, Bean-flowers, Roots of Dragons, or Cuckow-pintles, Sowbread, Raddiſh, Gentian, Mallows, Lillies, Mullein, Water-lillies, Melons, Kidney Beans, Pine-nuts, with ſweet Waters, as of Roſes with Muſk, or Camphire, of Orenge flowers, Orris Roots &c.*

The Waters of Lillies, and Roſin of the Fir-tree, doth make a thick Skin thin.

Many Compounds are for the ſame uſe, thus made, of *Guords, Melons* being ripe and divided, diſtilled with *Goats Milk, and Eggs* beaten together.

Or *of Lemmons, Oranges, Citrons, diſtilled as the former.*

Another is made of Bread thus: Take *of common white Bread, or of Barley, or Bran, the Cruſt taken off two pounds, of Goats Milk three pints, of Eggs beaten ten, diſtil a Water of them.*

You may add *three ounces of Sugar, and ſo diſtil it.*

Or *half a pint of Wine, and one or two Lemmons, or one ounce and an half of the Juyce, and one dram of Camphire.*

Or, Take *the aforeſaid, and add of Bean or Peaſe Meal, or of Rice three ounces, of bitter Almonds, two ounces, of the four great cold ſeeds one ounce, diſtil them.*

That it may cleanſe more, add of *Dragon Roots, and Solomons ſeal each one ounce and an half, of Orris Roots one ounce, and of Maſtich half an ounce, Borax two drams.*

Alſo *the Water of Rice macerated or ſteeped in Lemmon or Bean water till it ſwell, diſtilled to a pint, ad half an ounce of the ponder of Maſtich.*

And *the white of Eggs mixed with the Juyce of Lemmons make a good Water diſtilled*; to which before the ſtilling you may add *Borax, Allum and Salt.*

The Venetian Paint is not to be omitted which is thus made. Take *of the whiteſt Lard that is ſweet and cut it ſmall, as much as you pleaſe, of the white Flowers of Bindwood, of the Juyce of crude Citrons ſtrained, each as much as is ſufficient, ſtill them with a gentle fire in* Balneo Mariæ, *keep the water for your Uſe.*

The water alſo of Snails, diſtilled with *Goats Milk, and Hops, or Goats Greaſe, and a little Camphire.*

There is alſo an excellent Water made of Urine mixed with Salt, eſpecially *Salt Gem. with Cloves, Cinnamon, and Roſe-water,* to take away the Sent thereof.

Alſo a Water diſtilled *of white Tartar, diſſolved in Wine, with Bean flowers, and Roſemary.*

Or, Take *of Tartar one ounce, Allum half an ounce, Borax two drams, Camphire one dram, of Water that is proper two pints, diſtil them.*

Or, Take *of Tartar calcined one pound, of Maſtich one ounce, with whites of Eggs* make a Paſt out of which draw a Water.

You may make a water of Sublimate not to whiten, but to cleanſe, either by diſſolving it being ſteeped or boiled in the waters above mentioned Simple or Compound, eſpecially in that of Bread, with the *Juyce of Lemmons*, you muſt take no leſs then three pints of water to *one dram of Sublimate*, and you muſt try by *Copper* put into it if there be enough: to which you may add *Ceruſs, and Camphire*, and mix it with *Goats Milk, whites of Eggs, or Mucilages* leaſt it ſhould hurt.

Of more or fewer of thoſe things may a water be diſtilled; as, Take *of Lilly and Orris Roots green, each four ounces, of Dragon Roots, or Cowkow pintles, and Solomons Seal, each two ounces, of Bean flower four ounces, of Rice flower two ounces, of the four great cold Seeds one ounce, of bitter Almonds five ounces, of Quince ſeeds half an ounce:* beat them all and add *one pint of Goats Milk, of Calfes Feet, and Snail broath, three quarters of a pint; of Bean flower, Water and Roſe-water, each one quarter of a pint; the white of twelve Eggs beaten, Turpentine diſſolved in the Yolks of Eggs half an ounce; of Honey one ounce, of common Sugar, or Sugar Candy, two ounces, of wine and Vinegar, each one ounce, of powdered Maſtich, half an ounce, of Allum, and Borax each two drams, of Camphire one dram,* mix and diſtil them.

To theſe may be added *Briony, wild Cowcumber, Sowbread, Guaicum, Lemmons, Oranges, Melons, Muſkmelons, Guords, or their Juyces. Alſo Primroſe flowers, Bean flowers, Lillies Elder flowers, Peaſe, Lupins, Starch, Pine-nuts, Fleabane ſeeds, and the Gums of Traganth, or the Infuſion thereof, Frankincenſe, Myrrh, Cinnamon, Cloves, Muſk, Boys urine, Ox gall Litharge, Tartar, Ceruſs, Soap, Goats Suet, or freſh Butter,* to which you may add ſhells and earths, from which little comes by diſtilling, as *Coral* and *Shel-fiſh*, and ſometimes a little *Chalk*.

To take away the Spots of the Face, and whiten it, this is an excellent Water: Take *of Bean flowers, Turpentine waſhed in Goats milk, each one pound, whites of Eggs ſeven in number:* mix them and put them in *Balneo Mariæ*, keep the diſtilled water for your Uſe, then Take *a white Capon pluckt, and waſht and cut in pieces, and put that alſo in* Balneo, and mix the water that is diſtilled from it with the former, adding *two drams of Borax, half a dram of Camphire*, put them all in a long necked Glaſs, and ſet it by Night in the Moon ſhine, and by Day in the ſhaddow, waſh the Face with this water warm.

This water following which was uſed by *Mary* of Medices, the Queen-mother is of moſt Vertue above all others, ſhe uſed it to make her Face fair: it is made thus, Take *three white Capons preſently after they are killed, and mince them ſmall taking out their Greaſe, two new green Cheeſes made of Goats Milk, the pulp of ſix Lemmons, the peels taken off, the whites of eight Eggs with the ſhells, of Borax, and Pouder of Brimſtone, each half an ounce, of Camphire one pound, of Bean flower, and Water-lilly-water, each one pint, put them in* Balneo Mariæ, *and ſome Grains of Muſk in the Neck of the Still*, keep the water that comes forth for your Uſe, waſh the Face therewith every Night.

This water is good with Sublimate: Take *of Dragon or Cuckow pintles Roots, Sowbread, and Solomons Seal, each one pound, of Crumbs of Bread half a pound, of freſh Lard one ounce and an half, of Juyce of Lemmons two ounces, in which Sea Snails have been diſſolved, of Allum two ounces, Sublimate half an ounce, or leſs, diſtil a Water.*

A Decoction is uſed to waſh the Face to make it clear, and to waſh off what hath been formerly laid on, eſpecially of *Beans, Pears, Rice and Lupines*, and the like abſtergents or cleanſers. In a ful fat Face the Decoction of *Guaicum* is approved.

Some Liquors are uſed, as of *Melons* thus made, let a *Melon* ſliced be put in a Pipkin, and at the top of it unripe Grapes, *Mallow-flowers*, and ſome Eggs ſhells, let theſe be kept well ſtopt in an Oven ſo long as the Bread is baking, this done, ſtrain forth the Liquor for your Uſe.

Some uſe Snail-water made of Snails and Salt ſo baked in an Oven as the former.

Some mix Snails and Melons together.

Maids being faſting uſe to ſpit into their Hands and rub the Hair of their Fore-head backwards and make it ſhine, which wil whiten more, if they chew *bitter Almonds* before.

Moreover the Face is anointed with fat Liniments, which bring Splendor, and it is to be done carefully leaſt the Paint appear.

Pomatums do this.

And chiefly the Marrow of a ſheeps bone which is taken from them, being well cleanſed broken and boiled, ſwimming at the top.

Oyl of Talcum to whiten and make clear the Face and

Hands

Hands is of moſt uſe among great ones, and is of great price becauſe it makes them alſo ſoft.

Of *Mucilages*, the Infuſion of *Gum Traganth* as alſo the *white of an Egg*, is beſt to make the Face ſhine.

Remedies that make the face & hands ſoft and white.

Some things may be uſed to the Hands to cleanſe them and make them white and ſoft, which are not ſo proper for the Face.

For this there is a paſte with which they rub their Hands as with Soap, made divers waies.

The moſt plain paſte is made of *Crumbs of Bread, boyled Bran, or Barley flower, Rice, Peaſe, Lupines*, which we uſe alone or with water, or with ſoft Soap, or hard a little diſſolved, and Honey we make a paſte.

Of Nuts there is another Paſte, as of *bitter or ſweet Almonds, of Peach Kernels of Hazel and of Pine-nuts, Beans bruiſed, or firſt ſteept in Milk, or mixed with Soap or Honey.*

Alſo it is made of other ſeeds eſpecially of *Guords and white Poppies.*

The Compound Paſte is thus made. Take *of the aforeſaid Simples one, eſpecially that of Almonds, or of two or three the quantity of one pound, adding pouder of Muſtard ſeed two ounces or more, of Orris Roots half an ounce, this will ſweeten it, and of Honey as much as will make a paſte, to this add ſometimes the pulp of Figgs, and Rocket ſeed, inſtead of Muſtard ſeed; ſome add the Gall of an Ox*, but this leaveth ſuch a bitterneſs that it is not commendable, we may alſo make it ſweet ſented with *Sanders, Wood Aloes, Angelica Roos, Lavender flowers, Roſe-water, or Muſk &c.*

Others may be added, as this for the Hands, Take *of Ceruſs half an ounce, of Starch three drams, of Borax, and Camphire each two drams, of Egg ſhells calcined half a dram, to them being pondered add of Lilly, and Water-lilly, and Roſe-water ſix pints, of Lilly Roots two ounces, of Bread Crumbs half a pound: boyl them well, then add twelve Yolkes of Eggs beaten*, ſtrain them and keep them for your uſe.

Or make an Infuſion *of Gum Traganth in Milk, and jnyce of Lemmons, adding Ceruſs, Starch, and the like*, and ſo anoint the Hands.

Alſo there is a paſte of the *Roots Daffodils boyled and beaten, adding Tartar, and beaten Eggs.*

Where you will more mollifie when the Hands are very hard, anoint with the *Oyl of Guord ſeeds, or of ſweet or bitter Almonds, diſſolved with white Wax*, alſo you may add *the pulp of white Lillies, and Oyl of Tartar to cleanſe.*

The pulp of Melons rubbed doth make the Hands ſoft and clean.

Remedies againſt wrinkles.

To diminiſh or take away wrinkles if poſſible, in the Face eſpecially, and ſometimes in the hands, that the skin may ſeem leſs cloudy, and folded and uneven, there have been proper Remedies declared, albeit there are ſome cleanſing Paints, as aforeſaid, proper for the ſame; theſe that follow are proper, and ſuch as by a cleanſing Quality or by mollifying do enlarge the skin that was bound.

The ſeeds of wild Caraway bruiſed applyed with a Cerot are commended by *Dioſcorides.*

Alſo *Briony Roots with Orobus, Fænugreek, and Chalk, or Earth of Chios.*

Others approve *the Water of Pine-apples that are green, the Flowers of Mullein, alſo the Roots of Aſaron, and Solomons Seal.*

The Water of the Flowers and Roots of Lillies with May dew is admirable.

The Juyce of Lemmons, Primroſe, Cuckow-pintle Roots, and of ſtinking Gladon, do lift up the skin, and make it break and a new one come under it.

The Decoction *Jeſamine ſeeds, alſo of Figgs with Briony Roots.*

Oyl of Myrrh, Jeſamine, Acorns, Tartar, bitter Almonds, Pine-nuts, and Ivy-berryes.

An Emplaſter. Take *of pure Wax one ounce, diſſolve it with Aſſes Milk*, ſtir them and when they are cold, take them off and add *an ounce of Oyl of ſweet Almonds, Allum, and Sperma Cæti each half an ounce*, diſſolve and ſpread them and apply it to a wrinkled Fore-head or the like.

Let the Meal of Lupines be rubbed on with *Goats Gall.*

Or, Take *of Hens Greaſe two ounces, of white Wax one dram, of Roſe-water one ounce*, diſſolve them, add *of Ceruſs, two drams, of white Coral one dram, of Camphire half a dram:* make *an Oyntment.*

Pomatum is in great Uſe.

The Fume of Myrrh caſt upon coals, and received on the Face, is ſaid to be good.

They alſo ſtudy to take away Wrinkles from other parts of the Body, as thoſe which are left after Child-bearing upon the Belly.

This is done with this Oyntment made of the *Suet of a Kid*, or *Ram, in Roſe-water*, or *Pomatum with a little Butter, and the white of an Egg, with the the pouder of Maſtich, and Frankincenſe.*

Or, Take *of Maſtich, and Frankincenſe each half an ounce, of Myrrh two drams, of burnt Harts-horn, one dram, of Amiantum two drams, of Salt Ammoniack one dram, of Barley Meal, two drams, of Nigella one dram, of roſted Squills half a dram, with Honey make an Oyntment.*

Medicines that make the Lipps and Cheeks red.

Medicines that make red are uſed by Women that ſtudy Ornament, to their Cheeks and Lips, and ſo they take away the Paleneſs and ill Colour by painting with theſe that follow.

The Roots of great Madder rub'd upon the Cheeks makes them red, and alſo if theſe be mixed with Oyl anointed.

The Pouder of Briony Roots mixed with Water or Honey, if the Cheeks be waſhed with the infuſion, or anointed therewith, it will make them red.

They write that the *Sea Onion* and *Dill ſeed* anointed with *Honey* and *Wine* will do the like.

That Red which Painters make *of Sanders, and ſhavings of Braſil ſteept or boyled in Water, Wine or Vinegar, with Allum* will paint the Cheeks, and Lips red.

The Spaniſh Women do colour the inſide of their diſhes with *Cuchynelle*, and call it Vermillion of *Spain*, and ſo keep it, and when they will uſe it they ſpit upon it and paint their Cheeks.

The cheeks being rubbed with Scarlet or Silk dyed with Cuchineile, or Crimſon dipt in a little *Aqua vitæ*, turn red.

Some Women rub their cheeks with red Leather to make them red.

I have obſerved that if one rub her cheek with ripe *Mulberries* and then after with a green, and waſh with Water thereupon there will remain a flouriſhing colour long after.

That Cure which belongs to particular Diſcolorations, is either for Commaculations or Spots.

The Cure of commaculations is according to the cauſe which is external, either, Air, Filth, or other things that diſcolour the Skin.

The Cure of Sun-burning.

They who by Labour and Travail are Sun-burnt, think it no diſhonor but a commendation, and therefore care not for the cure, becauſe in the Winter it uſually decreaſeth. But if this Blackneſs diſpleaſe, we muſt prevent it, and deſtroy it.

Thus we prevent Sun-burning.

A broad brim Hat or the like, or Gloves for the Hands prevent ſun-burning.

Or defend them with anointing with *whites of Eggs, or the Mucilage of Fleabane, or of Quinces, Extracted with Roſe-water, or with the Infuſion of Gum Traganth* made therein. To theſe are added *Butter or Sues, or Pomatum, or Oyl of ſweet Almonds, or Cream of Milk*, in a ſmall Quantity leaſt the Face being anointed with thoſe fat things, or without thoſe by the uſe of dryers ſhould appear extended.

The pulp of the Juyce of Melons doth the ſame, and of *Guords* adding ſome of the unctious things mentioned.

Or anoint with this before you go into the Sun. Take *of Pomatum two ounces, of Ceruſs diſſolved in Roſe-water one dram, of Frankincenſe, and Maſtick each half a dram, of Mucilage,*

cilage, of Quinces one ounce: make *a Liniment.*

This blackneſs by Sun-burning is ſometimes cured by Nature; which ſupplyeth continually the Burning which is new and little, with a freſh skin, if they keep out of the Sun, except it pierce to the true skin, and then it will ſcarce go away of its own accord. And then it muſt be cured by paints and coſmetick Remedies, as the Natural blackneſs which have been already deſcribed, and therefore ſhall not be repeated.

Moreover, we cure this by taking away the burnt skin from the Face and Hands except the Impreſſion be too deep as we have ſaid. This is done by lifting, and raiſing the ſcarſe skin to make it fall off by this following Remedy. Take *of the Roots of white Lillies one quarter of a pound, roaſt them in the Embers, then beat them with one ounce of ſugar candy,* lay it upon the Face, and repeat it often, alwaies anointing with Honey when it is taken off.

This will be done ſooner if you add *freſh Butter, or Hogs greaſe waſhed in Roſe water three ounces, Turpentine half an ounce, Lime five times quenched two drams,* and ſo apply it.

Or add *Lilly Roots ſo roaſted two ounces, the Roots of Reeds, and Dragons, and Beans two drams, Melon ſeeds one dram, the Mucilage of Fleabane, or the Infuſion of Gum Traganth one ounce, of the Citron Ointment half an ounce:* make an Ointment according to Art.

If you add a little *Water of Sublimate boyled,* it will ſooner raiſe the Skin.

An Onion, or Squill, or a Lilly Root often rubbed upon the part doth ſo raiſe the skin, that it will eaſily come off.

The Cure of the Pollution of the Skin by Filth.

An evil Colour from Filth, ſticking to the skin, is taken away with the filth as we ſhall ſhew in the Treatiſe of filth: thoſe which keep the hands and Face clean have been declared.

The Cure of the diſcolouring of the skin from external cauſes.

A black, yellow, or green Colour, or the like, with which the skin is infected, is taken away as other filth of the skin, and it is done ſooner or later as it hath taken Root.

Firſt, that which comes to the Hands from handling green Wall-nuts, is a blackneſs which ſticketh faſt, but at length vaniſheth of it ſelf, and will by uſe of cleanſers, aforementioned be ſooner gone, if rubbed with *the Juyce of a Lemmon, or Vinegar, and a little Colophony.*

The Redneſs that comes upon the Hands by gathering *Mul-berries,* though it ſtay otherwiſe long, is quickly taken away if you rub the parts with *green Mul-berries,* and after waſh with Water.

The Cure of Spots is according to the Diverſity of the cauſe, which is internal, as Blood, nouriſhing Juyce, or Seed, or a Diſeaſe.

The Cure of blackneſs from Stroaks.

Black, and blew Spots do appear after Contuſions and Stroaks, by reaſon of the Blood breaking through, under the ſcarſe skin, theſe, if they require cure, are to be cured as contuſions whereof we ſpake formerly. But if the contuſion be cured and yet the ſpots remain, then we muſt chiefly have regard to them. They uſe to go away of their own accord, becauſe the Blood cannot grow thick putrified in the place as it doth in a large ſpace, but is made wateriſh and thin, and ſo may paſs through the Pores by inſenſible tranſpiration. But if by reaſon of the plenty of it, and thickneſs, this will not be, but it continueth, and there is fear that being thick and putrified it may ulcerate, you muſt apply Medicines that diſcuſs and dry, to which if we come at the firſt while the Blood floweth we may add aſtringents, but after we uſe only Diſcuſſers and Dryers, and they are thus made.

Herbs freſh gathered may be bruiſed and applyed, or a little boyled, as *Wormwood, Hyſſop, Calamints, Organ, Hemp, Rocket, Devils bit, Arſmart, Sneeſwort, Mallows, Amcos,* or they are mixed with *Honey, and Bran, and Cummin ſeed. A Raddiſh Root* ſliced doth the ſame.

A Decoction of the Plants aforementioned *in Wine, and Honey, with Vinegar* at the firſt, makes a Fomentation, a Fomentation of warm water, eſpecially if Salt, if often uſed will do it alſo.

Alſo the Juyces of the Plants mentioned, eſpecially of *Wormwood, boiled with Honey, and Aloes, and with the pouder of Cummin ſeed, and alſo the Juyce of Raddiſh and Coriander.*

Divers Oyntments and Applications are made of other things, and chiefly *of Nut Kernels beaten with Honey and ſalt.*

Or *Salt, Wine, and Honey mixed in equal parts, Cummin ſeed alſo poudered with the Yolk of an Egg, and Wax, or Honey,* to this you may add a little *Camphire.*

Or, Take *Bean flower, and Fænugreek, of each two ounces, Cummin one ounce, pouder of Wormwood two drams,* boil them *in Wine, and Honey, adding half a dram of Saffron:* make an Emplaſter.

Or, Take *of both Comphrey Roots, of Flower-de-luce roots, each half an ounce, of Raddiſh one ounce, of Mallows, and Wormwood each one handful, of Chamomel, and Meliſot flowers each one pugil:* boil them *in wine and water,* then ſtamp them, and add *two ounces of the pouder of Fænugreek or the like, Cummin half an ounce, of Muſtard, or Rocket ſeed, two drams, of Frankincenſe, Myrrh, or Lac, each one dram, of Goats Dung, half an ounce, Salt two drams, Ox gall one dram, Honey one ounce, Oyl of Dill two ounces:* make *a Cataplaſm.*

This is moſt excellent, Take *Orpiment half a dram, of the Meales aforementioned, two ounces:* boil them *in Wine for a Cataplaſm.*

Anoint the part with the blood that comes forth of a quill new drawn.

Or with the Gall of a Goat, or Ox, with Honey, or the Yolk of an Egg.

Or apply Goats Dung or Ox Dung *with Cummin.*

The Lungs of a ſheep hot applyed do diſcuſs ſpots.

Oyl in which *Briony Roots* have been boyled or the like, or *of Roſes, Olive, Chamomel, with Salt.*

Or Oyntment of Alabaſter.

Scarification doth make way for the Blood under the skin to come forth, which may be uſed if it be much, and ſtay long; leaſt it putrifie and infect the quick part and make a Gangrene, in the ſuſpicion of which you muſt ſcarifie deep.

But if by putrefaction an Impoſthume, or Ulcer be bred, you muſt cure it as an Impoſthume or Ulcer. If a Gangrene be as it happens from a great Contuſion ſometimes, then it muſt be cured as a contuſion and Gangrene, of which we ſpake formerly.

The Cure of all kinds of red ſpots, Fleabits or Freckles, Eryſipelas, Teter, Roſy-drop.

Spots that come from the diſperſing of the Blood through the skin, if they be ſmall, and red and little as Freckles, like Fleabites, they ſomtimes go away by inſenſible Tranſpiration or by ſweat, as alſo the broad Anthonies fire; yet if they continue long they require cure, as Tetters and thoſe bloody Spots that are ſo red in the face and other parts, which are hard to be cured. And that which is called the Roſy-drop is very difficult, if the face be alſo full of Puſtles, and the Noſe much ſwollen.

If then you deſire to cure theſe, which ſome deſpaire of, and therefore neglect, you muſt begin thus. Firſt purge the Body in reſpect of the abundance of humors, and you muſt let blood in the Arm for Revulſion, or in the Fore-head. for the Face, or under the Tongue for Derivation, or by ſcarification in the ſides of the Neck and Shoulders, and by Cupping-glaſſes, to draw from the Face, often repeating them, either with or without ſcarification. And this may be done by Horſleeches to the Face, Noſe, or there about the Noſtrils, or cheeks, or chin, or behind the Ears. Then uſe things that alter, which allay the Heat, and cool the Blood, and keep it from running ſo violently into the part, either by way of Diet or Phyſick; As hath been declared in Diſeaſes of Blood.

The Topical Medicines which are applyed to the part muſt

muſt in theſe red ſpots be ſuch as cool and aſtringe the blood, and ſuch as conſume the abundant Juyce by a drying and digeſting Quality, if the ſpots turn to Puſtles, and theſe muſt be ſtrong, if the ſwelling be hard by adding if other things fail, ſuch as corrode and burn.

Theſe are applyed in Liquors, Waters and Oyntments, with which you muſt anoint, or waſh the red Puſtles; or if you apply ſtrong things, you muſt only touch the Puſtles: they are divers.

Firſt, they are made of Plants, *as Water of Straw-berries, Aſh, and Mullein flowers, with Camphire, and wine of ſtraw-berries.*

Another uſual which is very good: Take *in the Spring one pint of Straw-berries, or in Winter one pint of four Grapes, of Goats milk two pints, twelve whites of Eggs, and the Mucilage, of Fleabane, and Quinces, of Gum Traganth, made in Roſe or Plantane water, four ounces, of Camphire two drams,* diſtil them. You may add *Vinegar, Juyce of Lemmons, or the Plants following, alſo Allum, and Sulphur.*

Or uſe this following. Take *of Speare, Dock-roots three ounces, of Plantane, Nightſhade, Sorrel, Mallows, Fumitory, each one handful, of Roſes, Violets, Water-lillies, Honey ſuckles, Willow, each one pugil, of Lemmons, Oranges, or ſharp Apples, ſeven or nine, of green Mulberries, Strawberries, or grapes half a pound, of Allum half an ounce, of Camphire one dram:* diſtil them, *Brimſtone* added makes it better, but it will ſweat ſo, well.

You may add *Water-lillies, great Penny-wort, Houſleek, baſtard Dittany, Pomegranate flowers, green or dry.*

Or thus; Take *Goats milk four pints, of ordinary meal, as much as is ſufficient,* and make *Bread thereof, half bake it, and take of the Cruſt, and break it in pieces, and diſſolve it with four pints more of Goats milk,* adding *Lemmons peeled and ſliced twelve, Raddiſh, and Spear-Dock Roots, each two ounces, whites of Eggs beaten twelve, Allum half an ounce, Tartar, and Sugar, each three drams, white Coral, two drams, Egg ſhells calcined, and Camphire each on dram:* mix them well, and diſtil a water from them by a Lembeck.

Allum water, ſo called, of Plantane, and Purſlain water, Oyl, Allum, and whites of Eggs is good alſo.

This following *Vitriol water* is good againſt a red Face. Take *of the water of Froggs-Spawn, Mullein, Fern, each two pints and an half, of the Urine of a young Boy three pints,* to theſe mixed, add *of the Treacle of Andromathus two ounces and an half, of Vitriol, Salt, Allum each four ounces,* draw a water by the Embers, or *Balneum Maris,* till the reſidents are dry. To which water add *Camphire, and Saffron, each one ounce;* keep it for Uſe.

The powder of Spear-Dock roots, and the aſhes of Daffodils, with Oyls, make a laudable Oyntment.

The hot blood of a Hare, or other Creatures is good to take away Redneſs.

Of *quick Brimſtone* Applications are eſpecially good to take away Redneſs.

If it be mixed with cooling or aſtringent Juyces, as the *Juyce of Houſleek, Nightſhade, or Plantane, or ſome ſweet water, as of Roſes.*

Or, Take *of quick Brimſtone one ounce, of white Frankincenſe half an ounce, of Camphire two drams,* diſſolve them *in one pint of Strawberry, or Roſe-water,* and you may add *the Juyce of a Lemmon, or four Pomegranates.* And it will be better if you add *common Salt, Salt Ammoniak, or of Allum two ounces, or Litharge boiled in Vinegar, or Ceruſs.*

Or, Take *of live Brimſtone half an ounce, of Lytharge,* made white by Decoction *in Vinegar two drams, of Frankincenſe one dram, of Camphire half a dram, of Grains of Paradiſe, or Ginger one ſcruple, of Citron Oyntment, or white with Camphire, two ounces:* make a Liniment, and if you add *half a dram of Orpiment,* it will be better.

They make a *white Water of Lytharge* called *Virgins milk,* which takes away all evil Colours from the Face eſpecially Redneſs. It is made thus, Take *of Lytharge poudered two ounces, of white Wine Vinegar ſix ounces,* more or leſs as it is in ſtrength, ſteep them, often ſhaking them, or boil them a little.

This done let the thick part ſettle, and pour off the clear and ſtrain it. Then Take *of Allum, or Salt or both two ounces,* diſſolve them in Spring-water, or other diſtilled water good for the Face, as *of Beans, Lillies, and Roſe-water for the ſent ſake, ſix ounces, one dram or two of Borax, and a little Camphire* when we will uſe theſe two Waters, we take equal Proportions, and though they were clear before, (being mixed) they turn as white as Milk, with this waſh the face; and if it be too ſharp, you may add more water. Alſo by mixing the Ingredients of both Liquors, ſteeping or boyling them, this Milk is made; if you will cleanſe more you may ad a little Oyl of Tartar or the like.

Another Water excellent in a red ſwollen Face, and when there are ſcales and Hardneſs. Take *of Litharge one ounce, of Allum one dram, of Borax three drams, of Ceruſs half an ounce, of Vinegar two ounces, or Roſe, Plantane water, or the like, four ounces:* boyl them to the Conſumption of the third part, ſtrain them, add a little *Juyce of Lemmons.*

There is alſo a diſtilled water of the Virgins Milk mentioned which is good. Or this, Take *of ponder of Litharge one pound, of Vinegar two pints:* ſteep and boyl them, then add of Bean-water or the like one pint, draw a water adding ſometimes other things, as *Allum, Camphire, Borax, Oyl of Tartar* before it be diſtilled.

Or uſe this Oyntment: Take *of Litharge prepared white (which is by infuſing it thrice in Vinegar, and drying it) two ounces,* add *Vinegar, and Oyl of Gnord ſeeds, as much as will make a Liniment, with Camphire diſſolved in Roſe-water half a dram.*

A profitable and convenient Water is made of *Tartar* thus. Take *of calcined Tartar half a pound, of burnt Allum one ounce and an half, of Borax one ounce, of Sugar candy two ounces, of Camphire two ounces, of whites of Eggs beaten twenty, of the Mucilage of Fleabane ſeed one ounce and an half, of the Juyce of Lemmons, or of Vinegar two ounces:* draw a water.

There is a powerful Oyntment made of *Camphire,* Take *of unſlcaked Lime two ounces, quick Brimſtone half an ounce:* pouder them, and boil them in Vinegar to an Oyntment.

An excellent Medicine of Quick-ſilver. Take *of Peach Kernels, or bitter Almonds, chew them a little, and being brought to a Paſte, take out the milky Juyce with a linnen ſtrained, and put thereto as much as a Nut of burnt Allum, then take as much Quick-ſilver as a Peaſe, and rub it in your Hands ſo long with ſpittle till it grows black, then mix it well with the aforeſaid milkie Juyce, anoint the Face at bed time therewith, and in the morning, for the ſpace of a Week; this done, before you go abroad waſh it thus: make a paſte of Bean meal, and Rice, with whites of Eggs beaten, keep this in balls, and ſoften one of them in water for a Night, and then rub the Face therewith upon a Towel.*

Another is made thus, Take *of Quick-ſilver one dram, of Fir-tree Roſin waſhed, one ounce:* mix them well, then add *half an ounce of Borax, one ounce of Sugar candy, of Cuttlebone two drams, of Soap two ounces, of Oyl of Tartar two drams or more, with as much Oyl of ſweet Almonds, or of Roſes, as will make a Liniment,* you may add *the Juyce of Sorrel, Spear, Docks, or Lemmons, and Litharge.*

Excellent Medicines and ſtrong are made of Sublimate, to be onely touched lightly, with which the Puſtles being touched till the Skin be taken off, they fall away and dry or conſume; thus they are made: Take *of Sublimate one dram, of Juyce of Lemmons, or Vinegar one ounce, of ſome convenient Water four ounces, of whites of Eggs ſix in number:* let them be ſteeped together cloſe ſtopped.

Or thus, Take *of Sublimate half a dram, of Litharge half an ounce, of white Wine Vinegar four ounces:* boil them till the third part be conſumed, to the ſtrained Liquor ad *milk, the Juyce of Lemmons, or Oranges, and a little Oyl of Tartar.*

The Emulſion of *Variola* to take away Redneſs of the Face, which is moſt rare is thus made, Take *of Spring-water, in a glaſs ten pints, let it ſtand twenty four hours before to cleanſe it, to this put in a thin rag of linnen one pound of white Poppy ſeeds bruiſed with two whites of Eggs, and two drams of Sublimate ſweetned and wel poudered, ſhake them in a wall ſtopt*

glaſs

glaſs for an hour: to theſe add about the Concluſion of ſhaking *of white Sugar, and Borax burnt a little upon a hot Fire-ſhovel each ſix ounces.* With this emulſion waſh the face, morning and evening. You may uſe other Medicines that are made *of Sublimate, and Arſenick* that corrode and burn, mentioned in venemous Puſtles, if they be very hard to be taken off.

A Fume of Brimſtone, and Frankincenſe caſt upon coales, taken upon the Face, cures the Redneſs thereof, as we ſee red Roſes fumed with Brimſtone preſently wax white; but you muſt do it warily, and keep your breath, and ſhut your Eyes.

The Cure of divers Spots, Scurfe, Tetters and moates that are Natural.

The Cure which belongs to theſe ſpots which come by Nature, from the nouriſhing Juyce in the Pores, is chiefly againſt things which come of evil Juyce, that when they are hurtful, and threaten Danger, theſe Spots may be taken away, as the Morphew, and Scurfe and the like. Thoſe which come not by Nature, and evil Juyce as Freckles, although many, becauſe they are uſual to ſome and go away at Winter, or are leſs after hot weather are not medled with commonly. But becauſe ſome think they deform, and deſire to have them taken away: I ſhall teach the Cure of them.

The ſame is obſerved by Moles, that are Natural, and therefore not thought evil, and not regarded except they deform.

But in the Cure of all theſe ſpots, the internal cauſe muſt firſt be removed, as in Morphew and the like; but in others ſince the cauſe is not hurtful, as in Moles and Freckles it is not needful, except the body be other way foul, and we determine to make the Topick Medicines work the better, to cleanſe the Body.

In foul Spots we firſt evacuate, and with thoſe things which we uſe to cleanſe the body in the like filth, as the Scab and Itch, and we take heed by good Diet and altering Medicines, that they return not again.

As for Topicks that are uſed to take away ſpots which are ſo evil as Morphew &c. they muſt be of a drying and cleanſing Quality, by which they conſume them inſenſibly, and if weak things will not, uſe ſtronger, which eat off the ſame. And if that will not do, uſe Cauſtiks and Corroders, which will plainly burn or dry them up, or elſe take them off by manual operation: thus we can do in Moles. In Lentigines, or Freckles, we may do it with eaſier Medicines, becauſe they are many, and it is not ſafe to uſe ſtrong Medicines to all, except in one place we deſire to take off many. The Remedies mentioned for evil ſpots by vitious Blood, as Tetters, Puſtles of the face, and the like, are good here, and they all do it either by cleanſing onely, or by corroding, or burning or by pricking, or ſhaving off.

The cleanſing Medicines that do not corrode, both weak and ſtrong which are proper for theſe, are divers, as thoſe called Comptica and Coſmetica, by which the blackneſs is corrected, as we ſhewed, and eſpecially in taking away the lentils and in other ſpots they can do it by conſtant uſe.

To theſe are the cleanſers following applyed, to which if the skin be thick, we add Emollients and they are rubed upon them, and if we will have them work ſooner and better by the fire or Sun, they are taken from divers things from Roots and Herbs, theſe bruiſed or cut are rubbed or applyed, as the Roots of Dragons, Sowbread, wild Gourd, Briony, Flower-de-luce, Raddiſh, Onions heads, Daffodills, Leeks, alſo white Hellebore, Solomons Seal, Spear-Dock, Madder, Alkanet, Capars, black Chameleon, Water-lillies, Aſphodel, Gum Succory, wild Lettice, Beets, Coleworts, Penny-royal, Agnus caſtus, wild Purſlain, alſo the Stones of wild Vines, and Fruit of the wild Guord.

If you rub freſh Soap-wort bruiſed, it will froath like Soap, whence it hath its Name, and will cleanſe well.

Theſe bruiſed or a little torrified if hard, you may add the Meal of Lupines, Orobus, and the like, and to make them ſtronger, *Vinegar* and *Honey*.

With theſe Decoctions of Plants made in water or wine, or with Lye thereof being hot, the ſpots are rubbed or bathed eſpecially if there be many, as *Lentigines*, or *Freckles*, with other aſtringents, as *Roots of Daneworts, Elicampane, Lillies, Leaves of Pellitory, Mercury, Mallows, Marſh-mallows, brank Urſine, Bugloſs, ſcabious, Fumitory, Hops, Succory, Sorrel, Violets, Cranes bill, Tarrow, Wormwood, the leſs Centaury, Water-creſſes, and Senna, with bran and bean-flower, ſtilled Waters alſo of ſtronger Plants, and of Roſins, of Fir and Larke-tree.*

Anoint them with *the Juyce of Plants, as of the Roots of Dragons, wild Cowcumber, or Elaterium, Flower-de-luce, Gentian, Dock, Capars, Thapſia &c. and chiefly with Juyce of capars, Leeks, Squills, Daffodil, Scabioſe, Cole worts, Lemmons.*

Oyl of Plants are uſed eſpecially in the Morphew, as *of Muſtard ſeed, and Spurge, alſo Oyl wherein Laurel, and ſpurge have boyled, or Roſe Laurel, the Juyce of Elm leaves, and of a Beet ſtalk,* take away any ſpots.

The Pouders of Plants, with *Vinegar, or Juyce of a Lemmon, or Honey, or Oyl of Greaſe, or the Yolks of Eggs, as of both Dragons, Solomons Seal, wild Cowcumber, Briony, white Hellebore, alſo the meale of Lupines, Orobus, Beans, Oates, alſo Muſtard ſeed, Raddiſh ſeed, and Rape ſeed in pouder, and Rockets, Cabbage, Nettle, Nigella, Hatchet vetch, Ricinum, and Peach kernels torrified and poudered with Agarick, the aſhes of Garlick, Lillies. and birthwort Roots,*

The Greaſe which is taken from living Creatures, as of the Fiſh Thymallus takes away Freckles.

The Blood of an Hare hot, takes away ſpots, alſo the gall of Beaſts, and Fiſhes.

Pigeons Dung, or ſheeps Dung, with Vinegar, Oyl in which quick Lizards were boyled, with Wine till it be conſumed is good againſt Morphew.

Alſo red Ants tyed in a clout and preſſed till the Juyce is taken forth.

Of earthly ſalt Juyces, common Salt, or Salt Gem, or Ammoniacum, or Niter, or Borax made of it, Allum, Halyonia, or ſea Froath, with vinegar, and Juyce of Lemmons.

The Pyrites, or Fire-ſtone, or Lazule with ſtrong Vinegar.

Tartar by it ſelf, or calcined, is alſo good eſpecially the Oyl thereof, this doth excellently.

And thus may it be made: *Take* of Tartar of white Wine, with Vinegar made into a ball, put it in clouts under the Embers, let it be burnt a little, then uſe it with Honey or it ſelf, for it will diſſolve, if you quench Gold often in ſack and ad a little white Tartar thereto, it takes away Freckles.

The Compounds are theſe, made of Plants, whoſe Decoction is good, with ſalt, common or Ammoniack, Niter, or Allum.

The Waters are thus made, *Take* of Docks, and Roots, four pounds, ſlice them, add Vinegar four ounces, Tartar two drams, Sal Niter half an ounce, diſtil a water for uſe.

Another, *Take* of Raddiſh Roots one pound, of Orris, and Dock roots, and Lillies, each half a pound, of wild Cowcumber, or Solomons ſeal, of unripe Grapes, each one quarter of a pound, of Pellitorry, water Parſley, Centaury the leſs, each one handful, of cold ſeeds, Rape, or Rocket ſeed each an ounce, of Barley bread, or Bean flower, one quarter of a pound, Turpentine one ounce; of Urin two ounces: diſtil them, you may add Myrrh, Frankincenſe, each half an ounce, of liquid Storax one dram.

Or this. *Take* of bitter Almonds, Peach Kernels, and Apricock Kernels, two pugils, of the Meale of Peaſe, Rice, Beans, each one pugil, of the four cold ſeeds the greater, each one pugil and an half: ſprinkle them with the Decoction of ſharpe Dock-roots, and Lemmons, or of Oranges, and Citrons, and with Ceruſs, two ounces, Tartar one ounce, of common Salt, or Niter, or Borax, half an ounce, of Camphire, one dram: make a water of this paſte.

An excellent Water: *Take* of Tartar calcined, one pound, Frankincenſe, or Maſtich, each half an ounce, of Camphire four drams, ſome whites of Eggs, diſtil them. Inſtead of Tartar, you may uſe the ſame weight of Soap.

Virgins Milk is good alſo, Take *of Litharge one ounce, of Allum, Borax, Ceruſs, each half an ounce, of Camphire two drams, of Tartar half an ounce, of white Wine Vinegar, one pint, of Lilly-water, and Bean flower water, each four ounces, of Roſe water one ounce:* boil and ſtrain them by a philter, add *the Juyce of Lemmons, water of Docks each three ounces, Borax, Camphire, of Sugar candy each five drams:* boil them again gently, and ſtrain them for uſe.

Liniments are made of *the Juyces mentioned with Salt and Niter, and Borax, and Camphire.*

Another Oyntment. Take *of the Juyce of Dragon roots, and other Herbs mentioned of Moulein, three ounces, of meale of Lupines two drams, of Orris roots one dram, of Pigeons Dung one dram and an half, of Oyl of bitter Almonds, or of Eggs one one ounce and an half, of Oyl of Myrrh half an ounce, of Turpentine as much as is ſufficient.*

There are other Oyntments. Take *of the pouder of the aforeſaid Plants half an ounce, of Ammoniacum, or Niter, or Borax, or Allum, one dram, of Myrrh half a dram, Camphire one ſcruple, with the Juyce of Oranges, or with Honey or Soap* mix them.

For the Freckles: Take *of Dragons the great or leſs, or the middle bark of an Elm, half an ounce, of Cuttle bone two drams, of Frankincenſe one dram, of Liquid Storax half a dram:* make them up as before.

In the Morphew: Take *of Raddiſh ſeed, Nigella each two drams, of white Hellebore, Allum, or Sal Ammoniak each one dram, of burnt Galls one dram: with Honey, and Vinegar,* make a Liniment.

A ſtronger, thus made: Take *Borax, or Niter, Allum each half an ounce, of Tartar calcined two drams, of the meale of Lupines, or Orobus half an ounce, the Roots of both Hellebores each half a dram, of Muſtard ſeed one dram, of ſoft Soap or hard four ounces, of the Juyce of Dock roots, and Elicampane, each one ounce, of the Roſin of the Fir-tree a little,* ſtir them well.

Verdegreece makes ſtronger Oyntments, if half a dram, be mixed with half an ounce of the reſt, ſometimes Capars alone, or with Verdegreece with Oyl of Tartar.

Or, *Take* of Ægyptiacum two drams, of burnt Allum one dram, of Oyl of Tartar half an ounce: mix them. If it be ſharpe, add a little Oyl of Roſes.

Or thus, *Take* of white Hellebore, and Dragon Roots, each one dram and an half, Staphſager, Raddiſh ſeeds each one dram, of Savin half a dram, of Pepper one ſcruple, of Sal Ammoniack one dram, of Verdegreece one ſcruple, of Sulphur one dram, with Vinegar make Troches, which you may diſſolve with Vineger or Juyce of Lemmons when you uſe them.

Corroding and cauſtick Medicines which conſume ſpots and Puſtles, ſome with pain, ſome without, as in the Morphew which is inſenſible, which are to be uſed warily leaſt they hurt the part adjacent, and muſt only touch the parts affected are,

Of Sublimate, and Arſenick eſpecially mixed with the aforeſaid Oyntments.

Alſo a little Sublimate with the white or Yolk of an Egg, or any Mucilage, or Oyl, or Greaſe, may with caution, be applyed.

Or the Puſtles may be touched with a water made of the Decoction of the ſame, which is this: *Take* of ſublimate half an ounce, of ſome convenient Water, to which add Roſe-water ſix ounces: boil them to the Conſumption of the third part, if this be too ſharp, it may be made weaker, alſo you may mix Oyl of Tartar.

That Water which remains as the preparation of ſublimate, or the *Aqua fortis* of Gold-ſmiths doth the ſame.

Or uſe this following: *Take* of ſublimate one dram, of Cantharides two drams, of Arſenick one ſcruple, of Willow, Arcoale one dram: pouder them, boil them in Water-lilly water, or Plantane four ounces, till they grow thick, add ſome Drops of *Aqua fortis,* dip a little Cotton therein, and touch the ſpots morning and evening, till they bliſter which you ſhall anoint with *Unguentum Citrinum.*

Or make this following Paſte, and apply a bit of it diſſolved in any water: *Take* of ſublimate, and Allum each as much as a Peaſe, Borax two drams: burn them upon a hot Iron, and pouder them, with Maſtich, Sarcocol, and Sugar candy, each half a dram: mix them well, in a Mortar with ſoft Soap, adding a little Ox gall. and after ſome Bean flower, and pouder of Nuts, let them be well dryed and made into a paſte, and dryed for Uſe.

Beſides theſe there are other Veſicatories, as the Leaves and Roots of Crow-foot beaten, and the Leaves of Laurel, and the Milk of ſpurge, and the like mentioned formerly.

Alſo Cantharides and unſlaked Lime, with Vinegar.

Alſo they may be taken away with an actual or pontential Cautery, eſpecially ſuch as cauſe no pain made of lime and wine-Lees, or with the water made of Cauteries.

To prick many Holes is good in the Morphew, by which if the Blood flow, there is hope of Recovery.

Alſo it is good to ſhave them often.

The Cure of the ſpots in Feavers Eryſipelas, ſmal Pox, Meazles & the like, malignant ſpots, or of the Pox, or Leproſie, or Scurvy.

The Cure of ſpots that come from a Diſeaſe was explained in the Cure of thoſe Diſeaſes whence they ariſe; as of an Eriſipelas in Feavers ſynochus, alſo we have declared the cure of the Puſtles in the French Pox, Leproſie, Scurvy, which do indeed conſtitute the Diſeaſes it ſelf, as it is in the skin, and produceth them, in the Treatiſe of thoſe Diſeaſes others require no other cure but of the Diſeaſe, as thoſe in Feavers, which vaniſh with the Feaver the chief cure is to keep them from external cold leaſt they be thereby ſtricken in.

Alſo there are other red, violet colour'd, and black ſpots in malignant Feavers, and when the Feavers ceaſe they vaniſh, or they end alwaies with Death, which they preſage.

Of Puſtles in the ſmall Pox.

But thoſe ſpots which turn to Puſtles which are called *Eſthymata* or *Variolæ,* although they often require no other cure but that of the Diſeaſe; in which we rather provoke there comming forth, then hinder them, and take no more thought of them, becauſe they commoniy vaniſh of themſelves or dry up, or turn to little Ulcers, and ſo are cured of themſelves: yet if theſe come on ſlowly, ſome things may be given which may make them ſooner dry and come to maturity.

To dry them, they muſt be wet with this Decoction with a quill or feather, or a clout. *Take* of Lentils half an ounce, of the inner bark of a Tamarisk three drams, of Myrtle-berries one dram, of Broom flowers half a dram: boil them in water, adding at the Concluſion a little Roſe-water.

For private Uſe you may put into the Decoction two drams of red Sanders, or half a dram of ſaffron, and they will diſcolour it.

It will dry better if you ſeaſon it with Salt: and Allum.

The Juyce of Pomegranates that is between ſharpe and ſweet, will ſooneſt dry them and others of that Kind.

That they may be ſooner ripe, anoint them with Hogs greaſe, or rub them with the inſides of Figgs, or with the Yolk of an Egg, or the like.

When they are ripe they open of themſelves uſually. And if not, or if it be long a doing in regard then the fleſh will be eaten with the Matter contained, there will be a hollow Ulcer, and there will be left a Scar, with a pit. Therefore to avoid this great Deformity of the Face, they muſt ſoon be opened with a Needle or ſharpe Inſtrument. (which if made of Gold is ſuppoſed to leave the leſs ſcar.) It often happens that when they are ripe, the Matter endeavouring to get forth, cauſeth itching, which cauſeth ſcratching which leaves them open. And this women are very ſollicitous to keep their Children from, ſuppoſing that it cauſeth the pitting, but falſly, for it comes from their want of opening and the long continuing of the Matter. After they are open, becauſe they are covered with a ſcab which is made of the dry matter, becauſe it will fall of it ſelf, you need not uſe any means.

But

But if any remain long, rub them with a fat piece of skin that is ſalted, or other Emollient and they will quickly fall off. And in regard they are ſmall Ulcers, if you cleanſe them often from filth, they will heal of their own accord with Application of any thing: but if there remain any Scars in the face, they muſt be cured as is ſaid concerning Ulcers.

If the Pox do not only annoy the skin, but the Noſtrils within, and there turn Ulcers, we ſhewed the Cure of them in the Ulcers of the Noſtrils: as alſo in the Treatiſe of the Lungs and Jawes, if they be there. Among other things ſharpe Vinegar ſmelt unto often, keeps the Pox from entring into the Noſtrils.

The Cure of ſtroaks and white ſpots of the Eyes and of the Pox, or Meazles therein.

The Cure of the diſcolouring of the Eyes, which comes from Diſeaſes, was explained in the Diſeaſes of the ſame; as Redneſs, in the Inflammation of the Eyes true or falſe, or in the Treatiſe of Rheums. The red or blew ſpots, are declared in the ſtroaks, and the white ſpots, in the ſpots, ſuffuſions and ſcars of the Eyes.

But if the Pox or Meazles get into the Eyes, you muſt labour to prevent them. Therefore apoint the Eyes being ſhut with theſe following, if any of it ſhall get into the eyes by chance it wil rather do good then hurt.

As *Roſe, Plantane, Myrtle and Coriander Waters.*

The common Water is that of Roſes wel coloured with Saffron, Or the Decoction or the Infuſion *of Sumach leaves, in* the ſaid water.

Or drop in *the Juyce of the Flowers and Fruit of ſweet Pomegranates, mixed with the Juyce of Henbane.*

Or *the pouder of Henbane flowers, with ſharpe wine,* is to anoint the Eye-lidds.

A good Eye-water. Take *of the pouder of Sumach flowers one dram, of Coriander ſeed, or Myrtles prepared half a dram, of Saffron one ſcruple, of Camphire half a ſcruple, of the waters aforeſaid, eight ounces:* mix them well.

It wil be ſtronger if you ad a little *Juyce of Pomegranates.*

Some think that if you compaſs the Eyes about with ſaphyrs of Gold they will keep out the Pox.

When they are in the outſide of the Eye-brows, you may alſo uſe the aforementioned water dropping it alſo into the Eyes, adding of Tutty prepared, or the white Troches of Rhaſis half a dram. And if they turn to an Ulcer by ſuppuration, there is Danger of looſing the ſight, and then they muſt be cured, as the Ulcers of the Eyes mentioned, and be ſprinkled with the fine pouder of Beans, and Sugar candy, and other things mentioned in ſcars, to prevent and take away the ſcar.

Things that make black Eyes.

Some uſe this Art to make grey Eyes black, which they take to be the moſt beautiful: they put into the Eye, the fine pouder of Nuts with water.

We have ſeen grey Eyes turn black of their own accord, in time: and I ſaw a Man ſome few years ſince, in the Houſe of my Father now deceaſed, that had one grey Eye, and another black, which was ridiculous. And when he put his hand between his Eyes, he ſeemed ſtill another Man.

The Cure of the diſcolouring of the teeth

When the Teeth are diſcoloured, and by reaſon of filth and ſcales black or yellow, they are divers waies whitened, as was ſhewed.

The Cure of Nails diſcoloured.

The diſcolouring of the Nails require not a peculiar Cure, unleſe there be other faults as clefts, corroſions &c. of which we ſpake in Deformities.

For if they begin to wax black, by reaſon of Paleneſs of Body, or to have black ſpots underneath, by reaſon of ſome ſtroak or bruiſe, in regard the Colour is not in the Nayles but in the Fleſh underneath, and is ſeen through them being tranſparent, they muſt be cured no otherwiſe then was mentioned in Paleneſs and Bruiſes; and if Blackneſs under the Nails be from filth, we ſhall declare the Cure in the Treatiſe of Filth in General.

As for the white ſpecks which are in the Nails by reaſon of thick Juyce, in regard they are not evil, but ſigns of long life eſpecially if they be many, as in young Men, or if few in old Men they have hope of long life: therefore are they commendable,

The Cure of diſcolouring of the Hair.

That Diſcolouration is chiefly obſerved in Hair which is exactly white, as in old age, becauſe it is venerable, it is not meddled with: but young people ſtudy to change. Some diſdain the red Hair, and others highly eſteem it. To change them into other Colours is impoſſible, becauſe in grey hairs, there is ſuch dryneſs which takes away their perſpicuity, as we ſhewed, that they cannot be changed: and in red and the like, the Juyce that nouriſheth will alwaies produce the like by aſſimulation; as we ſee, when hair is pluckt off, the like grows again, and in Birds if one feather be pluckt off, although all there about are of another colour, yet there will be another of the ſame Colour with that pluckt off, as I have often tryed in Pigeons.

The cure of grey Hairs.

Some old men deſire to be black or the like, and to ſeem young. And young men if they have any grey Hairs in Head or Beard, as often is ſeen, they deſire to have them like the reſt, or to make red hairs black; and this is done by the Comptorian Art mentioned, by which another Colour is made that will not continue.

Things that make white Hairs black.

By adding chiefly aſtringents which may make them black or at leaſt obſcure them; but that they which grow after may be of the like colour, it cannot be done and therefore we cannot prevent the appearing of grey hairs, except we uſe them conſtantly, which is not only troubleſome but hurtful for the Head; but to make the Head or Beard black, you may waſh or anoint them with theſe following.

A Decoction, made in Lye, or Rain-water, or Iron water, wherein Iron is quenched, or *of Galls, green Wal-nuts, Beech maſt, Cypreſs, Myrtles-berries, Willow-roots, Maſtich-tree leaves, Myrtles, Sumach, Mulberries, black Berries, Cypreſs, Roſes:* and it will be ſtronger, if you add *Litharge, filing of Iron, or Ruſt and Vinegar, or other aſtringent Juyce.*

The Decoction *of Myrobalans* is approved, and alſo, *of Capar roots, or Leaves of Ophris like jagged Coleworts, or black Vine.*

And if the head be to be waſhed you muſt ad ſuch things as reſpect the Head; chiefly *Sage, and Bay-leaves,* and the like.

They ſay if you waſh hairs with Wine in which a *Horſe-leech* hath been drowned it will make them black.

Stilled Waters of the ſtrongeſt Plants mentioned, may do ſomthing, eſpecially if before you ſtill them, you add *Sal Niter, Sal Gem, and Vitriol.*

Alſo a Water drawn from Ink may be good, which if uſed by it ſelf would black the Body too much.

Some approve *the water of Danwort, with Gum Arabick.*

Oyl alſo wherein a Lizard hath been boiled, or in which the ſhells of Nuts, and Allum hath been boyled.

Or that Oyl which is put into the hollow of a Coloquintida Apple, with a little Orpiment and roſted in the Embers, and then ſtrained out, ſome add thereto the Seed of Henbane.

Or, Take *of common Oyl, or of Myrtles, or of Maſtich, half a pint, of Juyce of green Nuts, four ounces, Vinegar two ounces, Acacia, or Hypociſtis, one ounce, of Galls half an ounce, of Allum two drams, Vitriol one dram:* boil and ſtrain them. You may alſo boil therein other aſtringents, as *Myrtle berries, Cypreſs-nuts, Myrobalans, Acorn cupps, Sumach &c.* alſo *Labdanum.*

There are other Oyntments, as *of Galls, or Pomegranate peals, and Allum, boiled in Vintgar, or Oyl*

Or, *of the Juyce of green Wall-nut ſhells, or of Acacia, Hypociſtis, Labdanum, and Allum, and Sal Gem or Niter, diſſolved in Oyl of Myrtles, or Juyce of Beets.*

Or *of Litharge boiled in Lye to half a pint,* whereof if you add

add *four ounces of burnt Braſs*, it will be better, *and half an ounce, of Oyl of Tartar*, after it is boyled.

Another Oyntment. Take *of Litharge, and burnt braſs, the quantity before mentioned, unſlaked Lime, ten ounces*: and boyl them in water to the Form of a Liniment.

We make hair black by Degrees with a Comb, if we anoint the Teeth thereof with the aforeſaid Remedies; or with the filings of Iron, or Ruſt or of Lead boiled in Vinegar.

It will be of better Operation, if two drams of filings of Iron be diſſolved in *Aqua fortis*, with a little pouder of Orpiment, and therewith anoint the inſide of the Teeth of the Comb, not at the ends, leaſt they touch the skin, and cauſe Ulceration.

To comb the Head and Beard with a leaden Comb often, is thought a good way to make Hair black.

In blacking of hair, you muſt note that theſe Medicines are ſo to be ordered that they compleatly make black, leaſt the ſame happen to them that uſe them as did to an old Man, not long ſince, who marrying a young Wench, deſirous to make his grey hairs black, to pleaſe his Spouſe with a ſophiſticated Youth: made his hair of his Head, Beard and Eye brows green, to the great Laughter of the Beholders..

Moreover, if the Hair be very black, and have no yellow or inclination to brown: they that are ſtudious of getting Beauty, do diminiſh the blackneſs a little.

The Remedies that make hair leſs black.

And that they may not ſeem ſo extream black, which they count uncomely, or white which the high Dutch call *Steis* and the French blond, they uſe theſe following.

They firſt waſh them with Lye, and while they are wet, they fume them with melted Brimſtone, and when they are dry they anoint with the poplar Oyntment, and the fume of burnt Brimſtone will do it better.

The Lye of Vine aſhes doth the ſame, or in which the *the Roots of Elicampane, the greater Centaury, Raddiſh, the barks of the Roots of Capars* have been boiled, you may add *Allum and Sulphur*.

Or make this Waſh. Take *of Sulphur two drams, of Frankincenſe one dram, Allum half a dram, Swallows Dung, two drams, of Raddiſh ſeed poudered, and the barks of Capar roots, and of Elicampane, each one dram, of Ox gall half an ounce. With Vinegar or Glew diſſolved in water*: make a Liniment, you may add *the aſhes of the white flowers of Moulein*

Medicines to make Hair yellow.

To make hair yellow, which the Venetian Ladies do extreamly labour for; they are firſt to be prepared, that they may better take the Colour, with water in which Allum, Salt, or Niter or Tartar have been diſſolved or boiled: or waſh them firſt with the plain Lye aforementioned.

A Water to prepare is made alſo of Agrimony, Dragons, Cuckow-pintle, with Vinegar, and the fourth part Niter, and of Honey, with Gum Arabick.

A Lye to waſh hair is made of the aſhes of Vines, and Oat chaff, with aſhes of Ivy wood, of Cabbage, and Bean flowers; and pouder of Herbs: all theſe are laid upon Oat, or Barley ſtraw, and the water is ſtrained through them for to make a Lye.

A Decoction to waſh hair alſo is made of water and common Lye of Vine aſhes or the like, in which you boyl things that have yellow Juyce, as ſhavings of Box, Barbery bark, Orange or Citron bark, the middle bark of Elder, Roots of Celandine, Liquoriſh, Turmerick, the yellow flowers of French Lavender, of Mullin, Broom, Dyers flower, ſometimes with Rhubarb, and Saffron, and other Plants which do the ſame, as Nettle Roots, Agrimony, the Capilar Herbs, Barley, and Oat chaff, Lupines, Cummin, Fœnugreek, alſo Ivory ſhavings, adding ſomtimes Myrrh, and Tartar, or Salt, or Niter.

Anoint with Oyl in which ſhavings of Box, Celandine-roots, Saffron, and the like have been boyled, or Myrrh.

An Oyntment. Take *of Myrrh two drams, of Tartar one dram and an half, of Salt one dram, of Saffron half a dram, with Oyl* in which ſome of the aforeſaid have been boied: make a Liniment, ſome add burnt Bees.

Medicines to to make red Hairs.

To make Hair red, which is thought moſt beautiful in ſome Countryes, you muſt waſh them with the Decoction *of Madder roots, Raddiſh, Lote-tree raſped, Lupines, and Wormwood made in Water, or Lye, alſo the Juyce of Raddiſh, Bucks-Thorn, or Raddiſh water, or the Oyl of wild Cowcumbers, with calcined Tartar.*

Alcanna, or *Hanna* in *Barbery*, (ſome ſticks whereof are brought from the Barbery Coaſts ſaith *Lobel*, being yellow within, which *Dodonæus* takes to be the Cypreſs of *Dioſcorides*, different from privet, which they took for it) is the beſt to make hair yellow; and uſual to my Knowledg, among the Turks which admire red hair in Women and Children, and it is ſo ſtrong that it dyeth the Nails alſo and other parts when they pleaſe. The Leaves thereof bruiſed are rubbed on, either by themſelves, or moiſtned firſt in the Juyce of the Root as *Dioſcorides*. In defect whereof, I beleeve if we boil thoſe ſticks which are brought over they will do the ſame: or *Oyl of Cypreſs* which is made thereof and is counted excellent for the ſame.

Things that make Hair ſweet.

To make the Head and Beard ſweet, you muſt mix ſweet Herbs, as *ſweet Marjoram, Lavender flowers, Cloves, Nutmegs, Muſk, Ambergreece* and the like, in Decoctions and Liniments.

And there is a ſweet Soap which is made divers waies for that purpoſe.

CHAP. III.

Of Extuberances or Swellings.

The Kinds of Swellings.

WE call it an Extuberancy, when the Body is not over great in General, but ſwelleth in ſome part; when it hath not a part too many, but a Swelling or Excreſcence in ſome certain place growing in it, or upon it. Which when it is without the Superficies of the Body, and is without pain in its ſelf, or if it have pain or bring trouble to the part affected, yet the Swelling is moſt regarded, is that we here ſpeak of. As for internal Swellings that lie hid in the Body, we ſpake of them in the hinderance of Functions. But theſe external Extuberances, when they are of divers Kinds, we bring them chiefly to theſe two, ſome are General, ſome particular.

General Extuberances are the Swellings ſpoken of, which poſſeſs a large part of the Body, when either the whole body or half, or the Belly only ſwelleth: as ſhall be ſhewed in particulars.

The white Dropſie.

The whole Body ſwells eſpecially the Face, Hands, and Feet and other parts in the Diſeaſe called *Leucophegmatia* from the white Colour and Moiſtneſs thereof, which cauſeth it: and they call it *Anaſarca* or *Hypoſarca* which is a kind of Dropſie, becauſe the water is gathered under the skin and fleſh. This Diſeaſe commonly follows a Cachexy or evil Habit, which declared it ſelf before by Paleneſs; and it is by degrees made of that into a ſoft Condition: and in both the Urin continueth pale. There is Faintneſs of the whole Body, and there is ſomtimes withal a lingering Feaver, and other diſeaſes, and there is Symptoms, as we ſaid of Cachexy.

Anaſarca or Hypoſarca.

Seroſa Leucophlegmatia, or white water Dropſie.

There is another Kind of white Dropſie which they call wateriſh from the cauſe, in which the Swelling is more looſe and ſoft then the former,

eſpe-

eſpecially in the Feet, and not much differing from that of the Aſcites, becauſe they will eaſily pit with the impreſſion of the Finger, and it will remain long: yet this is diſtinguiſhed from the Dropſie Aſcites, in regard it is general and the belly is not larger then other parts, and there other ſigns in Aſcites. There is alſo a third kind of Leucophlegmacy, in which the Body riſeth into a fuller and ſofter Tumor, and is like both in tumor and ſplendour in the Feet, and Legs to the Aſcites, and they ſwell moſt, and this kind ſometimes comes upon a Man by degrees and ſometimes ſuddenly.

I lately had a Virgin marrigeable, my Patient, which had a Feaver with an Eryſipelas, and expoſing her ſelf to the cold with waſhing Linnen, fell into a difficulty of breathing ſuddenly with a watery Tumor, over the whole Body beginning firſt at the Feet, which water fell in her Thigh and broke notwithſtanding the Tumor of the whole body remained and increaſed dayly: ſhe lay a few months and then died.

Beſides theſe, we have obſerved another Swelling of the Body, Face, and Joynts, that riſeth ſuddenly ſomtimes, not ſo ſoft, but ſtretched out and yet will not pit, as if the skin were blown up and this we call the Inflation of the Body.

The blowing up the whole Body or Swelling thereof.

In the Dropſie Aſcites, the body ſwells from the top of the belly to the feet, and it is ſo called becauſe the belly reſembleth a Bottle of water. In this the Tumor begins at the Feet and the loweſt part of them, and then it riſeth to the ankles, and ſo by degrees to the knees, and to the lower part of the Thighs, and grows dayly higher as the Patient ſits or walks more or leſs, it decreaſeth ſomthing at Night when he lieth down, and pits keeping the print of the finger ſome time, and when it is ſtretched out it ſeems ſhining and tranſparent. The belly begins to ſwell with the Feet, and at length it is ſtrecht from the ſides to the Privities, and the ends of the Ribs are thruſt outward: being moved it makes a noiſe, and if the Patient turn upon his ſide, it falls forcibly down. In the skin alſo under the Navel, and in the black ſwollen, if you preſs it with your finger there wil remain a pit as in the Feet. The Cods are ſwollen as the belly and are tranſparent, as in the Hydrocele, or water Rupture, but greater, ſomtimes as big as the Head. The Yard ſwelling is four times as big, and tranſparent, and is crooked like a great Pudding. So alſo the lower parts grows greater and the upper parts conſume.

The Patient in this Dropſie is very ſhort winded, eſpecially when he goes up hill, or lieth down, and it is the chief Symptom he complains of; which alſo foretelleth a Dropſie before a tumor appear, and when it comes it increaſeth, and from the beginning about Midnight after Concoction, there is a preſſing pain at the Heart, and then ſhort breathing, and they are in Danger of choaking, by which they are conſtrained to ſit up like men in an orthopnæa Breathing with their Neck ſtretched out. And when they lie on the one ſide, either right or left, they cannot lie long for ſhortneſs of wind, on either ſide, but are forced to lie upon their Backs. At laſt the Diſeaſe increaſing, they cannot lie down at all, becauſe they are ſtraight tormented thereby, and they continue Day and and Night ſtrait up, and their Head bowed to their Breaſt for better breathing, ſitting long they ſpend the remnant of their daies miſerably. There ſtrength decaies for want of lying down, there Appetite is loſt: there is conſtant Thirſt: little Urin made: the Urine is ſomtimes high, red, or Gold coloured, and thick ſomtimes crude and watery, ſomtimes not changed.

A Tympany joyned with an Aſcites.

There is another kind of Dropſie Aſcites, in which the belly is far more extended, and ſoundeth like a Drum being beaten, in which you may hear a Noiſe upon motion, with other accidents like the former, onely the Feet ſwell not alwaies as in other kinds: and this is a Tympany with an Aſcites.

A Tympany alone.

In the Dropſie Tympanites only the belly ſwells, and is ſtretched like a Drum from whence it is ſo called. In which the ſtretching is ſo great, that being ſtrook it ſounds like a Drum and being compreſſed it preſently riſeth, nor will it keep an impreſſion long as an Aſcites doth. Theſe breath freer then they in the Aſcites, nor do they find any difficulty of breathing by lying down, neither do their Legs or other parts ſwell, beſides there are Noiſes heard in the Belly, and they have pain ſometimes, and are weak.

The Tympany of the Guts.

There is another Kind of Tympany in which with the aforeſaid accidents, there is a ſtoppage, Pain and Vomiting, with the Symptoms of the Diſeaſe of the Ilion Gut and Colon.

The Belly alſo grows great Naturally as after Conception, and ſomtimes beſides Nature in a falſe Conception, when there is a Mole with Conception or without, ſo that a Woman ſeems great with Child thereby: of which three kinds of tumors of the Belly we ſhall treat here ſhewing what they are, and by what ſigns they are known.

The growing of the Belly in a Woman with Child.

That growing of the Belly which is in Women great with Child, albeit being Natural it concerneth not us here, yet that we may diſtinguiſh it from unnatural, and ſhew that it comes not from any Diſeaſe, which women do pretend which have been irregular, and would conceale their bleeding; and that we may pronounce ſome certainety or probability of Conception, and that we may not miſtake in this prediction which is eaſie, in regard the women that have conceived are at the beginning, eſpecially very doubtful, and do exceedingly deſire to know, and therefore do ask Phyſitians adviſe and ſend their waters, we ſhall ſhew by ſigns, accidents, and Experiments how you may know that a woman hath conceived.

The Conſtitution of a woman fit to conceive, doth with other ſigns make ſomwhat for the Knowledg of Conception. This (as they write,) is when beſides the ſoundneſs of Body and Temperature, (which is thought to be beſt when contrary to the Mans) ſhe hath broad Loyneſs a large belly not too fat eſpecially about the Privities. But ſince we ſee thoſe that are not ſuch, do conceive, of what temper ſoever, fleſhy, or lean, nay the very leaſt like Pigmyes, we can gather great Matter from thence. We hold her fit for Conception, who is between fourteen and forty five, and hath Parents that are fruitful. Alſo if ſhe have formerly conceived, there is a ſtronge preſumption, if there be a doubt, that ſhe hath conceived.

It is neceſſary that before Conception ſhe have Knowledg of a Man, to enquire this of married people is in vain, in others Neceſſary, which when they will not confeſs it muſt be diſcovered by divers Arts, among which this is one, when there is great Suſpicion, if the Phyſitian by the water ſhall affirm that ſhe is defiled, becauſe the vulgar people think a Phyſitian can tell any thing by the water; or elſe the Parents and Magiſtrates ſhall force confeſſion by threats. Alſo if a woman ſhall perceive after the Uſe of a Man, that ſhe kept the Seed, and that it went not out again, although through Modeſty ſhe will not declare it, it is a great ſign of Conception, eſpecially if at that time ſhe perceived any contraction of the Womb or ſucking with great pleaſure, and that her Seed met with the Mans at that time.

If the Terms ſtop which kept formerly, their courſe it is a great and chief ſign of Conception: by which women preſently judg themſelves with Child, and caſting their account from the firſt Moneth after Copulation they collect the time of their lying in. And if they doubt their Conception, they will freely tell a Phyſitian when they ſtopped; both they which are honeſt, and others alſo though they which pretend other cauſes of their ſtopping. And although in women with Child, there is ſomtimes ſome evacuation of Blood from the Womb at ſome times, yet is

it be ſmall and keep no order as the terms did it is not a ſign of not conceiving: and if the woman at the time ſhe conceived, gave ſuck and wanted her terms, as it is uſual, and afterward though not preſently the terms wholly ſtop it is probable ſhe hath conceived, and for this cauſe when Mothers perceive it, they wean their Children.

If the belly grow bigger by degrees, no accidents of a Diſeaſe being preſent it is a main ſign of Conception, eſpecially if the tumor be moſt under the Navel, and if it be hard and gathered together, not pitting after impreſſion as in the Aſcites, and not ſtretched out as in a Tympany: and keeps the ſame Magnitude only except its gradual increaſe, and grows not bigger when the Body is upright as in the Aſcites, and leſs when ſhe lies down; nor hath a tumor as in the Aſcites, ſuddenly fallen down when ſhe turns upon one ſide; when it is thus, if it be not a falſe Conception, or other Tumor joyned with a true, as we have ſeen, for then the belly ſwelling violently, the Women are in Danger of Suffocation through ſhortneſs of Breath by which ſomtimes they die, except by Abortion or by lying, if they can attain to it, they are freed pouring forth much water together with the Child.

The growing of the Breaſts, if other things be alike, is a ſign of Conception, becauſe in Diſeaſes they rather decreaſe, if they have Milk it is not to be doubted, which we conjecture is made before it come from the ſwelling blew Veins of the breaſts: alſo the increaſe of the Nipple the itching of the ſame, and when the circle about it is more black.

When the Child begins to move which is in the middle time of Child-bearing, ſomtimes ſooner, ſometimes later, it declares its ſelfe and the Mother. This Motion is not with a Noiſe or pain of the Belly, but by ſtricking one ſide of the belly, and as it were thruſting it which the Mother perceiveth.

There is a Loathing of ſome Meates ſooner or later in them that have conceived; ſome abhor wine; ſome vomite contrary to cuſtome; others deſire much thoſe Meats which they formerly loathed, albeit they are not ſomtimes Meates, but other abhominable things, this Diſeaſe is called *Pica*: as we ſaid in the depraved Appetite.

There are alſo ſome peculiar accidents to Women with child: as fainting or weakneſs, when they are conſtrained to ſit long in a place, as at Banquets, Churches, ſo that they find a ſtraightneſs of Heart, and preſently ariſe and take Air, and they muſt open their breaſts that they may breath freely. In others that are Plethorick or evil habited, there are other accidents, as Swelling of Legs, crooked Veins in the Legs and the like.

As for the Judgement of the Urine, it is uncertain and deceitful, yet the vulgar attribute ſo much unto it, that they ſuppoſe a Phyſitian can tell certainly by only looking thereupon, and if they confeſs there is nothing certain therein he is taken for a Fool, and if he pronounce any Judgement he is eaſily miſtaken, and expoſed to deriſion, as it is with many, to whom falſe Urins, or Urins of Cattel. Phyſitians ought to be wiſe and circumſpect, in this leaſt they be branded for ignorance. Therefore when they caſt the water, let them ask many things of the divers ſigns of conception, to get from the party, and determine nothing raſhly, but anſwer circumſpectly and dubiouſly. Firſt if he ſees a Urin like that of a ſound Body, and from thence know that the courſes are ſtopped, which they will eaſily confeſs, he may gather that it comes not from Diſeaſes in which commonly the Urin is crude or otherwiſe changed, but rather from Conception, and ſo by ſome Judgement in regard of the Urin declaring ſoundneſs of Body rather then from other ſigns, he ſhall perceive the woman to be with Child, and then he was more freely pronounce ſomthing for finding out of other ſigns. As to other ſigns of conception in Urins, as the things contained, things flying therein like Locks of Wool, or rather as I have obſerved ſomtimes in women newly married after conception, that they have made Urin like Pus or Matter, for ſome dayes, without having any hurt in the Reins or Bladder; ſince theſe are altogether uncertain, of theſe alone there can be no ſolid Judgement but by all put together there may.

There is alſo a ſtoppage and dropping of Urin, in ſome women, when they are firſt married, which is a ſign of conception: alſo pains about the Navel, or a little beneath preſently after Copulation, and ſomtimes a good while after, are certain ſigns of Conception.

As for Experiments, by which you may know whether a Woman be with Child or no they are divers: the moſt uſual are theſe, *Hippocrates* ſaith that if Meade be given a woman with *Aqua cæleſtis*, when ſhe goes to ſleep, and it cauſe pain, ſhe is with Child. Make a Peſſary of Garlick and put it into the Body of the woman, and if ſhe ſmell it or ſmell of it, ſhe is with Child. But in my Judgement, it might be approved by this Argument that ſhe is not with Child, becauſe in Women with child the Womb is cloſed ſo that the Vapor of the Garlick cannot ſo well aſcend that waies, but in women not with Child the womb is open, and therefore they may more eaſily receive the Sent thorough that part. Moreover, if the Urin be like Bean broth mingled with white Wine, they ſay ſhe is with child.

Not only common people, but many excellent Phyſitians ſuppoſe they can tell whether a woman be with Child of a Boy or a Girle, but ſince I perceived theſe to be uncertain and erroneous, I willingly omit them, leaſt I ſhould ſeem to be a Patron of Errors.

The Swelling of the Belly from a Mole.

If from a falſe Conception, not a Child but a Mole, in the womb cauſeth an ill favoured Tumor, as we ſhewed; it will have many ſigns and accidents like unto a true conception, therefore it is hard eſpecially at the firſt to know this preternatural conception, and to diſtinguiſh it from a Natural.

Firſt a woman of a good Complexion, fit for conception, that lives with her Husband, may be ſubject to this, though ſeldom. And there is a great Suſpicion of a Mole if a woman hath formerly had the ſame: and greater if often before, as we have obſerved ſome who have had them every year, ſome every month, and in the mean time have not been ill, but freſh and luſty.

Otherwiſe as in true conception ſo in this, the Terms ſtop, and the Breaſts and Belly increaſe by degrees, afterwards if the Mole ſtayeth, the belly continues in the ſame ſtate, and increaſeth no more as in a true conception, or if it increaſe, there is not felt the motion, which is when women are with Child, neither is it ſtraight but looſe and burdenſom, ſo that when the woman turneth upon her ſide it rowleth that way. From theſe they preſume or ſuſpect that there is a falſe conception.

As for other accidents, the Appetite is diminiſhed and depraved, as in a true conception and other accidents are alike, and in regard this is preternatural they are more and worſe, as the extenuation of the whole Body beſides the belly, and the diſcolouring of the ſame, pricking of the belly, and long want of Appetite; by which we cannot pronounce certainties, nor by the inſpection of Urine, to which the vulgar aſcribe much in this caſe, and Phyſitians to ſeem more ſkilfull do connive thereat. Therefore it is very difficult to know a true from a falſe conception; untill either by Abortion, as is uſual ſometimes in a few moneths or by bringing forth it be diſcovered. And a woman is paſt her time, being certain by the aforeſaid ſigns of Conception, if ſhe brings not forth, nor have endeavours nor throws, nor other ſigns that ſhew ſhe hath a dead child, unleſs this be when there is no conception, as ſhall be ſhewed, it is certain that ſhe hath not a child but a Mole: ſuch I have known to be kept a long time, the belly being ſwollen, the Courſes ſtopt, and other accidents, add many moneths or years after they have caſt them forth with Danger of life, and large effuſion of blood, or kept them till Death.

Some-

The Swelling of the Belly in women as if they were with child.

Somtimes the belly ſwells without conception, as in women with Child, ſo that they, (and others that have born Children think the ſame) do ſuppoſe themſelves with Child. There is the ſame Suſpicion of Virgins if this happen to them, when the belly ſwells and the courſes ſtopt, becauſe they have no other Diſeaſe or accidents which uſe to accompany the ſtoppage of the Terms, nor a Dropſie, nor other Symptoms: from want of which ſigns, we eaſily diſtinguiſh this Tumor from that in Diſeaſes. For this is diſtinguiſhed by us from that Swelling of the belly that comes from either true or falſe conception, if the Woman be paſt the years of conception, or is not come to them being too young, and here we may be deceived except they be very young or very old, but not, if ſhe be a Virgin, and too that is difficult if ſhe pleaſe to conceal her having had copulation with a Man.

In the mean time, becauſe this Tumor is not ſo gathered together, hard and equal, as it is in Women with Child and they that have Moles, and becauſe their Breaſts do not increaſe, nor do they perceive any Motion of the child: and in regard there are ſigns of Plethory or Fulneſs of a bad conſtitution, by faintneſs, paleneſs, a preſſing pain about the Stomach, and beating of the Heart, and a change of Urin into worſe: and in regard other accidents happening the belly ſwells larger and rumbleth: by theſe ſigns we may gather that this Tumor of Belly comes not from conception, and ſhe woman is not with child.

Alſo the Sym[illegible]s in this caſe being greater then in a Mole, ſhew it is no Mole, as when the time of bringing forth is paſt there is ſuſpicion: and chiefly when after a large Flux of blood, the belly either ſuddenly or by degrees falleth down, without any Mole which ſomtimes is voided before that time of conception, ſomtimes after. And if the Effuſſion of blood be very great, it weakneth the Party, and leaves miſchief behind, or elſe kills her.

Particular Extuberances are ſuch as are in ſome places only, in the Superficies here and there, and in the open cavities as the Eyes, Mouth, Privities. And they are many and of divers ſorts, and ſomtimes gathered together, or ſpread abroad. And they are diſtinguiſhed firſt: thus ſome comming forth in the places mentioned do there remain: of theſe we ſhall ſpeak firſt, others go in again, and of thoſe we will ſpeak laſt.

Thoſe Tumors which continue in their places, as Tumors ſpread abroad which cannot return, as is ſaid, are divers, ſome are ſofter, others harder.

Soft Tumors which yeeld more or leſs to the touch, as they are more or leſs extended, and being preſſed they either riſe preſently up again, or elſe have an impreſſion remaining, are divided into Tumors of the fleſh, and Tumors of the Skin.

A Sarcoma or carnous Tumors.

A carnous Tumor or Tumor of the fleſh, which reſembleth new made fleſh covered with skin and full of Veins, is called Sarcoma Sarcites, or rather *Sarcoſis hypoſarcoſis* or excreſcency of fleſh; this ſtretcheth or hangs from the body more or leſs, the Tumor being greater or leſs round or long or otherwiſe; and it is ſometimes burdenſom by its weight, and hinders Action. This may grow in any external part of the Body, having skin as the whole body hath of divers formes, of which we have ſeen a baker carry one many years to the end of his life, round as big as his Head, hanging at his Neck with a narrow Root. Alſo not long ſince, there was a Child brought to me, who had a great round Carnoſity with red Veins and a narrow Root, upon his Loins in the middle of the back Bone.

Proud Fleſh.

After wounds or ulcers are cured, there may remain proud fleſh where they were. In the Codds there is alſo ſuch a fleſhy Tumor which grows to the Stones called Sarcocele, all Tumors in the Codds are called κήλαι, that is Ruptures, and the Germans call this *Carnnel* from *Caro*, fleſh.

Sarcole, or fleſhy Rupture.

This is eaſily diſtinguiſhed from the Rupture or falling down of the guts called *Enterocele*, though they be both in the Codds, becauſe it will not yeeld to a compreſſion nor will it be put up into the Belly, but growing by degrees (not ſuddenly falling down, as in the Rupture of Guts falling called *Enterocele*) it will be fixed, and remains united to the Stone, ſomtimes including, or covering it all over. This tumor ſomtimes grows very great, and hangs down filling the Codds. and ſtretching them, and is very troubleſom with its weight, yet not painful nor diſcoloured.

I ſaw ſuch an old Tumor very great, full of Griſtles beſides the glandulous or ſpungy fleſh, cut off by a great Surgeon, and after divided into divers parts by my Father of pious Memory.

The Sarcoma or fleſhy Tumor of the Noſe.

Inwardly there are fleſhy Tumors in divers parts, of divers ſhapes, covered with a Membrane; and often in the Noſe there is a little riſing of fleſh called *Sarcoma*, which if it increaſe and grow forth of the Noſtrils, or hang by the Jawes, is called Polypus becauſe it is round and long like the fiſh ſo called, and ſticks to the Noſtrils by a Nerve root, and by Veins, which is red alſo like the inward Skin of the noſtrils but without pain, by which and by its ſoftneſs it differs from a canker; for if this be in the Noſe, as we ſee ſomtimes it is hard and pricking, and grows often very big and ends in a *Carcinoma*. But a *Polypus*, beſides the filthineſs of it, doth onely hinder the voice and breathing by ſtopping the Noſe, and is ſeldom bred without ſome hurt before going in the Noſe, contrary to that of a cancer. This they ſay increaſeth and decreaſeth with the Moon.

Polypus

The fleſhy Tumors of womens Privities.

Sometimes there grows a carnoſity in Womens Privities; and we have ſeen one called *Clitoris*, between the Lips of the Matrix, ſo great that it was as long and as thick as a Gooſe neck, and hung down like a great pudding, which ſhe had all her life time, which is the cauſe as I ſuppoſe that many are taken for Hermaphrodites, becauſe it lookes like a Mans Yard. And this Excreſcency is often in the Anus of men and women, with pain and other accidents called a *Condyloma*: as we ſhewed in pains.

Condyloma.

The proud fleſh of the Teeth when one grows them.

In the mouth and cheeks eſpecially in the Gunis, there is alſo proud fleſh, ſuch as covers the Teeth eſpecially the Grinders, and it is called ſuperincarnation of the Teeth; there is alſo in ſome parts of the Gums about the roots of the Teeth, a little Caruncle or piece of fleſh which is called *Epulis*. I had of them at the farther end of the rank of my Teeth, which was ſoft, red, lank, and thick, which had but a ſmall root, which ſometimes was bigger, ſomtimes leſs, and ſo it continueth ſtill, bringing no impediment.

Epulis.

In the Eyes that little fleſh which is Naturally there, in the corner grows ſometimes larger, like a puſh, which beſides its Moleſtation itcheth, which is called *Encanthis*, as the Caruncle of Natural fleſh is called.

The Tumors cutaneous or of the skin which are not hard, are ſo called, becauſe they are chiefly in the skin, and lift it up with a ſoft tumor. Theſe are in divers parts of the Body, as the Feet, Codds, Neck, and they ſtretch the part. Others are only in the ſcarſe skin; others ſtretch the Veins and Arteries.

Oedema.

Among thoſe tumors which are in divers parts of the Body, that is moſt ordinary called *Oedema*, which word though it ſignifie any tumor, yet it is properly uſed for that which is gathered, ſoft and yeelds to impreſſion, and is without pain not diſcoloured, and often it is very great.

There

The oedematous Tumor of the Feet, Arms & Hands.

There is anorher Oedema more ſpreading, not ſo contracted which they call an Oedematous Tumor; ſomtimes ſwelling the whole Feet, and from the Knee to the Anckles, and making them twice or thrice as big as they were, like the former in other things. This we have known divers to have had without other Infirmity all their life time, differing from the Dropſie Aſcites, or Leucophlegmacy, not only in the Feet, but in the Belly and other parts, of which we ſpake, but this is onely in the Feet, and goes no farther and is firmer, and will not pit. The Germans call theſe *Delchenkſel*, that is oyly Legs, becauſe they ſeem as anointed: ſomtimes the hands, and Fingers, and the Arms, have been ſo ſwollen, and have continued ſo long, if not alwaies. And it may be ſo in other parts.

Phyſodes or windy Tumor.

There are ſome tumors which will riſe in divers parts, in which the skin is more extended, and will not pit, called *Phyſodeis* from the wind that cauſeth them: or if they are between both, they are called windy Oedemas, and windy Phyctænæ.

The Swelling of the Feet.

Some tumors are onely in the Feet; one whereof like an Oedema, is al over the feet, yet ſofter then that, and like the Dropſie. And this either comes from an inward cauſe, or in ſome Diſeaſes of the feet, as the Scab, Anthonies fire, or Oedematous Eryſipelas, breeds with them, and remains after they are gone. It coms alſo ſomtimes after Diſeaſes eſpecially Feavers, and eſpecially about the Ankle, and the Foot, ſhewing it ſelf moſt at Night, or after watching; and when the Patient is perfectly recovered of the Diſeaſe it vaniſheth.

The Swelling of the Leggs.

We have ſeen the like in the Legs, in the length extended, and going no farther, at a certain time, comming with itching heat and pricking yet without pain and not diſcolouring, in which no pit would remain after impreſſion; this as it come ſo it went away quickly, but ſome have been troubled with it many years at times.

Hydrocele or water Rupture.

Theſe tumors alſo uſe to be in the Codds beſides thoſe which are mentioned in the Ruptures called *Enterocele*, and the tumor *Sarcocele*: of which one is more uſual, which ſwells the Codds and makes them heavy, as in the Dropſie Aſcites, which in regard it comes of water filling the Codds, as in a Dropſie is called *Hydrocele*, and this we call alſo the watery tumor of the Codds, or the aſcites thereof. This is diſtinguiſhed from Enterocele, becauſe it yeeld not but is firm; from Sarcocele, becauſe it is not from fleſh but water, which is known by the touch, and you may perceive by a candle. This is not only in men but children.

Pneumacele, or windy Rupture.

There is another tumor by which the Codds are blown up like a Bladder, ſo that they are tranſparent, if you hold a candle by them; which comming from wind, and ſwelling the codds is called *Pneumatocele*, which we may call the windy tumor of the codds, or their tympany, becauſe they are ſtretched, and being ſtrook ſound like a Drum.

The blowing of the Codds.

Beſides theſe there is another tumor of the codds, uſually in great Colicks, which being ſent downwards, make both codds ſwell, in which both Stones are tormented: alſo this happens after ſtrong and long Exerciſe. This comes often, and quickly vaniſheth, of which we have ſpoken in the colick.

The watery Tumor in womens Groins.

In Womens Groins there is ſomtimes a watery tumor, which is like the Hydrocele in Men, as that is in the cod, this is in the Groine.

Hydromphalus.

There is alſo a tumor about the Navel which being watery, raiſeth the skin called *Hydromphalon*: this is ſeldom but in the Aſcites, and then the Navel is like a Bladder filled with Water.

Hydrocephalon.

In the Head there is a watery Tumor eſpecially in Children, and it lifts up the thick hairy ſcalp which is called *Hydrocephalon*.

The Swelling of the Eye-brows.

There is a tumor in the Eye-brows like a ſpreading Oedema, ſo as they ſeem blown up, round about, in the Diſeaſes of the Eyes, and when they are ſound, which continueth ſometimes long and ſometimes quickly vaniſheth. This ſome call the *Oedema* of the Eyes, which may better be called the Swelling of the Eye brows.

The Hernia of the Throat.

The Neck hath ſomtimes a great Swelling in the Throat, very large, and ſtretched out, and will ſound when ſtroak upon, and being preſſed, it yeelds like a blown Bladder, and riſeth again eaſily diſtinguiſhed from a ſtruma, becauſe not ſo moveable. This tumor becauſe in the throat, upon the rough Artery, becauſe both are called *Bronchi*; and becauſe it hath the ſame cauſe that Hernia or Rupture hath, is called *Bronsocele* or throat Rupture. And beſides the Deformity it makes the voice hoarſe, and breath ſhort, and ſometimes threatens Suffocation.

Phlyctænæ

Sometimes there are Bladders or Bubbles which are watery and tranſparent in the ſcarſe skin in divers parts, eſpecially Hands, and Feet, and ſomtimes in the Ball of the Eye, called *Phlyctænæ*, which are inſenſible of themſelves, but being b[illegible]en eſpecially in tender parts, or being whole if the H[illegible] contained be ſharp, cauſe pain · of which we ſpake in the pains of the Eye. There are alſo many ſuch called *Hydroa*, in the Hands and elſe where which foreruns or accompany the Itch; which the Germans call *Shren*, from the itching, which they ſcratch or open with Needles, to let out the water. We have ſeen a clear thin Bladder riſe in the Eye by the Juyce of a wild Cowcumber ſquirting in by chance, that hath gone away the next day without hurt.

The bladder in the ball of the Eye.

The Swelling of the breaſts with milk.

Somtimes there is a tumor in the veins which bring Milk, in the Breaſts which makes them ſwell or ſtretch, or gathers and is hard: ſomtimes with pain, ſomtimes with Redneſs about which is turned into an Inflammation when the pain is gone.

Varix.

Alſo a tumor may be in the Veins that carry the blood, called *Varix Cirſos* in Dutch *Krampffader*, by which the Vein is extended and ſwollen, as broad as a finger, blew or black, and knotted and unequal, having Swellings in divers places, ſometimes paining by the extenſion being ready to break, otherwhiles itching, it is often in the feet in many places, with an Ulcer near it, nouriſhed by it, and therefore called *Ulcus varicoſum*: as we ſaid in Ulcers. And without this Ulcer, there are the ſame in the Feet, which as in Women with Child, return after Child-birth, or continue without hurt.

An Ulcer from Varix in the Feet.

In other places they are as in the codd, external, and then the Veins that hold it, ſwell and are crooked and black; or inward, and then the internal Spermatick Veſſels ſwell, and are hoiſted; and are hard to touch, in ſo much as they who know not the Diſeaſe ſuſpect it to be a fleſhy Rupture, or a third Stone, hence ſuch are called triorches, or men with three Stones. This they call *Circoſtellen*. *Aetius* writes that there are crooked Veins in the wing of Womens Secrets; alſo theſe will be in the Eye-brows, and will ſomwhat hinder their Motion.

The Veins lying bare in the skin.

It alſo happens in a tender skin and white Body, the Veins ſwelling, are manifeſt to the ſight, and do rather deform by colour then tumor without any other inconvenience. And this is often in the Hipps and other places.

There

Aneurisma. There is a tumor in the Arteries called *Aneurisma*, either when the Artery is dilated, or the Mouth thereof, as ſhall be ſaid in the Cauſes; and this tumor beateth like an Artery, but the Pulſation is great and troubleſom. When this is preſſed, it partly flies back, and returns back forcibly again, as big as a fiſt, ſomtimes leſs, it is often in the Feet and Hands, ſomtimes about the Throat and Breaſt, witneſs *Fernelius*. When this is inward, then it produceth other Symptoms, as Palpitation of the Heart, which is mentioned before in Cachexy.

Hard tumors which will ſcarſe yeeld to the touch, are known chiefly by their places: ſome grow in glandulous parts: ſome in fleſhy; ſome in parts without fleſh, ſome in the skin chiefly, as ſhall be ſhewed.

Kernels. In the Glandulous parts there are glandels or Kernels under the skin, which grow hard, with an external tumor, or they may be felt, if they lie deep. Theſe may be moved any way, otherwiſe then a Scirrhus, and they grow by degrees.

Theſe are in divers parts, as the Natural Glandules from whence they are named, among great Glandles they appear more, in other leſs: and they either come forth in many places together, or in ſome only.

The Tumor ſcorfula. Theſe being inlarged and grown hard, do diſcover themſelves in divers parts of the body at once. As in the Neck under the chin, where there are often many together; and they are called *Scrophulaes* or *Choirades*, becauſe Hogs have them often in that part. They are alſo behind the Ears, under the Arms pits, in the Groins, and bending of the Joynts, and ſomtimes in the Breaſt and Papps of Women, and other parts ſwelling and hard, to be ſeen, or if they lie deep, to be felt. Thoſe in other parts are uſually called *Scorphulaes*, as well as thoſe in the Neck, yet not ſo deep, in regard Hogs called *Scroſi*, have them only in the Neck, and other Puſtles which are found in the Neck and Fleſh of a Hog, which they ſuppoſe is the Leproſie, called the Meazles, are not hard Glandules but Puſtles newly grown; except they be called *Scrofulaes*, becauſe many come together at a time, becauſe the Swine brings forth many at a litter. This Diſeaſe is ſomtimes hæreditary, and uſual in ſome Countryes; in which the Glandules either remain hard like a Scirrhus, or they break and turn into a creeping Ulcer. The firſt is called *Scirrodes*, the ſecond *Nomodes*, or they end in a *Carcinoma*, and are called *Carcinodes*, and bring great hurt to the Body.

Struma. Somtimes theſe kernels break forth only in certain places, as in the Throat, where there is ſomtimes one, ſomtimes two or three, like a bunch of Grapes, growing very great, ſomtimes hanging down. Theſe they call *Strumæ*, and when they are in the Neck Scrofulaes, or if they be little, they are called Strumules; yet in regard theſe differ from the other, being not ſo many in number, and greater, neither have Hogs the like, we thus diſtinguiſh them: theſe we call *Strumæ*, the other *Scrofulæ*. Theſe *Strumæ* beſides their naſtineſs and hinderance, if they lie deep in the Throat, cauſe Hoarſneſs, and difficulty of breathing. In ſome Countries they are ſo common, that they are not accounted uncomely; we have obſerved that one of them choaked an Infant lying deep and inviſible, and the cauſe was not known till after diſſection. Under the Armpits, and in the Groins are alſo Glanduls, either hard, or

Bubo without pain. *Parotis.* ſwelled and hard; and theſe are called *Buboes*, if theſe be behind the Ears, upon the Glandules, it is called *Parotis*, and both are cold and without pain, contrary to thoſe of which we ſpake, in pains: for in theſe of one colour and without pain, there is no Inflammation or Heat, except they come to an impoſthume, out of which, as we ſhewed concerning a cold Impoſthume in a fleſhy part, there comes no Pus, but other matter, as we ſhewed: out of which kind of hard *Parotis*, ending in an Impoſthume, and after in an Ulcer we have ſeen Stones come forth.

The hardneſs of the Stones. To theſe hard Glandules we refer the ſtones grown hard: which ſometimes grow ſo big that the Codds hang like a bag filled and ſtretched out. This they call the Scirrhus of the Stones by reaſon of its hardneſs; but we rather refer it to a glandulous tumor: as we ſhewed that ſome Glanduls were called *Schirrodes*.

Scirrhus. There is a hard tumor in divers fleſhy parts of the body that ſhineth, and is ſo firm, that it will not be moved from the place, ſometimes more large and extended, and ſomtimes lying deeper of one Colour and without pain, called a Scirrhus, and ſomtimes it is in the beginning, and ſomtimes confirmed. This often follows Inflammations, ſometimes it begins of it ſelf, and grows by degrees: ſomtimes it may be turned into a cancer, but we ſuppoſe that they have miſtaken a Cancer not yet ulcerated for a Scirrhus, being like in hardneſs and ſhape, and ſo they were deceived, ſuppoſing that when it brake, a Scirrhus broke and ulcerated.

The ſcirrhus and glandulous Tumors of the belly. We have ſeen hard tumors about the belly, ſomtimes many have been together, making the Belly riſe like a Dropſie, or in women as if they were with Child, from which it is diſcerned eaſily by its inequality; and the continuance of it at length will ſhew that it was none of them; ſome have been ſo all their lives, and without any great inconvenience. Theſe we refer to the Scirrhus, except they be Glanduls in the cawle, which ſtretch out the Belly.

There are alſo other tumors in the Belly, which come from Tumors of the Bowels.

The hardneſs of the Liver, or Spleen makes a diſtention of the Hypochondria. In the right or left Hypochondrion, or ſide, there is diſtention of the Ribbs rather then a tumor, when the ſhort Ribbs are thruſt out by a Scirrhus or hard tumor of the Liver or Spleen. In the middle ſeat called that of the Heart, where the Ribbs divide, theſe tumors mentioned, (if in the Liver, in regard it reacheth ſo far on the right ſide) may be felt: otherwiſe we can neither feel nor ſee them, except by other Diſeaſes that accompany them; in the Deſcription whereof we have mentioned theſe Tumors, theſe are a ſtretching and heavy pain about the Hypochondria or ſhort Ribbs, the compreſſive pain of the Heart, the Jaundies, Cachexy, Dropſie, which if they ſwel the whole Belly, hinder diſtinction.

The hardneſs of the Womb cauſeth a tumor in the lower part of the belly. In the loweſt part of the Belly under the Navel, there is ſometimes a hard Tumor, that comes from a Scirrhus in the bottom of the Womb: of which we ſpake in the Inflammation of the womb, from whence it comes.

The tumors of the Belly which cauſe pain, have been ſpoken of by us concerning Pain; as that which is above the Navel, between the Ribbs and comes from the Inflation of the Stomach, and other in other parts of the belly, comming from the diſtenſion of the Guts, as that of the Colick, when there is a Swelling on the left ſide againſt the Navel: as we ſhewed in the Colick and pains of the Stomach.

Steatoma, Atheroma, Meliceris what they are. Somtimes a tumor like a Scirrhus is in ſome fleſhy part of the Body, yet not ſo hard, but growing old, it turns to an Impoſthume, not that which cauſeth pain and follows Inflammations, but which is without pain and continueth long, and is open, ſending not forth Pus or quittour, but other matter, which if like Tallow is called *Steatoma*; if like Frumenty, Atheroma, if like Honey Meliceris. There are alſo other tumors out of which come matter like curdled milk, or like a Glandule, or a Nail, a Bone, or Hair, or like other things without the Body, as like Clay, a ſandy ſtone, or hard ſtone, like a coale, the ſhells of fruit, pieces of wood, which the People think came in by witchcraft:

theſe tumors and impoſthumes have no proper and peculiar Names, and all of them, as they may be in many places, ſo ſomtimes under the Tongue, like that Tumor called *Rana* a Frog, but without pain, from which being turned into an Impoſthume, as from that which is with Inflammation, of which we ſpake in pains of the Mouth, ſomtimes a ſtone hath come forth. Theſe tumors uſually riſe in the Head, where the skin is hairy, eſpecially ſuch as have ſoft Matter, as in other Creatures which are all hairy. Theſe from their divers forms are called *Teſtudo* and *Talpa*, that is a Snail or a Mole.

The Rana under the Tongue with Inflammation.

Teſtudo and Talpa tumors in the Head.

Outwardly in the Habit of the Body where fleſh is wanting there are tumors in divers parts, both in and out of the Joynts, there where the Bones have nothing but skin to cover them. In the Joynts where the Tendons, Ligaments and Nerves do meet, about the Knee, Elbow, or other Joynts, there riſeth a tumor ſometimes called a *Gangleon*, which tumor growing in theſe parts, being uneven ſometimes larger, ſomtimes over the whole Joynt: is not ſo hard, yet will not yeeld; neither is it without ſenſe, but being ſtrongly preſſed is ſenſible of pain, neither is it ſo faſtned but it may be moved, hindering the free motion of the Joynt, and ſometimes knitting the Joynt, that it neither can move, or if it do, the motion is in perfect: and if it be in the Knee, on either ſide, or in the Hand, where this Ganglion doth often grow, covering all the Joynt, the Patient can neither ſtand nor go well, or without a ſtaff, becauſe his Feet will not reach the Ground.

Ganglion.

The Knots upon the Joynts of men in the Gout.

There are other tumors of the Joynts called Nodes or Knots: which continue a long time in the Fingers, and Toes; from whence the hand Gout, and foot Gout are called Nodi; ſome of which are hard like ſtones, other ſoft, and theſe ſpread beyond the Joynt ſomtimes, and are in other parts, as we ſhewed in the Joynt Gout, and how they bring pain, and hinder motion.

Hard Knots upon the Bones.

There are alſo very hard tumors upon the Bones, which cannot be moved from them, as if there were a new Bone grown to the former. Theſe the Germans call *Uberbian*, that is bone upon bone, being they are as hard as the bone. Theſe grow about the Fore-head, Temples, and Shinns; in the Wriſt, and ſmall of the Leg and the like. Theſe although without pain, yet if they preſs upon the parts adjacent, cauſe pain and trouble, if they are in the Joynts, they hinder Motion. And theſe are either ſuch as grow of themſelves, or accompany a Diſeaſe, as the French Pox, Head-ach. In which through pain they breed, and of which we ſpake formerly.

The Nodes in the French Pox, and Head-ach.

The Colloſity or Hardneſs.

To theſe a Callus may be referred, ſuch as comes after Bones are broken and ſet again, which buncheth out above the bone, and if it reach to the Joynts, it hinders Motion.

The hard Swellings of the Nails.

There is alſo a hard Swelling upon the Nails, by which they grow thick, (as we ſhewed in Magnitude increaſed) and alſo uneven, and are like young Nails, as I have ſeen.

There are alſo hard tumors in the skin called cutaneous. The firſt kind whereof is a hard and thick skin, called *Callus* and *Tilloma*. Somtimes larger, ſomtimes leſs, ſpread abroad leſs or more, or lifted up, blacker then the other skin, becauſe thicker, being without ſenſe or pain. This is often in the Palm of the Hands, and ſoles of the Feet, and between the Fingers and Toes, and is exceeding hard, I knew a Smith whoſe Hands were ſo hard that he could touch hot Iron, and hold it ſome time, without harm to his Hands, by reaſon of the Callus.

There is alſo another Callus which is like a skin upon the skin, called a Scar, inſenſible and whiter then the other skin, and more firm, without Pores or Hairs, ſomtimes bigger, ſomtimes leſs, ſomtimes above the true skin, ſomtimes lying deep, ſomtimes like a white Spot. Theſe come after wounds and ulcers cured.

A Scar.

To theſe may be added the unevenneſs of Face, which is left after the ſmall Pox, with pits like a Honey-comb, by reaſon of the Scars that lie low: theſe are not Extuberances, or Riſings or even with the skin as others, yet are fit here to be mentioned.

Pock-holes.

Alſo that hole of the Navel leſt after the cloſing thereof at the Birth, if it lie too deep by reaſon of the Callus, by which it grew together, lying too deep: is here to be mentioned.

The Navel pit.

And alſo the Swelling of the Navel, not that which is in dropſie and ruptures, but that which comes from an increaſe of the Callus.

The ſtretching forth of the Navel.

Warts.

There is a little tumor called a Wart, as big as a Peaſe, above the skin, hard without ſenſe, and narrow, about the Root, by which as a ſtalk it grows to the skin. And if it hang far out, it is called *Acrochordon*, or a Wart that hangs by a ſinew ſo called, rather becauſe it may be tyed with a ſtring or corde, then becauſe it hangs like a corde, If this be diſcoloured like Tyme, or the Herb Thyme, and uneven, it is called *Thymium*. Theſe are in divers parts often in the Hands and Feet, and many together yet at ſome diſtance and and ſomtimes united. Theſe being unſeemly: and the worſe in the Face, from whence *Cicero* had his Name, becauſe his Wart there was as big as a Peaſe called *Cicer*, do alſo moleſt ſomtimes and hinder.

Acrochordon.

Thymium.

Verrucæ ſeſſilis.

A fixed Wart, is called *Verrucæ ſeſſilis*, becauſe it ſits faſt, and comes leſs forth then the other, like a Lupine having a broad Root faſt to the skin, otherwiſe like the former, only when it is hard thruſt upon, it feels a pricking. In this oftentimes, eſpecially in the Face, groweth a hair or two.

Clavus.

Like to theſe is a corn in the Feet or Toes called *Clavus*, both becauſe it hath a head like a Nail, and alſo becauſe being preſſed, it pricks like a Nail. It is very troubleſom, and hinders going, the Germans cal it *Egerſtenany*. becauſe it is like a Magpyes Eye.

Vari or Jonthi warts in the Face ſo called.

There are beſides tumors in the Head eſpecially called *Vari* or *Jonthi*. They are hard and callous, moiſt at the top, and in the Face ſomtimes, and Beard, and then called *Pſydracia*.

There are other hard tumors in the Eye-brows, like Warts, one whereof grows upon the Eye-lid, Hordeolum, becauſe like a Barley corn, without ſenſe, itching or red. Another grows to the upper Eye-brow, and is hard called *Grando*, becauſe like a Hail-ſtone.

Grando.

That tumor which comes and goes is called *Cele*, which word is applyed to other tumors, called Ruptures from the Cauſe; it is in Groins often both of Men and Women. It is at firſt ſmall, of the Colour with the other fleſh, ſomtimes ſoft, ſomtimes hard and uneven, being preſſed it goes back, and returns, and may be thruſt forth by ſtraining and holding the Breath: this is called *Epiplocele*, when the Cawle is broken, and *Bubonocele* from its likeneſs to a *Bubo* or *Bubo herniosus*, or *Hernia inguinalis* that is a Rupture in the Groyne.

If it come from the Guts falling down it is called *Enterocele*, though this tumor doth not reſt in the Groyne, but falls into the Codds of Men, the Colour of the skin not being altered, ſomtimes wrinkled. This tumor if it be preſſed, or the party laid upon his Back, vaniſheth; and after returns again, and the ſooner if it be forced by holding the Breath and ſtraining.

Women have ſomtimes the ſame in the Groyne, as Men have

have in the Codd, and it will fall downwards into a great Tumor, and it will go and come again as that of Men.

The Hernia or Rupture of the belly, or Omphalocele.

There are the like also in the Belly and other parts, and especially about the Navel, which is called *Omphalocele*, when the Navel sticks out somtimes as big as a nut, somtimes as an Apple: and sometimes there is a Tumor in the part that hangs down like a bagg, all these tumors go in by pressing and lying down, but they will return, except they be prevented. In these Tumors mentioned, sometimes there is no pain, nor impediment besides the tumor, somtimes there is great pain at the beginning especially in the Groyne, when it falls from thence into the Codd, then there is a tearing and pricking pain. They are commonly bound in the belly that have them, and if the tumors be long out, they will vomit up their Dung, as we shewed in the *Convolvulus* speaking of Vomiting.

To these tumors that come and goe may be referred those that come from the windy Cramp in the Calves of the Leggs, and other fleshy parts with great pain, rising and falling again: of which we spake in Convulsions.

The Causes.

The immediate Causes of all Extuberances, or general Swellings, are from the Humors, Seed, Milk, or Blood, or Water, or Wine either single or mixed: the Cause of some tumors is the Dislocation of some part, as we shall shew.

The Parents seed is the Cause of fleshy Tumors, Strumaes, Scrophulaes & hereditary warts

As the Seed is the Cause of Deformity, and Discolouration that comes Naturally (as we shewed before) so is it the cause of divers Tumors, which are hereditary, as *Sarcomata* or fleshy tumors, *Tubercula* or Pustles, soft or hard, and chiefly of *Strumas*, or *Scrophulas* which are kernels hardned in the neck. These we rather suppose to have come from the Parents, then from evil diet. Also those Glandules of kernels which are in divers parts of the Body, and end in cancerous Ulcers, come often from the Parents Seed; and it appears, in that where these are frequent in divers Countryes, they will never marry til they know certainly that neither party is infected therewith. And as all small tumors may come from the Parents, so may Warts and Moles like Pease, such as *Tully* had in his Nose, and thence he was called *Cicero*, and this is from the Infection of Parents Seed: as we shewed concerning Deformities.

Imperfect Seed is the Cause of the Tumor of the belly called Mola.

As when the Seed is perfect there is a Child, so when it is imperfect there is a Mole or the like, and this will grow and swell the Belly preternaturally. This defect in the Seed is hard to be discovered, but if there be a production of flesh with Vessels or with Membranes, the fault is in the Man, except there be also a Distemper in the Womb. And seeing there is a Navel-vein, this ill shaped Lump must increase, and the Mother must find it Nourishment by her Courses, and she must have Milk in her Breasts: as when she is with Child.

It is not probable that a Mole should come from other Causes as only the Mothers Seed, or Terms, or from the Blood that nourisheth the Womb, because nothing can be gotten without the commixion of both Seeds; neither can it be from the terms, which though they may nourish, yet can they not beget either Child or Mole; and if that blood which nourisheth the womb produce any thing it must be a *Sarcoma*, or fleshy tumor, which grows to the womb, rather then a Mole which is loose and only hangs by Veins, as we shewed in the Causes of *Sarcoma*.

That no Mole comes from wind, is manifest, for if wind be inclosed in the womb, it will rather puff it up: and we have shewed that the womb cannot be so blown up in the pains of the womb.

That nourishing Juyce which is made of Blood dispersed into the parts, and resembling them and doth nourish them, as when it is good and laudable, by nourishing the substance it keeps it in a good temper, so when it offends in quantity or quality, it produceth general or particular tumors accordingly: and that two wayes, either by producing another substance in the part, or by increasing the part.

The Juyce that nourisheth the parts of the body is the Cause of some kinds of Tumors.

This Juyce that nourisheth the parts, produceth divers tumors, by getting as it were new and superfluous substance in the parts which grows in them or to them; And this is when it offends more in quantity, and then besides its nourishing of the parts, it produceth somthing superfluous not unlike the part, softer and harder: or when the Juyce is too thick for the Nourishment of the part, then it produceth a harder tumor: the reason whereof shall be declared.

The juyce that nourishes the fleshy parts produceth fleshy Tumors, either by the plenty or by the thickness thereof.

The nourishing Juyce sweating through the flesh is the cause of Sarcomata or fleshy tumors, and proud flesh, in the Nose, Gums, and elsewhere.

The Juyce which sweateth out of the flesh, for want of tunicles by which it is confined, and by which the Mouths or the Veins that bring are stopped, if it grow to the flesh, it produceth *Sarcomata* or fleshy tumors; as in Ulcers full of flesh and not skin'd over, there is an excrescence by reason of the abundance of Juyce; or if the skin of the Nostrils be eaten off with Ulcers, there wil be a *Polypus*, and if the Gums be seen there will be Epulis. Fleshy tumors called *Sarcomata*, are produced inwardly, when the tunicles of fleshy parts are divided, and the Juyce is diffused out of them: as from a Contusion, by which the Mouths or the Veins are a little opened, though there follow no other hurt or Ulcer, yet there wil somtimes arise little tumors from a Contusion of the Spermatick vessels, in the cod, when the juyce being out of the vessels, causeth somtimes a Sarcocele or fleshy rupture.

The more plenty of Juyce there is, the sooner is a Sarcoma produced. And this is occasioned by Plethory or attraction of Blood to some part, friction though the part be not hurt, or by uneasie sitting or riding may cause a Sarcocele, the Blood being continually attracted to the part; also from moderate Venery, the Vessels being dilated there will be a flux of Blood: And if the part be disposed to receive it, as being loose, it is caused sooner. Hence it is that the Gums grow so rank, and the little Caruncle in the corner of the Eye, especially when the Gums chew much and the Eye is rubbed for itching.

Thick Juyce is the Cause of Scirrhus, Atheroma, and Steatoma, and Meliceris.

Somtimes harder tumors then *Sarcomata* come from thick Juyce, simple or Compound, as that called *Scirrhus*, daily growing harder and fixed: hence are they many in the Belly, if not glandulous. And other hard Tumors which are not so fixed but at length turne to Impostumes, in which the Matter is divers according to the diversity of the Cause, yet will they not break as those comming of blood, or suppurate, but as we shewed turn into a solid substance joyned to the flesh, or it turns to a Humor included in its proper compass, and goes away by Maturation.

And this thickness of nourishing Juyce, that produceth these tumors, comes either from the blood, or from the Juyce. And so a Scirrhus may come, of an Inflammation, not because the blood grows hard for want of Suppuration as some think, or by the Application of cold things, for then it would rather putrifie and corrupt; but because the blood being discussed by a violent Heat, the Juyce of the part inflamed is made thick and hard: besides this Cause which is thickness of Juyce, there is another which is when the Nourishment of some other part which requires that which is thick, is carried to a fleshy part. And this is proo-

ved

ved, in that in Impoſthumes comming of thoſe Tumors you ſhall find ſomthing like the ſubſtance of other parts, a hair or a Nail, or like a Bone, or a Kernel, which could not be but from the Juyce which nouriſheth the parts; as when it reſembles fat, you may ſuppoſe that ſome Juyce that was to have nouriſhed the fat parts miſcarried thither: or when it is like Furmenty, or Honey it ſhews that the fleſhy juyce is not turned into Matter, as in hot Impoſthumes, but into a more thick Humor, and if it be more burnt, and grow more earthy, it will reſemble coates and ſtones. If theſe be included in their proper Membrane, and that be included in membranous Juyce, they will grow alike as hath been ſaid: which as they may be from a Tumor turned into an Impoſthume, ſo that the juyce which belongs to another part which is more hard, may cauſe a Schirrhus. And if it turns to a Cancer, there was ſome Venom in the juyce. And we think theſe more probable Cauſes then Flegm or Melancholly, which moſt affirm; for if a tumor ſhould ariſe of them, it would not be ſo conſtant, but ſubject to Corruption: as we ſhall ſhew in other Tumors which they ſuppoſe to come from thoſe Humors.

The nouriſhing Juyce being too thick, cauſeth hardneſs, or Scirrhus of the Liver, Spleen, & Womb.

Alſo the internal Tumors which are hard, and in the Liver, and Spleen, and Scirrhus, which you may ſee, or feel under the Ribbs, and that in the womb as we ſaid of the external parts come from Inflamation aforegoing or thick juyce, as we ſhewed in the cauſe of Aſcites, Cachexy, and Jaundies, comming from theſe tumors, and Scirrhus, and in the Inflammation of the womb, we mentioned the Scirrhus thereof, which groweth ſomtimes; as the womb being ſmall, grows larger after Conception.

The thickneſs of nouriſhing Juyce, is the cauſe of glanduls under the Ears, & bubos, Strumas, and Scrophulas.

In Kernels, the nouriſhing juyce being mixed with other Humors, or by its plenty or thickneſs, being alone, produceth Hardneſs, and Tumors, ſome whereof turn to Impoſtumes and ulcerate, as Parotides and Bubones, being hard, or ſuch as are turned into a cold tumor, and Strumas in the Neck, which commonly continue hard, and Scrofulas which turn into a Scirrhus, or malignant Ulcer.

The cauſe of this abundance and thickneſs of Juyce, is the ſame with that of a Scirrhus, and other hard tumor, which being thicker, nouriſh Glanduls rather then fleſhy parts, makes them ſooner ſwell and harden, or if it be taken from other parts, it cauſeth hardneſs where it ſhould not be; and if the Matter be included in a Membrane or Coat, it is of the ſame Juyce. We deny not but Flegm and other humors may be mixed therewith: but we cannot affirm that Flegm, or Melancholly alone can produce theſe tumors. But if Rheum flow from the Head; or Blood come to the part, there may be a Swelling but not a Hardneſs: and if it be mixed with this Juyce, we ſay it cauſeth the tumor ſooner to impoſthumate. But if water be mixed with thick juyce while this grow thicker, and the earthy part of the water dryer, it may produce ſtones, as we ſhewed in the knots of the Gout, and in the ſtones which we ſaid we found in tumors behind the Ears. And if any malignant Humor be mixed, the Kernels will be worſe, and eaſily ulcerate; as Scrophulas, which are in many parts of the Body. In which if the Matter be corroding, the ulcers are called *Nomodea*, if malignant Cacoethea, and if there be Venom, they are Cancers. The Original of evil Humors is the ſame with that of malignant Ulcers whereof we ſpake. Wherefore ſome people are ſwollen in their Necks with Strumas, in thoſe places, eſpecially where they drink Snow-water; as the Inhabitants of the *Alpes*. And this is not likely, becauſe it is in ſome places only of that Country, as in the lower parts of *Valeſia*. But it is rather to be imputed to the natural diſpoſition of mens Bodies in thoſe parts, which is the cauſe that they are ſo common there Parents Seed being ſo infected, rather than water drinking: as we ſhewed in the cauſe of the Seed.

The Juyce that nouriſheth the Membranes is the cauſe of a Gangleon.

When the thick Juyce nouriſhing the Tendons, Nerves, Membranes, and Ligaments aboundeth, it begets a hard tumor in the fleſhleſs parts of the Joynts called a *Ganglion*; when it is glewed to theſe parts that are exerciſed, and produceth a like ſubſtance, eſpecially in the Joynts, as in the Ham by reaſon of the violent motion of the Knee. And it may come at the curing of a Wound in any other part, when the juyce aboundeth. And it cannot be from Flegm, Excrementitious as they call it, being it is ſuch a Nervous, firm and ſolid ſubſtance, no more then a Callus or a Node, or a Broncocele, or Tumor in the Throat, which they ſay comes from Flegm. This is of divers kinds, and comes from divers Cauſes: as we ſhewed in the windy Cauſe.

The Juyce which nouriſheth the skin is the Cauſe of a hard skin.

When the nouriſhing Juyce aboundeth in the skin, it cauſeth the hardneſs called *Callus*; as when by labour it is worn although not quite taken off, yet ſomwhat alwaies is taken away, and it is made thin; and then the nouriſhing juyce being drawn thither more by the chafing of the part, doth require and make new skin, till there comes a Callus as in the Hands and Feet. Mechanick men have ſooner hard Hands from the Inſtruments they uſe, which cauſeth Bliſters at firſt by ſeparating the ſcarſe skin from the true, and attracteth the nouriſhing Humor, which joyns to the skin and makes it hard.

The Juyce that nouriſheth the skin is the cauſe of a Scar.

The Juyce that nouriſheth the skin gleweth together the Diviſion which is made by a Wound or Ulcer, and fills up the place, and makes a Callus inſtead of a true skin called a Scar, which differs from the skin, becauſe it is inſenſible, and more hard, not porous, nor hairy. And it is larger or leſs as the wound was. And if the Juyce abound it grows higher then the skin if not even; And if the Ulcer were hollow and have a Scar to heal it up before it be filled with fleſh, it is like a pit in one or in many places as in the ſmall Pox.

As it is in the Navel, if the hole thereof which ſent out a Cord in the Womb, which is taken away after Birth, grow ſound and skin over below, there will be a pit; but if it grow up there will be a Callus even with the skin, or if it grow too high, the Navel will be thruſt out.

Nouriſhing juyce in the Pores is the cauſe of Warts and Cornes.

If that Juyce which is ordained to nouriſh harder parts get into the Pores, and makes Warts and Cornes; which Juyce may come from that which nouriſheth the skin, for as it cauſeth there Hardneſs, Callus, and Scars, ſo getting into the Pores it may take root and grow forth as a Wart which hangeth down, or is fixed, and as a Corn in the Feet, where being preſſed with going, while it grows, can go no farther, and there is pain, by the compreſſion when the fleſh underneath is pricked. The largneſs of the Pores, is the cauſe of this, when they ſhould be ſo ſtraight that they ſhould receive nothing but vapors for ſweat. This comes in divers places, eſpecially in the Feet, where the skin is much preſſed in one place, and ſo the Pores made more large, which cauſeth a Corn, which hath a hard skin for the ſame cauſe. And Warts come in the Hands from external Injuries, and hard tumors in the Eye-brows, called *Hordeola* and *Grandines*, from the rubbing of the Eyes. The like may be from the Juyce which nouriſheth the Hair, if it be too thick, the Pores, and this Juyce may cauſe a Hair in the Wart make it grow longer; it is not likely that any ſuch ſhould come from Flegm, which may reſemble the ſubſtance of the parts of the Body, where they are much leſs, can ſo ſmall a thing as cauſeth a Corn or Wart come from a Defluxion? Neither could they come from Flegm, if they were Infectious, as *Rondoletius* thinks in regard the juyce may have malignity: as we ſhall ſhew. And if they were hereditary, they rather come from the Seed then any preterna ural Humor.

From

The nouriſhing Juyce in the Pores, is the cauſe of Freckles.

From this thick Juyce which is for nouriſhing other parts when it gets into the Pores, there ariſe hard Puſtles called Freckles, or Pimples, as Warts; which when in the Head or Beard are called *Pſydracia*. For the ſkin being thicker, and harder there, is nouriſhed with thicker Juyce, which coming into the Pores in great quantity, cauſeth Pimples, and if it be ſpread in the Face, it cauſeth the ſame there, by Reaſon of the Looſneſs of the part. Theſe are fixed if they come only from this juyce, but if any Excrementitious Humor or Matter be mixed, then the Puſtles will run, and turn to little ulcers.

The juyce that nouriſheth the Bones, is the cauſe of Nodes and Callus.

Alſo in the Bones the juyce that nouriſheth them cauſeth Nodes, which as it happens alſo in the Fleſh being laid bare, ſo here in the Bone, when the Perioſtium or ſkin thereon is eaten away; and the juyce of the Bones which the ſkin uſeth to confine within its ſelf to the Bone, growing forth cauſeth Nodes like to the Bones. And as theſe may come by external violence, as in Horſes Feet, ſo in Men alſo, and by other Cauſes ſometimes, which are malignant, as the French Pox: as we ſhall declare when we treat of that diſeaſe. Alſo this juyce may produce a tumor; for when the Bones are broken, which wil cauſe abundance of juyce, there will a Callus grow to glew them together, and it will grow out from the Bone and be like a Node.

The Juyce which nouriſheth the Nails being too thick or too much cauſeth the callofity of the Nails.

In the Roots of the Nails there is Juyce which giveth them Nouriſhment, and if it be too much in quantity, it doth not onely make them too thick which is unſeemly; but if it be thick withall, it cauſeth uneven Swellings. Now the cauſe of this abundant juyce, among the reſt is this, when it is drawn thither by a violent Exerciſe of the Hands or by hurt: as we ſhewed. And if this juyce be too thick, or be mixed with the Juyce that belongs to the Bones adjacent, it makes the Nails to be too hard and thick. And if it be mixed with other juyce which is evil: it procures other inconveniences beſides hardneſs, as ſhall be ſhewed.

Crude juyce nouriſhing the body, is the cauſe of Leucophlegmacy.

The Juyce which nouriſheth the Body, cauſeth enlargment by encreaſing the ſubſtance thereof; and if it be crude and unconcocted, which long nouriſheth the body inſtead of that which is concocted, it makes the body ſoft and faint and ſwollen, and is the cauſe of Leucophlegmacy ſo called, becauſe it is made of wateriſh juyce or flegm, which is water congealed.

And the Cauſe which breeds this crude juyce is the ſame with that of a Cachexy, which comes from the ſame juyce: as we ſhewed, when we told you, that it came from crude Blood which produceth ſuch Juyce. And that it came either from the Foot, or from ſome Diſtemper of the Bowels, as the Stomach which leaves the Chylus imperfect in the firſt Concoction, or from the weakneſs of the Liver and Spleen, from Diſtemper or other Diſeaſes, as Obſtruction and Hardneſs, by which meanes the blood is not ſufficiently wrought in the ſecond Concoction. Hence is this evil juyce ſo plentiful in the Veins, which nouriſhing the Habit of the Body, firſt breeds a Cachexy, which uſeth to go before a Leucophlegmacy, and produceth it certainly if the matter increaſe. And we have ſhewed how the ſerous or watery Humor mixed with the crude produceth the ſame.

The crude, nouriſhing juyce, either alone or mixed with water is the cauſe of the tumor called Oedema.

Crude juyce gathered in ſome parts cauſeth the Tumor Oedema, which is ſpread abroad, and in which the ſubſtance of the parts where it is, ſeems rather to be enlarged ſoft and ſwollen, then filled with Excrementitious Flegm, which they ſay is the Cauſe, and therefore is harder to be cured.

Alſo when Water is mixed with the juyce, it produceth tumors that are more ſoft and watery, which we call ſerous Oedema's, theſe are eſpecially in the Thighs, which make them look like a Dropſie.

We have ſhewed the Cauſes of theſe laſt in the Treatiſe of the ſerous Humor; but for the cauſe of thoſe which come only of crude juyce, ſomtimes it is the ſame with that of a Cachexy and Leucophlegmacy; if it come to the part through the weakneſs thereof; ſomtimes only the evil conſtitution of the part, by which it doth not ſo perfectly turn the blood brought thither into its ſelf, but leaves it crude and imperfect, may be the Cauſe; if the part be cold, weak, looſer or fainter, from Diſeaſes or hurts received.

Plenty of milk is the cauſe of the Swelling of the breaſts.

Abundance of Milk in the Breaſts cauſeth a Tumor which diſtendeth the whole Breaſt, or ſome part thereof wherein it is gathered. The plenty of Blood is the cauſe of this plenty of Milk; but chiefly the retention and collection of Milk already made in the breaſt, commonly after Child-bearing which is the time of giving ſuck, in which if Women give not ſuck, as ſome do not, they are ſubject to ſwollen breaſts, ſomtimes though the Infant do ſuck, yet in regard it cannot ſuck them clean by reaſon of the continual increaſe of Milk, the ſame may happen. Women when they have weaned their Children, are troubled with this ſome few daies after. And they ſeldom have it before they are delivered, albeit they have Milk, and their Breaſts grow bigger. Some ſay that not onely the abundance of milk but the curdling thereof is the cauſe of this Tumor of the Breaſts, which if ſo, the Tumor would be rather gathered and hard, as ſomtimes it is, in that place wherein it curdleth, rather then a general Swelling, and this would be ſo becauſe the Milk is out of its proper Veſſels, and then in regard curdled milk as clodred Blood cannot be long in a part without corruption or Suppuration, nor can they eaſily be diſcuſſed; this tumor would quickly be an Impoſthume.

Blood filling the Veins is the cauſe of crooked Veins called Varices.

We ſhewed in pains, how Blood carried out of the Veſſels cauſed hot Tumors with pain. And ſomtimes when it is in the Veſſels it cauſeth tumors, as it is in the Veins or Arteries; if in the Veins, they are ſwollen and crooked, by too much filling and dilatation, and ſomtimes they are in ſome places more ſwollen like baggs or Nodes ſtretched forth, made clear and tranſparent through dilatation, and the Colour of the Blood is ſeen through, and they appear blew and black, ſtraight or crooked, and if they be ſo ſtretched, that they preſſe the adjacent Nerves, or if the Matter contained in them do offend the Nerves there is pain. And the blood will do this ſooner in thoſe parts which are dependant, and from whence it cannot ſo eaſily aſcend as in the Leggs, where theſe Varices are moſt uſuall and large: as from the ſame Cauſe, there is the tumor called *Cirſocele*, in the inward Veſſels of the Codds, but this is ſeldom, becauſe the Blood will not come ſo violently into ſuch narrow Paſſages, but by ſome extraordinary occaſion. Moreover, Blood ſent into other Veins of the ſkin gets Varices, eſpecially where there are many Veins as in the Scrotum, or Cod, and the Eye-brows and the like. But theſe are different as the Blood, for if that be temperate and pure they are leſs, and only are offenſive by their being ſtretched forth: but if the Blood be hot or foul, or mixed with Choller, they burn, and are more troubleſom, and ſometimes have an Ulcer at the bottom, where the Blood ſetleth, as in the Legs is uſual if the matter be ſharp and it will be a creeping, corroding Ulcer, which many ſuppoſe comes from a Melancholick Humor, as all other Varices, becauſe they look black, when pure Blood ſeen through the ſkin may ſeem ſo, & the rather when it is foul.

Now the reaſon why the Blood is carried ſo faſt to that part, is from the part, and from the blood it ſelf: as when there is too much Blood as in a Plethora, and Women with Child, by reaſon of the Terms ſtopped in the Veins of the

Womb, and being more then will nouriſh the Child, hence it is that they have theſe crooked Veins in their Legs, becauſe their blood being ſtopped is carried thither, that is into the Legs, which Veins conſent with the womb, as appears by letting Blood in the Foot to provoke the Terms; and after they are delivered, the blood being purged by the Womb as is uſual, theſe veins fall down, except they be too much dilated. Alſo blood ſent by the Veins into the extream parts by reaſon of its evil Juyce, produceth Varices or crooked Veins, and ſomtimes ulcers let the Blood be what it wil, it produceth Varices by its violent motion, therefore they are chiefly in the Feet, by reaſon of much Exerciſe But hard travail and long and great throws in Child-bed, are the chief cauſe of Blood flowing into the Feet, which produceth theſe Swellings of the Veins. Alſo immoderate Venery, becauſe it forceth Blood violently into the Spermatick Veſſels (which hath been ſomtimes known to come forth inſtead of Seed) and dilateth them, may be the cauſe of the Swelling called Cirſocele, which is of the Veins in the Codds. And thoſe Swellings come the more when the part is weakned, and fit by its looſneſs to receive a Defluxion: and when the part hath more and larger Veins then others, or when it is dependant and loweſt as was ſaid.

Blood in the veins of the Womb cauſeth the belly to ſwell as if the woman were with Child.

There is another tumor riſing from Blood gathered about the womb in the Veins thereof, and ſtretching them out: which cauſeth that Swelling in women which we ſhewed, made them look as if with Child before Conception. And this comes from Blood, becauſe the Courſes have long ſtopped, and it will not be diſſolved but by a Flux of Blood. And it appears that this blood doth not cauſe this tumor by getting into the Cavity of the Womb, and by filling it till it ſtretch, becauſe the womb is fleſhy and Nervous, cannot be enlarged by any Humor, as a Membrane, and it cannot be enlarged but by the growth of a Child or Mole: as we have ſhewed. And if it were filled with blood, it could not be kept there long, and would be corrupt and putrified, which it doth not, becauſe alwaies it comes afterwards forth, thin: and though ſome Clodds come therewith, it ſhews that they grew ſo by ſtoppage at the firſt, and cauſed this Swelling. Now from hence we conclude that this Swelling of the Womb came. Becauſe blood being a long time retained in the Veins of the Womb, doth not only enlarge them externally in the outſide of the Womb, and make them crooked and ſwollen; but theſe Veins in the ſubſtance of the Womb, which at other times are ſmall and ſcarce apparent, being now filled and dilated by degrees, do liſt up the ſubſtance of the womb, and make it larger: and ſo the Swelling of it, and the ſtretching of the veins external, cauſeth this Swelling of the Belly, which when the Courſes flow, and the veins grow empty, is aſſwaged except ſome other Diſeaſe happen, as Cachexy, or beginning of a dropſie, when the Belly is ſo ſwelled with wind or water, (as we have known it in Women with Child) and then the tumor is altered, and will not be gone with bleeding.

I have obſerved in two full bodied Women, this gathering and ſtopping of Blood in the Veins of the Womb, which cauſed a Swelling of the Belly with diſtenſion, and puffing up, or inflation of the Breaſts, (as in Women with Child) whom at firſt I judged to be with Child, which was their Hope, but not long after, the Courſes flowing plentifully, they were freed both from Swelling of Breaſts and Belly.

Blood getting out of the Arteries under the skin is the cauſe of the tumor called Aneuriſm.

Blood in the Arteries cauſeth that beating Tumor called an Aneuriſm; which they ſuppoſe to be from the dilatation of an Artery, as the other was from the Vein. And it was formerly declared, that this only may be in the inward Arteries, and that from an internal Aneuriſm, Pulſation of the Heart and Arteries may proceed, when we ſpake of that Diſeaſe. But ſince the Branches of the Arteries do not ſpread themſelves to the skin, nor are they faſtned unto it, as the branches of the Veins are, this Swelling cannot be like that of the Veins, except by chance an Artery do ſo ſwell in ſome part near to the skin, that it appear external and cauſe Pulſation. And if this be ſo, it muſt come from the ſame Cauſe from which we told you in the Palpitation of the Heart, the internal Aneuriſm did proceed.

But an Aneuriſm doth not come only from the Dilation of the Artery, while it containeth ſound and whole, but often, though not alwaies, if it be external, it comes from ſome manifeſt apertion of the ſame: For then the thin Blood which comes out of the Artery, gets under the skin and makes it ſwell, and there makes a Hollowneſs into which the Artery disburdens its ſelf, as it is wont to do in the Brain Naturally, ſo here preternaturally, by throwing forth the Blood with the Spirits in its Diaſtole or Dilatation, and drawing it again in the Syſtole or Contraction of it ſelf, and this cauſeth the Pulſation in this Tumor.

Now the opening of the Mouth of the Artery, is the Cauſe of this Bleeding, when being dilated by the Cauſes mentioned, it doth not only ſwell, but makes way under the skin for the Blood to get forth, by opening the mouth through the Diſtenſion.

Or if the Artery from the force of that ſpirital Blood be ſo compelled, that it is ſtretched forth and opened; or be hurt by any external force, ſo that it be broken externally, it may ſend blood under the skin: as we have declared.

But it is apparent that this happens not from an Artery broken, or by ſtretching opened internal, but external; in that the Mouths of the Arteries which end and ſhut up the ſame, have their termination in the extremities of the Body, where the Arteries end: and if an Artery inwardly hurt or opened ſhould bleed, the Blood would fall into the Cavities of the Body, neither would it produce a Tumor, ſuch as many times is inward, alſo when the Artery is onely ſtretched.

Moreover that an external Aneuriſm comes often from the effuſion of this Arterial blood by the Cauſes aforeſaid, under the skin, and not from the dilatation only, it appears in that the Tumor is round rather than long, like the Artery dilated, and not wrinkled or twiſted like a Varix.

But it appears chiefly by an inciſion made in the skin ſwollen, that the blood was lodged there, becauſe it leaps out ſuddenly, and often in ſuch abundance, that, (as it hath been obſerved) it could no waies be ſtopped, but the Patient hath bled to Death; and that this Aneuriſm came by the breaking of the Artery appeared by the leaping, and in regard the Pulſation was ſuch, and it had long continued and was grown very big. We alſo ſaw a woman looſe a great deal of Blood with great Pulſation from the opening of a Vein, which could ſcarce be ſtopped, although many Remedies were applyed: having a beating Tumor after the wound was healed, which declared it to be an Aneuriſm. And this came, either becauſe the Artery was cut by chance, in the fleſhleſs bending of the Arm, where the Tumor was, by reaſon of the blood ebbing and flowing under the skin, after the wound was healed in the skin, and not in the Artery: Or becauſe the Mouth of the Artery was freſh dilated, before the inciſion was made; and that cauſed that when the skin was cut there was a Flux, which cauſed a Tumor after the cut was healed. Neither can an Aneuriſm not be from the Arterial blood, when it is under the skin and corrupted, although this may be when blood is ſent from the Veins into the empty ſpaces: yet when Blood leaping from the Artery thus opened, returns again, and the skin is inſtead of an Artery, it may be without concretion, as when it is in the Artery. And becauſe this cannot be in the Veins, an Aneuriſm cannot be from venal Blood.

A watery, ſerous Humor, produceth in divers places both general and particular Tumors, becauſe it is contained in divers parts of the body, as in the veins which are diſperſed all over, and Bowels into which they are ſent, or in o-

ther

ther Veſſels being ſeparated from the blood: from which places, ſomtimes ſimple Water, otherwhiles mixed with other Humors comming forth, produceth divers kinds of Tumors; differing exceedingly, as they are in the cavity of the Abdomen, or Belly, Codds, Groyns, or in the ſuperficies of the Body, either in the inferior parts only or al over: as ſhall be ſhewed in particulars.

Water ſent into the Caviry of the Abdomen is the cauſe of the dropſie Aſcites.

A ſerous Humor like Water, getting into the Cavity of the Belly, or Abdomen cauſeth the Dropſie Aſcites: and then the belly ſwells more or leſs according to the quantity of the Water, and is ſomtimes ſo full that it grows very large, in which by tapping we have ſeen taken from the Living, and found ſomtimes in the Dead, threeſcore pound weight and above of water, when much had formerly run out at the Feet; which water doth not only burden with its weight, but by preſſing lying and hindering the free Motion of the Diaphragma or Midriff, cauſeth difficulty of breathing, of which they ſo complain, and eſpecially when the water goes more to the Midriff and oppreſſeth it; hence it is that they breath better when they are ſtanding, for then the water goes downwards. And if the ſame water weaken the Bowels, Liver, Spleen, Veins, Stomach, and Guts, by making them too moiſt, or by its ſaltneſs or ſharpneſs, from mixture with other Humors, or by its Corruption through long continuance, till it ſtink, make them too dry; the Meſentery Cawle and Reins will be dryed and drawn up, and the Fat clodded as we have ſeen. Or if this water corrode the exulcerate in any part, or putrifie the ſame, we have ſeen the Cawle yellow, and ſtinking in many, as well as contracted, and the Midriff hath been found the ſame in and opening of Hydropical People; if this happen, or if any other Bowels be hurt by this Water, it will produce worſe Symptoms in the hurt Functions of natural parts, as want of Appetite, Thirſt, Cachexy, Atrophy and Diarrhæa and the like, as by Corruption and Gangren of the Stomach, by the water long contained therein, a Vomiting with Heat and vehement Inflammation of the Oeſophagus or Wezand, which I ſaw in an Hydropical Woman, which a liltle before her Death, vomited often abundance of black, ſtinking Water, with great Inflammation of the Throat.

The cauſe of this water in the capacity of the Belly, is from the parts of the lower belly, which contains the Water, or from the Bowels that are ordained for Sanguification, as the Liver, Spleen, Reins, or from the Veins which go through thoſe parts and the reſt, or from the Bladder that holds the water; from which, if they be divided or the continuity diſſolved by Diapedeſis, by which it is ſtrained, or Anaſtomaſis by which the Mouths are open, this water falls: as ſhall be ſhewed in particulars.

Fernelius witneſſeth, that there is no Dropſie but it is cauſed by the ſolution of the continuity, or Diviſion, of the Parenchyma or ſubſtance of the Liver. And this by Anatomy we have often known; And that chiefly when the ſubſtance of the Liver is cleft and gapeth, from whence the water paſſing by it from the Veſſels of the hollow and gate Vein, and ſweating under the Coats, being there conſtrained, fills them with water, and makes them like bladders by ſeparating the Tunicles from the parts under them, which being broken, the water runs into the Belly: we have often ſeen theſe Bladders very large and clear, growing to the Liver and Spleen, in Men dead of the Dropſies, and in an Ape, and Butchers find the ſame in Cattel. And when theſe coats are corroded, the water falls directly into the belly. The great Dryneſs of the ſubſtance of the Liver which makes it grow leſs, is the cauſe of theſe clifts in the Liver. And this came rather by a hot then cold Diſtemper, as appears by the great Thirſt of Hydropical People, and the high Colour of their Urin, and other ſigns of heat rather then cold: and in regard they have it that time moſt deliciouſly with ſpiced meats, and drink the ſtrongeſt wine, and ſo continue, being young, or aged, at which time they fall into a Dropſie, by reaſon of the Dryneſs of their bowels, and they jeſtingly complain that they are troubled with water, though they never drank it in their lives. And this we have obſerved to have been the chief cauſe of dropſies in our Country, and we perceive that a perpetual thirſt in Drunkards, which they long have had from the hot Diſtemper of their bowels, which makes them ever drinking, is a moſt ſure fore-runner of a Dropſie, if another Diſeaſe doth not prevent it by Death.

This alſo may come by heating of the Bowels immoderately with hot Medicines with which Women labour to warm the Stomach and Womb: or when they have other cold Diſeaſes.

Theſe bowels may alſo be dryed and cleft by hot, ſharpe and conſtant Diſeaſes, as Feavers, and Jaundies, and therefore the Dropſie which ſheweth rather the ſigns of heat then cold, followeth theſe Diſeaſes.

From a hard Tumor of theſe Bowels either all over them or in any part in the concave or convex part of the Liver, or in the Spleen, may theſe Clefts come, from a Scirrhus of the Liver or Spleen, or any other Tumor which will turn to an Impoſthume; Or there may be ſuch openings by which the water may fall into the Abdomen, becauſe from this Hardneſs the Tunicle quickly cleaveth; and if it impoſthume and ulcerate, then there is way made for the water: as ſhall be ſaid in Ulcers. Which is the cauſe why that Hardneſs, or Scirrhus or hard Tumor that turns to an Impoſthume in the Liver or Spleen bringeth a Dropſie, becauſe if there be Hardneſs without fiſſures or clifts, that would rather cauſe the Jaundies, Cachexy, or Atrophy by ſtoppage, then a Dropſie, which follows the hurting or clefts of the Bowels, which comes from thoſe ſtoppages: and hence it is that other obſtructions of the bowels, when they do not divide the ſubſtance of them externally are not alone, the cauſe of the Dropſie Aſcites, as they are of the Diſeaſes mentioned, and ſomtimes of the Anaſarca Dropſie: as we ſaid.

The cauſe of this Hardneſs or Scirrhus, is the Dryneſs of the bowels which cleaveth them, if it be ſo active that it dry them hard, and this dependes upon hot meats, drinks, Medicines and Diſeaſes. Or that which is the cauſe of theſe Tumors, as of a Scirrhus, or that hard tumor which impoſthumateth, outwardly in the fleſhy parts of the body, may alſo be the cauſes of theſe in the Bowels. As the too thick juyce with which the bowels are nouriſhed, which comes from the Chylus and Blood from whence it is made or from the mixture of ſome other juyce, which belongs to another part; and that which turns into an Impoſthume hath Diverſity of matter in it, as hath been often found. Nor can the ſubſtance of the Bowels, but the Veſſels onely be ſo hardned from choller and flegm: as we ſhewed in Obſtructions. But an Inflammation of theſe parts, if it cauſe a Scirrhus, doth harden them rather by thickning the Juyce that nouriſheth them, then any other wayes: as we ſhewed in an external Scirrhus.

When the ſubſtance of theſe bowels is hurt about the ſuperficies, the water may be ſent into the belly; as in an Hydropick Maid, we ſaw the Liver on the one ſide with a fungous Tumor growing thereunto, in which there was ſomewhat congealed, from which a ſerous Humor might diſtil. Eſpecially if the Liver and Spleen be ulcerated, ſo that the Ulcer pierce to the Superficies, the water which ſweateth out, as in other Ulcers which are alwaies moiſt, may cauſe a Dropſie. Which Ulcers coming after Inflammations ſuppurated, or Tumors aforeſaid ending in Impoſthumes, and ſending forth Matter, do cauſe a Dropſie at length. Other Hurts do follow ſuch as come from external Injuries by contuſion; And we knew two men thrown from a Horſe upon their right ſide, having firſt ſome Symptomes of a hurt Liver, who died of Dropſies. The ſame may be come by an external Wound reaching to the bowels, except Death prevent it, by leaving an Ulcer. Alſo corruption of the bowels totally or in part, as we have often ſeen, is the cauſe of a Dropſie, which follows Tumors

or

or corroſions, or ulcerations, or other hurts of the bowels, from the cauſes aforeſaid. Alſo if the Tunicle of theſe bowels be corroded by water putrifying in the belly, or the ſubſtance of them hurt, there will be an increaſe of water in the belly from the Serum, or Whey, which comes from thence. We have alſo obſerved that when the Tunicles of the Liver and Spleen, and the Peritonæum or ſilme of the belly, where they lye have been corroded by this water, they have ſo grown together, that we could neither ſeparate Liver nor Spleen from the Diaphragma to which they grew, with tearing of the Tunicles, from whence the Serum or water might flow into the cavity.

In the Body of the Reins which conſiſts of a bloody ſubſtance like the reſt, if continuity be diſſolved as is ſaid, the ſame may be, and the Dropſie Aſcites may come from thence, and we affirme this by Reaſon and Experience. For ſeeing Whey or Serum is carried to them continually not only with the Blood by the emulgent Veſſels, but is alſo continually by them there laid up, if the ſubſtanee of the Reins be open or divided, the water which drayneth from them as from other parts, and making Bladders, or preſently piercing, may ſooner flow and in more plenty from thence, then from other Bowels into the belly, and may make a Dropſie Aſcites which may laſt long, becauſe the hurt of the Kidneys eſpecially if but of one doth not preſently kill a man, but cauſe a long Diſeaſe, and when one is gone, as we ſaid, the other may ſerve a long time. In which caſe, beſides other Accidents which come from the collection of water in the Belly, we find ſomtimes ſome matter if there be an Ulcer, and they piſs leſs, eſpecially if both Kidneys be hurt, becauſe much of the Urine is carried continually into the belly, and comes not to the bladder as it ought. The Cauſes of theſe hurts in the Kidneys may be the ſame with thoſe of the other Bowels, as over Dryneſs of the ſame, as may be, which alſo may cauſe the ſtone, as we ſhewed, and this may be not only by age, hot Diſeaſes, but by hot Urins through the uſe of hot Meates, and eſpecially Wines.

Moreover Ulcers in the Reins internal and external being more or fewer, may cauſe the Dropſie which ſprings from the defect in the Reins: as alſo the corruption of the Kidneys when they are ſo conſumed that they hang as we have ſeen like a Purſe. Alſo other hurts internally and externally cauſed: as contuſions and wounds.

Moreover we are more bold to affirme this, not onely from what hath been ſaid, but becauſe we have often ſeen it; for when a certain Noble Man that had the Dropſie aſcites ſeven moneths, was opened after Death, and we had ſearched all the Bowels of the lower belly very deligently, and had found no other fault, but that the water long contained in the Belly, had by ſtinking brought to the Peritonæum, Midriff, and Cawle; we found that both Kidneys were deeply fiſtulated, with many Ulcers, ſo large that we could turn a finger therein, with Bladders full of water upon them, which fell down when they brake, and the external coat of the Kidneys was eaten every where through. We gathered that this came from great drinking, becauſe from his Youth he uſed it, and was very ſtout at it, and ſeldom made water. To which did much conduce, his uſe of ſpiced and hot Meates continually, which do dry and burn the Kidneys as other Bowels, eſpecially ſince they were corroded by Retention of Urine.

From the branches of the Veins of the inferior Belly, eſpecially from the *Vena Porta*, which come from the Guts and the Stomach by the Membranes of the Meſentery and Cawle, and gathered into two ſtocks, and faſtned by the right to the Liver, and the left to the Spleen, by a Diapedeſis, when the Coats are made thin, or by Anaſtomaſis, when the Mouths are open, eſpecially of the Veins which are diſperſed from the great ſtocks into the Omentum or Meſentery and there ending, being laid open: if water flow plentifully and more then ſerves from the Natural moiſtning of the parts leaſt they wither, and be gathered in the belly; The Dropſie Aſcites may alſo be produced. And that this may be, and that the water may flow from the Veins mentioned by the blind Pores and Mouths without ſolution of continuity, and that without mixture of Blood, or Tincture thereof, appear thus, becauſe as into other parts it breaks forth ſuddenly and in great plenty, both internally by divers Defluctions, as alſo externally by Sweats, Tears, Snot and by the Womb fluxes; ſo alſo in the Meſeraiks, there may not only be ſome Natural breathing of Moiſture into the Belly, as we may perceive a conſtant Moiſture, but it may preternaturally fill the Belly, and the eaſier, becauſe in thoſe Veins the Whey which is made of Meat and drink, and continually brought with the Chylus, doth more abound then in other parts. And as in ordinary Fluxes called Diærrhæa; or in ſuch as are cauſed by purging: This water or whey, returns back without Blood by the Mouths of thoſe Veins by which it entered, even ſo by the internal Mouths by which the branches are cloſed about the ends, being laid open it may flow into the Belly without any Tincture of Blood.

By the ſame reaſon doth the Serum or Whey ſeperated by the Kidneys from the Blood flow into the Bladder, from all which we gather that the Dropſie Aſcites may come though others think it impoſſible. Alſo in opening of men that died of Dropſies, when we have ſeen no manifeſt ſolution of Continuity, but abundance of water in the belly and Veins, conjecturing that it came that way into the Belly, we were bolder to affirme it, becauſe in a Hydrocelæ or watery Rupture, the water may from the ſame Cauſe flow into the belly, and thence into the Cod, as we ſhewed.

The Cauſe of this Anaſtomoſis and Diapedeſis or opening of the Veſſels in the Meſeraick Veins, is too much Serum or Whey therein, which opens them by ſtretching; or tenuity or thin wateriſhneſs which eaſily pierceth. For then, it being in the Meſeraick Veſſels, except it go back by the ſame waies by which it entred into the Guts, and ſo be purged forth by ſtool, it breakes through theſe Veſſels and falls into the Abdomen or Belly. This abundance of water is the cauſe, when its paſſage from the Meſeraicks by the Liver into the hollow Vein is hindered. This happens eſpecially when the attractive Faculty of the Liver is weakned, ſo that it cannot attract the Serum, and ſend it to the hollow Vein, which is mixed with the Chylus, and is alſo a Portion of the blood, and ſomtimes ſeparated from it, for Reaſons mentioned in the Cachexy, which comes from the weaknes of the Liver. They have alſo conceived that the paſſage may alſo be hindered by the Obſtruction of the Liver with a Humor, or Hardneſs or Scirrhus; which if ſo great as that it ſtop the Serum from coming to it, the blood ſhall be hindered alſo, and then there would be an Atrophy ſooner then a Dropſie; but without that, the ſame may happen, if the Serum which is in the hollow Vein, and cannot get its Natural Paſſage by Urine, is ſo much in quantity, that it being not able to ſubſiſt there, it is ſent by Nature by its branches into the Liver, and the branches of the Gate-vein: Or flie otherwiſe back and ſo be gathered together.

The cauſe of this may be the weakneſs of the attractive Faculty of the Kidneys: Or an Obſtruction ſo great, eſpecially in both Ureters, that the Serum cannot get into the Bladder. The cauſe of which we have declared in other Symptomes of Piſſing.

It hath been thought that the ſame may come from ſtoppage of wonted Sweat, but this cannot alone be the cauſe, or without another, becauſe at that time the ſerum may be evacuated by Urine. Alſo the ſuperfluous Generation of Serum: the cauſe whereof we ſhall ſhew in the Cauſes of Leucophlegmacy, if it be joyned with the reſt, will ſooner produce a Dropſie, and being then a greater quantity of water, it will ſooner paſs the waies ſhewed into the Abdomen. And as this comes from Moiſture taken in, ſo the Dropſie Aſcites comes by continual Drinking, not onely through the hurt of the Bowels cauſed by much Drink, but becauſe there is plenty of water thereby, in thoſe uſually who piſs not according to the proportion of the Drink received

ceived, but the Serum abounds in the Veins, by which they are heavy, and they complain of Heavyneſs and Extenſion of the,belly before they have a Dropſie.

It may be declared by probable Arguments, and certain Demonſtrations, that the water falling into the Belly may Cauſe a Dropſie, by the dividing of the Meſeraick Veins which contain the Omentum and Meſentery. For ſomtimes by an external chance, when any Vein is by violence broken, many have had a Dropſie. For firſt Blood and Water have flowed from thence into the Belly, and when the Wound hath been turned into an Ulcer, or to corruption of the Bowels, which have been found after Death; a Dropſie hath followed by the continual Diſtillation of water from thence; and commonly bloody ſtools and vomits have gone before, afterwards mattery and filthy. Which Ulceration or Corruption, by which the Serum falls down, may come by a Corroſion in the Omentum or Meſentery,where the Veins are: when ſharpe and malignant Humors, retained in theſe Veins, which uſe to be full of Excrements, eates them through, and ſo may cauſe a Dropſie: As alſo if this corruption in the Membranes and Veſſels, come from the long retenſion of ſtinking water, as we ſhewed, we perceive in all Diſſections of Dropſies,that the Omentum and Meſentery are by this means infected; which being ſo, though it be not the chief cauſe of the gathering of the water, ſeeing it came from other parts: yet becauſe it then diſtilleth from thence, it cauſeth the water to increaſe, and the more when other Bowels are ſo infected with this water, that they are alſo broken.

It is credible that water may fall into the Belly and cauſe a Dropſie, from other veins that preſs inward, as the *Vena cava* or hollow Vein, and its branches diſperſed to the Reins, the Womb, and other parts, as Muſcles, and Membranes, by Anaſtomoſis or Diapedeſis, which are when they are opened; and eſpecially in a Cachexy or the like, wherein there is much water, and more eſpecially in women, who uſed to have Evacuation of this water, by their courſes or after them by the whites, which being ſtopped cauſeth the water to find out another way out of the veins. In theſe Veins it cannot ſo eaſily come by ſolution of continuity, becauſe if it be in the greater Veins, there will be a bloody Flux which will prevent a Dropſie by Death, and the leſſer veins lying deep, are not ſo ſubject to Injuries as thoſe called Meſeraicks,which are in the Omentum.

We have found in the Anatomy of Hydropical Perſons much water in the Navel-vein, where it is joyned to the liver and Peritonæum being dilated, which in People of age reſembles rather a Ligament,then an hollow Veſſel.

Somtimes we have found it not only there retained, but carried to the Navel by the veſſel that endeth there,and gathered under the ſkin, and to produce a tumor like a bladder of water, and from thence to flow into the Belly, and to break out of the Body ſo plentifully that the whol belly was emptied.

We ſaw one that had his Belly ſwollen before he died, from the breaking of his Bladder,and his urin diſperſed into his belly; in regard another had leaped upon his belly, when he lay upon the ground drunk,which brake his bladder being ſtretched out with Drink. And it is probable that the ſame may happen from the breaking, or otherwiſe opening of the Ureters when the water flows out, and that a Dropſie may come from thence, becauſe they may live long after. This I have obſerved in a Child, which new born, lying in his Cradle,after a long ſuppreſſion of Urine, voided a little ſtone and much Urine therewith,and growing older, died miſerably of a Dropſie with ſhortneſs of breathing, having firſt had great pain in his right Groyne, when his Urine was ſtopped for a time, till his Ureters broke which cauſed the Dropſie.

Water fallen into the Codds is the cauſe of Hydrocele, or water Rupture.

If water fall into the cavity of the Cod it will either cauſe that Tumor which is in the Dropſie Aſcites with Swelling of the Belly, or the Hydrocele, which is without a Dropſie. And this tumor being waterish comes from no other part, then the belly in both caſes, into which it firſt fell, and from thence fell into the Codds. And that two waies, the one by Aanaſtomoſis or Diapedeſis, which is when the water goes under the ſkin from the belly into the Codds: as in the Dropſie Aſcites, where it falls the ſame way,into the Feet alſo. The other way is by the Peritonæum, which brings the ſeminary Veſſels to the Codds, if it be ſo enlarged that the water gathered in the Belly, may fall by it into the Codds, for albeit the relaxation be not ſo large, as that is by which the Guts fall into the codds, yet if it be ſmall, the water may diſtil by drops. And this relaxation may come from the water only which moiſtneth that part of the Belly, where theſe paſſages are, without other force, but if ſuch be, there is a greater Dilatation and Rupture, the way being enlarged; and the Codds are ſooner filled: as we ſhewed in the Dropſie-rupture. But if Moiſtneſs be the cauſe, only it will come with much water, as in the Dropſie: but in the watery Rupture, it will come ſlower, becauſe there is but little water, and falls by degrees into the belly, and ſo into the codds.

And we have ſhewed that not only ſolution of continuity in the Bowels and Veſſels,but alſo Anaſtomoſis and Diapedeſis of the Meſeraick Veins, may be the cauſe of gathering water into the belly in a Dropſie. And this ſeems to proove that in a Hydrocele, the water doth ſweat through or drop from the Mouths of the Veſſels, becauſe that in this caſe, they have no other Diſeaſe but Swelling of the Codds, and it is long a growing, and the water is by Degrees carried through the Tunicles of the Veins or Mouths thereof. And we have ſhewed that this may come from the ſame Cauſes, from which the Dropſie ſometimes proceeds, but leſs, and ſuch as bring leſs Damage, in regard the water Naturally ſweating forth, and bedewing the inward parts of the Belly, although it abound not much; yet may it without a preternatural Cauſe be gathered into the Codds, the wayes being laid open by Moiſture, or the like cauſes, and ſo the relaxation of the Paſſages may be the only cauſe of Hydrocele, or Water-rupture.

When the water gets into the Groins, it cauſeth thoſe watry Tumors in Women.

When a ſerous Humor falls into the Groynes of women, it makes a Tumor like the water Rupture. And that by reaſon of the looſneſs of a Paſſage by which a certain Veſſel comming from the womb is carried without the Peritonæum into the Privities,not unlike that of men which ſerve the ſeminary Veſſels. Which relaxation may come from the ſame cauſes with Hydrocele,by reaſon of its moiſtning the parts, and becauſe it was firſt in the Belly. Among which Cauſes ſtrong throws in Child-beaing, or Ruptures in this part, may occaſion the Dilatation,and the Tumor following thereupon.

In the Dropſie Aſcites there is a Collection of water in the Cavity of the breaſt.

Somtimes in Dropſies the Humor which is gathered in the Belly, is carryed to the cavity of the Breaſt, which is perceived after Death upon Diſſection, though before it appeared by no tumor, except as we ſaid in an Empyema or matter in the ſide,there be ſo much of it gathered together, that it cauſe a Swelling in the ſpaces between the Ribbs. Beſides, we may gather from ſhortneſs and difficulty of breathing, which then troubles Hydropical Perſons more, though they ſtand upon their Feet,that there is water in the Breaſt; becauſe as when it is in the Belly, by waſhing the Midriff below,ſo when in the breaſt by oppreſſing it above, it cauſeth weight,and hindering its motion two waies,cauſeth difficulty of breathing, and the rather becauſe it ſomwhat hinders the motion of the Lungs. But how it is carried from the belly to the breaſt, we cannot find another way then by the Midriff, becauſe that ſeparates the parts, and by which as by the Peritonæum or inward Rimme, and the Muſcles thereto adhæring, we have ſhewed, that it may ſweat into the Belly, or be carried by the Mouths of the Veſſels, ſo alſo may it here paſs through the Midriff;

except ſome corroſion, as we ſhall ſhew may be by water long retained, or other perforation, do make it way. For which Reaſon, if water comming not from the belly in a Dropſie, but another part into the breaſt, as in other Diſeaſes, paſſing through the Midriff fall into the lower belly: it may cauſe a Tumor there, or if it go farther, a Tumor in the Feet. And this we ſuppoſe to be the cauſe why ſhort breathed or Aſthmatical People are Hydropical, except the Cauſes of both Diſeaſes do meet: and at length though not preſently, the Feet in the Diſeaſes of the Breaſt will ſwell, except the water find another way under the Skin from the Breaſt downwards.

A Flux of water by the womb in the Dropſie Aſcites.

Water getting into the hollow of the womb, and enlarging it cauſeth the belly to ſwell, and this is called the Womb-Dropſie. But we ſhewed in the Diſeaſes of the womb, that the capacity of it was not ſo large to hold ſo much water, nor can it be ſo dilated except there be a Child growing therein, yet it may happen, that water gathered in the Belly may be voided externally by the womb, either all or it in part which may cauſe the aſſwaging of the Tumor, which cauſed men to think that was gathered in the womb. But when this is ſo, it is poured forth by the Veins which are in the Neck of the womb, which ſendeth forth the Menſtrual Blood or Whites, by an Anaſtomoſis when Nature labours to disburden her ſelf by this way which is ordained for the ſame; ſo that there is no need to determine that the water was in the bottom of the Womb, which cauſed the Belly to ſwell. It may alſo ſomtimes happen, that before the Belly is full of water, it may find out a Paſſage by the Veins of the Neck of the womb, in a Cachexy, or evil Habit, or the Leucophlegmacy, and ſo prevent a Dropſie: as long ſince I obſerved in a Woman of an evil Habit of Body, which is yet alive, which often hath her Terms abundantly, and when they ceaſe, ſhe avoideth abundance of water by the Neck of the womb.

When water is carried downwards in the Dropſie Aſcites it cauſeth a tumor in the Feet with that of the Belly, becauſe the humor being thin ſtill goes downwards, and when it is fixed in the loweſt parts, it cauſeth firſt an appearance, and when the Flux continueth and filleth the Feet, it tendeth upwards by the Legs and Thighs to the Loins and Belly, and there it being under the skin, is more manifeſt in which places it doth not onely lift up but ſoftens the skin, ſo that if you preſs with your Finger, it will pit and continue ſo ſomtime. And when this watery Humor, gathered under the skin moveth, it happens that if the Legs are downwards as commonly, they grow bigger by water comming thither, and the Belly ſomwhat leſs, and if by lying down or other waies they are lifted up, the water comming back ſwells the Belly, and the Legs are leſs.

This watery Humor in the Dropſie Aſcites ſweating into the Feet, Leggs, Belly and Loins, from the branches of the hollow Vein, or flowing by Anaſtomoſis, is referred to that kind of Dropſie which comes from plenty of water in the Veins, becauſe the water doth not only flow from the branches of the hollow vein into the belly, but alſo outwardly as in a Leucophlegmacy, and we ſhall ſhew that the Leggs ſwell by that way. In all other Cauſes of the Dropſie Aſcites which depend upon the Diſeaſes of things contained in the Guts, and of the Meſeraick Veins, it ſeems to be evident that the water is carried to the outward parts, and ſo to the Feet, from the cavity of the belly, into which it firſt came, not only in regard that when the water falls downward into the Legs, the tumor of the belly abateth; but becauſe the breathing is freer, and when the water comes back, theſe return. And this certainly confirmes it, becauſe when the ſcarſe skin either breaks or is opened in the Legs that are ſwollen, the Tumor of the belly is abated by the water that drops out by degrees; or if it flow violently or long, it quite goes away; and many meaſures of water flow this way forth, which could not be contained any where but in the belly, becauſe the Feet while they do ſwel, and when they are abated, ſend forth much water, which could not come but from the belly. And it is to be prooved, in that when water gets into the belly from the hurt of the Bowels, which we ſaid was the uſual Cauſe of a Dropſie, and when there is no Fountain of water but from thence, the Feet will ſwell before you ſhall perceive a Tumor in the belly, this ſhews that it came from the belly, becauſe it was no where elſe.

But as theſe are plain, ſo how this ſerous Matter can fall without the cavity of the Peritonæum, (in regard there is no apparent Paſſage through the Membrane) it is not manifeſt. Wherefore we gather that this is done by a Diapedeſis, and that the Serum or Whey doth ſweat through the Membrane under the skin which is diſtended by Swelling, and moiſtned with Humors; and falls by degrees (between it, and the parts beneath, unto which it is joyned) downwards, as in other Defluxions. And we conceive that it may return the ſame way upward, becauſe in other parts it doth ſo, that is, pierced through the Membranes, and paſs through the Veins. Or that it comes by an Anaſtomoſis in the mouths of the Veins diſperſed into the skin from the Peritonæum, when the Whey gets in, and flows that way into the parts beneath, and returns again by the ſame. Or becauſe ſome part of the Peritonæum is ſo corroded by a ſharp and ſtinking water, that water may paſs through it under the skin. As by Anatomies we have ſeen, that the Membrane hath not been eaten through in one, but divers places; and ſomtimes in that place where it encompaſſeth the Midriff, upon which the Liver and Spleen do lie. And if the Tunicles of thoſe veſſels be alſo eaten through, the parts touching will grow together: as we have ſhewed formerly.

But in the caſe of him that had a Dropſie with a Rupture, whoſe Guts with water had filled the Codds, and were grown to the Peritonæum, as we ſhewed; this growing together came from the corroding of the water, by which the Tunicle of the Gut and its Membrane were eaten through. And this, as other Glutinations proveth, that parts cannot grow together except their Tunicles or Skins be taken off: as we ſee in Fiſtulaes. Moreover; ſince we have obſerved in men alive, that this water in the Navel which came from the cavity of the belly, not by the Navel-vein which is rooted in the Liver, and if opened would ſend water from the Liver, and not from the belly and in leſs quantity: but by the Peritonæum to the Superficies of the skin; which it raiſed into a bladder being gathered under the ſcarſe skin, which being cut, all the matter in the whol belly flowed forcibly forth: Hence we conjecture, that nature can find out divers Paſſages for the water to paſs under the skin, through the Peritonæum. Perhaps by Bladders inwardly growing as outwardly, or by ſolution of continuity ſome other way: and if after Death there were more Anatomies made of ſuch as dyed of Dropſies, there would be many ſuch things diſcovered which are yet unknown.

When water gets into the whol body, it is the cauſe of Leucophlegmacy.

When a watery Humor gets into the Habit of the whole body, it cauſeth that General Swelling which is in Leucophlegmacy; which comes not only from crude Nouriſhment, as we ſhewed, but of a ſerous Humor, leſs or equal, or more in quantity; in which not only the ſubſtance of the parts is too much increaſed, but being watered with the Serum it is made ſofter, takes Impreſſion ſooner, and longer retains it. And theſe appear moſt in the Feet (becauſe water being thin alwaies goes downward) and they are very like then to the Legs of Hydropical Perſons. And this may be called the water between the skin, or *Aqua intercutis*.

Now this ſerous Humor comes not in this mentioned Leucophlegmacy from the capacity of the Belly, but from the Veins diſtributed into the Habit of the body, by which it paſſeth with crude blood to the nouriſhing of the Parts, and as the blood nouriſheth them with crude Juyce, ſo this watereth them. And the Cauſe of the mixture of this ſerous Humor with the crude, is the abundance of it in the Veins.

Veins. When there are Cauſes which produce theſe ſerous Humors joyned with the weakneſs of the Bowels that do ſanguifie or make blood, ſo that they cannot ſufficiently compleat it, as we ſhewed in the Leucophlegmacy. Among which this was chief, the immoderate increaſe thereof, which moſt ſay is in the Liver, and is Naturally produced at the ſecond Concoction, ſo that if the Liver be weakned or cooled, becauſe it cannot make the Chylus into Blood, they ſay, it turns it into Whey. But theſe Arguments may proove that Whey and Serum is not made in the Liver, but in the firſt Concoction, and it takes its form preſently from thence, becauſe being partly made in the Stomach with the Chyle, of the beſt Juyce, ſome part thereof is thinner as Whey in Milk, and is of the ſame uſe with the Chylus, of which it is a part, and comming partly from the Humors abounding through eating and drinking and made thinner, it hath the form of Whey, and being ſent into the Guts with other Excrements, it is carried from the Meſcraick Veins into the hollow Vein with the Chylus, and without it, as we ſee ſome who piſs out Drink too much taken, preſently, being ſuddenly ſnatcht to the Liver.

Hence it is that we muſt attribute the abundance of Serum to too much drinking, and uſe of moiſt things, which adminiſter matter unto it, rather then to the fault of the Liver: except we will (as ſome do) call that crude Juyce which is made by defect in the Liver, a ſerous Humor, or becauſe the ſeparation of the Whey imperfect at the makeing of the Blood, cannot be handſom, but there is more Whey in the Blood then is needful, and is not ſeparated as in other places, makes it more watery, for this cauſe we may pronounce that the Serum or Whey is not only made by the Liver, but alſo gathered into the Veins more plentifully: And ſo to determine the Leucophlegmacy comes from the weakneſs of the Liver. And this is chiefly, when there is not a ſufficient Evacuation by Urin, the attractive Faculty of the Kidneys being weakned, or when uſual ſweating is ſtopped, which may be the only Cauſe, without the Diſtemper of the Liver of water in the Veins. And this is ſooner when the Diet is ſuch as breeds water; Theſe cauſes meeting, make a Leucophlegmacy in which the whey or water called Serum, is more then the crude Juyce, or ſuch as comes from only Serum, when the Imbecillity of the Liver is abſent. As we have ſeen ſome who have ſwollen only by drinking a great Draught without fetching breath, when they were very hot, by reaſon of the Heat which carried the Humor ſuddenly into the Veins, and thence into the Habit of the Body, and the ſame hath been when a body hot and ſweating was expoſed to the Air, through the ſtrikeing in of the water. And it ſometimes happens that the water being carried from the Meſeraick Veins into the Belly (from the Cauſes aforeſaid,) and ſo into the Habit of the Body, that the Dropſie Aſcites is produced with that called *Anaſarca*, and ſo they both are united.

Water in the Feet may cauſe a ſwelling without a Dropſie.

Water falling into ſome parts and there gathered, cauſeth Swellings, as when it is in the Feet: of which we ſpake without the Dropſie Aſcites, it cauſeth a Tumor like that of a Dropſie being ſoft. ſuch as we deſcribed formerly. And this is when together with the crude Nouriſhment which cauſeth Oedematous Tumors, it falls from the inferior parts into the Feet. Or when in Diſeaſes of the Feet, as the Eryſipelas Oedematous or the like, theſe Excrements are carried with other Humors into the Feet, and cauſe theſe Diſeaſes, and when the other are diſcuſſed, the Tumor remaineth. Or when by a Defluxion into the Eyes, there is an Epiphora, or Moiſtneſs and weeping, which makes the Eye-lidds ſwel which was ſpoken of in the Eyes. Or when in the Declination of other acute Diſeaſes, Nature disburdning the remainder of the Excrements with the water into the lower parts, the Feet do ſwell; and the ſooner, becauſe having long kept the bed and their Feet up, when they begin to walk, the Humors flow downward. This tumor of the Feet, in men that are in Health, is counted a good ſign becauſe the reliques are ſo carried away. And becauſe ſuch thin Humors are quickly diſcuſſed, it continueth not long, unleſs it be ſuch as ſhewed it ſelf at firſt in the Feet, which a Dropſie followed, this deceiveth many, and it may be diſcovered by other accidents which accompany a Dropſie.

Water in the Leggs, the cauſe of particular tumors there.

We have formerly ſhewed that there hath been a Tumor in the skin, upon the Longitude thereof only from a ſerous humor, and becauſe it came ſuddenly it was a ſign that it would go ſuddenly away, though it pitted with ſtrong Impreſſion.

And this was ſent by Nature, by reaſon of the plenty of it, as appeared by the Parties continual Sweating, and by reaſon of the thinneſs, and ſharpneſs, which cauſed Itching. And there was alſo a Looſneſs of the Feet and a contraction.

Water gathered under the skin of the Head, the cauſe of Hydrocele

If water be ſent under the skin into any outward part, if it ſeparate the skin from the part, and fill the ſpace between it, cauſeth a Tumor, as under thick skins of the Head in the Tumor called *Hydrocelephale*, comming from plenty of water there breeding, and gathered together.

Water in the Navel is the cauſe of Hydronphalon.

And when water is under the skin of the Navel, the Tumor called *Hydromphalon* is raiſed being carried thither by the Navel-vein enlarged, or by reaſon of the plenty thereof, or from other cauſes, while the Paſſage is not dryed: as we ſhewed in a Dropſie may be.

Water in the Eye-brows, Cauſe of their Swelling.

When water is in the Eye-brows there is a ſwelling, and the ſooner with tears and rubbing, becauſe they will often Itch. Somtimes there is a ſudden Defluxion of Blood into the Eye with water, with Swelling and Redneſs, as if there had been a ſtroak (comming and going) about the ball of the Eye. Theſe have I ſeen, in two Children of evil Habit of Body, having pain in the Limbs, and the running Gout.

Water under the skin of the Eye, the Cauſe of Phlyctæna.

Alſo when water is under the ſcarſe Skin, if it be ſeparated from the parts beneath, and the Mouths of the Veins that end there, and ſtop them, cauſeth the Bladder called *Phlyctæna*. And this will be ſo in other parts. The cauſe is the abundance of whey brought thither, and hindered from paſſing through the Pores by Sweat, and therefore it getteth under the skin and liſteth it up. And if this be ſalt or ſharpe, provoking Nature, and in divers parts. It cauſeth thoſe watery Puſtles in the Itch, called *Hydroæ*. Alſo another external force may cauſe the ſame, when the ſcarſe skin is raiſed; as alſo by rubbing or burning, as we ſhewed.

Wind begets ſome of the Tumors aforeſaid, differing according to their parts, as in the Belly, Codds, Stomack, and Guts or the like.

Wind comming from other parts into the hollow of the Belly, or bred there, is the cauſe of the ſimple Tympany, or if with water, of the Aſcites.

Wind gathered and kept in the cavity of the Belly, is the chief Cauſe of the Dropſie called Tympany; and it is ſeldom without water: And it muſt be in the cavity of the belly and ſtretch it forth very large, and we may know there is wind by the ſound thereof when it is beaten. And ſomtimes there is a pricking pain by reaſon of the Diſtenſion of the Membranes. Theſe winds getting into the belly, becauſe no parts beneath in which it may be retained, ſo plentifully muſt needs come from the Stomach and the Guts. But the doubt is which way, for it ſeems impoſſible that they ſhould come through the blind Paſſages of the Stomach and Guts, becauſe they are eaſily held in with the ſmalleſt Membrane, and a thin Humor will with more eaſe ſweat out then wind break forth. And it is plain that they

they come not from ſolution of Continuity in the bowels, becauſe then the Chyle of other Excrements would alſo come forth. Therefore it is probable, that if wind be carried from the Stomach and Guts into the Belly, it firſt gets into the little mouths of the Meſeraick Veins, and from them, as we ſhewed the water doth, into the cavity of the Belly. And this appears, in that the water may come the ſame way, which is commonly mixed with the wind, except, as ſome ſay, the wind paſſing by the inward Tunicle of the Guts into the outward and piercing through the meſentery, where it is joyned unto them get in, and being contained between two Tunicles, at length gets through them into the Belly; and whether it come this way or that, it is rare, as alſo the Tympany, and not but from abundance of wind, by which the Guts are ſo diſtended, that they are ſo thin, that wind may paſs through. And this cannot be except it be ſo incloſed in the Guts, that it can find no other way upward or downward.

This abundance of wind is continually made in the Guts and Stomach, from great weakneſs therein, turning that by its weak Heat into wind, which ſhould have been concocted; from whence alſo may come the Dropſie called the Tympany, from wind and water, if the Liver be weakned alſo, and water be mixed. Now the great Obſtruction and gathering together of the Guts, cauſeth that it cannot go forth downwards, by its Natural Paſſage, and therefore the pain of the Colick comes firſt with the binding of the Belly: as we ſhewed in thoſe Diſeaſes, and from what Cauſes they came. And if they continue, and the wind be carried into the Belly as we ſaid, the Belly will begin to ſwell, and the pain of the Cholick remains as at firſt, with the binding or coſtiveneſs of the Body, till by continual dilatation or Enlargement, a way is made, that the wind which was in the Guts, may have a free Paſſage, and cauſe no more pain, and if this wind break away, yet that which is without the Guts doth not, but the belly is ſwollen, and the pain of the Cholick is turned to a Tympany. If dropſie Bodies were often anatomized, it would be found out, that wind in a Tympany doth ſometimes get into the ſpace or vacuity of the Belly, by reaſon of ſome manifeſt Solution of continuity in the Stomach or Guts, which were before ſtretched exceedingly thereby, or by ſome other waies; and this may hence be collected, becauſe it is the worſt of all Dropſies, therefore the hurt ought to be great, and if it were ſo in an Aſcites, it would be incurable, And if the Solution of continuity be ſo great, that the Chyle and the Excrements alſo get into the belly, it will ſooner kill; but if only water and wind, without thick Matter (as it may be) the life will be prolonged.

Beſides this Cauſe of the Tympany which comes from the wind of the Guts, getting into the belly: there is another, which comes from wind bred in the cavity of the belly. And this is when the watery Humor with which the belly is alwaies moiſtned, ſweateth too plentifully from the Meſeraick Veins, or comes too faſt from the Mouths of them, and turns into wind, which retained for want of paſſage, cauſeth a Tympany. And if the whol Humor turn into wind, which is ſeldom, it will be a ſimple Tympany, but if mixed with water a Compound, which is moſt uſual. In which kinds, if water abound not over much, and falls not into the Feet or other parts from the cavity of the Belly, nor cauſeth Swelling any where elſe, neither can it be diſcovered in the belly. But if there be ſo much by the continual Increaſe thereof, that the Tumor of the Belly not only extends it, but cauſeth a Noiſe of Water falling into one ſide, when the Patient turns, and the water falls into the Feet, there is an Aſcites with the Tympany. Now the Cauſe of this wind turning into water, (in regard we have ſhewed in Aſcites the cauſe that brings it into the belly) may be the Heat of the inward Bowels, which maketh the water turn into a Vapor or thick Wind: as it may do in in any part of the body, where there is ſpace and Humidity.

As we have ſhewed, that in the Aſcites, when water is carried from the cavity of the belly into the Codds, it makes the Tumor called Hydrocele or Water-rupture: ſo when wind comes from the ſame part into the Codd, and puffeth it up, it cauſeth the Pneumatocele or windy Rupture, Which we never ſaw in a Tympany, and it is ſeldom alone, and when it is, there is commonly water with it. But by wind brought thither that Swelling in the Codds which comes with the pains of the Cholick and vaniſheth preſently, may be produced, Nevertheleſs, the cauſe of both is the dilating of the Paſſages of the Peritonæum, and it is leſs when wind only with a little Moiſture, gets by degrees into the Codds. This Dilatation or ſtretching in Pneumatocele or Wind-rupture, may come from divers Cauſes mentioned in *Hernia*, eſpecially in young, tender Bodies, which are ſubject to theſe as well as other ruptures by crying; and the eaſier if there be wind in the belly, as it uſeth to be, without a Dropſie, in thoſe that are ſound, otherwiſe being made of water turned into wind, as in all vacuities of the body it may be, and we ſhewed a Tympany cometh the ſame way; and though the wind be not much, and diſperſeth it ſelf, yet if there be a Paſſage to the Scrotum open, it will get thither: For which reaſon, this puffed Swelling in the Codd which ſtaies long, comes from the ſtraining, which dilates the Paſſage by wind that breaks through, by which Paſſage after the force is over, the wind comes back into the belly and the Codd ceaſeth to ſwell, neither doth it return without a new force be raiſed.

Wind kept in the Guts and ſtomach is the cauſe of the Tympany of the Guts.

Winds detained in the Guts and belly which are not gotten into the cavity, do not only produce the Cholick, but if they be ſo incloſed, that for want of Paſſage they ſwell the belly, they may produce a kind of Tympany, more eaſily then when the wind breaks into the belly, as we have found in thoſe whom we took to have the Tympany, and had no wind in the cavity of the belly, after they were dead, nor did the belly aſſwage. But the Guts, eſpecially the thin, were ſo ſtretched with wind, that when they were forth, we could not get them in again, and we wondered how they could be contained in the belly, before it was opened. And in one, we found them made ſo thin by ſtretching, that they were not only ſhining and clear like a blown bladder, but when they were broken, they ſent the Excrements violently forth with the wind. And the Cauſe of this Tympany, is the ſame with the other, that is wind and gathering of the guts or great Obſtruction: as we ſhewed, and hence it is that in this kind of Tympany, they neither break wind, nor go to ſtool for a long time.

Wind contained in the ſtomack, is the cauſe of the ſwelling of the ſtomach, wind in the Guts, is cauſe of the Cholick and Tumor thereof.

When wind is gathered in the Stomach, it makes it ſwell viſibly, and this is the Inflation of the ſtomach mentioned, whoſe cauſe we ſhewed in the Diſeaſes in the Stomach; and when wind lying in the turning of the Guts, cauſeth little Tumors in thoſe parts: we have ſhewed the Cauſe thereof in the Cholick.

Wind under all the Skin, is the cauſe of a general Tumor.

When wind gets into other parts and ſpaces of the body, either alone or with water, it cauſeth Tumors. As when it is every where under the skin, it cauſeth the general Swelling of the body, which comes ſuddenly and lifts the skin from the body, as they who make a hole through the skin, and blow therein that they may the more eaſily take the Feathers off from the Quils. And though this Swelling comes ſeldom, and it is difficult to be, yet ſomtimes Nature, either by the abundance of wind diſperſed in the body, eſpecially if there be water joyned therewith, being offended, violently throws it to the extream parts under the skin. And this may be when Nature ſtirred up by Poyſon taken in or by the ſting of a venemous beaſt, or by poyſonous Humors labours to expel the ſame.

Alſo

Alſo this general Tumor of the whol body with difficulty of breathing, comming from the ſtretching of the Muſcles between the Ribbs or the like, may be as I have ſhewed, by the ſuppreſſion of Sweat, which comes by violent exerciſe, through the Coldneſs and Moiſtneſs of the Air: and this after purging, is eaſier cured with ſweating.

Wind creeping under certain places of the skin, is the cauſe of the Tumors called Phyſodes, and windy Oedema.

Alſo in certain parts there are peculiar Tumors from wind under the skin, and if they be ſimple they are called *Phyſodes*, and windy bliſters: but if the wind be joyned with a crude and ſerous Humor, they are called *Oedemata* or windy Tumors: which as they may come of their own accord from an internal Cauſe in divers parts of the body, ſo may they come from without, as when the Hair is pull'd hard, we find the skin blown up with wind which got in upon the Pulling of it up; and we ſee the Hands and Feet ſwell with cold which bindeth the skin, liſts it up, and ſtraineth out the thin Moiſture.

Wind under the ſcarſe skin is the cauſe of Phlyctænæ or wind Bliſters, wind between the Muſcles, is the cauſ of the Cramp.

If wind be under the ſcarſe skin, and bliſter it, the Bliſters called *Phlyctænæ*, do come from thence, ſuch as are mixed with wind and water.

If wind be between the Muſcles, it cauſeth Tumor and Cramp of which we ſpake.

If it get under any external Membranes, or the Perioſtium which is the skin upon the bone, and cauſe a Tumor, becauſe it is with pain, we ſpake of it in the Cauſes of windy pains, when it gets into other internal cavities, as of the Breaſt, Head, Womb, becauſe it produceth other accidents beſides manifeſt Tumors, of which we only here ſpake, we refer you to them.

Wind under the Skin and Membranes of the Neck, the cauſe of Bronchocele.

That wind getting under the skin and and Membranes under it in the fore part of the Neck, cauſeth the Tumor called *Broncocele*, appears in that the skin in that part of the Neck, ſeems extended and liſted up, and when it is beaten it ſounds as if the air only were underneath. The Cauſe of which Air there gathered is nothing but looſneſs of the skin plucked up, (when the Membrane which is above the Neck, is more red and thick from the rough Artery, and the Muſcles of the Neck before which lie under it) making a ſpace underneath, into which the Air or Wind got under to avoid vacuity, not only filling it, and making the skin and membrane ſwell, but in by ſtretching, cauſing it to increaſe. Hence it is that we do not only make the wind to be the Cauſe of this Tumor, but the ſeparation of parts which were joyned by ſmall Fibres, which being torn a ſunder or broken, cauſe this Diſeaſe to be called a Rupture, or breaking of the Throat or about it. Albeit ſome think this Tumor comes from Rheum falling from the Head, but this cannot be, becauſe of the not pitting thereof with the Impreſſion of the finger, nor from water: and if theſe two Humors ſhould produce this Diſeaſe, and they ſhould be contained there long, they would produce other putrid Infirmities, which they perceive not. And that ſhortneſs of breath and Hoarſneſs comes not from any humor, but from a ſtretching by which the free motion of the Throat is hindered. Nor do we deny that Defluctions may be carried thither in this Diſeaſe, as well as into other ſpaces, and that other excrements may be there collected; but that theſe will not cauſe this Tumor, in regard when they are diſcuſſed, the Tumor remaineth. But the chief cauſe of this ſeparation of the Membranes, is violent ſtraining in Child-birth, when the breath is held in the time of Delivery, or when they blow ſtrongly with the Mouth, and this appears by the Swelling of the jugular Veins of the Neck, from which the Membranes are divided, and when the Spirits are driven into the Neck by the Veins and Arteries, the wind carried thither, alſo may cauſe this Diviſion and Separation of the Membranes.

Any part falling from its Seat, outwards cauſeth the Hernious or Rupture, Tumors called *Cele*, and this is either a Gut or the Cawle, which cauſe this when they fall from the cavity of the Peritonæum, under the skin or into the Codd. The Cauſe of the falling out whereof, ſhall be mentioned with thoſe of the Womb and Anus.

The Cure.

We ſhall firſt diſtinguiſh the Cure of divers ſorts of ſwellings in reſpect of the cauſes, nemely, as they come from Flegm, which we call crude Juyce, or water or wind; or from the nouriſhing Juyce, either mixed with ſome or more of them; or as they come from Milk, Blood or Seed. As for the Tumors that come from ſome part fallen called *Cælæ*, becauſe they come from another place: we ſhall ſpeak of them in things caſt off, and in things caſt forth.

The Cure of Tumors that comes from crude Juyce, if firſt in regard of the Swelling of the whol Body, and Leucophlegmacy from thence: and then in regard of particular Parts, as Oedema.

The Cure of Leucophlegmacy, or white Swelling of the whol Body.

If Leucophlegmacy be ſimple, although the whol Body be ſwollen, and in Aſcites the Belly and the Feet are only ſwollen, yet is it eaſier cured then the Aſcites, becauſe the hurt of the bowels is leſs, and the weakneſs which gets this crude blood may be amended: with more difficulty, if it tend to an Aſcites, and not at all, if it be joyned with it. In old men it is hardly cured, although it be long lingered.

You muſt begin the Cure as in a Cachexy, becauſe it is the Original of it, and they depend upon the ſame cauſe long continuing: you muſt correct the Diſtemper and Weakneſs of the Liver and Spleen, by removing firſt the cauſe, if it come from too great a Flux of the Terms, Pills, or other bleeding, then you muſt ſtrengthen them, if there be Obſtruction you muſt open it with moderate Aperitives and Cleanſers, leaſt they provoke the Flux if there be any, and with ſtronger Apertives if there be no Flux, which may alſo move the Terms if they be ſtopped, all both by inward and outward means. Alwaies evacuate the crude watery Humors which are in the Stomach, Guts, and Veins, or the Habit of the body, by Purges, Sweats and Urin.

Alſo by Topical external Medicines to the parts moſt ſwelling, which may take away the Matter by diſcuſſing and conſuming it. But in a Leucophlegmacy, where there is alſo much Whey, or that which is with an Aſcites, there muſt be the ſame Cure with Aſcites, by drawing out and and conſuming the water, with Remedies according to the cauſe. The Remedies uſed for Anaſarca, or a Dropſie ſo called are as followeth.

You muſt purge the Stomach from crudities, and open Obſtructions with cleanſers, ſuch as were preſcribed in a cachexy, with things that purge water, if it be ſerous or watery.

As, Take *of the four or five opening Roots each one ounce, of Orris and Elicampane, each half an ounce, of Aſarum two drams, of the Barks of Cappar roots, Aſh, and Tamarisk barks each ſix drams, of Liquoriſh one ounce and an half, Succory with the Root, of Endive, Groundpine, Maiden-hair, Maudlin, Fumitory, Hops, each one handful, of Wormwood, and Thyme each half an handful, of Elder flowers, Broom, and Tamarisk flowers each one pugil, of Raiſons ſtoned ten pairs, of Aniſe, and Fennel ſeed, each one dram and an half, of Endive, and Dodder ſeed each one dram, of the four cold great Seeds two drams, of Polypody, one ounce and an half, of Senna two ounces, of Epithymum, half an ounce.* make a Decoction, and in the ſtraining infuſe *three drams of the Troches of Agarick, of Rhubarb half an ounce,* ſtrain it and add *two ounces of Syrup of Roſes ſolutive, or of juyce of Roſes, one ounce, of Sugar* as much as wil make an Apozeme *for five or ſix doſes, make it ſweet with Cinnamon, Spike, Schœnanth, and Sanders,* and if you muſt uſe more, encreaſe *the quantity of Sugar, and make a Syrup half or fully boi-*

To this in a watery Leucophlegmacy, you may add *Soldanella, or pot Mercury, or Carthamus seed, &c.*

A Wine: Take *of Succory roots one ounce and an half, of Fennel and Orris roots, each one ounce, of Elicampane half an ounce, of Asarum two drams, of Tamarisk bark one ounce, of Wormwood, Groundpine, Agrimony, Thyme, and Epithimum, each two drams, of the Topps of the lesser Centaury, Cordial flowers, Smallage seed, or Parsley, and Fennel seed, each one dram, of Senna one ounce and an half:* to these you may add *Soldanella one dram, Agarick in Troches, and Rhubarb, each three drams, of Spikenard one scruple:* infuse them in as much Wine as is sufficient, for five doses.

An ordinary Drink. Take *of Rhubarb four scruples, of Troches, of Agarick, one dram, of Spikenard six grains:* steep them in white Wine, and after pour *Wormwood, or Centaury,* water thereon, and strain them adding *Syrup of Roses solutive, or some Physical Decoction, of pot Mercury and Soldanella,* if there be more water: make a Potion.

These Pills Electuaries and Lozenges which we mentioned in a Cachexy, are good here, adding things that purge Water.

Glysters which cleanse and expel wind, are here useful As, Take *of the Emollient Herbs, three handfuls, Mercury or Beets, Penny-royal, Calaminths, each one handful, of Chamomil, Elder, and the lesser Centaury flowers, each one pugil, of Orris, Elicampane, and Asarum roots, each one ounce, of Fennel, Caraway and Cummin seed each two drams:* make *a Decoction in water with Barley, or Pease, and dissolve benedicta Laxativa, or Hiera, half an ounce, of Oyl of Rue, and Dill, each one ounce and an half with a little Salt,* make *a Glyster.*

You may ad the Decoction, *of Wormwood, Marjoram, Chamæpyts, or Groundpine, Rosemary flowers, Stœchas, Lavender, and Broom flowers, also Agarick, with Brine, Urine, or Led, and other Laxatives and Oyls.*

An abstergent Glyster not so strong: Take *of the Urine of a Boy one pint,* to which add *Lye, Oyl of Chamomil, or Lilly two ounces,* make *a Glyster.*

Vomiting is good to cleanse the Stomach, where the beginning of Crudity is; this is done by things mentioned in Diseases of the Stomach.

Bleeding may be in the Feet, to provoke the Terms, if they be wanting. And they who are used to bleed and are full of crude Blood, may loose a little, because some crudity is there by evacuated, as appears when it is setled, at least it can do no hurt, if it cool not the bowels too much.

Sweating because it consumeth much of the Humor, both out of the Habit of the Body and the Veins, is good, because thereby the tumor decreaseth, and must be every day if they may be endured with Exercise, and Rubbing, and these alone do discuss the Matter.

Or they are provoked with *Guaicum* and *Sassaphras* boiled, or with other Softners that are not violent.

Or with this Decoction: Take *of Milium seeds peel'd, two ounces, of Spring-water two pints:* boil them to *four or five ounces* to the straining add as much *white wine,* let him drink it hot, it wonderfully provokes Sweat.

Syrup of St. Ambrose made after the like manner, doth the same thing, and it is pleasant to give to Children in the Dropsie.

Another Sweat: Take *Treacle one ounce and an half, of Calamus Aromaticus, a quarter of a pound:* boil them well stopped in a measure and an half *of red wine* till the third part be consumed: let him take a Draught every Night at Bed-time hot as much in the morning, to sweat.

Some drink *Treacle-water.*

The Rob or Juyce boiled thick *of Elder, or Dwarfe-elder, dissolved with convenient water, with the Decoction of Milium, or Flower de-luce-water, or of Carduus benedictus,* may also be taken.

Attractives to strengthen the Bowels, take away Obstructions, and provoke Urin, to take away Hardness if there be any, as in the Ascites are also good, as we shewed in a cachexy, where you may take your choice, of Decoctions, Syrups, Juyces, Wines, stilled Waters, Oyls, Lyes, Urins, Natural waters. As drinking of Vitriol waters, with good caution, and to be forbidden, if the Stomach or Liver be weak or cold, also conserves, Pouders, Potions, Electuaries, Pills, which you may there chuse.

To which these may be added, good for to strengthen and help the Concoction of the Stomach, and to avoid crudity.

A good Decoction: Take *of opening Roots one ounce and an half, of Drop-wort one ounce, of Agrimony, Maiden hair, Germander, Groundpine, Dodder, Marjoram, each one handful, of Hyssop half a handful, of Anise seed, and Fennel seed, each one dram, of Elder flowers one pugil:* make *a Decoction with a little wine and water,* adding *a little Cinnamon, Spike, Schænanth, and Sugar* for an Apozeme; For doses, if you will purge, add a little *Carthamus and Polypody.*

You may make wine of the Infusion of these things.

Or this Decoction experienced: Take *of Juniper-berries half a pound, of Elicampane, and Briony roots, each half an ounce, of Thyme, Marjoram, Rosemary, Topps of Rue, Mugwort, each half an handful:* boil them *in four pints of water, sweeten,* and perfume it, let him drink it some times.

Another: Take *of Rhapontick two ounces, of Wormwood, Horehound, Ceterach, each one handful:* boil them wine and water, to the consuming of the third part.

Or boil thus the *Roots of Acorus, Penny-royal, and Ivy.*

The Syrup of Wormwood is good against Crudity, and *of Bettony, made of its Juyce with Sugar.*

Also *wormwood, and Bettony-water mixed with other Openers, as with Enula, Marjoram, Mints boiled &c,*

Also mix Pouders for the Stomach with Openers, as *Diacalaminth, Diagalanga, Aromaticum rosatum,* and *Cordials* when they are weak, made of the Gems.

Also Pouders after Meat for Concoction.

Also *conserve and candied Bettony, Acorus, Ginger, Marjoram, Stœchas, Rosemary, Citron barks, of both Bugloss, for* concoction and strength.

Or this: Take *of the Conserve of Succory flowers, of Smallage roots, each one ounce, of the Conserve of Orris roots, of Marjoram, of Bettony and Bugloss flowers, each half an ounce, of Gum Lack two scruples, Coral half a dram, of Cinnamon one dram, of Galangal, and Fennel seed, each half a dram of Spikenard half a scruple, of the ashes of Hens guts, and Gizard skins one scruple, with the Syrup of the five Roots, or the like:* make an Electuary: Let him drink water after it, made of proper things, and the Liver of a Wolf added, will make it better.

Or: Take *the aforesaid Conserves adding of the species of Triasantalon, or Diarrhodon, half a dram, of Diagalanga and Dialacca, each one scruple, of the ashes of Hens Gizard, skins and Guts, half a scruple:* mix them for an Electuary, it will be better to mix any cachectick Pouder mentioned in Discolouration.

This Electuary is good: Take *of Orris roots two drams, of bitter Almonds one ounce and an half, of Anise, and Fennel seeds each one dram, of Sugar the weight of all.*

These Pills are good, and also provoke the Terms, and Urin, and mollifie Tumors.

Take *of Rhubarb one dram and an half, of Gentian, and Birthwort roots, Madder, bitter Costus, each one dram, of Smallage seed, Ammeos, Juniper-berries, each half a dram, of Schænanth, Spike, each one scruple, of Gum Lack one dram, and an half, Mastich half a dram, with Juyce of Orris, or Agrimony:* make Pills, or *with bitter Almonds, Troches, Pills of Gentian* better then the other. Take *of the extract of Gentian one dram, of Centaury the less, and Carduus each half a dram, of Rue, and Wormwood each one scruple, of the Pouder of the lesser Centaury, four scruples, of the Troches of Myrrh, one dram and an half, of the Troches of Agrimony and Capars, each one dram, of Wormwood half a dram, with the Elixir proprietatis,* make a Mass of Pills, the dose is from *two scruples to a dram* stronger are these.

Take *of Rhubarb, Madder roots, Valeria, Asarum, each one dram, of Savine, Marjoram, Smallage seeds, each half a dram, of Spike half a scruple, twelve Spanish Flies, the small*

wings

winges taken off of Ammoniack dissolved in strong Vinegar, one dram, with the Syrup of the five Roots, make a Mass, give from *half a dram* to two, drinking upon it the Decoction *of Pease and Parsley.*

Or, Take *of the aforesaid Powder with the Gum dissolved, and bitter Almonds blanched, one ounce and an half, of Melon seeds two drams, with syrup of Maudlin, or of Orris:* make an *Electuary, a dram is the dose, drinking after the Decoction of Melons or Pease.*

External Medicines mentioned in the Diseases of the Liver or Spleen are good, Oyntments, and Emplasters, Fomentations and the like, choosing the fittest for the Cause, to which you may add these following fit for the Stomach.

An Epithem for the Liver: Take *of Smallage roots, one ounce and an half, of Asarum half an ounce, of Wormwood one handful, of Bugloss, Borage, and Elder flowers, each one pugil, of Dodder seeds two drams, of Endive, and Sorrel seed, each one dram, of all the Sanders each one dram and an half, of Spike, Cassia Lignea, or Schænanth, each half a dram:* boil them in wine and water to foment the Liver, you may also anoint the Liver with the *cerot of Sanders.*

Anoint the Stomach to expel Crudities thus: Take *of the Oyl of Wormwood, and Mints, each one ounce, Oyl of Mastich, Quinces, and Spike, each half an ounce, of Mastich two drams, of Sanders, and Cypress each one dram, Cloves half a dram, wood Aloes one scruple, Wax* as much as will make an Oyntment.

Or anoint with Nerve-Oyl Compound.

An Emplaster is made of the same *with Powder of Wormwood, Mints, Mastich, with more wax, and Gallia moschata,* or the Emplaster for the Stomach.

For swollen places, to allay them somtimes, apply Discussives, and if water abound, Consumers, and many things mentioned in Ascites, as these.

Sweat is caused by dry Baths or moist, or Stuphes, and so the matter is consumed, and the Swellings, and sooner in this then Ascites, made of the things there mentioned.

If you cover the Body, except the Head, in sand or ashes as in Ascites, it is here better.

Foment the parts with Lye as there mentioned, rowl the parts about somtimes with Rowlers dipped in Lye.

Cataplasmes of Dungs as there mentioned, also baggs applyed to the parts with hot Discutients.

As for Diet, let the Air be convenient, then temperate, not moist, not rather dry.

Let the Meat be of good Juyce and Concoction, seasoned with hot Dryers, good for the Stomach.

They say that the flesh of a Hedg-hog, is good against Leucophlegmacy.

Watchings are thought to do good by drying, but they hurt by weakning.

The Cure of Oedema.

The Tumors called *Oedemata*, which are especially about the Knees and Shoulders, and also about the Feet, and other parts being broad, comming from crude Juyce are difficulty cured, because they are the substance of the flesh increased: therefore they carry them to the Grave often.

The Cure of them is the general Medicines to the whol Body, and particular to the parts.

The general must be according to the cause to hinder crudity, and if it come from the want of concoction in the Stomach, Liver, Spleen, then because there is a Cachexy, which begets particular Tumors, that must be first cured, by good Diet, fit Evacuations by stool and sweat, and you must strengthen the Bowels, and oppose other Diseases, before you meddle with the particular Tumors. But if crude juyce cause an Oedema from the evil Habit of the part, then with respect to the Constitution to get good Blood and cleanse the body, for the better proceeding, the general Cure must preceed the particular.

The particular Cure of Oedema, is in the beginning and in the increase done by things which astringe, and repels by pressing the Juyce, which makes the part bigger, and when it is at the height you must use things that dry and digest it mixed with strengtheners, or drawing Medicines, or if it imposthumate, (as seldom,) such as ripen, and open, and at length heat the Ulcer, as follow.

Fomentations and Baths are used if if be large.

And at the beginning foment with a Spunge, to repel a new spunge is best, because its thought more binding, with Vinegar and Wine, or with strong Vinegar, and ironed water or the like.

After foment with Vinegar and Lye, or salt-water.

Afterwards when the Tumor is big, use salt-water alone or Nitrous Baths.

Or make them of Lye strained from *common Ashes, Vine branches or Oak, Beech, Willow, Fig-tree, or burnt Bones.*

It is stronger *with Allum, Salt, and Vinegar.*

And if you add the Plants, they will digest and strengthen, as *Dane-wort roots, Acorus, Docks, Sage, Rosemary, Marjoram, Bettony, Bayes, Calaminth, Organ, Juniper topps, Rue, Savine, Mug-wort, Lavender, Chamomil, Lupines, Beanes, Jupiner-berries,* or the like hot things that are good for the Joynts.

Anoint after Fomentation in the beginning with this repeller: Take *of Bole half an ounce, Aloes three drams, Acacia, Sanguis Draconis, each two drams, of Cypress roots one dram, of Saffron half a dram, Vinegar one ounce and an half, Oyl of Roses three ounces, Turpentine,* as much as will make an Oyntment, or *Wax for a Cerote.*

Another in the increase of a Tumor: Take *of Quick-brimstone three drams, of Sal Gem. two drams, of Ashes common, or of Plants, one dram, Bean flower two ounces, strong Vinegar one ounce, Oyl of Nutmegs, and Turpentine,* as much as will make an Unguent, you may add also *the Juyce of Coleworts.*

An Emplaster for the whol tumor: Take *of Labdanum one ounce and an half, of Frankincense one ounce, of Storax half an ounce, of Quick-brimstone six drams, of Allum, and Sal Niter each two drams, of Oak moss poudered, Wood, common wood Ashes, each one dram, of Acorus roots, and Lavender, each half a dram, of Saffron one scruple, of Cow Dung dryed, two drams:* mix them poudered, *with Vinegar,* and when they are dryed again, add *Turpentine, the Dregs of the Oyl of Rue, or of Lillies,* and make a Plaster.

The usual Plasters for this are *Diachylon, Ireatum, Ceroneum, Diachalcitcos.*

A digesting Cataplasm: Take *of Lilly, or Marsh mallow roots, and Briony roots, each three ounces, the Roots of wild Cowcumber, two ounces, Dwarfe-elder, and Dock roots, each one ounce, of Sage, Rue, Tamarisk, or Savine, each one handful:* boil them in equal parts of Rain-water and wine, adding in the Conclusion *Vinegar three ounces:* beat them, and add *Bean, or Orobus meale, two ounces, Lupine meale one ounce, the Ashes mentioned for a Lixivium half an ounce, of dryed Cows dung, six drams, Salt half an ounce, Leaven one ounce and an half, Hogs grease four ounces, Oyl of Chamomil, and Wall flowers, each three ounces:* make a Cataplasm.

You may add to them, *Snails, and the Juyces of Dwarfe-elder, and Docks, instead of the Plants, or Fennel.*

Clay made with Bone ashes, especially Mans bones, with bole and Saffron, Plantane, and Nightshade water, like a Cataplasm, hot applied, is of great force.

Also baggs filled with discussing Pouders, or Pouders sprinkled upon dry Spunges or wet, and so bound to the Tumor.

They are made *of Sage, Rosemary, Bettony, Caraway, Carrot and Fennel seeds &c. with Maiden hair* to hinder the breeding of the Oedema.

If it tend to an Imposthume, you must use such things to bring it to Maturation as are mentioned in curing Imposthumes.

To roule an Oedema well down with Bolsters, is good to hinder its groweth.

Also rubbing doth discuss, and the more if it be done with *Vinegar, and Roses, and Salt.*

To scarifie or burn with an Iron, tis good to abate an Oedema, if it be done in many parts of it: or to applie a Vesicatory *of Cantharides.*

When

The Cure of the Oedema of the Eye-brows

When the Eye-brows are ſwollen with a Tumor, it is cured as the reſt, by general Medicines, if the Body be very moiſt, and by Topick to the place, ſo ordered that they hurt not the Eye, wherefore we uſe thick Oyntments, leaſt they ſhould run into the Eye, or ſticking Plaſters, which firſt repel and then digeſt, or if we will uſe a Fomentation, (we muſt leave out all ſharp, ſour, and ſalt things) and uſe that which is preſcribed in the Weakneſs of the ſight: or anoint the Eye-brows with the Oyntment there.

To which this following may be annexed: Take *of galls, or Cypreſs-nuts, two drams, Cummin ſeed one dram, Aloes, Myrrh, each two drams, Saffron one ſcruple, of Honey* as much as will make an Oyntment or Emplaſter, to be laid upon the Eye-brows, the Eye being ſhut.

Alſo *Feaverfew*, and *Chickweed* beaten with *Barley meale* and applied.

The Cure of Tumors that come from a watery Humor ſhall be ſet down, firſt that which is general, as the dropſie aſcites, then of the particular Tumor of the Feet and in the Groine, which falls into the Codd called *Hydrocele*; then of the Belly, as that of Women like Hydrocele of water, and that againſt the Navel called *Hydromphalon*, and in the Head called *Hydrocephalon*, and the Swelling of the Eye brows: Laſt of all we ſhall treat of the ſmall Puſtles in the Eyes called *Phlyctænæ*.

The Cure of the Dropſie Aſcites.

If the Dropſie Aſcites come from the dividing of the ſubſtance of the Liver or Spleen, by Drineſs, Hardneſs, or Scirrhus, or other Tumor or Ulcer, or total Corruption, or Stroak or Wound of the ſame, it is almoſt incurable; as when it comes from Hurt of the Kidneys, or breaking of the Bladder, or Ureters; or from the breaking of the Meſeraick Veins with the Cawle of the Meſentery, or from Ulceration or Corruption of the ſame, it is incurable. But if it come from too much water, in the Paſſages of the gate and hollow Vein, and ſweating from thence into the Belly, or diſtilling by Anaſtomoſis or opening of the Veſſels, it may be cured, ſo there be not cauſed a weakneſs of the Liver or Reins, or both Ureters be not ſo ſtopped that they cannot be opened, which is ſeldom ſeen. Or if the water in the Belly long contained, have not infected the Bowels and Caule, and Meſentery, as is uſual. Theſe things obſerved, if you know the cauſe, you may better foretell, but if you know it not, or doubt of it, you muſt ſpeak leſs boldly of the Cure. But if the Urine be very red, it is dangerous, if white and crude, there is more Hope.

In the Cure of this, firſt conſider the cauſe, if it come from the weakneſs of the Liver or Spleen, Coldneſs, Stoppage, Hardneſs, Scirrhus or any Tumor thereof, the cure is chiefly as the Cachexy, partly as the Jaundies, which come from the ſame cauſe, and go before the Dropſie,: of which we have ſpoken ſo largely, that we ſhall not need to ſpeak more. As alſo if it come from Heat and Dryneſs of the Bowels, we laid down the cure in Cachexy, which uſeth to go before it. But if it come rather from the weakneſs of the Kidney, or ſtoppage of the Ureters, you may cure it with Remedies mentioned in the Suppreſſion of urine. After this conſider action, let us bend our whole Force to get the water out of the Belly, before it corrupt the Bowels, by purging by Urine, and by Sweat, and if theſe will not do, we muſt uſe outward Applications and Openings. And this muſt be done in the Feet alſo, to take away their Swelling, and that when the water flows out, that which is in the Belly may come in its place: and if the Codds be ſwollen, you muſt apply things that may allay and conſume the Swelling.

But in other cauſes which are hard or impoſſible to be removed, as when the Bowels are broken or cracked, by Heat and Drineſs, we muſt uſe rather cold and moiſt then hot and dry Remedies, which in all other Dropſies are uſed, as we ſhewed in cachexy that comes of the ſame cauſe; Alſo in Hardneſs of the Bowels or Swelling of the ſame, you muſt ſoften them with Medicines there mentioned. theſe are better to prevent a Dropſie then to cure it, in that cauſe, or when the Bowels or Veſſels are hurt or corrupted. In theſe deſparate caſes, notwithſtanding we muſt labour to abate the Symptomes, and take the water of the Feet and Belly, to hinder the ſhortneſs of breathing, and leaſt the water continuing by its ſtinking and hurting the Bowels, ſhould produce worſe accidents, or breaking into the Feet by force, or by opening it ſhould cauſe Inflammation and Gangræn, which cauſeth a miſerable Death: all this is done by the following Remedies.

In this Dropſie, purging is good both to open Obſtructions, and to carry away the water; of which they which are uſed to open Obſtructions, eſpecially in the Bowels, which cauſe a Cachexy and Jaundies, if theſe be with the Dropſie, are beſt: And in other Cauſes they are better then Hydragoga or water Purgers, becauſe they provoke Nature to avoid it, and they are mixed with things proper for the Bowels. For the other that is Hydragoga, muſt violently provoke the expulſive Faculty if there be much water, and therefore they eaſily inflame the body by ſharpneſs and burning, and except warily given, and well prepared, they knaw and burn up the Stomach and Bowels. Therefore uſe theſe as the laſt Remedies when all fail, yet if by chance Nature being moved thereby, may not onely ſend forth the water which is in the Veins, near and far off by the mouths of the Meſeraick Veſſels to the Guts again, which is eaſily done; but alſo that ſhe might purge forth that which is in the belly, by the ſame way it came, as ſhe doth often wonderfully: All theſe are done by theſe following Remedies.

The common Medicines which are good to open the obſtructions of the Liver and Spleen, are mentioned in the Jaundies, and Cachexy and Leucophlegmacy, and theſe may be uſed here in the beginning to purge water, before we come to ſtronger Medicines. As Potions chiefly of Rhubarb, which is thought to be ſuch a Friend to theſe parts, and other Purgers, *alſo ſolutive Electuaries, Catholicon, Diaphænicon, of the Juyce of Roſes*, and eſpecially thoſe made *of Hiera ſimple and compound, ſolutive Syrups of Roſes, Fumitory, Epithymum, Polypody, and Pills of Hiera de tribus, of Rhubarb, Agarick, and Agregative*, the Forms of which may be found elſewhere.

But thoſe Purges which are proper for the Aſcites made of Water-purgers alone mixed, are as follow.

A Decoction to purge Water proper for the Liver and Spleen: Take *of the five opening Roots, two ounces, of Orris, Valerian, and five leaved graſs Roots, each one ounce, of Aſarum, half an ounce, of the bark of Tamarisk, Capars, Elder and Dwarfe-elder, each one ounce and an half, of Succory with the Roots, and Dandelion with the Roots, Endive, Sow-thiſtle, Liver-wort, Agrimony, Germander, Groundpine, Fumitory, of the five Capillars, each one handful, Flowers of Broom, Tamarisk, Elder, and Dwarfe-elder, of the four Cordial flowers, each one pugil, Flowers of the leſſer Centaury, half a pugil, of the four great cold Seeds, half an ounce, of Aniſe, Fennel, and Parſley ſeeds, each two drams, of Dodder ſeed one dram, Ivy-berries three drams, Prunes five pair, Tamarinds one ounce and an half, Raiſons ſtoned two ounces, of Senna, Polypody, and Carthamus ſeeds, each one ounce and an half, Epithymum two drams*: boil them in water with one quart of white Wine, and when it is ſtrained, infuſe *Agarick, Troches, half an ounce, Rhubarb three drams, Spike one ſcruple*, ſtrain them and add as much *Sugar or Honey* as is ſufficient to make an Apozeme, aromatize it *with Cinnamon for four doſes*.

And if you add *one handful of Soldanella, or Sea bind weed, or of pot Mercury, or one dram of prepared Eſula or half a handful of Spurge*, and if you take more, you may leave out *Rhubarb, and Agarick*, ſome add *Smallage roots*. And when it is thus ſtrong, you muſt give the leſs quantity at firſt, that you may know their ſtrength, and this is to be obſerved in other Medicines, alwaies keeping good Order, and uſing Baths after if need be.

Another more ſimple Water-purger: Take *of Soldanella*

two

two ounces, Ivy-berries half an ounce, of Aſarum roots, two drams, Aniſe-ſeeds three drams: boil them in water and wine, or a Decoction of the Simples mentioned for a Draught.

Or thus: Take *Liquoriſh one ounce, Elicampane half an ounce, Roots of Sowbread one ounce, Soldanella one handful, of Spurge or Laurel half an handful, of Raiſons ſtoned two ounces, Ivy-berries three drams, Fennel ſeed two drams*: boil them *in the Broath of grey Peaſe, add to the ſtrained Liquor, Sugar and Honey of Roſes*, as much as is ſufficient, let them boil a little, and add *two ounces of Wine and an half, Cinnamon, Schænanth, or Spike*, let him drink a little, and according to the Operation of that, let the reſt be given after. Medicines ſteeped in Wine or boiled therein, do work ſafer and better, and if a Dropſie can be cured, they will do it, we know this by Experience. Take *of Flower-de-luce roots one ounce and an half, of Succory, and Fennel roots, each one ounce, of Elicampane, or Maſter-wort, half an ounce, the barke of the Roots of Elder, and Dwarfe-elder, each one ounce, Wormwood three drams, of Germander, and Groundpine, each two drams, of Roſemary Topps one pugil, of Flowers of Centaury one dram, Fennel ſeed two drams, Caraway, Coriander, and Parſley ſeed, each one dram, Senna one ounce and an half, Agarick, or Briony roots prepared, or Mechoacan, half an ounce, Rhubarb two drams*, and if you wil have it ſtronger, *Turbith two drams*, ſlice them, and beat them all being dry, and infuſe them in *five or ſix pints of Wine*, and let him drink of it only ſteeped or boiled in a double Veſſel, one Draught, and as that worketh, let the reſt be after proportioned.

Or add to the aforeſaid *Gentian roots, and Birthwort, each half an ounce, Aſarum two drams, the Bark of Bitter-ſweet ſix drams, Thyme one dram, Broom flowers one pugil, Ivy-berries, half an ounce, Smallage ſeed, one dram.*

And to make it purge water more, we ad to theſe wines, *Soldanella, or Sowbread roots, half an ounce*, and if we will have it ſtronger, in want of the *Flowers of Spurge*, we take *the prepared Bark of Spurge roots, or of black Hellebore, from one dram to one dram and an half, or half a dram of Coloquintida:* Theſe given in wine are ſafer, *with Spike, and Schænanth, each half a dram.*

If they be ſteeped in new Wine, or boiled with a little *Wormwood for the ſtomach ſake, Barkes of the Roots of Elder, or Dwarfe-elder, or the inward barke of Elders, or of Bitter-ſweet, or the ſeeds of ſpurge*, they are better.

Stronger are, *the Roots of wild Cowcumber, or Briony in Wine, or ſpurge Leaves alone, or with the ſeeds and flowers.*

Other Potions by Infuſion or Decoction in Wine, with Juyces, are thus made: Take *of Rhubarb, and Soldanella, each one dram, or four ſcruples*, infuſe them in wine, and give it being ſtrained, *with ſyrup of Roſes ſolutive.*

Or, Take *Rhubarb one dram, or four ſcruples, ſprinkle it with the Juyce of Flower-de luce, from half an ounce to ſix drams* or add *the Juyce of Elder roots*, and after ſufficient ſteeping put to it as much *Wormwood-wine* as will ſerve, ſtrain it hard, and give it, or with Syrups.

It is ſtronger if you ſteep *Rhubarb, in the Juyce of Sowbread, one dram and an half, or Juyce of Palmachriſti, half an ounce.*

Or, Take *Agarick one dram, Ginger two ſcruples, Sal Gem. one ſcruple, ſprinkle them with the Juyces aforeſaid, and with wine* ſtrain them, and give it.

A Potion made *of Cock broath* thus, is approved: Take *of Polypody of the Oak, two ounces, of Carthamus ſeeds bruiſed, one ounce, of green Flower-de-luce roots, one ounce and an half:* boil them *in Whey of Goats milk, or old Cock Broath, or ſtuff the Cock* with theſe, give a Draught with *the Pouder, or Orris, and Cinnamon, each one ſcruple*, uſe it often, you may ad more of the former to make it ſtronger.

The Juyce of Flower-de-luce from two drams to ſix, provokes Urine and ſtool, it alone hath often cured a Dropſie, and you may let it ſettle. Becauſe it inflames the jawes, you may give it with Wine, broath or Milk, or with Honey, or Sugar, with other things to make it taſt well, and ſuch as are good for the Liver.

Or you may make a Syrup of it, putting as much Sugar to the Juyce, and ſo keeping it, or boiling it to a body if it muſt be kept long: but then you muſt give a double quantity or more, as you perceive its Operation.

Or, Take *of Rhubarb infuſed in Wormwood-wine, and ſtrained, three drams, of the Juyce or Orris roots four ounces, of Cinnamon water half an ounce, of Sugar four ounces*: boil them *into a ſyrup give it from one ounce to one ounce and an half.*

The Juyce of Sowbread may be given the ſame way, crude or other Juyces, as *of Elder, Dwarfe-elder, Briony, or with the Infuſion of Rhubarb, or Agarick, made into ſyrups, as the Juyce of Flower-de-luce.*

There are *Fæculæ* or Dreggs made of *Briony roots*, both the *Dragons* and *Flower-de-luce*, to be given in this caſe, the Juyce is taken out of the Roots, and ſet in a cold place, till it have a branny ſetling, that which is thick and white, is poured from the Sediment or Setling. This is dried after it hath been ſprinkled with Roſe or Balm-water, and ſtirred often in divers broad Veſſels in the ſhaddow, till it be like Meal, this is to be kept in a dry place.

Or make the Juyce up thus, which is an approved Remedy: Take *of the middle Bark of green Elder, or of Bitter-ſweet which is in the middſt, two handfuls, of green Briony roots one ounce*: beat them well *with Wine and Vinegar, ſtrain out the Juyce*, give it twice or thrice.

The beſt of all is *the Juyce of wild Cowcumber prepared, called Elaterium, which is made of the Pulpy Juyce of them unripe, ſtrained through a ſieve*, to which add after the Decoction of *the parings of the Cowcumbers ſtrained*; Theſe ſtirred together are placed in the Sun or at the fire, covered with a Cloath, and when they have ſtood a while, you muſt pour off the water, and make that which remains into little Balls; It is made ſooner and better, if the Liquor be poured upon a Linnen-cloath, preſſed down in the middle being three times doubled and laid upon the aſhes, and what remains in the cloath be dried into Balls.

Thus it may be made ſooner: Take *the Juyce of the wild Cowcumber*, and boil it with four times as much Sugar to a Syrup or Electuary, mixing other things proper: Of all which you muſt give a little at firſt till you know the force of them.

The Extract of Juyce of ſpurge, made thick, and of Roots of Cuckow-pintles, black Hellebore, Euphorbium are all to be warily given, and the doſe is rather to be found out by Experience then preſcribed here.

The Extract of Eſula or Spurge, will do much in purging water, which is commended by *Ruland* in his Emperial Obſervations, and it may thus be prepared ſafer.

Take *of the leſſer ſpurge four parts, of both the Sow-thiſtles green, red Roſes, and Coriander ſeed prepared, each one part:* boil them with water at a gentle fire, ſkumming them alwaies till no more appears, and after pour it off by inclination, and put in more water, and boil it as before; This water being altogether or this whol Decoction, let it be evaporated, till it comes to the thickneſs of Honey; After pour on as much Spirit of Wine rectified, as will be the breadth of a Finger above it, let it ſtand in a cloſe ſtopt veſſel a while in a warm place, ſtirring it ſometimes, and then draw the Spirit of Wine in *Balneo Mariæ* by Evaporation, keep this Extract, the Doſe is from one ſcruple to half a dram, and more in ſtrong Bodies.

A Conſerve of the Leaves of Spurge, and Laurel, firſt ſteeped in Vinegar, then bruiſed and mixed with a double quantity of Honey, is given with Milk or Whey.

An Electuary of the dried Leaves of the ſame Herbs poudered and boyled with Honey, is given the ſame way.

Or this: Take *of Soldanella, Mezereon, or Widdow-waile ſteept in Vinegar, and dried, and poudered, of Senna three drams, of the Kernels of Carthamus ſeeds two drams, of Turbith three drams, of the Pouder of Orris roots one dram, Maſtick, Lack, each one dram and an half, with ſyrup of Roſes*: make an Electuary.

This is more ſafe; Take *of the Juyce of Flower-de-luce one ounce and an half, Honey one ounce*,: boil them gently, and

add at the end, *the pouder of Soldanella, ſix drams, pouder of Orris one dram, Cinnamon one dram and an half,* make an Electuary, let him begin with two drams.

Another highly commended Electuary: Take *of the juyce of wild Cowcumber, out of the Fruit and Roots, the Juyce of laurel Leaves, of the Juyce of the purple Flower-de-luce roots, of the Juyce of Wormwood, and Agrimony each one ounce and an half* let them ſetle, and pour off the clear top by Inclination and with the thickeſt, mix *of Rhubarb, and Agarick each two drams; of Endive, Succory, and Purſlain ſeeds, Maſtick, Lack, Traganth, Sal Gem. Spikenard each half an ounce; of pure Honey two drams,* ſet them in the Sun or a Furnace, and ſtir them often, till they grow to a thick conſiſtance, give one dram for a doſe.

Like this you may make it more excellent: Take *of the Juyces aforeſaid one ounce and an half, of Vinegar of Roſes one ounce, of the Infuſion of Rhubarb three drams, of Agarick two drams, Sal Gem. one dram, white Wine ſix ounces, Cinnamon half an ounce,* ſteep and ſtrain them, and add *Sugar and Honey of Roſes each four ounces; Pulp of Quinces four ounces, Gum Traganth infuſed in Roſe-water two ounces,* boil them to an Electuary, and add *Maſtick, or the like, or leave out the Pulp, and with half a pound of Honey or Sugar,* boil them to a Syrup.

The uſual Electuary to purge Water, is that *of Mezereon or Widdow-waile made of the Leaves thereof, with Oyl, Honey, Agarick, Manna, Sugar, Quinces, and Whey,* Thus: Take *Agarick half an ounce, Rhubarb three drams, infuſe them in Whey, and ſtrain it, and diſſolve therein ten drams of Manna, of Sugar, Pulp of Quinces, boiled a little with Vinegar, two ounces and an half, Oyl of ſweet Almonds three drams:* boil them to an Electuary, mixing at the end *two drams and an half of Mezereon pondered, or of Laurel, or Eſula firſt infuſed in Vinegar.*

There is another Electuary *of Eſula or ſpurge called Alſiebram* in Arabick, *made of Eſula and Myrobalans, with juyce of Fennel,* by Inſolation dried into a Body, which may be made as that *of Mezereon with Eſula.*

There is alſo an Electuary of *Meſue* called *Diaphyſalidon made of the Leaves of Mezereon ſteeped and prepared with Oyl of Mezereon, Scammony, Turbith, Agarick, Myrobalans, Manna, Caſſia, Tamarinds, Raiſons, Penidyes, Orris, Smallage and Fennel ſeeds, Wormwood, Rhubarb, with the Juyce of Endive, Smallage, Agrimony, Wormwood, Oyl of Jeſamine.*

Benedicta Laxativa which hath *Eſula* in it, or *Hiera Hermaris with Mezereon,* are counted Water-purgers.

Some Water purging Pouders are given *with Wine, Milk, Chicken broath, or Cock broath, or ſome other Decoction, with Sugar, Honey of Roſes, and Cinnamon and the like,* and being often uſed they work better, and if they be unpleaſant they may be made into Pills.

The Pouder *of Soldanella* given often *from a dram and an half, to two drams, and Mechoacan or Briony root poudered in the ſame quantity.*

The Roots of Dwarfe-elder, or Elder, to three drams of Aſarum with new Wine.

The Pouder of the Bark of the Root of wild Cowcumber to one ſcruple given in new Wine, five ſeeds or more of Palma Chriſti *in pouder, alſo the Grana Regia of* Meſue, *from ſeven to ten or twelve,* their ſhells taken off, beaten and given in a rear Egg to avoid Vomiting, or in Figgs or Dates.

Theſe are better if you mix them *with pouder of Rhubarb, Spike, Cinnamon, or Maſtick.*

Or thus; Take *the Leaves of Soldanella one dram and an half, Senna two drams, Rhubarb one ſcruple, Sugar one dram:* make *a Pouder for one doſe.*

Or, Take *Soldanella one dram and an half, Turbith one dram, Rhubarb half a dram, Ginger one ſcruple, Sugar one dram* make a Pouder, give it as the former, and if you put to it a little Eſula prepared it will be ſtronger.

This is excellent. Take *Soldanella half a dram, Pouder of Graſs-hoppers one ſcruple* give it with Broath.

Gum ſagapenum with Myrobalans or Rhubarb is given by ſome, very excellently if it be diſſolved *in Vinegar and given with Aloes and Troches of Alhandal, or Scammony in form of a Pill often.*

Water purging Pills, are made with the Pills *of Rhubarb or Agarick or Agregative, or of Euphorbium, or Sagapenum or the like, with Juyce of Flower-de-luce, or Sowbread, or of Palma Chriſti.*

The Pills of Rhaſis made of Rhubarb purge water, and are theſe: Take *of Rhubarb one dram, and Agarick one dram and two ſcruples, Endive ſeeds one dram:* make them up *with Juyce of Endive, or Agrimony.*

Thus made they are ſafer: Take *of Rhubarb and Agarick each one dram and an half; of Spike half a ſcruple, with Juyce of Flower-de-luce, in which Spurge and Laurel and Euphorbium* have been ſteeped, make them up.

The Pills of Mezereon are in uſe made *of the Leaves of Mezereon five drams, ſteeped three daies in Vinegar, and one ounce of Myrobalans, with Manna, pulp of Tamarinds, and Endive water.*

If you take only *half the quantity of Myrobalans, and two drams of Rhubarb* and make them with the Infuſion of *Traganth* they will be ſafer.

There are uſual Pills alſo *of Elaterium made of three drams of Elaterium, Aloes two drams, Maſtick one dram, with Juyce of Elder or Dwarfe-elder.*

Or, *half a ſcruple of Elaterium with half a dram of Maſtick Pills or two ſcruples, or de Tribus, the Pills of Rhubarb, or Aggregative, or mix the Elaterium with Troches of Rhubarb, or of Lack.*

There are Pills of *Philonius* called *Hydrogogæ made of Laurel ſteeped in Vinegar, Diagredium, Rhubarb, Myrobalans, Orris roots, Coſtus, Wormwood, Aniſe and Fennel ſeeds, wood Aloes, Lack, burnt Braſs, and Juyce of Fennel.*

Clyſters do alſo purge water, by the Meſeraicks, is brought again into the Belly, which they do by cleanſing and ſtirring up Nature, and by opening the Mouths of the Veins, thus made, and they alſo take down the Belly by expelling wind.

A gentle Clyſter is thus made: Take *of Beets, Mercury, Pellitory, Cranes bill, or Dove foot, and Rue each three or four handfuls, Flowers of Elder, Broom, St. Johns-wort, Chamomil, Dill, white Lillies each three pugils or four, Caraway ſeeds half an ounce, Smallage ſeed, or the great or leſs hot ſeeds half an ounce, Senna one ounce and an half, of Carthamus ſeeds one ounce:* boil them *in Water,* and diſſolve *Hiera benedicta, or Lenven half an ounce, Honey one ounce, Oyl of Bayſe one ounce and an half, with a little ſalt,* make a Clyſter.

It will be ſtronger with more Purgers, as *Agarick, or Turbith half an ounce, Aſarum three drams, or with only a dram of Coloquintida,* leaving out the purging Electuaries.

It will purge water ſtrongly by adding *a handful of Soldanella or ſpurge to the Decoction, or one ounce and an half of the Roots of wild Cowcumbers and as much of Sowbread, and Smallage roots.*

Another: Take *the Urine of a ſound, cholerick Man, or Lixivium* which is not too ſtrong, and diſſolve in it *one ounce of ſtale Leaven, and one ounce and an half of Oyl of Rue,* and it will be ſtronger if you add *half an ounce of the Juyce of Flower-de-luce roots,* which may be added alſo to the former.

For other Evacuations, eſpecially Sweats which bring the Water into the Feet and other parts, they are good, but not to be forced too much, for ſo they are hurtful, becauſe the ſick being in Bed and taking hot things is inward and outward in danger of Suffocation for want of Breath, therfore except they come freely, and in the declining of the Diſeaſe: for taking Swelling from the Feet, you muſt not ſweat. But if the Party by inclined thereto and can ſweat ſtanding, uſe ſuch as we ſhewed in Leucophlegmacy, which if they move not, Sweat yet will purge by Urin.

Evacuation by Vomit, becauſe it ſhakes the Belly too much, and increaſeth the ſhortneſs of breathing, it is hurtfull to ſome; yet in ſome if there be a Revulſion made by Vomits from the Meſeraick Veins to the Stomach and Guts, or to take away ſomething that cauſeth the water, if they be eaſie to vomit it may do well; as alſo if then thirſty they drink much water, to vomit it up again, *Rhaſis* adviſeth

viſeth to provoke Sneezing, to ſend the water to the Kidneys.

We can do little good by Blood-letting in a Dropſie, becauſe except there be another Diſeaſe joyned, as an Inflammation, it cannot help the Bowels, and it brings none of the water from the Belly, or Habit of the Body, nor out of the Meſeraicks, nor much of that which is in the branches of the hollow Vein. for we find that in Dropſies they bleed clear, thick and black Blood, by Experience. Yet if the Hæmorrhoid Veins uſe to bleed or do open themſelves, the water in the Meſeraicks may be ſent forth in great quantity thereby.

Water is often taken from the belly by cutting, burning, or pricking it, as alſo from the Codds and Feet.

And that which is done by tapping or pricking of the belly called *Paracenteſis* is the beſt, for by it all the water may be taken out of the belly, ſooner then by any other way. Therefore it is moſt uſual, and ought to be betimes before the water by long continuance deſile the bowels, and the ſtrength decreaſe, becauſe this wound being made only ſlightly through the Skin, Muſcles, and Peritonæum brings no danger as the People ſuppoſe, nor can the Guts be thereby ſo made any wayes hurt, becauſe the Superficies of the Belly being ſtretched with water, is at ſuch a diſtance from them, and they lie, as is proved by diſſection, far ſeparated from the parts divided. Beſides it is impoſſible that the Patient ſhould eſcape, in regard the water can get out no other way by ſtool or urine, it is therefore better in a deſperate Condition, to try this Remedy as the laſt, then to leave the Patient, becauſe except the Greatneſs of the Cauſe do hinder, they may thus ſometimes be cured, or if they die, in regard they could not otherwiſe be cured, the Phyſitian by foretelling this, may keep his credit and his Conſcience clear. And the Patient ſhall get this benefit at leaſt, that when the water is let forth, he ſhal be freed from his great ſhortneſs of Breathing, and other internal Griefs, and ſo die in a more eaſie poſture.

But for the doing this handſomly, you muſt chooſe a place three fingers below the Navel, on the ſide, and there where the Muſcles of the lower Belly are oblique and tranſverſe, and lie upon the fleſh, becauſe you may better make a wound there, then in the middle under the Navel, where the nervous parts are of the Muſcles which make the white line which is Nervous. Therefore with an Inciſion kniſe, or ſome other fit Inſtrument make a wound through the Skin, Muſcles and Peritonæum gently, leaſt you hurt the Guts, and receive the water in a Baſon, which uſually guſheth forth violently.

And you muſt preſently ſhut the Orifice again, leaſt it flow all forth at a time, and ſo take away the ſtrength, ſo that the water may be taken out by Degrees, dayly twice or thrice a little at a time, by cloſing the Orifice without loſs of ſtrength, which muſt in the ſame time be reſtored with proper Remedies. In which we muſt have a ſpecial Care that we commit not an Error, and that we may ſtop the water when we pleaſe; which is done by putting in a hollow top which may ſhut the Orifice, ſo that we may open it and ſhut it as we pleaſe; or if, before we make the Orifice, we draw down the skin, and cut it tranſverſe as far as the Muſcles, and after cut within with an Inciſion kniſe: For then the lower Orifice of the wound made firſt in the skin riſing when the skin is looſe, the inward Orifice will be hid and ſtopped, and when the skin is drawn down again, it will be opened, and ſo we may keep and let out the water as we pleaſe, and prevent its flowing out at other times.

Moreover we muſt conſider when the water flow's forth whether it be clear and without evil Sent, for then it is a good ſign, becauſe we ſuppoſe from thence that the bowels are not yet putrified, but if it ſtink or be bloody, it is to be ſuppoſed evil.

A Puncture made in the Codd, as we ſhall ſhew in Hydrocele, doth not onely give vent and let out the water there, but if it be long kept open, it will take it from the Belly by degrees and by the ſame way that it firſt fell into the Cod; for which Cauſe, if the Puncture be not made in the belly, it may ſafely be made in the Codd: And this is the only way to cure any dropſie curable though it be neglected. Alſo we may take water from under the skin by Scarification. Which being made in the Feet, doth not only evacuate that which is there abouts; but becauſe other water comes alwaies in the room of that which is let out, it fetcheth it ſo from the upper parts and hollow of the Belly, that by long and plentiful Evacuation, it takes it from the Belly alſo, and it ceaſeth to ſwell. And this Scarification being uſual, is not refuſed by the ſick; although it may ſeem ſtrange, becauſe the water flowing may cauſe an Inflammation, and ſomtimes a Gangræn, and this may be thought to be from the Scarification which may be a reproach to the Phyſitian. That he may avoid this, he muſt foretel that this may come from the malignity of the water, when it begins to flow either by Inciſion or of it ſelf. Moreover the Scarification muſt be rightly made, and good Government uſed. And this is done by making it in the fleſhy parts of the Feet about the Ancle, or firſt trying in the Thigh, only cutting the ſcarſe skin which will drop, and then piercing the true skin gently, making Wounds broad and at a diſtance with a large inciſion Kniſe; and let the water that comes away be gently wiped off with a Linnen-cloath, without rubbing, and after let the Inflammation be taken away with white Oyntment and Juyces convenient, as of Nightſhade, Plantane, Henbane, or with the Leaves laid on: And let us chiefly take heed leaſt the Roulers or Bolſters be alwaies wet by changing them continually, or by anointing them with Goats ſuet, or Dears ſuet to keep them from taking water.

Some commend the Scarification of the whol Belly to the Nervous parts of the Muſcles, which cover the ſtraight Muſcles, to draw out water.

Alſo you may let out water by raiſing Bliſters in the feet and breaking them, and by keeping them open. And theſe uſe to come by the force of the water within the skin being ſharp and burning: Otherwiſe they are made by art, by light burning of the skin, by an actual Cautery: By theſe means one in a Dropſie was cured with a warming that burnt his Feet, being in the Bed at that time. Or this may be done by Veſicatories, foretelling alwaies the Danger of Inflammation and Gangræn, and by uſing gentle things, becauſe if you apply very hot things to raiſe Bliſters, you will cauſe Inflammation ſooner then by Scarification.

Moreover Water doth not onely flow by bliſtering the Feet, out of the whol Belly, but we ſometimes find the Navel enlarged with a clear Bladder full of water, by which being opened with no pain, the water hath all come forth with great force. And this way of Cure being ſo eaſie, might be by often applying Cupping-glaſſes to the Navel to raiſe it.

Water alſo may be let out by an Iſſue in the Feet, which would quickly cauſe Inflammation, if made with an actual Cautery; Therefore it is better to uſe a Potential cautery, which opens the skin by Mortification without pain (in the Feet if nothing hinder,) with ſuch Cautions as are before mentioned. And this may be done without Danger in the Cod, but not in the Belly, becauſe it is too thick.

Alſo if the Dropſie come from weakneſs of the Bowels, and fullneſs of Humors, from Obſtructions or Hardneſs, you may uſe altering Medicines ſuch as are mentioned in a Cachexy: And theſe are chief which are ſo compounded, that they dry up water and provoke Urin, as theſe following.

A Decoction. Take *of the five opening Roots, Succory, Flower-de luce each one ounce and an half; of Dandelion, five leaved Graſs, Dropwort, Valerian and Eryngus each one ounce; of Aſarum roots, half an ounce, of inner Bark of Tamariſk, Aſh, Elder, Capar roots each ſix drams; of Endive Agrimony, Horehound, Germander, Groundpine the Capilar Herbs, Burnet, Mouſeare, Wormwood, and Cardnus*

each

us each one handful; of the Flowers of Elder, Broom, Tamarisk, St. Johns-wort, Bugloss, Borage, each one pugil; of the four great cold Seeds half an ounce, of the less cold Seeds three drams, Pease one pugil, of Smallage, Fennel, and Parsley seeds each two drams, of Raisons stoned two ounces, of Liquorish one ounce and an half, make a Decoction in water, and the fourth part wine, with as much Sugar as is sufficient, you may add the Juyce of Flower-de-luce, and a little Cinnamon, Schænanth, Spike, or Cassia Lignea, or Diarrhodon or Trionsantalon, &c.

To these may be added the Roots of white Carduus, Polypody, Fern, Docks, the great Celandine, Ash bark, Misleto of the Oak, Cleavers, Plantane, Devils bit, Hops, Mints, Hyssop, Poly mountane, Bettony, Penny-royal, Organ, Rue, Marjoram.

Another Decoction: Take *of the Roots of Fennel, and Parsley each one ounce, of Rhapontick two drams, of Wormwood Ceterach, Agrimony, each two drams, of the four great cold seeds each one dram; of Schænanth, and Spike each one dram:* boil them in chicken broath, or infuse them in Wine without the cold Seeds.

Rhasis hath a Potion much esteemed, of Wormwood, Dodder, Winter-cherries, Fumitory, the four great cold Seeds, Schænanth, and Spike in Whey.

Of simple Decoctions, that of Lignum vitæ is best, to provoke Urine, also a Decoction of Garlick and Madder with Honey, of the broad Plantane by it self, or with Lentils, as *Dioscorides*, who approves the Decoction of Organ with Figs, and of Pease with Rosemary, and of sweet cane, with Smallage seed.

A pound of Misleto of the Oak sliced in three pints of water boiled to half, is good if morning and evening four ounces be given, for a long time, you may sweeten it with Sugar, and a little Cinnamon.

A Decoction also of Earth-worms with things that provoke Urine, as Smallage roots, Orris, or Asarum, or the Bark of Elder roots, of Danewort, Ivy-berries.

Also Wormwood wine, for weak stomaches made with Sack, provokes Urine wonderfully: Also wine of Horehound and Squils.

Compound wines are made of many of the aforesaid mixed together, as; Take *Roots of Smallage, Fennel, and Flower-de-luce each one ounce and an half; Valerian, Acorus each one ounce; of Master-wort and Gentian, each half an ounce; Asarum and Squils, each two drams; of the Bark of the Root of Elder, or of Danwort, and Sassaphras each one ounce; of dried Wormwood, Horehound, Agrimony, Maiden hair, Germander, Carduus each two drams; the Tops of the lesser Centaury, Broom, and Tamarisk flowers each one dram; of dryed Elder-berries two drams, of Parsley, and Fennel seeds each one dram and an half; of Ameos, and Dill seed each one dram; of Cinnamon two drams, of Spike half a dram:* bruise them *for two or three quarts of wine.*

A Lye made of Bean stalks, or Juniper ashes dried in a Furnace, often strained or long steeped in water, drunk sometimes, hath often done good; And some have been recovered by drinking nothing else, but it hath been smal: Also that is good which is made of Broom ashes: Also that of Ivy, Bitter-sweet, and of Hedg Hyssop, and if wine be used instead of water or mixed therewith, it wil pierce the more; Or if you bind the Ashes aforesaid in a knot of Linnen, and steep it in wine, it will cure, especially if the Ashes are made of Plants not throughly burnt, but dried to ashes in an oven

I did much for one in a Dropsie with this Lye, when his Codds and Yard were swollen. Take *of the Ashes of Vine and Bean stalks, and of Bitter-sweet, and Holly bark, and Juniper, all burnt in an Oven without flame each one handful;* pour a pottle of water thereon, and let it run through, till it grow a Lye, and then boil it with Sugar, and skum it, and when it is cold, give it a relish with one ounce of Cinnamon water, let him drink thereof in the morning, and one hour before or after Supper three or four ounces.

The Chymists like the Salts made from thence better, as of Wormwood, Juniper, Hedg Hyssop, and Dwarfe-elder. If one drink their own Urin, or that of a young Boy it will provoke urine. *Dioscorides* commends the urine of a Goat drunk every day with Spikenard, distilled waters penetrat, much, if drunk often four ounces with wine.

Simple waters are of Elder, or Dwarfe-elder roots, and Flowers or Berries, of Orris roots and flowers, and of great Celandine: also of white Lillies, of Raddish, French beans and Dodder: and of other opening and diuretick Herbs, and Roots, among which the water of Sea Fennel is best: some commend a water distilled of Mans dung, and Tobacco water.

The Compound waters are made of the aforesaid, with Juyce of Flower-de luce, some add Cantharides, cinnamon, Spike, and Schænanth.

The Chymist make some stronger waters, which they give by spoonfulls, adding to the aforesaid, as celandine, Elder, &c. Tartar and Vitriol calcined, and a little Spirit of wine, or of Tartar and Vitriol alone with Flints burnt and poudered, they make a water which they after distil and account a secret.

Dioscorides gives the Juyce of Lazerpitium or Benjamin, with Figs, the Juyce of Brooklime with wine, some commend the Juyce of Tobacco, some the Extract of Juniper.

The Oyl of bastard Saffron, and the Oyls of the Salts aforesaid, are mixed with the former by the Chymists.

Those Compositions mentioned in a cachexy from weakness of Bowels, Obstructions and Hardness, are good because they provoke Urine.

Also Juleps, and the milky Potion made of Turpentine.

Also Electuaries, especially that we mentioned in a cachexy, when a Dropsie is feared, as that made of the Juyce of Elder, and Dwarfe-elder and Dialacca, and Diacurcuma.

Of the Compounds we may give the two last best, and of Simples the Pouder of the Tops of the lesser centaury, and of Sea wormwood.

Also Pouder of Dill with Wormwood or Horehound-wine.

Also the Pouder of a Wolfes Liver or Guts, or the Pouder or Ashes of Hens Guts, the Liver of a Cuckow, and Spleen of an Ass, or of a Colt, when the Spleen is affected, the Flesh of an Hedghog, the Body of a Bat with the Head taken off, Earth-worms, all dried and poudered, or burnt to ashes given alone, or with other Pouders in wine, syrup or water convenient, are thought proper for these Bowels distempered.

Spanish Flies also, or Grass-hoppers, or Crickets baked to a Pouder, and one scruple given with water or convenient Syrup or Milk provoketh Urine powerfully, also you may add cherry-tree, or Plum-tree Gum, to hinder their ulcerating.

Some commend burnt Brass, and Pouder of Load-stone.

Also the Pills mentioned in a cachexy, are good against the Dropsie that comes from thence. And these following are most powerful to provoke Urine. Take *of Cantharides without the thin wings half a scruple, Mastick six grains, Rhubarb half a dram,* pouder them finely, and make them up with Turpentine, or Fir-tree, Rosin two drams, adding the Infusion of Gum Traganth made in Violet water, and fresh Butter each half a dram; make them up with Sugar candy into Pills, give one dram at the first to try the strength of them.

Also we endeavor to consume water in the Belly and the parts below with outward Applications, such as draw it forth and digest or dry it into a Vapor.

You may make Fomentations and Baths for the belly and swollen Legs, and Codds, of Sea-water, or salted water, or Suphur, nitrous or bituminous Waters, Artificial, or Natural.

Or of a strong Lye, especially for the Feet, by straining water or wine through the ashes of Vines, Oak, Beech Beans, Cole-worts, Bones or the like, with Allum and Salt if you will have it stronger, with which you may wet clout, and lay them upon the Legs.

Or

Or you may make Fomentations and Baths of a Decoction of Wine, Bean water, or the like: chiefly of the roots and Leaves of Dwarfe-elder, alſo of Orris, Nettle, Celandine, Sowbread, the Bark of the Root of an Elm, and Fern, Centaury, Mezereon or Mountain-peper, Rue, Calaminth, Organ red Coleworts, chamomil flowers, Elder and the other Dryers, with Brimſtone, Salt or Allum, ſometimes Scales of Iron, and three drams of the Pouder of Graſs-Hoppers, or cantharides to provoke Urin alſo.

Or make this Fomentation: Take *of common Lye ten pints, Vinegar one pint, Salt or Allum three ounces*: boil them with drying Plants, and foment the parts with a Spunge.

A Stove or dry Bath doth more dry and draw out the humors by ſweat, from the inferior parts, and the more violently, if you quench Flints in the bath to raiſe the fume: ſome have with good ſucceſs uſed Laurel boiled therein.

Alſo a Fume raiſed by Iron, Flints or Marchaſits quenched in Vinegar, or by Vinegar powered upon them, or upon a Mil-ſtone is good, and the rather if Dwarfe-elder be boiled firſt in the Vinegar.

Or jet quenched in Vinegar.

Cover the lower parts of the body with hot Sand, the Sea-ſand is beſt by reaſon of the ſalt which is drying, therefore *Dioſcorides* bid it be done at the Sea ſhore, other ſand will do the ſame with ſalt and aſhes.

This may be done alſo with aſhes alone, which are beſt when made of drying Herbs and Woods.

The ſame may be done in a heap of Corn, Malt, Bran, or trodden Grapes being hot.

Fill baggs with warm Sand, aſhes, and parched Salt, and apply them to the Belly and Feet; to which you may add drying Herbs, and the great or leſs hot Seeds.

In the Dropſie Aſcites, ſweat provoked with Dane-wort as followeth, takes down the Tumor. Take *a good quantity of Dane-wort fried without Water, and not burnt, lay it upon a Quilt or Blanket, upon which let the Patient lie and ſweat while he is able, refreſhing himſelf with Cordials that he may continue the longer in it.*

There are alſo divers Plaſters, Cataplaſms and Oyntments for ſwollen Bellies, and Feet and Codds, when full with water, to conſume it, with things proper for the bowels thus.

Of Simples, Raddiſh roots, or Acorus, Pepper-wort bruiſed raw, or boiled in ſtrong Vinegar, which with Watercreſſes, and Muſtard ſeed, they are ſtronger.

Alſo Onions beaten with Honey and Pepper, and applied, as *Dioſcorides* commends the Lyes of Oyl or Greaſs in an untan'd skin to rub upon the part.

The Root of a wild Cowcumber bruiſed and ſteeped twenty four hours in Vinegar of Squills, with twice as much Honey, is an excellent Medicine if boiled with a little Pouder of cummin.

Goats dung and Cow dung alſo applied to the belly, and Pigeons, and Hens dung alone, or mixed or boiled with the urin of a Boy, or Goat, or with Lye or with Wine, Vinegar or Oxymel ſimple or made of Squills, adding Sulphur, Niter or Salt.

Or, Take *of dryed Goats dung, or Cow dung, the Plaſter of Bay-berries each half a pound; the Aſhes of Snails or ſhell-fiſh half an ounce, of Vinegar and Honey as much as will make a Plaiſter.*

Another more excellent.

Take *of Pigeons dung, and Wine of the beſt each one pound; Vinegar three ounces, of Juyce of Dane-wort and Flower-deluce each two ounces; Honey three ounces, Quick brimſtone one ounce, Salt or Niter half an ounce, of Flower of Beans or Lupines one ounce and an half*: boil them to thickneſs, adding at the end *Bay berries one ounce, Cummin ſeed half an ounce, Water-creſſe ſeed, Cypreſs roots, Elicampane each two drams; of Chamomil and Dill flowers each one pugil; of Turpentine as much as will make a Cataplaſm.*

Another is thus made: Take *of Goats dung or dried Cow dung four ounces, of Frankincenſe, Maſtich, and Myrrh each one ounce; Cypreſs roots and Coſtus each half an ounce; Cummin two drams, Brimſtone, Salt each three drams; as much Honey and Vinegar of Squills as will make a Plaiſter.*

Or, Take *of the aforeſaid Dungs two ounces, of Dove foot Rue, Pellitory, Dwarfe elder each three handfuls, boil them in Urin or Lye with Salt, Water and Wine*; beat them adding *Meal of Lupines, Bay berries each three ounces; Oyl of Rue two ounces, make a Cataplaſm.*

Snails bruiſed and applied are very good, *Dioſcorides* bids you uſe the ſhells alſo, therefore they muſt be dried and poudered, alſo the ſlime of Snails is good if you add as much Goats or Cow dung to the Snails, the Plaiſter wil be better, to which for the Bowels, you may add Maſtich, Spikenard, Schænanth and Aſarum.

Or thus, Take *Bay berries half an ounce, Cummin or Caraway ſeeds two drams, Water creſs ſeeds, Agnus Caſtus and ſtaphſacre each one dram; Orris roots three drams, Aſarum one dram, Maſtick and Myrrh each two drams; Mummy one dram, Spike and Schænanth each half a dram; Brimſtone three drams, burnt Salt two drams, the Aſhes of a Vine or Oak or of Snails, one dram*, make a fine Pouder, ſprinkle it with ſtrong Vinegar, and with ſo much Goat or Cow dung or Snails fleſh, make a Cataplaſm.

If the belly be anointed with ſome Juyces or Plaiſters made of them, water may be drawn forth, the Juyce of ſowbread, Dragons or Cuckow-pintles, wild Cowcumbers, Mezereon, Spurge, Laurel and Soldanella are beſt, then of Dwarfe-elder, Elder, Flower-de-luce, Birth-wort, Aſarum, Mercury, mix them with Bean or Lupine Meal or Orobus, adding ſomtimes Spike, Aſarum, Schænanth, and apply it like a Pultis very large about the Navel, or make them into an Oyntment.

Thus; Take *of the Juyce of wild Cowcumbers three ounces, Juyce of Sowbread or Dragons two ounces, Juyce of Spurge or Laurel one ounce, Juyce of Dwarfe-elder, and of Flower-deluce each one ounce and an half, of Ox gall half an ounce, Oyl of Nuts, Squills and Butter each four ounces*; make a Decoction til the Juyces be partly conſumed, adding afterwards *one dram and an half of the pouder of Scammony, Coloquintida one dram, Euphorbium, two drams, of the Pouder of the Root of Sowbread*, if the Juyce be not in, *three drams, Wax as much as will make an Oyniment.*

If you boil a little of it with Honey, it wil be very ſtrong.

Or you may uſe the following Liquor to the parts ſwollen: Take *of the juyce of wild Cowcumbers one ounce and an half, the juyce of Dwarfe-elder and Flower-de-luce two ounces, the Leaves of Laurel, or Spurge one handful, of Turpentine twelve ounces, Myrrh half an ounce, Frankincenſe, and Maſtick each two drams; Numeg half an ounce, mix them and diſtil them.*

Or anoint with the Oyl following; Take *of Oyl of Nuts or Line ſeed one pound and an half, Wine and Vinegar of ſquils three ounces*, boyl in them *the Fruit or Leaves of wild Cowcumbers, alſo Mezereon or Laurel bruiſed three handfuls, of the Roots of Squills and Euphorbium each half an ounce*: ſtrain them for Uſe.

To theſe you may add Wormwood water to ſtrengthen the Bowels, and if the Liver be hurt, the Juyce of the Roots of comfrey, and boil them with Oxymel, adding Gum Ammoniack diſſolved in Vinegar of Squils, and mix Sanders, Spike, Dialacca, or Diacurcuma, and apply it to the whol Belly.

Other Applications are thus made: Take *of Sowbread roots one dram and an half, the Roots of Aſarum one dram, Birth-worth and Pellitory of Spain each half a dram; of Smallage, Rue, and Muſtard ſeed each two ſcruples, of Spike and Schænanth each half a dram, of Aſhes of Graſs hoppers, and Spaniſh Flies one ſcruple, of Oyl of Wormwood, Bayes or Rue each two ounces, of Oyl of Scorpions one ounce, with Bdellium diſſolved in Vinegar and Wax make a Liniment*; or with Orobus, Lupine, or Bean flower, a Pultis, or leaving out the Oyls mix the pouders and meales with juyce of wild Cowcumbers, Laurel, Sowbread or Dragons, and make an Oyntment or Cataplaſm which with Honey will ſtick better, or a Plaiſter with Pitch and Wax.

Or, Take *burnt Braſs two drams, Allum or Salt half an*

ounce, Orris three drams. Orobus meal one ounce, mix them as the other with Oyl of Squills or Juyces.

The uſual Oyntment to anoint the Belly is that of Artenita or Sowbread is beſt, it is *Meſuas* and is made of Juyce of Sowbread, wild Cowcumbers, Vinegar, Ox gall, Aloes, Scammony, Coloquintida, Turbith, Mezereon, Euphorbium, Sagapenum, Myrrh, Polypody, Chamomil, Pepper, Ginger, Sal Gem. Oyl of Flower-de-luce, Butter and Wax.

There is another Oyntment of Sowbread which is good againſt a hard ſpleen made of the Juyce of Sowbread, Dwarfe-elder, Vinegar, Tamarisk, Polypody, Gum Ammoniack, Bdellium, capar Roots, Spikenard, and Oyl of Flower-de-luce.

Oyntment of Aregon is good in a Dropſie to anoint the Belly, it is made of Dragon Roots, wild cowcumbers, Pellitory, Briony, Laurel, Sage, Savine, Fleabane, Roſemary, Marjoram, wild Time, Rue, Bays, calaminths, Maſtick, Olibanum, Euphorbium, with Ginger, Pepper, Oyl of Musk, Bayſe, Petrolium, Bears greaſe, butter and wax.

The Oyntment called *Agrippa's* of *Nicolas* is uſed for the ſame, it is made of Briony roots, wild Cowcumbers, Squills, Orris, Dwarfe elder Water, caltrop, Oyl and Wax.

Applications to the bladder do provoke urin, which are deſcribed in the ſuppreſſion of Urine, as that Fomentation of the Decoction of Garlick, Juyce of Dove-foot and boys Urine, alſo anointing with the Oyl of Scorpions and the like.

Some fume the Anus with ſuch things as they do the belly and Feet, and anoint it with *Aqua vitæ*, and Oyl of Euphorbium, or caſtorium, and Juyce of Flower-de-luce, adding if they inflame, butter and oyl, cataplaſmes will do the ſame, ſuch as are uſed to the belly, the vertue of which wil come from the *Podex* to the belly.

They report that the ſtone in a water-ſnakes belly which ſhe vomiteth into the water, when ſhe is tyed by a ſtring to her Tail, is of ſuch force to conſume water, that it preſently conſumes the water into which it falls, and if it be laid to the belly, conſumes the water there alſo.

You muſt have regard to the Liver and Spleen, if diſtempered, with ſuch Remedies as are preſcribed in theſe Diſeaſes, eſpecially in a cachexy and Obſtructions.

The Air muſt be dry, which is better then moiſt; Exerciſe, if they can beare it, doth diſcuſs, Frictions or Rubbings do it more, eſpecially if the Hands be anointed with Salt and Oyl, or Oyl and Water, and then if you rub till the skin be red.

Alſo Muſtard ſeed and Urine rub'd upon the belly to make it red and diſcuſs.

Cupping-glaſſes applied to the whol belly are good to diſcuſs.

Watchings although they dry more then ſleep doth, yet becauſe they weaken and are troubleſom to difficult breathers, you muſt not allow them much.

The Diet muſt be moderate, of good Juyce and eaſie concoction, abſtaining from moiſt things, and roaſt is better then boil'd, they muſt abſtain from ſalt, ſpiced and hot things which provoke Thirſt: they may uſe Diureticks, or ſuch as provoke Urine, as Parſley, Fennel, Rocket, and Cole-worts, Livers of Wolves, Foxes, Hens, and Larks are counted proper.

They muſt not forget Sallads which provoke urine and looſen the belly, made of yong Elder budds, and of Dwarfe-elder, firſt boiled a little, with much Oyl and a little Vinegar, and Sugar if they pleaſe.

Let them drink little, for it is hard wholly to forbear, yet when ſome have done it many daies, they have been cured, being their bowels were not hurt. Water drinking, eſpecially much, is hurtful, with a little Vinegar, it will quench the Thirſt better; thin ſharp wine is good to provoke Urine, Vinegar is good ſauce not only for the Spleen, but Liver and to quench Thirſt.

The Cure of ſwollen Feet.

The ſpreading Tumor of the Feet differs from Oedema, it is ſofter and comes of crude and ſerous Juyce, and ſomtimes it is in one Foot, ſomtimes in an other, very large, ſomtimes in a certain place below or about the Ankles, or, as we have obſerved, upon the skin, which if it come after this or that manner without another Diſeaſe continueth long, and if it ceaſe, it returns at certain times, it is harder to be cured in ſome that are accuſtomed to it, and it is hard to prevent from returning, except the body be very well purged from thoſe Excrements and Humidities which Nature conſtantly ſendeth to theſe inferior parts, and the return of them prevented. And this is done by a moderate and ſparing Diet, and often purging, by ſweating, ſomtimes for a week or two together, or for a moneth continually or by Urine, with other particular Evacuations, and altering Medicines, that conſume theſe Humors, and ſuch as ſtrengthen the bowels, the weakneſs of which was the cauſe of them. Theſe kinds of Medicines have been declared in Defluxions, and in the Joynt-gout which come from ſuch watery Humors, and the like, and may be applied to this Diſeaſe.

As for outwards Medicines you muſt at firſt repel thoſe Humors which make the Feet ſwell, applying ſuch things as we ſaid would ſtrike back Oedematous Tumors ſpread abroad; then they are to be dried up and conſumed, with ſuch things as were propounded in the ſame caſe in the Dropſie Aſcites, with Fomentations, Oyntments, and Plaiſters. Roulers do excellently in this, to keep the Humors from returning, if daily with a long Rouler a Hands breadth, beginning at the ſoal of the Foot, you roul to the Knee in the morning before the Feet begin to ſwell, as they do in the day; and ſo let them be till they go to bed, or keep them ſo night and day which may be done with a ſoft Boot, or laced Stockin or other Arts.

The Cure of ſwollen feet after ſickneſs.

Other Tumors that fall into the Feet after ſickneſs by excrementitious Moiſture that falls down, are taken for a good ſign, and therefore neglected: For they either go away of their own accord, or after a little purging or ſweating. But if theſe come from any hurt in the Bowels left by a Diſeaſe, then becauſe it is the beginning of a dropſie, you muſt proceed as we have taught therein.

The Cure of a Hydrocele or Water-rupture.

If Hydrocele be joyned with Aſcites and the Codds are filled with water as the belly, they are both dangerous: for the cure, it muſt be as the Aſcites which muſt chiefly be regarded, for if the belly fall, the Codds will alſo ceaſe ſwelling; And if not, then apply the outward Medicines mentioned in Aſcites, as Fomentations, Fumes, Plaiſters, &c: To the codds, as we ſhewed: let out the water by a Prick, and that which is in the belly will follow.

But if Hydrocele come of it ſelf without any other Diſeaſe, and the codds alone be ſwollen, becauſe it brings no great hinderance it is uſually neglected at the firſt, but it muſt be cured by thoſe Remedies mentioned in Aſcites to let out the water. Among which the cataplaſmes made of Goat and Cow dung, and the fleſh of Snails onely are the beſt, leaving out the things which are preſcribed for the bowels.

Or make this Pultis: Take *Goat or Cow dung one pound, of Snails boiled in Lye and cut ſmall twelve, mix them with the dung, then boil them all with the remainder of the Lye, then add Bean flowers three ounces, Cummin ſeed half an ounce, Muſtard ſeed one dram, Brimſtone one ounce, the Aſhes of Snail ſhells and Cabbage roots and ſtalks burnt, half an ounce:* mix them.

In the mean while foment the part with Lye to which there is added Salt and Brimſtone.

Beſides theſe you may uſe by turns things that conſume water and aſtringe, and ſhut up the Paſſage by which water falls into the Codd, and alſo dry up the water.

Such as this is made of the dung aforeſaid with the third part of Bole and Vinegar or Oxymel.

Or this, Take *Bran one pound, Bean flower four ounces,*

Chim-

Cummin seeds two drams, Galls six drams, Hypocistis or Conserve of Sloes half an ounce, Allum two drams; boil them *in Oxymel to a Pultis.*

If the Tumor yet abate not, you must prick it, which is easily done without great pain in the lowest part of the cod, with an incision Knife thrust into the skin which is stretched out, and so let out the water, and press it forth till all be out, and then keep the wound some time open with a Tent, or with a seton or skein of Silk drawn through by another Orifice.

Besides this, if the Party be so subject to this Tumor that it returns again, you must thus prevent it, by hindering the increase of water in the Belly with good Diet, and such things as consume Water, as we shewed in the weakness of the Stomach; And if there be any fault perceived in the Bowels ordained for Sanguification or making of blood, you must use things mentioned in a Cachexy.

And if we perceive by the return of it again speedily, that this Swelling comes from the falling down of the Peritonæum, you must keep it up with such Remedies as were mentioned in fleshy Ruptures called *Epiplocele* and *Enterocele*; and if they prevail not, you must use a Truss or Ligature to keep it up, first making incision in the Groin, as in other Relaxations and Ruptures. And because this is dangerous for loss of life or one stone, it must not be done but upon great Necessity, especially in a Hydrocele which is less troublesom, and may be cured by a Punctnre.

The Cure of the watery Tumor in the Groin. The watery Tumor in the Groin, in Women being like the Hydrocele in men, is cured the same way, applying things that consume water.

The Cure of Hydromphalus of the Navel. The Cure of the Swelling about the Navel called *Hydromphalus*, is by external Applications and manual Operation.

The Cure of Hydrocephalus. The Hydrocephalus being a tumor of the Head, is hardly cured with outward Applications, because the skin is there so thick, that the matter cannot de digested, but when you have tried the best Medicines mentioned in Oedema and the Dropsie without success; you may easily cure it by cutting or burning, and the safer, because there is no danger of great loss of blood.

The Cure of swolen Eye-lidds. If the Eye-brows be swollen, either they fall by actual Heat, or by Fomentations, (the Eyes being shut) or discussing oyntments mentioned in the watery Oedema.

The Cure of Phlyctænæ. Phlyctænæ or little Bladders full of water either depart of themselves, or by pricking or cutting to let out the water, and then the cut may be cured.

The Cure of Hydroaxa. *Hydroaxa* or water Pustles are little and many, called *Saren* in high Dutch. If these vex by itching, because they argue much salt or cholerick Water, he must be purged, with things mentioned in the Itch, and they must be opened to let out the water, to which the itching calls the Nails, or they must be pricked with a Needle, and afterwards the Scabs are to be cured, as we shewed.

The Cure of Bladders in the Eyes was shewed when we speak of their pains, you must cure all windy Tumors as a Tympany of the belly, or as the puffing up of the whol body is cured, at first. And after it be in the Codd called *Pneumatocele*, or in the Throat called *Bronchocele*, or a *Physodes* you must look to Particulars.

There are three sorts of Tympanies, from divers causes, two are more usual, the first comes from wind onely in the Guts, the other from wind and water in the cavity of the belly; the third is very seldom which comes from wind only shut up in the cavity of the belly: we will declare what is to be done in all three.

The Cure of the Tympany of the Guts. The first kind of Tympany which comes from wind not gathered into the cavity of the Belly, but in the Stomach and Guts, which so stretcheth them, that the belly swelleth, if it come from rouling together of the Guts, or from some old Obstruction, and if the Guts be made exceeding thin thereby, so that they cannot again come to their former condition, or be broken as we have known, with a little force: It is for the most part desparate; but if this stretching or stoppage hath not been so old, so that it seems rather like a Cholick from wind, then a true Tympany, then there is Hope of cure.

And it is thus begun, by opening again the Passages of the Guts, and that speedily and chiefly with Glysters which by softning and pricking do loosen the Belly. and discuss the wind, or by purges such as are mentioned in the cholick, and in the binding of the belly; where we have been so large that we need not repeat them again.

The Cure of the Tympany joyned with ascites. But in the other kind of Tympany, when wind and water in the cavity of the belly, cause it to swell, which is most treated of, because most usual, because the Tympany and Ascites meet being both dangerous the case is worse.

The Cure of this differs not much from that of Ascites, only you must respect the weakness of the Stomach which causeth wind, and whether the wind come from the Stomach, or from water turned into wind, you must regard both

And first you must purge with such Purgers as were mentioned in Cachexy and Leucophlegmacy, for to cleanse the belly and Stomach of Excrements, and then purge water, and wind.

You may use these following,

Take *of Liquorish one ounce and an half, opening Roots each one ounce; Valerian, Orris, and Elicampane each half an ounce; Asarum two drams, Mints, Betony, Horehound, Maiden-hair, Germander each one handful; Cordial flowers, Broom, Rosemary, and Lavender flowers each one pugil; Anise and Fennel seeds each two drams; Parsley, Sesili, Endive, Dodder seed each one dram; Melon seeds two drams, Raisins stoned one ounce, Senna and Carthamus seeds each one ounce and an half; Epithimum three drams, and if you please two drams of Soldanella:* boil them in water, and the third part wine, infuse *Rhubarb, Agarick and Mechoacan each half an ounce; Cinnamon, Ginger, and Sanders each one dram, Spike and Schænanth each half a dram; Sugar* as much as is sufficient for an Apozeme, for three or four doses.

Or make this wine. Take *of Succory roots, and Fennel roots each one ounce, of Orris and Elicampane each half an ounce of Gentian and Valerian each two drams; Wormwood, Mints, Groundpine, Ceterach each one handful; Topps of Centaury and Rosemary each one pugil; Fennel seed half an ounce, Caraway seed two drams, Senna one ounce and an half, Agarick, Rhubarb each half an ounce; Spike, Schenanth each half a dram;* infuse them in a sufficient quantity of wine, for four or five doses.

Also the Clysters mentioned in Anasarca and Ascites, or this for expelling Wind.

Take *Orris and Briony roots each one ounce and an half; Gentian half an ounce, Asarum two drams, Bark of Elder roots one ounce, Rue, Mother-wort, Horehound each one handful; Flowers of Centaury, Chamomil, Dill, Melilot, Elder, Lavender, and Rosemary each one pugil; Juniper and Bayberries six drams, Cummin, Caraway, or Fennel seeds half an ounce, Parsley seed two drams, Fænugreek three drams, Carthamus seeds half an ounce, Agarick three drams, Soldanella or Roots of wild Cowcumbers two drams,* (or leaving out the Purgers, we add a little Coloquintida) boil them in water and the third part wine or weak Lye, and in as much of the strained Liquor as is sufficient, dissolve *two drams of leaven, two ounces of Honey, three ounces of Oyl of Rue, and a little Salt*: make a *Clyster*.

You may leave out the Purgers in the Decoction, and dissolve *Hiera or benedicta Laxativa half an ounce, Juyce of Mer-*

Mercury and Flower-de-luce one ounce and an half.

Here alſo you may uſe altering Medicines which we ſaid were good in Droplies in divers forms, chooſing thoſe that expell wind moſt or adding them.

You may make this Pouder. Take *of Valerian roots one dram, Orrice roots, Germander, Mints, each half a dram, Cummin ſeed prepared in Vinegar, Fennel and Caraway each one dram, the aſhes of the Guts of Hens or Wolves or of Earthworms, half a dram*; make a pouder.

Or this Electuary. Take *of the Conſerve of the roots of Succory and Valerian each one ounce; Conſerve of Marjoram and candid Ginger each half an ounce; Pouder of Diacyminum and Diacurcuma each one dram; of the aſhes of Hens or Wolves guts, half a dram*, with the ſyrup *of the opening roots* make an *Electuary*.

You may apply outwardly things mentioned in Aſcites to the Belly, becauſe they diſcuſs Wind as wel as Water, chooſing thoſe that are moſt proper againſt Wind, or mixing ſuch things.

Emplaſters of Dungs mentioned are the beſt if they have many things in them that expel wind.

The Emplaſter of Bay-berries is excellent, alone or with others, againſt the Aſcites, and expels wind, made as I ſhewed in the weakneſs of the Stomach.

The Diet muſt be the ſame with that of Aſcites, and they muſt avoid all things that breed wind.

The Cure of a ſimple Tympany.

In the third kind of Tympany which comes from wind that gets out of the Stomach and Guts into the Cavity of the Belly and ſwels it, which is ſeldom; there is more danger than in the reſt and is thought the worſt kind of Dropſie, becauſe it comes from the ſame cauſe which the firſt kind of Tympany, a total obſtruction and convolution of the Guts and a thinneſs of the ſame extenuation and ſtretching and alſo becauſe wind can hardly be diſcuſſed out of the Belly. And the Diſeaſe wil be greater, and incurable, if the Stomach be very weak and cauſe theſe winds becauſe new wil breed from thence continually, as alſo if there be a ſolution in the Guts which makes way for wind into the Belly, and cannot be cured.

If this come from Coſtiveneſs of the Belly, it muſt be cured, as is mentioned in the firſt kind of Tympany, if it come from great weakneſs of the ſtomach, you muſt chiefly regard that and the expelling of wind, for which we have writ medicines at large in the weakneſs of the Stomach.

And give Purges of crude humors which are gathered by reaſon of the weakneſs of the Stomach, and are the cauſe of Wind, and expellers of Wind, ſuch were preſcribed in the cure of a weak Stomach.

We may uſe this following Decoction. Take *of Fennel and Parſley roots each one ounce; of Orrice and Elecampane roots each half an ounce: Wormwood two drams, Mints, Marjoram, each one dram; Roſemary, Lavender flowers, each one pugil; Anniſe and Fennel ſeeds each three drams; Caraway ſeed two drams: Carthamus ſeed bruiſed and Senna of each ſix drams*; boyl them in *Water* and *Wine* adding in the end *Rhubarb and Agarick each three drams; Cinnamon one dram, Spike one ſcruple*, diſſolve *Sugar* when it is ſtrained and let it be for divers doſes: or let all theſe be infuſed in *Wine* and let it be ſomtimes taken.

Another Potion. Take *Rhubarb four ſcruples, Spiknard one ſcruple, Agarick two ſcruples, Ginger one ſcruple*, ſteep them in *white Wine* and *Fennel water*, ſtrain it, and add *Diacarthamum and Diaphœnicon one dram.*

The Clyſters mentioned in weakneſs of the Stomach and in the Collick, to expell wind, are good here alſo.

Or this made for the purpoſe, Take *of Rue two handfuls, Chamomel flowers two pugils, Juniper or Bay berries one pugil, Cummin or Caraway ſeed ſix drams, Fennel ſeed half an ounce*, boyl them in *water* and *wine*, diſſolve *Honey, Oyl of Nuts, each two ounces; Oyl of Spike ſix drops*,

Or, Take *ſix ounces of Spaniſh wine, water of Chamomel flowers four ounces.*

Or Take *Rue water diſtilled as much as is fit with half an ounce of the ſpirit of wine* make an Injection.

Or, Take *Juniper berry water, or of Caraway ſeeds, Cummin, Fennel or Aniſe ſeeds*, it is very excellent to expell wind.

To theſe Wines and Waters for Glyſters you may add Juyce of Rue, Oyl of Rue, chamomil, Dillor Lillies, two or three ounces, with Honey.

Or make this of Oyl only: Take *Oyl of Rue four ounces, Oyl of Chamomil, Dill, Lillies each two ounces; Oyl of Spike Caraway or Cummin diſtilled ſix or ſeven drops.*

Altering Medicines to help the firſt concoction, and to hinder breeding of wind, and if bred to diſcuſs it, ſuch as were mentioned in the weakneſs of the Stomach, are here alſo good; of which the chief is Fennel or Aniſe ſeed wine, or of the barks of Fennel roots, broath made with Bay-berries, or with caraway ſeeds, caſtor drunk with wine: among the compound Pouders the fifth and the tenth, and that for after Meat made of Seeds: Lozenges made with Oyl of Aniſe ſeeds and Fennel ſeeds.

That Electuary which is chiefly for wind, and the like there ſet down.

A Pouder for the ſame, *Cummin ſeed* infuſed in wine, and dried again *two drams, Fennel ſeed one dram, Mints and dryed Marjoram each half a dram; Ginger one ſcruple, give one dram for a doſe, and if one ſcruple of Caſtor* be added, it will be excellent.

Or this Electuary: Take *Conſerve of Mints and Marjoram each one ounce; Conſerve of Roſemary, Lavender and candied Ginger each half an ounce; of Aniſe and Fennel ſeeds each one dram; Caraway and Cummin ſeeds each half a dram, or inſtead of the ſeeds, the ſpecies Dianiſi or Diacumini three daams, Cinnamon one dram, with ſyrup of Wormwood* make an Electuary.

You muſt apply things to ſtrengthen the Stomach, and eſpecially to the Belly to expel wind, ſuch as are mentioned in the weakneſs of the Stomach; as the ſimple and compound Oyls, and the Ointment preſcribed againſt the Swelling of the Belly, cataplaſmes of Bread and Seeds, Fomentations of Penny-royal and Organ &c. baggs to expel wind of Galangal and Mints, of Bran and Milium.

To theſe may be added this Ointment.

Take *Oyl of Rue two ounces, Oyl of Lillies, Mints, or Marjoram each one ounce; Juyce of Rue, Fennel and Aqua vitæ each one ounce and an half*; boyl them to the conſumption of the Juyces, and add the Pouder *of Cummin and Bay-berries each two drams; Wax* as much as will make an Ointment. It wil be excellent if you leave out the Pouders, and put in *one ſcruple of the Oyl of Cummin, Caraway or Spike, and better with half a dram of Caſtor diſſolved in Aqua vitæ.*

Make a Cataplaſme of cow or Goats dung, boiled in ſtrong Wine, Urin and Lye, with Pouder of Cummin, caraway, Smallage ſeed, Bay-berries, Bean flowers, and Rue, and Salt and the like.

Or, Take *Rue, Hyſop, Wormwood and Figgs*: boyl them *in Wine or Urin and Vinegar*, beat them adding *Bean flowers and Bay-berries one pugil, and with a little Niter* make a cataplaſm.

It is good to foment the belly with theſe things following boyled in wine, as Orris roots, Elicampane, Rue, Mints, Marjoram, Roſemary, chamomil flowers, Dill, Bay-berries and Juniper berries, the hot Seeds and the like.

Or let the Fume of theſe be ſent to the belly under the cloaths in the Bed

Make a bag for to lay upon the belly of theſe; Take *of Millium ſeeds two pugils, Cummin ſeeds and Caraway each half a pugil, Bay-berries and Bran each one pugil, Melilot, Chamomil, Dill, Centaury and Roſemary flowers each one pugil; of burnt Salt half a pugil*; fry them in a Pan, ſprinkling wine and Vinegar and make a bag, you may add Rue ſeeds, Nigella, Seſili and Spices with Brimſtone.

Great Cupping-glaſſes that draw forth wind, and are thence called *Ventoſes*, applied to the Navel do powerfully draw wind forth, or apply many about the belly.

There muſt be a good Diet to prevent crudities and wind, for quantity and quality, and the motions of the Body and Mind muſt be ordered, as we ſhewed in the weakneſs of the Stomach.

When

The Cure of the general Swelling of the whol Body.

When the whol Body is ſwelled with wind which is ſeldom, as that called *Anaſarca*, which comes of crude Juyce, in regard it comes of a violent cauſe, or great Diſeaſe, it muſt be regarded; and if the cauſe be taken away, as when it is from poyſon by Antidotes, the Swelling will ceaſe. Or if it be a deadly Diſeaſe, which appears by the Tumor, it ends in Death with the Diſeaſe.

But to remove it if it continue, the cauſe muſt be taken away by Evacuations made by ſweat, and inſenſible Tranſpiration, and the wind expelled, with Treacle and other Opiates; if it come from poyſon, which reſiſt it, and provoke ſweat; alſo you may diſcuſs wind, and take away Swelling with Stoves and hot Fumes, ſuch as were mentioned in the Tympany.

The Cure of Pneumatocele, or windy Rupture.

If Pneumatocele come from wind and water in the Codds, firſt there muſt be a general way to hinder the comming of wind and water, and then outward Medicines muſt be applied, ſuch as were mentioned in the Tympany joyned with Aſcites, and thoſe mentioned in the Water-rupture called *Hydrocele*, for that which conſumes water, doth alſo diſcuſs wind, or if need be, you may open the part with a Lancet, and let out both wind and water.

But in a ſimple windy Rupture, the general Medicines to prevent wind, and diſcuſs, and particulars applied to the Codds, mentioned in the Tympany may be good, and the Emplaſter of Dungs is moſt excellent with half an ounce of Brimſtone.

Or this; Take *Bean flower half a pound, Bay-berry flower three ounces, Cummin ſeeds one ounce, pouder of Rue two drams, Niter one dram, Brimſtone three drams:* boyl them *in ſtrong Wine, with Aqua vitæ one ounce,* make *a Cataplaſm.*

Fomentations, Bags, Fumes, and Oyntments preſcribed in the Tympany are good here to the Codds.

Or this Oyntment; Take *Oyl of Rue three ounces, Oyl of Caſtor and Pepper, each one ounce; Oyl of Spike one ſcruple, Soap ſix drams, Aqua vitæ one ounce and an half, Gentian, Hermodactyls, of each one dram and an half; Pellitory and Sow-bread roots, each one dram; Seeds of Cummin and Staphſagre, each half a dram; pouder of Earth-worms one ſcruple, Turpentine as much as will make an Unguent.*

Or make a Plaiſter thereof with Maſtick and Frankincenſe.

In all the kinds of Ruptures as in this, if that Herb of Geſners called *Numularia* or *Money-wort* green or dried, be ſteept in Spirit of Wine with a little Horſe-tayl, and clouts dipped therein and applied, it is excellent.

Some commend highly Water Bettony, or the Clowns Wound-wort beaten with Roots, and boiled and applyed in this, and in the beginning of other Ruptures, and if uſed as the Former, it will be of more force.

The Cure of the Inflammation of the Codds.

In other Swellings from the Colick or Straines, when both Codds are diſtempered, in regard they quickly go away, there is no other care to be taken but to prevent them hereafter, which is by taking away the cauſe, leaſt it being often repeated, it brings a windy Rupture, therefore at the firſt appearance apply external Medicines, ſuch as we have declared for the cure of a windy Rupture, and hindering wind from comming into the Codds.

The Cure of Bronchocele or Throat rupture.

Bronchocele which is a Swelling of the Throat, if not quickly taken in hand before it comes to the full growth, can ſcarce be cured, but continues all the life with hindrance and Deformity, bringing hoarſneſs and ſhortneſs of wind very dangerous.

The cure although it for the moſt part conſiſts in purging of crude Humors, which are thought to be brought thither from the Head, and taking them from the ſwollen part; yet we, becauſe we ſay it comes from wind which is gotten in by the relaxing or tearing of a Membrane with the skin from the parts underneath, ſuppoſe that the chief care is to be taken in expelling wind, and what moiſture is there gathered, and to reſtore the relaxation and ſeparation; which is hard to be done, as we ſhewed in other Ruptures, beſides aſtringent things which ſhould do this being applied to the Throat, and ſtopping the Paſſages, eſpecially if before there be difficulty of breathing, will hinder breathing. Therefore this is harder to be cured then other Ruptures, in the Codds and Groins, becauſe alſo if we ſhould cut which is the laſt refuge we cannot make ſo good a Ligature.

Nevertheleſs, at the firſt before the Tumor is grown to the extremity, and before there is ſhortneſs of breathing, you may apply ſome aſtringents, ſtronger or weaker, with ſuch things as conſume wind and moiſture.

Therefore we may uſe the Emplaſter for Ruptures that is ordinary, or that of our preſcription with as much of the Emplaſter of Bay-berries, or other Seeds that diſcuſs wind, as cummin and the like.

Or cataplaſmes preſcribed in Hydrocele to aſtringe and diſcuſs, as that of Dung and Bole, and the other of Bran and Galls, for the ſame end and to unite the ſeparation of the membranes, if poſſible you may uſe ſome of thoſe which were preſcribed in Ruptures.

And it is found by Experience, that the Pouder of burnt Allum often given, hath done good by binding and drying, it may be given alone with wine half a dram in weight at a time, or with other diſcuſſing and drying Pouders.

Or thus: Take *of Orris roots and Galangal, each one dram and an half; of Penny-royal, Savory, Rupture-wort, each half a dram; of Fennel and Aniſe ſeeds, each one dram; of Parſley ſeed half a dram, of long Pepper, Spikenard, Nutmeg and Cinnamon, each two drams; Myrrh half a dram, burnt Allum half an ounce, Sugar of Roſes as much as all the reſt, give one dram and an half in Wine.*

When this Tumor is confirmed, we muſt only mind the expelling of wind and water, and there are divers external Medicines in Hydrocele and Pneumatocele preſcribed for the ſame.

If they prevail not, you muſt uſe the ſtrongeſt, as: Take *of Briony roots, and Orris three ounces, of Roots of wild Cowcumbers, and Squills one ounce and an half, ſlice them, and boyl them in Wine, with Bean meal, and Orobus, each two ounces, bitter Almonds, and Peach kernels one ounce and an half, of Cummin ſeeds two drams, Pepper one dram:* beat them *with Oyl of Lillies, and Flower-de-luce three ounces for a Cataplaſm.*

Or this Plaiſter: Take *of Gum Ammoniack, Galbanum, and Bdellium diſſolved in ſtrong Vinegar, each two ounces; of Pulp of Coloquintida two ſcruples, Saffron one ſcruple, Sal Gem: and Allum, each one dram, with Pitch one ounce and an half; Pine or Fir-tree, Roſin two ounces:* diſſolve in the oldeſt oyl of Nuts for an Emplaſter, to theſe add for more ſtrength and ſweetneſs *Oyl of Spike or Caraway half a ſcruple, Oyntments of Oyl of Peppers or Caſtor,* muſt be uſed with the hands firſt dipp'd in *Aqua vitæ,* or make Unguents with the ſame, and the Pouders aforementioned.

Alſo Fomentations mentioned in Hydrocele and Tympany may be uſed here, eſpecially let the tumor be often fomented with a Linnen-clout dipp'd in *Aqua vitæ.*

The cure of the Tumors Phyſodes.

The tumors called *Phyſodes,* or thoſe which come of wind and water, which they call windy Oedemas, if they come of wind alone or thin water, fall again ſpeedily: but if the tumor be much and thick, they laſt longer.

In the cure of theſe, firſt take away the cauſe, if it be internal and feed the Diſtemper, [illegible] hour alſo to hinder wind from comming to the part, [illegible] crudities and Humors, and if they be many, let them [illegible] evacuated, and diſperſed by external Remedies.

The general and particular Medicines for that, are mentioned

tioned in the third kind of Tympany, and in the windy Rupture and in the Throat-rupture.

But if they come from an external cauſe, and the Tumor ariſe from the attraction of the skin, or the Hands or Feet ſwell with cold, then when the cauſe is gone, they alſo vaniſh or they are diſſolved by actual or potential Heat by Fomentations and Oyntments, as other Diſeaſes and Pains comming from cold.

The cure of windy bliſters called Phlyctænæ.

To theſe are referred Phlyctæne or Blyſters of wind, which muſt be cured as watery Blyſters, becauſe when the ſcarſe skin is taken off, there is water underneath.

The cure is divers in tumors that come from the Juyce which nouriſheth the Parts, either abounding or being too thick; either as they are in glandulous Parts, or in fleſhy Parts, as they are harder and ſofter, or as they are in Parts without Fleſh.

The cure of Kernels.

The cure of tumors in Glandulous Parts comming from the nouriſhing juyce, is firſt of general Glanduls growing together in many parts then of particular, as of thoſe in the Throat as Strumaes, and then of thoſe behind the Ears called *Parotides*, and of thoſe under the Arm holes and Groins, called *Bubos*, and laſt, of the Stones thus hardned.

The cure of Scrophula.

The general Kernels in many places together, are either Scrophulas in the Neck to the Chin, called alſo *Strumæ*, and are ſomtimes in other Parts; in regard they are uſual, and hæreditary and common to ſome People, they require the chiefeſt care for cure; and this is not done without Labour and long time; ſomtimes it is incurable, when the Glanduls or Kernels are grown Scirrhous or hard, and will not yeld, or have great Venom as Cancers, then they turn into incurable Ulcers; ſomtimes though cure be done yet is not abſolute, yet though they be taken away, yet they leave behind them great diſturbances, as filthy and unequal Scars, and hinderances of the uſe of ſome parts, where they grew.

For the Cure of theſe, firſt conſider the condition of the whol Body, ſee that it be well cleanſed, by divers Evacuations and Alterations, having uſed Preparations for the ſame. Then give thoſe things that conſume a Scrophulous tumor, and diſcuſs it, or if that cannot be, yet ripen and digeſt it, ſo that it may come to ſuppuration, and either break of it ſelf, or be opened by Inciſion, and then uſe it, for the cure, as a corroding, cancerous Ulcer, into which ſomtimes they are converted. Somtimes when they are grown hard and ſcirrhous, and cannot otherwiſe be taken away, you may cut them or burn them off: as we ſhall ſhew.

Blood-letting if there be Plethory or Fullneſs, is good both to revel and draw from the part, as alſo to derive and ſend the Humors another way, and alſo Scarification.

They uſually purge Flegm in this this Diſeaſe, becauſe they ſuppoſe that it comes from a Defluxion of Rheum, not only when the Scrophula is in the Neck, but when it is in any other part: Firſt they prepare Flegm, then they purge it with Potions, Decoctions, Pills, ſuch as are deſcribed in the Treatiſe of Defluxions and flegmatick Diſeaſes. But we labour to purge the Humors as we find them in the body, either plethorick or cacochymick that is over full, or over foul, with any Humors; and when there is aboundance of evil Humors we purge often, eſpecially when many Scrophulas break forth, becauſe without ſo doing we ſhall never cure them.

If gentle Purges will ſerve, you may find them in former treatiſes; but if ſtrong are required, you muſt uſe thoſe mentioned in the Scab and French pox.

And when you purge, you may give this Syrup between, upon the dayes of reſt, which hath in it, things proper for the cure of Scrophula: Take *of the opening Roots three ounces, of Orris, Acorus, Piony, each one ounce and an half; the Roots of the leſſer Celandine, Crowfoot, Pepper-wort, ſtinking Gladon, each one ounce; the Roots of round Birthwort, Pellitory, and Aſarum, each half an ounce; of Squills prepared two drams, the Leaves of Fig-wort, Burnet, Mugwort, Baum, Bettony, Marjoram, Maiden-hair, each one handful; Flowers of French Lavender, or of ordinary Lavender, Roſemary toppes, and Time, each one pugil; Broom flowers two pugils, Juniper-berries half a pugil, the great and leſſ hot ſeeds ſix drams, Liquoriſh two ounces, Raiſons one ounce, Polypody two ounces, ſenna three ounces, Turbith half an ounce*; make a Decoction when it is ſtrained, add *of Honey or Sugar half a pound*: boyl them to ſuch a conſiſtance that it may keep.

It will be more ſtrong, if inſtead of Turbith you take *two or three drams of Eſula prepared, and infuſed in Oxymel, the Roots of wild Cowcumbers half an ounce.* And ſtronger if you add *of black and white Hellebore, each one dram*; or ſome approve *Laurel or Dragons*, if you ſteep half the quantity of the Ingredients mentioned in Wine, it will work as much and more ſafely.

They uſe to add ſtrong purging things to the things we ſhall mention for alteration, and give them a long time that the evil Humors may be purged, and alſo conſumed in the part affected. Thus, take *of the pouder of white and black Hellebore, each two drams*, with the altering Pouders that ſhall be preſently preſcribed five ounces, mix them, and give one dram for four Weeks every morning, others add Diagredium, or give it with Frankincenſe, Coriander, Spike and other Spices.

They highly commend Euphorbium half a ſcruple, made into Pills, with the Juyce of Flower-de-luce, and given every third day.

Sweating, if there be many Scrophulas diſperſed in the body, which ſhew abundance of Humors, is ſometimes good, eſpecially in flegmatick Bodies, not in hot and colerick, becauſe it would inflame them: In which the Surgeons are deceived, when they go about to cure old external Diſeaſes in colerick Bodies by ſweating.

But when the body is flegmatick and fit for ſweating, after purging you may ſomtimes ſweat by fits, or conſtantly if for many daies together, uſing a ſlender Diet: as we ſhal ſhew in the cure of the French Pox.

We give in Scrophulas things that are drying and digeſting, or that conſume them by a ſecret Propriety. And they are to be continued long, becauſe they remove gently. Therefore theſe Pouders which dry up Moiſtures in the Brain and Stomach before mentioned, eſpecially thoſe that dry moſt of all, as Aſhes, are good in this caſe.

Theſe Pouders following are to be given with wine, or other conveniency faſting for a long time together.

Take *of the pouder of a well dryed ſponge or burnt, ſo that it may be beaten, one dram*, give it faſting ſome Weeks together, you may mix Sugar or ſpices to make it pleaſant.

The Roots of Spurge-wort or ſtinking Gladon, Broom flowers, the Pouder of ſtone amiantus given as the former are alſo commended.

Or this Compound: Take *of the pouder of Spunge dryed as aforeſaid, half an ounce, of the Spunge ſtone, Cuttle-bone, or Pumex ſtone, each two drams, the pouder of Egg-ſhells half a dram, burnt Acorns, Galls, Birthwort, each one dram*; Plantane ſeeds, *and Cinnamon, each half a dram*; *Pepper, Ginger, and Sal Gem. each one ſcruple*; make a Pouder.

Or thus: Take *Spunge one ounce, of Stone Amiantus, and Spunge ſtone, each ſix drams*; *of Burnet and Mugwort, each one dram, of Birthwort, and Pellitory, each a dram and an half*; make a Pouder, you may mix it with ſpices.

To theſe you may add ſtrong purgers, as white and black Hellebore, and Diagredium, as we ſaid, to purge and conſume the Scrophula.

Alſo Sea ſponge made of pouder or aſhes given by it ſelf, or with other Medicines: alſo the pouder of burnt Paper, and filings of ſteel.

The troches of Vipers and Aſhes of Vipers, or the skin of the ſame, are eſteemed conſumers of Scrophulas, and to be mixed with others, alſo the skin of Snakes are as

good

good; therefore you may often give that Treacle which hath the Troches of Vipers. *Dioſcorides* ſaith that Vipers Fleſh eaten is alſo excellent.

Conſerves of Roſes made with Honey or Sugar, or of Broom flowers two drams, is highly commended if often taken. Alſo the Conſerve of Spatula fœtida, or ſtinking Gladon takes away Scrophulas, according to *Pliny*.

Vulnerary Drinks as they cure Wounds and Ulcers, ſo do they cure Scrophulas, of which I have ſhewed divers ſorts, which may be uſed, as alſo this: Take *of Agrimony, Wintergreen, Saracens Conſound, Dropwort, or Burnet, Ceterach, red Coleworts, each one handful; Comfrey roots four ounces, Liquoriſh one ounce and an half:* boyl them in the broath of grey Peaſe, or in the Decoction *of Guaicum in three pottles of Water, and the third part Wine*, till the third be conſumed, make it ſweet if the Patient loveth it ſo, let him drink it often.

There are Wines for the ſame, more proper to be drunk many dayes together; as Wine wherein Pilwort bruiſed hath been long ſteeped or boiled.

Or this: Take *of the Roots of Dropwort, ſtinking Gladon, each one ounce and an half; Roots of five leaved Graſs one ounce, round Birthwort half an ounce, Pilwort, Burnet, Mouſeare, Agrimony, each one handful; Mugwort, Tanſey, red Coleworts, each half an handful; Broom flowers one pugil, Raddiſh ſeed two drams, Nettle ſeed one dram:* boyl them in Wine and Honey, let the ſtrained Liquor be drunk four ounces at a time, this muſt be continued.

Wine wherein a Mole hath been boyled is commended.

The Juyce of Pilewort, or of the Root of black Briony, or of great Penny-wort taken with Wine and Honey, or ſyrups made thereof, are good.

Let him drink for a long time Spaw, Waters of Niter, Allum, or Sulphur.

They commend the Stones of a young Boar to be eaten for to cure the ſame.

Some things cure the ſcrophula in the Neck, if they be held in the Mouth, as the Troches of Diaireos melting in the Mouth, eſpecially when the ſcrophula lies upon the rough Artery.

Alſo if you take ſome of the Pouder of Spunge aforeſaid and mix it with Honey like Troches or Lozenges, and hold them under the Tongue at night, it will cure the ſcrophula in the Neck.

To gargle or waſh the throat often with the Decoction of Orris, Pellitory, and other Plants in Wine, is accounted beneficial.

The Applications upon the tumor, muſt be made of things that digeſt ſtrongly, and conſume this thick juyce, mixed alwaies with Emollients, leaſt when the thin part is diſcuſſed, the thick ſhould grow harder, which if they tend to Maturation, may do much good. But if the ſcrophula comes it ſelf, or by art to open as an Impoſthume, you muſt cure it as an Ulcer. Theſe that digeſt, mollifie and ripen are applied in divers Forms, either by Baths or Fomentations, or by things that ſtick longer on.

We often apply fat and ſlimy things, as: Take *old Oyl of Olive, or of Nuts, Lillies, or Elder, of Flower-de-luce, or Wall flowers, and of bitter Almonds, each two ounces; of Hens Geeſe, or Ducks Greaſe, the Mucilage of Line ſeed, and Fœnugreek, each one ounce and an half; of the Marrow or Suet of a Calfe, Goat, or Dear, one ounce, of Wax* as much as wil make an Oyntment or a Cerot.

You may add ſtronger Oyls, as the Fæces or Dreggs of Olive Oyl, or of Lillies one ounce, or of Oyl of Caſtor, or Euphorbium half an ounce.

Or theſe ſtronger, as of Turpentine, Oyl of Saffron by Decoction, or of wild Cowcumbers, or Oyls where in other proper Plants, or their Juyces have been ſteeped or boiled; as this: Take *the Juyce of Briony, Savine, or Rue, Celandine, each two ounces; Vinegar of Squills three ounces, Aqua vitæ one ounce, Honey two ounces, old Oyl of Lillies and Orris, each two ounces and an half*; boil them in the Conſumption of the Juyces.

You may add divers ſorts of Greaſe to theſe Oyntments, becauſe all mollifie, eſpecially of wild Beaſts, which they ſay digeſt alſo, Hogs and Mans Greaſe is chiefly commended, alſo Hens Greaſe, alſo of ſome Fiſhes, as of Eels, of wild Beaſts, as of a Wolf, Fox, a Badger, a Bear, a Lion, Elephant, Eſtrich, Vultur, Eagle, which as rare ſo are accounted precious.

The Fat which drops from a roaſting Gooſe which was firſt ſtuffed with many Mice, is highly commended.

Butter and Pilewort roots, which *Mathiolus* teacheth to be made thus: Take *the Roots gathered in Autumne, waſhed and bruiſed with freſh Butter*, and put them in a moiſt place fifteen daies in a pot well covered, then melt it gently, and ſtrain it.

You may ſteep or boyl the ſame Roots with Mice in oyl for the ſame.

Theſe are made of Gum: Take *of Gum Ammoniack, Bdellium, or Galbanum, each two ounces; Opopanax one ounce and an half, diſſolve them in ordinary Wine Vinegar, or that of Squills, or Aqua vitæ, or both, with two or three ounces of the Oyls aforeſaid*, make a Liniment, or with Wax and Oyntment.

Or, Take *the aforeſaid Gums diſſolved, and mix them with the Fats and Greaſes aforeſaid.*

To theſe Gums add Serapinum, Elemi, or Labdanum, or Storax, Aloes, Frankincenſe, and Maſtick poudered half an ounce, and ſo make an Oyntment or Cerot; or with wax and Roſin, and Pitch make a Plaiſter.

A Plaiſter of Wax, Roſin, and Pitch with ſome proper Greaſe, is good alſo.

Divers Applications are made of Plants, as this of roots: Take *Roots of black and white Briony four ounces*, if green, bruiſe them, if otherwiſe boyl them in Wine and Vinegar or both, or with Lye and pickle or brine, or Aqua vitæ, make a Cataplaſm, or with Honey, or Oyl or Greaſe.

You may thus prepare Orris, and Raddiſh roots, with Briony for the ſame Uſe.

Or to make them ſtronger do thus: Take *Briony roots four ounces, Orris two ounces, Dragons, Sowbread, each one ounce and an half*; mix them as formerly, and with Roots of wild Cowcumbers it will be ſtronger, or Roots of ſtinking Gladon, or of reſt Harrow, or of Cane one ounce.

There is a good Application made of round headed Roots, as of Onions, Garlick, Lillies, Daffodills, roaſted under the Embers, or boiled and bruiſed, and mixed as the former; and Squills boiled or roaſted are ſtronger.

You mix this and the former Cataplaſmes together.

Alſo of dryed Figs and Raiſons bruiſed, or a little boiled, and mixed with the round headed Cataplaſm, or with that of other Roots, are excellent.

Alſo Applications by *Dioſcorides* by Pileworts, Clowns al heal, Maiden-hair, the leſſer Houſleek, Capar roots, of five leaved Graſs, and Docks beaten or boiled, with the former, and Roots of Marſh-mallows.

The Herb Muſtard, and Leaves of Agnus caſtus, Savine, Pine, Cypreſs, Miſleto, Pitch, or Reeds, with Arſemart, Spurge &c. are alſo commended.

The Miſleto of an Oak, or Pear-tree beaten into an Oyntment, with Oyl of turpentine, doth ſoften and cure all hard Impoſthumes and Scrophulas.

Alſo Dungs of Beaſts, as Ox, Aſs, Boar, Goat, Pigeons dung, and of a wild Goat, Weezle, with Vinegar or Oxymel, or Greaſe, and Oyls.

Or with other Applications of Gums and Plants, or of Onions, Figs and Dung, make a Cataplaſm.

The blood of Weezles is commended by *Dioſcorides*.

The Gall alſo of a Turtle alone, or mixed with other things.

There are divers Pouders uſed, in Cataplaſmes, Oyntments, Plaiſters, or with the former.

The firſt is made of Seeds, as: Take *Line-ſeed, Fœnugreek, Beans, Lupines, Orobus, with Honey and Vinegar, or with Oxymel ſimple, or of Squills.*

Or, Take *one ounce and an half of the Pouder, and mix it*

with

with the fat Oyntment, or that of Gums, or with the Cataplasm of Roots, or Brownbread, and Figs.

Another more discussing is this: Take *of the Meals aforesaid three ounces, Mustard seed, or of Water-cresses two drams, Cummin and Nettle seed, each one dram;* mix them.

Another Pouder is made of Plants more proper: Take *of Cypress nuts half an ounce, of Birthwort, stinking Gladon, each two drams; Agnus Castus leaves, and Wormwood, each one dram; with a Snakes skin:* mix them as the other, or with the Oyntments or Cataplasmes aforesaid.

Another of Roots: Take *Orris, and Briony, each half an ounce; Roots of Sowbread, or wild Cowcumber three drams, Dragons two drams, Birthwort one dram:* mix them as the former, or with Oyls and Grease, or with Wax, Pitch and Rosin, make a Plaister.

Another strong Pouder: Take *Brimstone half an ounce, Sal Gem. or Niter, or the Froath of the Sea, or Pumex stone, each two drams; Mustard seed two drams, Nettle seed one dram, Markasites, or Litharge one dram.*

Another is of the ashes of Juniper, Fig-tree, Cabbage stalks, Wormwood, Agnus Castus, Cray-fish, Snails, Spunge, Ass Hooses, and burnt Weezles, mix these with Oxymel or Vinegar, or with the former Pouders, and Applications.

Another Pouder is of the burnt Clay of an Oven, with Vinegar, mixed with the other.

Unslaked Lime with Honey and Grease, or other Compositions, is good.

Also Rust of Brass, or burnt Vitriol, mixed with the rest.

Dung dryed also to pouder, may be mixed as the rest.

The Emplaster of Diachylon with Orris, is the best composition, and it will be stronger with the Pouders aforesaid, and proper Oyls.

Galen hath a Plaister to take away Scrophulas, of Bdellium, Ammoniacum, Mustard and Nettle seed, Birthwort, Sea Foam, Brimstone, Oyl and Wax.

Oribasius hath another prescribed by *Mesue.*

The burning Oyl is excellent to take away Scrophulas without pain, and Fistulaes, and other Excrescenses thus made: Take *Oyl of Bricks, Mastick, Gum Arabick, Turpentine, each three drams;* pouder them, and with a Glass still draw an Oyl, mix it with Ashes of Ivy, and by a retort in Ashes or Sand, draw an Oyl,

Stupefactives or Narcoticks do dissolve, as we shewed, used externally, and are good here, as Mandraks, Henbane, Poppy bruised or boiled, or with Meals, with other Pouders and Liquors, make a Cataplasm.

The Juyce of them alone is good.

Also the distilled Water thereof, as; Take *Henbane, Hemlock, Celandine, Savine, each two handfuls; Spurge half a handful, Raddish roots three ounces, Dragons one ounce, Onions, and Garlick, each two ounces; Mustard seed half an ounce, Salt one ounce;* draw a Water.

This Emplaster of Opium is of great force: Take *of Opium one dram, Scammony two drams, Myrrh one dram, Saffron one scruple:* mix them with Honey.

Or this Oyntment: Take *of Gum Ammoniack, or Galbanum one ounce, dissolve them in Aqua vitæ, which is also narcotick, with Opium one dram, Henbane seeds two drams, Hens or Pigeons dung dryed half an ounce, Grease or Oyl,* as much as will make an Oyntment, or with Wax make a Cerot.

The Oyl of wild Cowcumber stufft into the Nose, is held good.

Roots also of Plantane and Sorrel hang'd about the Neck.

Also Fomentations with Spunges, prepare well for other Applications.

They are made of the Plants aforesaid, of which Cataplasmes are made, in Wine, Vinegar and Honey, Urin, Lye, Brine, or Smiths Forge water.

Or with other Herbs aforesaid, make this: Take *the two Roots of the first Cataplasm mentioned, or more of the second, add of the round Roots three or four, Figs twelve, of the Herbs mentioned three or four handfuls, Mustard seed two drams, Brimstone half an ounce, Salt two drams:* boyl them as aforesaid for a Fomentation, if you rub the tumor till it be red, it helpes to discuss, if done before other Applications.

Somtimes we cut away those that cannot otherwaies be cured: we first open the skin till it lyeth bare, and then we cut it out by the Roots; in doing of which, you must take heed of hurting a Nerve or other Vessel. For which cause when the Scrophula is under the Chin, and deep, it is dangerous; but if it be there, or in any part else, outwardly hanging forth, it is safer, provided that you cut not the kernels which are hardned between the Vessels, especially those in the Joynts, or a Nerve or Tendon, which will cause Contraction of the part.

We have often taken them off with a potential Cautery, which maketh an Eschar in the skin without pain, or made them better ripen with other Medicines thereby.

It is difficult to use potential or actual Cauteries that burn, because of Inflammation, but if the place be not dangerous, it may be done.

Some think that they are taken away, or kept from growing, if pricked with the finne of a thornback.

It is thought that some Kings have the Gift from God to cure them by touching, especially they of *France*, to whom they come at a set time in multitudes, also that the Kings of *England* have the same.

Some think that the seventh Son that comes in order without a Sister between hath the same Gift. I had a friend one *Picto* in *France* that studied Physick, who told me that when he was a Child, he touched many publickly in the Church, using many superstitious Ceremonies.

The cure of Struma.

Struma, is either simple or compound, either in the throat or hanging therein: if it be hæreditary to the Countrey, and grown great and hard, is incurable, and not to be broken, but must be all the life, except it be cut off at the first: if it be not hæreditary, or belong to the Soyle or Country, you may attempt it, and after purging use Applications: you need not purge so often, as when there are many Scrophulas, except other Causes require it.

But you must mix those things which consume it, by which we have found that they have ceased growing, and vanished, being not confirmed. You may give things mentioned for Scrophulas, especially Pouders of Spunge, Amiantus stone, stinking Gladon, Broom flowers, and the Compound Pouders mentioned, and Conserves for vulnerary Drinks they will be needless, because it seldome ulcerates.

As for outward Applications, they must be stronger then those for a Scrophula, because a Struma is more difficult to be cured, and they must stick faster, as Emplasters of Gums or Cataplasmes of Roots, and Roundheads, and other Herbs, or of Dungs, with the stronger Pouders, as of Ashes and Lime, either by themselves, as mentioned, or with Vinegar, or other strong Liquor.

We take off Strumas by Incision, if they be confirmed, and be unsomely, and hinder breathing, as we do scrophulas, and it is safe when they hang out; but it is dangerons, when they are so rooted into the Vessels that they cannot be taken off without hurting them; and then it is better to let them alone, then to endanger the Patient, and dishonour your self.

It may be done also with a Cautery, as a scrophula.

I leave it to the Judgement of those who have seen it, whether the great Struma may be cured by a touch or not.

The cure of a Parotis, which is without pain

A cold Parotis is a kernel behind the Ears, hard, without pain. If it be old and scirrhous, it cannot be cured without cutting, but that which is young, and in the increase, or not quite hardned, may be cured better then kernels in other parts, by Discussion or maturation or Imposthumation, or by Ulceration, by which means divers sorts of matter may flow forth, or come forth in a bag, somtimes hard as a Stone.

This

This Cure is done with ſome things uſed in Scrophula's, as firſt by Evacuations of the ſame ſort, to take away plenty of Humors and Excrements, and altering Medicines to hinder the increaſe of thick Humors. And then by giving things that conſume a Scrophula, there mentioned, if it laſt long. And becauſe there is not ſo many Glanduls or Kernels as ſcrophulas, we need not uſe ſo many things.

Of thoſe which were mentioned, theſe are fitteſt, things made of Gums, Plants, Roots, round Roots, Dungs, and Pouders.

And when it tends to Maturation, you muſt mix things that help it, as this Cataplaſm made of Onions, or Lillies, Roots of Marſh-mallows, or Orris, baked under the Embers, and bruiſed with Figs, Meal of Lineſeed, and Fœnugreek, Honey, Oyl, and Greaſe.

Or if it incline to break: Take *four ounces of baked Figs, Leaven one ounce and an half, green Flower-de-luce roots one ounce, Aloes two drams, Niter one dram:* mix them with Oyl and Greaſe.

Or you may ripen this Tumor with things mentioned for Impoſthumes that follow Inflammation, and open it when it is ripe, and then cure it as an Ulcer.

If it be old and ſcirrhous, cut it out, as we ſhewed in Scrophula, or burn it off, taking heed of the great Veſſels.

The Cure of Bubo without pain.

A cold Bubo, that is a ſwollen, hard Kernel without heat in the Groin, or Armpit, is ſomtimes ſcirrhous and incurable, as that of the Plague, which hath continued to my knowledg all their life: ſomtimes it may be diſcuſſed: but it ſeldom comes to an Impoſthume, as that with Inflammation, and if it do, there will be a malignant Ulcer.

This muſt be ordered almoſt like the Parotis behind the Ear, with the like Evacuations firſt, and Alteratives, among which ſome of thoſe which were good to cure Kernels, may be uſed for a Bubo.

Apply ſuch things as are mentioned in Parotis and Scrophula, chooſing thoſe which moſt diſcuſs and ſoften. And if it tend to Maturity, proceed as you did in Parotis and Impoſthumes.

We cannot well uſe Inciſion or Cautery, becauſe they lye too deep.

The Cure of hard and ſcirrhous Stones.

The Stones being ſwollen and hardned without Inflammation, (though Inflammation uſually go before,) if they grow ſcirrhous, they ſo continue, and are troubleſome, chiefly in riding. And if both Stones ſwell, and the ſpermatick Veſſels grow hard, the Man will be unfit to get Children. But if this Tumor be looked to, in time it may be taken away.

In the Cure of this, having firſt uſed general Medicines, you muſt uſe more Digeſtives then Mollifiers in your applications, leaſt Suppuration be too quick, and ſo the ſtones putrifie, and be loſt as hath often been. And you muſt apply things mentioned in the Scrophula, Cataplaſmes, Plaiſters, and Fomentations which work powerfully.

And if it tend to an Impoſthume, you muſt bring it to ſuppuration. As we ſhewed in Impoſthumes open it, and cure it as an Ulcer.

If it will not yeeld to Medicines, but the Stones continue very hard, and painful, you muſt take them off by gelding, as we ſhewed in Sarcocele.

The Cure of Tumors which come of nouriſhing Juyce in fleſhy parts, is as that of Scirrhus, and thoſe in the belly which come from an internal ſcirrhus; and like the Cure of thoſe which contain ſtrange Matter, as Atheroema, Steatoma, Meliceris.

The Cure of Scirrhus.

When Scirrhus is in a fleſhy part, whether it follow Inflammation which is uſual, or grow of it ſelf, which is ſeldom, and is either one, or more together; as in the Belly, ſomtimes there is a ſcirrhus in the fleſh, or made of Glanduls or Kernels, when they grow hard and confirmed without ſenſe of pain, which can neither be ſoftned, diſuſſed or maturated, or made ripe, but if it be not grown to the height, but it is yet ſenſible, there is hope of Cure.

This Cure is to be attempted with ſtrong Remedies, becauſe weak will not prevail: firſt, diſpoſing and ordering the Body, by Purgations if needful, or other Evacuations, ſo that if it be foul or ſupply the part with Humors, that may not hinder the work. But in reſpect of the ſcirrhus it ſelf, eſpecially if it come from Inflammation, which dryed up the Juyce, or from ſome thick Juyce which belongs to another part, brought hither: there is no neciſſity to follow the Cuſtome of purging thick Humors: But rather to apply thoſe things that mollifie the ſcirrhus, make it thin, and diſcuſs it, theſe may be either mixed together, or applied ſeverally.

The things preſcribed for a ſcirrhus ſcrophula, may do well here.

When we deſire to ſoften, we uſe Oyls, Fats, and Mucilages or ſlimes, and things made of Gums, and Gum drops, there mentioned.

Or this Cataplaſm following: Take *Althæa or Marſh-mallow roots, and Lillies, each two ounces; Orris roots one ounce, the four mollifying Herbs, Orage, Coleworts, Pellitory of each about three handfuls; Chamomil and Melilot flowers, each one pugil; Line ſeed and Fœnugreek, each one ounce and an half;* boyl them in Water or fat Broath, ſtamp them, and add *of Hens Greaſe, or Gooſe Greaſe or the like, about two ounces, Oyl of Olive, and of ſweet Almonds, each one ounce:* make a Cataplaſm.

Foment it often with a Decoction of the ſame Plants, or Oyl of Lillies, and of ſweet Almonds, or Oyl in which emollient things have been boiled.

But when we intend to ſoften, and diſcuſs, we muſt apply divers Roots, and Herbs, and Dungs, with Pouders, or the like, and Emplaſters for the ſame.

Things good in a Scirrhus may be uſed here, as Raddiſh roots beaten with Nettle roots.

Onions roaſted in the Embers, and beaten with the fleſh of Snails, and other things.

Alſo Miſleto with Time and Greaſe.

Alſo Pitch, or Roſin, with Wax and Greaſe, and Pouder of Marchaſites called Fire ſtones.

The Blood of a Bull with Barley flower, or other Flowers.

Thoſe Fomentations which we commended for ſcrophulas, may be uſed for to digeſt and ſoften a Scirrhus.

A Fumigation of Vinegar poured upon a hot ſtone, is good in a ſcirrhus; Or if you heat the Marcaſites, or Fire-ſtones, and caſt them into Vinegar, or if you quench Iron in Vinegar, and let the Vapor come to the Scirrhus.

If you rub a Scirrhus, as was ſhewed in Scrophula, before you uſe outward Applications, they will work the better.

It is Raſhneſs to attempt to cut off a ſcirrhus, or burn it off, becauſe it is deep rooted, that it cannot be taken off without Danger of much bleeding, and worſe Inconveniency. Moreover it will be Labour in vain to take off part of it with pain, and leave the reſt behind to grow again.

The Cure of Scirrhus, and Kernels in the Belly.

We have ſufficiently ſhewed in a Cachexy, and in the Dropſie, how the Tumors in the upper part of the Belly, comming from the Scirrhus of the Liver or Spleen, are to be cured.

The Cure of Scirrhus in the Womb.

And if a Tumor come from a ſcirrhus in the bottom of the Womb, externally in the lower part of the Belly, it muſt be cured as a ſcirrhus, and we have ſhewed in the Inflammation of the Womb, how it is to be ordered, if it tend to an Inflammation. And though it be hard to be cured of what Cauſe ſoever it comes, yet it muſt be attempted for to abate it.

Wherefore after the Body is purged and prepared, we give ſuch things as are mentioned in the Scirrhus of the Liver or ſpleen; as Pills of Ammoniacum and the like,

mentioned in a Cachexy, which comes from that Scirrhus, you may apply the things mentioned for an outward Scirrhus and for Scrophula, when the Tumor is in the Belly to be felt hard.

As Fomentations of Oyls, or Decoctions, adding things that respect the Matrix. As Roots of Marsh-mallows, Lillies, Flower-de-luce, Briony, Mallows, Line seed, Fænugreek, Figs, Flowers of Chamomil, Violets, Melilot, and other softners and digesters there mentioned, Mugwort, Nip, Flower of Featherfew, Elder, Dane-wort, Hops. And in the Declination, Calaminths, Penny-royal, Rosemary Flowers, and of French Lavender.

The Oyntments, Plaisters, and Cataplasmes mentioned in the External Scirrhus, are good here, made of Fats slimes, and Gums, and of Plants.

To these add things for the Matrix, as Rue, and Wormwood.

Also Roots of Mandraks, Henbane leaves, or Poppy or Hemlock, boiled in Wine, and made up with Oyl and Grease, are excellent, to which you may put Gums dissolved.

Dioscorides adviseth Wormwood, Rue, Flower of Lupines, with Myrrh.

Galen, Goose blood, with Fœnugreek, or Lupines, Diachylon, with Orris, is the best ordinary Plaister, there are other Plaisters and Cerots mentioned in the Cure of Knots or Nodes.

Also Oyl of Myrtles, Storax and the like.

Also those Pessaries mentioned in the Scirrhus of the Womb comming of Inflammation, are good here, with the Oyls aforesaid, and Juyce of Fœnugreek.

The Cure of Atheroma, Steomata & Meliceris.

Also the Fumigation there mentioned *Dioscorides* commends the Fume of Agrimony. Atheroma, Steatoma, and Meliceris are often without hurt, and therefore are neglected, and turn to Imposthumes: as the Tumors in the Head called *Talpæ* or Moles, and Testitudines, and Snails. The Cure is not so difficult, as that of scrophula and scirrhus, and they may be taken off when they hinder the part, as we said concerning the Atheroma under the Chin.

It is done as that of scrophula, struma, parotis, and scirrhus, by using first general means, if need be as purging, and the like; and then applying particulars to the tumor, that dissolve, soften, and ripen, mentioned in Scrophula, and they will do it sooner in these Tumors, which are not so hard, and consume them, if not yet confirmed, or bring them to Imposthumes, which must be broken and cured as an Ulcer.

Dioscorides commends Raysons stoned, beaten with Rue, to cure a Meliceris, also sour Dock, with Oyl of Roses saffron, and Melilot. And for a Steatoma, Crowfoot flowers with a Cerot.

These are also good; Roots of Sowbread, Dragons, with old Grease, and Brimstone.

Unslaked Lime, with Grease or Oyl.

Dogs dung or the like with Vinegar.

Gum Ammoniack, Bdellium in Vinegar and Honey.

Or this of Pitch: Take *Ship Pitch dissolved one ounce, Ponder of Brimstone, half an ounce*; spread them upon Leather, take it off every day, and wipe it, and lay it on again, renewing it every fourth day.

Also Fomentations mentioned in scrophula and scirrhus are good.

Because these will not well open of themselves, we use Incision, not cutting the skin transverse, or cross, longwaies, or like a Myrtle leaf; and we take out the Membrane which containeth that thick, Suet-like or pap-like, or honey like Matter, from whence the tumors are named, and eat away what remains with cleansing Medicines: this done, we cure it as an Ulcer.

This may be done by an actual or potential Cautery, as in scrophula.

The Cure of soft tumors rising in fleshy parts from the nourishing Juyce, is by distinguishing those that have pain as the Condylomata or Tumors in the Anus or Matrix, the Cure of which is mentioned in the pains of those; for those that are without pain, some under the true skin called *Sarcomata* and *Sarcocele* in the Codds, and fleshy part of the womb; others only under the scarfe skin, as the *Polypus* in the Nose, *Epulis* in the Mouth, *Encanthis* in the corner of the Eye: and excrescent or proud flesh in an Ulcer.

The Cure of Sarcoma, or Wenne.

The Sarcomata which grew here and there in the Body are under the skin, except you prevent them at first, cannot be easily cured, because they become like Natural Flesh, and a part of the Body: to consume it is impossible with potential things, therefore we take it off by cutting or burning, but if it cause no pain nor trouble, it is better let it alone, by reason of the danger through bleeding and hurt of Vessels.

If we will attempt the Cure, we must take it at first, and remove the Nourishment from it, by Blood-letting in some Vein nigh it, and by scarification and Cupping-glasses, the Body must be brought down with purges, sweats, and fasting.

Use externally Repellers, or things that strike back the Humors that breed it at first, such as are mentioned for the beginning of an Inflammation.

Then roul it hard with a plate of Lead upon it.

When it is grown great, in regard we can no way consume or ripen, it being mixed with the Veins, we must if we will take it off, use rather Incision, then burning, either taking it off with the skin, or without, bewaring of the Vessels underneath the great Veins, Artery and Nerves, and then stop the Blood, and cure it as an Ulcer.

In the lesser sarcoma, if you will not cut it off, onely open the skin, and consume the bare Flesh with actual or potential Cautery by degrees.

If these Wenns or Sarcomata, have but a small Root, or may be tied with a silk about the Root, you must tye it so hard, that the flesh may want Nourishment, and so decay; and being made senseless, it may be the better cut off.

You must dip your silk in Arsenick, or sublimate, that may burn the Root, and mortifie the Wenne; And because so doing, may cause Pain and Inflammation, it is better to dip it in our Cautery, that is without pain, which will turn into water by the Air, and to use it often.

I have taken off Wenns with a thred, not very straight bound at the Root, and a potential Cautery put into the circle which is made by tying with a sticking Plaister thereon.

The Cure of Sarcocele, or Flesh in the Codd.

When flesh grows to the stone in the Codd, it is called *Sarcocele*, and is sometimes very large, and will scarcely be stopped in its growth, or taken off any way, but by cutting, with gelding, and therefore is not meddled with.

If you will attempt it, you must have it in hand at the beginning, and open the Vein in the Foot often, to take away Blood from the part.

Applying astringents to the Codds that repel and hinder the groweth; such as were mentioned to hinder Defluxions upon the Eyes. And if they do not stop it when the flesh is in the Codd, and groweth not to the stone, it will be in vain to use Caustick to open the skin, or otherwaies, because the stone will be in as much danger of being lost by corrupting, as if it had been cut off.

Nor can softners do any thing, because it is not a scirrhus, but flesh, which being mollified will grow bigger, and drying things are best to harden it, hinder it from growth.

If the Patient weary of the burden, desire to have it off, let it be cut as a Hernia or Rupture in the Groine, opening the skin, and taking out the seminary Vessels, and the stone with the flesh growing thereto, tying the Vessels, and cutting it off beneath, this is gelding and dangerous. But it were safer, if the stone could be taken out, as when Hogs,

Dogs

Dogs, or other Creatures are gelt, which heal without any Care or Binding.

And if you take out the flesh, or part thereof without the Stone, the Stone must be put up, and you must heal the wound by Injections.

We may gather, that this cutting is not so dangerous in the Cod being cut, since it is a spungy part, which wil more easily be enlarged and contracted then other parts, and sooner. I have seen half the Cod taken off with a Bullet, and the right Stone lye bare with the spermatick Vessels, cured with Balsom of Sulphur, and a common Wound-Plaister.

The Cure of carnosity in the Womb.

Somtimes there is Carnosity or Flesh growing to the Womb, which hangs down, which rather hinders the Husband then the Wife, who is unwilling to make it known and therefore it is not meddled with, because also it is dangerous.

But at first, you may prevent the growth, as that of wenns, and if it must be taken off, you will either tye it, to stop the Nourishment, and make it wither, or burn it with a Caustick thred at the Root, which will cause Pain and Inflammation, therefore you had better use the Cautery without pain, above mentioned.

The Cure of Polypus.

The Cure of Polypus when great, is hard, but at first is more easie.

First, you must use Generals to hinder the Flux of Blood to the part, by Bloodletting; and purging if the body be foul.

The Applications to the part called Topicks. are Epuloticks or mild Healers or Dryers to cicatrize, or make a Scar. And if it be not confirmed, it may be often scarrified, or cut off, and these applied. If these prevail not, proceed to stronger, called *Cathæreticks*, which eat the flesh, called Corrosives. And if these do not, you must use Causticks, which burn and consume and mortifie: Or at last cutting. These are of divers sorts, mentioned in the Cure of Imposthumes, for cicatrizing and corroding.

Pouders to cure a Polypus, are prescribed among those Remedies that cicatrize, or dry up both simple and Compound; the Corrosives mentioned, are of Hermodactils, black Hellebore, Borax, Pumex-stone, and Wine Lyes burnt, and this. Take *burnt Allum three drams*, or: Take *Vitriol four ounces, Allum &c.* Another is there stronger, with Vitriol and Arsenick, or use the pouder of Dragons, Grap-stones, and of Iron.

Soote which riseth from the smoak of things burnt at the Nose, when the Breath is held, doth dry excellently, if it be often, made of Frankincense, Mastick, Pitch, upon Coals, or if you make a Candle thereof with a wick, and after lighting, put it out, and hold it to the Nose.

It will dry more with Brimstone, and other Minerals.

Oyntments are applied with a Clout, or if very strong with a quill, least the parts adjacent should be touched. Of Cicatrizers, mentioned in an Ulcer, that is best, which begins thus, Take *of the sixth Pouder, half a dram, of Corrosives*, mentioned in an Ulcer, this is best, which begins with Take *Antimony &c.* And thus: Take *Hermodactyls, or Agrimony &c. Ægyptiacum* also mentioned in Fistulaes, or that made with Sublimate, or that which is mentioned for opening Imposthumes, of Sublimate, or Troches. Our Caustick made of Oyl of Bricks, and mentioned in Scrophula, which is called the Caustick without pain, is good.

If you will use milder, take the pouder of Dragons mentioned, make an Oyntment with Oxymel of Squills, or Juyce of Pomegranates, or Oyl.

Or the Juyce of the Peels and Stones of Pomegranates boiled forth with Oyl.

The Juyce of Dragons, also is good.

Or this strong Oyntment: Take *Ægyptiacum half an ounce, Pomegranate Peels, and Galls, each half a dram; Oyl of Vitriol one scruple.*

Or, Take *the strongest Vitriol, or Verdegreece, and mix them with Oyl or Honey, with Scales of Brass.*

It will be more strong with a little Arsenick or Sublimate.

There are Waters also for the same, to touch them with a Quill, or a little button of Lint.

These are mentioned in Fistula's, as that which begins thus. Take *of Verdegreece three drams &c.* Or thus, Take *of Orpiment one dram, Verdegreese three drams &c.* Or thus, Take *of Orpiment and Verdegreese, each one ounce &c.* Or that Receipt which is mentioned for the Cure of Imposthumes, and begins thus. Take *Vitriol and Arsenick &c.*

Also this stilled Water. Take *of Allum half a pound, Vitriol one ounce and an half, Galls, or Pouder of Pomegranate peels three ounces, of Oyl, or Syrup of Grapes two ounces, or Juyce of green Grapes:* mix them with strong Vinegar, and distil a Water thereof, with which often wash the Polypus.

The Oyl of Vitriol is stronger.

Or this: Take *Oyl of Vitriol one scruple, burnt Allum two drams, dissolve them in Plantane-water.*

Another most powerful. Take *Sublimate two drams*, boyl it *in Smiths Forge-water, three ounces to half*, and use it alone, *or with Oyl of Vitriol half a scruple, burnt Allum half a dram, Aqua fortis with Orpiment*, also cureth it.

The Oyl appointed for Fistula's, which begins thus, Take *Antimony &c.* Is also good.

Cauteries of Time, burnt Tartar, and those which are without pain, being warily applied with a Quill, to defend the parts adjacent, do cure it.

This is done sooner by an actual Cautery, or hot Iron through an Iron quill.

We also cut it off with an Instrument, first made hot in the fire, to hinder bleeding.

The Cure of ranke flesh in the Gums.

That flesh which grows over the teeth, because it only hinders chewing by bleeding is not much regarded, because it goes away by chewing.

But if it grow over the Grinders, then you must wash the Mouth with dryers and astringents, such as are mentioned in the Ulcers of the Mouth, and use things to rub the teeth such as were prescribed in Foulness of teeth.

The pouder Lapis Prunellæ, or spirit of Salt-peeter, or of common Salt, must be applied with a Pencil.

If these help not, use stronger, as the Oyntment of Dragon pouder, and that made of Oyl and Juyces, mentioned in Polypus, or Oyl of Vitriol, as there mentioned.

Or this, when the teeth are covered. Take *Allum half a pound, Vitriol &c.* As is there prescribed, or Aqua fortis, and touch the superficies of the Gums, and not the Roots, least the teeth grow loose, defend therefore the parts in the time of Operation, and wash the Mouth well afterward.

The Cure of Epulis.

Epulis is a little flesh growing at the roots of the teeth, it hinders not, though in a Defluxion, it is somtimes bigger, and goes away of it self, therefore it is neglected.

But if it hinder chewing, and cause pain, then take it away with astringent, Mouth waters such as are mentioned in the consuming of the Gums, with Care, as aforesaid.

But if it hang down with a slender root, and may be tyed, it may be so cured.

The Cure of Encanthis.

Encanthis is a Caruncle in the corner of the Eye, which is troublesom, therefore you must prevent the Blood which comes thither, as we shewed in Ophthalmy, or Diseases of the Eyes.

We use outwardly dryers and astringents, such as are prescribed in Ulcers of the Eyes, by which it will quickly be cured.

But if not, use stronger Remedies, so that you hurt not the Eye, or take away all the flesh, which will cause a Rhyas which is worse; therefore proceed by degrees from mild things to the strongest. These are all mentioned in the Cure of the Eyes, and taking away Filmes, and will be as good for this.

This Water is most excellent, and is also good for other Ulcers.

Take

Take a Copper Veſſel, fill it with Spring water, or rain-water which is better, and put therein an indifferent quantity of unſlaked Lime, and let it ſtand, till it is ſetles to four quarts of the clear water, add, (if you make it for the eyes) half an ounce of Sublimate, and if for foul Ulcers, an ounce, and let it fall to the bottom, and will be yellow, pour off the clear water, and keep, this with you muſt gently touch the Caruncle in the Eye, but waſh the foul Ulcer ſoundly.

The Cure of proud Fleſh.

When Fleſh grows rank in an Ulcer, if it be not skin'd, it is eaſily cured, as we ſhewed in an Ulcer, but if it be cicatrized, and grown over with skin, it muſt be cured as a Wenne.

The Cure of tumors growing in parts without fleſh, is firſt of thoſe in the Joynts, as a Ganglion and Nodes which grow alſo upon the bare Bones; as alſo of thoſe of the Nails, and then of thoſe which grow to the skin, as Warts, Cornes and Callus: and laſtly, of Freckles and Tumors, like a Barley corn, called *Hordeoli*.

The Cure of Ganglion.

A Ganglion is a tumor in the Joynts, and though it be ſofter then a Scirrhus; yet is it hard to be cured, if of long continuance, ſometimes it is incurable, but being deep rooted, it hinders the motion of the Joynt, and ſo of the Membrane. This muſt be prevented before the tumor be confirmed.

And we muſt uſe all means to diſcuſs it, or make it leſs, ſo that the Joynt may move. And this after fitting Evacuations, mentioned before in hard and ſoft Tumors, muſt be done by topical or outward Remedies, that ſoften and digeſt, being wary as may be, leaſt it come to ſuppuration; becauſe when it is come to matter, either of it ſelf, or by neglect, it cauſeth perverſe and incurable Ulcers, which do ſo corrupt theſe Nervous Parts, that the motion of the Joynt is either hindered, or utterly loſt thereby. But by manual Operation, ſomthing may be done, as I ſhall ſhew.

The Applications external, muſt be the ſame that were preſcribed in Scrophula, which mollifie and digeſt, adding things proper for the Nerves, and increaſing the quantity thereof, to make them prevalent.

It may be done by Fomentations, or Baths thus made. Take *Lilly roots, and Marſh-mallow, Briony, and Orris roots, each two ounces; Mallows and Coleworts, each two handfuls; Henbane one handful, Groundpine, or Sage, and Wormwood, each half a handful; Chamomil, Melilot, Wall flowers, or Elder-flowers, each one pugil, Line ſeed, and Fœnugreek, each one ounce; Bay-berries half an ounce:* boyl them in Water and Wine, or Lye for a Fomentation, or in greater quantity for a Bath.

To theſe may be added ſtronger, as Roots of wild Cow-cumber, Dragons, Sowbread.

Or the Fomentations mentioned in Scrophula, with theſe mentioned here.

Alſo a Decoction of Frogs, and Earth-worms, or if that will not do, of ſtrong Vinegar alone, or in which Mil-ſtone or Fire-ſtone hath been quenched.

Or a Lye made of Aſhes, eſpecially of Fig-tree; or Urin, or the like mentioned in Scrophula, with the things here mentioned.

Alſo Oyl of Earth-worms, and of Frogs, or of Savine.

A Plaiſter of Galbanum, in which a little Opium is diſſolved, with ſome drops of the diſtilled Oyl of Savine, is good to ſoften and diſcuſs a Ganglion. If they ſit long in hot Brimſtone Baths, uſing them for a month, this Tumor will be diſcuſſed, and the Limb relaxed. For which Cauſe, let them be ſent to the Bath betimes, and uſe it as a remedy.

The Oyntments, Cataplaſmes, and Plaiſters mentioned in Scrophula, are good here alſo, becauſe proper for the Nerves; as thoſe fat and gummy things and ſlimy, or of Plants, Dungs, Pouders, with Oyl of Earth-worms, Foxes, Frogs, for the Nerves. The Greaſe of a Man, Bear, Badger, or Fox.

Alſo this Plaiſter. Take *Pitch two ounces, diſſolved in Oyl of Earth-worms, and Orris one ounce and an half, with Labdanum, Maſtick, each two drams; Storax one dram, aſhes of Earth worms half a dram.*

Alſo this Cataplaſm. Take *the Kernels of old Wall-nuts three ounces, Meal of Lupines, or Orobus one ounce and an half, Raddiſh, and Flower-de-luce roots, each one ounce; Honey as much as is ſufficient with Salt*: mix them.

A Fume alſo of Vinegar, in which Fire Stones have been quenched.

Or this: Take *Benjamin, Storax, each two drams; Myrrh and Bdellium, each one dram; Orris roots half a dram, Marcaſites two drams, with Turpentine*, make Troches for a fume.

You muſt beware of Inciſion, becauſe it can ſcarce be made without danger to the Tendons, Ligaments, and Nerves,

We may uſe other manual Operations, by which though a Ganglion cannot be taken away, yet the Limb may be rectified.

It is dangerous to open a Ganglion, as I ſhewed.

It was declared in the Treatiſe of contracted Members, how when it comes from a tumor, they may be reduced by Art and Inſtruments.

Knots or Nodes in fleſhleſs parts, are of three ſorts, either in the Joynts as the Gout, in the bare Bone as in the Pox, and Head-ach, or from ſome violent Cauſe, called callous Nodes: we ſhall ſpeak of them ſeverally.

The Cure of Knots or Nodes in the Gout.

The Gout Nodes in the Joynts of the Hands, or Feet and elſewhere, are hardly diſcuſſed, and when they are opened they produce ſome humor, or ſandy ſtone, or they grow hard, and fixed in the joynts ſo that the Fingers or Toes are either ſtraight out, or crooked, as I ſhewed in the Gout.

But to hinder their growth, or to diſcuſs, or ripen them; you muſt firſt uſe the Cure for the Gout, which is the cauſe by Evacuations and things mentioned againſt the Gout, which are ſo ſtrong, that if the quantity of a ſmall Nut be taken for a month or a year, it would diſſolve the Nodes of the Gout, which they ſay this following will alſo do.

Take *St. Johns-wort, Germander, Groundpine, each ſix drams; Tops of leſſer Centaury half an ounce, Roots of round Birthwort, Valerian, Spiknel, Hermodactyls, Agarick, each three drams, Roots of Gentian, and Parſley, each two drams; Spikenard one dram*: pouder them well, and with Honey make an Electuary.

Alſo apply things to mollifie and diſcuſs, or ripen, as to other tumors, but the ſtrongeſt are theſe.

A Cataplaſm: Take *Roots of Marſh-mallows two ounces, Flower-de-luce one ounce, Line ſeed half an ounce*: boyl them *in Wine and Honey, with a little Turpentine*, apply them.

Theſe are moſt proper, the Roots of wild Hemp, Teaſles Stone Crop, Groundſel, Hemlock, and Henbane green and beaten, or boiled firſt in Wine or Vinegar, with Honey or Oxymel, and ſomtimes Greaſe.

Or, Take *Rue, Shepheards purſe, and Raiſons*, beat them together.

The Heads of Onions and Garlick, roaſted and boiled with Greaſe of a Hen, Badger, or Mountain-mouſe.

Rotten Apples applied, are good.

Ammoniacum, Sagapenum, Galbanum diſſolved in ſtrong Vinegar, or Oxymel with Bran, Oyl of Turpentine.

Or, Take *Galbanum melted in ſtrong Vinegar, one ounce and an half, Birdlime, or Glew, moiſtened with Vinegar, Turpentine and Wax, each half an ounce*; mix them.

Dogs or Goats dung, with Wine and Vinegar, and Barley meal, is alſo good.

Alſo old ſtrong Cheeſe, of Sheeps Milk, beaten and applied.

The Roots and Seeds of Gith, pouder of Orris, with wax laid conſtantly thereon.

Alſo the Pouder of Oak-moſs, or Hazel-moſs, with French Soap, and Niter.

The Aſhes of Willow Bark, with ſtrong Vinegar.

Or this. Take *of Oker two drams, the Aſhes of Willow-Bark,*

Barks, Nigella ſeeds, each one dram; dryed Dogs dung one dram and an half, make a pouder, and mix it with old Cheeſe, adding, if you pleaſe Gum and Vinegar.

Alſo the Juyce of Capars, and Oyl of Indian Nuts.

You may apply Fomentations to the Nodes, and they work beſt; firſt waſh with warm water, or an emollient Decoction.

Fomentations are moſt uſed to conſume hard gravel Tumors, and ſtrengthen the part made with red Wine, Marſhmallows, Mallows, Docks, &c.

Or thus: Take *Sea, or ſalt Water ten pottes, boyl therein one pound of Guaicum, of Guaicum bark, four ounces, Wormwood, Groundpine, Bettony, French Lavender, red Roſes, each ſix handfuls; Orris roots one ounce and an half,* boyl them to ſix pottles, then add twelve pottles of red Wine, and boyl them till the the fourth part be conſumed, ſtrain them, and uſe it for Fomentations, for twenty dayes.

If you fume the part with the ſame Decoction through a Pipe, it will diſcuſs the Hardneſs, and ſtrengthen the Part, as hath been experienced.

Alſo it is good to put the part into a Wine-preſs, firſt of moiſt, then of dry Grapes.

You may alſo open Nodes, by cutting and letting out the Matter, and they will either fall, or the Medicines applied, will have better Operation.

The Cure of Nodes or Knots in the French Pox, and Head-ach.

The Nodes in the French Pox, in the Fore-head, Shinns, and Backs of the Hands, becauſe they require a general Cure proper for the Pox, and alſo ſome particulars, they ſhall be declared in the Cure of the Pox.

The Nodes in the Head-ach, in the Fore-head vaniſh when the Head-ach is gone, uſually; but if they remain, you muſt evacuate, and uſe external Applications mentioned.

Of Callous Nodes.

The callous Nodes which come not from a Diſeaſe, which eates the Perioſtium or skin upon the Bone, but from over much Nouriſhment by Bone Juyce, ſo that it ſeems to be a new Bone growing to the other: Or which come after a broken bone are hard to be taken off, but continue the whol Life.

But if they be offenſive, we ſhall ſtudy to remove them with outward Remedies: Not uſing Evacuations, becauſe they come from an outward Cauſe.

We may apply things mentioned for the Gout, or for Scrophula.

And we know by Experience, that Narcoticks, or Stupefactives do much, by which we have diſſolved deſperate Nodes, in Men, and Beaſts: Taking the Roots of Mandracks, Leaves of Henbane, and Hemlock boiled in Vinegar, for a Fomentation, and Cataplaſm, to which Bee-nettles may be added.

Plaiſters and Oyntments of Quick-ſilver, are as good here as in the Pox.

To ſoften Nodes, uſe the Cerot of Oeſypum, which is made of Oyl of Chamomil, Orris, Oeſypum, or Greaſe of Sheeps-wool, Roſin, Turpentine, Maſtick, Wax, Spikenard, and Saffron.

Alſo the Plaiſter of the Son of *Zachary* made of Nerve-Oyl, Oeſypum, or Greaſe of Sheep-wool, Gooſe greaſe, Marrow of a Cow bone, Turpentine, Bdellium, Ammoniacum, Maſtick, Storax, Aloes, Fœnugreek, and Chamomil, with Saffron.

There is another of Calfes ſuet, Olibanum, Juyce of Squills, and Wax; alſo the Oeſypum'd Plaiſter of *Paul*, and the Diapente of *Democritus*.

The Nodes are ſomtimes cut off, eſpecially when they grow towards the Joynts, and hinder the Motion. And this Operation is ſafeſt, when they are upon the bare bone only covered with the skin. This is done, firſt by opening the skin, and laying them bare, and then with a ſharp knife with one cut, taking them from the Bone, and by curing the wound, which may be done by burning, but not ſafely nor quickly.

The Cure of the callous Tumor of the Nails.

If the Callous Tumors of the Nailes come from any Hurt, it will be gone as the Nails, grow out, and are paired.

But if from an internal Cauſe, they become uneven, and thick, they will not be made thin; yet we muſt attempt it, if we ſuppoſe the Diſtemper of the Body was the Cauſe, by removing that, and by external Remedies, Emplaſters, and Baths which ſoften that we may ſtill cut off the Tumor, that the new Nails may grow thinner.

The Cure of the Callus, or thickneſs of the Skin.

A Callus in the Hands, is a ſign of labour, and no dishonor, and in the Heel doth ſtrengthen the Motion, and therefore requires no Cure, beſides if there be reſt, it will peell off, and a new skin ſucceed.

But if they grow to be an hinderance in touching or going, as Cornes, then we muſt uſe Softners.

And chiefly Baths for the Hands and Feet, of warm water, and ſoftning Plants, mentioned in Clyſters, that molliſie, and in the Baths for a Scirrhus, with Greaſe, and fat Tripe-broath, and Oyls.

Alſo Oyntments, Plaiſters of Oyls, Greaſe, Mucilages and Gums mentioned in Scirrhus, and things that ſoften a Corn.

Among the which Ammoniacum diſſolved in Vinegar is moſt ſoftning.

After bathing, pare the Hands, Nails and Feet about the Heel, with a Pumex Stone, or File.

We took away a Corn in the ſide of the Foot, which was very troubleſom and hard with our Cautery, that cauſeth no pain.

The Cure of Scars.

The Cure of Scars or Callus in the skin, is not accounted needful, eſpecially in Soldiers, to whom a wound in the Face is honorable, becauſe it argues they faced their Enemy, and ran not. Alſo when it comes from any other Cauſe, if it be even with the skin as a white Lye. it is neglected, becauſe it is like the skin, and muſt not be altered to another Color, leaſt it be more apparent.

But when it ſticks forth, or is uneven, we muſt make it with cleanſing Remedies equal with the skin, ſuch as follow.

The Decoction of wild and Garden Poppy, for a Fomentation.

Alſo the Water of Lilly, or Bean flowers, and that of Mans dung commended by ſome.

Alſo Oyl of Myrrh, and Yolks of Eggs, of bitter Almonds, Peaches, Dates, or inſtead thereof, beat the Kernels, and rub the part.

The Common People rub it with faſting Spettle.

The Liquor that ſweats through Eggs, roaſting in the Embers.

The Greaſe of the Fiſh Thymalus.

Or an Oyntment of Rocket, and Muſtard ſeed with Ox Gall.

Or of Borax, Camphire, and Greaſe or Marrow.

Oyl of Nutmegs boiled in Vinegar, and Niter, is commended of *Dioſcorides*.

An Oyntment. Take *of the Roots of wild Cowcumber or Dragons, Orris, Reeds, each two drams; Mellon ſeeds, and Raddiſh roots, each one ounce; Harts Horn, or burnt Egg-ſhells, each half a dram; white Chalk, Cryſtal, or Amianum, one dram and an half, Frankincenſe, one dram, Sugar Candy three drams, Gum Traganth infuſed, or the Mucilage, of Fœnugreek one ounce, with Oyl or Greaſe;* Make an Oyntment.

If theſe avail not, uſe ſtrong Cleanſers, Corroders and Burners, if you will take it quite away. Such as we ſhewed in Diſcoloration to take away Spots.

You muſt alſo pare it with a Pen-knife, as a Callus.

If the Scar be deep like a pit, you cannot make it even, unleſs you firſt cut or burn it, and they fill up the Cavity with new fleſh, and after heal it.

The Cure of the pits of the ſmall Pox.

But in the pits after the ſmall Pox through the Face and Noſe, becauſe

ſtrong

ſtrong things cannot be well applied, there is little hope of Cure, great Men would have ſpared for no coſt, to have it done for their Children if poſſible. If any thing be done, it muſt be ſoftners and attracters, to raiſe the fleſh and make it even. As the Decoction of Lillies, Calfes feet, which will do but little; and this is rather to be prevented in the Cure of the ſmall Pox: as we ſhall mention there.

The Cure of the pitting of the Navel.

The Cure of the pit of the Navel growing too deep is neglected, becauſe being private, it is no Impediment; as alſo that tumor which comes from the growing of it hard; but we ſhall ſhew the cure of the Navel, Rupture and Water-rupture.

The Cure of warts & cornes

Warts and Cornes either depart of themſelves, or are not regarded, when they are not viſible, but when in the Face or Hands, as Warts, or when they cauſe pain, and hinder motion as Cornes, we may cure them eaſier then other hard tumors, though they have deep Roots and be hard; yet being in the Pores, and not faſtned to the true skin, as one with it, nor covered with it as other tumors, and being without feeling, ſo that you may apply what you pleaſe, the Cure is eaſier which we thus order, that they may be conſumed without force or burnt, cut, or drawn out.

We conſume them, either by things proper for the ſame, or ſuch as dry up their Nouriſhment, and make them vaniſh, becauſe theſe are ſo hard, that they can ſcarce be ſoftned or diſcuſſed.

Some Remedies are made of Plants, as the green Leaves bruiſed, of Groundſel, Agrimony, Sumach, Herb Robert, Toad flax, Dandelion, Succory, Beets, Poplar, Rue, Yarrow, Water-creſſes, Aſarum roots, Orris, Teazle, Celandine and Daffodil roots.

Theſe are ſtronger, bruiſed With wine or Vinegar, with Salt or Niter, Pepper or Aloes.

Leeks, Onions, and Lillies roaſted with Greaſe applied are good.

Alſo the Juyces of the Plants aforeſaid, chiefly that of Dandelion like Milk, and the like in Succories, with the Juyce of the Leaves and Flowers of Moulin, Pomegranates and Purſlain, and Laſerpitium.

Honey of Anacardus is excellent alſo.

The Water that comes out of a Vine being burnt.

The Pouder of Nigella ſeed, with Urine, or Lye, or Honey.

Alſo the Seeds of Sun-flowers, being like Warts, is ſaid to cure them, alſo Peaſe meal, and Barley.

Wheat Leaven conſumeth Cornes.

The Aſhes of Willow bark with Vinegar, and the aſhes of Squills is approved.

Frankincenſe, and Pitch poudered, with Salt, Vinegar, and Juyce of Onions like a Plaiſter.

From Living Creatures take theſe, Gudgeons tied to a Corn while they rot, drive them away.

Dioſcorides commends the Head of a Lizard.

The Head of the Fiſh Smaris ſalted, and burnt, and applied with Wax and Vinegar, doth the ſame,

The rough ſcaly skin, alſo in a Hens foot, which is taken off by fire, is ſaid to take away warts, if you rub them or apply them therein.

The Juyce of Cornel-berries alſo is good.

Alſo Dogs dung, Sheeps, and Goats dung, with wax, Soap, Lye, or Urine.

Alſo the Gall of the Ox.

Alſo Sal niter, and Ammoniack, and Allum, with Honey, Suet, or Soap.

Lapis Lazuli alſo poudered and mixed with Vinegar.

We ſomtimes burn Warts and Cornes, and ſo they are rooted out, and return not, this is done by actual or potential Cauteries, you may uſe the ſtrongeſt, if you defend the skin round about.

Crow-foot leaves, and Roots are the gentleſt potential Cautery, yet beaten and often applied, they may conſume them, as alſo other burning Herbs.

Divers Cauſticks work ſtronger before mentioned, which muſt be uſed warily, only to the Wart or Corn, covering the part about with wax or plaiſter, leaving a Hole in the middle.

Theſe are moſt uſual, the Milk that comes from Figs, or their green Leaves, and of Spurge, the Spurge, Mirſinites hath the beſt Milk, and it is to be had in winter; alſo the Milk of Lathyris, Peplus, and Chamæſyce, which are all ſeveral ſorts of Spurge.

Ægyptiacum the Oyntment mixed with Juyce of ſpurge, or Ruſt of Braſs poudered with the ſame, with a little Sublimate, or Orpiment is excellent.

Unſlaked Lime alſo with Soap, and Vitriol, and Verdegreece, or with Arſenick, or Sublimate.

The cautery which cauſeth no pain, made of Quick-lime in a Lye, and ſuch as are mentioned for to open Impoſthumes, do it quickly.

Alſo cantharides with Leaven.

Alſo if it be touched with a drop of Aqua fortis, let it be black.

Or with Water and Vitriol, Arſenick &c. mentioned for opening Impoſthumes.

Or this: *Take Sal Ammoniack, Allum, and Vitriol, each two ounces; Quick-lime one ounce, Verdegreece half an ounce, diſtil them, it is ſtronger with Sublimate and Arſenick.*

Paracelſus commends this for taking off warts and cornes. *Take of Oyl of Juniper berries, Benzonna,* (which is that Muſh-room that kills Flies) *Agarick, each one dram; Ox gall:* make an Oyntment, to be uſed often.

I would rather uſe thoſe little Muſh-rooms, that are full of Juyce, and grow upon Dunghills, gathered before Sunriſing, which I have uſed to Horſes ſucceſsfully for the ſame.

We alſo actually burn them, with an Iron and a Quill to defend the parts about.

Or we fire a Birch twig, and blow it out, and then burn the wart with the the coal.

Or we drop a wax candle thereupon, or burn them with a Match, defending the part with a Plaiſter, or thin Plate of Lead, with a Hole in the middle, when it is done.

Or thus, we boar half a Nut-ſhell as wide as the wart, and put the wart therein, and then lay Brimſtone upon the wart, and ſet it on fire, till the parts adjacent begin to feel it, and then give over.

We cut them diver wayes, or ſcarifie them, to make the Remedies applied ſooner, and better prevail.

Or we cut off their tops with a ſharp Raſor, and ſo go on, till the pain will no longer permit, and then the Medicines will eaſily take away the remainder, or when we are at the quick, we burn it with ſtrong Dryers, or apply a Plate of Lead hard bound.

If they hang down, they muſt be tied with ſilk very hard to hinder their Nouriſhment, that they may fall off.

We Warts are ſuddenly drawn out by the Roots, by Art by Mountabanks with their Nails, or an Inſtrument, which they firſt anoint with an Oyntment, which they proclaime good for divers Diſeaſes to deceive the people.

Some things are thought to cure warts by a ſecret Propriety; as wart-ſuccory uſed in Sallets, or Horſe-time.

Alſo the Seeds of Wart-ſuccory one dram taken before ſleep, for ſome dayes together.

If you take ſo many Peaſe as there are warts, and touch every wart therewith, and then wrap them in a clout, and throw them behind you in the new Moon, thus *Dioſcorides:* the vulgar uſe to burn them.

The Cure of Pimples in the Face.

Pimples in the Face and Head, called *Vari* or *Jomhi* and *Pſydracia*, muſt be cured with ſtrong Cleanſers, Softners, and with Corroders and Cauſticks, all which we haveſhewed in ſtubborn Spots and Morphew in Diſcoloration: as alſo how the Body is to be prepared and purged.

Theſe following diſſolve Pimples, Gooſe greaſe, Wolf or Cats greaſe, and that of the Fiſh Thymalus.

Alſo

Alſo the Greaſe that comes out of a burnt Linnen-ragg. And Aloes, with Gum of Fennel, and Vinegar of Squills.

Or, Take *the Juyce of Docks four ounces, Vinegar of Squils one ounce, Gum Ammoniack diſſolved in Vinegar, half an ounce, Borax three drams, Salt and Allum one dram.*

This is excellent: Take *Juyce of Onions, Leeks, and Scabious, each half an ounce; ſoft Soap one ounce, Gum Ammoniack diſſolved in Vinegar, two drams, Myrrh, and Aloes, each half a dram; Powder of Penny-royal, Hyſop, and Baſil ſeed, each one ſcruple; Salt, Niter, or Allum one dram, Borax half a dram, burnt Vitriol one ſcruple*: make a Liniment.

Or, Take *Dock roots, and Elicampane ſliced*, boyl them *in Vinegar*, and bruiſe them, adding *Borax, Aloes, Frankincenſe, Cuttle-bone*, or ſtronger things.

Or, Take *Penny-royal, Hyſop, or Agnus Caſtus dried, each one dram; Meal of Lupines, or Orobus two drams, Salt, or Juyces before mentioned, or Borax one dram and an half, Frankincenſe half a dram, with Oyl of Muſtard*, make an Oyntment.

Or, Take *the Meal of Lupines two ounces, of Orobus, or Vetches one ounce, Melon ſeeds peel'd two drams, Raddiſh ſeed one dram, Orris roots two drams, Sal Ammoniack one dram, burnt Harts horn half a dram*: mix them with the Infuſion *of Gum Traganth, for Troches to be diſſolved in Milk.*

Oyntments of Fiſh gall and Oyl, Honey, and Sugar doth diſcuſs Pimples.

If theſe in the Head are mattery, you muſt add Lytharge with Vinegar, and Verdegreeſe, and other Dryers, mentioned in the Scab.

The laſt Remedy for hard Pimples, are the corroding and cauſtick Medicines mentioned in Spots.

The Cure of the Tumor in the Eyes, called Hordeolum & grando.

Hordeolum is a hard tumor like a Barley corn upon the Eye-brows, beneath, and Grando like Hail, is the ſame above in the upper Eye-brow, and they are cured as warts, by applying things which conſume them, but ſo that they may touch only them, and not get into the Eye, and hurt it, eſpecially when they are ſtrong.

Theſe following are good in theſe tumors, Gum Ammoniack, or Serapinum ſpread upon Leather.

Alſo Flies their wings taken off, and Ants mixed with Roſin and Wax.

Wine Lyes, Vitriol, Honey and Wax.

Lime with the third part of Vitriol, and Turpentine.

If nothing will prevail, we may burn them off, defending the Eye carefully, as in warts, whether we do it by actual or potential Cautery.

VVe may alſo ſcarifie them; but it is not ſafe to cut them off, or forcebly to pull them out.

VVe may, if it be convenient, tye them with ſilk like warts, but gently, leaſt it through pain, ſhould cauſe Inflammation.

The Cure of the Tumor of the Breaſts with Milk.

The Cure of the Swelling of the Breaſts from Milk, becauſe it goes of it ſelf, is ſeldom undertaken. But if it be ſuch as it cauſeth fear of Inflammation, then we muſt have a care to hinder the comming of Milk into the Breaſts, and to conſume that which is there, or draw it forth.

But if it be curdled, and the tumor hard, we muſt diſcuſs it, if it tend to an Impoſthume, we muſt ripen, open it, and cure it as an Ulcer. And if Inflammation follow, it muſt be cured as a Phlegmon: of which we ſpake in the treatiſe of Pain.

VVe hinder the increaſe of Milk, with a ſlender Diet, Evacuations by bleeding and purging, and giving things that conſume both it and the Seed, as Agnus caſtus, and Rue ſeeds, we keep it from the Breaſts, by revelling and deriving the Blood another way, as by opening a Vein in the Arm or Foot, (eſpecially if they were not well cleanſed after Child-bearing) and with other things that provoke the Courſes, Scarification, Cupping on the Shoulder, and above the Knee, by Frictions and the like.

Alſo by binding the Breaſts, and uſing Emollients, you may hinder the farther increaſe, and conſume the Milk in the Breaſts. The Engliſh and French Women, which uſe not to nurſe their own Children, apply bags of Lin-ſeeds to their Breaſts, and bind them down, for the ſame end.

VVe repel the blood by outward Applications, which we place upon the viſible veins, that come from the Armpits to the Breaſts, not upon the Breaſts, but about, and without them, becauſe if Milk be curdled in them, it cannot be repelled.

There are alſo repelling Emplaſters called defenſatives, made of Bole, mentioned in Phlegmon, and in the Pains of the Eyes from Defluxion, uſed to the Fore-head and Temples and the like, elſewhere mentioned, which muſt be laid about (not upon the breaſts) but towards the Arm-pits.

Eſpecially thoſe we mentioned for hindring the growth of Breaſts, may alſo be good to hinder Milk.

Alſo an Epithem of Vinegar, Roſe-water, and Allum, with a little Camphire to penetrate rather then cool.

VVe diſſolve Milk in the Breaſts with Dryers and Digeſters laid all over upon the breaſts, and if there be a tumor, you muſt lay thereon things that conſume Milk, and bring it to matter.

Mints is chiefly good for this, and next Calamints, Smallage, Coriander, Agnus caſtus, alſo Wormwood, Horehound, Ladies-glove, Palma Chriſti, Epimedium, Rue, Rocket, Celandine, Cole-wort, white Beets, Brionv Leaves, and water Lilly roots beaten green, or boiled firſt in Wine and Vinegar equal parts, and the third part Honey to a Cataplaſm.

Or that which is made of Wheat-bread, or Bran, Bean, Barley, Lentils, Orobus, and Fœnugreek meal boyled as before, ſomtimes with Herbs, and Oyls of Dill, Chamomil, and Lillies.

As for Example. Take *Marſh-mallow, and Lilly roots, each two ounces; Mints two handfuls, Wormwood, and Celandine, each one handful; Chamomil flowers one pugil*, boyl them *in Wine, Vinegar, and Honey*, as before, beat them up *with Bean, and Barley meal, or the like four ounces, Oyl of Dill, Ducks greaſe, each two ounces*; make a Cataplaſm.

Or thus: Take *Bean and Lentil meal, each four ounces*; boyl them *in Vinegar, and the third part of Honey, with dry Mints, half an ounce, dry Wormwood two drams, Cummin ſeed half an ounce, Agnus Caſtus ſeeds, and Chamomil flowers, each two drams and an half; Liquid Storax half an ounce, Saffron one ſcruple, Oyl of Dill two ounces and an half*; make a cataplaſm: to this add *of the Runnet of a Kid ſix drams*, to diſſolve Milk if it be curdled.

Another, mix Bread with Purſlain, and Sage-water, and Honey for a Cataplaſm.

Some only ſteep Bread long in Mint, Sage or Purſlain-water, and apply it.

The Root of the greater celandine, beaten and laid upon the Nipple, is ſaid to diſſolve curdled Milk.

Dioſcorides teacheth that Hemlock doth deſtroy Milk, and hinder the growth of Breaſts, and other Stupefactives, alſo not by cooling, but by diſcuſſing, as we have ſhewed their Nature to be.

Oyntments made of the Juyces of the Herbs mentioned with Oyls, as of Mints and the like, do conſume Milk, and diſſolve it when curdled, as this: Take *the Juyce of Smallage, and Mints, each two ounces; Vinegar one ounce and an half, Honey two ounces*: boyl them a little. and waſh therewith.

Dioſcorides commends wine Lyes, with Vinegar.

Alſo a Fomentation of the Herbs aforeſaid, with a ſponge or Linnen-cloath is good, eſpecially a Decoction of cummin and coriander.

Or with ſtrong Vinegar, Sack boiled with a little Saffron.

VVe take away abundance of Milk by the way ordained, by the Infants ſucking, and if it will not move, Children muſt ſuck, or let a woman draw them with her mouth or with an Inſtrument for the purpoſe. If this cannot be done

done for want of Nipples, you muſt do what is taught in the Loſs of Nipples, and want of Milk.

The Cure of Tumors comming from Blood, is firſt of the Veins, as of Varix, or ſwollen Veins, Cirſocele or Cod-rupture; and ſecondly of the Arteries, as an Aneuriſm.

The Cure of a ſwollen Belly in women with Conception.

As to the other Tumors of the belly, comming from the Terms ſtopped, as if they were with Child, without Conception: becauſe it ends with a large Flux of Blood at the womb, we ſhall ſpeak of it, in things caſt off, when we mention bleeding at the Womb.

The Cure of Varix or a ſwollen, and crooked Vein.

If Women with Child have great Stretcht, and crooked Veins in their Legs, after they are delivered, they commonly vaniſh. And if either Man or Woman have them continually, they regard them not, till they trouble them. But if they itch or pain them, or turn to an Ulcer, they muſt be cured, becauſe while they continue, the Ulcer cannot be cured, as we ſhewed in the Kind of Ulcer.

For the Cure, firſt conſider the Plethory, and evil Habit or Juyce in the blood, and this muſt firſt be cured by letting blood, and purging: as we ſhewed.

Then we muſt apply things that may repreſs, and conſume the filthy blood that ſtretcheth the Veins. And that with Lotions or Fomentations, with a Decoction made in Forge-water, or Lye or Urin, of Fennel roots, Bugloſs the great, Agrimony, Laurel, Cole worts, of Roſemary, Elder, and Lavender flowers, Cypreſs nuts, Sloes, Lupine ſeeds, Cole-wort ſeed, with Salt and Allum, and if you will aſtringe more, with Vitriol.

Or with this Fomentation, or Epithem. Take *burnt Chalk three ounces, Bole, or fat Earth one ounce and an half, Acacia, or dryed Sloes one ounce, Sanguis Draconis ſix drams, Myrrh half an ounce, ſtrong Vinegar one pint and an half, Lye three pounds, with a little* Salt *and Vitriol* we ſtop the flux, by Ligatures, or Roulers about the part, beginning from below upwards, as we ſhewed in Oedema, alone, or with a Fomentation afore, or we wet the Rouler in the Fomentation, and ſtrain, which will be ſtronger thereby, eſpecially if it be made of Sloes.

Somtimes we cut off the great Vein, which nouriſheth the Ulcer, when it hinders the Cure of the Ulcer; if there were no Ulcer, we would not do it, becauſe dangerous if but opened. It is better therefore to bleed in the other Leg for Revulſion. But when we will cut a Vein out that nouriſheth the Ulcer, firſt you muſt mark its Paſſage above with a Pen, as it comes from the Ulcer, and then open the skin by longitude, and lay the Vein bare, then rub the Blood down, and tye the Vein above, and cut it beneath in length to let out the blood, then bind it next to the Ulcer, and cut it that part of the Vein, which is between the two Ligatures, and ſo the way will be ſtopped, by which the Ulcer was fed.

The ſmall crooked Veins in the Codds, Privities of women, and Eye-brows, or in other parts of the skin, becauſe they hinder not, are not regarded, but if you will do any thing, you muſt revel the blood from the part, and repel and diſcuſs it, as in Inflammations, only your aſtringents muſt not here be ſo cold, leaſt the Blood congeal.

The Cure of the Stone veſſel rupture.

Cirſocele is when the ſpermatick veſſels are ſwollen, and if it hinder not the Seed, it is not regarded, becauſe it is hard to be taken without Gelding, and except it grow great, like a fleſh Rupture, it is not attempted, but you muſt uſe Fomentations and the like, before it comes to that.

The Cure of Aneuriſma.

Aneuriſma, that is a Tumor from the opening of the artery, when the blood thereof gets under the skin, when it is old is not curable, becauſe the blood cannot be repelled by aſtringents, or the mouth of the Artery lying deep be ſhut. Nor may we open it, becauſe the Patient would certainly die of a Flux of Blood, which cannot be ſtopped. Therefore if at the firſt Repellers and Cloſers of the Artery mentioned in Hæmorragy or Bleeding do nothing, we muſt leave it, except we will uſe a Ligature, or Plate of Lead, to keep it down.

As for an internal Aneuriſm, becauſe it hath no external Tumor, of which we ſpake, but produceth the Heart beating, we have ſhewed how it muſt be ordered, when we treated of Palpitation of Heart and Cachexy.

Tumors comming from Seed, as that which is Natural of the Belly in Women with Child, require nothing but good Government, to prevent Abortion or Miſcarriage, as ſhall be ſhewed in the Treatiſe of unſeaſonable Births.

The Cure of the Belly ſwollen with a Mole.

The tumors of a Womans Belly from a Mole, is to be mentioned in things caſt off, becauſe the cauſe is not to be certainly known, till the Mole is brought forth.

The Cure of tumors that are from the Birth.

The Cure of particular Tumors, is not here to be repeated, if they come from the Seed, at the Birth, as Sarcomata, Kernels, Struma's and the like, becauſe they are to be cured as thoſe.

CHAP. IV.

Of Defœdation or Defilement.

The Kinds.

UNder the Name of Defœdation, we underſtand thoſe Infections which defile the Body with many Diſeaſes. ſo that they are that infected with them, muſt leave the ſociety of ſound Men. Of this there are two Kinds principally, The one is old, called *Lues Elephantica* or Leproſie, the other new called the *Lues Venerea* or French Pox. The body is many waies defiled by them, with ſuch as are common to both, as tumors, puſtles, ulcers and falling of the Hair, and others that are proper to them in particular Pains, and Hindrance of Functions.

There are alſo other Infections, that have been firſt known our age, that defile the Body, and are proper to ſome Countreys, among which the Scurvey is moſt known, uſual in the *North*, of which we ſhall ſpeak here, leaving other Infections to them that know them.

The Leproſie called Elephantiaſis

It is called *Elephantiaſis*, from the Likeneſs of the Patient to an Elephant, his Ears growing thin and broad like wings; they are called Lepers, from the Roughneſs of their skin, and from their Lyon like looks, it is called *Leontiaſis*, and becauſe they are Lecherous *Satyriaſis*.

In this there are divers accidents, which are to be ſearched and deſcribed, becauſe they ſhew how it came, and they who have it, are to be examined by the command of the Magiſtrate, and ſeparated from the ſound, that we may judg rightly, and not miſtake as uſually, and offend either ſick or ſound. In regard I have been thirty years appointed, and have examined above ſix hundered ſuſpected of the ſame, I will faithfully declare, firſt the Diſeaſes they have, and then the Actions hurt, and examine the things caſt off, that we may know how to judg of the ſame.

The outward Infirmities, are chiefly in the Heads and Joynts, and the Searchers do ſcarce examine any other part, and yet give ſure Judgment. In the Joynts they examine the Hands, and Feet, Fingers, and Toes and Nails, and above the Knees to the Thighs, above the Elbow to the Shoulder; and in the Head they ſearch the Mouth, Eyes, Noſe, inſide and outſide, Face, Ears and Hair, Eye-brows, and Beard, and the tumors and ulcers there, to judg by them alone, or together.

There are oftentimes little tumors in the Leproſie from

the Face, and Joynts; in the Face, upon the Fore-head and Cheeks; and making them look wildly, which first discover the Disease, and are in the Arms, Backs of the Hands, and in the Feet and Thighs. These are moveable, and without pain, and are blewish, red, especially in the Face. like a cancerous Tumor. These Pustles be they in one or more places, fewer or more, do certainly declare an Elephantiasis; and if these appear not, you cannot judg directly, except other signs concur.

A general Cancer.

There are other Tumors, which are in the Mouth, the Palat and Jaws, more or fewer, yellow, blew, which are signs of the same; such as are in Hogs, and therefore in *Germany* they look in their Mouths, and if they find them, they will not eat of their flesh.

There are also Ulcers, especially between the Toes, and in the Soles of the Feet, in the thick skin there, and in the Hands, also in the Elbow, and other Joynts. These Ulcers pierce through the skin, and seldom go farther, but are broad, with hard, swollen Lips easily bleeding, like Carcinomata; and because the tumor is like a Cancer, and the Ulcer resembleth a cancerous Ulcer. This Elephantiasis is called an universal Cancer. Neither do the Ulcers feel any pain, nor the Tumor though they be molested; hence they are supposed to be void of feeling: besides these Ulcers creep, and being cured in one place, they break forth in another. From these alone rightly understood, we may determine the Leprosie, but surer, when the other agree. They who are infected, pretend they were burnt to take away suspicion, because they resemble the Scars of burnings. Experience shews that the Ulcers and Tumors in a Leprosie, want feeling. So *November* 22. 1625. a young Man of three and twenty years of age, being to be searched for a Leper, who was full of such tumors and Leprous Ulcers and signs, and therefore judged to be a Leper, I being brought in with many other Physitians (by my Father of pious Memory) to give censure, thrust a Needle into a Tumor on the outside of the right Arm, being high to the bottom, in the presence of them all, and the Patient being blind-fold, perceived it not.

There are Ulcers in the Nostrils, and they are worst which eate the spungy Bones thereof, and make the Nose fall off, and corrode on further, and eat through the Palat and Uvula, and the Jaws, and if they get down to the Wind-pipe do kill the Patient, as also when they are too corroding in the Nose.

Somtimes the Swelling of some parts declare the Leprosie, as the broad Gristle of the Ear growing thick, swollen or broad, as an Elephants, from whence it is called *Elephantiasis*. Also the Nostrils are dilated, which makes the Face very uncomely, especially when the Nose between them is flat, which also hinders breathing; also the other parts of the Face swell besides the tumors: as also the eye-brows, so that the red hangs out, and seems horridly. Also the Hands, and Feet are swollen, when the rest of the Body is lean.

If a skin be grown over the Eye, it is an Argument of the Leprosie, if other signs agree. And if it be in the larger corner grown thick, it gets over the Pupilla, and hinders the sight, as we shewed in the Hurt of sight.

Sometimes the skin of the Leper is rough in the Feet, Hands, Face and Ears, and also in the Head, and Eyebrows where are also Dandrough and Scabs, somewhile blew, or black, with little, or no itching. The skin is also cleft in some places, especially the Hands, and it is hard and scirrhous, the Nails are also cleft and bent; there is also a Scab dry and stinking, over the whol Body, which seems to pollute the whol Body more then an Elephantiasis, which is only in the Head and Joynts, and that called *Psora*, by the Greeks, is most desperate and taken for Elephantiasis; as we shewed in *Psora*, but being not the same, it must be distinguished. And the Greek Leprosie is not to be called the Arabian Leprosie, which is the Elephantiasis, except other more certain signs accompany it.

Also the hair falls off both from the Head which is bald, as also the Chin, so that the Beard is either fallen or very thin, and from the Eye-brows.

The strange colour may help the Discovery of this Disease which is not fresh, but pale, yellow, black and dark, especially the Face, and the Eyes are red or blew. Also if Veins under the Tongue are black and swollen; but this sign I have little regarded.

The Functions are not hurt at the first, wherefore they feeling no pain neglect their cure, till more manifest signs appear: And then they have defect in the Operations by the Increase of the Distempers mentioned, especially in breathing which is hindered by the stoppage of the Nose, so that they breath with open Mouth, and by Ulcers and Tumors in the Nose, so that their Voice is hoarse, and the Party grows in danger of being choaked, and so they many times die, when notwithstanding other accidents, they might live.

Also the Senses are hurt in the continuance of the Disease, as the sight with a filme in the Eye, which either hinders sight, or makes blind. Also the touching is so stupified, that the skin feels not any offense in the part, and therefore they try them, chiefly by the prick of a Needle. But Experience sheweth that is not always true, but only in the swollen Feet, which have long been so, and want Heat to be felt as if dead, this I have tried by pricking them to the bottom, neither did they bleed, but onely water. And this made them think that in all Leprosies there is want of feeling, or it was because the ulcers and tumors are without feeling: as we shewed, therefore they suppose all the Body insensible.

As for other Functions, except by the continuance of the Diseases the strength fail, they can perform any actions, as eat, concoct, digest as found Men, and if poor, they beg for Meat. Moreover, lust is not gone from them, because by many instances, they are proved wanton, and though they impute it to other causes, yet we suppose it to be from their being kept from their Wives. And they can procreate, as appears by their Wives left with Child, though they were Leprous long before, and also they beget leprous Children.

There is nothing voided which doth especially declare this Disease, though many Chyrurgions and Physitians say they may be known only by their blood, which the People believes, and therefore they bleed all they examine, and pronounce by the blood, as it is black, blew, or gravelly. Others strain it, and seek for worms, which they say is the true sign; others try the blood, thus they throw hot Salt into the blood, and if it dissolve not, or if Vinegar mix not with it, it is a true sign of the Leprosie. But we that have above thirty years, diligently searched into the Blood of Lepers, do plainly declare that neither we, nor our Chyrurgions could ever find any sign of Leprosie from the blood, but it was either like sound Men, or not much different corrupted or infected, or so bad as in a Feaver or Jaundies. And we declare the same concerning Urin, which the vulgar esteem so much of for discovery, as also of the Pulse, which hath no Alteration.

The Venereal Disease called by that name, because it comes from Venery, and because it is there frequent, and came from thence the Neapolitan Disease, or French Disease may be more truely called the Indian Disease, thence it came first, doth corrupt the body with as many accidents as the Elephantiasis, and makes it filthy, sick and uncomely. And in this there is great pain, and if it be alone, it is referred to the pains about the bones; but if it be mixed with other accidents, it is to be referred hither. And these accidents are to be diligently searched into, because it is infectious, and that it being known betimes, the unsound may be separated from the sound, for which end there are proper Hospitals. These accidents following are the chief.

The French Pox.

The Hair usually falls off in the French Pox, which is a sign, especially about the

One kind of French Pox.

Temples, Forehead and Eye-brows; and in men the beard falls, and this is a more certain ſign, if other accidents concur, albeit if there be no ſign of another Diſeaſe, it will be a ſign of the Pox alone; and alſo if they confeſs that they have had to do with unclean Women.

Another kind of French Pox. The skin is ſometimes ſprinkled with ſmall Spots, red and like Fleabits, or Freckles, dark, yellow, or blew in many places, in the Face, Neck, Breaſt, Belly, Privities, ſomtimes all over. And we have ſomtimes ſeen theſe Spots ſo joyned together, that the skin hath been broadly infected, eſpecially in the Breaſt and Back, and ſomtimes in the Belly, or other places, which being preſſed the ſtrange colour flew away, and the pit was white, and preſently returned to its former colour. Theſe Spots either alone, if we can diſcover no other cauſe thereof, beſides unclean Copulation, declare the beginning of the Pox, or ſome ſmall kind of it, as alſo the falling off of the Hair alone; or with other accidents they will be more certain, and ſhew the Diſeaſe to be worſe.

The third kind of french Pox. High Puſtles without pain, are ſomtimes in the skin, reddiſh, or yellowiſh, round, hard, and covered with a dry Scurfe in the Forehead, Ears, Noſtrils, Jaws, and in the Head; alſo in the Neck, Breaſt, Arms, and other parts: and theſe certainly declare the Pox.

Beſides, there are divers malignant Puſtles in the inward parts, the Mouth, Jaws, Noſtrils and Præpuce, or Foreskin of a mans Yard, and Womens Privities; theſe if many together, do certainly ſignifie the Pox, eſpecially if other ſigns went before, or come after. In children infected, theſe Puſtles in the Mouth, are the chief ſign of it.

There come alſo filthy Ulcers from the Puſtles mentioned in divers parts, yet chiefly in the tender parts of the skin, Face, Noſe, Lips, and about the Privities, and that cancer in the Præpuce or Fore-skin of the Yard, and thoſe in womens Privities, alſo in the Jawes, Mouth (as the little ſores called *Aphthæ*, or thruſh) Noſtrils, and in the Poſteriors.

Some of theſe creep on, and corrode the ſubject parts, and corrupt the bone, and bring hurt to the parts, either by Lameneſs or loſs of the ſame. Others disfigure the Face by eating off the Noſe; others corrode the Lips, ſo that they cannot drink, or ſup, which muſt be done by the lips, as I have ſeen. Others have eaten through the Palate, and conſumed the Vvula, whereby the voice hath been hoarſe, and they have ſpoken through the Noſe, and ſnuffled. Alſo theſe Ulcers corrupt the Glans, Nut or Head of the Yard, and makes them unfit for Venery: as we ſhewed in corroding Ulcers, ſuch as hinder Functions and Actions. By theſe, eſpecially if many together, and mix'd with other accidents, we certainly diſcover the French Pox.

The fourth kind of the French Pox. Pains about the Bones without fleſh, as in the Shins, Shoulders, Head, Fore-head, and Temples, ſomtimes in the Breaſt, which is only pained in this Diſeaſe. Theſe pains are great, and worſt towards night, and when they are touched, neither will they be aſſwaged with Anodines or Stupefactives as other parts, but worſe thereby. Theſe if without other ſigns, are to be referred to the pains in the Habit of the Body And if they be joyned with other accidents, they make a diſtinct Pox from the reſt, and it is eaſily known.

Beſides theſe, there are other accidents which are ſigns of the Pox, which being alone, (becauſe they may be alſo in other Diſeaſes,) cannot determine certainly, except after copulation with unclean Women, they cauſe a ſuſpicion. And then alſo we cannot undoubtedly pronounce it the Pox, except there be other ſigns, for before ever the pox was known, there were venereal Buboes or Swellings in the Groin, without Infection, that came by Copulation; and other accidents which we ſhall explain. And if they come from the Pox, there will preſently be other ſigns, as pain about the Bones, falling of Hair, Spots or Puſtles. Theſe following accidents, are both in the Pox, and in other diſeaſes, and are exactly deſcribed elſewhere, therefore we ſhall but touch upon them here.

The Swelling in the Groin called *Bubo venereus*, ſometimes breaks forth in the beginning, and vaniſheth preſently, or if it remain, it grows hard, or comes to matter, nor is it unlike that Bubo which is without the Pox.

Theſe are Swellings called *Condylomata* in the Privities of a Woman and of a Man alſo, which are alſo like thoſe that are without Infection.

There are clifts alſo in the Hands and Feet, and the skin in the Palm of the Hand, being thick, comes off without pain, as we ſhewed it may without the Pox.

It is obſerved that the Nails and Hair alſo fall off.

Somtimes there are Nodes or Knots in that kind of pox, which is about the bones with pain, in the Forehead, Shins and other parts without fleſh; as we ſhewed in pains about the Bones, which are without the Pox, and yet very like it.

Somtimes there is matter that flow from the Privities, both of Man and Woman, fouling their Linnen with a yellowiſh ſtain, which follows a venemous Matter or Seed, mentioned in the infectious or virulent Gonorrhæa, or running of the Reins, this is joyned with the Pox, and is ſomtimes without it.

There is alſo here a burning of Urine with dropping of the ſame, as in other Diſeaſes. As for the other accidents that hinder Actions, becauſe they come not of themſelves from this Diſeaſe, but by accident from other Cauſes and Diſeaſes, if they grow troubleſom, being general, and belonging to other Diſeaſes of continuance, and do not conſtitute the Pox, neither can we take any certain ſigns thereof from them, we willingly paſs them by. As we counted it alſo to be ſuperfluous to predict or foretel any thing hereof by the Urin or Blood being contrary to experience; and we think it fit to cheriſh the people in their Folly of ſuppoſing all things may be known by urin.

The Scurvey. The Scurvey is called by *Pliny* and *Strabo*, *Stomacace*, becauſe it is in the Mouth and *Scelurbe*, becauſe it is in the Shins with ſpots, and *Scorbeck* or *Schverbuych* in High Dutch. This being firſt found in the Northern Sea-coaſts and infectious, makes me ſuſpect that it was brought by the Sea-men from ſome remote part, as the French Pox was brought firſt into *Naples* being near the Sea from the *Indies*, and called firſt the Indian Pox; not unlike that which comes without Infections, for both infirm the Body, and hinder Action: as ſhall be ſhewed.

Theſe have Spots in their Thighs, firſt ſmall, then lying hid, of a purple or violet colour or black; others have black or blew skins all over, and ſomtimes in other parts, ſomtimes theſe Spots wear away with the skin like ſcales, ſomtimes they vaniſh ſuddenly afore death, and after death they appear again.

Their Gums are ſwollen and looſe, Itch, and are painful, and ſomtimes bloody. Alſo the Legs ſwell, or grow very ſmall, with ſmall Puſtles, which are hard in the Kernel parts of the Body, and between the Muſcles, and in other parts, ſomtimes without pain, like thoſe Tumors in the Glandles, and cauſe that Infection which is called by the French *Scrophula*, of which we have ſpoken.

Afterwards the Gums ulcerate and ſtink which infecteth the Breath, and when they are conſumed, the Roots of the Teeth lie bare, and they are looſe, as in the Cancer of the Gums, mentioned in the pains of the Mouth, where we mentioned the Scurvey of the Gums. There are Ulcers in the Shins, but ſeldom, theſe are putrid or ſtinking, and rotten, or gangrenous, and without feeling.

There is alſo a ſtretching, or a contraction, or a roughneſs in the Legs about the Calfes, which comes at the firſt with little pain, and pricking about the ſoles of the Feet, which keeps them from ſtanding or going: and ſomtimes the Veins of the Legs ſwell, and are crooked.

There is alſo Heavines and Lazineſs of Body at firſt, and the Pulſe is weak, then there follows ſuch a Weakneſs and

Straigthneſs

Straightneſs of Breaſt, that when he would ariſe and move he fainteth, and the Pulſe ſtops.

As for other ſigns, there is loſs of Appetite, or Increaſe in ſome. The Belly is bound in ſome, and looſe in others, the Urin red and thick, and the Sweat ſtinketh.

A gentle Feaver accompany's it, or an acute or ſharp malignant Feaver goes before it, ſometimes a quartan follows, and then the Pox returns after it, and brings worſe Diſeaſes, as Convulſions, Palſies and the like, in which it concludeth, as Atrophy, or want of nouriſhing, Conſumption, Dropſie, and bloody Flux &c.

The Cauſes.

We refer the Cauſes of theſe Infections which ſo diſturb the Body, whether it be the old Leproſie or latter Pox, or the Scurvey only known in ſome Motions and the like, not to a certain and manifeſt Quality, or Humor, or to Venom which lie by its Malignity, as appears by the Effect doth act ſecretly and deadly deſtructive. But we ſhall ſhew what parts of the Body they invade, and what Diſeaſes they produce therein, and from what Cauſe, in theſe ſeveral kinds following.

The Part affected in Elephantiaſis.

The Diſtemper comming from the Leproſie called *Elephantiaſis*, ſhews that only the Membranes are infected, and chiefly the skin, and ſome places thereof, eſpecially in which this Infection produceth the accidents mentioned, as little Tumors in the Face, and in the Hands and Feet, Ulcers in the skin of the Feet, Soles thereof, and between the Toes, the Swelling of the skin, in the Noſtrils, and Ears, and of the Face and other parts, and ſomtimes Roughneſs and Clefts in the ſame, and in the Nails, and the falling of the Hair: alſo the ſame Venom breeds Puſtles in the Palate, and Ulcers in the Tunicle or Skin of the Mouth, Jawes and Noſtrils, and thickneſs in the skin of the Eye, and at length a film. But in other parts, as the Muſcles, Bones, inward Bowels, and Veſſels, this poyſon cannot do the ſame, as is vulgarly thought, as appears by their having no other Diſeaſe that pierced ſo deep, when they are opened, and in regard no Functions are hurt, either in the voluntary Motion, or animal, vital or natural Actions, except there come another Diſeaſe, neither doth Urin, Blood, or other Excrements ſhew any Infection of the Bowels, as we ſhewed.

A venemous Diſtemper is the cauſe of Elephantiaſis.

The Diſeaſe which this Venom produceth, muſt alſo be a venemous Quality or Diſtemper in the skin, not only perverting the true temper thereof, but corrupting the whol ſubſtance, ſo that it converteth the Juyce with which it is nouriſhed, and ſupplyed when it is worn away, (although it be made from good Blood fit to nouriſh ſound parts) into the like evil ſubſtance, when it comes to it. Even as we ſhewed another venemous Quality produced a Cancer, and that evil Juyce nouriſhed and increaſed it. For as from this, a tumor only in one place, ſo from that are divers Puſtles and other Diſtempers. Therefore becauſe Elephantiaſis, and a general Cancer come from a like venemous Cauſe, producing divers Operations, that Elephantiaſis may be called a general Cancer, rather then that which infecteth the whol Body, becauſe it is not all over but in the skin, and ſome Tunicles.

The Cauſe from which this poyſon producing an evill Quality in the skin and tunicles, which is the ground of the Leproſie is divers.

Somtimes it comes from the Parents that were infected; ſomtimes from other Humors, or Cauſes in the Body. When this Venom comes from the Seed of the Parents, it cauſeth an hereditary Elephantiaſis, for Seed comming from the whol body, that which comes from the parts infected, is polluted, and when the Child is formed, the Venom makes an Impreſſion in the parts like thoſe from whence it came, as the skin and tunicle which it produceth. And it ſeldom appears preſently after the Child is born, but being tamed and qualified by the ſtrength of the purer part of Seed, it lieth hid ſomtimes, and is only in power, till that growing weak, this prevalent Venom breaks forth, into Act, ſomtimes ſooner, and then it is greater, and ſomtimes later, and then it is leſs, and ſhews it ſelf at that time of age, wherein it appeared firſt in the Parents. And it happens that lying hid in Children a long time it appears, ſometimes in their Children before it appears in them, ſo that the Children are free, and the Grand children infected. And though there be no certain ſign of it in the Parents, yet it may be derived to the Children, and be firſt manifeſt in them. As in a certain old Man that had no ſigns of a Leproſie, who had one Baſtard and two Legitimate Sons, which in their Youth were wonderfully infected, and yet three Daughters begotten by the ſame Man were free from it all their lives: this we ſaw. And it was credible from the polluted Seed of the Father, not yet appearing in him, upon the Sons; and the Daughters eſcaped by the purity of the Seed of the Mother. Although God ſometimes inflicts this as a Puniſhment with that means.

It is a received Opinion that one Body will infect another, and therefore they are ſeparated one from the other, and it appears to be ſo, becauſe the Infection being in the external parts and skin only, nay by touching or lying together, eſpecially in Mariage, may eaſily be conveighed to the skin of another; or by the uſe of the ſame Cups or Spoons, or taking in of meat, which the infected have chewed, it may get firſt into the Mouth, and then into other parts. As we ſhewed the venom of the Pox, and of beaſts, could infect by ſpettle. And they are ſooneſt infected that are of a like temper, as thoſe of a Kindred, as we have upon ſearch found two or three Brethren infected in the ſame Family. Or they have ſome capacity to receive it, which we can ſcarce declare; but it is ſuch, becauſe when many have been together in the ſame danger, onely one or two have been infected

Alſo they ſay that other Creatures infected therewith, may infect Man-kind; for although Beaſts have ſomwhat like the Leproſie, as tumors in the Jawes in Hogs, yet becauſe it is not every way the ſame, neither have they other ſigns of it, as men have, it is either not the Leproſie, or another kind, and will infect only beaſts of their own kind and not men. Alſo we daily find by Experience, that poor people eat daily meazled Hogs, and yet have no ſigns of Leproſie.

I have obſerved that a Woman with Child that longed for meazled Pork and eat much of it, brought forth a Son who had meazly Puſtles all along his Back-bone, very like thoſe of Swine ſpread abroad, continuing a while and then vaniſhing without any other inconvenience. We ſhall affirm little, but leave it to every Mans Experience, whether from the biting or ſtinging of venemous beaſts, or touching only of Venom, or drinking or ſmelling, as they ſay of baſil, this Leproſie can come or not, although the people have divers Opinions thereof.

It appears this Infection may come from Humors very often, becauſe many Leprous Perſons have not taken it by Infection, and we ſee often them that have converſed long with Lepers, and been married to them, to have remained ſound. Therefore becauſe we cannot perceive any other Cauſe from whence it ſhould ariſe, we conclude that it comes from within. Moreover we cannot ſay that theſe Humors from whence the venemous Quality comes into the parts, ariſe from Diſtemper or Corruption, as is generally beleeved, becauſe they produce no other Diſeaſes or accidents, or ſigns of the ſame, which uſe to ariſe from the change of Humors in that manner: but that a certain venemous Quality produceth a Diſeaſe like it ſelf. And this may be bred in the Blood, and with that property by which it can onely hurt ſome places, according to the Nature of poyſon,

poyſon, it hurts only the skin and Tunicles only and no other part. For the doing of which, and that its force may come to the Superficies of the Body, it is not needful that all the blood be corrupted, for then it would kill the Party, but ſome part thereof. Or if this poyſon being againſt Nature, be driven to the exteriour parts by it, the Cauſe with its Effect produced will ſtick there, only where the Infection brake forth, and no longer be in the Blood, although it came originally from thence, and ſo corrupt the ſubſtance of the parts, and that will corrupt the nouriſhing Juyce; as I ſhewed, and ſo cauſe, and nouriſh an Elephantiaſis. Theſe venemous Seeds in the Blood, except the Blood be firſt infected, and then the parts of the Body from it, may come from ſome Corruption in the ſame; or Putrefaction, in which the blood may be turned into Venom. as in other poyſons, whereof we have ſpoken in other Diſeaſes, among which as ſome are ſaid to come from the Terms, which are accounted venemous, ſo they ſay the Elephantiaſis comes alſo, not only in a Woman, when her Courſes are ſtopped, but in a Man by Infection, when he hath had to do with a menſtrous Woman, or in a Child conceived at that time. All which come not from the menſtrual Blood, becauſe it is not of its own Nature in ſound women, filthy. as we ſhewed, except that it or other blood, for other Cauſes contract ſuch evil as may produce the venemous Seeds of an Elephantiaſis. And it is hard to judg by bleeding, whether it comes from meat or a Diſeaſe afore going, or what kind of Venom it is but by the effect.

In the Cauſe of the Elephantiaſis begin other Humors, as Melancholy (as ſome think it is) or any other, and if it proceed not from its certain quality (though hurtful) or if it be Naturally in Humors preternatural, or become ſuch from Corruption; becauſe other Diſeaſes come from thence, which are not found in an Elephantiaſis, but then alſo it wil come from the corruption of them, from whence theſe Humors receive a venemous and malignant Quality fit to produce an Elephantiaſis, they will produce it, that as we ſhewed of Blood by driving it the outward parts of the body, and by infecting them.

It is thought that this Leproſie is contracted by extream Cold external of the Body, when men have been long in Water, Air, or Snow, or after vehement Heat, as bathing they endure a great cold, or when they cool a hot Tumor, as Eryſipelas too ſuddenly. But becauſe other accidents come from thence, as when there is extream cooling, the extinguiſhing of Natural Heat and Mortification of the part, we cannot make this a cauſe of the divers accidents in this Leproſie.

Nor can we affirm that other Tumors and Ulcers in theſe outward parts, can be turned into this Diſeaſe, although many think it to be poſſible in an Eryſipelas and Herpes, becauſe when they are changed into a malignant Scab, which the Greeks call a Leproſie, they take it for a kind of Elephantiaſis, from which it differs, as I ſhewed. And if any external Diſeaſes ſhould turn into this, the Humors that cauſed them, muſt firſt of Neceſſity turn into a venemous Quality by Corruption.

The part affected in the French Pox.

In the French Pox, that Venom which produceth it, is chiefly in the Membranes which cauſeth Diſeaſes there and Pain, as we ſhewed. As pains about the Periostium, or Skin, or Bone, where there is no fleſh in the Head, Shins, Breaſt, and Nodes in ſome places. But the Elephantiaſis chiefly in the skin, the mouth Jawes, Noſtrils, cauſeth the Hair to fall, Spots, Ulcers &c.

An evil quality is the cauſe of the French Pox.

The Diſeaſe of the French Pox is a Diſtemper of theſe parts, and ſuch a venemous quality, as is fit not only to produce ſuch accidents as are in the Elephantiaſis but more, and great pains; as appears by what is ſaid in Elephantiaſis, and in the ſecond Book of the Pox.

Where we have at large declared, where and how this Venom comming of a venemous Cauſe, can by contagion by the Copulation of Male and Fœmale, or other touching, or by Spettle, or by a Vapor or Humor, be carried into the Membranes and infect them, and bring forth the accidents mentioned, ſo that we ſhall not need to repeat it here.

A malignant quality is the cauſe of the Scurvey.

Alſo in the Scurvey, a certain ſecret poyſon which produceth a venemous Quality breeds the like Diſeaſe, as appears by the Diverſity and the Malignity of the accidents thereof, which are alſo in the skin, as Spots in the Legs, Puſtles, and Ulcers, Swelling of the Gums, and other inconveniencies. And we rather determine this to be the cauſe, then a melancholick Humor, to which it is attributed by ſome, that they may not flie to an occult Cauſe, as in other Diſeaſes, whoſe Malignity ſhews them to come from Venom. And I had rather leave it to the Inhabitants of thoſe parts, where the Scurvey is moſt to judge whence this Venom aroſe, and got into the Body, and whether it came by Sea into the North as the French Pox; then ſearch into the Cauſes of Venom which are hard to find out, and not to be known but by their Effect.

The Cure.

The Cure of Elephantiaſis.

Elephantiaſis, although it be onely in ſome parts of the skin, yet is it hardly prevented at firſt, and cured when old, eſpecially when hereditary. Nor have we found them that cure it, though they brag when they cured only an Itch, as if they had cured a Leproſie. Yet it is not to be neglected, but at firſt oppoſed by all means, that if it be not cured, it may be allayed. And we muſt remove the accidents as they come forth, becauſe without them the Patient may live long. And becauſe they cauſe great Deformity, that they may be leſs ſuſpected when they keep men company, there may be a palliative Cure: which great Men do intreat from Phyſitians with great promiſes.

The Cure is two wayes, firſt generally of the whole Diſeaſe, the ſecond particularly of the accidents.

The general Cure, is to labor as much as may be to take away the poyſon which is the cauſe, with Evacuations, and to correct the venemous Quality. But becauſe as yet the Medicines are not found out which do it by a peculiar vertu, as in the French Pox, and we cannot proceed that way, the beſt way is to take away the accidents. And therefore it muſt be done as the venemous Itch, and the evil Spots, Puſtles, and malignant Ulcers are cured, by the means following.

You muſt purge as you find the Body abound in Excrements; and becauſe you cannot purge Venom, yet purge Melancholy, and uſe things to abate it, ſuch as allay the ſharpneſs with Moiſtneſs and Cold. Thoſe which are good againſt al ſalt cholerick humors, as the Scab and Pox are here alſo good, with which you may purge twice or thrice every Spring and fall, to prevent evil, and other times, if the Body be foul.

Firſt uſe gentle things for the common Excrements, as a ſharp Clyſter, mentioned in divers places, in the Cure of Melancholy.

Or give Caſſia, Catholicon, Tryphera perſica, or Saracenica, or Diaſena, with convenient Waters, or Decoction of Peaſe, or Goats Whey.

Or, Take *Rhubarb infuſed in Endive water, or Whey one dram or four ſcruples, Syrup of Roſes ſolutive one ounce and an half, Caſſia, Catholicon, or Tryphera perſica half an ounce, with Bugloſs and Fumitory water*; make a Potion.

And that the Excrements may abate, give a Vomit inſtead of that Potion, if it hath been uſed, weaker or ſtronger of Hellebore.

Prepare afore purging with Syrups of Violets, Fumitory, Bugloſs, Endive, the compound Syrup of Fumitory, of water-lillies, Gourds diſſolved with Fumitory, Hops, Bugloſs, Endive,

Endive, Succory, and Sorrel-water, &c. and a little Trionſantalon.

Or with this Decoction: Take *both Bugloſſes with the Roots two handfuls, Graſs roots, Sparagus, Liquoriſh, each two ounces; Capar barks, and Tamariſk, each one ounce; of Endive, Succory, Lettice, Maiden-hair, each one handful; Cordial flowers, red Peaſe, each one pugil; the four great cold Seeds ſix drams, Aniſe-ſeed two drams, Raiſons two ounces;* make *a Decoction and in two pints and an half of it, diſſolve of the Syrup aforeſaid* as much as is ſufficient, *or Sugar, with Trionſantalon: for five or ſix doſes.*

Or this Julep mentioned in the preparing of Melancholy, which begins thus. Take *Syrup of Violets, Borage &c.* Or thus: Take *Juyce of Bugloſs, and ſweet ſented Apples,* or the Decoction that begins thus: Take *of both Bugloſs-roots &c.*

We purge with this after Preparation. Take *Rhubarb infuſed in Endive water one dram, Agarick infuſed in ſyrup of Roſes ſolutive, two ſcruples, Confectio Hamech, or Diaſenna three drams, Syrup of Violets one ounce and an half, diſſolve it with Fumitory, or Hop-water.*

Or give this Bole. Take *Catholicon half an ounce, Confectio Hamech two drams, de Succo Roſarum, one dram, with Sugar,* make *a Bolus.*

Or this Potion. Take *the Herbs and Roots of both Bugloſſes, or Succory, or Endive, Fumitory, Hops, each half an handful; Endive, Purſlain, Melon, and Citron ſeeds, each half a dram; Aniſe ſeeds one dram, Cordial flowers one pugil, Raiſons one ounce, Prunes five pares, pulp of Tamarinds half an ounce, Liquoriſh, and Polypody, each one ounce; Senna ſix drams, Epithymum two drams, with ſome convenient Liquor and Sugar* make a Potion, you may add *Myrobalans, Rhubarb, diſſolve Electuaryes therein.*

Inſtead of theſe, you may give the purges mentioned in Melancholy, as that which begins thus. Take *Chatholicon one ounce, &c.* Or thus, Take *Senna, Polypody &c. or the Pills there mentioned.*

We prepare and purge with this Apozeme. Take *Graſs roots, Aſparagus, Butchers-broom, barks of Capar roots, Aſh, and Tamariſk, each two ounces:* mix them *with ſharp Wine,* or adding *a little Vinegar, take the Roots of Liquoriſh three ounces, of Elicampane one ounce, the Herbs and Roots of both Bugloſſes, Succory, Sorrel, Docks, each one handful; Fumitory, Hops, Mercury, Scabious, the Capillars, each two handfuls; Endive, Lyons-tooth, Lettice, Liverwort, Bucks meat, each one handful; Betony, Thyme, Tops of Roſemary, Groundpine, Germander, each half a handful; Cordial flowers, Broom, Tamariſk, and Water-lillies, each one pugil; the four leſſer cold Seeds half an ounce, Sorrel ſeed two drams, Aniſe ſeed three drams, Fennel ſeed two drams, red Peaſe one pugil, Jujubs and Sebeſtens, each five pairs; Tamarinds one ounce, Polypody of the Oak four ounces, Senna three ounces, Carthamus ſeeds bruiſed one ounce and an half, Epithymum ſix drams:* boyl them all *in Water, with the Roots,* and their Infuſion as was ſaid, adding *as much Sugar as is ſufficient, with a little Sanders, cinnamon or Powder of the three Sanders, or Diamargariton frigidum. For five or ſix doſes.*

Let purges be given by turnes, ſome daies together, or once or twice in three or four daies, as the Body aboundeth with Excrements.

Syrups for this purpoſe will keep longer; made of the Apozeme before mentioned, that purgeth and prepareth, of Roots, Herbs, Flowers, Fruits, and Seeds, adding *two ounces of Tamarinds, ſix ounces of Polypody, Senna four ounces and an half, Carthamus ſeeds bruiſed three ounces, Epithymum one ounce, black Hellebore half an ounce, boyled in Water, and ſtrained,* adding *Citron, and Indian Myrobalans rubb'd with Oyl of ſweet Almonds, each three drams, Rhubarb half an ounce, Spike half a dram, Cinnamon one dram, Agarick five drams,* ſtrain it, and add *Syrup of Roſes ſolutive four ounces, Sugar half a pound:* boyl them to the conſiſtance of a Syrup, you may give it alone, or with Peaſe Broath, or Whey or the Decoction of pot Mercury, or with proper Waters.

A Syrup of Juyces: Take *Roots of Polypody, Liquoriſh, each three ounces; Senna four ounces, Carthamus ſeeds bruiſed two ounces and an half, Epithymum ſix drams, Tamarinds two ounces, Raiſons one ounce, Aniſe ſeeds two drams:* boyl them *in Goats Milk Whey, take two pints of it ſtrained,* and add *the Juyce of Fumitory, Hops, Bugloſs, Scabious, Docks, each three ounces;* boyl them again, and skum them, then add *Sugar half a pound,* boyl it to a conſiſtance, and add *a little Cinnamon, and Sanders;* if the Juyce of pot Mercury be added, it will be better.

The Infuſion or Decoction of Hellebore to take away the ſharpneſs, is thus made. There is a Decoction made of Endive, Succory, and both Bugloſſes in Water, and in ſix pints thereof ſtrained, they infuſe one ounce and an half of the Roots of black Hellebore ſliced, and after ſteeping a while, they boyl it till two parts be conſumed, and of the third part, they give four ounces, with half an ounce of ſyrup of Violets for ſome daies together.

Two drams of the Pouder of Epithymum, with Whey is given for a month together every morning, it will work better, if one dram of the Pouder of Senna be mixed with a dram of Epithymum, and half a dram of Tartar, and one dram of Sugar Candy with Whey; to which you may add Turbith, and ſome Spices, and this is better then the pouder Diaſena.

A pleaſant laxative Electuary. Take *Pulp of Tamarinds one ounce and an half, Pulp of Caſſia two ounces and an half, Pulp of Raiſons, and ſweet Prunes, thick Juyce of ſweet Apples, each one ounce; ſyrup of Violets, and Roſes ſolutive each one ounce and an half; Diagridium two drams, pounder them with half an ounce of ſugar candy, Turbith three drams, the pouder of Liquoriſh, and Cinnamon, each one dram and an half,* make an Electuary, give two drams at firſt for tryal, and after more or leſs, as it worketh.

It will have more taſt like a Medicine, if you leave out Diagridium and Turbith, and mix with the Pulps Catholicon, Trypherа, Syrup of Roſes ſolutive, with infuſion of Rhubarb, or the Pouder of Rhubarb and Senna, or the ſtronger purging Electuaries, as that of the Juyce of Roſes, Hamech, Diaſenna, de Citro.

The Purges mentioned in the Cure of Melancholy are here proper, as that Apozeme or Syrup of Juyces, or the Wine, or the Electuary: alſo the Pouder.

Alſo theſe mentioned in the cure of the malignant ſcab, as the Whey with other Ingredients, alſo the Syrups and purging Decoctions, that Syrup of Juyces, the purging Wines, and chiefly the Decoction of Hellebore, and other Potions, Electuaries and Pills, there mentioned.

Alſo many purges mentioned in the French Pox, eſpecially from the abundance of ſharp Humors.

After purging ſtrengthen the Bowels, with Conſerve of Roſes, both the Bugloſſes, Succory, Violets, Maidenhair, Water-lillies, or Diarrhodon, Trionſantalon, Diamargariton, or Treacle, or with Conſerve of Bugloſs.

Before purging they uſe to let blood ſpring and fall, to make a general Evacuation, but the Seeds of this Infection cannot be taken away thereby, in regard the blood in the Veins is not infected; as we ſhewed, and therefore it ought not to be. They bleed firſt in the Arm, and when the Body is full, ſome daies after in the Hand and Foot, and the common people think often bleeding prevents it; but the Body being conſumed thereby, the Infection will come ſooner and more. Therefore they are too raſh, who when they examine this Diſeaſe let Blood for tryal of it to ſatisfie the vulgar.

They alſo think Scarification every month, upon the Shoulders and Legs, with Cupping-glaſſes, is very good, and alſo Horſleeches.

It is profitable to provoke the Terms if they be ſtopped, by opening the Ankle Vein or the like.

It is excellent to open the Hæmorrhoids with Horſeleeches and the like.

Somtimes we burn with actual and potential Cauteries as the laſt Remedy, not only in the Arms and Legs which is moſt uſual, but in the Head.

The Antients adviſed Men to be gelt when they were deſperate and paſt other Cure, and that to change the temper of the whol Body, making them effœminate, and of another Conſtitution. And this they did with leſs difficulty, becauſe Lepers were forbidden Copulation, leaſt others ſhould be infected thereby: and taking away of Man-hood did then no hurt, but cauſed their Cure.

We alter their Conſtitutions, to bring them to a better, but when there is no manifeſt Diſtemper, you cannot adminiſter contrary things certainly: but for the moſt part we give thoſe that prevent ſharp Humors and aſſwage them; Moreover, ſeeing they have a Drineſs and Conſumption, we give things to moiſten and refreſh and reſtore, ſuch as are mentioned in the Hectick Feaver, and theſe following.

Let them live in pure Air, not hot but temperate, and far from them of the like Diſeaſe.

Let the Meat be of good Nouriſhment, of young Creatures, Broaths, Eggs, Milk, pot Herbs, Fruits that moiſten and are temperate, as in Hecticks and Conſumptions.

The fleſh of Frogs, Cray-fiſh, Sea and Land Turtle, are good here, as in Hecticks.

Let the Drink be Wine not too ſtrong, or with too much water; ſomtimes Goats milk, and the Decoctions preſcribed for Hecticks.

There are Medicines that cool and moiſten, and temper ſharp Humors, mentioned in the Cure of external Diſeaſes, which you may uſe here, and the Syrups, Waters, Confections, and Conſerves preſcribed for a Hectick Feaver.

Among the reſt this Electuary is moſt proper. Take *conſerve of Bugloſs flowers one ounce and an half, of Succory, Violets, Water-lilly, and Roſe flowers, each one ounce; of Maiden-hair, and Roſemary flowers, each half an ounce; candied Bugloſs roots one ounce, of Trionſantalon, or Diarrhodon, Diamargariton frigidum, each half a dram, of the Troches of Camphire one dram, with Syrup of ſweet ſented Apples:* make an Electuary.

Let him drink after it Fumitory, Bugloſs, or Endive-water, &c.

Many other Medicines for the Liver and Spleen, which are thought to be the cauſe of this Infection may be given, and to be applied outwardly, mentioned in the hot Diſtemper and Obſtruction of the ſame: but except we are certain that the Liver and Spleen are diſtempered, they are given in vain.

There are Antidotes which have a proper Vertue againſt Leproſies, as theſe following.

Vipers fleſh (many waies taken) is held beſt, and they ſay the fleſh of other Serpents, as thoſe which the Germans call *Blindenſleich* or blind Vipers, theſe take off the skin and the faults thereof; becauſe theſe Serpents caſt their skins every year, therefore they ſuppoſe they may cauſe man to do the ſame.

This Vipers fleſh is given divers waies prepared, ſometimes boiled in Broath with Salt, and Eels their skin ſtript off, or peeled off by boyling, their Heads and Tayls cut off and Guts taken out: and ſo, if you perſwade them to eat Eels, they will leſs disdain the Food; you may alſo boyl them, and mince them otherwaies, that they may not be known; ſome report that by the uſe of theſe, the skin of the Leper hath peel'd off in divers polluted places.

The Broath ſometimes is ſufficient in which theſe have boiled, or they eat it with the fleſh, in which you may boil Salt, Aniſe ſeed and Dill, others add Mints and Leeks.

A Syrup made of this Viper Broath, with Sugar and cinnamon, will laſt longer.

Some ſay that if you fat Hens with Vipers fleſh till their feathers fall off, and then boyl them, and eat them, they will do the ſame.

Some give Wine in which Vipers have died.

Alſo the fleſh of Vipers is dried and made into Troches to be kept, when Vipers cannot be had. They take the fleſh only without the skin, Head, Tayl and Guts, and boil it with Dill and Salt, then beat it, and with the Broath make it into a paſte, with Wheat-bread the fourth part, and ſo make it into Balls, and dry them. Theſe are called the Troches of Vipers.

Theſe troches are ſeldom uſed by themſelves, but with Conſerves, ſuch as are mentioned in the Electuary above, and if you add one dram of the troches to that Electuary or more, it will be better. Theſe troches are in treacle, to to reſiſt Venom, and therefore it is good againſt the Leproſie.

As the Vipers caſt their skins, ſo the Cray-fiſh caſt their ſhells every year, and therefore are thought of as much vertue as vipers; they have a refreſhing and reſtorative vertue, *Dioſcorides* gives the fleſh of Hedghogs dryed and roaſted, and Salamanders with other Medicines, and if they can do any thing, it is by a propriety.

Some Hiſtories if not Fables, ſay that mans blood taken when he is newly ſlain, and drunk is good, and alſo a water diſtilled thereof, ſome ſay Harts horn, and Ivory is good againſt Leproſies, as well as other poyſons, and great Men have Vnicornes horn at a dear rate for that purpoſe.

Some magnifie the Pouder of an Emrald.

The Chymiſts promiſe the perfect Cure of the Leproſie by the uſe of *Aurum potabile*, of high tincture, of Antimony, the true tincture of Coral, with proper Purgers, among which they extol the ſecret of Coral, Mercurius dulcis, Antimonial Pills that purge onely by ſtool. The famous Dr. *Hartman* in chymical Practiſe, commends the uſe of the ſweet Eſſence of Sulphur, Vitriol, for the Cure of the Leproſie.

The outward means uſed in a general Leproſie, are baths, to take away the Venom in the skin, by often uſe of them to prevent and cure the Leproſie, or at leaſt to take away the Deformity of the Ulcers, Nodes, and Roughneſs of the skin. Theſe are Natural or Artificial.

The Natural Baths are of ſweet Waters warmed, uſed at certain times, the Body being well purged before and after, Spring and Fall before and after Dinner, ſitting in them, uſing them till the skin flouriſh, and grow ſound, and theſe take away the malignant cauſe that lyes in the skin.

Hot Natural Baths are ſtronger, eſpecially of Brimſtone, ſuch as are in *Helvetia, Argovia, Valeſia*, and Bath in *Summerſet-ſhire*, which as they cure all ſorts of Scabs, ſo the Leproſie, or take away its Malignity, and at leaſt abate all accidents, if not take them away, if they be long uſed. And therefore they go to the Baths to conceale the Leproſie, and we ſend them thither after Examination, when we doubt to ſee what change will follow.

Moſt artificial Baths, are to be uſed long, and they muſt ſit in them, they are of Water and things that cleanſe and make thin the skin, and ſo conſume the evil Juyce, as roots and Leaves of Marſh-mallows, Docks, Dwarfe-elder, Elicampane, Roots of Dragons, wild Cowcumbers, Briony, Sowbread, Orris, Raddiſh, Bath, Hellebore, Lillies; alſo Leaves and Roots of Mallows, Bugloſs, Succory, Endive, Sowthiſtle, Beets. Alſo Wormwood, Senna, Fumitory, Hops, Scabious, Sopewort, Pellitory, Violets, Liverwort, Duck-meat, Groundſel, Sorrel, Agrimony, Mugwort, Plantane, Golden-locks, both Ivyes, both Celandines, Water-lillies, Tamariſk, Flowers of Chamomil, Melilot, Elder; alſo Beans and other Pulſe, Bran, Line-ſeed, Fœnugreek, and all Guords.

They add to theſe Salt, Brimſtone and Allum, when the Decoction is not ſtrong.

Others are added for the Joynts, Primroſe, Groundpine, alſo Calaminth, Roſemary, Lavender, and the five opening Roots.

Theſe moiſt Baths which were mentioned for the malignant Scab or Itch are not unlike theſe, and that is beſt, which hath Chalk or Lime in them. And the Decoctions to take away ſpots, may be good here for a Bath.

Some Hiſtories ſay that a bath of Mans blood hath been uſed to ſit in with ſucceſs.

Dry

Dry Baths in hot Houſes, becauſe they too much inflame the Body, and violently draw the Humors to the ſuperficies of the body, are not ſo commended, but we may prepare the body for the moiſt Bath by the ſteam thereof.

There are Waſhes for the parts affected, with Puſtles, Ulcers, and Roughneſs of the skin, to take away (if poſſible) the Malignity.

They are made of Cleanſers and Dryers, and ſuch as have a propriety, as Serpents and Vipers. The Greaſe of Vipers, they ſay, will take off the skin and its faults, as well as the fleſh eaten; alſo the Oyl wherein their fleſh was boiled, or a quick Viper drowned, ſome mix the fleſh boiled, with Oyntments.

Make this Oyntment of the aforeſaid. Take *the Roots of Dragons, and Cookow-pintles, Daffodil, or Lillies, Elcampane, Beets, Saffron, each one pound*; beat them *with Oyl of Roſes Omphacine*, add *half a pound of Unguentum Citrinum, Vipers Greaſe three ounces, Turpentine half an ounce, Oyl of Wheat, or Yolks of Eggs one ounce and an half, Oyl of Tartar two ounces, Sulphur vivum, Niter, each three drams; Lytharge, or Ceruſs half an ounce, burnt Borax ſix drams, Tutty prepared, Sarcocol, Frankincenſe, each two drams; the Mucilage of Line-ſeed two ounces, Juyce of Docks, Fumitory, Lemmons, each three ounces*; make them into an Oyntment, for rough, ulcerated and puſtuled.

Or thus: Take *Juyce of Lemmons, or Oranges, or Citrons, of Docks, Fumitory, Scabious, Elicampane, one pint, Vinegar two ounces, Aqua vitæ one ounce, Oyl of Roſes Omphacine, Myrtles, or Maſtick, each four ounces and an half*; boyl them till the Juyces be conſumed, adding *Oyl of Yolks of Eggs, two ounces, of Tartar one ounce and an half, French Soape, two ounces, Vipers Greaſe four ounces, Pomatum two ounces, the Gall of a Bull or Goat half an ounce, the Mucilage of Fleabane, or Line-ſeed two drams, Honey one ounce and an half, Roots of Dragons, wild Cowcumbers, Sowbread, Orris, each three drams; both Helebors two drams, Staphiſagre, Raddiſh ſeed, each one dram; and Borax and Tartar burnt, each half an ounce; Quick-brimſtone three drams, Cuttlebone two drams, Snails burnt to Aſhes, one dram, Camphire one dram and an half, Lytharge, Tutty and Ceruſs, each one dram and an half*; mix them well for a Liniment.

To theſe may be added Oyl of Bread Corn, of Raddiſh ſeed, of Vipers, Juyce, of Sowbread, and Niter.

Alſo Quick-ſilver may be added, which though it doth not deſtroy the Venom, either in Leproſie or French Pox, yet it taketh away the accidents in the skin, uſe it not in quantity, as you do in the Pox, eſpecially if you anoint all over, leaſt it cauſe ſpitting, becauſe it will not cure an Elephantiaſis, apply it onely where the accidents are in the particular parts: one ounce with the former Oyntments is enough, if it be uſed all over.

Or make this Liniment therewith. Take *Unguentum Citrinum four ounces, Oyl of Eggs one ounce, Oyl of Tartar half an ounce, Quick-ſilver diſſolved with Turpentine, and the oyntment preſcribed formerly, half an ounce, Juyce of Lemmons, or Oranges two ounces and an half, Borax two drams, Roots of dragons, Docks, Daffodil, Lillies roaſted and beaten, and mixed with the aforeſaid two ounces.*

Treacle of Andromachus, and Oyl of Juniper added to theſe Oyntments, will much increaſe their vertue.

Particular Applications are only to the parts affected, to take away Deformity, though they cannot cure. And they are uſed to the Puſtles and Ulcers external, to diminiſh or take away, or to correct them, as the falling of the Hair; but we muſt uſe them chiefly to internal, leaſt they produce worſe accidents, as in Puſtles and Ulcers internal, mentioned in difficulty of breathing.

Medicines are applied outwardly to Puſtles, in the Face and other parts, and they are of dryers and cleanſers, or Cauſticks that is burners. As we ſhewed the blackneſs of the skin, in the Diſcourſe of Pains and Spots, Puſtles, and Freckles: which Remedies may be uſed here, either gentle ſtrong, or burning, when Puſtles are to be taken off. Theſe are applied in divers formes.

Diſtilled Waters are uſed for the Face, of things that corrode not.

As this. Take *Brimſtone ſix ounces, Tartar calcined, two ounces, Sal Niter, Cryſtal calcined, each one ounce; Frankincenſe, Myrrh, each three drams; Camphire one dram, Juyce of Docks four ounces, Juyce of Lemmons two ounces, Roſe, Beanflowers, Lilly flower, or Plantane water one pinte*: diſtil them.

Another Water. Take *Tartar calcined four ounces, Borax half an ounce, Frankincenſe, or Maſtick two drams, ſugar candy one ounce, Camphire one dram*; pouder them, and mix them *with Mucilage of Fleabane, or of Gum Traganth in Bean-flower water, or Water-lillies, ſix ounces, three Whites of Eggs beaten, Juyce of Lemmons, or Oranges two or three ounces*: diſtil them in an Alembeck.

Other Waters mentioned in Diſcoloration, which have Urine, Tartar, and Sublimate are here good; and thoſe for a red Face, for Lytharge, and Tartar and the like, and thoſe for Spots made of Tartar.

A white Liquor for the Face, like Virgins Milk: Take *Lytharge one ounce and an half, Vinegar ſix ounces, Juyce of Lemmons or Oranges two ounces, Allum, or Sal Gem. two drams, Tartar calcined half an ounce, Camphire one ſcruple*: ſteep them, and ſtir them often, or boyl them a little, if you muſt uſe them preſently.

Or boyl in ſtrong white Vinegar, equal parts of Sulphur, Niter and Cryſtal finely poudered, and waſh the face with it ſtrained.

There are others mentioned in a red Face, and in Diſcoloration of Brimſtone, and Milk, and Lytharge; alſo Lac virginis, or Virgins Milk ſo called.

There are divers Oyntments for the parts, mentioned in Diſcoloration, as Unguentum citrinum for the Face, and in a red Face and other Spots, made of Juyce of Plants, of Oyl of Eggs, Tartar, and Hellebore, of the Blood of an hare and Galls, eſpecially of a wild Goat approved by *Dioſcorides*, alſo Oyl of a Lizard.

Another Oyntment excellent againſt puſtles. Take *aloes three drams, Aſarum roots one dram, both Hellebors, each half a dram, Staphiſagre one ſcruple, Coloquintida half a ſcruple, with Bulls gall*, make an Oyntment for the Face.

Oyntments made of Quick-ſilver, mentioned in Diſcoloration, and in the French Pox, are good here.

Some extol this, ſteep two or three Eggs a long time in ſtrong Vinegar, till the ſhell be conſumed, then beat them with the fourth part of Vinegar, and add Frankincenſe, for the Face; and it is ſtronger with black Soap.

The Cauſticks againſt puſtles, made of Sublimate for the moſt part, are mentioned in the Cure of Spots in Diſcoloration. Alſo Cauteries, theſe we may uſe in the Elephantiaſis.

Or this: Take *Unguentum Citrinum, Oyl of Tartar, each half an ounce; Juyce of Lemmons one ounce, ſublimate half a dram, Vipers or Hens greaſe half an ounce*: make a Liniment for the Face.

Some gather the Worms that breed in a Viper that is buried, and dry them, and mix them with Cantharides, and ſharp Vinegar to an Oyntment.

To waſh off the Oyntments and other things, take a decoction of Bran, and Beans ſhaled, Peaſe, Rice, Barley, Lupines bruiſed, not in Meal, leaſt it turns to a paſt in boyling, adding the Flowers of Beans, Water-lillies, and an Orange cut in pieces.

Or waſh with Bean-flower-water, or the Decoctions mentioned for a red Face.

In outward creeping hard Ulcers, many mentioned for puſtles are good; and theſe in pains, for malignant ulcces, are here good.

We ſpake of Medicines againſt falling of the Hair, in deformation.

In the internal puſtles of the Noſe, Palate, Jawes, we uſe thoſe mentioned for other Ulcers, and when the Vvula is eaten off, and there is Hoarſneſs, as we ſhewed.

Alſo we give things mentioned in ſhortneſs of Breath and Hoarſneſs, and if the Noſe be ſtopped, you may know there, what to do.

When

When a fleſhy red skin grows in the Eye, leaſt it cover the ſight, and cauſe Blindneſs, it muſt be preſently prevented, with things mentioned in the Cure of the skin or film of the Eye; if the Eye brows are red or rough, there are Remedies.

The Cure of the French Pox.

The French Pox, albeit it comes from an external hidden Venom, yet daily Experince ſhews it is curable, yet with pains, and more when it is old and deep rooted, and hath many evil accidents; of which ſome remaining, when the reſt are cured and are incurable.

The Cure is general of the whol Pox, or particular of its accidents.

The general Cure which reſpecteth the Pox and its accidents, is in taking away the Cauſe, that is the Venom, brought into the Body by Infection, and the Diſeaſe that it cauſed: That is the Quality or hurtful Diſtemper in the skin and Membranes.

Experience hath taught us that this is done by Evacuations, and Reaſon ſheweth how, that is when the Excrements deſire to be expelled with other Humors, by Sweats and other waies, they diſcharge the Venom alſo. And the ſooner, if the evacuating Medicines have a ſecret force or manifeſt quality of drawing out the poyſon and conſuming it, then it is better drawn out, and the evil quality departeth, and the more perfectly, if they have a propriety hidden, by which they oppoſe the pox, reſiſt the poyſon, and take away the noxious Quality.

Theſe Remedies which thus cure the pox do it not by one kind of Evacuation, or by a conſuming force or propriety. Therefore we cannot divide the Cure according to their Operations. For the better declaring the Cure, we ſhall ſpeak of the way by Guaicum, and by Quick-ſilver; and by others ſince invented. Firſt, we will ſpeak of the Cure without Quick-ſilver, then with Quick-ſilver.

The Cure of the pox without Quick ſilver is twofold, one by ſweat chiefly, the other by purging.

The Cure which is chiefly by ſweat, is done either by inward or outward Remedies.

The Cure by inward ſweating Remedies, is the oldeſt and moſt uſual, and it is done firſt, by giving things that provoke ſweat, and if they have a propriety againſt the pox beſides, they will do it the better; then by giving things which help forward this Sweating and evacuate the Body by ſlender Diet which is convenient; and beſides theſe, you muſt firſt uſe other Evacuations, eſpecially purges. This way of Cure is moſt deſired and moſt in uſe, although it be long and troubleſom, by reaſon of ſweating, faſting and purging, becauſe it is ſafer then other waies, which are dangerous upon the leaſt miſtake.

This cure is commonly by Guaicum, which was brought hither with the pox from the *Indies*, and hath been uſed for the Cure ever ſince; becauſe it doth not onely cauſe ſweat, but becauſe it is thought to have a propriety to reſiſt the Venom of the pox.

We make for this purpoſe a ſweating Decoction of the Wood, which hath a ſharpneſs and bituminous Sent, and ſomtimes of the Bark thus.

A plain Decoction commonly uſed. Take *of the duſt, filings or ſhavings of Guaicum from the hard ſtock, or from a ſtick, which being barked or peeled is outwardly yellow, and inwardly black one pound, pour upon it twelve pints of Spring-water, let it ſtand to infuſe in a glaſſed Veſſel covered, then boyl it with a gentle fire by degrees, till two parts of three be conſumed, of which pour the clear part after it is ſettled into a Glaſs, and keep it ſtopped, and keep the Fæces for the uſe that ſhall be after mentioned.*

It will be ſtronger, if, as they who boyl with more care, uſe to do, you add three or four ounces of the bark to the pound of Wood; or if you boyl it higher then is mentioned, or take at firſt but eight pints of water.

Being thus made, it hath not ſuch a ſent and taſt as Phyſick, but it is a little ſharp, and pleaſant to the Party, when uſed to it; if any deſire it ſweeter, you may add ſugar and Cinnamon; ſome do with Wine, but it is better without, becauſe it is to be taken faſting, which will hurt the Head, and it will inflame the Body when they ſweat, at which time it muſt be given alſo.

Theſe muſt drink of this Decoction four, five or ſix Weeks, every morning faſting in their bed, a little warmed from ſix ounces to eight, ariſing by degrees, and ſo deſcending: and let them cover themſelves to ſweat after it, as long as they can two or three hours; and let them be wiped with hot Cloaths, and the ſheets changed for others that are dry and warm, then let them riſe, and dine about two or three hours after.

This Decoction is given three or four hours before Supper to ſtrong Men, for the better Evacuation and ſpeedier Cure, eſpecially when the Diſeaſe is old, in the ſame quantity. Others take it again ſome hours after ſupper, but to no purpoſe, becauſe it will hinder their reſt in the night, and being to take it in the morning, it will be to ſoon, and will weaken him.

As for their Diet in this time, becauſe it muſt be exact, they call all this courſe of Phyſick a Diet, becauſe the patients deſiring not to be known to have the pox, by their conſtant ſweating and ſtaying within, pretend that they uſe a convenient Diet only: this Diet is to be ſtrictly obſerved in theſe particulars following.

Let the Air be hot in the time of the Cure, that he may ſweat the better, and not have it driven in, by keeping a good fire all the time, and let him not go forth, except it be a hot day, and then only at noon.

Let his Meat be little, only ſo much as will keep up his ſtrength, of good Juyce, and no Varieties, for the conſuming of the Humors and Excrements, and that by reaſon of good Food in a ſmall quantity taken, they may be hindered from Increaſe, by which the Cure will proceed the better, and Nature will be leſs hindered in ſweating, being not burdened with meat, or called in to Concoct. Therefore let him keep a very ſtrict Diet, and eat but twice in a day or but once if he can forbear, and that without gorging: Let him have but one diſh or but twice at the moſt: and that it may be of good Juyce and not excrementitious, ſome eat only fleſh, and bread and fruits, after this manner.

Hens fleſh is moſt uſual, and Chickens, boiled for broath or of old Hens or Cocks, becauſe it is the pleaſanter and ſtronger Broath, excellent againſt the pox, one quarter at a time of a Cock, is ſufficient. Alſo Veal, Kid, Mutton, if tender, may be taken three ounces at the moſt, at one Meal; ſomtimes Pigeons, Partridges and Chickens roaſted, may be given in the ſame quantity, Eggs or the Yolks onely may be given, if you abate them ſo much of their fleſh.

Four ounces of Bread are enough, for their Meat and Broath, becauſe the Diet muſt be very ſlender, and it muſt be of pure Wheat, but a little leavened and well baked.

Dryed Fruits may be the ſecond courſe, in a ſmall quantity, ſuch as fill not over much, as Raiſons, Prunes, Figs, if they nouriſh much, as Almonds, you muſt abate ſo much bread.

As for Sauces, all ſalt things muſt be avoided, neither fleſh nor bread muſt be ſalt or very little, not only becauſe they hinder ſweat (as they ſay) but becauſe ſalt meat will make more thirſty, who by reaſon of ſweating are apt to be ſo, whereby they will drink more, and be more hot and unquiet. Therefore Spices muſt be avoided or regulated, and ſharp Fruits are forbidden, except they be given to allay the Heat.

Drink is not to be denied in this Diſeaſe, becauſe it is quickly digeſted, and they may drink freely, if they be thirſty, becauſe it refreſheth them without burden, and helps Sweating, therefore at meat and between meals, let them drink except other things hinder; but no Wine, becauſe it would inflame the Body, and hurt the Nerves and Head, and therefore we only allow a little to weak perſons to refreſh them either alone or with Water, Water boy-

boyled, to take off the Crudity, and to provoke Sweat the better, is commended. Thus, Take *the ſhavings of Guiacum which were boyled, put twevle or eight pints of water there-to*, boyl it to half, and ſtrain it. This they may drink freely at Meate and othertimes, and it will not be unpleaſant when they are uſed to it, eſpecially if you add a little Cinnamon, or Sugar, or Raiſons boyled therein, others add many things as Liquoriſh, which cauſeth a Phyſical taſt, and make them loath it, except you put Wine to it which is allowed but in great weakneſs.

Sleep is allowed not only at night, but in the morning and before ſupper when they Sweat, becauſe it doth not only provoke ſweat, but being at reſt they better indure it.

Let him walk abont the Chamber, uſe Frictions or Rubbings, eſpecially after Sweat, let him Comb and Rub his Head. Alſo,

You muſt keep the Belly looſe which is apt to be bound by faſting and ſweating. Let him beware of Venery, and refreſh his Mind with Sport, Diſcourſe and Muſick.

You muſt alwaies purge before you begin to give Guiacum for ſweating to void the thick Humors and Excrements. And ſomtimes you muſt purge in the time of the Dyet, the rather if the Body be fowl, that the Cure may proceed the better, becauſe it helpeth the operation of the Guiacum by taking away the cauſe of the Diſeaſe. And becauſe no certain humor, as was ſhewed, produceth this Diſeaſe, therefore you muſt direct your purges to the conſtitution, and to the quantity and quality of the Humors and Excrements. Thus,

Firſt give an Emollient Clyſter to take away the Excrements from the Guts that may clenſe, and be ſharp, ſuch as are preſcribed in many places. Or a Suppoſitory, or give Caſſia, Manna, ſome molliſing Decoction, the the Infuſion of Rubarb, ſyrup of Roſes Solutive, ſyrup of Peach flowers, Catholicon, and other mild Electuaries or gentle Pills, or Lozenges, ſuch as are Mentioned in other Diſeaſes.

Theſe being adminiſtred, If the Body be ful, let blood in the Arme, which is not needful in the Flegmatick and leane Bodies, except uſed to it. Then prepare the Humors as we ſuppoſe they abound, if they be Cholerick or ſharp, with ſyrup of Fumitory, Hops, Bugloſs, Mayden-hair, Endive, Succory, Violets, Apples, or the like with proper Waters, as of Scabious and the like, and ſo let him take theſe Juleps ſome daies together before Purging.

When they are Flegmatick and ful of pain we add the ſyrup of Stœchas or French Lavender, which is very good made of Bettony and Hyſop, alſo Honey of Roſes and the like, with the waters of thoſe Plants, or of Calaminta, Bawm, &c. And when there is pain about the bones, the water of ground pine and Prim-roſes. You may alſo prepare with Decoctions made of the ſame Herbs.

We put Spices, as Cinnamon, into thoſe Juleps, and Decoctions to make them pleaſant. Or Trionſantalon, Diarhodon, Aromaticum Roſatum. Or give a Lozenge thereof after it.

Many times we purge and prepare at the ſame time, mixing gentle purgers, with the preparatives, when they are weak and Cholerick, or ſtronge purges when they are Flegmatick and Luſty. Proper for the Humors we intend to oppoſe eſpecially ſuch as purge watery, Salt, and ſharp Humors, when there are Spots and Ulcers, ſuch as were preſcribed in divers Diſeaſes, eſpecially in the Itch. Or if there be pain about the bones, we muſt give ſuch as are preſcribed in the Diſeaſes of the Joynts from watry Humors.

We give theſe Apozems or Decoctions for five or ſix daies to prepare and purge; Thus made, Take *the Herbs following with the Roots, Succory, Endive, Dandelion, Docks, Sorrel, Bugloſs, Capillar Herbs, Scabious, Germander, of all five or ſix handfuls; Fumitory, Hops, pot Mercury, of each one handful; Aſparagus, or Kne-holm and Graſs Roots, of each two ounces, Cordial flowers three pugils, red Roſes two pugils, Tamarisk flowers one pugil, Prunes ten, Raiſons three ounces, Sebeſtens, or Jujubs twenty, of the four great Cold ſeeds and Annis ſeed, of each half an ounce; Fennel ſeeds two drams.* Boyl them in Water or in the Decoction of Guiacum ſtrained, which is more proper. And infuſe, *Senna three ounces or four, Polypody, Carthamus ſeed, of each two ounces, Epithymum two drams.* Boyl them again, and then add, *Sugar or Honey to ſweeten it, with a little Cinnamon.*

In moiſt Flegmatick Bodies, add theſe following, *Calamus Aromaticus or Galangal one ounce and an half, Elicampane, Bettony, Majoram, each one handful, Roſemary, and Lavender flowers, of each one pugil, tops of Time one pugil and an half, Figs twelve, Caraway ſeeds one dram, and thoſe that purge water, bark of Elder and Dwarfe Elder one ounce and an half: or ſtronger purgers, Agarick or Rdubarb half an ounce, Turbith three drams, Soldanella two drams, or in ſtrong men who commonly have this Diſeaſe, Hermodactils two drams in the pain of the bones. Or half a dram of the Pulp of Coloquintida tied in a clouze, which is ſtrong, or one dram and an half of black Hellebore.*

If there be pain in the Head and Bones, you muſt add things good againſt it, and againſt Poyſon, as Tormentil roots, and the like, you may uſe the Decoctions mentioned for the Itch, as that which begins thus. Take *the roots of Docks three ounces, of Graſs, &c.* Or you may give purging Wines, made of the ſimples of the former Decoction, infuſed therein, or that preſcribed in the Itch.

After preparation, or purging with preparation, we uſe ſtrong purges, if we ſuppoſe the Body not purged ſufficiently, we give ſtrong Purges divers waies, by adding to the laſt draught of the Decoction, an Electuary, or the like that purgeth, or another Decoction, Electuary, or Pills, conſidering the ſpots, Puſtles, Ulcers and Pains. Commonly they purge Melancholly that ſuppoſe it to be the cauſe of the Pox, and therefore they give Confectio Hamech and Diaſerna, alſo Pills of Lapis Lazuli, of Fumitory, and others mentioned in Melancholly Diſeaſes. And we allow theſe in ſtrong people, becauſe they Purge Choller and ſharp Humors of all ſorts. Other Purges alſo mentioned in the Cure of the Scabs, and if there be pains about the bones, Pils of Herinodactils, ſtinking Pils, or *Pilulæ fœtidæ*, and others mentioned in Arthritis. And many others mentioued in other Diſeaſes, which have both Scammony and Coloquintida, which are uſed indifferently, though many think, they ſhould purge but one Humor.

But Empericks and Chyrurgions preſently purge, without preperation, before they uſe things that Evacuate by the habit of the Body and without choice of purges, or careing what Humor, ſo they do but purge ſufficiently. Therefore they give the ſtrongeſt. And among the reſt Wine, wherein an Apple of Coloquintida hath been all night infuſed, or that wherein ſome of the leſſer Spurge Seeds have been infuſed; or they bid them ſwallow the ſeeds, or they purge at firſt, with the Decoction of Hellebore, ſuch as we mentioned in Cure of the Itch: where we ſhewed how the Empericks cured the Itch and other Diſeaſes only with Stybium infuſed, which is good here alſo; As alſo how good purging at firſt in many perverſe Diſeaſes hath excellent ſucceſs, as with the dry leaves of true black Hellebore poudered and made into Pills with Aloes.

After Evacuation made, you muſt refreſh the Body a day or two with Conſerve of Bugloſs, Borrage, Roſes, Stœchas, Roſemary, Marjoram, Treacle or Mithridate, and the like. Among Cordials thoſe of Guiacum are beſt, and they give the Pouder with Conſerves and Electuaries. And the Chymiſts Magniſie the Salt thereof, others uſe the Pouder or Salt of Sarſaperilla. There are uſual Purges for the time of the Cure when they take their Sweats to keep the Body open, to be given between Sweats, divers Times.

You may make Syrup of the Decoctions mentioned that will keep, or uſe the Syrups preſcribed for the Itch,

as that of Hellebore, or of Apples, and that of Montanus made of Juyces, or you may purge with Electuaries or Pills.

The Cure may be alſo by other Sweats beſides Guiacum, and good Diet, and purging, ſuch as are good alſo againſt other cold Diſeaſes. And although they taſt not, nor ſmel like Guaicum, yet they are thought to have a propriety to cure the Pox; as Sarſaparilla and China fetcht from the *Indies*, and known ſince Guaicum to be good.

They make a ſweat of Sarſaparilla roots, which are long and ſlender, of like taſt and no ſcent. thus,

Take *Sarſaparilla ſliced three ounces, Water twelve pints*, let them be infuſed as Guaicum was, and boiled to the third part, which you muſt ſtrain and keep, this quantity you may increaſe or diminiſh as you pleaſe.

They drink this Decoction every morning for ſome weeks, and ſomtimes at evening and ſweat; firſt purging the Body, and at ſeveral times after, as we ſhewed concerning Guiacum.

Uſe the ſame order, for Air, Meat and Drink, and make a ſecond Decoction of the ſame for ordinary Drink, and the like.

There is another made of China, which comes from China in the *Eaſt Indies*, to cauſe ſweat; this Root is thick red and without taſt, and the Decoction is reddiſh, not unpleaſant, nor offending the Stomach, and thus made.

Take *China roots that are ponderous, two ounces, cut them in ſlices, add twelve or eight pints of Water*, ſteep them, and boil them, as the former, keep it being ſtrained very cloſe ſtopped, leaſt it grow ſour: or to prevent that, boyl half the quantity and repeat it.

This is taken as the reſt, and it provokes ſweat, and the Patient muſt be governed as formerly, and purged, and a ſecond Drink made of the ſame Roots as formerly: And being thrice boiled, they have ſome Vertue, and may be drunk while other is prepared.

There is another Root lately come from the *Indies*, called *Saſſaphras*, of which a Sweat may be made, uſed as the reſt for this and other Diſeaſes, thus made.

Take *the Wood with the Bark ſliced into Chipps, two ounces and with twelve or eight pints of Water*, infuſe them, and boyl them as formerly, and give the ſame quantity as of the other; this is pleaſant and better taken, becauſe it diſturbs not the Stomach, nor breeds wind, as may be gathered by its ſcent, reſembling Aniſe and ſweet Fennel ſeed.

There are ſweating Decoctions for the Pox, made of three or four of the former Roots mixed, they add to half a pound of Guaicum one ounce and an half, or two ounces of Sarſaparilla, and boyl them with eight pints of Water, as the former.

Or inſtead of Sarſaparilla one ounce of China.

Or we mix Guaicum, China and Sarſaparilla in the ſame quantities, and boyl them: or we take leſs of Guaicum, and more of the reſt.

To theſe we add Saſſaphras, becauſe it gives a good ſmell and taſt, and is of the ſame Vertue.

Theſe muſt be uſed in the ſame quantity, and with the ſame order and government as the former, and an ordinary Drink muſt be made of the ſame, by a ſecond Decoction.

Somtimes they make Compound Decoctions with many other things, added to theſe, which they add many times to Guaicum, and Sarſaparilla, but ſeldom to Saſſaphras, and China, leaſt they looſe their ſcent; ſomtimes they add things to correct, as when Guaicum is too hot Succory and Lettice, yet though it hath a little ſharpneſs, it doth not inflame the Body; and if you take away the ſharpneſs, it will not ſweat ſo well, and rather hinder then profit, as alſo by thoſe things, the pleaſant taſt is taken away, and it will be loathſom; ſomtimes they uſe things to increaſe the Heat, and cauſe more Sweat, as Aſarum roots, Elicampane and Spices, and the opening Roots and herbs, Baulm, Time, Marjoram and the like, Nigella ſeeds, ſometimes things good for the head and joynts if pain be there, as Bettony, Groundpine, Roſemary, and Lavender flowers; ſometimes things to purge the Blood, as Fumitory, Hops, Bugloſs, Elder, Dwarfe-elder, Orris and the like. And to dry the Body more, they uſe Amber, Frankincenſe, and Benjamin.

By this mixture, they make the Decoction of leſs force, and more unſavory, ſo that the Patient will not take it, eſpecially when they ad Gentian that is ſo bitter, and Mumy which ſtinketh, then it is abominable. But if you will add to the Decoction any thing to allay the Heat, or to provoke ſweat or the like, it is leſs unpleaſant, when you boyl the Roots in the Waters of thoſe plants which are for that purpoſe.

You may make your Decoction in Arſemart water, which is beyond all the other for its admirable propriety for cure of the pox, it is made of the Herb at the end of *September*, and all *October*, by Diſtillation.

Beſides theſe many, mix gentle and ſtrong purgers with Guaicum while it is boiled, as Polypody, Aſarum, Epithymum, Carthamum, Agarick, and other bitter things, as aloes, and if the pain be in the Joynts, Hermodactyls. And ſomtimes the ſtrongeſt, as Hellebore, and Coloquintida. Which purging Decoctions, if they be given at firſt before ſweating, and uſed in the times of Intermiſſion, are good. Or if we intend not to cure the pox by ſweating but by purging, we may uſe them inſtead of other purges conſtantly or by fits with Intermiſſion.

It is found by Experience that other plants beſides Guaicum, Sarſaparilla, China, and Saſſaphras make a good Decoction for the ſame. And hence we gather that theſe work the Cure of the pox, rather by ſweating then by any hidden Vertue, ſuch Decoctions are made of theſe following.

A Decoction made of yellow Box, which is hard like Guaicum, doth the ſame, but becauſe it is not ſo pleaſant as Guaicum, we take not a whol pound to twelve pints of water.

I have cured poor people with Juniper, and it is ſweet and ſomwhat ſharp. I took the Chips not ſo much as of Guaicum, but half ſo much or three parts, and with twelve pints of water I boiled and uſed it as the former; to theſe you may add Guaicum and other Roots; and it is an excellent Sweat and ſafe, although from *Dioſcorides* ſome ſpeak againſt it as deſtructive, which often uſe ſhews to the contrary: and I judge that place of *Dioſcorides* to be falſe, and ſo do others.

We doubt not but a Decoction made of Cedar, Cypreſs, Sabine that bears the Berries, Wood-Aloes, Rhodium that ſmells like Roſes, will do the ſame; and others as they write of the Turpentine-tree.

It is written by ſome that the Decoctions made of the Roots of Dittany, Tamariſk, Butter-Burre, Tormentil, Calamus, Elicampane, Cane roots, Orris and Sowbread in twelve pints of water will do as much as Sarſa and China in the ſame or leſs quantity.

And of Herbs, as Cleavers, or Gooſe graſs, Ceterach, Scordium, and Rupture-wort, and you may uſe alſo Jack in the Hedg, and chiefly Arſemart.

Or of Seeds, of which Juniper-berries are the chief, the Decoction whereof made as the former, will have a ſharp taſt and ſweet ſent, and it is better then all the reſt for cure of the pox by Sweat.

There are other Sweats to cure it beſides, as ſweating Wines made by Decoction or Infuſion, for weak and cold perſons, as this which is of Honey and pleaſant. Take *Galangal two ounces, Ginger half an ounce, Cinnamon two ounces and an half, Cloves one ounce and an half, Nutmegs or Mace one ounce, Schœnanth half an ounce*, bruiſe them and put them in a Veſſel, *with one pugil of Roſemary flowers or tops*, then add *ten quarts of white Wine, one pint of Honey or more*, keep it ſtopped for your uſe: drink three or four ounces of it every morning and ſweat, continue it.

It will provoke ſweat more, if you add four ounces of of Juniper-berries.

Or thus. Take *Orris and Calamus, each three ounces, Galanga!*

langal one ounce, Asparagus one ounce and an half, Elicampane half an ounce, Sowbread roots two drams, Thyme, Scordium, Ditany, Rupture-wort, each one handful; Rosemary, Lavender, and Chamomil flowers, each one pugil; Juniper-berries six ounces, Cinnamon two ounces, Cloves one ounce, Mace half an ounce, Schœnanth two drams, bruise them, and put them in a Vessel *with four ounces of Guaicum, Sassaphras one ounce,* infuse them *in twelve pints or more of Wine:* let him drink it thirty daies or longer.

Another very powerful, with which alone some say they have cured the Pox. Take *Plantane leaves, Olive or myrtle leaves, Yarrow fresh gathered, each one handful; Sowbread two drams,* or more when the Party is strong, *white Wine five pints, give six or seven ounces of the strained Liquor,* let them sweat, and continue it every morning for five and twenty daies together.

Stilled Waters are given to provoke Sweat, but seldome alone in this Disease, because they agree not with the stomach, but they say that these cure some people, or take away the Reliques of the Disease.

This following is best. Take *Filings of Guaicum one pound and an half, the Powder of the Bark of the same, half a pound, Sassaphras Chips two ounces, Gress and Sparagus roots each one ounce and an half; Elicampane three ounces, Sowbread roots one ounce an an half, Carduus, Penny-royal, Sorrel, each one handful, Bugloss, Roses, Rosemary, Chamomil flowers, each one pugil; Cinnamon half an ounce, Nutmeg two drams,* cut them, then ad *Treacle of the best, four ounces, Spanish Wine, Dock and Succory water, each two pints,* distil them, give *three or four ounces of this Water, with other convenient Liquors, or the Decoction of Guiacum or the like Sudorifick, as of Milium, some add four ounces of Polypody, and one ounce of Epithymum to the former.*

There are other Sweats or Sudorifick Decoctions and Wines, stilled Waters and Electuaries good against other Diseases, which may do well here if often administred, such as were mentioned in the stoppage of Sweat and the like, especially those mentioned in the Cure of a pestilential Feaver, which are thought as good here. In this Disease being venemous, they cure not only by sweat, but by resisting of Venom. Among the rest the Treacle waters there mentioned are good.

As for Goverment, when they take these Sweats of wine or distilled Waters thus prepared, they must observe the same Rules, that were before prescribed, they must keep their warm Chamber, eat little, and no varieties, and for their Drink use the thin Decoction of Guaicum and Sarsaparilla; or if the sweating Wine mentioned, be pleasant, they may drink it at Meales, and if it inflame, it may be mixed with Water. And if you fear least the Liver or other Bowels should be inflamed by the use of these hot sudorificks, you must give some cooling Syrups to allay the Heat, and have a care the Belly be not bound, and that the Cure may go on the better purge the Body now and then.

The Cure of the Pox by outward Applications, without Quick-silver to cause Sweat, is not performed; but they must keep warm, as we shewed, and use bathing or hot Houses to farther it, the dry Bath or hot House is the best; for the Body there shut up is made hot and opened, and the Humors drawn forth by Sweat; and it may take away the seed of the Disease by long continuance, if it be not deep rooted. But in regard this hot House alone is not alwaies sufficient, if you will use it, let it be when sweat is hard to be provoked, by things given inwardly in the bed, and then to go into the Stove, and by its heat make way, and dispose the Body once or twice, till Nature doth it of her own accord, is good. The chief use of a hot House in the end of the Cure, is to take away whatsoever remains fixed in the skin, and to cleanse the same; and then we give leave to wash in the hot Honse with wine, water and lye, which could not be granted before. But in the Cure of the Pox, not only dry Baths are used, but before the Cure is taken in hand, if you doubt of the same by reason of the obscurity of the signs: And the often using of these sweating Baths, by drawing forth the hidden seeds to the superficies, will discover the certainty of the Disease by Spots and the like.

And because the use of those Baths is ordinary known, we will not speak further of them: but that they may sweat the better, we give the Patient before he goes in, Treacle or some other sweating Medicine; and we let him stay there as long as he can, and after we keep him from Cold.

A moist Bath either Artificial or Natural, is seldom used for the Cure of the Pox, because Experience teacheth that it doth more hurt then good by its Moistness.

Yet some there are that though they deny the Bath of sweet water, and other things that astringe too much, yet they allow things that rarifie or strongly attract, for the helping of the Medicines to work, when they are slow: and therefore use moist Baths before, in which they boyl hot herbs and flowers, and seeds of all sorts, especially Dwarfe-elder, and Elicampane Leaves and Roots, Mugwort, Chamomil flowers, Melilot, Juniper-berries, also Guaicum, and Juniper chips, yet these being not so safe may be left out. Others commend strong drying Baths, but I have observed that they do hurt and not good: except after the Cure, to refresh some Member that hath been wearied with Medicines, and to strengthen the Body, and then we add to the former Artificial Baths things proper for that, as Groundpine, and other Herbs mentioned in the pains of the Joynts.

The Cure of the Pox by purging is not so usual, because lately invented, and this is done by giving violent purges often, and refreshing the Body by turns. And sometimes it is cured by this way alone, without the use of any other Evacuations, Sweating or Fluxing. Sometimes we joyn sweating with purging, especially when the Patient will not endure strong purging, such as is required for this Curre, and then after purging divers times, we give the decoction of Guaicum some daies to sweat, and then purge again, and so as formerly till it be cured: sometimes we consume half the time in purging, and the other in sweating, with internal Sudorificks, also we use outward dry Baths, and mix purging by fits. And in purging, we choose not things for some onely Humors, because we know not it is that causeth the Pox, but any thing that will purge, for they which abound will be sooneſt evacuated when Nature is stirred up. And we observe that al Physitians, though they talk of purging, Melancholy or flegm, yet they use any kind, which we give according to the constitution, and strength, and as there are Spots, Pustles, Ulcers, or Pains, as we said for purging with sweating: these are divers waies prepared.

Of Decoctions and Apozemes, after general purging for a time, shorter if for fifteen daies together they take it twice a day, or longer, if the Patient being weak is constrained to rest a day or two often, and then to fall to it again, for then it will require three weeks or a month. Some continue this Course four or five weeks, purging three or four times in the week together, then resting three daies, in which morning and evening they take strengthners; and use good Diet, but not so strict and little, as when they sweat only: nor are they to be so prohibited the Air, but may eat often of the best, and walk forth sometimes when it is fair, which they desire, least they should be suspected to have the Pox by staying within, and therefore they like this way of cure best.

These Decoctions are thus made when the Body is hot and cholerick, spotted, pustulated, or ulcerated. Take *Polypody three ounces, Senna two ounces, Epithymum, Myrobalans, Citrin, and Chebulars, each two drams; Cordial flowers two drams, Capillar Herbs, both Buglosses, each one handful; Succory roots half and ounce, Anise-seeds two drams:* boyl them *in Water for five or six doses, sweetning them with Sugar, dissolved in each dose of the Juyce of Roses, and Fumitory, each half an ounce; or of their Syrups, or of Violets, each one ounce;* sometimes mixing *one dram of Rhubarb* infused in the Decoction,

coction, and ſometimes ſtronger Electuaries if you will purge more, as that of Juyce of Roſes, Confection Hamech &c. ſomtimes forbearing the Decoction, one day or two you may give a ſtronger purge, and then return to it again; thus let him continue taking thoſe Potions by fits five or ſix times, and make new, ſtronger or weaker according to the Operation of the former, and while he is cured. And becauſe it is troubleſom to make the Decoction new ſo often, it is good to increaſe the quantity of Ingredients and Sugar, and boyl it to the conſiſtance of a ſyrup, that it may laſt, and give that quantity thereof of that will purge ſufficiently.

For thoſe that are flegmatick, wateriſh and cold, if there be pain about the bones, this Decoction is made. Take *of Carthamus ſeeds bruiſed one ounce and an half, Senna two ounces, Polypody one ounce, Turbith half an ounce, Epithymum two drams, Raiſons one ounce, Figs ten, Liquoriſh one ounce, Elicampane ſix drams, Galangal half an ounce, Thyme, Bettony, Marjoram, Hyſop, Groundpine, each one handful; Bugloſs, Roſemary, Stœchas, or Lavender flowers, each one pugil; Chamomil flowers half a pugil, Coriander ſeeds, and Aniſe, and Fennel, each one dram; Nigella ſeed half a dram*: boyl them *in Water, for five or ſix doſes, ſweeten them with Honey, and diſſolve in each, the Juyce of Orris half an ounce, Syrup of Roſes ſolutive, of Fumitory and Hops, each ſix drams.* If we will have it work ſtronger, infuſe *Agarick or Mechoacan one dram, Ginger one ſcruple*, or mix an Electuary therewith, as Diaphœnicon or the like: theſe Decoctions are uſed as the formerr

Other Decoctions ſuch as are properly againſt the Pox may be uſed, as of Guaicum, Sarſaparilla &c. which often uſed cure other Diſeaſes as well as the Pox; as this following which muſt be drunk twenty five or thirty daies together, with a little Intermiſſion, and that when neceſſity requireth. Take *Guaicum Chips one ounce, Sarſaparilla ſix drams, Liquoriſh half an ounce, Succory roots two drams, Bugloſs flowers two drams, Raiſons half an ounce, Prunes ſix*; ſteep them *in eight pints of Water* a day and a night, then boyl and ſtrain them, and add *a little Cinnamon in five ounces of this, infuſe half an ounce of Senna, Mechoacan or Agarick one dram, Ginger half an ounce*; let it ſtand a day and a night, ſtrain it and add *ſyrup of Roſes ſolutive, and Balmwater, each two drams*, give it at one Draught, and prepare another for the next morning, and ſo continue till he be cured.

We mentioned a Drink like this in the Cure of the ſcab, which muſt be continued thirty daies together alſo.

You may uſe more or fewer purgers in the Decoctions of Guaicum, and Sarſaparilla, Senna is beſt and ſafeſt, and Hermodactyls which is not to be omitted when there are pains, as is ſhewed in the Cure by Guaicum alone.

There are alſo Decoctions with Hellebore, as in Melancholy Diſeaſes, and the like, good for the Pox, if often uſed, or if they be too violent, every other day, and let the day of reſt be for Cordials, Antidotes and good Meat and Drink; which muſt be obſerved in other violent purges.

The chief Decoction with Hellebore is this. Take *the Bark of black Hellebore ſix drams, of the five kinds of Myrobalans, each half an ounce; Senna and Polypody, each one ounce: Sowthiſtle one handful, Chipps of Guaicum four ounces*: boyl them *in eight pints of Water, and a pint and an half of white Wine, ſtrain and ſweeten them with Sugar, and Cinnamon, and Cloves, let him take three or four ounces as it worketh.*

Another Decoction or Infuſion of Hellebore for the ſame, mentioned in the Scab, is good here.

Or this: Take *the Barks of black Hellebore pondered, one dram or four ſcruples*: boyl it *with Whey or other Decoction, and give it ſtrained with ſyrup of Fumitory, and ſyrup of Roſes*, uſe it often.

Wine wherein only Hellebore is infuſed, will do the ſame without Decoction: or if you make a Wine of the Grapes of the Vine that hath black Hellebore growing at its Root.

A famous Chymical Emperick cured the Pox with this Electuary, giving it morning and evening fifteen daies, if the Patient be ſtrong. Take *Guaicum bark four ounces, of the Wood of the ſame, of Ebony, Oak, or Box, each ſix ounces; Sarſaparilla ſix ounces, Hermodacts four ounces, Turbith two ounces, Cloves two drams, Aniſe-ſeed one ounce, Saſſaphras three ounces, Senna ſix ounces, Water nine pints*, let them ſtand a day or two in the hot Embers, ſtrain them, and then pour on as much more water, then boyl them till the third part be conſumed, ſtrain them, and let the firſt Infuſion of this be mixed with this Decoction, by Evaporation made with a gentle fire, to the form of a Syrup, and add *clarified Honey four ounces, the Pouder of Sarſaparilla, Senna, and Hermodacts, each half an ounce; Turbith, Jalap, each three drams; Cloves one dram, Extract of ſcammony two drams*: make an Electuary, *the doſe is one dram and an half, to two or three*, and let the Patient while he takes this, drink the Decoction of Sarſa, China, Hermodacts, Aniſe-ſeeds, Cloves and Guaicum.

Pills made of Quick-ſilver, or Mercury precipitated, or made red, are here uſed, which taken but twice or thrice, by violent purging cure the Pox, but we intend to ſpeak of Mercurial Medicines by themſelves. Divers other purges often taken do the ſame, as Electuaries, Pills and the like, mentioned in Diſeaſes of long continuance, eſpecially thoſe with which the Body muſt firſt be generally purged, as Extracts of Senna and Rhubarb &c.

While you purge, give by Intermiſſion, things that ſtrengthen the Heart, Stomach, Liver, and Brain, eſpecially when you uſe violent purges, or apply things outwardly to the Heart or Stomach if weak by purging, as we ſhewed in fainting.

There are Antidotes againſt the Pox, which are alſo good againſt other venoms, either given alone or with other Reſtoratives. Thoſe we before mentioned to be given after other Purges.

If the ſtrength fail in the uſe of the Apozemes mentioned, one day in the week or two or three as need requireth, give theſe. Take *Tormentil roots one dram and an half, Dittany two ſcruples, Citron ſeeds, Carduus, and ſorrel ſeeds, each half a dram; all the ſanders one dram, ſhavings of Ivory, or Vnicorn one ſcruple, Pearl prepared half a ſcruple, red Coral half a dram*: make *a Pouder*, mix *two drams, with Conſerve of Roſes, Citron bark candied, Conſerve of ſcabious, or Cordial flowers one ounce, and with ſyrup of Bugloſs*, make an Electuary; let him take the quantity of a Nutmeg, and drink Balm, Scabious, or Carduus water and wine after it.

In cold and weak Perſons, add to this *Pouder, Cinnamon, and Cloves, each one ſcruple, Mace half a ſcruple, Conſerve of Roſemary flowers, and of Acorus, each one ounce.*

You may make Lozenges of the ſame, ſome give purges one day and another the Decoction of Bugloſs and Wormwood, and ſo continue.

When you uſe Decoctions and Infuſions of Hellebore every other, or the third day uſe the former Cordials, or this following which is good after all ſtrong purging. Take *the thick Juyce of ſowthiſtle two drams, ſcordium dried one dram, Citron ſeeds half a dram, Mithridate or Treacle half an ounce, ſyrup of Citron barks as much as is fit for an Electuary.*

Mithridate and Treacle are given alone after purging, when we fear a Dyſentery, Flux, to prevent it, as I ſhewed in Dyſenteries.

The Pox is uſually cured with Quick ſilver, ſo called, becauſe like ſilver, and Hydrargyrum, becauſe it flows like water, and by the Chymicks, Mercury, it is uſed inwardly or outwardly.

Outwardly, we obſerve it cureth ordinarily, but by what quality or force is the doubt, although at that time we alſo diſpoſe the Body for ſweat, yet it is uncertain, whether ſweating is not then provoked by the ſilver; and although they ſpit after it very much, by the particular force of the Quick-ſilver which nothing elſe will cauſe, yet the queſtion is whether the ſpitting cures the Pox, it ſeems to cure for theſe reaſons, becauſe the Cure is not without it

be

be raiſed, and becauſe there comes Inflammation, Ulceration and ſtink in the Mouth and Teeth, which is thought to come from the Venom of the Diſeaſe, and not from the Quick-ſilver. And beſides its manifeſt power to flux, it cureth it by a ſecret Vertue, as it doth other Infections as Itch &c. and by a propriety contrary to the Venom of the Pox; for which it ſeems the Antidote.

It is not needful to ſearch out for a manifeſt quality, as Heat or Cold by which it acteth, as great Men have done, and how it worketh, becauſe we ſee that by its ſecret qualities and proprieties it doth it when nothing elſe will, neither doth its Operation demonſtrate any other. Nor muſt we omit the uſe of it, becauſe of the accidents it produceth in the Mouth or the like, as Convulſions which are moſt to be feared, when it is abuſed; for the Mouth is eaſily cured, and if it be rightly uſed, you need not fear Convulſion. And we ſee many miſtakes in other Medicines, as Sweats and Purges, when they are not rightly adminiſtred.

Moreover the Cure of the Pox by Quick-ſilver, is either with it crude or alive, or fixed or mixed.

Of the crude we make an Oyntment to cure the Pox, which is called the *Neapolitan Oyntment*, becauſe the Diſeaſe was called *Neapolitan* comming from *Naples*. Theſe are made with Greaſe, Butter, Oyl, Roſins and Gums, that the Quick-ſilver may ſtick the better to the Body, ſo mixed that you cannot ſee the Quick-ſilver not killed, but all looking blew when it is right, they mix alſo therewith things that make the skin thin, and open the Pores to make it penetrate or pierce, and to prepare for ſweat, and to digeſt that filth in the skin. The quantity is two ounces of Quick-ſilver with one pound of the reſt, and ſomtimes half Quick-ſilver if the Body be ſtrong, and you may uſe more or leſs as you pleaſe, according to the Conſtitution and its Operation.

This general Oyntment is the beſt. Take *Quick-ſilver two ounces, either crude or killed, with Juyce of Lemmons, or faſting ſpettle. freſh Hogs greaſe tryed, with the third part of Hens, Ducks, or Gooſe greaſe, or Butter, ſix ounces, Roſin waſhed in Aqua vitæ one ounce, Pouder of Maſtick, and Frankincenſe, each one ounce; Oyl of Bayes two ounces, Oyl of chammomil, Dill, Lillies, or Roſes one ounce, with a little Wax* make a Liniment. Firſt mix the Quick-ſilver in the Mortar with the Roſin, and then add the Greaſes, and after the Oyls in which the Wax is diſſolved, and then the Pouders.

To make it ſweet ſented and to correct the greaſie ſent thereof, add one dram of Oyl of Spike, or more for it will make it pierce, ſome leave it out, becauſe it diſcovers the Pox in the Patient that ſmells of it, being ſtrong and known to be uſed. Liqeid Storax gives a better ſent, and diſſolves more.

They mix Treacle and Mithridate with this Oyntment to reſiſt Venom, the quantity of half an ounce, but to what purpoſe I know not, for it will neither mix with the greaſe nor is it good outward, but inward.

When there is pain in the Head and about the Bones, make it thus: Take *Quick-ſilver, Greaſe, Roſin, and Gums as formerly, with the Marrow of Veal one ounce, Oyl of Orris, Wall flowers, Worms, or Foxes, or Bayes five ounces, Pouder of Orris, Hermodacts, Bay-berries, each one dram; Euphorbium one ſcruple, with Wax* make an Oyntment.

For ſcent and piercing, add Oyl of Spike, Storax, and Labdanum, and to pierce more, half an ounce of Oyl of Turpentine, or Petroleum which is not accepted by ſome for the ſcent.

Others, to make it better for the Nerves, boyl the Juyces of Rue, Dwarfe-elder and Sage in the Oyls till they are conſumed, and add Aqua vitæ and Wine.

If there be Puſtles and Ulcers, add dryers, and if the Oyntment be too dry and hinder ſweating, uſe them not but after openers, they are thus made. Take *Quick-ſilver, Greaſe, Roſin, Gums as formerly, Oyl of Bayes, of Bricks, each two ounces; of St. Johns-wort one ounce, Myrrh half an ounce, Lytharge and Ceruſs, each two drams; Vine aſhes half a dram, with Wax* make an Oyntment. You may uſe Oyl of Juniper for Oyl of Spike, and Juyce of Fumitory, Docks and Briony boiled in the Oyls.

It will be excellent, if you add *Cinnaber, or red Lead two drams, or Verdegreeſe one dram, or Sublimate, one dram.* Theſe are ſafer, as in particular Unguents ſhall be ſhewed, when they are applied only where there are Ulcers and Puſtles, and not daub'd all over.

They mix ordinary Greaſe one pound, and two ounces of Quick-ſilver, or in pains the four hot Oyntments, Dialthæa, Martiatum, Aregon, and Agrippa, or Enulatum and the like in the Scab.

Another. Take *Quick-ſilver two ounces, Frankincenſe, Maſtick, each half an ounce; Hogs greaſe, Butter, each four ounces; Oyl of Bayes four ounces, Salt one ounce and an half, Allum burnt, and Tartar, each half an ounce; Aqua vitæ one ounce,* make a Liniment, and in Ulcers add *two drams of each of Ceruſs and Lytharge.*

Some make an Oyntment of Quick-ſilver, the four hot Oyntments and Oyls, with Treacle and Mithridate, pouder of both Hellebors, wild Cowcumbers, Euphorbium, Verdegreeſe, and they confeſs it cures not all.

Others make it of Sublimate, or Cinnaber, with Brimſtone, Greaſe, Roſins and Wax, and Aqua vitæ, but it is not ſafe.

Others make it with Quick-ſilver and Greaſe alone, or Vine aſhes. Others of Quick-ſilver, with Turpentine, and Aqua vitæ, all theſe muſt be uſed warily.

The uſe is thus, let the Patient be anointed naked in a warm Chamber at the fire, Hands and Feet in the palms and ſoles, and up the Back-bone, under the Arms, and in the Groins, not touching the Breaſt or Head, and this done once or twice a day morning and evening, or one day once, and the next day twice, as the ſtrength requires. When thus anointed, you muſt wrap him in warm cloaths, and put him into a warm Bed, and let him ſweat while he is able; and if he ſweat not, freely uſe bottles of hot water or pillows, filll'd with hot Peaſe to keep the heat, placed at the Feet or under the Arms, or Bricks, let him ſweat an hour and an half or as long as he can, and then wipe him, and change his Linnen, and after he is up and hath walked a little, let him eat, let him do thus eight or ten daies, leaving when he begins to ſpit, and if he do not ſo in that time, make the Oyntment ſtronger with Quick-ſilver. or anoint oftner till his Mouth be ſore, which you muſt after cure, and look to him till his Ulcers, Pains and Puſtles be gone, and then to cleanſe him for the remaining filth of the Oyntment, put him into an hot Houſe, and waſh him with Lye, and bring him by degrees into a temperate Air.

Let him keep in hot Air, and uſe Diet of good Nouriſhment, moderately. A little Wine is allowed to the weak when ſtrength fails, and Wine and Water for others, or three pints of water, boiled with two ounces of Guaicum.

Let him firſt have a general purge and bleed if need require, for when the Body is cleanſed the Cure will proceed the better, and between his daies of Oyntment uſing let him purge if he be coſtive: As we ſhewed in purging.

The curious people uſe theſe Oyntments onely to ſome parts, as the Joynts and Back-bone, but then the Cure is long and not alwaies certian.

Others anoynt only the Palmes and the Soles of the Hands and Feet, and this is leſs troubleſom, and leſs perceived if they wear Gloves, eſpecially if they walk abroad, as they may in warm weather, and excerciſe, which is good for ſweating, and when they return home they may ſweat further and uſe other things.

Theſe muſt have more Quick-ſilver in them then the other.

There are alſo Plaſters of Quick-ſilver to Cure the Pox. Or Sear-cloths uſed ſeldom but by ſuch as have the oyntment, becauſe filthy, and requires more ſtricktneſs, and deſire the Plaſter, becauſe they have more freedom, but this if ſlower, and muſt be uſed longer, and with more Quick-ſilver. And if they neither ſpit, nor have ſore,

Mouths, you muſt provoke them with Oyntments, and Fumes afterwards, and ſo the Plaſter doth well to prepare.

Theſe are made of the ſame things, that the Oyntments are made, with half an ounce more of Quick-ſilver, with Cinnaber and Sublimate by ſome, with Wax for a Cerat, and Roſin for an Emplaiſter, ſpread upon Leather, or by way of Cere-cloth.

Or they take other Gum Plaſters, as Ceroneum Melilot, Zachary, Diachylon, with Orris, and put as much, or more Quick-ſilver as to the former. There is another Plaſter of Quick-ſilver, by *Vigo* called the Emplaſter of Frogs, which are therein, which is applied to the parts pained, and may be uſed generally with more Quick-ſilver and Euphorbium which hath, beſides Quick-ſilver, Hogs-Greaſe and Vipers greaſe, Turpentine, Frankincenſe, Euphorbium, Storax, Wax, Oyl of Chamomil, Dill, Lillies, Bayes, Spike, of Saffron or Juniper, juyce of Dane-wort, Elicampane, Wine, Mother-wort, Stechas, Schænanth, Litherige, Frogs, Worms. The uſe is, ſpread it upon Cloth or Leather, and lay them to the places you uſe to anoynt, as the Hands and Feet, and Emunctories and to the Back-bone; tie them on, and wear them day and night, and renew them every third or fourth day, and labor to Sweat every night, continuing till the Mouth is ſore. Let him purge and Diet, as when anoynted, and becauſe the Cure is longer, they may have liberty to Ride, or go abroad ſomtimes; with their Plaſters on.

Theſe do ſomthing, if but applied to the Hands and Feet. Let them therefore were Gloves and Socks to conceal and keep the Plaſters on. And becauſe they keep company they are leſs miſtruſted. This in tender Bodies and long continuance will do the Cure. We uſe alſo for the Cure of the Pox, not only crude and running Quick-ſilver, but fixed, either with Brim-ſtone or Vitriol.

You muſt boyl Quick-ſilver with Brim-ſtone, til it come to a red clod, which they call Cinnabar; becauſe their artificial Cinnabar is like the natural, by which name they alſo cal red Lead. Thus prepared it is uſed for curing the Pox, not by anoynting, as when it is Crude, but by the Smoak of it, when it is burnt to Fume the Body. For this Artificial Cinnaber keeps ſtill the force of Quick-ſilver, and when it is burnt by reaſon of the Brim-ſtone, it hath a greater and more peircing fume, or ſmoak and works as ſtrong as Quick-ſilver when it toucheth the Body, and cauſeth Salivation or ſpetting and a ſore mouth, and Cures the Pox. And therefore our Chyrurgions uſe it more then the Unction, or if there be any relicks after another courſe hath been taken, this will clear remove them. They mix things to correct the ſtink of Cinnabar, when they raiſe theſe Fumes, which they powder and lay upon the Coales; or they mix Cinnabar with Roſin, or the Infuſion of Gum Traganth, and make Troches thereof, which they lay upon the Coales to ſmoak. Obſerving this quantity, that's one dram of Cinnabar be uſed at a time.

This Fume is made for eight times. As,

Take *Cinnabar one ounce, Frankincenſe alone or half Maſtick three ounces;* make *a Pouder, uſe half an ounce at a time,* or mix it *with Turpentine which makes a great Fume, or with Gum Traganth* make Troches for eight times.

To make them ſweeter. Take *Cinnabar one ounce, Frankincenſe, or Maſtick one ounce and an half, Benzoin ſix drams, Storax half an ounce, Labdanum two drams, Wood Aloes or white Sanders half a dram:* make *a Pouder, let him uſe half an ounce at a time.*

You may add other ſweet Gums and Spices, as Cloves, Cinnamon, Nutmeg and the like.

In Ulcers you may add to the ſecond pouder preſcribed half an ounce of Myrrh, and Amber, and when the Ulcers are very malignant, you muſt uſe very ſtrong dryers, as half an ounce of Antimony, two drams of Braſs, or Venice Glaſs one dram.

And ſomtimes ſtrong, if the Party be ſtrong, as *Orpiment one dram, Quick ſilver prepared, otherwiſe a ſublimate or præcipate one dram,* with this Caution, that they take none of the Fume into their Noſe.

Some ſuppoſe that they can reſiſt this Venom in the Oyntments and Fumes by mixing of Treacle; but in regard the ſtrength is loſt by burning, as it will do little in Oyntments, ſo we ſuppoſe it is good for nothing in Fumes.

Theſe Fumes are thus adminiſtred: the Patient is put naked into ſome warm cloſe place, which is kept from the Air, as a hot Houſe, or a Tub for the purpoſe, which beneath of wood and above covered with a Mat or the like, arched a Tent. Thus ſitting let him take the Fume which comes from the Troches thrown upon the coals there, with his Face out, that he may endure it longer, but his Head ſo covered that the Air come not at it, but towards the Concluſion, let the Head be a little fumed alſo; let him ſit while he can endure it without fainting and ſweat. Then cover him with warm ſheets, and carry him to another place where there is no ſmoak; not too far off, leaſt he catch cold, there put him into a warm Bed, as we ſaid in Unctions, to ſweat while he is able. There is another way of ſmoaking for the Pox, for gentle Folks, with leſs trouble: if you do it againſt a Chimney covered with Tapsſtry, and ſo the Smoak will get up the Chimney, and the Patient breath the better. And the beſt way is to lay the Patient ſtraight in his Bed, and conveigh the Fume by a ſpout from a Funnel or fuming pot under the cloaths unto his naked Body, and there they keep it, with his Head out of the Bed, till a little at the laſt as we ſaid before.

Theſe Fumes are to be uſed once every day, and if the Patient be weak every other day, or if he grow faint, let him reſt ſome day till his Spirits be recruted, and to it again till by his fluxing, or ſpitting or ſoreneſs of Mouth, you are admoniſhed to give over, which uſually will be after ten times, ſomtimes ſooner, and ſomtimes later.

The Diet is the ſame with that of Unction, but they muſt eate oftner, becauſe Fumigation weakneth more then Unction and Abſtinence cannot do ſo much good here, as weakneſs will do hurt; you muſt alſo purge ſomtimes, as in the Unction.

Quick-ſilver made into Sublimate, with Vitriol and vinegar, which flyeth up, and ſticketh to the Head or covering by the force of the fire is uſed outwardly, alſo for the Cure of the Pox, mixed with ſome Liquor to waſh the ulcers; for Quick-ſilver is in the Sublimate, and ſticks to the Body, and doth the ſame that it did in the Oyntment and Fumigation, and cures the Pox by ſpitting, which alſo maketh a ſore Mouth as the other. And moreover by the ſharpneſs of the Vitriol, it burns the skin, and bliſtereth it, and draws out the venom from the ſore and knotty places. Thus they cure the Pox by it alone, and take away the Pains and Nodes, and root them out when no other way will.

For making this Mercury water of Sublimate, a middle quantity is one ounce of Mercury to two pints of Liquor, and you may increaſe or decreaſe the quantity according to the Operation.

By Decoction you may make it thus: Take *of Sublimate Mercury one ounce, common Water, or Roſe-water, Scabious, Fumitory, Marjoram, or Sage-water &c. two pints, white wine four ounces. or Aqua vitæ two ounces:* boyl them a little and keep them for uſe.

An Infuſion for a Water to waſh with. Take *Sublimate one ounce, Allum one ounce and an half, Lytharge, and Ceruſs, each one ounce; Aqua vitæ two pints:* ſteep them in a cloſe ſtopp'd Glaſs.

A Decoction. Take *Sublimate one dram, Arſenick four drams, Euphorbium half a dram, Roſe-water or the like, with Aqua vitæ, each twelve ounces:* boyl them a little in a Glaſs.

Thus we uſe theſe Waters, let the Legs be waſhed with a clout dip'd in this Water from the Knee downwards, and the Arms from the Elbow foreward, ſometimes, morning and evening by the fire, continuing it ten daies, till the Mouth be ſore and they ſpit.

Let

Let the Patient be governed as in the Unction in a hot place ſweating, and taking proper Meat and Drink, and let him be purged before, and in the time of uſing it.

Alſo Experience hath taught, that Quick-ſilver taken inwardly cures the Pox, either crude or calcined.

When it is taken crude, it doth it by the ſame way, as when outwardly applied, cauſing no other manifeſt Evacuations, but ſpitting, neither will it cure without it make the Mouth ſore. And in regard, it doth the ſame externally, it is thought prejudicial inwardly; give it not raſhly therefore but in an old Pox, or when others fail, or to ſave Labour and Charge. And it is ſafer, when it ſtaies not long in the Body, for being crude, it commonly gets out ſoon by its weight and ſlipperineſs, or uſually ſome other things are mixed to carry it away: and ſo it hurts not the Stomach and Guts, and leaves its ſtrength notwithſtanding.

We give crude Quick-ſilver from ſix to eight or ten grains, with ſomthing added to diſſolve it, and to carry it away; for of it ſelf, it will not cauſe ſtools, it is made into pils and ſo given every day till there be Heat, and ſtink in the Mouth with ſpitting, which muſt continue thirty daies, and the Cure is compleat, if general Purges went before and a good Diet with it.

You may make theſe Pills thus: Take *of crude Mercury half a dram, kill it with Juyce of a Lemmon or Sage, or of Roſes, or with Syrup of Roſes, or with Turpentine, add the beſt Agarick two ſcruples*, make three Pills, let him take every night after Midnight, one, and repeat them till the ſigns aforeſaid appear, Rhubarb is given inſtead of Agarick: ſome mix one or two grains of Opium to the Compoſition, to take away pain, and provoke Sweat. Sometimes Musk and Ambergreeſe, or a drop of Oyl of Cinnamon, to refreſh it by it ſcent. Alſo becauſe Gold is good againſt the Venom of Quick-ſilver, and to make them dearer, they uſe to guild them.

Another Compoſition. Take *Aloes one ounce, Rhubarb or Agarick two drams, Maſtick one dram, Quick-ſilver killed with Turpentine two or three drams, with Syrup of Roſes ſolutive*, make them up, adding the aforeſaid Spices, give one ſcruple at a time, or more if the former work not.

We make theſe Pills ſtronger, by adding ſtrong Purgers, which take away ſpitting, they are given every day, or every other day, and Treacle between.

They are made thus: Take *of the Pills mentioned of quick-ſilver, Rhubarb, Agarick, and Maſtick*, add to the *Scammony, or Coloquintida prepared two drams, give half a dram at a time.*

Or thus: Take *Cochy and fœtida Pills, each half an ounce; Rhubarb, and Agarick, each one dram; Quick-ſilver killed with Turpentine three drams, with ſyrup of Roſes ſolutive*, make a Body for Pills, let him take *one ſcruple or half a dram.* as they work.

Mercury calcined called Precipitate, is given to cure the the Pox ſo called, becauſe it is precipitated or thrown down into the bottom of the Glaſs by the fire, or becauſe it moveth the Belly downwards. And then it doth not work by its Natural force, as when crude, but by an acquiſite or new gotten Vertue, by which it ſtirs up Nature ſo violently to ſtool; and not to ſpitting: and that not as other purges in a long time, but quickly given but twice or thrice, cauſing aboundance of vomiting and purging, ſomtimes ſweating and urin, ſo that they are cured, as by a Miracle, but not without danger.

The way to prepare it, is as followeth. Take *Quick-ſilver two ounces, Aqua fortis three ounces*, let them ſtand a day or two in a Glaſs, till it fall to the bottom like chalk, pour off the Liquor by degrees till the bottom is dry: or draw off the Moiſture by Evaporation upon the fire, or boil them to a hardneſs, pouder that which remains, and put into a Crucible or melting pot upon the fire for an hour, ſtirring it with a ſtick, till it be calcined, and made like red Lead, this they call Precipitate,

Take it and infuſe it in Roſe-water, Plantane, Scabious or Bettony-water at a gentle fire, till all the Water be gone and the pouder remains dry, then calcine it in a Crucible: this pouder muſt be mixed with Conſerve of Roſes, or of Apples or the like, and a Pill as big as a Peaſe thereof given in the morning; others add ſome Cordial or Stomach pouder; others Treacle, and Confectio Alkermes.

Some work with more pains to rectifie it, that it may do leſs hurt: firſt they waſh it in hot water, then they boyl it in Vinegar four times diſtilled, three or four fingers above it, in a cloſe Glaſs for four hours, then they pour off the Vinegar, and boyl it again in new, the third time alſo, then they diſtil the Vinegar that was thrice poured off, and after the vinegar is gone, they take that in the bottom which is like Salt, and boyl it in Rain-water, and when it is ſettled, they pour off the clear top, and diſtil it in *Balneo mariæ*, till the Liquor be gone, and keep the remaining Body, and this they uſe as the ſafeſt precipitate.

Others take more pains, and ſteep it in Spirit of Wine, and ſtill with a retort, and then dry it to a red Pouder it. One grain of this in wine doth wonders in the Pox, ſay the Chymiſts.

Some give Pills of precipitate, with Rhubarb, Senna, Scammony, or Hellebore, Saffron, and Starch, with Juyce of Lemmons, and give every day one

I thought fit not to omit that famous Medicine of the Chymiſts called *Bezoar mineral*, for curing the Pox, it is thus made. Take *Antimony, and Sublimate calcined with Vitriol very white, and let it be thrice finely pondered, of each as much as you pleaſe*, firſt ground by themſelves, and then together, and draw out the Oyl by a Glaſs retort with a gentle fire, by degrees increaſed, ſeparate the coagulated Mercury as much as you can. Take four ounces of this Oyl, and pour upon it three ounces of Vitriol by drops, which will make a great Noiſe, ſtill them in ſand till they are dry, fortifie the Spirit with one ounce of freſh, do thus thrice and the Mercury will be fixed, calcine this in the fire of Fulmination, and it will be very white, and it muſt be ſweetned with ſpirit of wine, often poured on and drawn off, this is Bezor mineral, keep it in a glaſs and give two or four grains at a time. Theſe are not to be uſed raſhly becauſe dangerous, and when all things fail, nor muſt all know them. And when we uſe them we muſt refreſh them with things internal and external, and we prevent the Flux, Dyſentery: as we ſhewed in Dyſentery.

The accidents of the Pox are divers wayes cured.

The pains about the skin, bones, ſhoulders, head, and fore-head, with the Nodes, if they continue after the cure fully adminiſtred and trouble the Patient, muſt have peculiar Remedies; and if they help not, you muſt begin the Cure again, the Remedies follow.

If after the general Application of things, there remain any accident, it may be removed by the anointing of the part with the common Oyntment mentioned in the Pox, and if you add Wax thereto, you may make a Plaiſter for the Fore-head, and uſe it like a Cap or the like, conſtantly.

Or uſe the Plaiſters mentioned, or Cerots to the particular parts, or that called *Divinum* or *Gratia Dei*, or of Bettony with Quick-ſilver, adding Euphorbium, Caſtor, Hermodactyls, Orris, Pellitory, Hellebore, and other hot things for the Joynts, eſpecially that uſual Emplaſter of *Vigo* called the Plaiſter of Froggs, excellent for pains and Nodes or Knots.

Alſo that Cerot which we mentioned for curing of Nodes.

That excellent plaiſter which I have found ſo ſucceſsfully, is thus made. Take *Quick-ſilver three ounces, mix it with Turpentine waſhed in Aqua vitæ one ounce, Hogs greaſe or Calfes Marrow, each one ounce and an half; Oyl of Lillies, Chamomil, Dill, Bayes, Worms, or Foxes, each half an ounce; Oyl of Spike, or Turpentine two drams, Euphorbium, Frankincenſe, each half an ounce; Storax ſix drams, Hermodactyls two drams, Caſtor one dram: with Wax*, make a Cerot. They ſay the Oyl of Guaicum allayeth the pains.

Waſh the Legs pained with Mercury-water, it is the beſt

beſt for Pains and Nodes, as is mentioned.

Some ſay that Fomentations and Oyntments of things without Quick-ſilver will allay the pain, being temperate and anodine, or takers away of pain, or heating much the Nerves. But we have ſhewed that actual and potential heat doth increaſe theſe pains, except Quick-ſilver be mixed.

Beſides it is good to purge often with Pills, Potions, and the like, mentioned in the Gout and Head-ach, which alone ſomtimes takes away the Reliques of the Diſeaſe, and with other Medicines to the part they are more effectual, eſpecially if you give between, things that ſtrengthen; and if the Head ake, give peculiar Medicines therefore.

Sweating alſo by Decoctions mentioned, doth take away the after pains, eſpecially with purges and Medicines to the part. Stilled Waters are the beſt for it, as that of the Decoction of Guaicum, or that of Treacle, mentioned in the general Cure given in Potions.

Narcoticks or Stupefactives are ſometimes given to aſſwage pain with good ſucceſs, becauſe they alſo bring reſt and cauſe ſweat; and they may be taken without hurt. Therefore Treacle is ſo good to cauſe ſweat and aſſwage pain, and the reſt that ſtupefie, called Narcoticks.

The Nodes or Swellings in parts without fleſh, as the Fore-head, or Head, or Shins, or Backs of the Hand, depart when the pox is cured; and if it be by Unctions or Fume the ſooner, becauſe they are anointed with the other parts, but if the Cure be by internal things, and the Knots or Nodes remain, you muſt cure them by Unction and Fumigation, and the whol Diſeaſe is not perfectly cured, adding more Oyls and Gums, and Greaſe to the Oyntments.

The Emplaſters mentioned are good for theſe, eſpecially that of Vigo, which ſoftneth and conſumeth them.

Or this Cerot. Take *Gum Ammoniack, Opopanax, each two ounces; diſſolve them in Aqua vitæ, Gooſe greaſe, Hens or the like, each one ounce and an half; the Marrow of Veal, or Goats bones one ounce, Labdanum, Storax, each two ounces; Storax liquid one dram, Pouder of Hermodactyls, Orris, each three drams; Cinnabar one dram, Quick-ſilver diſſolved with Turpentine ſix drams, with Oyl of Worms, and Wax,* make a Cerot.

Or boyl *Briony roots, and Orris roots in Wine, to half a pint, ad Gum Ammoniack, Galbanum and the like diſſolved in Aqua vitæ to three ounces, Liquid Storax, Bears greaſe, horſe Marrow, each one ounce; Quick-ſilver kill'd with Turpentine two ounces:* make a Plaiſter.

Or take black Briony roots, and fill them made hollow with precipitate, keep it in a moiſt place, then take out the Mercury, and anoint it with the Juyce of the Root.

Mercury water is good againſt Nodes to waſh as mentioned, eſpecially when it raiſeth Blyſters as it uſually doth and burns the skin, and this is done by adding more Mercury, or ſome Arſenick, as we ſhewed.

That Froath which is skummed off at the boiling of guaicum, doth diſcuſs the Nodes, if it be often uſed.

You may uſe the ſtrongeſt of thoſe Remedies which were preſcribed for taking away other Nodes, as we ſhewed in tumors, eſpecially thoſe of Quick-ſilver.

And the Stupefactive Roots and Herbs will do good applied, as is ſhewed. As Briony roots bruiſed and applied without Quick-ſilver, doth wonders.

Some boyl Rhubarb and Aloes in one part of Lye, and half a part of Soap, till it come to a Plaiſter with Wax.

Alſo they foment the Nodes which ſoftning Decoctions, mentioned in Scirrhus, and Knot-gout, and other hard tumors.

A Bag filled with Oats, and boyled, and often applied hot, is accounted good for the ſame.

The Nodes are cut out if they will not away, but hinder the Patient, as we ſhewed in the Cure of other Nodes. And if they be not near the Joynts or Nerves, as in the Head, or if their be fear that the Bone is foul, they may be burnt with an actual Cautery, and if the Head or Shins be infected, ſo that the Bone will not ſcale, you muſt take it out with a pair of Forcipes or little tongs, if the skin of the Brain appear, you muſt defend it with red ſilk or fine linnen before you lay a Plaiſter to the Ulcer, and cure it as a Head-wound.

The Ulcers external and internal that come in the Pox, if they be ſmall are cured with the general way, but if they be fixed and filthy, they muſt have a particular Cure, leaſt they infect the parts adjacent and the Bones, and it muſt be ſpeedily adminiſtred after the general.

In the external Ulcers of the Face, about the Noſe, Lips, the Privities or Fundament, you muſt firſt cleanſe them if foul, and if hollow apply Incarnatives, and then heal them up if the Bones be foul, they muſt be ſcaled. As I ſhewed by Remedies mentioned in the Cure of malignant ulcers, where theſe are comprehended, and in the general Cure of foul Bones by actual and potential Cauteries.

Chiefly in the Ulcers of the Pox, they which contain Quick-ſilver, Sublimate, or Precipitate, or Cinnabar all made thereof are the beſt, becauſe they are contrary; as I ſhewed to the Diſeaſe, ſuch as is preſcribed in the Cure of Ulcers. beginning thus,

Take *Quick-ſilver one ounce, Turpentine &c.* and that following for the Ulcers of the Legs.

Or that made of others there mentioned, as Apoſtolorum and the like, adding *four ounces of Quick-ſilver, with half an ounce of Turpentine diſſolved, or one dram of Sublimate, or precipitate*: or mixing equal parts of the general Oyntments for the Cure of the Pox, and for the Cure of Ulcers together, or another there mentioned, good againſt Puſtles and Ulcers, this may be uſed to the Ulcers after fluxing &c. as we ſaid there, if the Ulcers be filthy, Cinnabar, Verdegreeſe, and Sublimate muſt be added, and if you fear the Bone is foul, add one ounce of Myrrh more. And if the Bone be foul, add ſix drams of Euphorbium, which will take Scales that are rotten from the ſound Bone.

The pouder of white Hellebore roots, Agarick, Senna added, alſo do cure thoſe perverſe Ulcers.

Oyl of Guaicum is commended above the reſt, alſo of Antimony, of Bricks, and Juniper.

They alſo teach that the Foam, or Skum ariſing from Guaicum boiled, cures theſe Ulcers.

Other internal Ulcers in the Pox, although as we ſaid of external, they muſt have a general Cure, yet it is good in the time of the cure, and after if they continue to apply particulars to them. Which differ not much from them that are uſed to other Ulcers which are in the ſame places without the Pox.

For in the Ulcers of the Noſe which are internal, we proceed as we do in other Ulcers of the Noſe, by ſternutations, or Errhins ſnuffed up, or pouders. Among the reſt they are not proper which are made of the Decoction of Guaicum, Cinnabar, and Sublimate, the Fumigation of Cinnabar cureth not onely the whol Body, but alſo the Noſe, if taken: as we ſhewed.

In the Ulcers of the Mouth as the thruſh, Fiſſures, and Excoriations, whether they come from the Pox, or after the uſe of Quick-ſilver, thoſe which are declared in the like Ulcers, in the pains of the Mouth and Jawes, are here alſo very convenient. Among which ſome are mentioned, which are proper for the pox, which have treacle in them.

The Ulcers in the Fundament of both ſexes, and in the Privities, as thoſe called *Condylomata*, require the ſame cure, which is mentioned in the pains of thoſe parts.

If the Ulcer be in the Yard of a Man and Neck of the Bladder, or in a Woman, ſo that it cauſe burning, and corrupteth Urine, we ſhall ſhew the cure thereof, when we ſpeak of piſſing of matter in things caſt forth, and in the infectious running of the Reins, which goeth many times before the pox.

The Inflammation and Puſtles of the Mouth uſually following the uſe of Quick-ſilver is cured, as we ſhewed in Diſeaſes of the Mouth with Oyntments of Greaſe and Milk. And there we ſhewed, how they are to be cured, when they follow the uſe of Quick-ſilver, as other Inflammations of the ſame parts, and how thoſe Medicines that have

have treacle therein are to be adminiſtred, and if they turn to Ulcers, of which we now ſpake, how they are to be ordered.

We cure all Spots and Puſtles by curing of the Pox, for if the Pox be rooted out, by divers purgings, as we ſhewed, they will be gone, or if they remain, you muſt begin the Cure again with outward Applications, and they will take away the Reliques. But when the pox is gone, the puſtles remain fixed, you muſt cure them with the ſame remedies that we preſcribed for red puſtles, if they be ſuch or venemous, by cleanſing, conſuming and burning them off.

And becauſe quick-ſilver doth powerfully take away the accidents of the pox, you muſt uſe the general Oyntments made thereof.

And you muſt mix them with the particular Oyntments mentioned in red Spots.

Or apply Quick-ſilver and Greaſe, with Turpentine or Roſin.

Or mix quick-ſilver well, after waſh'd with Juyce of Lemmons or Docks, with Ceruſs, Frankincenſe and Maſtick for an Oyntment.

Or, Take *Quick-ſilver one dram, Lytharge two drams, maſtick half a dram, Camphire one ſcruple, Turpentine one dram, with Oyl of Eggs: make an Oyntment.*

And if you add a little Sublimate, it will be better.

Or uſe the Waters, Mixtures, or Unguents made of ſublimate, mentioned in the Cure of red and infectious Spots.

But if you will add the firſt, apply gentle Remedies, uſe the Topical Medicines there mentioned, or that Oyntment of burnt Allum, Aloes, Juyce of Oranges, or Docks, with Oxymel of Squills.

Or the Emplaiſter of Lilly-roots, roaſted and beaten, with Sugar, and Camphire, or Oyl of Tartar to anoint.

Some cure with Baths in the time of the Cure by Unction, and they uſe the Bath after Supper, and the Unction in the morning. The Bath is made of ſuch things boiled, as were mentioned for other Puſtles, as Docks, Scabious, Fumitory, Lentils, Lupines, black Hellebore, Brimſtone and the like: but theſe will not do except the Diſeaſe be quite taken away: therefore theſe and the like Baths are to be uſed at the Concluſion, to waſh away the Reliques of the Diſeaſe and Itch of the Oyntments; but it is better to uſe a hot Houſe or dry Bath.

If Cleſts continue in the Hands and Feet after the cure, it is a ſign that ſome Reliques remain, therefore the cure muſt be repeated by the Unction, or you muſt anoint the palmes of the Hands therewith, and the ſoles of the Feet.

Or *diſſolve half an ounce, of Quick-ſilver with two ounces of either of the four hot Oyntments, or with that of Turpentine, or with Greaſe and Turpentine, and a dram of Sublimate, and anoint the Cleſts.*

Or mix the pouder of Sublimate, with Oyl of Violets, Almonds, or with Pomatum, ſo much as may not corrode, or with Allum, Borax, and Camphire.

Or boyl Sublimate in water, and touch the cleſts therewith, or uſe thoſe Remedies preſcribed in Diſcoloration for the cure of fiſſures and clefts, and of the peeling of the skin, there you may find Medicines which are here proper alſo.

Where we alſo ſhewed, how the cleſts muſt firſt be waſhed before they are anointed, with an emollient Decoction, to which you may add Docks, and Fumitory or the like to cleanſe.

Scales in the Hands, if they remain after fluxing may be cured by the ſame means, or by the Remedies mentioned in that Diſeaſe with the pox, in the Chapter of Deformity.

And if Dandrough remain after fluxing, you may uſe the Remedies mentioned there for the cure thereof.

The falling of the Hair from the Head or Face, as Eyebrows and Beard, ſhewing this kind of Pox, or mixed with other accidents, is commonly cured in general with the pox, by purging and the like, and it is not needful to treat thereof in particular, but if it be left after the Cure, you muſt either renew the cure again, if you conceive the pox not gone, or elſe apply Medicines mentioned in the Falling of Hair. Among which thoſe which allay the ſharpneſs of Humors, which corrodes the Roots of the Hairs, are good to prevent the Falling off, and when they are fallen off, you muſt take away the Cauſe thereby: as we ſhewed.

Oyntments of quick-ſilver may do here good, as in other accidents left after the general cure; but becauſe they are not convenient for the Head and Face, you may uſe other things without quick-ſilver, and that is the beſt which we mentioned to be made of Cantharides, or Spaniſh Flies, and Oyl of Spike.

Other accidents and Symptoms of the pox are to be cured, of which theſe are the moſt uſual following.

The decay of ſtrength from ſweating or purging over much, is cured by ceaſing from Evacuations, till ſtrength return; and by refreſhing the Patient with reſtoring meat and drink, and ſtrengthening Phyſick inwardly and outwardly, mentioned in the deſect of vital Spirits, ſuch alſo may be uſed to fortifie the Patient in the time of Evacuation. But if they faint away in the Cure, and ſwound, then you muſt recal the Spirits by divers Applications. All which and how they are to be uſed, are preſcribed in the Deſect of vital Spirits.

If the Flux Diarrhœa or Dyſentery come from much purging, you muſt cure them with Remedies mentioned in theſe Diſeaſes. Among which Narcoticks or Stupefactives of Nature, as treacle and the like, are very good to take away pain and not hindering ſweat: as was there ſhewed.

The Cure of the Scurvey.

The Scurvey though it come alſo from a venemous Cauſe, yet it may more eaſily be cured then the pox; and if it be neglected or evil ordered, it turns to a Dropſie or a worſe Diſtemper.

Experience hath taught that the total and perfect Cure of the Scurvey, is by Evacuation and things that alter by manifeſt or ſecret Vertue, contrary thereunto, by which alſo the cauſe is taken away, and the Diſtemper amended.

We muſt evacuate thoſe Humors which we perceive chiefly to abound, and becauſe that Melancholy is thought the chief, which is in the Meſeraick Veins about the ſpleen or in the ſame, they ſtudy to evacuate that onely, by bleeding, purging and ſweating.

They bleed, if the Body be full before purging, in the Arm and Hand, on the left ſide, ſomtimes in the Foot, eſpecially in Women when the courſes ſtop. Alſo the opening of the Hæmorroids is very profitable.

After a Clyſter or the cleanſing of the Guts from Excrements, and Blood-letting if need be, we prepare the ſuperfluous Humors and evacuate them. And becauſe they are Melancholy, you muſt prepare and purge with the ſame things, that we uſed for the pox, as therein at large is mentioned. But you muſt not continue ſo long purging as in the pox, but only at firſt ſomtimes, repeating them. To which Remedies you muſt add things that open Obſtructions, eſpecially in the Bowels and Spleen which are the occaſion of Melancholy, therefore you may uſe the remedies preſcribed to prepare and purge Melancholy, and to open Obſtructions mentioned in other Diſeaſes of Melancholy; and they will be more fit here, if you mix thoſe things that alter, and are properly enemies to this Diſeaſe.

Sweating is good in the Scurvey as well as in the pox, but it muſt not be of ſo long continuance, but after purging, now and then, in a morning in the Bed, or in a hot Houſe, if ſtrength will permit. Therefore the Decoction of Guaicum, Sarſa, and Saſſaphras, and the reſt mentioned in the pox are good. Or we may give treacle or mithridate, or which is better, the thick Juyce of Dwarfe-elder, Elder or Juniper, adding to three ounces of theſe one ounce and two drams of Syrup of Poppies, or give the ſtilled Waters mentioned, in the altering Medicines.

We uſe things that alter the malignant Diſtemper of the Scurvey, which are by a ſecret propriety contrary thereunto.

Some Plants which are ſharp, which Experience teacheth have a propriety againſt the Scurvey, among the which Scurvey graſs is the chief, a ſharp Herb like Water-creſſes, this all men conclude to be the Antidote againſt it. Whether it be eaten in Sallads, or made into a conſerve with ſugar, and eaten often: or the Juyce be boiled to a Syrup and ſo taken, or it be boiled in Milk, or Wine or Ale, and drunk conſtantly, or the diſtilled Water thereof.

Water-creſſes are judged to be of the ſame Vertue, taken as Scurvey-graſs, or with it.

Brook-lime alſo is good though it be not ſo ſharp.

Wild Purſlain alſo, or great Stone-crop which is a little biting, may be added to theſe.

Alſo the Herb, and eſpecially the ſeed of Muſtard, which candied with Honey like ſweet-meats, is excellent, not only for the Cure, but the prevention of the Scurvey.

There are divers other things that correct the Diſtemper at the firſt in the Liver and Spleen, by opening Obſtructions, which are mentioned in the like Diſeaſes of Melancholy in the form of Decoctions, Syrups, Infuſions in Wine, diſtilled Waters, Conſerves, Electuaries, Pouders, and Tablets, and Pills made thereof.

Which are made of theſe following, which are openers of Obſtructions, and good againſt the ſpleen, the five opening Roots, Avens, Reſtharrow, Elicampane, Rhubarb, and Monkes Rhubarb, the Leaves of Fumitory, Thyme, Epithymum, Polypody, Bugloſs, Germander, Agrimony, Tamarisk, Celandine, Burnet, and bitter things, as Gentian, Squills, Hedg-hyſop, Wormwood, ſour things, Sorrel, Wood ſorrel, and of the hotter Medicines for cold people, as Bettony, Mints, Sage, Roſemary, Stæchas, Organ, Hyſop, Mugwort, Rue, Bay-berries; alſo of Spices, as Nutmeg, Mace, of Minerals, as Vittriol, Steel, Iron, Bezoar-ſtone, and the like Cordials.

As for the Symptoms of the Scurvey, the Tumors and Ulcers of the Gums, you muſt uſe ſuch Remedies as in the Diſeaſes of the Gums, drying Waters, with ſuch things as are properly againſt the Scurvey, as Decoctions of Scurvey-graſs, Brook-lime, Water-creſſes, or the Waters, or Juyces thereof.

Alſo the Juyce of Oranges, crude and boiled, eſpecially in the filth of the Gums to waſh and to drink inwardly.

Alſo Lapis prunellæ or Salt-peeter prepared, mixed with the things mentioned, or with Sage, Self-heal, Privet-water or the like, is an excellent Remedy for the Ulceration of the Mouth and Gums, approved by Experience.

If there be Ulcers in other parts, the like Medicines are to be applyed.

The ſpots in the Leggs and elſewhere, becauſe they vaniſh when the Diſeaſe is cured, require not a peculiar cure, and if any remain after, uſe the Remedies againſt ſpots in Diſcoloration.

If after accidents be, as Contraction or Reſolution of Members, or Leucophlegmacy or a Dropſie, you muſt direct your Cure at that, and proceed as we ſhewed in the like caſes in Motion, Hurt and Tumors.

CHAP. V.

Of Conſumption of the Body.

The Kinds.

WE call that a Conſumption when the Body or any part thereof is conſumed or decayed, for if they grow leaner, we ſpake of that in Deformity, when Magnitude is diminiſhed: alſo when the internal parts are conſumed, as the Bowels, Liver, Spleen, Kidneys without Corruption, as hath appeared by Anatomies, as alſo it may be found in the Lungs, Heart, and Brain: we have ſpoken thereof in the Hurt of the great Functions. But of outward Conſumption whereof we here ſpeak. There are two ſorts, one when the whol Body, another when any parts thereof is waſted or conſumed.

Leanneſs or Slenderneſs.

Somtimes the whole Body conſumed in thickneſs, and not in length, which ſeems to be increaſed; in ſome there is a falling away or Leanneſs, and if it come from want of Nouriſhment it is *Atrophia*, as ſhall be declared in the Cauſes, but if the whole Body or the greateſt part conſume it is called *Tabes*, and then the Temples of the Face fall in, and the Eyes, and the Noſe grows ſharp, ſuch a Face is called *Hippocrates* Face, becauſe he ſo deſcribed it, alſo the Cheek bones ſtick out, the Mouth keeps open, except the Beards of Men keep them from being perceived. In the Breaſt all the Ribbs are viſible; and the Griſſle like a ſword between them is bent, the ſhoulder blades are like wings, and the Channel bone like a bow, under which there is a deep pit, and they ſtick out, the Back bone is plainly ſeen, but the Belly is fallen down and ſeems empty except a Dropſie follow, the Neck is ſlender, long and unequal, and the external Larynx or Bone called *Adams apple* is viſible, the Buttocks are lank, the Hipps fleſhleſs, the Coccyx or three lower bones is like a Tayl, the Legs, Arms Hands, and Feet are lean and withered, and they ſeem ſwollen about the Joynts, becauſe the adjacent fleſh is loſt, the Nails grow longer and at length crooked, ſometimes the Roots are ſo conſumed, that when they grow again, the hinder part grows lower. and there is an Impreſſion as it were dividing the Nail as acroſs, which alſo grows away; the Hair being dried at the Roots falls away: the Skin lanke, wrinkled, ſoul and dry: in which the Veins are to be ſeen blew.

Thus in ſound Men otherwayes you may perceive leanneſs or Atrophy, or Tabes which is to a total Conſumption as they who want Food, or are worn away with labour and care or with age, lean, dry and withered.

In ſick people the Conſumption is moſt uſual, and is a Symptome of divers Diſeaſes, eſpecially of acute and laſting Diſeaſes, which conſume the Body, and when the recovery of the Body repaireth; ſomtimes they are all their lives time lean, and ſeem old, when not, therefore it is called *Senium* or age-like.

Senium or Age-like.

When other Diſeaſes laſt long they conſume the body, and that is *Tabes* which hath many Symptomes accompaning it, as a Cough, and then it is called *Phthiſis* or Corruption of the Body, or the Ulceration of the Lungs, from the cauſe that ſhall be mentioned; and in this kind of Conſumption there is a cough night and day, and ſpitting ſometimes with Blood mixed, and at firſt pure Blood, and in great quantity, as we ſhewed in ſpitting of blood, which cometh by fits, and there follows matter ſtinking, white, or yellow or green, or black; ſomtimes a piece of the Lungs is ſpit up with the matter, and there is a conſtant hectick Feaver, with a ſmall Heat and a quick Pulſe, as in Feavers mentioned, which cauſeth ſhortneſs of Breath upon little Motion, and coughing, theſe continue many months and years, and brings the body like a Sceleton or Anatomy of Bones covered with skin.

Phthiſis or Corruption of the Body.

Empyema or matter in the Breaſt.

There is another accident to this Phthiſis or Phtiſick which is called *Empyema* or Suppuration, when matter is in the cavity of the breaſt, like the Ulcer of the lungs by the ſigns; but ſometimes it appears by a flowing of Matter at the ſide, and more certainly when there is a Node between the Ribbs, which being preſſed flies in, and then returns, if theſe ſigns go before thoſe of a Phthyſick will preſently follow.

This

Maraſmus or Withering.

This Conſumption with a Hectick Feaver is called *Maraſmus*, from the decay rather then from the Feaver, there are three ſorts thereof, when it begins, increaſeth, or is confirmed, and this is called *Maraſmus Feaver*; when it is at the height of the Body, is ſo lean and withered that the Griſſles bend, eſpecially in the Breaſt, and ſides and ſtick out, the Skin is rough, the Nails crooked, and the Hair falleth.

The Colliquation or Melting of the Body.

This Conſumption of the Body is joyned with another kind of Hectick Feaver, which comes from the burning Feaver, and this is called *Colliquation* or Melting, becauſe it laſteth not long, but is ſudden and ſhort: as we ſhewed in Feavers.

Atrophy joyned with Cachexy or evil Habit.

Somtimes there is a decreaſe or conſumption with other accidents mentioned in the Cachexy, as loſs of complexion, a preſſing pain at the Heart, as there is a Swelling of the Body; and this called *Atrophy* or want of Nouriſhment, which may be called a kind of Cachexy, becauſe decreaſing it cauſeth an evil Habit, although evil Habit or Cachexy, is rather when the Body is increaſed then decreaſed. The practick Phyſitians deſcribe this Atrophy under the Diſeaſes from whence it comes, as thoſe of the Liver and Spleen, and comprehend that Conſumption in the Names of thoſe Diſeaſes.

Atrophy with a Dropſie.

Beſides this Atrophy joyned with Cachexy, there is another joyned with the Dropſie and its Accidents, by which though the Belly and Feet ſwell, the upper parts are extenuated, and grow lean, ſo that the body is partly ſwollen and partly conſumed, miſerable to be behold: as we ſhewed in the Dropſie.

A particular Atrophy of a Part.

Sometimes ſome Parts conſume, and that is called *Atrophy*, which is a kind of Conſumption, this is uſual in the outward Joynts or Members, as about the Hip, Foot, Thigh, and Calfe of the Leg, where it is more viſible; or upon the ſhouder or Elbow, or between the Thumb, and fore-finger.

The Atrophy or Conſumption of the Eyes.

Beſides theſe, the Eye is ſaid to have an Atrophy or Phthiſis and not the Pupilla, when it is not exactly diſtended and filled, and ſeems leſs and obſcure and the little black is more ſtraight and contracted, this contraction of the black is mentioned in Hurt of ſight: and thither may this falling of the Eye be referred rather then the Conſumption thereof, which is in the thick Tunicle.

The Cauſes.

The Cauſe of total or particular Conſumptions is of the parts when they are ſoft, fleſhy and fat, theſe conſume ſooner then the hard, as Bones, Griſſles, and Membranes, which manifeſtly decreaſe not, although while a man lives their Juyce and Humidity may conſume, and they may wither. Hence as it is that fat or fleſh being conſumed, their places are empty, and the bones are only covered with skin. This unevenneſs is moſt in thoſe places where there are more and greater Muſcles, as the Temples and Cheek, when the jugal bone ſticks out, when they are fallen, and there is hollowneſs of Eyes, when the Muſcles and Fat of the Eyes are conſumed, and when the Muſcles in the Neck are conſumed, or in the Breaſt, Back, Belly, Buttocks, there are void places, and cavities and bones ſtick out, as the backbone, Ribbs, Throat, Griſſle, Shoulder-bladds, Channelbone, and the crupper-bone or Ilium, and when the Muſcles are gone from the Arms, Legs, Calves, Fingers; the places are naked and depreſſed, and the Bones ſeem to ſtick out, eſpecially the Joynts, and the Nails, which ſome ſay increaſe in a Conſumption, unleſs Nature being content with a little Nouriſhment for them as I ſaid of Bones, ſhould keep them growing all the life. As when the whol body is conſumed, the Hair grows except by the force of the Diſeaſe the Roots dry up, and they ſo fall off. In Griſſles there is no ſign of Conſumption, but that being naked they ſtick more out, as the Noſe is ſharper, and the Nails, which only of all Cartilages come forth of the skin, are crooked in a great conſumption. As for the Membranes, of the skin which is only viſible, makes the body even, and if the fleſh and fat under it, and keeping it out be conſumed, it grows wrinkled and dry as I ſaid, and obſcure from the wrinkles that caſt ſhadows, and the Veins are naked, becauſe of the fat conſumed, the cauſe of the Conſumption of theſe parts is the want of nouriſhment or ſubſtantial radical Moiſture, or the change of the Temperament.

The want of Nouriſhment when blood is either not, or unprofitable, is the cauſe of every Atrophy.

If the Body grow lean for want of Nouriſhment, it is called *Atrophy*, in which the parts wanting their Juyce of nourihing blood, grow lean, in regard inſtead of the ſubſtance loſt there is no new, eſpecially fleſh which requires more Nouriſhment then other parts, and being ſoft is ſooner conſumed, but the harder parts, as Bones, Griſſles, Membranes conſume not, becauſe they are nouriſhed with little, and are more firm, as we ſee the bones of dead Men laſt long. This want of Nouriſhment is from divers Cauſes, and firſt becauſe it is not bred, or it is unprofitable, or it is hindered.

When the Bloood is not ſufficient, then becauſe the Juyce nouriſhing the parts faileth, and the fat continually decaying is not renewed by the like, the body conſumeth, this is from want of Chyle in the firſt concoction, when found men have too little Food, or ſick men too little Appetite, which cauſeth decay as well as the Diſeaſe. And this may come from other Diſeaſes of the Stomach, as want of concoction, when there is little or imperfect chyle, as in the Tympany, thoſe parts which are not conſumed. The body is extenuated from the want of a ſecond concoction, when the blood is not made, this cauſeth an Atrophy, this is from the fault of the Liver or Spleen, as weakneſs &c. When a Cachexy or Leucophlegmacy from their actions diminiſhed, or from their actions loſt, ſo that there is little or no blood; alſo other Diſeaſes of the Liver or Spleen breeding a Dropſie Aſcites, may cauſe an Atrophy therewith, where the parts above not ſwollen like Feet and Belly are conſumed, theſe are deſcribed in the cauſe of the Dropſie.

The blood is unprofitable and unfit to nouriſh, if it be foul, not crude, which cauſeth cachexy and Leucophlegmacy but impure, then it breeds Leanneſs or Atrophy, which is joyned with Cacochymy; and if it be watery it gets the Atrophy with the Dropſie Aſcites: this is from the firſt concoction which is not mended in the ſecond, or in the third, as we ſhewed.

The want of Nouriſhment, from blood hindered is the cauſe of the Atrophy of a Part.

When the blood is ſtopped from a part it hath an Atrophy, this comes from an outward cauſe, for the internal from want of blood would cauſe Leanneſs of the whole body. The blood is hindered from diſtribution by the Veins ſtopped and preſſed, by the Diſlocation of ſome Joynt, as the Hip; from which follows often an Atrophy of the Legs, and ſometimes Numneſs, if the Nerves be preſſed with the Veins. Alſo when Members are too long bound, or if the Veins are ſtraightned by a Callus, Tumor, Node, or Wenne, about the Joynts, or cut off, eſpecially if the great Veins or many be ſo cut off, for the leſſer Veins, and few being cut, there are others to nouriſh the part. And if the great Arteries be cut off, there will be Mortification rather then Conſumption.

For

The want of ſubſtance making Juyce is the cauſe of Conſumption or Tabes.

For the want of Subſtance making Juyce and of Natural Heat, the Body conſumes, and that ſomtimes through age, for as the body grows thereby being young, and flouriſheth thereby in middle age, ſo in old age as that decayes, the Body conſumeth, through the drineſs of the parts alſo which comes by their Temperament, whereby they are withered.

The ſame may come from Labour, Care and Diſeaſes, being vehement and perſevering, whereby the radical moiſture and Natural Heat is conſumed and weakned, as in old Age, ſo before by Labour, and Cares and Diſeaſes, Men become ſooner weak and lean, and ſo continue all their lives, except the Natural Heat be not ſo weakned, but it may be repaired. And then, though they be very lean, yet if they leave off Labour and Care and grow ſound, they will recover their former Vigor.

The change of the Conſtitution into hot and dry is the cauſe of Maraſmus.

It happens through the change of the Conſtitution into a more hot and dry temper, when all the parts are of a like temper; that the Body doth not increaſe in young Men, and in the aged it decreaſeth, and groweth dry and withered. As in a Hectick Feaver, coming from the heat of another Feaver, which changed temper of the Heart making it too hot and dry, the Body conſumes of a Maraſmus, as we ſhewed in Hectick Feavers.

And though it is by degrees in this kind of Hectick, yet is it of a ſudden in Colliquation or melting, and it follows a burning Feaver, the extream Heat whereof, did not onely turn the temper of the Heart into hot and dry, but melted the ſubſtance whereby the whol body became dry and conſumed: As I ſhewed in the melting Feaver.

The Ptyſick is cauſed by the change of the Conſtiqution into hot and dry, and a Hectick Feaver.

This is not only in ſimple Hecticks but in ſuch as are joyned with a Diſtemper of the Lungs, ſo that the Body conſumes as in a Hectick, and this is called *Phthiſis Ptyſick*, becauſe the Lungs diſtempered are the cauſe of it. This Conſumption riſing from a filth and Rottenneſs of the Lungs, doth continually diſturb the Heart adjoyning by Heat, and makes it, and the whol body hot and dry, which cauſeth a Hectick Feaver; as other Hecticks come from other Feavers: as we ſhewed in Feavers. The firſt Cauſe of this Rottenneſs of the Lungs, and the Hectick that comes from thence, and the Conſumption that follows that, is the Ulceration of the Lungs, till they rot, ſo that the Lungs are in part or all one ſide turned into matter, and the Veſſels of the Heart which are joyning to the Lungs, are loſt on that ſide, and as it were cut off about the Heart, and a Callus at the Root, And this Corruption hath been ſo great that the Mediaſtinum that divides the Lungs, and the Pericardium or Caſe for the Heart have been infected thereby.

Matter in the Breaſt is the Cauſe of Empyema.

Theſe things being thus; the matter which breeds in the Ulcer of the Lungs, is not only ſpet out, as it falls upon the Branches of the rough Artery, but at length when the ſubſtance of the Lungs is divided by corruption it fals into the Cavity of the Breaſt, and there being heaped up it cauſeth the Diſeaſe called *Empyema*. This appears to come from the Ulcer, by Anatomy, for when there is corruption of the Lungs, you ſhall alwaies find ſome matter in the Breaſt. As alſo in regard, that matter coming from the Suppuration of the Membrane that compaſſeth the Breaſt, fals ſeldom into the ſame, for it will rather fal out of it, as was ſhewed in the Pleuriſie. But an Impoſtum, growing to the Membranes, or to the outward Tunicle of the Lungs being broken by other Cauſes then Inflammation, may ſend its matter into the Breaſt: or matter may flow thereunto from without; as they ſay may be from an Angina ſuppurated, or Squinſie, or from a Defluxion of Flegm into the Breaſt. But in regard there is no paſſage from the Neck into the Breaſt, and if they ſhould get into the rough Artery, except they were coughed up they will rather fall into the Lungs then the Cavity of the Breaſt, this is not probable to come from a Squinſie much leſs from a Defluxion. But if an Empyema ſhould breed without an Ulcer in the Lungs, after the manner mentioned; the Lungs would at length be infected by the matter retained in the Breaſt, and the Ulcer of the Lungs would follow, which uſually goeth before the Empyema, or matter in the Breaſt.

The ſolution of continuity in the Lungs is the cauſe of Ulceration.

The cauſe of this Ulceration, and the rottenneſs that comes from thence, is either Inflammation or breach of ſome Veſſel in the Lungs, or a Wound, or corroding of the ſubſtance by ſome ſharp putrid or venomous Humor.

In a *Peripneumonia* or Inflammation of the Lungs, or in the Pleuriſie, if the blood, as we ſhewed in the Pleuriſie, be not turned into matter by Concoction, and ſo ſpet out: But the inflamed ſubſtance of the Lungs is alſo ſupurated, there is an Exulceration of the Lungs which uſually follows ſuch Inflammations, in which there being more matter, which is thrown out by coughing, in great quantities. And this matter, except death prevent, corrupting the ſubſtance of the Lungs, more, begets that laſting Ptyſick, joyned with a Hectick Feaver in which the Body pines away. If either in the beginning or afterwards, any matter falls into the hollow of the Breaſt, there will be alſo an Empyema, as *Hippocrates* ſhews, if Men in a Pleuriſie be not purged in fourteen daies, they wil have a Suppuration or Empyema: And this will ſooner come from the Pleuriſie and Inflammation of the Lungs, then from the Membrane that goes about them, becauſe a true Pleuriſie, as I ſhewed, comes from the Inflammation of the Lungs, as well as *Peripneumonia* or Conſumption of the Lungs.

This comes often from the breaking of a Veſſel in the Lungs which paſſeth through the ſubſtance of them being ful of Blood, and then the Blood being ſut from the Veſſels into the branches of the rough Artery there is coughing up of blood at the firſt which goes before the Ptiſick, and ſhews that it comes from the breaking of a Vein. Becauſe there is a Wound made in the Lungs by the breaking of the Vein, which by the continual Contraction and Dilatation of the Lungs ſeperating the Lips thereof cannot grow together and be healed but turnes into a filthy Ulcer which corrupteth the ſubſtance adjacent of the Lungs and cauſeth a Hectick Feaver, and a Conſumption, ſomtimes the cauſe of this Rupture of a Vein in the Lungs, is too often and vehement Dilatation thereof, by hollowing, crying and blowing, or ſtraining in lifting, or carrying of burdens, or in voiding of Excrements, or Child-birth. Somtimes from other external force, as a blow or fall if the Breaſt be ſo bruiſed that the Lungs are hurt. As we ſhewed in the cauſes of ſpetting blood.

There is alſo an Ulcer in the Lungs often, from an external cauſe, either from a Contuſion of the breaſt breaking the Veſſels and ſubſtance of the Lungs which cauſeth a contuſed Wound, or from a thruſt into the Breaſt which toucheth the Lungs, and cauſeth a wound, both which turn into Ulcers.

Somtimes the cauſe of a Ptyſick or Conſumption, is a ſharp humor flowing from the Brain which corrodeth the Lungs and this they ſuppoſe to be the chief cauſe, but it is not, in regard many who have a long time had this Defluxion and Cough, yet have no Conſumption, and young men fal into Conſumptions rather then old who are more troubled with Defluxtions. Yet if we grant that a Ptyſick may come from a Defluxion, which cauſeth a Cough, and the Cough the breaking of a Vein, becauſe by forcing often the inner parts of the Lungs, they may be hurt in time. And that Defluxions may eaſily befal Conſumptive men, which though they do not firſt hurt the

Lungs,

Lungs, yet by reaſon of the Cough which is added to that which proceeds from the Ulcer, they cauſe an increaſe of the Diſeaſe. But we ſuppoſe it more often comes from an humor ulcerating the Lungs, which lieth in the ſubſtance thereof and there corrupteth, and is not coughed out, but often recruted. Becauſe(being bred in the ſubſtance of the Lungs and not getting into the branches of the rough Artery, and leſs provoking a Cough then when it fals from the Head upon the rough Artery) it may continue longer, and do more hurt. They teach that the Lungs may be infected with blood or matter, and ſo a Ptyſick may come; and becauſe in the Diſeaſe of ſpetting of blood, the blood is not ſufficiently diſcharged, it putrifies and hurts the Lungs and ſo cauſeth a Ptyſick. But this comes rather from a broken Vein as we ſhewed, and when the blood out of its Veſſels, lodgeth and corrupted. And if the blood comes not from a broken Vein in the Lungs, but fals down by the rough Artery there upon, (except it be coughed up again(as it is uſually)and lodgeth(which is difficult)then putrifying it may alſo hurt the Lungs. In the Inflammation of the Lungs in the Pleuriſie and *Peripneumonia*, the blood that ſweats through or matter that breds thereof, if it be not ſufficiently coughed out but retained in the Lungs, it infecteth them, and cauſeth a Ptyſick which follows a Pleuriſie, or *Peripneumonia* that is inflammation of the Lungs not well expectorated or coughed up. And that matter in their ulcerated and Corrupted Lungs continually increaſing, and ſticking to the Ulcers, makes a greater corruption.

If the Lungs be ulcerated from any venemous humor, as is written of a Sea-hare, that eaten, it will ulcerate the Lungs, if it be true, it is from its quality contrary to the Lungs.

The Cure.

It muſt firſt be general of the whol Body, and then perticular to certain parts thereof.

The general Cure of the Conſumption of the whol body, is to be as it is in ſound men and ſick.

The Cure of Atrophy or Leanneſs.

In ſound men that have no other infirmity the body through faſting and want of nouriſhment, hath an Atrophy ſomtimes: or from labor and care which dry up the natural moiſture, and then you feed them moderately again and they abſtaine from violent labor, and caſt away care, they recover of themſelves, except they be very far ſpent, and then they are incurable. Neither can leanneſs in old Age, when the ſubſtance making moiſture is conſumed and the Members dried, be more cured then old age its ſelf.

The Cure of Atrophy joyned with Cachexy & Dropſie.

That Atrophy which is from the diſeaſe of the Bowels ordained for ſanguifying or making Blood or Chyle, eſpecially the Stomach, Liver and Spleen, through the want of Nouriſhment which is cauſed by thoſe Diſeaſes, by which means either blood not ſufficient or unfit for Nouriſhment is bred; requires that Cure which belongs to thoſe Diſeaſes which being cured, the Body flouriſheth, and if not the Patient dieth. The cure of which we have ſhewed in other great accidents that come from the ſame: as in the Cachexy whereof Atrophy is a Species or Kind, and in the Dropſie and the like accidents that come from the Diſeaſes of theſe Bowels, joyned with Atrophy. In all which becauſe of the Conſumption of Body, it muſt be nouriſhed with good Juyce, often chooſing the beſt that are preſcribed in a Hectick Feaver and Ptyſick, and ſuch as the weak Stomach can digeſt. Therefore if the Appetite be dejected, that they take little, let nouriſhing Clyſters be adminiſtred. Such as we taught in Hectick Feavers, or Milk, Yolks of Eggs, and Chicken-broath, alſo Broath of other fleſh, and Juyces, or Gellies, or ſtilled waters, cream of Barley and Wine.

If a Maraſmus follows a Hectick Feaver cauſed by the change of the Complexion too hot and dry.

The Cure of Maraſmus or withering & Colliquation or melting of the Body.

We ſhewed the Cure in the Hectick Feaver called *Maraſmodes*.

As alſo we ſhewed the Cure of Colliquation or melting from a burning Feaver in the cure of the melting Feaver. The Conſumption or Ptyſick which comes from a Hectick Feaver through the Ulcer of the Lungs, which alſo changeth the conſtitution, ſhall here be treated of.

The Cure of the Ptyſick from the ulcer of the lungs and Empyema.

The Solution of continuity in the Lungs, is ſcarce united when they ſpit Blood; and therefore cannot be kept from an Ulcer. And if it be in the ſubſtance of the Lungs, and they ſpit filth and matter, the cure is very hard to be done: and it is deſperate if the Lungs begin to corrupt, and to be turned into matter and to corruption cauſing an Empyema in the Breaſt. The conſtant motion of the Lungs cauſeth this difficulty and impoſſibility, which hinders the wound from growing together; alſo the cough that comes from that matter, or from a Deſtuxion which more and more ſtirreth the Lungs. Beſides, becauſe Medicines for the Lungs can ſcarce come thither with their leaſt part, they can do little in the breaking of a Veſſel, or an Ulcer. Moreover the Lungs corrupted cannot be repaired, and that Corruption which falls through and turns to an Empyema, in the Breaſt, can very little be coughed up. And though it ſhould be let out by cutting, yet the Ulceration of the lungs remaineth, without which the Empyema could ſcarce have been there, as we ſhewed. But if an Empyema come without the ulcer of the Lungs, from ſome Impoſthume in another part, as we ſaid, except you preſently make way for it by cutting, (which may cure the Patient, if it be certainly from that Cauſe) it will corrupt the Lungs by continuance, and bring the ſame Danger.

In regard we muſt leave nothing unexperienced, we muſt take the Cure in Hand, foretelling the worſt; and we muſt begin at the Diſeaſe that is the Ulceration or corruption of the Lungs with the matter and cough, and the collection of matter in the Breaſt, if there be an Empyema, then we muſt regard the Hectick Feaver and Conſumption. Then the cauſes, namely the Deſtuxion which cauſeth or nouriſheth the ulcer, and increaſeth the cough. As for the other cauſe that is the breach of a Vein, which is known by ſpitting of Blood: we ſhewed in ſpitting of blood the cure thereof.

We give ſomthings which though they can come but in a ſmall quantity to the Lungs through the rough Artery, yet are good againſt the Ulceration, Corruption, Cough and Collection of Matter. They are cleanſers, ſuch as are good for other Ulcers, which purge the Lungs and inward parts of the Breaſt from matter, and provoke coughing; which are good alſo in an Empyema, without the Ulceration of the Lungs. Then we give aſtringents which by a drying and emplaſtick Vertue, do as much as may be glew and unite, the ſubſtance of the Lungs divided, as follows.

Milk being cleanſing by its Whey, and glueing by its cheeſie part, is chiefly uſed for the cure of this Ulcer, and becauſe the Butter therein doth alſo looſen and diminiſh the cough; theſe it doth given with Sugar, or plentifully drunk to repair the conſuming Body: as we ſhall ſhew.

Water and Honey, twelve parts of Water to one of Honey, is good for an ordinary Drink to cleanſe the Ulcer; alſo Water and Sugar or Ptiſans of Barley and Figs, ſtilled water alſo is good to dry an ulcer.

Some commend a Julep of ſtilled Waters, of Parſley-roots, Fennel, Marſh-mallows, and Elicampane mixed and boyled with Sugar: adding while they boyl a little Gum Traganth, Arabick, or Juyce of Liquoriſh.

There are alſo Syrups for the cure of ulcers in the Lungs, as that of Myrtles, which are ſlimy, glutinating and aſtringent; alſo the Syrup of dryed Roſes and of Quinces.

Or make this following, which is fitteſt. Take *the Roots of Comfrey, and Liquoriſh, each one ounce and an half; of Marſh-mallows one ounce, of Brank Urſine, or Birthwort, each half an ounce; the Leaves of Plantane, Bettony, Lungwort, Coleworts, Colts-foot, Shepheard purſe, each one handful; the Flowers of Roſes, Violets, each one pugil; of the four great cold Seeds half an ounce, of the four ſmall cold Seeds, and Line-ſeed torrified or parched, each two drams, Water-creſſe ſeeds torrified one dram, red Peaſe one pugil, Myrtle-berries two drams, Jujubies, Sebeſtens, each ſix pair; Raiſons ſtoned ten pair:* make a Decoction, adding *Honey and Sugar, each four ounces:* boyl them to a Syrup, of which let him take a little often. The Decoction of the Oak of *Jeruſalem* is commended againſt ſpitting of matter.

Or, Take *Comfrey roots three drams, Juyce of Colts foot and red Roſes, each one ounce; Juyce of Liquoriſh, and of Sloes diſſolved in the aforeſaid one dram and an half, Gum Arabick and Frankincenſe poudered, each one dram; Water and Honey four ounces, Penidyes or Sugar pillets, of Roſes, each two ounces; Syrup of Jujubes and Myrtles, each one ounce and an half;* to theſe you may add *Juyce of Scabious, and Juyce of Plantane to heal.*

The things that are licked called *Eclegmata*, or Electuaries taken now and then, or Tablets or Troches, which are held in the Mouth till they diſſolve, which are good againſt the Ulcers of the Lungs, are made divers wayes.

Of theſe uſually, as Diatraganth frigid, Dipenidion without Species in Tablets, alſo Sugar of Roſes in tablets is excellent, and the Conſerve of Roſes often taken. Alſo the reſumptive Electuary without the Species, and the Lohoch of Poppies, which doth aſſwage the cough of thoſe mentioned in the Cure of a cough, ſome are more thickning, and by their glueing quality are good againſt ulcers, as thoſe of Mucilages, and that of Turpentine of the Larch-tree.

Theſe following Pouders will cure, if poſſible, the ulcer and corruption of the Lungs, either given with Sugar of Roſes penids or with Milk, or with Sugar diſſolved in convenient Waters made into tablets, or with Syrups into Lambitives, or mixed with Electuaries.

The firſt is: Take *Comfrey roots two drams, Marſh mallow roots and Liquoriſh, each one dram; red Roſes two ſcruples, Gum Traganth, and Arabick a little parched half a dram, Starch one dram:* make a fine Pouder.

Another: Take *Red Peaſe, Line-ſeed, and Quince-ſeed parched a little, each one dram; Plantane, Marſh mallows, Mallows, Purſlain and Cotton ſeed, each half a dram; white Poppy ſeed one dram, the four great cold Seeds two drams, Pomegranate flowers one ſcruple, Frankincenſe, or Maſtick and Amber, each half a dram.* Make a Pouder, uſe it alone or with the former.

You may add burnt Ivory or Crabs eyes and coral, each one dram, or if you will glutinate more, Bole or ſealed Earth.

They are counted better though leſs pleaſant, with Fox Lungs, and Windpipes dried one dram, Aſhes of cray-fiſh half a dram; alſo the Pouder of Snails dried, and of weezles Lungs. If he ſpit Blood ſtill, you may add one ſcruple of white Henbane ſeed.

For ſpitting of matter, uſe the Roots of Clot-burre, or Moon-wort, the Leaves of Bettony, *Dioſcorides* gives winter-creſſe ſeeds; others the Leaves of Elm, Pauls Bettony and Scabious, with the former Pouders.

This Electuary is Excellent. Take *Conſerve of Comfrey roots one ounce and an half, Conſerve of red Roſes one ounce, the Infuſion of Gum Traganth in Plantane water one ounce, Coral, Bole or Earth of Lemnos, each one dram, Conſerve of Sloes half a dram, Saffron half a ſcruple, Syrup of Myrtles* as much as will make an Electuary.

Theſe tablets following are pleaſant and profitable. Take *red Roſe flowers without the white,* dry them, and pouder them finely, ſprinkle it with Juyce of Lemmons, and with Sugar boyled in Roſe-water, make tablets.

Or, Take *Sugar diſſolved in Roſe-water, and with Juyes of Roſes* make Tablets.

Or, Take *four ounces of Sugar diſſolved with Juyce of roſes* and boyl it, add at the end *the ſpecies Diapapaveris and Diatraganth frigid, each one dram; Conſerve of Comfrey roots half a dram:* make tablets.

Troches to be held in the Mouth. Take *Roſin of the lark-tree, or Turpentine a little boyled, and poudered, Frankincenſe, each half an ounce; Myrrh, Sanguis Draconis, or Pomegranate flowers, each one ſcruple; Saffron half a ſcruple, Comfrey roots two ſcruples, Sugar of Roſes one ounce, with the Infuſion of Gum Traganth in Coltsfoot water:* make Lozenges.

Brimſtone infuſed in Plantane, Coltsfoot or Roſe-water, or the like to give it a ſcent twice or thrice, given in a rear Egg in pouder, or with Sugar, is good for this, as for other Diſeaſes of the Breaſt. The Chymiſts give the flower of Brimſtone by making it whiter; chiefly with Salt-peeter fixed mixing one part of Salt Peeter, with two of Brimſtone which ſhineth, and ſubliming it in the fire according to Art with Sand. Salt Peeter is fixed with Sulphur even as Lapis prunellæ is made. Alſo they think that ſulphur waters drunk, do good.

There are alſo Fumes that dry the Ulcers which are received at the Noſe or Mouth, and drawn into the Lungs by the breath, which way they can beſt get thither.

The Fume of a Decoction mentioned in the cough, which muſt be taken hot into the Mouth is good.

The beſt Fume to dry, is that of the Roots and Leaves of Colts-foot burnt, and of Horſe tayl.

Or that which is made of Henbane ſeed, and the like in the Troches of the Cough.

Or they that are made of Brimſtone, and other things mentioned in Aſthma.

Or thus. Take *Gum of Ivy one dram and an half, Frankincenſe one dram, Myrrh half a dram, Amber one ſcruple, Benzoin, Storax, each half a dram, Conſerve of Sloes two ſcruples, Coriander, Roſe ſeeds and red Sanders, each one ſcruple;* pouder them, *and with Gum Traganth or Turpentine of the Lark-tree:* make Troches. You may add a little of the Back of Mandrake root, or Henbane ſeeds, ſome uſe a little Orpiment but not ſafely, ſuppoſing that Sandarach was called Orpiment, but Sandarach is the Gum Varniſh.

A dry Air is better then a moiſt for men in Ptyſicks, this may dry the Ulcers.

Oyntments to the Breaſt may do ſomething of relaxing Oyntments, that they may eaſily ſpit up the Matter, ſuch as are mentioned in the Cough and the Aſthma. And when the Matter is little, you muſt uſe aſtringents to heal the Ulcer, if they may reach the Lungs poſſibly.

As, Take *Oyl of Myrtles or Roſes, and Maſtick, each one ounce and an half; the Mucilage of Comfrey, and Marſh-mallow ſeeds, each one ounce; Line ſeed, or Fænugreek two drams, Sarcocol infuſed in Milk, Frankincenſe or Maſtick, each half a dram; Myrrh one ſcruple, Roſin one dram, Saffron one ſcruple, with Wax* make a Liniment.

To ripen the Impoſthume, which being in the hollow of the Breaſt produceth an Empyema, to break it before it doth great hurt, they apply things to the Breaſt, they make Concoction that the matter may be ſpit out.

You may apply the great Diachylon Emplaſter, or that of Orris.

If you add to the Ripeners things that draw forth then by making the skin thin, and digeſting the matter, they cauſe a Tumor, and ſhew where it ought to be let forth by cutting.

For which this following is good. Take *Marſh-mallow roots, Briony and Orris, each two ounces; Figs ten pair, Dates ſix, Chamomil and Melilot flowers, each one pugil; Fænugreek and Line-ſeed, each one ounce,* boyl and bruiſe them, adding *Oyl of Lillies two ounces, of Peppers one ounce, Muſtard ſeed two drams, Leaven one ounce,* make a Cataplaſm.

You may apply Pitch over the Breaſt, if you are certain there is matter by the ſtretching forth and noiſe thereof, that the Tumor may more appear.

Injections into the Cavity of the Breaſt, are good when it comes from a wound without, and we have ſeen by the

uſe

uſe thereof, and other things which are good in ulcers, one that had a Knife ſtrook into his Lungs, and an Ulcer, ſo that ſome parts of the corrupted Lungs came forth, and the Party conſumed, and yet lived a long time after. And I knew another that ſpit bloody Matter a long time, that by theſe things lived long. And in the year 1645. I ſaw a Scholler who had a Pleuriſie evil cured, and his Breaſt opened for an Empyema, too low, ſo that all the Matter was not let out, that had abundance of Matter after, was gathered in his Breaſt, ſo that when he held down his Head, the Matter came out at his Mouth, as I often ſaw; we took from him the Matter, (by conveighing into the old Ulcer that was ſtopped a ſwelling Tent) with ſome parts of the ſubſtance of the Lungs, and we ſent him home found where he is yet living.

Theſe Injections are made of Cleanſers, and after of Dryers, uſing ſome gentle things which are preſcribed for other Ulcers, made of Water and Honey, Whey, or the Oyntment of Smallage, Barley water, and of other Plants.

Or make this Cleanſer. Take *Whey of Goats Milk one pint and an half, Honey of Roſes four ounces, Juyce of Celandine and Smallage one ounce and an half.*

Uſe this Injection by turns when no matter comes forth. Take *Goats milk in which Comfrey roots are boyled two pints, Juyce of Plantane one ounce and an half, Sarcocol ſteept in milk and diſſolved one dram and an half, Myrrh one dram, Roſin of the Lark-tree diſſolved in the White of an Egg one dram*: mix them.

If you are certain of the Collection of matter in Empyema, by the little Tumor between the Ribbs and the Noſe, you muſt make Inciſion, for otherwayes you cannot take out the matter. And ſo he may be cured, if the Empyema be without Ulcer of the Lungs. And if there be an ulcer and the Cure proceed not, yet in regard that otherwiſe an Empyema cannot be cured, it is better in extremity to uſe the means, then leave the Patient, and ſo by ſhewing the matter we excuſe our ſelves. And if we doubt of the Empyema, when we are certain of the ulcer of the Lungs, and make Inciſion at firſt, it will help the Cure, for ſo the matter would be better let forth then by coughing. And becauſe Injections may be made into the Lungs, this way when Medicines cannot come other wayes to them, and come forth by the ſame Orifice: as we ſhewed in the cure of the Wound in the Lungs.

This Inciſion is made alwaies, foretelling firſt the Danger, and if there be a little Tumor, thruſt the Knife into the Breaſt there, and take the matter out, not all at once leaſt the ſtrength fail; if nothing appear, make the Inciſion above the twelveth Rib in the loweſt part of the Breaſt, where no Muſcles lye upon thoſe between the Ribbs, ſo that the matter being fallen into the breaſt, and lying upon the Diaphragma which is joyned to the twelveth Rib, may come better forth, and the Wound is to be kept open till all be let out by degrees.

Hippocrates ſhews that matter may be let out by burning, with an actual Cautery, becauſe a potential cannot reach ſo deep: but becauſe it is not ſafe to uſe there a hot Iron, it is better done by Section.

The Remedies uſed for a Hectick Feaver with the ulceration of the Lungs, muſt be ſuch as repair the loſt Subſtance of the Body, and correct the dry Diſtemper thereof, and if they be alſo good againſt the Ulcer, they are the better.

Reſtoring Medicines in the Ptyſick.

They which chiefly reſtore the Subſtance of the Body, and are uſed therefore though they have other Vertues alſo; are either ſuch as are adminiſtred inwardly or outwardly or injected.

Things are given inward, as Nouriſhment onely, or as Medicines.

They which only nouriſh are good to reſtore the Body conſumed with flouriſhing Juyce that moiſten, and correct the Drineſs which is procured by the Hectick Feaver; and to this end you muſt give things of eaſie concoction, that breed good Juyce, that are quickly digeſted and applied to the ſubſtance of the Body. Among which Milk is preferred before all, becauſe it doth not onely what is mentioned, nouriſhing the Body with its whole ſubſtance; but alſo by its temper and moiſtneſs, qualifies the ſharpneſs and ſaltneſs of the Matter and Humors in the Lungs, or that fall down; and cleanſes the Ulcer of the Lungs with its Whey, and binds them with its Cheeſe, and allayes the Cough with its Butter.

We give Cows Milk, or of Goats and Sheep, and Womans Milk to people in years, though it is not uſual, and Aſſes Milk, in all which though there be four Vertues of which all Milk partakes, namely to nouriſh, mollifie, cleanſe and glew, yet becauſe one ſort of Milk is better then another for ſome Bodies and works ſtronger, we ſhall chooſe that which is moſt proper.

Of the uſual ſorts of milk Goats milk is beſt, becauſe it is moſt cleanſing in regard it hath more Whey, which is beſt when the Lungs are ulcerated; it is taken new from the Cow, or warmed, faſting in the morning four or five ounces at firſt, and ſo increaſing by degrees to eight or twelve ounces: and ſomtimes at night going to bed, for a month together.

You may mix it with Honey or Sugar to make it more cleanſing, and to keep it from Corruption. And if you feed the Goat with Herbs that cleanſe the Lungs, the milk will be better; as with the Leaves of Brambles, Willow, Lungwort, Coltsfoot, with Barley, Beans, and beaten Lentils, Fennel ſeed, and a little Salt and the like.

Cow milk is not much unlike Goats, in want of which it may be uſed, or to thoſe that have been accuſtomed to it, becauſe it cleanſeth, though not ſo much, but Sugar will help it. And becauſe Cow milk doth glutinate more then Goats, with its thicker part, it is good after he hath drunk Goats milk, or other cleanſing milk to purge the ulcer to drink Cow milk the reſt of the time after in the ſame order.

And that the Ulcer may better be healed, you muſt take it with Sugar of Roſes a long time, ſome quench flints, iron or ſteel in it firſt, ſo that the watery part or Whey being conſumed, it may be more glutinous; or they boyl it with Rain-water, and Roſes, or Comfrey roots which are better, but theſe are better towards the end of the milk, taking then at the firſt; alſo Sheeps milk is good at the concuſſion to glew up the ulcer.

Some give Milk without order for their ordinary drink.

Aſſes milk is commended above Milks that are not uſually taken, and are therefore more nauſeous, becauſe it is cleanſing, but by its Whey which is not moſt to be required in the ulcers of the Lungs. And therefore when it may be had, and the Patient affected it, it may be uſed in the ſame quantity and manner, and as long as Goats milk, becauſe it is better.

Womans milk is chiefly commended againſt the Ptyſick, becauſe it hath the ſame ſtrength with the reſt, and is alſo more proper to reſtore, nouriſh and refreſh the Body of a weak Man, being more agreable and familiar to Nature, and is turned ſooner and better into the ſubſtance of the Body, it muſt be ſucked twice or thrice a day from a ſound Woman, for a long time, as if he were a Child at Nurſe. Thus I have known ſome cured, and that one grew not only well, but got ſuch ſtrength, that leaſt he ſhould want Milk for the future, he got his Nurſe with Child.

There are other things which are of good Juyce and eaſie concoction which nouriſh a decaied body, ſuch as are mentioned in the Cure of the Hectick Feaver, as the fleſh of beaſts that are young, teuder and full of Juyce, hens fleſh, Capons and Partridges; alſo the fleſh of Birds, eſpecially of the Woods; alſo the Brains, Stones and Eggs of ſome Creatures. Alſo the fleſh of Brook-fiſh which is good Nouriſhment and moiſtneth more; alſo from Plants the Seeds of Corn, as Barley, Wheat, Rice, Oats, and ſhell Fruits, as Almonds, Pine-nuts, Piſtacha's, and Raiſons, which do fatten exceedingly.

The

The fleſh of Wood-tortoyſes or Snails is preferred before the reſt, for the repairing of the ſubſtance of the Lungs, and moiſtning the Body; alſo the tayls and ſhells of Cray-fiſh, and the hinder parts of Froggs.

Of all which you may make innumerable Preparations for Meat and Drink. As the fleſh aforeſaid boyled or roaſted, or minced or the like, or broath made thereof, or Jellies, or the Gravey of the Roaſted; alſo pure Bread and Cakes, with broath or milk; alſo Almond bread, Pine-bread, Barley, Rice, and Oat-bread which *Galen* ſaies is excellent againſt the Ptyſick. Alſo Emulſions which they call Milk made of thoſe Corns, Raiſons, and Grapes, alſo ſweet Wine, and becauſe it refreſheth much, you muſt not take it raſhly from them that have been uſed thereto: as we ſhewed in the Hectick Feaver, where we ſhewed ſome kitchin Phyſick for the Ptyſick.

Among the which there are ſimple Waters diſtilled of Nouriſhment, by which the body is reſtored and moiſtned, and the Capon water is the chief, and the Snail water is highly commended, as alſo of Froggs, Cray-fiſh &c. diſtilled.

There are alſo nouriſhing Medicines or Kitchin Phyſick which reſiſt the Hectick Feaver, and the ulcer of the Lungs, which are mentioned in the Hectick Feaver, in the form of Bread or Lozenges.

There may be others made which are both pectoral and cordial, of Diamargariton frigid, and the Electuary of Gems without the Species, alſo precious Stones, Pearls filed, and leaf Gold and the like, which are precious and powerful.

There are alſo ſtilled Waters of Food, to which you add theſe good for the breaſt, and to reſtore the ſtrength, thoſe they call Reſtauratives, becauſe they reſtore the ſubſtance of the body, ſuch as the Capon water compounded of the broath of a Capon, and the like, mentioned in the Hectick Feaver.

Or you may make this Reſtaurative of theſe following diſtilled. As, Take *of the muſculous fleſh of Capons or Hens which is about the Breaſt one pound, with the ſame fleſh of Pigeons, Chickens or Partridges, of Snails taken out of their ſhells twelve in number, of the Tayls of Cray-fiſh, or hinder parts of Froggs twenty*, boyl them al *in ſix pints of Water, til two be conſumed, then put the Broath remaining into a Lembeck, with half a pound of Crumbs of white Bread, four ounces of ſweet Almonds, two ounces of Pine nuts, Melons, Pompion ſeeds one ounce and an half, beaten and ſteeped in Milk; alſo Raiſons and Figs, each four ounces; Comfrey roots and Liquoriſh, each one ounce and an half; Orris and Elicampane roots, each half an ounce; Colsfoot and Plantane, each one handful; Cordial Flowers of each one pugil; Gum Traganth, Frankincenſe poudered, each two drams; Amber one dram, Bole or other fat Earth, two drams, Spikenard one dram, Sugar or Honey two ounces*, draw a Water for your uſe.

Thoſe Medicines which you give to correct the Hectick Feaver here, may be the ſame which are preſcribed in a hectick Feaver alone, as that Julep which begins thus. Take *of Violet water &c.* Or thus: Take *Juyce of Purſlain &c.* Or the Syrup which begins thus. Take *of the Roots of Bugloſs, or Purſlain, or Scabious water, or the Tablets of Sugar of Roſes, or the Candyes*, or that which begins thus. Take *conſerve of Roſes &c.* Theſe muſt be uſed here, as we ſhewed in the Hectick Feaver.

Outwardly for the Hectick and Ptyſick, we uſe baths and Oyntments for the back-bone after them, gentle rubbings, as we ſhewed in the Hectick alone.

And we mentioned there nouriſhing Clyſters, as in the Cure of Atrophy, which muſt be uſed in time of neceſſity, when Meat is abhorred or loathed, which is ſeldom.

The Cure of a Ptyſick with a Catarrh.

Theſe Medicines following are good againſt the Humor which floweth from the Head, which increaſeth the former Cough, when a Defluxion and a Ptyſick are joyned together.

Somtimes we purge to prevent it, and keep it from falling down, when it abounds, when otherwiſe in reſpect of the ulcer, Purges do not profit, becauſe they draw nothing out of the breaſt. And if the body be very lean and weak, they do hurt, and bring danger by a Flux which is deadly in the Ptyſick.

If neceſſity require, we uſe gentle things, as in the Aſthma, to which there is a Defluxion joyned, as in Manna, which alſo cleanſeth the breaſt, and Caſſia, with the Decoction of Polypody, and Fruits, or old Cock-broath, and others more gentle, Troches, Potions, Infuſions, Pills, and Electuaries there mentioned: alſo in the Cough that comes from a Defluxion, you may uſe thoſe gentle Purges there mentioned, and things that ſtop the catarrh.

We give alſo Preparatives for the Humor that flow's down, that it may be the better purged, and that, that which is already in the breaſt may be expectorated, if it be thin they thicken it, or make it eaſie to be ſpit up, if it be thick and fixed to the Lungs, they cut it, if it be tough, they cleanſe it: which we ſhewed in the Cough and Aſthma, how and in what form they ſhould be uſed. Among which they which cleanſe moſt are beſt, becauſe they take away the matter from the ulcerated Lungs, and they which thicken, becauſe they glew up the wound in a meaſure. For the ſtopping of the flux or catarrh, we give things that thicken, to which we add things that allay the ſharpneſs of the Humors, and ſtupifie the exquiſite Senſe of the Jawes, and mitigate the cough, which is raiſed both from the matter in the breaſt, and the Humor flowing down: for which we declared in the Cough from a Catarrh, Narcoticks, and Lambatives, or to be licked, waters, and Pills, and Opiates, and other formes in the Aſthma.

To which this following may be added, which mollifieth, and ſtops the Flux. Take *Mucilage of Fleabane ſeed one ounce and an half, the Infuſion of Gum Traganth, or Arabick one ounce, Starch two drams, the Milk of white Poppy-ſeeds made with Violet-water one ounce and an half, Syrup of Poppies, Sugar of Roſes, each one ounce.* Let him take it often, and it will be better, if a little Oyl of ſweet Almonds, or freſh Butter be given therewith.

Or, Take *Starch or Sugar of Syrup of Violets candied, or Penidyes, each two drams; fat Bole one dram, Spikenard half a ſcruple, Henbane ſeeds half a dram, with the Infuſion of gum Traganth:* make Troches, to hold upon the Tongue.

There are alſo things to draw back, and drive the Humor flowing down from the breaſt, as Clyſters often uſed, which are ſafer for diverſion then Purges.

There are alſo Pouders for the Hair which dry, and fix the Head, ſtop and conſume Defluxions, or Bags; alſo Emplaſters, and Waſhes for the Head; alſo Fumes taken into the cap and Pillows, and are taken at the Noſe, ſuch as are mentioned in Defluxions, and in the Cough, and Aſthma.

The Humor flowing from the Head, is turned away from the breaſt by cupping-glaſſes to the Shoulders, and ſides of the Neck; alſo by Ligatures, Frictions or Rubbing: as we ſhewed in other Defluxions.

It is neceſſary, if Defluxions from the Head will not ſtop, to revel and derive them by burning of the skin, in the Arm, Leg, with an actual or potential cautery for Revulſion; but for Derivation of the crown of the Head upon the coronal Suture; all kinds whereof are deſcribed in Defluxions of old Head-aches, and in the Cure of Impoſthumes; alſo in the cough and Aſthma &c.

If a Flux of the Belly come thereupon, it muſt be preſently ſtopped, for it is deadly, becauſe it weakneth the body, and carrieth away nothing of the cauſe of the Diſeaſe.

In this cauſe increaſe the doſe of aſtringents, which are given at the Mouth for the cure of the ulcer, as of bole, Terra Lemnia, Roſes, and thoſe that are outwardly applyed to the belly to be mentioned in Diarrhæa.

The cure of a particular Atrophie or Conſumption of ſome part of the body, which is muſculous, as the feet and

The Cure of Atrophy or want of nouriſhment in ſome Parts.

and Arms, by reaſon of the ſtopping of the blood from that part which ſhould nouriſh them, is thus, if it comes from a Luxation or Relaxation of the Nerves, or from Ligatures long and ſtraight bound, or from ſome Tumor, you muſt firſt look after them, and reduce the bone that is diſlocated, and untie the bands or roulers, and the Tumors if poſſible muſt be removed by that way which is preſcribed in the Treatiſe thereof. If this come from them by cutting off the great Arteries or Veins, or of many little ones, the way being ſtopped by which the Nouriſhment ſhould paſs, the Diſeaſe is deſperate.

Howſoever we muſt uſe all means to bring the Blood more or leſs to the part conſumed, uſing things that by Heat, or opening the Paſſages, or ſome other wayes do attract, and draw it.

Uſe Oyntments actually hot rub'd hard on, every day, a long, time till the Member ſeems to grow bigger, which we may try by a Leather meaſure, or rather of Paper for that will not ſtretch.

Theſe oyntments are made of things potentially hot and opening, many whereof are preſcribed in other Diſeaſes and may here be uſed.

It is found by Experience that this is the beſt. Take *Tops of Savine, and of Juniper and Lovage leaves, each two handfuls; Chamomil Leaves or Flowers two pugils, green Juniper-berries, and black, each one pugil*; cut them, and bruiſe them all a little, *and with Oyl of Bayes or Lillies, as much as will cover them, fined Hogs greaſe, eſpecially of a red Hog, four ounces, Aqua vitæ two ounces*: boyl them till all the Moiſture be conſumed, then ſtrain them, and add *Oyl of Spike, or of Juniper-berries diſtilled one ounce, Pellitory roots three drams, round and long Pepper, or Ginger two drams, and Wax* make a Liniment or Oyntment.

Tops of Pine-tree, Leaves of Rue, and Nettles, and other hot things, as Oyl of Peppers, and Euphorbium, and Greaſes, eſpecially Horſe greaſe, Dogs, Bears, Foxes, and Badgers greaſe, and Butter, are ſomtimes added. And if you boyl Cray-fiſh, and Earth-worms there with, it will be ſtronger, eſpecially if you mix with the other Pouders two drams of Euphorbium or Caſtor, or Pouder of Ginny Pepper, which is very burning, or half an ounce of the pouder of the Stone Amiantum, or ſo much Salt.

Somtimes the Juyce is taken from theſe Herbs, and is boiled with Oyls and Greaſe till it be conſumed, and ſo is made up with other Oyntments, or the Juyce with Oyls, Roſin, and Pouders is mixed for an Oyntment.

You may make Plaiſters of the ſame with Roſin.

Some commend the Blood of a Calfe, with Pouder of Pepper.

This Liniment is made of few things, but it is againſt a Conſumption of a Part. Take *the Greaſe of a Fox, Dog or Man, which is moſt proper two ounces, Oyl of Earth-worms, or Toads one ounce, Philoſophers Oyl half an ounce*: mix them and anoint the part warm.

Baths made of the Decoction of the hot Herbs mentioned for Oyntments, with others proper for the Parts, as Sage, and Mollifiers, as Mallows are good, if you often bath, but the conſumed parts therein, and anoint them.

A Dropax or ſticking Plaiſter laid often on, and drawn off again will attract the blood, and Sinapiſmus or things made of Muſtard, which will attract the blood till the part be red.

It is alſo good to exerciſe and rub the Part often.

Gentle whipping often with Rodds, eſpecially when the conſumed part is ſtupified, may do good when other things fail.

The End of the firſt Book.

THE SECOND BOOK OF THE Functions, HURT of the Body.

TREATING of the FAULTS of EXCRETION, or things ſent forth.

THe Faults of things ſent forth or rejected out of the Body, are Symptomes of the third Kind, which are in the Excrements or thing voided; and therefore are Diſeaſes beſides Nature as well as the reſt, whether Diſeaſes or Cauſes thereof: of which we ſpake. *These Faults in Excrements after they come forth of the Body, are to be ſeen touched, ſmelt, taſted, and heard. And they differ in that ſome are wholly beſides Nature, and from the Subſtance; others from the Quality, if they be otherwiſe then they ought, or from the Quantity, if they come forth more or ofner then they need, and ſo they become preternatural and evil. And if any thing come forth at a place it ought not, though it be not evil in it ſelf, yet it is a Fault, and if it be alſo evil, it is a double Fault or Diſeaſe, as it is a preternatural Excretion.*

These preternatural Excretions that are in themſelves alſo evil, as well as in Reſpect of their Excretion, becauſe they are divers: we ſhall firſt thus diſtinguiſh them. They either are ſuch as conſtitute and make up the Body, or are contained therein, either from their Original, or proceeded from without.

The Excretion or voiding of Parts. | *Such as conſtitute the Body, are parts that originally compoſe it, or ſuch as after grow in it, and are parts of the childs Body; a Child preternaturally delivered, is mentioned in* Abortion, *and the parts conſtituting the Body, in* the taking away of Parts: *all theſe ſhall be explained together in* the Excretion of Parts, Chap. I.

The ſticking forth of Parts. | *Some Parts that conſtitute the Body, do not altogether come forth but ſtick out: theſe ſhall be treated of in* the ſticking out of Parts, *as* the Guts, Cawle, Womb, Fundament, Eyes, Stones, Chap. II

There are divers things contained in the Body, and are bred which cauſe the preternatural Excretion, as Wind, Humors, Excrements, and divers Bodies following.

Efflation or breaking of Wind. | *There is a* preternatural Excretion of Wind, *by* Breathing, *by* a Wound, *by* Snorting, Belching, Farting, Stinking *of the* Breath, Noſtrils: *theſe we ſhall explain in* Efflation, Chap. III.

The preternatural Excretion of Humors and Excrements is in divers following, as for Milk though it be plentifull, and come forth of its own accord, yet is not preternatural, and if it ſwell the Breaſts it belongs to Tumors, where we ſpake thereof.

The Excretion of Seed. | *There is preternatural Excretion of Seed, in* too much Venery, *in* a ſimple and venemous Running of the Reins, of imperfect Seed, *or* when it comes another away or too quick: *of which we ſhall ſpeak in* the Spermatick Excretion, Chap. IIII.

Excretion of Blood. | *There is a preternatural Excretion of Blood, in* the Bleeding at the Noſe, *in* the Terms *or* Hæmorrhoids, immoderate Flux, *and* at the Eyes, Ears Yard, Privities of Women, Fundament, the Pores *and* other open Parts: *of which we will treat in* the bloody Excretion, Chap. V.

Excretion of Matter. | *There is a preternatural Excretion of* Matter, *by* the Eyes, Ears, Noſe, Vrinary Paſſages, Womb, *and* other opening Parts: *theſe ſhall be handled in* purulent Excretion, *or* of Matter, Chap. VI.

Excretion of Water. | *There is a preternatural Excretion of Water in* Tears, dropping at the Noſe, ſnotty Noſe, Whites, over much Sweating, *or* evil Sweat, *and* by the Ears, *and* other open Parts: *of which we ſhall ſpeak in* the watery Excretion, Chap. VII.

Spitting. | *There is a preternatural Excretion of Spittle and Humors mixed therewith, in* Ptyaliſmo, *or* Venom, Spittle, *and* other Water, *or* Blood, Matter, *and* Impoſthumes: *theſe ſhall be deſcribed in* Spittle, Chap. VIII.

Vomiting. | *There is alſo a preternatural Excretion of Meat and Humors, and Excrements in divers* Vomitings, *as* of Flegm, Choller, *to which* the Diſeaſe of Choller *is referred*: *alſo of* Blood: *of which we ſhall ſpeak in* Vomiting, Chap. IX.

Piſſing. | *There is a preternatural Excretion of Urine, and other Humors in* unvoluntary Piſſing, *or* immoderate, burning Urin, mattery Milk like, blood, *and when* the Urin cannot be held, *and when* it flows out at a Wound *or is* tinctur'd: *which ſhall be explained in* Piſſing, Chap. X.

Dejection or Stooling. | *The preternatural Excretion of the Excrements of the Belly, and the Dung is in the* Flux Diarrhæa, Lientery, Diſentery, Needing, Liver-flux, *of* thick Blood, Matter, Slime, Flegm, Fat, Vomiting *of* Dung, Piſſing it out, *or* ſending it out by the Womb, *or* a Wound: *of which we ſhall ſpeak in* Dejection, *or* going to ſtool, Chap. XI.

Excretion of Filth. | *There is a preternatural Excretion of divers Filths, by* the Ears, Noſe, Eyes, Womb, Skin, *between* the Toes, Teeth: *which we ſhall deſcribe in* the Excretion of Filth, Chap. XII.

The divers Bodies which are in the Body of Man which are wholly beſides Nature, and are preternaturally ſent forth, are either living or without Life.

The

Excretion of Living Creatures. *The live Creatures that come out of the body either live and move, as* Worms, Fundament-worms, Worms in the Noſe, Ears that come forth by coughing, Piſſing, *from* Ulcers, Wounds, Worms in the Teeth, Navel, Lips, in the Hands : *of all theſe, we ſhall ſpeak in* the Excretion of Living Creatures, Chap. XIII.

Excretion of living Creatures that move not. *Other Living Creatures that come forth are alive but move not, nor are ſenſible, as* a Mole, Grove-wormes, *the* Gourd-worm : *which ſhall alſo be deſcribed in* the Excretion of living thngs Chap. XIIII.

Excretion of Earths. *The Bodies without Life that are ſent forth, are earthy, as* Piſſing of Sand, *and* Stones, *or from* the Eyes, Noſe, Mouth, Fundament, *from* the Tongue, Pores, *as* Gravel, *from* the Teeth, *and the like : of which we ſhall treat in* the Excretion of Earth, Chap. XV.

The voiding or Excretion of things that get into the Body. *There are many things come forth of the Body which are not there bred, by* the Eyes, Ears, Noſe, Mouth, *as by* Spitting, and vomiting by ſtool, Urin, *by* the Breaſts, Nipple, *and* the Skin : *which ſhall be deſcribed in* the Excretion got into the Body, Chap. XVI.

CHAP. I.

Of the Voiding or Excretion of Parts.

The Kinds,

THe Voiding or Excretion of the Parts of Mans Body, by which they are taken from the Body, is twofold, firſt when the parts faſhioning the Infant, or the Infant it ſelf is caſt forth : or when the Original parts that conſtitute the body, fall off.

A Natural Birth, but not without Pain. When the Infant is put forth of the womb, it is called *Partus* or bringing forth and this is either Natural, as when the Child, being ripe (the time being expired of travel) is brought forth. And this being Natural, is not reckoned among the Diſeaſes that diſturb Mankind. But ſeeing this Action by reaſon of Sin is painful and muſt be looked after, we ſhall here ſpeak of it, that we may know how it differs from that which is preternatural, and how it ought to be ordered.

Abortion or Miſcarriage. The Birth is preternatural, when it is untimely, or before the time ordained, which is commonly the tenth month, although ſome hold the birth of the ſeventh month to the Legitimate. Abortion is when the Child is not come to its full Ripeneſs and Growth, is ſent forth ſooner then it ought to be, either dead, or in deſperate condition ; ſomtimes it is ſo little, in a Lump, no bigger then a Grape, that you cannot diſtinguiſh the Arms, Legs, or Head, ſuch we have ſeen often, after ſome weeks conception ſent forth ; and that we might perceive the Limbs, we divided them with an Inſtrument ; and we perceived two black points like Eyes in the Head, and a little Spot upon the right ſide ſhewing the Liver, the body being all over white beſides. We have ſeen at other times a Child of a fingers length, having all the Members plain to be ſeen for the diſtinction of ſex alſo, with Nails, and we made a ſceleton thereof, by cutting an Anatomy ; as we did by others that were larger. Alſo I knew a woman, that after ſhe had brought forth a Child naturally at the time, within a few dayes after was delivered of another a ſpan long.

I obſerved alſo that a famous Merchants Wife which was delivered with little pain, of a Child a hand long, after ſhe had with hard Travail brought forth, another dead Child in the eighth month ; and which is more wonderful in the year 1655. A Contrey-man came to me for Counſel, concerning his wife lying of a luſty Child which ſhe brought forth three weeks after ſhe had miſcarried of another that was dead.

Superfœtation or too many at a time. If there be three or four at a Birth which is rare, yet is it not preternatural (when they are compleat,) either at one time or at divers ; ſome talk of an infinite Number, which could not come to a juſt proportion, and that may be counted Abortion.

Children ſo delivered although untripe and little, yet are ſomtimes whol and of good Complexion ; otherwhiles lean, and conſumed, if they have been long dead in the womb, and they come out ſlowly, and ſomtimes corrupted and ſticking ; ſomtimes we perceive the ſigns of Diſeaſes in them. As we diſcovered a Child that was but half the time in the womb by the Swelling of the Legs, bigneſs of the Belly, and aboundance of water there, and in the great Veins to have the Dropſie in the womb.

But if a compleat Child ſhould die through the difficulty of bringing forth, it muſt be referred to the defect of bringing forth : alſo if it remain in the womb after it is ſo dead, as we knew a woman that kept a Child that died ſo, twenty weeks after the time of Delivery, ſhe died alſo, and after we took it out rotten and ſtinking.

If a woman bring forth a monſtrous or ill ſhapen Child, except it be by Abortion or it be dead, this is not to be referred to a preternatural Birth, but to evil conformation or Deformity from the Birth : as we ſhewed in Deformity.

The taking off of parts that conſtitute the Body. The taking away of parts from the body, although it may be a Diſeaſe in number diminiſhed, or if they come piece meal, in magnitude diminiſhed, where we made mention of them, yet they may be referred hither.

As if the Eye be thruſt out of its place, or if any humor as the watery, Cryſtal, or glaſſie Humor of the Eye ſhould flow forth, or if part of the Brain ſhould come forth at the Noſe, the Teeth pull'd out of the Mouth, the tongue cut off, the Lungs be ſpit up, the Guts fall out, as in the Hæretick *Arrius*, by a divine Judgement rather then by a Natural Cauſe. Or, which is uſual, when from a wound any part of the Brain, Lungs, Liver, or Spleen comes forth, as we ſaid in the Hurt of thoſe parts.

The Cauſes.

The Cauſes of the Excretion or Voiding of an Infant, or of any parts that conſtitute the body, is the ſolution of Contiguity, or things near or of Continuity, as ſhall be ſhewed.

The ſeparation of the Veſſels of the Child which were joyned to the Veſſels of the Womb, is the Cauſe of Natural Birth. Natural Birth when the Child comes ripe and quick into the world, is when the child is ſo grown that the Mother can no longer contain it, but it muſt have have more Air for life, and more nouriſhment, and if it ſhould grow bigger, it could not get out of thoſe ſtrait Paſſages. Therefore provident Nature, ariſeth and moveth it by the expulſive Faculty, ſeparating the Veins and Arteries, by which the bed of the Infant or Secundine was joyned to the womb, without any hurt, even as the ſtalks of ripe Fruit fall eaſily from the tree, driveth down the Infant by the help of the Mother, and ſo brings it forth, not without pain, labor, ſweat, and bleeding, by reaſon of the opening of the Veins in the Womb and Secundine more or leſs in all Women.

In

The ſeparation of Veſſels before the Child is ripe is the Cauſe of Abortion

In a preternatural Birth, when the Child is ſent forth unripe, by Natur's force, dividing the Connexion of the Veſſels, there are ſomtimes leſs accidents then in a Natural, if the Child be ſmall. But if there be this Separation of Veſſels by a greater force, and ſolution of continuity, and tearing, which ſtirrs up Nature to the work, there are greater accidents, as Pains and Bleeding.

The Separation of the Veſſels by the violent Motion of Body or Mind is the Cauſe of Abortion.

There are divers Cauſes of the dividing of the Veſſels, and ſpurring of Nature to the work which procure Abortion, if the Child be ſhaken by violent Motion of the Body, ſo that the Veſſels by which it hangs to the womb are divided. Nature eſpecially when near the time, will ſend it forth, ſo it may be driven down by leaping, as *Hippocrates* ſpeaks of the tyre-maker, that caſt away her Child voluntarily, alſo it may come by other violent motions, eſpecially of the lower parts, by riding, running, or other violent Motion.

It may come alſo with preſſing of the Belly, by ſome external Injuries, or with ſtrong tying of the Muſcles of the Belly, or from couging, vomiting, neeſing, crying, ſcowring, by which alſo in a Natural Birth, the Delivery is helped.

As the Excrements of the belly, ſo the Child alſo may be driven down in a Convulſion made by the compreſſion of the Muſcles, and a violent motion of the body. As we ſaw one that without Senſe aborted in the fit of a Convulſion: and wondered when ſhe came to her ſelf what had been done to her Belly.

Alſo Nature ſtirred up by Paſſions of the Mind, through the vehement Agitation of the Spirits, will cauſe Abortion; as by Fear, Anger, and other Paſſions hath been ordinarily ſeen, eſpecially if they ſwonnd, for then the Child is deprived for that time of vital Spirits, with the Mother from whom it receives them.

Abortion cauſed by ſtirring up of Nature.

When Nature is ſtirred up by things taken or applied, it voided divers things, and ſo alſo the Child, as by the uſe of purging Medicines, which force Nature violently, ſo that not only the Excrements, but the Child alſo is voided. Alſo by the uſe of thoſe things mentioned in the want of Terms and bringing forth, either taken in, or applied to the womb by opening the Paſſages, and provoking the womb, by a Propriety to provoke Terms, or driving down the Child, Abortion may be cauſed.

The expulſive Faculty is compelled ſomtimes by humors that burden the womb, to void not onely them, but the Child alſo, eſpecially by blood, which if it be too plentiful for the nouriſhing of the Child, and not conſumed by it, about the Veins of the Womb, it burdeneth Nature, which labours to throw it out, and ſometimes the Terms comming upon a Woman with Child, the Child is alſo ſent forth with them. Therefore when women with child have their Terms, they are in danger to miſcarry. Or if the Terms be provoked by opening a Vein in the Foot, the ſame may happen, and therefore women with Child muſt not be let Blood in the Foot. Alſo the Terms will ſooner be provoked, if the blood be thin, cholerick or foul, and unfit to nouriſh the Child.

When the womb is moiſtned with water, ſo that it is too looſe to hold the Child, that it is the chief cauſe of Abortion, as ſome ſay. And if it were ſo, it muſt needs be without it, and moiſten the Oriſice of the Neck of the womb, which is cloſe ſhut in women with Child, becauſe it cannot be in the womb, whoſe cavity is filled with the Child; and if it could be there, it could not ſo looſen it; nor can it do it when in the Neck of the womb, becauſe it cannot remain there, and there muſt be a greater cauſe of Abortion then that.

Separation of veſſels by a dead child is the Cauſe of Abortion.

The chief Abortion is from a dead Child, becauſe then Nature labours to void it, as being burdenſom, the cauſes of dead Children are divers.

As external force to the belly being great, as a Stroak or Contuſion.

Want of Nouriſhment by which it decaies and at length dieth, this is not eaſie, for while the Mother liveth, the Veins can ſcarce be ſo empty, that there is nothing for the Child. Moreover, though the Mothers blood be impure and foul, the Child will have the beſt of it, hence it is that we have obſerved, that women in Ptyſicks and Hecticks, have gone their time and brought well. But it may happen, that if a woman with Child have her Terms violently and long, the Veins of the womb, and all other parts will be ſo exhauſted, that the Child muſt want Nouriſhment. And this is ſo, if for the Cauſes aforeſaid, the Child being alive, the Veſſels are ſeparated from them of the womb. And then it can live no longer, not only becauſe it wants Blood, but becauſe it wants vital Spirits, by reaſon of the Separation of the Arteries, and cannot take breath.

The Mothers by certain ſigns do know that the Child in the womb, hath a Diſeaſe and is ſick, and like to die, but thoſe are not eaſily determined till Birth, nor then, except there be viſible manifeſtation, as I ſaid of the Dropſie. But without doubt Children in the womb have ſome Diſeaſes, as a hot Diſtemper muſt needs be in the Child, when the Mother hath a Feaver, which is in all Parts, and alſo in the Child. Or when the woman hath another Diſeaſe, ſhe may communicate it to the Child, or ſhe being full of evill Humors, may conveigh them into the Child with the blood, and ſo it may be cacochymical or of evil Juyce, or ſhe may give it the Pox, or Plague, and this is not without a great cauſe, becauſe the Child takes the beſt, and moſt agreable to it, and though the Mother be ſick the Child may be ſound. As Children that ſucked their Mothers of the Plague have been by us obſerved to eſcape it when others have died. Yet I knew a Child born of the mother when ſhe had the ſmall Pox to be full of the ſame. Alſo it is thought that things taken by the mother or applied to her womb may bring a malignant quality deſtructive to the child; as many Medicines which do kill children, and are Poyſon.

Some Diſeaſes that come from the Seed in conception to the child, appear ſooner ſome, later, and kill him before his Birth, or continue by him after, they are mentioned in Deformity in Diſeaſes original.

A Wound or an Ulcer is the Cauſe of taking away a part that conſtitutes the Body.

There is a Solution of continuity, divers waies in the voiding of parts that conſtitute the Body, as a wound, when part of the ſubſtance of the brain Lungs, Liver, Spleen, is cut off and comes out by the wound, or the teeth or tongue is cut off; they or ſome of its Humors fall out, which alſo may come from an Ulcer. Alſo the Brains may come out at the Noſe by a contuſion: as we ſhewed in Wounds of thoſe parts.

The Cure.

A natural and legitimate Birth, when the Child comes ripe forth in due time, he muſt not be delivered, but well ordered, and if it be difficult, aſſiſted. Concerning which how the Mother and the Midwife ſhould behave themſelves, we ſhewed in the defect of Child-birth.

The Gouvnment of the Mother and Child after Labor.

When travail is paſt, then you muſt have a care of the Mother and child, for the Mother you muſt mitigate her pain, and provoke her Flux after Labour, and ſtrengthen her thus. Let her be raiſed up gently in her bed that ſhe faint not, and give her broath, and wine, and good Scents to refreſh her, and let her be moderate in eating and ſleeping, and keep her

her out of the Air till ſhe grows ſtrong, and her womb be brought to its former Condition, which will be ſooner if her Belly be rouled gently down.

As for the Child, let him be waſhed in hot water from his filth, and wiped with Feathers, and anointed with cream or butter, or Oyl of ſweet Almonds, then roul him, and lay him in a Cradle, and rock him to ſleep, and to learn him to ſuck, hold him to the breaſt: it is beſt to try that as ſoon as he is waſhed, for comming thirſty out of the bath, he will preſently lay hold on the Teate and ſuck.

After Abortion or Miſcarriage, there is no other order to be obſerved then after travail. And you muſt after take heed that it cometh not again, which it is probable it will if ſhe hath been formerly ſubject to it. And this is done by things given and applied before conception, and when ſhe is with Child.

The preventing of Abortion before Conception.

Before the woman hath conceived, which ſhe may be certain of, if ſhe hath not uſed a man ſince her Abortion: you muſt conſider diligently, if there be any ſecret cauſe in her body, by reaſon whereof though ſhe do conceive, and the child be formed (for if the Seed conceived preſently flow forth, it is not a true but falſe Conception, and the cauſe of barrenneſs: as we ſhewed) yet ſhe doth not keep it. And this is done by obſerving her conſtitution, whether ſhe be Plethorick or Cachymick, of much or evil blood, and as the Humor aboundeth, you muſt cleanſe the body by bleeding, purging, ſweating, and good Diet. Or if ſhe have a Diſeaſe or Fault in the womb, which may cauſe this, you muſt ſtudy to amend it. But if there be no Humors appearing that can be thought prejudicial, you muſt ſtrengthen the womb, that the child hereafter may ſtay, by Medicines mentioned in Sterility, external, and eſpecially baths which they ſay are beſt, and therefore they ſit in hot baths often.

To prevent Abortion after Conception.

After the woman hath conceived, which ſhe knoweth by certain ſigns, then you muſt take care that ſhe may go out her time, and that the child may be luſty. But if you perceive it to be dead, you muſt not do ſo, and if you be certain thereof, you muſt uſe things that provoke Abortion, for either the child or Secundine remaining, will be the Death of the Mother.

There are divers things good to retain and keep up the child, after you have removed all cauſes that may hurt it, or remove it.

Somtimes it is good to let blood, if we perceive that abortion came from blood abounding about the womb the former time, by reaſon of Plethora, in regard ſhe had her Terms in the time of her being great: and if we ſee they begin to flow again as they did, you may let blood in the Arm not the Foot, becauſe that will move the terms: nor is litting blood to be feared, as the Ancients thought, when people with Child are full of blood, for I never knew any miſcarry thereby, though it hath been done twice or thrice; and have ſeen divers wounded, and that have loſt much blood, and yet the child hath not been the worſe, yet is it not to be done raſhly, but a little muſt be taken at once, and more the next month, and the third time if need require.

Alſo you muſt not be raſh in purging women with child, that are apt to miſcarry, except the body be too much bound, and then adminiſter Clyſters, or ſome opening, gentle Medicine; or if the body be very foul, then you may give ſome ſtronger Purge, and that will do no hurt but good; for many women by chance, not knowing they were with child have taken Purges, and had a great looſeneſs, and the Child not the worſe, neither did they miſcarry.

There are things that prevent Abortion by altering, which have an aſtringent Quality, to fix the Veſſels by which the Child is tyed to the womb; and theſe add ſtrength to the womb, and vigor to the child, and this they do by a Propriety known by Experience.

Some things are given often, eſpecially when they are nigh the time. Theſe Pouders are beſt taken in Wine, or the Yolk of an Egg, or with Sugar of Roſes, or made into Lozenges, with Sugar diſſolved in Roſe or Plantane-water.

Take *Red Coral in pouder two drams, Ivory one dram and an half, Maſtick, or Frankincenſe half a dram.*

Or, Take *the dry Grains of Cuchyneile one dram, Pearls or precious Stones half a dram, with a little Leaf Gold* make a Pouder: It is given by it ſelf, if the woman ſuppoſeth her Child not well, or mixed with the former, or with Margariton frigidum.

Another, Take *Roots of Biſtort, or Tormenil two drams, Date ſtones one dram and an half, Plantane ſeed one dram, water-creſſe-ſeed a little parched half a dram, Amber two ſcruples* make a Pouder.

Or, Take *the Runnet of an Hare dryed two drams, Crayfiſh parched one dram, burnt Ivory two ſcruples, Coriander ſeed prepared half a dram, Red Sanders one ſcruple:* make a Pouder, this may be given alone, or with the other; and if the Matrix of an Hare be dryed and poudered it is better, others add the Pizle of a Bull, or of a Dear.

You may make of theſe this Mixture. Take *Conſerve of Roſes one ounce and an half, Citron peels, and Quinces candied, each one ounce; Conſerve of Sage flowers, or of Mints which ſtrengthen the Womb, ſix drams, of candied Myrobalans, Pulp of Dates, each half an ounce; of one or two of the Pouders aforeſaid two drams, and with Syrup of Citrons* make an Electuary.

Dates their Stones taken out, and they filled with the Pouder of Cuchyneile, and eaten before and after Sleep, are ſaid to prevent Abortion.

The Water called the Childrens Balſom, made of many things ſteeped in Sack, and diſtilled Waters, is good to be taken every day to prevent Abortion.

Outwardly Oyntments and Plaiſters, applied to the Womb, before and behind about the Reins are alſo good. And they are uſed when we are certain of Conception, at firſt a little and then more often, eſpecially if any ſigns of Abortion appear.

The Oyntment. Take *Oyl of Roſes, Myrtles, Maſtick or Quinces four ounces, Juyce of Sloes, Bdellium diſſolved in Vinegar of Roſes, or red Wine half an ounce, Liquid Storax two drams, Wax as much as will make an Oyntment.* You may add *Oyl of Mints half an ounce,* which is good againſt all Fluxes, and proper againſt Abortion.

Make other Oyntments of theſe Pouders. Take *Frankincenſe, Maſtick, each two drams; Sanguis Draconis one dram, Bole, or ſealed Earth half an ounce, of all the Sanders one dram, Spike half a dram,* mix them *with the Oyl or Oyntments mentioned, or with Wax* make an Oyntment.

Or this: Take *Snakeweed, or Tormentil roots, Cypreſs-nuts, Acorn cupps or Gall, each half an ounce, Myrtle leaves, red Roſes, Pomegranate flowers, each two drams; Myrtle ſeeds, Sumach, or Berberries, Coriander ſeed prepared, each one dram; Water-creſſe ſeeds, or Cummin ſeeds ſteeped in Vinegar half a dram, of all the Sonders, Roots of Galangal, each half a dram; Gum Arabick, or Dragach one dram:* make a Pouder, mix it into an Oyntment as the former.

Another proper Pouder for an Oyntment. Take *Red Coral two drams, Ivory one dram and an half, Goats or Harts Horn, Runnet of a Kid or Hare, each one dram,* make a Pouder. You may add the Pouder of a Turtle baked, mix them as the former.

Oyntments are made more Compound of the Pouders aforeſaid mixed with Oyls &c.

Cerots alſo and Emplaſters, may be made of the ſame either ſimple or more compound, to be ſpread upon Leather, and laid on at night, and at other times, with more Wax, and Roſin to make them ſtick.

The uſual Oyntments are that of the Conutes and the Emplaſter againſt Ruptures.

Or we may uſe that Application which we mentioned to ſtop the Courſes, like an Oyntment or Plaiſter: it begins

begins thus. Take *Roots of Snakeweed, or Tormentil &c.*

Some commend Amulets, or things to hang about the Neck, as Eagle Stones which hath a Stone within that rattleth, if it be tyed to the left Arm, bare, or tyed firſt in Calfes skin, which is thought to provoke the Birth, if tyed to the Foot, and to hinder it if to the Arm, or under the Breaſts.

Others commend the Jaſper or Lapis Lazuli, to be hanged about the Neck, or Mallows, Pellitory, Tormentil with the Roots.

The courſe of Life which a Woman muſt uſe to prevent Miſcarriage, conſiſts in temperate Air, let her beware of Heat and Baths, let her eat meat of good Juyce temperate, let her drink ſmall red wine and water; let her take heed of ſharp or hot things, pot Herbs, or Spices, or bitter things which hurt the Child: from things of ſtrong Scent, as Saffron and the like, which move the courſes or provoke Abortion, as we ſhewed in the Cauſes. Let her take heed of Paſſion of Mind and violent Exerciſe. Let her either reſt or walk gently. Let her not often uſe man. Let her Body be kept from coſtiveneſs. And let her abſtain from all things that may breed Diſeaſes in the Child, as convulſions, and let her keep a good Diet.

The Cure of Parts taken from the body.

If the parts that conſtitute the Body that be ſent forth are noble it is deadly, as the Brain, Lungs, Liver, Spleen, when otherwiſe it hinders the Functions, and when theſe parts are quite gone, theſe cannot be renewed, therefore we uſe no other Cure, but to the ſolution of continuity, as the wound, contuſion or ulcer: as we ſhewed in the Functions Hurt, of thoſe Parts.

CHAP. II.

Of the Falling and Sticking forth of Parts.

The Kinds,

THe Falling and Sticking forth of Parts is preternatural, although they be not quite ſeparated from the Body, becauſe they are removed out of their place, outwardly. Thoſe Stickings forth of parts which come from Fractures, or Diſlocations. becauſe the parts are not then in another place or out of the Body, but only ſtick out, and ſo cauſe a Deformity, are ſhewed in the Diſeaſes of Deformity.

The comming forth of Parts.

When a part is removed and yet not fallen off, as when the Guts, and Cawle come forth, it is ſeen by the Tumor, and therefore we ſpake thereof in Tumors.

The comming forth of parts from the Body, when they appear to the Eye, are of the womb, Fundament, Stones, the Eye, or Tongue.

The comming forth of the Womb.

The Womb or Matrix, falls through the Privities far ſomtimes; and then you may ſee the Neck turned, thick, and rough and white for the moſt part, though red in ſome places, and it is ſwollen, and ſtops all the Privities, hanging down a ſpan in length like a bag, ſometimes leſs, and the bottom of the womb is ſeen, and its orifice reddiſh and like Blood, with ſwollen Lips, as I have often diligently obſerved.

The falling down of the Womb.

Sometimes the Womb falls down a little above the Privities or into them, and comes not forth, and is to be felt only, or it only hangs out a little, and grows forth more and more, except it be prevented, and this is called the Deſcending or Falling down of the womb

And if Inflammation or Corruption happen not, when the womb hath long been forth, and ill ordered, there uſeth to be no great accidents, but filth, hinderance in walking, and a ſenſe of weight, ſo that the Belly and Loyns ſeem to be drawn down, but otherwiſe if the woman can put it up again, as uſually it is, ſhe may uſe a man, and conceive, and go out her time without the Falling of it down while ſhe is with Child.

The Falling out of the Fundaments.

The Fundament externally like a purſe internally is made of the end of the Muſcles of the ſtrait Gut, if it be let more forth then at the time of going to ſtool is uſual, and cannot be put up again into the Body, but remains outward with ſome part of the Fundament, it is called the Falling down of the Fundament.

Somtimes it is without any other Diſeaſe, as when by ſtraining it comes forth, and continues longer or ſhorter, and comes of it ſelf, or with little trouble into its place again.

Somtimes though it be put up, it preſently eſpecially at the ſtool, comes forth again, this is uſual in Children, and ſomtimes in Men.

Somtimes the ſtrait Gut falls down and ſwells, ſo that it cannot be put up, or with much difficulty. Sometimes it is red and inflamed, and will endure to be touched, that it may be put up.

The Looſeneſs of the Fundament.

Sometimes it falls out without ſenſe, and cannot be drawn up at will; this is called the Palſie of the Fundament.

The Falling out of the Stones.

We have ſeen the Codds open and the Stones hang far out.

The Falling out of the Eye.

The Eye cannot hang far out of its place, as we ſhewed in Deformity, and if it ſtick far out, it is called the Falling out thereof.

The comming forth of the Tongue.

The Tongue ſometimes hangs out of the mouth, and this is called the hanging forth of the Tongue.

The Cauſes.

The Cauſe of the comming forth of the Guts, Cawle, Womb, Fundament, Eye, or Tongue is either from ſome opening, and the Rimme of the Belly, or weakneſs, and diſſolving of the Neck of the womb, or the turning of the Fundament, or ſtrait Gut outward: or the looſening of the knitting of the Eye, or Tongue; or a wound of the Codds.

By the opening of the Rimme of the Belly which keepeth the Guts and Cawle in the ſame, if the Guts or Cawle fall through the opening, then there is a Rupture or Falling out, of which we ſpake in Tumors. And this opening of the Rimme, is either when it is broken or dilated.

The Cauſe of the rupture of the guts called Enterocele, and of the Cawle called Epiplocele.

The Falling forth of the Guts and Cawle is from the breaking of the Rimme of the Belly, that cauſeth the Swelling called *Hernia* or Rupture, of which there are divers ſorts according to the Diverſity of Parts where they fall; for if it be in the Groin, and in the male-kind, ſo that the Rim be open which covereth the Stones and ſeminary Veſſels, the Guts get through the opening, and ſo lye under the skin, which is called *Enterocele*; and ſometimes into the Codds, and cauſe a great Swelling when much falleth down, or when they are ſtretched with wind, or with Excrements. And if they be hard, it is felt, and if there be wind, they make a noiſe being preſſed. And if the Guts ſtay there and cannot be put up, becauſe they are ſtretched and rouled together, becauſe the Paſſage of the Excrements is ſtopped, they are thrown up again. But if part of the Cawle fall into the Groin by the aforeſaid, it is called *Epiplocele*, and the Tumor remains

mains there, not going lower becauſe the Cawle being ſhort and ſcarce, reaching beyond the Bone of the Privities, cannot fall ſo low as the Guts, except ſome part of it be broken, when the Rimme is broken, and then it may fal into the Codd. which cannot be put up again. We ſaw one in the Groin very big, which we knew was the Cawle by feeling of it to be unequal with Knobs of hard Fat; which we knew was broken by the quantity or relaxed as we ſhall ſhew, but being without pain it was neglected, and the Patient lived not long after.

The breaking of the Rimme is the Cauſe of the Rupture in the Groins of Women.

If the Rimme be broken in the groin of a Woman, where a certian Veſſel paſſeth by it outwardly in the Groine, then there is the Rupture called *Enterocele* or Gut-ruptare in Women, which is ſometimes very great. And if the Cawle fall there which is longer in Women then in Men, the Tumor is larger then in Men, and is called *Epiplocele* or Cawle-rupture.

The Cauſe of Navel-rupture.

But if the Rimme be broken in another part of the Belly and the Guts, or the Cawle get there under the skin, if it be in the Navel, it is called *Omphalocele* Navel-rupture, or Exomphalocele, or Rupture about the Navel, if in any other part it is called *Hernia* or Rupture, which you may know by touching, whether it be the Guts, for then they will make a noiſe, but the cawle will not, and the Guts make a larger Tumor then the Cawle.

The Rimme is broken, either by a Stroak or Fall, or vehement Leaping, or Vaulting into a Saddle, as I have obſerved. Alſo by great ſtraining when the Belly is preſſed by the Muſcles in Labour or Travail with Child, or going to ſtool, alſo in Children by crying. Alſo by a cut, when the skin is healed, and the Membrane left open, or the like.

The Dilatation of the Rimme is the Cauſe of ruptures.

A Portion of the Guts or Cawle may fall down, only by the enlarging or dilating of the Rimme of the Belly, by which the Seed Veſſels deſcend into the Codds. This comes not ſpeedily but by degrees, with often ſtraining; for when the Guts are carried to the enterance of the Rimme of the belly, they work themſelves through or break through, when the force is great. And that this may be ſo, and that the enterance of the Rimme of the Belly may be ſo dilated and opened without breaking, it appears, in that more narrow and thick parts, may be ſo enlarged as the Ureters, through which a Stone falls down, as we ſhewed. And this we have ſeen to be by degrees. And in a Rupture-dropſie, when after Death we opened him, we found a round hole not cut or broken, by which the Guts fell into the Codds, by which that thin part of the Gut which is above the blind Gut, was carried to the bottom of the Codd which was full of Water, and it grew firmly to the Rimme in the whol Paſſage; and the Patient while he lived and was in Health otherwiſe, voided his Excrements orderly, and complained of no pain. *Fernelius* who diſtinguiſheth this Paſſage of the Rimme into that which is internal, and that which is external, ſaith that in the Gut-rupture, and cawle Rupture, the inward Rimm or Skin muſt needs be broken, and the outward only enlarged. It may be he meant that it was ſo in Women, that theſe Ruptures came from the Relaxation of the Rimme of the Belly in the Groin where they have as we ſhewed a peculiar Veſſel.

For he ſaith that there is a Tendon ſent from the Groine to the Rimme of the Belly which ſtrengthneth it, and ſo alſo the Guts and cawle.

But in regard that Veſſel is not ſo membranous and thin as the enterance of the Rimme, but is nervous and hard, and therefore is not ſo eaſily enlarged, the Guts or Cawle cannot fall into the Groin by the relaxing thereof, except it be broken.

The cauſe of Navel-rupture is the enlarging of the Rim of the Belly, there.

When the Rim of the Belly is enlarged without being broken, there may be a Navel-rupture alſo: and this appears, becauſe in great ſtraightneſs, eſpecially of Woman in travail, the Navel often ſwells, by the Guts through ſtraining, ſent chiefly to that part of the Rim, where there is a ſhort Paſſage in the Navel, which appeared at the birth in the Navel ſtring and after grew together, and there diſtending or ſtretching the Rim, and when the ſtraining is over, and the ſtretching, the ſwelling goes clean away and returns no more, which would not be, if it came from the breaking of the Paſſage: for which cauſe, as we perceive plainly that the Navel-rupture continues not, ſo we may collect, that the Rupture which remains, comes from the Rim of the Belly, ſo ſtretched by the Cauſes aforeſaid, that it cannot return, which cannot be in other parts of the rim of the Belly, but that in the Groine, without a breaking thereof.

The cauſe of the falling out of the Womb, is the diſſolving of the connexion of the Neck thereof.

From the Diſſolving or Diviſion of the Neck of the Womb, from the parts unto which it is knit, comes the Falling out thereof. For the Womb being chiefly held up by its Neck, upon which it reſteth, and unto which it grows firmly, and in other parts being free from all connexion or joyning, that it may better dilate and enlarge it ſelf in Conception, (except on each ſide a little, and that looſely to the Rimme of the Belly) it cannot be that it ſhould fall all to the Privities, except the Neck thereof which is ſo faſtned thereto, that it cannot be ſeparated, do alſo follow. And becauſe this cannot be without the rending of the fibrous Connexion which is made by the Neck and Parts adjacent. The immediate cauſe of the Falling of the Womb, muſt be the diſſolving of the Connexion of the Neck thereof. And if this diſſolving be in ſome part onely near the womb, the womb will hang down in the Privities, with ſome part only of the Neck turned, but if the Neck of the Womb be wholly ſeparated from the parts under it, then the Womb will all hang forth, with the Neck turned inſide, outward, and the womb will not be ſo turned in the bottom, but as it was when in the Belly, the Orifice onely being open, drawing with it the Membranes and the Rimme which is joyned to them with the Veſſels and Stones. And this may be without a Rupture; only from the Looſeneſs of the Membranes which can ſtretch much, (as we ſee in Dropſies, when the Belly is ſwollen, how the Rim thereof is ſtretched) although the womb hath been long down, as appears in that when it is put up again, Women may conceive, which could not be, if the Veſſels were divided from it.

The womb it ſelf cauſeth chiefly this Separation of the Neck of it from the Fibers or ſmall Veins by which it is joyned to the parts adjacent though not ſtrongly, and therfore it may be without great hurt or bleeding; when it is forcibly ſo drawn down, that it brings the Neck with it, either ſuddenly or by degrees, when there is leſs force, firſt tearing the Veins next to it, and then turning out the neck downward, which hanging forth, makes it fall more down by degrees through the weight thereof.

The forcible untying of the Neck of the Womb, is the cauſe of the womb Falling down.

The womb is thus driven down by great and often ſtraining, by blowing the wind, or otherwiſe which preſſeth downward the Guts and Womb, eſpecially in a womans throws in childbirth; when the travail is hard, and the womb gets too much downward with the Child, and the rather when the Child getting through with difficulty, thruſts the Neck of the Womb down, and ſo untieth it from the Veins. Or if the Secundine or after Birth, ſticking ſtill to the womb, be ſo driven by the Midwife, that the womb is driven down alſo with the Neck thereof. For theſe Cauſes after Child-bearing the womb falls down; and

and thoſe Women which have often brought forth, and endured ſuch Midwives, are preſently troubled therewith, or when they grow old.

The ſame may come from Leaping, or the like Shaking of the Body; and the Womb may hang out thereby.

Alſo from the Neck of the Womb it ſelf beſides, when it is pull'd away by the Womb, there may be a Falling out of the ſame, when it is ſeparated by Force from the parts beneath, by violent and frequent Copulation, as in Harlots which are continually rubbed; or from ſome Corruption in the Neck, by which we once ſaw the womb fallen out.

Alſo from other Cauſes, this Falling down of the womb can ſcarce proceed. As for the looſeneſs of the Ligaments (or of Muſcles by which ſome thought the Womb did hang) which they ſay comes from the Force mentioned (and by which the womb is driven down,) or from the plenty of Humors that wet the Membranes. We, (ſince there are no ſuch Muſcles, becauſe as we ſhewed the womb muſt be free, and Membranes ſo looſned, that they may follow the womb, nor ſo faſt tyed as they ought to be, if the womb hang by them) cannot grant the Falling out of the womb to be from the looſeneſs thereof. For although the womb be looſned, and the Veſſels ſtretcht beyond their bounds, yet can it not fall through the Privities, except the Neck be ſeparated, alſo which only holds it in.

Nor can the breaking of the Membranes be the Cauſe, as ſome ſay, becauſe, we found in the Anatomy of a Woman whoſe Membranes were putrified and conſumed, long before her death, as appeared by a Flux of ſtinking matter, that the womb moved not out of its place, but was firm.

As for the watery Humor which they ſay cauſeth the Falling out of the Womb, we ſhewed that it could not do it by moiſtning the Ligaments, and now declare, that in Women that have the Dropſie, in whom the womb and its Membranes ſwimms in water, the womb falls not out; yet it may come to paſs in the Whites, that the neck of the womb being continually moiſt, and therefore too looſe, that the womb being compelled by other Cauſes, may eaſier ſlip down, and the neck may yeeld more eaſily, and be inverted.

Some teach that beſides this Falling down, that the womb while in the Belly may be moved on one ſide, and get alſo up to the Stomach. But being it grows to the neck, and is compeſſed every where with the guts, abiding commonly in the middle, it will not eaſily get into other parts, and will rather go downwards then upwards. Except perhaps it grow ſo that it take up more room then formerly, as we ſee in Women with Child: and then alſo it rather goes downwards by its weight, and the Belly is more ſwollen and harder beneath. For which reaſons, and the other accidents in the Mother-fits, we declared in the Cure of them, that they come rather from Vapors that ariſe from the womb, then from the aſcending of the womb it ſelf.

The cauſe of the falling out of the Fundament is ſtraining.

The Falling out of the Fundament is from the Inverſion or ſtraight Gut, for then it ſwells, as when going to ſtool, the Fundament ſticks out with ſtraining to let out the Excrements, till it be drawn in again; ſo that if by great force and ſtraining with hard Excrements, it be ſo brought down, that it brings a part of the ſtraight Gut with it, it is the cauſe of its ſtaying out. The ſame may be from other cauſes that bear down, as in Child-birth, when the Delivery is hard, the Fundament alſo falls out, alſo from forcing about the Fundament, as in the Teneſmus, or needing or in the Flux called *Dyſentery*. And we have ſeen in an Inciſion made in the Rimme or Peritonæum near the Fundament for taking a ſtone out of the Bladder, that through pain, the Fundament hath been by ſtraining thruſt out, and the Yard alſo though in an Infant and little, hath been ſwollen and ſtood. And I have obſerved in ſome Children troubled with the Stone, that they had not only this coming forth of the Fundament alwayes when they ſtrained to make water, but an Extenſion of the Yard, eſpecially in the Head and Fore-skin, from their often handling of it through pain, which were the undoubted ſigns of the Stone in the Kidneys.

And if the Fundament be ſo thruſt out by ſtraining, that the ſtraight Gut be drawn from the Meſentery or middle Membrane by which the Guts are held, then they cannot be put up or kept in; although the Muſcles be right againſt the Fundament to draw it in again gently, yet if it be far forth and tied with no Ligaments, the Muſcles alone cannot do it, becauſe if the Fundament be far out, they will fall out alſo.

The Looſneſs of the Muſcles of the fundament is the cauſe why it cannot be drawn in.

It may come from the weakneſs of the Muſcles which draw in the Fundament after ſtool, and conſtrain it up, that the Fundament may be ſo far forth, that it cannot be drawn in, by which means the Fundament may be ſaid to be forth, but not to fall out except Force or Straining perceeded; becauſe it is not ſo retained by theſe final Muſcles, that when they ceaſe to act, it ſhould preſently fall out of the Body in which it was included without any Force. Theſe weakneſs which makes the Muſcles unable to draw back the Fundament, that falls out by ſtool, befals them, which have often had the Falling of it out; or it comes from too much cold of the part which is very ſenſible, by ſitting upon a cold ſtone or the like, or by ſtaying in the cold Air or Water, which touch the Fundament.

The Looſneſs of the muſcles is the cauſe why the fundament cannot be drawn back.

Many ſuppoſe that Falling of the Fundament, and that which is called *the Palſey of the Fundament*, comes from Looſneſs of the Muſcles through a Defluxion upon the Nerves. But it is improbable, that a particular Palſie of this part ſhould be alone, without any other part affected from the Defluxion. Nor is it probable that a Defluxion which muſt needs fall in abundance to cauſe a Palſey, ſhould fall only into the loweſt part of the *os ſacrum*; where theſe ſlender Nerves are accompanied with theſe Muſcles, and not rather fill the whol Cavity of the *os ſacrum*, by which means the Nerves might be diſſolved. Therefore if there be a Palſie in the Muſcles of the Fundament, it would be in the whol Body, or in the inferior parts, as well as there. And though there be a great Reſolution of parts in an Apoplexy, we find none there, nor doth the Fundament fall forth, nor in any other Palſie, when all the lower parts are reſolved, yet the Patient can go to ſtool and draw in the Fundament, and though it be weaker for the Diſeaſe, yet it falls out. For which cauſe, if difficulty of drawing back of the Fundament be from the Nerves, which comes ſeldom, it comes from a Palſie cauſed by a Defluxion, and we ſuppoſe that it comes from compreſſion of the Nerves, or contuſion by Fall or Stroak about the Crupper, or from ſome great Coldneſs of the part which is not only upon the Muſcles but Nerves.

The Connexion or Faſting of the Eye being looſned by a Contuſion is the cauſe of its coming forth.

When the Connexion of the Eye with its hollow roundneſs is looſned, it falleth out, and this comes by ſome violent Cauſe, becauſe it is ſo fixed to the place, that when it is brought to the Table boyled it can ſcarce be got out.

Yet the Eyes fall out by a great Contuſion of the head, by a Fall or Stroak.

And ſcarce by another means, except they ſtart out a little by ſtraining, as in Child-birth, crying or roaring and ſo ſeem bigger, yet they fall not out by that means but only ſtick out, of which we ſpake in Deformity: becauſe by ſtraining they cannot be much diſtended, but a little forced by the Muſcles.

Some think that the Eye may fall out by the ſtretching of the Globe with Wind and Moiſture gathered before it, but ſince we find no Cavity in the Eye, but it is full every where, and there is no way for theſe to get in, or can they be

be bred in the Eye, or come from other parts, we cannot yeeld to them. As we ſhewed in the Cauſes of pains of the Eyes, from Wind and Filmes, which they ſuppoſe to come from Defluxion of Water.

The looſning of the Connexion of the tongue from a contuſion, is the cauſe of its coming forth.

The Falling out of the Tongue may be from the looſning of its Connexion, it is ſo ſtrong bound by Muſcles, a Coate and Ligaments, that it muſt be done by great Force. But it happens from a Contuſion of the Neck or Breaſt, as when theeves are racked, their Tongue ſticks out, and it may alſo come by other means.

The cutting of the Cod cauſeth the falling out of the ſtones

I ſaw one whoſe Stones hung out by a wound which was given upon his Codd. And I obſerved the ſame in one which was ſhot with a Bullet and loſt half his Codd, that his right Stone, with the Seed-veſſels hung forth bare.

The Cure.

The Cure of the Falling out of the Guts & Cawle in Ruptures.

The Falling down of the Guts and Cawle which comes from the breaking or ſtretching of the Rimme of the Belly, cauſeth the Tumor called *Cele*, if it be in the Groine, and be but little, cauſing no great pain, it is neglected, or it is eaſily cured if taken in time; as alſo the Omphalocele or Navel-rupture, which ſome have all their lives, which will fall in when it is preſſed, or the like; but ſome Navel-rupture vaniſheth of it ſelf: as I ſhewed. But if the Tumor deſcend to the Codd, in the Gut-rupture it is harder to cure, or dangerous, for if it will not return by any means, but cauſe Pain and Coſtiveneſs of Body it is deadly, and the Excrements are ſpewed up which declare it.

Alſo the Navel-rupture or the like, if it cannot be put in, and produce the ſame accidents is deadly. And we ſhewed that the Cawle-rupture killed one, when the Tumor in the Codd grew hard. In other kinds of Ruptures in the Belly or Codds, if the Tumor will yeeld, although it be of ſhort continuance, yet to take it quite away that it return not, and to make a perfect Cure, it is difficult, eſpecially becauſe the Patient muſt continue them for their Operation, and Reſt, and be bound which he wil unwillingly undergo. But if it be old, it is impoſſible, except by manual Operation, and that is painful, and dangerous of death if by Inciſion, as is uſual, and the Stone on that ſide muſt be left, if it be made in the Groine. And if the Patient will not adventure that you muſt labour to hinder thoſe Tumors from increaſing which you cannot take away. All which ſhall be declared and the manner how, by Medicines both inward and outward; firſt how Medicines may be applied to the cauſe that is the part fallen, then how to the Diſeaſe which is the Solution of Continuity in a Rupture; or of Contiguity in the relaxing of the Rimm of the Belly.

We uſe things to put up the part fallen, and to keep it in, and hinder it from falling out again; if it be Gut or Cawle fallen out of the cavity of the Rimme, either cauſing a Tumor in the Groine or Codd.

We put up the Tumor in the Groine and Codd with the Hands by degrees, or in the Belly, by preſſing and moving it to the hole whence it fell, which we find out with the finger. And this is done when the Patient lyeth upon his Back, ſo placed that if it be below, that his Feet may be higher then the reſt of the Body, by which ſomtimes the Gut goes in of it ſelf, ſo I ſaved the life of a Countreyman twice that was broken on both ſides, when he vomited his Excrements, and was in great pain; and a while ſince I cured a Virgin that was burſten, which vomited her Excrements, by putting up the Gut with my Hand.

And if this Operation do it not, as when the Gut is out it comes to paſs often, through Diſtention by the wound, and Wrinkling and Hardneſs, that the Gut is ſo ſwelled, it cannot be reduced by the Paſſage, and then you muſt have a care, leaſt the Paſſage of the Excrements being hindered, they ſhould flie up or an Inflammation ſhould kill the Patient.

Alſo you muſt apply the Anodynes or takers away of pain, when there is Pain, Heat and Fear of Inflammation, mentioned in the Tumor Phlegmon.

And chiefly this Pultis, which openeth the wayes and mollifieth the hard Excrements, and expells Wind. Take *Marſh-mallow roots two ounces, Lilly roots one ounce, Mallows, Violets, Brank-urſine, Pellitory, each one handful; Roſes, Violets, Chamomil, and Melilot and Dill flowers, Bran, each one ſcruple*; boyl them in Milk and Water: if there be great pain, beat and ſeirſe them, adding, *Barley flower, and Bean meal, each three ounces*; *the Flower of Line-ſeed, and Fænugreek, each one ounce and an half*; *Fleabane ſeeds one ounce, Pouder of Earth-worms one dram, Oyl of Roſes three ounces, Ducks or Hens Greaſe one ounce*: make a Cataplaſm.

When the Heat is not, and we will uſe Softners and Expellers of Wind, add to it, *Orris roots, Briony, or wild Cowcumber roots, each one ounce*; *Wormwood, Calaminta, or Organ, each one handful*; *Elder, Roſe and Centaury flowers, each one pugil*; *Cummin and Caraway ſeeds each two drams*; *Agnus Caſtus ſeeds one dram*, and without Milk, we add Wine, and with *the Meals or Brans aforeſaid, or of Orobus and Lupines, each one ounce, Bay-berries half an ounce, with Oyl of Orris and Rue*: make a Pultis.

Or when there is much Wind. Take *Caraway ſeeds one ounce, Cummin ſeed half an ounce, Oyl of Rue one ounce, with Oxymel*, make a Cataplaſm.

Rue fryed with Oyl, and applied is good.

Fomentations are made of the Decoctions, of the which the Cataplaſm was made of the firſt if there be Heat, of the laſt if you muſt diſcuſs more, adding the Oyls there mentioned.

Alſo anoint with Oyl of Roſes, Dill, Lillies, Chamomil, Melilot, Orris, Elder, Rue.

You may diſcuſs with Baggs, of dry Plants, and Milium ſeeds, and the other great Seeds and Salt.

Beſides you muſt uſe againſt Wind inwardly and outwardly, things to diſſipate or diſcuſs and prevent it alſo. As we ſhewed in the Wind of the Stomach, and of the colick.

You have need of no external Applications, when the Cawle comes forth, being commonly in the Groine, and will go back only with lying down, or with the Hand, except it be in the Codd, as we ſhewed: and then you muſt foment and plaiſter the Tumor with Looſners, not regarding wind, except it be gotten in the ſame way.

If the Guts cannot be put up, we are conſtrained to cut, that the skin being open, and the Guts bare, and the hole by which they fell open, they may better be put up; which is dangerous to do in the Groine, if the Guts are gone from thence into the Codds, becauſe the Guts ſticking to the skin, may eaſily be cut alſo, as we have ſeen. Moreover if the Inciſion be made with ſuch care, the Guts are not hurt, yet in regard the naked Entrals are worſe to be medled with, for the Cure of the pain of the wound, then when they were covered with skin, by this Operation in the Groine, we either do no good, or we give occaſion to have cutting to be thought the Cauſe of his Death, which would otherwiſe have followed, while the Guts were forth. But we have obſerved good ſucceſs by cutting in other parts of the Belly, when the Guts get through the Rimme of the Belly being burſt, and can by no Art be put up again, becauſe the Tumor is ſeldom ſo great in thoſe parts, and the hole of the Rimme may better be found, and the Guts better put up without danger, being taken hold of near the hole, and by degrees wrought in.

We keep the Guts and Cawle in, and the Tumor from returning divers wayes; by placing the Body conveniently, and compreſſing the Tumor with the Hand or Inſtruments.

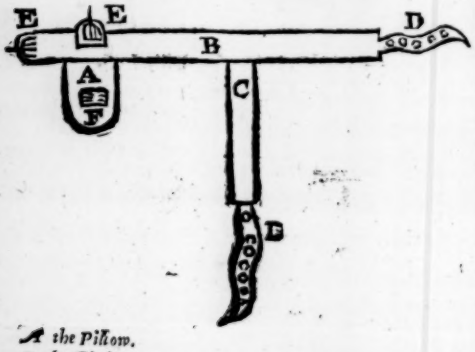
The placing muſt be ſuch that the Guts and Cawle may rather tend inwards then outwards, with the Face upwards, and let him keep his Bed in that poſture, becauſe it keeps them in till other Art be uſed.

The Hand preſſing the Tumor, doth not only drive it back, but keeps it from returning while it is held there, and though this cannot be done continually, yet it is good ſomtimes to apply the hand, eſpecially when the Guts are preſſed by the Belly by coughing or ſtraining, and ſtrive to get out. And if the Tumor be not great, and the ſtraining be uſual, you may keep it from increaſing with the hand.

We keep them alſo up with Inſtruments called *Truſſes*, which they muſt wear while they lie up, and not leave them off but at night if they hurt not nor hinder, & when they are conſtrained to change them or remove them, you muſt ſupply their place with the Hand. Theſe are made of Bolſters laid upon the Tumor which ſtops its return, which that they ſlip not nor be too ſtrait, are tyed by divers Bands like a Girdle, or from the Shoulders, and the like, tyed with Points, or with Claſpes, and they are to be faſhioned according to the Tumor that the Patient may wear them with little trouble, of which theſe following are the beſt.

The firſt for the Groine-truſs, is made of a Pillow of the length and breadth of the Groine, ſtuffed with wool two fingers thick, and leaſt by uſe it ſhould fetch off the skin covered with Linnen, Silk or Leather, and that it may ſtick faſt, there muſt be a broad Girdle of the ſame ſtuff about the Loins ſo faſtned as I ſhewed, to the Groine before, and a broad Rouler of Cotton to the hinder part of the Girdle, to come between the Thighs, that goes through the middle of the Pillow or Bolſter, paſſing through a loop to keep it faſt; and the Girdle muſt be there tyed again.

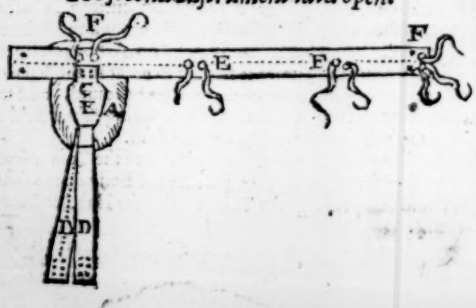
The firſt Inſtrument opened.



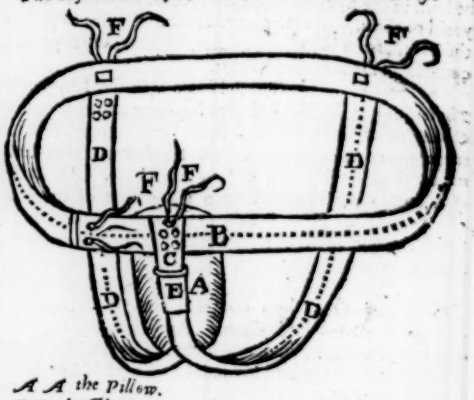
A the Pillow.
B the Girdle.
C the Girt underneath.
D D the Thongs of the Girdle and Girts.
E E the Loops through which the Thongs paſs.
F F the Loope of the Pillow which the ſtring paſſeth through

There is another for the Groine, made of the Girdle and Bolſter, as the firſt; but the ſtring going under, is faſtned before to the Girdle, and paſſeth through the Loop of the Bolſter, and is divided into two bands, which put under the Thighs, are tyed in two places to the Girdle, that they may hold faſter, and keep the Pillow right in its place.

The ſecond Inſtrument laid open.



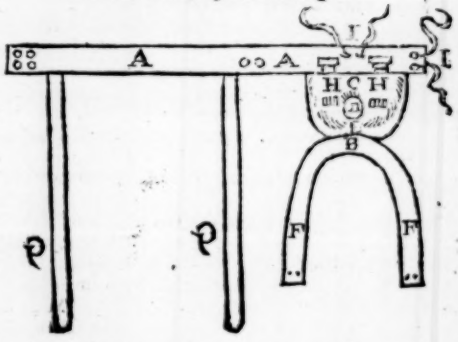
The Inſtrument cloſed, and as it is bound to the Body.



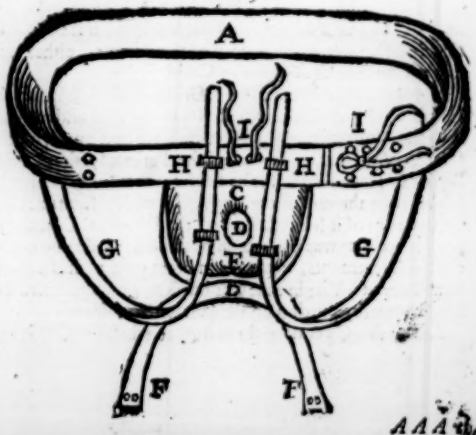
A A the Pillow.
B B the Girdle.
C C the String going underneath.
D D D D two Roulers into which that ſtring is divided.
E E the Loop of the Pillow, under which the Girt paſſeth.
F F F F the Girt by which the Girdle and the Roulers underneath are tyed.

The third Inſtrument to be fitted to the Groin, ſo ſtrong that it is proper for unruly Children, is made of an under Girdle, which is tyed to the Girdle above the Groins, being broad and large upon both Groins and the Codd, and on both ſides, where the Groins muſt be preſſed, like two Pillows ſtuffed with Wool, but in the middle the Yard paſſeth through a hole, and under there is a Bag which holds the Stones not cloſe. and ends in two Roulers, which brought under the Thighs, are tyed both to the Girdle, and do attract the under girt, and beſides there are two other Roulers which are brought forewards under the Thighs, which paſs through the Loops of the two Pillows, to fix the Girt and the Pillows, as the following Figure ſheweth.

The third Inſtrument open.



The ſame Inſtrument cloſe, how it is fixed to the Body.

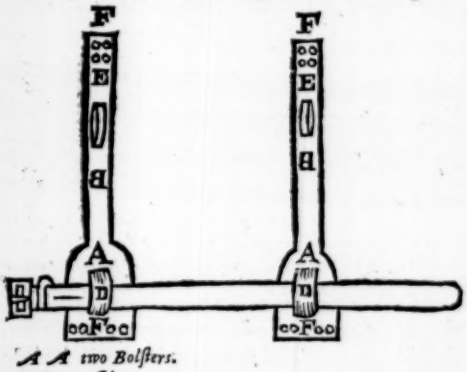


A A A the Girdle.
B the Girt.
C C the ſame open,
D D the hole of the Girt.
E E the bag of the Girt.
F F F F the two bands of the Girdle.
G G G G the two bands of the Girt.
I I I I the Points that tie the Girdle and the Girt together.

Somtimes the three kinds of Girts which are under the Girdles, that they may not ſlide down, and be faſter, are held by two other Girts that are faſtned behind to the Girdle, and caſt over both Shoulders, and bound with Points again to the Girdle before.

The fourth and moſt proper Inſtrument or Truſs, is made of two broad cotton Girts, to both which there is a Bolſter, which are tyed behind to the Doublet, and are carried under the Thighs, come up again to both Groins, where they lye upon both Groins with Pillows, and are again tyed to the Doublet, and that the Pillows may be faſt, they are tyed faſt with a Leather-girdle that paſſeth through the Loops of the Bolſters, before and behind, and ſo in the greateſt Motion it will hold, and the Bolſter in the ſound Part, doth help the Bolſter upon the Tumor, that it ſlip not. As the following Figure ſhews.

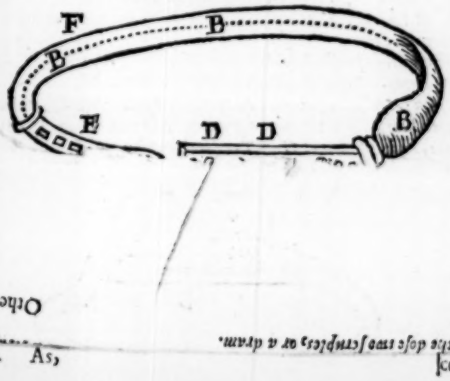
The fourth Truſs or Inſtrument laid open.



A A two Bolſters.
B B two Girts.
C the Leather Girdle.
D D the Loops of both Pillows.
E E the Loops of both Girts.
F F F F the Holes of both Girts by which the Points are faſtned to the Doublet.

The fifth Truſs is made of Wood two inches thick, thin and round beneath, which hath a ſpace in the middle for the Yard, leaſt it ſhould hurt the Root thereof on both ſides, with two Bolſters upon the Groins. This Girdle made of firm thin Iron, that it may yeeld a little, and covered with Leather is faſtned above with Nails and Hinches in the outſide, that it may open and ſhut, and the leather it is faſtned. As this Figure following ſheweth both open and ſhut.

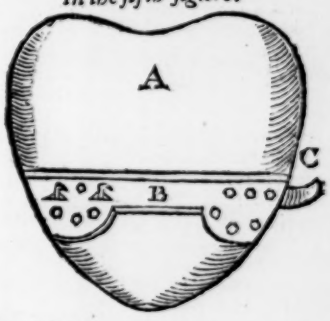
The fifth Truſs open.



A A A A the Wood.
B B B B the Iron Girdle covered with Leather in the firſt figure, and bare in the ſecond.
C the outward part of the Iron Girdle bare, faſtned to the Wood by Nails and Buckles.
D D the two Hooks
E the outward part of the Iron Girdle bare, with holes for the Hookes.
F F. the Iron Girdle divided there, in the firſt figure onely held together by Leather.
G the Barre made of the ends of the Girdle, joyned with Hookes and covered with Leather.

The ſixth Inſtrument made of Wood, that is broad, to cover both Groins, bowing inwards, and holding up the Codd, with an Iron Girdle like the former. Under which upon the ſide where the Rupture is, there is a Bolſter or Pillow to preſs down the Tumor: as followeth.

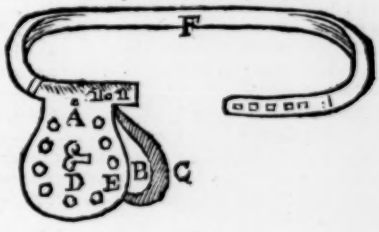
The ſixth Truſs made of a broad Board, faſtned to an Iron Girdle, like that in the fifth figure.



A the broad Board.
B the outſide of the Iron-Girdle faſtned to the Board.
C the Girdle there divided.

The ſeventh Inſtrument or Truſs is made of Iron, onely for the Groyn where the Rupture is, with an Iron-Girdle as the former. This is made of thick and broad Plate of Iron, with an Iron-ſpoon of the ſame breadth, joyned to the Joynt, that it may move, lined with Leather, and ſtuffed where it toucheth the Rupture, which is held with the Iron-ſpoon. As may be ſeen in the Figure following.

The ſeventh Truſs open.



A the Iron-Plate.
B the Iron-Spoon.
C the Convex, or bunching part of the Spoon covered with Leather.
D the Iron-ſhell which thruſts the Spoon down.
E little Holes through which the Leather is ſewed
Plat

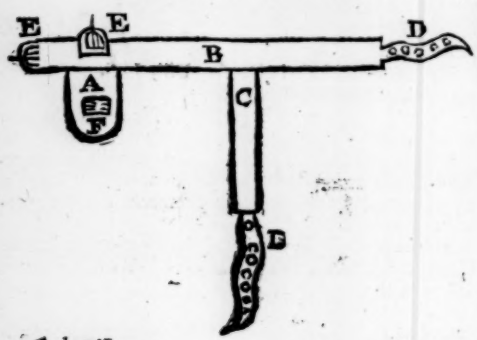
The placing muſt be ſuch that the Guts and Cawle may rather tend inwards then outwards, with the Face upwards, and let him keep his Bed in that poſture, becauſe it keeps them in till other Art be uſed.

The Hand preſſing the Tumor, doth not only drive it back, but keeps it from returning while it is held there, and though this cannot be done continually, yet it is good ſomtimes to apply the hand, eſpecially when the Guts are preſſed by the Belly by coughing or ſtraining, and ſtrive to get out. And if the Tumor be not great, and the ſtraining be uſual, you may keep it from increaſing with the hand.

We keep them alſo up with Inſtruments called *Truſſes*, which they muſt wear while they ſit up, and not leave them off but at night if they hurt not nor hinder, & when they are conſtrained to change them or remove them, you muſt ſupply their place with the Hand. Theſe are made of Bolſters laid upon the Tumor which ſtops its return, which that they ſlip not nor be too ſtrait, are tyed by divers Bands like a Girdle, or from the Shoulders, and the like, tyed with Points, or with Claſpes, and they are to be faſhioned according to the Tumor that the Patient may wear them with little trouble, of which theſe following are the beſt.

The firſt for the Groine-truſs, is made of a Pillow of the length and breadth of the Groine, ſtuffed with wool two fingers thick, and leaſt by uſe it ſhould fetch off the skin covered with Linnen, Silk or Leather, and that it may ſtick faſt, there muſt be a broad Girdle of the ſame ſtuff about the Loins ſo faſtned as I ſhewed, to the Groine before, and a broad Rouler of Cotton to the hinder part of the Girdle, to come between the Thighs, that goes through the middle of the Pillow or Bolſter, paſſing through a loop to keep it faſt; and the Girdle muſt be there tyed again.

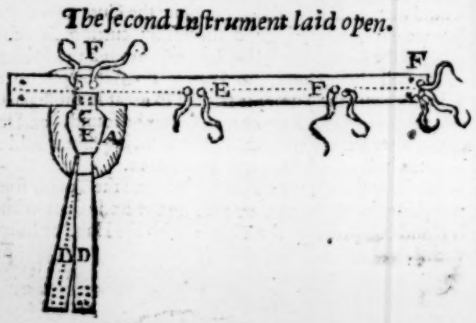
The firſt Inſtrument opened.



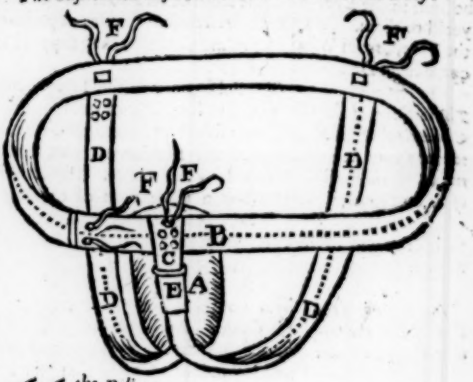
A the Pillow.
B the Girdle.
C the Girt underneath.
D D the Thongs of the Girdle and Girts.
E E the Loops through which the Thongs paſs.
F F the Loope of the Pillow which the ſtring paſſeth through

There is another for the Groine, made of the Girdle and Bolſter, as the firſt; but the ſtring going under, is faſtned before to the Girdle, and paſſeth through the Loop of the Bolſter, and is divided into two bands, which put under the Thighs, are tyed in two places to the Girdle, that they may hold faſter, and keep the Pillow right in its place.

The ſecond Inſtrument laid open.



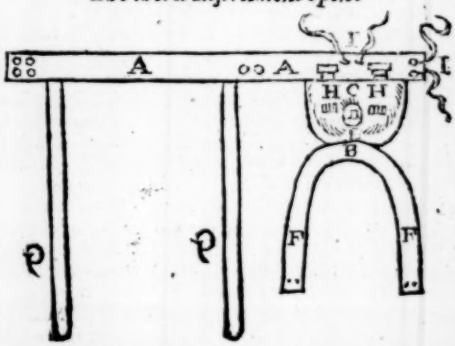
The Inſtrument cloſed, and as it is bound to the Body.



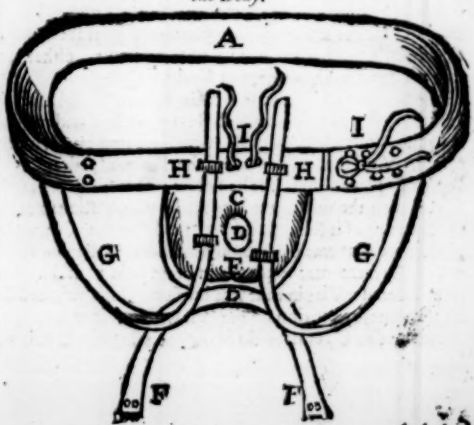
A A the Pillow.
B B the Girdle.
C C the String going underneath.
D D D D two Roulers into which that ſtring is divided.
E E the Loop of the Pillow, under which the Girt paſſeth.
F F F F the Girt by which the Girdle and the Roulers underneath are tyed.

The third Inſtrument to be fitted to the Groin, ſo ſtrong that it is proper for unruly Children, is made of an under Girdle, which is tyed to the Girdle above the Groins, being broad and large upon both Groins and the Codd, and on both ſides, where the Groins muſt be preſſed, like two Pillows ſtuffed with Wool, but in the middle the Yard paſſeth through a hole, and under there is a Bag which holds the Stones not cloſe. and ends in two Roulers, which brought under the Thighs, are tyed both to the Girdle, and do attract the under girt, and beſides there are two other Roulers which are brought forewards under the Thighs, which paſs through the Loops of the two Pillows, to fix the Girt and the Pillows, as the following Figure ſheweth.

The third Inſtrument open.



The ſame Inſtrument cloſe, how it is fitted to the Body.

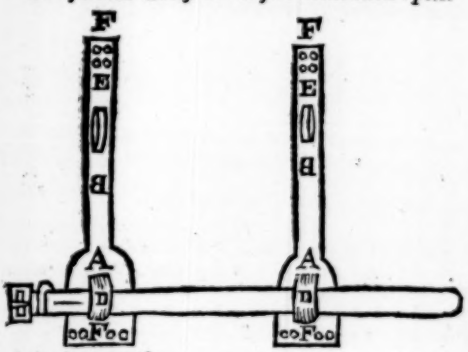


A A A the Girdle.
B the Girt.
C C the ſame open,
D D the hole of the Girt.
E E the bag of the Girt.
F F F F the two bands of the Girdle.
G G G G the two bands of the Girt.
I I I I the Points that tie the Girdle and the Girt together.

Somtimes the three kinds of Girts which are under the Girdles, that they may not ſlide down, and be faſter, are held by two other Girts that are faſtned behind to the Girdle, and caſt over both Shoulders, and bound with Points again to the Girdle before.

The fourth and moſt proper Inſtrument or Truſs, is made of two broad cotton Girts, to both which there is a Bolſter, which are tyed behind to the Doublet, and are carried under the Thighs, come up again to both Groins, where they lye upon both Groins with Pillows, and are again tyed to the Doublet, and that the Pillows may be faſt, they are tyed faſt with aLeather-girdle that paſſeth through the Loops of the Bolſters, before and behind, and ſo in the greateſt Motion it will hold, and the Bolſter in the ſound Part, doth help the Bolſter upon the Tumor, that it ſlip not. As the following Figure ſhews.

The fourth Truß or Inſtrument laid open.



A A two Bolſters.
B B two Girts.
C the Leather Girdle.
D D the Loops of both Pillows.
E E the Loops of both Girts.
F F F F the Holes of both Girts by which the Points are faſtned to the Doublet.

The fifth Truſs is made of Wood two inches thick, thin and round beneath, which hath a ſpace in the middle for the Yard, leaſt it ſhould hurt the Root thereof on both ſides, with two Bolſters upon the Groins. This Girdle made of firm thin Iron, that it may yeeld a little, and covered with Leather is faſtned above with Nails and Hinches in the outſide, that it may open and ſhut, and the leather it is faſtned. As this Figure following ſheweth both open and ſhut.

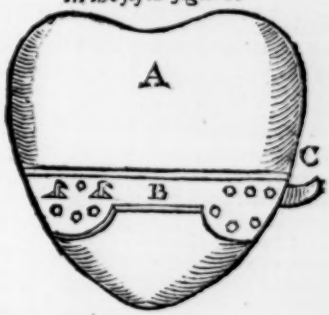
The fifth Truß open.

The ſame Inſtrument ſhut as it is upon the Body.

A A A A the Wood.
B B B B the Iron Girdle covered with Leather in the firſt figure, and bare in the ſecond.
C the outward part of the Iron Girdle bare, faſtned to the Wood by Nails and Buckles.
D D the two Hooks
E the outward part of the Iron Girdle bare, with holes for the Hookes.
F F. the Iron Girdle divided there, in the firſt figure onely held together by Leather.
G the Barre made of the ends of the Girdle, joyned with Hookes and covered with Leather.

The ſixth Inſtrument made of Wood, that is broad, to cover both Groins, bowing inwards, and holding up the Codd, with an Iron Girdle like the former. Under which upon the ſide where the Rupture is, there is a Bolſter or Pillow to preſs down the Tumor: as followeth.

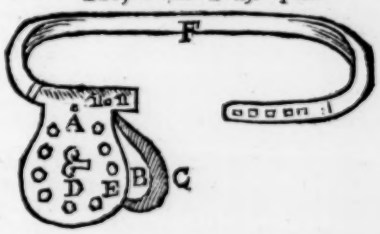
The ſixth Truß made of a broad Board, faſtned to an Iron Girdle, like that in the fifth figure.



A the broad Board.
B the outſide of the Iron-Girdle faſtned to the Board.
C the Girdle there divided.

The ſeventh Inſtrument or Truſs is made of Iron, onely for the Groyn where the Rupture is, with an Iron-Girdle as the former. This is made of thick and broad Plate of Iron, with an Iron-ſpoon of the ſame breadth, joyned to the Joynt, that it may move, lined with Leather, and ſtuffed where it toucheth the Rupture, which is held with the Iron-ſpoon. As may be ſeen in the Figure following.

The ſeventh Truß open.



A the Iron-Plate.
B the Iron-Spoon.
C the Convex, or bunching part of the Spoon covered with Leather.
D the Iron-ſhell which thruſts the Spoon down.
E little Holes through which the Leather is ſewed to the Plate.
F the Iron-Girdle as in the fifth Figure.

For the Ruptures of other parts, as of the Navel, and the places adjacent, Truſſes are made of Cotton or Iron-Girdles, as formerly, which goes about the Belly, where the tumor is with a Bolſter, or wooden or Iron-Plate to preſs it down, as you may artificially invent, which Girdle may be held up with Girts about the Shoulders, or faſtned to the Doublet. Alſo

Alſo we keep the Rupture from falling down, by taking away the Cauſe that drives it out, as much Meat and Drink, and ſuch things as breed many Excrements and wind, becauſe they fill the Guts, and make them ſtrut out.

To this end alſo we purge, with Medicines mentioned in the Diſeaſes of the Stomach and Colick. To which we add aſtringents for the Rupture, as Rhubarb, Myrobalans, and the like mentioned in the Dyſentery, or we add ſome of the Decoctions following

Youmuſt give no Clyſters in Ruptures, for if the Guts be out, they fill them, and increaſe the tumor, and keep them from being put up. And if the ſmall Guts be out, whether Clyſters can ſcarce come; yet in regard it is hard to diſtinguiſh them, and the Clyſters may ſomtimes get thither, it is better to forbear, except, after the Guts are put up, when there is a great coſtiveneſs. In the falling out of the Cawle called *Epiplocele*, becauſe Clyſters cannot be ſent thither, if the Belly be full of Wind and Excrements, you may adminiſter them with good ſucceſs.

Alſo Cold doth hurt in Ruptures, eſpecially when they are out, for it wil make them ſwell, therefore beware of it.

Alſo take heed of violent Exerciſe, ſtraining or whooping, for they contract the Belly, and thruſt out the Guts. Alſo Venery is evil, if forcibly uſed. Reſt is moſt convenient, not only to prevent it, but alſo to cure it: As we ſhall ſhew.

For the Cure of the breaking of the Rim of the Belly, or when the paſſage thereof is enlarged in the Groyn, or opened about the Navel, we give, and apply many things, or if they will not do, we uſe Inciſion.

We give inwardly ſuch things as are mentioned for glutinating of wounds, which by their drying and binding vertue, do help the Rimme when it is looſned or broken, by their glutinating force, if the Lipps of the wound are not yet grown hard, and then they can do little, except they can make new fleſh to ſtop the paſſage. Theſe muſt be uſed long, for many weeks, that their vertue may reach to the part affected.

For this purpoſe, you may uſe wound-drinks, mentioned in the Cure of Wounds.

Or of other Plants, green, or dry, boyled in wine, or the like, or made with Honey, or Sugar into a Syrup: As we ſhewed in Wound-drinks.

The ſimple Decoction of Knot-graſs, or Salomon-ſeal, which is called Rupturewort, for its vertue in Ruptures; or of Sanicle; or that of *Fernelius*, which is called Royal *Oſmond*, made in wine, is excellent.

The Compound Decoction of theſe three is alſo good.

Or with three coloured trinity Violets, called *Jacea* or Knapweed, or Ladies-mantle, Mugwort, Bettony, Agrimony, Horſtayl, Burnet, Mouſear, Thorow-wax, Creſswort, *each one handful; Comfrey roots one ounce and an half, Madder, and Snakeweed, each one ounce; round Birthwort half an ounce, Flowers of Mullein, and St. Johns-wort, each one pugil; Cypreſs-nuts half an ounce, Southernwood, and Water-creſs ſeeds, each one dram; Aniſe ſeeds two drams,* boyl them *in Wine and Water*, till the third part be conſumed, *to four pints*, and drink thereof, *or with Honey or Sugar*, make a Syrup.

There are others for the ſame, which may be boyled with the former, as Daffodil roots, or Avens, or Bearfoot, or Mary-thiſtle, or Lady-gloves, or Hog-fennel roots, the Leaves of Comfrey, Golden-Rod, Avens, Plantane, Adders-tongue, Strawberries, Mullein, Primroſe, Bears ears, Orpine, Yarrow, Tanſey, Hemp, Sage, Calamints, and the reſt mentioned in Wound-drinks.

The Arabians commend a Goats head boyled with the Hair, and the Hair of an Hare boyled.

You may make a Wine with the Infuſion of the beſt of the things mentioned, being dryed, and it will be leſs diſtaſted, and drunk longer.

Some Juyces drunk, do the ſame, *one ounce at a time, with Wine, or other Liquor, or boyled thick, to an Extract, one dram at a time: Or with Honey or Sugar made into a Syrup*, and given *one ounce and an half*.

The Juyce of Rupturewort is beſt, then of trinity Violets, and Oſmond Fern, and of great Comfrey roots, *and one dram* of the Juyce of Gentian roots according to *Dioſcorides*, and the Juyce of Butchers broom, the Juyce of other Plants mentioned in the Decoction; alſo the Juyce of Laſerpitium.

The ſtilled Waters of Ladies-mantle, Comfrey, Horſetayl, Plantane, red Roſes, and others mentioned, drunk alone, or with other Remedies.

There are alſo Potions for the Rupture, made of *one dram* of pouder, with red wine, or a Decoction, or ſtilled waters, or with water and Milk for Children, or with a rear Eg, or the like, with Sugar, or Honey, if you pleaſe.

As theſe following, ſimple, or mixed, the chief is of Rupturewort, and Horſe-tongue roots, of the Leaves of Adders tongue, of Roots of Swordgraſs, wild Orris, or three coloured Violets.

Alſo the pouders of Horſtayl, Shepheards purſe, Ladies-mantle, Thorow-wax; alſo of the Roots of Comfrey, Valerian, Birthwort, Snakeweed, Tormentil, five leaved Graſs, Briony.

Alſo *Dioſcorides* commends the pouders of other Herbs, as of Bettony, Liverwort, Cuckow bread, Balſom, Woodbine, Marygolds, Rock Comfrey, Burdock roots, Elicampane, Lovage, Seeds of Watercreſſes, and Countrey Muſtard, and of other Plants mentioned for Decoctions.

Alſo the pouder of Earth worms, and of the worms of Byzant, the Filings of Steel, of the Bloodſtone, Amiantum, and of Oſteocolla, which glews bones together. Alſo of Fat Earths ſealed, and other dryers.

Alſo the pouders of Troches of Amber, Ivory, or Bole, or of Diacydonium, made of Quinces without the Species, with ſome convenient Liquor.

Theſe may be taken in pouder with Sugar, or made into Lozenges with the ſame, with proper waters, and things good for the Stomach, and to expel wind, for that fills the Guts, and increaſeth the tumor.

As, Take *Coriander ſeeds prepared, one dram, Caraway, or Cummin, and Water-creſs ſeeds, each half a dram; Rupturewort one dram and an half, Horſtongue, or Adders tongue, or Horſtayl one dram, Comfrey roots, Pomegranate peels, each half a dram; Bole one dram, red Coral half a dram, Sanguis Draconis, the Aſhes of a Bulls, or Staggs pizzle one ſcruple, Cinnamon one dram, Sugar of Roſes*, as much as all the reſt, *or with more Sugar diſſolved in Roſewater*, make Lozenges.

You may make Electuaries of the ſame pouders, with *Conſerves, Candies, and Syrups, or Extracts two drams* to be given with convenient Liquor after it.

Or thus: Take *Conſerve of Comfrey, and Daffodil roots, each one ounce and an half; Conſerve of Rupturewort one ounce, old Conſerve of Roſes, and of Acorns, each ſix drams; Conſerve of Sage, or Stœchas, French Lavender half an ounce, Coriander ſeeds prepared, and Fennel ſeeds, each half a dram; Amber, Maſtick or Frankincenſe, each two ſcruples; Bloodſtone half a dram, Cinnamon one dram and an half, with Syrup of Myrtles*: make an Electuary. To which you may add ſome of the aforeſaid pouders.

You may alſo make a Mixture of divers Pouders mentioned, and give *half a dram*, or *two ſcruples* like Pills, every day, becauſe they are unpleaſant.

Thus: Take *Comfrey, Madder, Tormentil, Birthwort, Rhubarb, and Briony roots, each one dram and an half; Rupturewort, three coloured Violets, Horſtongue, Adders tongue, Shepheards purſe, Ladies-mantle, Horſtayl, Water-creſs ſeeds, Mummy, Byzamine worms, Bole, Coral, each one dram; Gum Arabick, Sarcocol, Maſtick, or Frankincenſe, Amber, each half a dram*; make *a Pouder, and with Syrup of Myrtles, and Infuſion of Gum Tragamh*, make *a Paſt*.

You may with all the other pouders make up as excellent Medicines, as the former.

The uſual Pills for the Rupture, are thoſe of Bdellium.

Or theſe: Take *of Bitumen, or Mummy two drams, of Bdellium, Galbanum, or Sagapenum, and Myrrh diſſolved in Vinegar, each half a dram; Pouder of Steel prepared one dram, Hares dung dryed, half a dram, Pouder of Earth worms one ſcruple, with boyled Juyce of three coloured Violets, or of Rupturewort, with Honey in form of a Syrup*: make *a Maſs, the doſe two ſcruples, or a dram.*

Others

Others commend the Dung and Hare of an Hare cut ſmall, and boyled in Honey, given one dram at a time.

There are divers outward Applications for a Rupture, whether the Rimme be broken or looſned in the Groine or Navel or any other part, which by binding do aſtringe the Relaxation or Looſneſs in the Groine, and if it be broke do unite the Lipps of the Wound, to which you muſt add Healers, by which (though the Rimme cannot grow together,) yet new fleſh may breed, which may ſtop up the Paſſage, as the Aſtringents or Binders make it ſtraighter. That this may better be effected, you muſt uſe all means to keep up the Guts, leaſt they return to the part to get out, and ſo hinder the uniting of the part. Therefore during the Cure, for a month or more, let him either lye upon his Back, or wear a Truſs continually, and take heed of all things mentioned which force the Guts down.

Theſe Applications are by Plaiſters, which will ſtay on, and which muſt be renewed.

As this. Take *the Roots of Comfrey and Snakeweed, each three drams; Birthwort two drams, Galls and Cipreſs-nuts and Pomegranate peels each two drams; the Leaves of Miſleto of the Oak, Pomegranate flowers and red Roſes, each one dram; Aloes, Sanguis Draconis, Juyce of Sloes or Acacia, each one dram and an half; dryed Earth-worms one dram, Frankincenſe, Maſtick, Myrrh, Sarcocol, Mummy, each two drams; Pitch, Colophony, each half an ounce; Bole, Lytharge and Blood-ſtone, each half a dram; Plaiſter of Paris burnt three drams, Roſin of the Firre, or Larke-tree, or Pine-tree,* as much as is ſufficient, pouder what is to be poudered, and let the Gums be diſſolved in ſtrong Vinegar, and ſo make a Plaiſter; or with Oyl of Quinces, Maſtick, or Myrtles, and a little red Wax, make a Cerot.

To theſe you may add the Roots of Daffodil, Plantane, Water-lillies, the Leaves of Rupture-wort, Acron-cups, Myrtle ſeeds, Gum Ammoniack, Bdellium, Galbanum, Serapinum, Traganth, Arabick, Amber, Load-ſtone, Steel, and Iron filings, Allum, Vitriol; alſo Pouder of Oak moſs, of Toad-ſtools, red Snails, Hedghogs skins, Hares hair, Bazantine-worms; alſo dryed Mans blood, Glew, or Mucilage, which is made of Sheeps skins boyled with the Hair. All or ſome of theſe with thoſe aforeſaid may be made into a Plaiſter, or with the Oyls mentioned or the like (in which Shepheards purſe, Juyce of Plantane, and other Aſtringents, and Vinegar have been boyled) make a Cerot.

Other Emplaſters without Oyls, which dry ſooner and ſtick faſter, do not only potentially aſtringe, but actually by preſſing the place, are thus made. Take *Frankincenſe, or Maſtick three drams, Bole and burnt Plaiſter of Paris, each two drams; Aloes, Sanguis Draconis, each one dram and an half; Galls or Pomegranate peels, Cypreſs-nuts, and Roots of Birthwort or Snakeweed, each one dram; or burnt Earth-worms, and the Hair of an Hare, each half a dram;* make a Pouder, and mix it with the White of an Egg, and Vinegar, or Glew of Fiſhes, or beat them being ſoftned and diſſolved in Vinegar, and apply it with Cotton, renewing it twice or thrice in a week.

A Plaiſter of Pitch and Roſin may be long worn, and changed when it itcheth or falls off, to which you may ad aſtringent Pouders.

That Plaiſter is moſt uſual, which is made of Sheeps skins, called the Rupture-plaiſter of Arnoldus, made of Lytharge, Blood-ſtone, Bole, Gums, Frankincenſe, Maſtick, Ammoniack, Galbanum, Myrrh, Pitch, white Wax and red, Turpentine, with Juyces, as Aloes, Sanguis Draconis; of Sloes, Opium roots; as of Comfreyes, Birthwort, Pepper, Flowers of red Roſes, Pomegranates, Miſleto of the Oak, Galls, Earth-worms, Mans blood, and Sheep-skins.

Alſo the Plaiſter of Maſtick, eſpecially againſt Wind, mentioned in Weakneſs of the Stomach.

The Counteſs her Ointment called *Comisiſſæ*, is aſtringent, and here may do good.

There are other Applicatations of Plants boyled in red Wine. As,

Rurpture-wort boyl'd with Comfrey roots.

Oſmond Fern, alſo boyled, with Horſetayl, and Shepheards purſe; alſo Galls, Cypreſs-nuts, and Pomegranate peels.

The Leaves of Miſleto of the Oak, or inſtead thereof Pear-tree leaves green, with glewy ſeeds of Miſleto, with Comfrey roots, St. Johns-wort, Sanicle, and Bettony, are good boyled and beaten.

Beſides theſe ſome commend the Pouder of dryed hemlock, mixed with the white of an Egg, and ſo applied.

Alſo Bdellium made ſoft with faſting Spittle, ſharp wine, or Vinegar, is highly commended.

Lupines burnt with a Linnen rag are applied with wine to the Navel-rupture.

Aſtringent Fomentations are with a Spunge or clout dipt often in a Decoction, yet not to be applied, they are made with aſtringent Wine and Vinegar, or Lead, or Iron-water, of the ſimples following, Roots of Snakeweed, Tormentil, five leaved Graſs, Madder, Daffodil, Herbs, as Rupture-wort, Horſe-tayl, Plantane, St. Johns-wort, Mullein, Rock-comfrey, Oak leaves, Bar-berries, Sumach, and other Aſtringents, as Pomegranate peels, Cypreſs-nuts, Roſe flowers, Coriander, and Water-creſs ſeeds parched.

To which you may add things to expel Wind, leaſt it drive the Guts out, as Rue, eſpecially the wild Rue, the topps of the leſſer Centaury, and of Roſemary, common or French Lavender flowers, Cummin, Caraway, and Fennel ſeeds.

And to theſe, if you add of Vitriol and Allum, each one ounce or more, it will be ſtronger, of which alone with Bole, and burnt Plaiſter of Paris, you may make a Fomentation.

Some commend the Liquor found in the Leaves of an Elm.

Cutting is the laſt Remedy, which is proper in the Rupture, and Looſneſs of the Rimme of the Belly, and when the skin is laid open, you may lay hold upon, and bind the Rim, yet becauſe it is dangerous and painful, it is to be uſed only when all other things fail, and then not raſhly, and except the Tumor is very troubleſom, and ſlips out eaſily, and is exceeding painful, and we fear leaſt when the Guts are out, they cannot be put in again. Otherwiſe it is better to uſe a Truſs, which with little trouble takes away pain and danger. This cutting is ſaid to cure Ruptures, for the skin being open in the Groine, the Mouth of the Rimme being torn, or broke nor relaxed, may be bound together; and the Paſſage ſo ſtopt and held together by the ſtring till the fleſh grow up, leaſt the Membrane ſhould open again being united, which will not grow together. And this cutting will cure other Ruptures, although in other places the Rimme is not ſo eaſily laid hold on and tyed, yet the fleſh that grows may ſtop the Paſſage.

That this may be done handſomly in the Groine, where it is moſt uſual, after you have implored the Aſſiſtance of God, becauſe it is is dangerous; you muſt place the Patient upon a table with his Face upwards, and ſo tye him that his Head may be lower, then the reſt of his Body, and his Feet higher. And if the Guts be in the Groine or Codd, they muſt firſt be put up, and the tumor preſſed down, and after the skin muſt be drawn up, and cut in the length of the Groine, and you muſt take hold of the Paſſage of the Rimme, which deſcends from thence into the Cods and contains the Seed Veſſels, and ſeparate it, by drawing or cutting from the parts adjacent to which it cleaveth, and tye it ſtrongly with a hempen thread, leaving the ends of the thread hanging out, and you muſt cut off the Paſſage below the thread, and pull it away with the Seed Veſſels, and the Stone that grows thereto. Then you muſt place him upon a Bed, and lay him upon his Back to reſt till the Wound be cured, which is done as other wounds with waſhing and good Ligature. And it will not be amiſs, before you cut, to put the Patient into a mollifying Bath, that the Guts may be better put up, and for the better ſucceſs in cutting.

Alſo this cutting may be without Gelding, (which all deſire,) if the Chyrurgion be a good Anatomiſt, and can ſo tye the Paſſage ſeparated from the Seed-veſſels, that no other part be tyed therewith.

Some have attempted this by a prick without cutting, they pierce the upper part of the Codd with a long Needle, through the Paſſage of the Rimme of the Belly, and draw a thread after it, and ſo ſay that they can ſtop the Paſſage by tying of the thread, and cure the Patient without loſs of Stone or Seed-veſſels.

I have often heard that a Rupture might be cured without cutting, but while I write theſe things, there came to me very ſeaſonably a French Surgeon, which I ſaw performed the Cure with good ſucceſs by this way. And being it is without pain, or but with very little, and without loſs of Blood, it is the beſt and ſafeſt way. And in regard the Veſſels may better be ſeen and felt without Blood, it is the beſt way for males, to prevent Gelding.

He applied a potential Cautery, a little above the ſtone on the Rupture ſide, where the paſſage of the Rimme goes into the Codd, ſo large that it mortified the skin half a fingers length and breadth, making an Eſchar or Scab which he took off, and applied another Cautery, till the skin was all taken away and the fat appeared, which he cut off, ſo that he could perceive the paſſage that carried the Seed-veſſels. This being done in two dayes time, he handſomly ſeparated the Veſſels from the paſſage, and with a crooked Needle conveighed a thread underneath, and ſo gently tyed the paſſage without pain, and after the thread fell off in time, he with incarnative or fleſh-breeding Medicines, produced a Callus or Hardneſs, which grew the better to the paſſage, becauſe the ſecond skin to the Teſticles called *Erythroïs*, is red, fleſhy and muſculous. And ſo by preſſing down, and filling up the place where ſubſtance was loſt, he ſtopped the paſſage by which the Guts came forth, and ſo he performed the Cure perfectly and happily without Gelding. And I underſtood by Letters, he brought to me, that he had cured divers the ſame way.

In other parts you may not uſe cutting or burning for a Rupture as in the Groine, becauſe you cannot ſo eaſily lay hold of the Rimme of the Belly and bind it; yet it may help ſomtimes, eſpecially becauſe proud Fleſh will ſooner grow, while a wound is healing: as I ſhewed. And this muſt be done when the Patient is upon his back, by an Inciſion upon the tumor, or a Cauſtick, and by other Applications for the Cure.

The Cure of the Falling out of the Womb.

Somtimes the Womb and neck thereof falls out of the Body, when the Connexion of the Neck is diſſolved, as we ſhewed, which can ſcarce be repaired, and then the Cure is difficult, and if it be old, becauſe the parts ſeparated are grown hard and cannot be cloſed, it is impoſſible. The greateſt hope is when the Womb is not quite fallen out, but hangs in the paſſage, eſpecially when it is deep, for then the ſmall Veins are leſs divided. Nevertheleſs, for the Cure perfectly or imperfectly, firſt you muſt conſider the Cauſe and then the Diſeaſe.

The Cauſe of Falling out of the Womb muſt firſt be removed, by keeping them at reſt, or with little motion, and from immoderate Venery, and preventing neeſing, coughing and roaring. And if ſhe be with child, give her things to help the Birth when it is at hand. And let her Body be alwaies kept ſoluble by Meats and Medicines, to avoid ſtraining. And it is better to purge ſo, then to uſe moiſtning Diets, which cauſe the Ligaments to be looſe, and the Womb to fall out. And if the womb be moiſt, or ſhe have the Whites, you may give ſtrong Purges to take away the ſlipperineſs of the part which cauſeth the womb to fall forth. Thoſe Medicines are drying alſo: as we ſhewed in the Cure of the Whites, otherwiſe purging or bleeding do little good for taking away the Cauſe, except to keep the Body clean.

The Cure of the Diſeaſe which is twofold, namely the Diſlocation of the womb and the neck thereof, and the ſolution of Continuity, is to put the womb into the right place, and keep it there, and to unite it to the Parts from which it is divided.

The womb muſt be put up, and for the better performance there of, you muſt take away firſt the Excrements from the Guts and Bladder, leaſt they ſtraiten the paſſage, becauſe the neck of the womb lyeth upon the ſtraight Gut, and the Bladder upon it.

This done, you muſt lay her upon her Back, with her Thighs abroad, and her Knees up, and with her Hands thruſt in the bottom of the womb into the neck, till all be put up. Or let the Midwife help her; or let her have a blunt ſtick with a clout at the end, which will paſs farther in. Or let her make a Peſſary of Linnen for the ſame purpoſe. Thus did I two years together, put up the womb which could not be done by any other Art, as the Butchers do the Guts of Beaſts, and ſhe yet liveth, and hath had Children in the time.

I have alſo happily cured oftentimes the turning out of the Womb after hard Travail, by the help of Midwives which I inſtructed, with a bag of wool ſtuffed with ſweet Roots, Herbs and Seeds.

And if there be a Swelling that hindereth the putting up, you muſt firſt take it away; or an Inflammation, or Wind, you muſt diſcuſs that, as we ſhewed in the Rupture.

Anoint the womb with Butter, Oyl, or Greaſe, that it may get in the eaſier, but if there be no neceſſity avoid them, becauſe the womb will ſlip out again the ſooner: which to prevent, uſe Aſtringents, that they may make the part rough, for the keeping in of the womb and its neck in its place, after put up, or when it is in danger to fall out, & that they may grow to the Parts adjacent, we uſe divers things, Aſtringents, Dryers, and glewing Medicines which make a perfect Cure, or things that only keep them up, and then the Cure is palliative and imperfect. They are inward and outward to the neck of the womb, when it is forth, or things conveighed into the Privities or Scents.

You may make tryal of things preſcribed for Ruptures, and Wounds.

Beſides which, this Pouder often taken is excellent. Take *the Roots of Mullein two drams, Leaves of Myrtles, Parſnip ſeeds, each one dram, Harts horn half a dram, Aſhes of Cray-fiſh or Crabs one ſcruple, red Coral two ſcruples*: make a Pouder.

Divers things are applied before, behind and below the womb while it is in, to dry it, and bind it, to the Parts adjacent, that it may not fall forth, and ſuch as ſtrengthen.

This is done by Fomentations about the Loyns for many daies. They are made by boyling theſe following in Forge-water and Wine, or Vinegar ſomtimes, Roots of Snakeweed, Tormentil, five leaved Graſs, the Budds of Oak, Pear-tree, and Sloes, Medlers, Brambles, Myrtles, Maſtick-tree, Ciſtus, Pine-tree, Cypreſs, Bayes, Shepheards-purſe, Vervain, Mullein, Yarrow, Blood-wort, Ivy, Solomons Seal, Rupture-wort, Wormwood, Centaury, Mugwort, Rue, Bettony, Lavender; alſo the Peels of Pomegranates, Acorn-cupps, Galls, Spunge Bedguar, or Lady-thiſtle, Cypreſs-nuts, Lentils, Peaſe, Myrtle-berries, Bay-berries, red Roſes, Pomegranate-flowers, Lavender-flowers, Sage and Roſemary; alſo Moſs, or Lungwort, ad to the Decoction of all or of ſome of theſe, Allum, or Salt, or Vitriol, Bole or Plaiſter of Paris, or Filings of Iron.

Alſo Natural Spaw-waters of Vitriol, Allum, Salt, or ſuch as petrefie or turn to Stone, and when they are boyled, leave much Chalk upon the Veſſel, being drunk for a month together, or more, are very good. For though they ſeem to moiſten, yet are they potentially drying, and by reaſon of Sweating, they conſume the Humors, and by the Effect we perceive that they dry and aſtringe by the wrinkling and Roughneſs of skin which followeth.

Oyntments or Plaiſters to be applied to the Womb about

bout the Privities and Loyns, are as follow. Take *Roots of Snakeweed two drams, Roots of Cypreſs, Rupture-wort, and Moſs, each half a dram; red Roſes and Pomegranate flowers, each half a dram; Galls, or Pomegranate peels, or Acorn-cupps two drams, Cypreſs-nuts, Dates ſtones, or Myrobalans burnt, each one dram; Myrtle ſeeds half a dram, Frankincenſe, or Maſtick, Acacia, or Juyce of Sloes, each one dram; Spiknard half a dram, red Coral one dram:* make fine Pouder, *and with Oyl of Myrtles, or Maſtick, and the third part of Oyl of Bayes, Turpentine, and Wax,* make an Oyntment, or with Roſin, Pitch and Colophony, make an Emplaſter.

Another Oyntment which is mentioned to anoint the Privities, to prevent Abortion. Take *Oyl of Roſes &c.* and the two Oyntments that follow made of pouders, are alſo good.

The uſual Oyntments and Plaiſters for other Fluxes of the Mother, are alſo good againſt the Falling out of the womb. As that of the Counteſs, the Emplaſter of Maſtick, and againſt Ruptures and the like.

Alſo Cataplaſmes made of the remainder of the Decoction, beaten with the Oyls mentioned.

Dioſcorides commends Nettles applied, being green and bruiſed.

You may fill Baggs with the remainders of the Fomentations, and apply them.

Great Cupping-glaſſes or three or four little ones to the Belly under the Navel, often applied, will help to hold up the Mother.

Some things are applied outwardly to the womb and the neck thereof, which after they are put up, will aſtringe and wrinkle the part from whence the womb fell, and keep it from falling out again, which are of a drying and glutinating Quality.

We may uſe Fomentations made of things mentioned, and Roots of Comfrey, Daffodil, and other things mentioned for healing of Wounds: as Frankincenſe, Maſtick, or other Gums.

When we will bind more, and there is no hope otherwaies, by reaſon of the Continuance of the Diſeaſe, we muſt foment the part with a Spunge dip'd in red Vinegar, Lye, Salt or Allum-water.

Or apply a Clout dipt in water of Nuts, or of Pine-apples.

You muſt ſprinkle pouders after you have anointed the parts with Mucilage of Comfrey, or the Infuſion of Gum Traganth, or Glew that is made of boyled Bran, which muſt have no Roughneſs, leaſt they lying under the womb hurt it after it is put up, and they muſt be more glutinous then Aſtringent, as this. Take *of Frankincenſe or Maſtick one dram and an half, of Sarcocol ſteep'd in Milk one dram, Gum Arabick, Juyce of Sloes, each half a dram;* pouder them.

You may uſe this pouder with the Mucilages aforeſaid, or of Quince ſeeds, or with Oyl of St. Johns-wort, or the like, that conſolidate or glew things divided, mentioned in Wounds.

Theſe following are put in, and injected into the womb, which hinder Falling of it out, by aſtringing, and drying and ſtraitning the paſſages.

As Peſſaries long and thick, ſo faſtned that they may be worn when they walk.

They are made of the Oyntment mentioned, with pitch, into a hard plaſter, in ſuch a form as may fil the womb, with other Gums diſſolved in Vinegar, as Galbanum, Bdellium, Sarcocol; alſo Opopanax half an ounce. To which they add ſtinking things to make the womb fly up, as Aſſa fœtida, which is not neceſſary, becauſe it will diſtaſte the woman, and diſcover her Diſeaſe by its Scent.

Thoſe Emplaſters which cure the Rimme of the Belly by increaſing fleſh, as we ſhewed, may do well here in this ſolution of the Continuity of the ſmall Fibres or Veins.

You may make other Peſſaries of pouders in the aforeſaid Oyntments, if they be firſt mixed with the white of an Egg, the Infuſion of Gum Traganth or Mucilage of Comfrey or of Quinces, and put into a bag.

And if theſe Peſſaries be troubleſom, you may make others as big as your finger for the night only, of the ſame things.

Or you may wet wool in Vinegar, and the white of an Egg, and ſprinkle the pouders thereon, and put it in.

Another Peſſary preſcribed for the Whites, begins thus. Take *Galls or Acorn-cupps, &c.* is good here.

Some commend an Eg that a Hen hath ſitten upon ſome daies, beaten and put up with wool.

There is a way among women to keep the womb from falling out, by carrying a round Ball therein, which muſt be ſo big that it fills the Privities, and not be put in by great force. It muſt be ſmooth, ſlippery and light, that it may not hurt the tender parts with its roughneſs or weight; and hard, that it may better hold up the womb, and dry, that it may take in no Moiſture, leaſt it fall out again. It is made thus of Cork, or Beets, by glewing two pieces together, if one be not big enough; brought into a ball, or a bottom of thread, and let it lye in melted wax, till it be covered over therewith. Which ſhe muſt thruſt up with a ſtring faſtned thereto to take it out; and let her wear it day and night, and not take it out but when ſhe is to uſe a Man. This though it be a little troubleſom, yet it is better then to have the womb fall out.

This trick have I ſhewed to many women in a miſerable Condition, which hath cured them, among whom one which a long time before had not known her Husband, conceived with the ball in her womb, which ſhe voided when ſhe was delivered of a Boy, with her Secundine or after-birth.

You may uſe Injections with a Syringe for the ſame, made of the Decoction mentioned for a Fomentation, and this is beſt.

There is a ſtrong Injection made of few things. Take *Galls three ounces, Moſs two ounces, Comfrey roots one ounce, Vine aſhes two drams:* boyl them in Forge-water, and the third part of red Wine, for an Injection.

There are alſo Fumes for the ſame, made of the ſame Decoction, for a Fomentation hot, which is very piercing and good.

As thoſe of Comfrey roots, Snakeweed, Cabbage ſtalks, Box topps.

The Fumes of Frankincenſe, Maſtick, Amber, Labdanum, Bitumen, Pitch, Colophony, with ſtinking things, are ſtronger, as Galbanum, Caſtor, and that abhominably ſtinking Divels Dung, with other aſtringent Pouders, or they may be made into Troches with Roſin.

Orpiment is very drying, but in regard the ſmoak thereof is hurtful, you may better uſe Varniſh.

That Fume which is preſcribed for the Whites that begins thus. Take *Maſtick two drams, Frankincenſe &c.* is good here.

Experience teacheth, that the Smoak of dryed Cow dung is very good.

And the Hoof of a Mule burnt doth the ſame miracles, with the Smoak in this caſe.

Many things mentioned to ſtop the Terms outwardly or inwardly, are good here to aſtring; but it is better to forbear, them leaſt they ſtop the Courſes, except the time be paſt.

They ſuppoſe that the womb follows ſweet things, and flies from ſtinkes, and therefore they apply the ſweets to the Noſe, and the ſtinkes to the Privities.

Somthing vomiting will fetch it up, but it is too forcible, and ſo is neeſing, and rather preſſeth down the Entrals.

The womb is kept up by lying down, and while the woman is ſo, it remains in its place.

Alſo Conception keeps the womb from falling out, and while ſhe is with Child it cannot fall down, becauſe it grows larger with the Child, and cannot fall out till after Child-birth, it grows little again.

The Cure of the falling out of the fundament.

The Fundament by ſtraining, and the ſtraight Gut may be turned out, and ſomtimes it will return again with eaſe, but if this be at every ſtool, and the Patient weak and the Muſcles relaxed, it is hard to be cured, and not at all, if it be torn from the Membranes, to which it was faſtned. For the Cure firſt begins at the Cauſe, and then look at the Diſeaſe which is the falling out of the Part.

To avoid the Cauſe, if ſtraining at ſtool, be it, keep the Body looſe with Clyſters, and Medicines and good Diet. If it come from hard travail, or from cutting of the Stone it will be gone when they are over. Then you muſt have a care to put up the part, and keep it in by divers means

The Fundament is put up, by the Hand of the Patient, or of the Surgeon, preſſing with his fingers, or with a clout for that purpoſe. And if it be ſwollen or inflamed, which hindereth its going up, you muſt firſt cure them. As we ſhewed in the Falling out of the womb, when it is ſwollen.

We keep in the Fundament that it fall not out again by divers Remedies, either ſuch as aſtringe and ſtop the Paſſages, or that unite the ſeparated parts, or by things which amend the temper of the Fundament when it is too cold or weak, or looſe and relaxed, by which means it cannot keep up. And this is done by things given inward, or applied outward to the Fundament or injected into it.

If it come from Solution of Continuity, you may give ſomthings preſcribed in the Falling out of the womb to conſolidate or heal, but abſtain from ſtrong Aſtringents, leaſt you make the Belly more hard, and cauſe greater ſtraining, which will force it forth. But if the Fundament come forth by looſneſs through the Falling down of an humor, you muſt uſe things that purge and alter which are mentioned in the Palſie.

The ſame things that are preſcribed by way of Fomentation and Pouders, for the falling out of the womb, may be uſed for the falling out of Fundament and ſtraight Gut, and they will do the ſame by holding up and fixing the Part.

You may alſo uſe other pouders, ſuch as were uſed to the womb in form of a Peſſary, as a Suppoſitory, here anointing before; As we ſhewed, leaſt they ſhould by their ſharpneſs get forth again.

Or this pouder. Take *Galls two drams, Pomegranate-flowers one dram and an half, Maſtick, Frankincenſe, each one dram; Amber, Sanguis Draconis, each half a dram; burnt Harts horn, and Antimony, each one dram*: make a fine pouder.

You may add Bitumen, Pitch, and Cockle ſhells, ſalt-fiſh, Dogs dung, and Hogs briſles, and the like burnt.

Or take ſome of the pouders, mentioned in the Oyntment for the Falling down of the womb, or anoint the fundament when it is forth, with that Oyntment.

Fume or Smoak is beſt, becauſe the thick and moiſt things will not be ſo well retained, as that preſcribed for the Falling out of the womb, eſpecially that of the Decoction of Mullein, with Vinegar, or that of Vinegar from a hot piece of a Mil-ſtone.

Alſo the Fume of Gums and Roſins, there mentioned, leaving out the ſtinking Gums, as Devils dung, and Caſtor, adding Bdellium, Juyce of Sloes, and other Aſtringents, and Spices, and Galangal, Cypreſs, Cloves, Mace, Nutmeg, Roſes, and Flowers of Mullein.

You muſt foment the part and the Loyns, with aſtringent and healing Decoctions, if the Connexion be divided, and if there be weakneſs or coldneſs in the Muſcles, with things that cheriſh the Natural heat, and ſtrengthen the Nerves.

Theſe are made of the Decoction of aſtringent Plants, and ſuch as heal, mentioned in the Falling out of the womb. boyled as there, with warm things, and proper for the Nerves, as Groundpine, Sage, Primroſe, Wormwood, Horehound, Bettony, Penny-royal, Chamomil, Roſemary, and Lavender flowers.

Spaw-waters mentioned for the falling out of the womb, are here good alſo.

When the Fundament comes forth in Children from Cold, it is good to ſet them upon a piece of green warm Oak, which is aſtringent and good for men alſo.

The Oyntments and Plaiſters there alſo mentioned, are good here for the Loyns and Fundament, to which if the Nerves and Muſcles be weak, you may add hot Oyls, as of Pepper-wort, Bayes, Spike, Foxes, Caſtor; alſo pouder of Pepper-wort, Galangal, Cypreſs, and other ſpices, and among other Plaiſters, Oxycroceum and Ceroneum.

You may alſo make Cataplaſmes of the remainder of the Decoction mentioned, or thus. Take *Rupture-wort, dry Moſs, each half an ounce; Galls one ounce, Orobus, and Lupines, or red Peaſe poudered two ounces, Roots of Sowbread half an ounce, Groundpine two drams, Dung of a Goat, Pidgeons, or Swallow, or Lizards one ounce, with Oyl of Myrtles, or Juyce of other proper Herbs* make a Pultis.

Dioſcorides ſaith that the Cramp-fiſh applied is good.

You may alſo apply Baggs, as in the falling out of the womb, or other hard Pillows to preſs the Fundament up, when they are ſitten upon or tyed hard thereto.

The Cure of the hanging out of the Tongue.

The hanging out of the Tongue is commonly from ſome deadly wound, and if it be cured, it is by preventing worſe accidents.

The Cure of the hanging out of Stones.

If the Codd be cut, and the Stones hang out, it is eaſily cured, by putting them up, and keeping them ſo, without ſowing or ſtitching.

The Cure of the Eye falling out.

The Eye falls not out but by ſome violence uſed to it or the Head, and becauſe death commonly follows, we meddle not with it; and if the Party liveth, it cannot be rightly reſtored without wrinkling and blindneſs, by the Aſtringents that are to be applied, to faſten the Eye in its place.

CHAP. III.

Of Efflation or Sending forth of Wind.

The Kinds,

WE call that Efflation by which not only wind is ſent forth from whence the word is derived, but when breath or air is ſent forth, the Efflation of breath by the Mouth and Noſe is Expiration, but the Efflation of wind by the mouth is called belching, and by the fundament farting, theſe are preternatural, when they are depraved or ſtopped, or vitiated or corrupted, or when they break forth by an unuſual way.

Preternatural Efflation or ſending forth of wind

The Expiration or Breathing is depraved when it is interrupted, or too violent, or too long, or with a ſtrange noiſe, or with other Excretion, not only of Air but, Matter, in a ſhort breath, Sighing, Yawning, Hickets, Neeſing, Cough, Blowing the Noſe, Spitting, Hawking, Vomiting: as we ſhewed in Reſpiration depraved.

To this is Snorting referred, when the noiſe is ſo troubleſom, that others cannot ſleep for it. This is alſo in ſome Diſeaſes when men are awake, as the Apoplexy, Fallingſickneſs, and difficulty of breathing; as we ſhewed in thoſe Diſeaſes.

Belching and Farting.

When wind is ſenth fort by the mouth in Belching, or by the Fundament in Farting by reaſon of its ſtrange ſound and ſtink, it ſomtimes is depraved, and that rather when they may

may be reſtrained, hence are theſe ſounds more indecent then others in depraved Reſpiration mentioned, though they make a noiſe, as in the Cough and Snorting, becauſe theſe cannot be reſtrained.

Rumbling and noiſe in the guts

To theſe preternatural Sounds may be added thoſe winds that preſently come not forth, but rumble firſt in the Belly, under both ſides, but eſpecially the left, and if they ſound like water, they are called *Fluctuations*, if they rumble, *Murmura*, and if they croak, *Rugitus*; ſomtimes there is a noiſe like Froggs or the like, and ſome imagine them to be really there. Theſe noiſes are uſually in Virgins and others, and are ſigns of Diſeaſes in the Stomach and Guts. Alſo there is ſomtimes a noiſe about the Navel, with a Swelling that moveth; this is uſual in ſound people, before ſtools or farting, and in the Colick: as we ſhewed.

The other ſtrange Noiſes, as in the Belly of them that have the Dropſie, wheeſing in the Breaſt, beating of the heart, which may be heard as well as felt. The divers noiſes in the Ears, becauſe they break not forth of the Body with wind, do not belong to the Efflations or Sendings forth of wind, but to other Diſeaſes where they ſhew themſelves, and where they are deſcribed.

The Breathing is faulty when it ſtinketh.

A ſtinking Breath.

As when the Breath ſmells of Excrements or of dead fiſh, or rotten Cheeſe or the like, mentioned in a ſtinking Breath. This is troubleſom, and better known to the ſtanders by then the Patient, and it is moſt when he is faſting, and ſomtimes it is conſtant; ſomtimes after eating of divers Meats, or Drunkenneſs, ſtaying but a while; ſometimes it is the Symptom of Diſeaſes, or fore-runner, when without any other manifeſt Cauſe, they are ſaid to begin to be ſick from the Scent, which the Germans call *Stecheſen*.

Stink of the Noſe,

The Breath that comes forth at the Noſe, when it ſtinks cauſeth the Diſeaſe called the Stink of the Noſe, which is intollerable to the Standers by, and makes them that are troubled therewith to be ſhunned.

The ſtink of a belch or fart

There is in belching a ſending forth of wind that is corrupted, like the ſmell of roaſted fleſh, and ſomtimes ſtinking. And in breaking of wind downwards, by which the Stink of the Excrements comes forth, there is ſent and moſt often ſtink.

An evil ſcent from a wound.

Somtimes Breath comes out at an unuſual Paſſage, not by the noſe and mouth, but through a Wound in the Breaſt or Neck. This may be felt or perceived by a burning Candle held to the wound.

Somtimes wind comes forth of a wound in the Stomach or Belly not at a diſtance, as breath, but together ſuddenly.

The Cauſes.

The Cauſe of all preternatural Efflation, which is the depraved Sending forth of Breath or Wind, is the diſorderly breaking of them forth, or the Corruption of the ſame.

An inconvenient Breathing, is the cauſe of preternatural Efflation.

How from the diſorderly breaking forth of Air or Breath, through the rough Artery into the Mouth and Noſe, Expiration is depraved, and there is a Noiſe, was declared in the Cauſes of depraved Breathing.

Snorting is cauſed by air drawn in, and ſent out at the Noſe.

Alſo Snorting comes from the forcing out of Air drawn in at the Noſe, eſpecially in thoſe that have Apes-noſes, and the Paſſages of the Noſtrils ſtraighter, or when the Bridge is fallen by other means, or when ſome part is ſtopped with Snot, then the ſound being broken cauſeth that called Snorting, eſpecially in ſleeping, when the Mouth is ſhut, and the Air drawn in at the Noſe, or if the Party lyeth upon his Back, for then the flegm falls eaſier down, and ſticks there; which cauſeth a Snorting in ſome Diſeaſes, when it comes to the Noſe, and ſtops there, as in an Apoplexy, falling-ſickneſs &c. This Symptom is conſtant with them, for the Cauſes mentioned in thoſe Diſeaſes.

Breath or wind breaking at a wound, is the cauſe of preternatural Efflation.

When there is a wound in the rough Artery or Breaſt, the Breath comes forth at an inconvenient place. Theſe wounds are made on purpoſe in the breaſt in an Empyema, in the rough Artery in Squinzie, or by chance, as was there declared.

And if the Stomach or Belly be wounded, wind will come forth, as when we cut for the Dropſie, or when a wound is there by chance.

When wind breakes from the ſtomach at the mouth it cauſeth belching.

From the Guts by the Fundament farting.

When it is included in the belly, it cauſeth Rumbling.

Belching comes from wind riſing up from the Stomach through the Gullet and Mouth, and when it goes downwards through the Guts to the Fundament, it cauſeth farting, making the greater noiſe by how much they are more forced. And if theſe be ſhut up in the belly, they run through the Cavities, and cauſe a Rumbling in the belly, eſpecially about the left ſide, if they be in the belly, or the Colon which lyeth under and is joyned to it. For theſe parts are chiefly on the left ſide (albeit ſome think it is from the Spleen which cannot be fill'd with wind) or if they be about the navel or other parts they wil cauſe noiſe, becauſe the Guts are thin about the Navel, we have ſhewed the Cauſe of theſe winds in divers Diſeaſes of the Stomach and Guts, among which the ſtrait lacing of Virgins to ſeem ſlender is one, for ſo the wind conſtrained cauſeth noiſe, and many times diſgrace.

Wind with an humor in the ſtomach and guts, is the Cauſe of Fluctuation.

Beſides theſe ſimple Winds, if there be another Humor therewith, there is then a Fluctuation, or ſound of water with the croaking, or if it be water alone, it will be only fluctation. And as this may be from divers Cauſes mentioned in Diſeaſes of the Stomach, ſo often from water-drinking and the like, when the Body is ſtirred, and the Belly preſſed.

A ſtinking Breath comes from the Infection of the ſame with things that have evil ſcent, as alſo that ſtinking of the Noſe and Mouth, and then Belchings and Farting will be very ſtinking, which comes from divers things taken and from Excrements.

The Infection of the breath by things chewed, is the cauſe of the ſtink thereof.

Some things taken that have an ill Scent, infect the breath, eſpecially if they ſtick in the Teeth, and in the Stomach, the the ſcent riſeth to the Mouth, as when you eat Garlick or rotten Cheeſe, and the like which, though not ſo bad is diſtaſtful to the Standers by, as belching from wine in drunkards, or from fat meats. Many other things not ill ſcented but by their Corruption, do infect the Breath: as fleſh in a hollow tooth, or between the teeth, if it continue long and corrupt and rot. Alſo fleſh corrupting in the ſtomach, may cauſe a ſtinking Breath, and other things that of themſelves are not ill ſcented, corrupt in the Stomach which is uſual, as Raddiſhes, and cauſe a ſtinking belching and breath.

The ſtink of the Excrements, is the cauſe of a ſtinking Wind and Breath.

Alſo ſtinking Excrements, being in the Stomach or Guts, ſent forth evil Scents, as when they are out. Excrements in the Guts are Naturally ſtinking, eſpecially being cholerick

or mixed with other evil Humors, and they ſtink not only when they come forth, but by Vapors which come from them, they diſcover their evil Scent.

Alſo a ſtinking Breath may come from the Excrements of the Belly, when the Stomach is too open, eſpecially the Pylorus or Orifice thereof, which opens into the Guts, and then the ſtink of the Excrements gets into the Stomach, and ſo into the Mouth, and infects the Breath. And this we take to be the chief cauſe of that ſtinking breath which ſmells like Excrements, which continueth ſo long, becauſe it comes from a fault in the Organ or Part called the *Pylorus* and Stomach which is ſcarce repaired.

This is occaſioned by long ſuſeiting, by which the ſtomach is ſo looſe, or ſo weak: as we ſhewed in the Weakneſs of the Stomach.

Some Excrements in the Stomach that ſtink and are bred there, or brought thither, do ſend their ſcent through the Gullet to the Mouth, or riſe up and infect the breath, as in many Diſeaſes, eſpecially when the Excrements putrifie about the Stomach in the Meſeraick Veins, there is ſtinking Breath going before, and accompanying them.

The Stink of the mouth is the Cauſe of a ſtinking breath

The Mouth is not ſtinking onely from things eaten, and putrefaction in the Teeth, but from the Spettle and the like, as in the French Pox, from the evil Humors ſent thither by the anointing with Quick-ſilver. Alſo Filth above the Teeth, cauſeth the ſame. The filth which grows in ulcers of the Mouth and Jawes, cauſeth alſo a ſtinking breath, yet Matter that is Natural will not ſtink, as in the Ulcers of the Lungs, there is little ſtink in reſpect of the matter, till it rot.

The Stink in the noſe, is the Cauſe of the Stink of the Breath.

When Flegm, Filth or the like, is long contained in the fartheſt part of the Noſtrils, about the ſpungy bones and in the cavities of the upper Jawbones, they ſend a loathſom ſtinking Scent. And this is called the ſtink of the Noſtrils. And this may come from the ſlimyneſs of the Snot, mixed with divers Humors, and from the ſtraitneſs of the Paſſages, where the filth is gathered, and lodgeth, till it fall or be blown forth, and this ſtraitneſs is either Natural or Accidental, and then the Noſe is flat. The ſame comes from ulcers in the Noſtrils, and there is a ſtink from them according as they are corrupted: as we ſhewed in the Ulcers of the Noſe. They write that the ſame may be from Humors putrified within the Skull, about the Organs of Smelling, or in the Ventricles of the Brain, but this is not probable, for ſuch Putrefaction could not be in the Brain without greater accidents, and ſomtimes death.

The Cure.

The Cure of preternatural Efflation.

The Cure of preternatural Efflation which comes from breath depraved was ſhewed in depraved Breathing.

The Cure Snorting.

Nor can you cure that Snorting which is from the ſtraitneſs of the Noſtrils any way, but as you cure the ſtoppage of Breath by the ſtraitneſs of the Noſtrils: as we ſhewed there, as alſo how you ſhould purge the Noſe from Snot and Flegm. Notwithſtanding, if it come from the fault of the Inſtrument, when the noſe is flat or ſtrait, it can ſcarce be taken away, but it may be mended, if they ſleep not upon their back but ſide. In Horſes this ſnorting is cured by cutting the Noſtrils.

The Cure of belching and farting.

Belching and Farting though they are good and for eaſement, yet becauſe they are unſeemly, they are to be reſtrained, or to be let privately. But if they be ſo forcible, that they cannot be ſtayed without danger, you muſt hinder the increaſe of wind, and this will hinder the noiſe and rumbling of the Guts, by taking away Crudities, and by diſcuſſing of wind with inward and outward Medicines, ſuch as are preſcribed in the Weakneſs of the Stomach; to which they uſually apply things proper for the Spleen, in the Noſſe under the Ribbs, uſual to Virgins. And this is good not becauſe the wind cometh from the Spleen, or is contained there, but becauſe the vertue of the things outwardly applied to the left ſide doth reach the Spleen, and therefore in ſome meaſure ought to be proper for it; as when you mix Seeds, as Cummin and the like in baggs made to diſcuſs wind with Rue, Agnus Caſtus, Ceterach, and the like, and rub the Pouders with Vinegar, or when we add Oyls proper for the Spleen, to the Oyntments we uſe to expel wind.

The Cure of noiſe in the Guts.

The Cure of a ſtinking breath

If ſtinking Breath come from things eaten, as Garlick, or Raddiſhes which cauſeth belching, it will ſhortly be gone, and you may for that time keep a diſtance from Company, or if you muſt needs converſe, uſe ſome Perfumes to correct it. But if it come from unclean teeth, or from between, or in the Hollowneſs of them, or other filth in the Mouth, then you muſt pick the teeth, and cleanſe the mouth, and pull out rotten teeth.

If it come from the Stomach, that muſt be purged and amended, if from Diſeaſes, as the Pox, they muſt be cured, and then it will vaniſh. If from Looſneſs of the Stomach, when the ſtink comes from the Guts to the Mouth, it is almoſt an incurable Diſeaſe in the Organ. But the Stomach muſt be ſtrengthened and aſtringed, and in all theſe Cauſes, ſweet things muſt be held in the Mouth and chewed, and the mouth waſhed with them, and they muſt be gargled and ſwallowed to correct the Stink, as followeth.

If the Cauſe be in the Stomach, purge it with things proper to the ſtink of Excrements, and the moiſtneſs of the Stomach. Among which the Pills of Aloes are beſt, becauſe they cleanſe the Stomach, and reſiſt Putrefaction, or purging Wine, with Wormwood, which doth the ſame with Aloes, and is alſo ſweet. Alſo other Purges, mentioned in Weakneſs of the Stomach. Among which Rhubarb, and Myrobalans are the chief and beſt Purgers; but you muſt mix many ſweet-ſented therewith, to correct the ſtink, as well Plants as Spices, and therefore the Aloephangina-pills made of Spices, taken often are good. And we add to the purging Wine, Angelica, and the like that are well ſcented.

The Alteratives that are given to ſtrengthen the Stomach, muſt hinder the producing of Excrements: and this is by good Diet, which is little and drying. Let him be temperate in eating of fleſh, becauſe it eaſily putrefies, and let it be well ſpiced, and with Vinegar, ſour Juyces of Sorrel, Citrons, Lemmons, Oranges; as alſo his other Meat. Let his Bread be made with Caraway and Fennel-ſeed. Let him after Meat eat Quinces, Pears, and other Aſtringents. when the Stomach is looſe eſpecially; Alſo let him eat Aniſe-ſeed, Fennel, and Coriander, Comfits, and other Pouders to be uſed after meat. In the morning faſting let him take the Pouders, Lozenges, Electuaries, Confections, and Conſerves, which are good in a moiſt and looſe Stomach, mentioned in the Weakneſs of the ſtomach, chooſing thoſe that are moſt ſweet-ſcented, as Aromaticum Roſatum, Diamoſchum, Diambra, and the like. Tryphera magna is commended to make Men well coloured, and of ſweet Breathes: And they ſay that Maſtick often taken, doth amend this Infirmity.

You muſt hold ſweet things in the mouth, and chew, and ſomtimes ſwallow them, as theſe following.

Of Simples, Angelica-root is moſt ſweet-ſented but bitter; alſo Maſter-wort, Zedoary, Nutmegs and Cloves, are good.

Muſk and Ambergreeſe for rich people, are excellent, with Sugar, made into Lozenges, with the Infuſion of Gum Traganth, made in Roſe or Orange-flower-water, or the

the like, and held in the mouth, to diſſolve and give a good Scent. To theſe they add Wood-Aloes, Sanders, Angelica-roots, which are good for a weak Stomach. Alſo a little Benzoin.

Beſides theſe, many ſweet-ſented things may be chewed, as Orris, and Acorus roots, Cypreſs, Elicampane, Orange peels, Citron peels, Roſes, Bayes, Marjoram, Smallage or Parſley chewed, taketh away the ſtink of Garlick and the like, and conceals that which is from the mouth. Alſo Dill, and Aniſe, and Sowthiſtle, *Dioſcorides* commends Myrrh, and Maſtick. *Mathiolus* commends Gold held in the mouth.

Of Compounds, Wine is good to waſh the Mouth, or to be drunk, in which the Roots and Seeds of Angelica, Marjoram, Sage, Coriander ſeeds, and other ſweet Herbs and Spices were ſteeped.

Vinegar of Roſes, Currance, Raſ-berries, Straw-berries, is very good, mixed with other things for to waſh, or held in the mouth or ſwallowed, doth preſently take away the ſtink of things eaten.

Let him conſtantly waſh his mouth with ſweet red wine, Vinegar, Salt, and Allum.

The Decoction of green Myrtle leaves in Wine, is good to waſh the mouth, and the Decoction of Citrons, and the like.

Another is made of the Decoction of Cypreſs roots, Citron peels, Roſes, Sanders, Cloves, Cinnamon.

There are divers ſweet ſtilled Waters, as of Roſes, Muſk, or Cloves, and other Spices, Salt, Orange-flower-water. Alſo Aqua vitæ, with the Infuſion of Cinnamon and Spices.

The diſtilled Oyls of Cinnamon, or other ſweet things, are very good, either mixed or alone, if the leaſt drop be held in the mouth.

If the teeth be foul, rub them with ſweet aſtringent things, and ſuch as reſiſt Putrefaction.

As, Take *Orris roots two drams, Angelica half a dram, Sanders, Wood-Aloes, Savine, or Juniper one dram, with a little Muſk, and two drams of Salt Alkali.* Some add Cuttle-bone, Harts horn, burnt Allum, when the teeth are foul, as ſhall be there declared.

℞ Or mix a little Muſk with Salt, or Harts horn, &c.

The Cure of the ſtink of the Noſtrils.

If the ſtink of the Noſtrils come from an Ulcer, when that is cured it vaniſheth, of which we ſpake in the Ulcers of the Noſtrils. But if it come from an Organical Diſeaſe of the Inſtrument or Noſe, when it is too ſtrait, it is almoſt incurable, except you prevent the Falling of the Excrements from the Brain to the part.

But if it come from filth which either from its plenty or malignity is eaſily corrupted, being retained and ſtopped, then you muſt go thus to work.

Firſt we purge the Head and Body of the Humors that abound, with Medicines mentioned in the Excrementitious Diſeaſes of the Head.

Then ſnuff up things into the Noſe, or anoint the Noſtrils with Oyntments which cleanſe and provoke Nature to expel the filth, and leave a ſweet Scent in the Noſe. For which uſe we have mentioned divers Errhines or Purgers of the Head by the Noſe, the Phlegmatick Diſeaſes of the Brain, with which you may mix theſe ſweet-ſcented things following.

The Juyce of Flower-de-luce anointed or ſnuffed up, is ſweet and very good.

Or thus. Take *the Juyce of Flower-de-luce one ounce and an half, of Marjoram one ounce, of rich Spaniſh Wine half an ounce:* mix them, and add Juyce of Beets to force more.

Or when there is great putrefaction, add to that the *Juyce of Centaury and Wormwood, each one ounce; Vinegar of Roſes, or Squills half an ounce, Myrrh one dram.*

The Juyce of Bayes, and Myrtles, and other ſweet plants may be added.

Somtimes theſe are boyled thick, that they may ſtick the better. Thus,

Take *of the aforeſaid Compoſition one ounce and an half,* ad *Labdanum, Storax, each half a dram; with Honey, or the infuſion of Gum Traganth made in ſweet Water:* make a Liniment.

We uſe ſuch things to be ſnuffed, or poured into the Noſe to cauſe a ſweet Scent, as Spaniſh Wine in which Baſil, Marjoram, Calamints, Bayes, Lavender-flowers, Cinnamon, and Cloves have been infuſed.

Or the ſtilled Waters of Orange flowers, Roſes, or Lemmons, or of thoſe Plants which were ſteeped in wine.

Or other waters of Plants ſeeds, and Spices, that ſmell ſweet, which with Muſk or Ambergreeſe will be more pleaſant.

Alſo there are ſweet Oyntments of Muſk and Ambergreeſe diſſolved in Oyl of Been or the like, which take not away the Scent of the other Compoſitions if they be added. Civet is to be uſed alone.

The ſtilled Oyls of Cinnamon, Cloves, Marjoram, and the like, mixed with white Wax, and put into the Noſtrils do ſmell ſtrongly, and laſt long.

The Cure of breath from a Wound.

If a wound be in the rough Artery, which ſendeth forth Air, Breath or Scent, it is deadly for the moſt part, becauſe that part cannot eaſily be cured. But if the wound be in the breaſt and the internal part hurt, it is the like for the moſt part, although as I ſhewed in the Diſeaſes of the Lungs, I ſaw one eſcaped that had a wound in his Lungs. The other wounds of the Breaſt without hurt of the internal parts muſt be cured as ordinary wounds.

When wind comes from a wound, that ſhews the Stomach and Bowels to be hurt, and it is incurable. I know other wounds in the Guts that have been cured.

CHAP. IIII.

Of the Voiding of Seed.

The Kinds,

A Spermatick Excretion or Voiding of Seed in men, is the Effuſion of it by the Yard, in Women it uſeth to be Naturally into the cavity of the womb; and it is preternatural, when it is too much o- floweth ſooner then it ought, and the more when it is foul, or paſſeth by an improper way.

Too great Effuſion of Seed weakneth very much, and makes the Body faint, and unfit for its Offices, and diſcoloureth it, and haſtneth Age and Death; and it comes either by Venery or without.

Too much Venery.

When there is too great Effuſion of Seed by Venereal Acts, Men through Intemperancy and Luxury deſtroy themſelves, and Women that before were ſtrong, grow weak, and men by that means are unfit for Procreation, and women for Conception: ſo that as it may be obſerved in men only, they ſend forth in Copulation only a drop or too: or it is not concocted but crude and bloody, and rather Blood then Seed.

The Voiding of imperfect and crude Seed.

If Seed fall out without a Venereal Act againſt the will it is called a *Gonorrhæa* or Running of the Reins; and if it be with pleaſure, becauſe it often comes in the ſleep and Dreams, it is called a Nocturnal Pollution. And if it be often, becauſe it weakneth as a Venereal Act, it is preternatural: and it doth more weaken, if it be without pleaſure night and day, and crude and watery for Continuance.

A venemous Gonorrhæa or Running of the Reins.

Somtimes there is an involuntary Effuſion of venemous Seed without ſenſe of delight, which is not like Natural Seed, but is like a cer-

tain white and yellow Venom, after which follows matter at the Yard, and heat of Urin: as we shall shew, and this is called a virulent Gonorrhæa, which is commonly a symptom of the French Pox, as we shewed, sometimes it is without it, in some especially unclean Strumpets with which she infecteth them that trade with her, with the Pox or a Disease like it.

The Voiding of Seed in a convulsion.

Hitherto you may refer the involuntary Effusion of Seed in the Falling-sickness and Convulsion, and although it do no hurt, yet it is preternatural.

The voiding of Seed at another Passage.

We shewed, that Seed might flow preternaturally by another Passage, namely by some Original Passage, or Fistula under the Yard of a Man, either from a defect in Conception, or which may cause the same Defect.

The too quick Effusion of Seed.

It is also preternatural, if the married people do not at the same time spend their seed, especially when it is at the beginning of Copulation, or before by the way, because this causeth a defect in the Venereal Act, so that it either is not, or diminished and imperfect.

Hither may also be referred that Effusion of Seed, when only a little froth is voided with vehement desire, without sense of satisfaction in pleasure, by which though they are not weakned, yet it hinders the perfection of the Art. Some say that matter flowing from the Brain may be sent forth of the Yard, but it seems improbable, because there is no plain passage into this common way for the Seed and Urin.

The Causes.

The Cause of the mentioned preternatural Fluxes of Seed, is either from Irritation, or provoking or Weakness, or Anastomosis, or from a Disease by Consent.

The Irritation or provoking of the Seed-vessels, is the Cause of too much Venery and of a Gonorrhæa.

Too much or too quick Effusion of seed, or involuntary in both Sexes, comes from the Irritation of the seed-vessels, which pricks the expulsive Faculty. If the vessels swell from plenty of seed, because it passeth with delight, causing many to be too much given to Venery; it is the cause of too great Effusion, and of the weakness that followeth, except it be from Heat of Lechery, to shew themselves powerful at Venereal Game, or for gain sake, as Harlots do. And the same is done by Irritation, if there be more heat or sharpness then is fit: as we shewed in the Causes of Lechery.

Also the same Seed by pricking, (through the Imagination only of the Act, which is usual in dreams, and the like thoughts) being moved and sent forth, causeth Pollutions sleeping and waking.

Also this comes from the heat of Seed, so that it is sooner ejected in the Action then it ought; or some part comes forth before the Act.

And also that it comes forth with Heat and Burning.

But if there be great sharpness in the Seed from Infection or Corruption, then follows the virulent Gonorrhæa, or venemous Running of the Reins, comming commonly from the French Pox. And this may come before they have the Pox from some other Venom which was gotten by Infection of other seed in Copulation, and so turned corrupt and sharp, by which means, not only this foul and involuntary Excretion comes by the sharpness, but also in continuance of time an ulcer and pissing of matter.

The weakness of the Seed-vessels is the Cause of a Gonorrhæa.

The involuntary Flux of Seed in the Gonorrhæa, comes from the weakness of the Spermatick Vessels: when the seed is watery, and not concocted to the likeness of milk; for then being thin it easily comes from its place without sense or with very little, and without any Cause, or with the least pricking not only in the Yard, but Fundament, when the stools are very hard, or as *Fernelius* speaks of one, when a Clyster is given. And this weakness comes from distemper, especially cold, or want of Natural Heat in the Parts, or the whol Body which makes the Seed so watery. For it is not likely that the Waterishness of the Seed should come from Flegm, because it is made of blood, which though it be crude and watery, yet the stones and breasts do alwayes take the purest blood to make seed and milk, in foul Bodies full of Excrements, as appears by men of evil Habit of Body getting Children, and women that nourish their Children, by giving suck when their Blood is impure.

Also Weakness comming from the looseness of the seed-vessels, produceth sometimes a Gonorrhæa, when the places containing the seed in their windings, and the Vessels that carry it, are too large and loose, so that it may easily fall out. This looseness comes from often Venery in a short time, sometimes sooner, sometimes later to luxurious People, by which the baggs of seed being often emptied and filled, and from the loss of spirits, are so loose and weak that the seed is thin and watery.

The Anastomosis or opening of the mouths of the Seed-vessels, is the Cause of imperfect and bloody Seed.

By the opening the mouths of the Seed-vessels which make it of Blood, there comes bloody seed or blood instead thereof in Copulation, when by the often Action, in a short time, the Vessels that contain the seed are so empty, that they draw blood or imperfect seed from the mouths of the seed-vessels opened by this sucking. And this sucking comes from the Lechery, or Heat of the Womb (as is said of African Women) as it happned to a Soldier a while since, that lying forcibly with a Countrey-wench, was so brought down, that after often Lechery he voided bloody seed, and by that means fell into a Consumption that caused his death.

The shaking of the Seed-vessels in a Convulsion, is the Cause of loss of Seed.

There is also an involuntary Effusion of Seed from a Disease in other parts, when the Seed-vessels suffer by consent, as the Nerves in a Convulsion, in which through the forcible shaking which moveth the whol Body, the Spermatick vessels being shaken, do cast out seed somtimes, especially when it abounds, even as by the same violence, through the pressing of the Muscles, of the Belly, the Bladder being pressed, sends forth the Urin. And this is rather the Cause of loss of seed in Convulsions, then the Convulsion of the Muscles of the Seed, although they also suffer. For though in the Act of Venery, they help the Effusion by gentle opening the Vessels, yet they do it not before the seed be out of its bag, and is carried by them, wherefore in Convulsions they do not help the Effusion, but the disorderly motion drives it from its place. Neither doth the Loosning of these Muscles in an Apoplexy cause the flux of seed as it doth of Urin, because these Muscles are made for Retention, and not as the Sphincter.

The Cure.

The Cure of the Gonorrhæa.

If the involuntary flux of seed in both sexes, be by Nocturnal Pollution from plenty of seed, it is not regarded, because it never comes but when it aboundeth, and hurts not much, and is cured either by Marriage, or if not, by abstaining from things that increase it, and provoke it forth. But if the Gonorrhæa come from hot and sharp seed, that must be tempered. And if from weakness of the Vessels it be made too watery, it flow too easily, or cannot be contained by reason of the looseness of the Vessels by too much Venery, because it weakneth the Vessels must be strengthned, and the seed thickned; all which may be done by the follow-

following Remedies applied to the Cauſes of the Gonorrhæa.

Somtimes we purge, if the ſeed grow to ſharpe and watery from colerick and watery Blood, to cleanſe it, ſo that it may afford good matter to make ſeed. And with ſuch things as are fit for the Humor abounding, theſe are ſo ordinary, they need not be mentioned here.

Things that alter are given to ſtay this Flux according to the diverſity of the Cauſe. And if it be from plenty of ſeed, we diminiſh it with Dryers, and that by a proper quality deſtroy it or conſume it; if from heat and ſharpneſs, we allay them with cool and gentle Remedies. If it be too thin and watery, we thicken it; if the Veſſels that contain it are weak or looſe, we ſtrengthen them with aſtringent, hot and proper things. All which are partly done with the Remedies mentioned in Sælacity or Laſciviouſneſs, eſpecially if the Gonorrhæa come from plenty or heat of ſeed, which cauſeth Lechery, and partly with theſe following, which are fit for the Gonorrhæa that comes from any Cauſe.

A drying Pouder that bindeth and worketh by Propriety. Take *Roots of Orris, Agnus Caſtus ſeeds and Coriander prepared, each one ounce; Seeds of Plantane, Roſes, Rue, Winter-cherries, Mints, each half a dram; Amber and red Coral, each one dram; Frankincenſe, Maſtick half a dram*: make a fine Pouder, give *one dram by it ſelf, or with Sugar of Roſes, or ſome convenient Liquor.*

When you will dry and aſtringe more, you may ad theſe following to the former, as Myrtle ſeeds, Bay-berries, Sumach, Yarrow, Agnus Caſtus, Rue, Roſes, and Ceterach, Acorns, Pomegranate flowers, the Pouder of the Guts and Gizards of Hens, Bulls, or Dears pizles, Hair of an Hare burnt, Ivory, Bole, Blood-ſtone, Cryſtal.

For to allay the heat and ſharpneſs of the ſeed. Take *the four great cold Seeds two drams, the four leſs cold Seeds, eſpecially of Purſlain, Lettice or Sorrel, each one dram; of Water-lilly roots or flowers and Roſes, each one dram and an half; of Gum Arabick or Traganth parched, one dram*: make a Pouder, to which you may add the third or fourth part of the Pouder aforeſaid. Some add Camphire to cool, or becauſe it quencheth the ſeed by a ſecret Quality.

A Decoction extinguiſhing the heat and ſharpneſs, and ſtaying the Flux.

Take *of Orris and Water-lilly roots, each one ounce; the Leaves green or dry of Agnus Caſtus, Coriander, Ceterach, Tarrow, Sumach, Plantane and Lettice, each one handful; Mints, and Rue, each half a handful, Roſes and Water-lillies, each one pugil, of the four great cold Seeds half an ounce, of the four leſs two drams, Plantane and Purſlain ſeed, each one dram; Myrtles two drams, Winter cherries half a dram*: boyl them *in Water and red Wine, and in three pints of the ſtrained Liquor, diſſolve two ounces of Syrup of Quinces, and with Sugar boyl it to halfes.* Let him drink it often.

The Syrups of Purſlain, Plantane, and others made of the Juyces and Decoctions, of the aforeſaid Plants, or of ſharp things, as Citrons, Pomegranates or Myrtles, is alſo good.

Alſo the Juyces of thoſe Plants, and the diſtilled Waters of the ſame.

Alſo Conſerves and Candies alone, or with the Pouders or Syrups aforeſaid.

Sheeps Milk or ſtilled Milk often drunk, temper the ſharpneſs of the ſeed. Alſo an Emulſion of the cold ſeeds, of Almonds, and of white Poppy ſeeds, and others mentioned in heat of Urin.

We ſomtimes uſe Clyſters in this cauſe, as Topicks to the part, becauſe their ſtrength will reach from the Guts to the ſeed-veſſels, they are made according to the Cauſe, of a cooling Decoction, if heat be the cauſe, with dryers and aſtringents, mentioned in the Decoction, and others, as Oak leaves, Cypreſs, Pomegranate flowers, and the like, boyl them in Water, red Wine, or a little Vinegar.

Some uſe drying Injections of Tutty, and the like into the Yard.

Alſo Baths, Fomentations, Oyntments which repreſs Lechery, may be here uſed. Alſo a Fomentation of the Codds, made of the Roots of Dogs-tongue; or of a Decoction of the Herbs mentioned for Decoctions and Pouders.

For ſtrengthning of the Veſſels that contain and carry the Seed, when they are weakned or looſned, when the Gonorrhæa is old, or ſubject thereto. The Natural hot Baths that bind, are good for ſome time continued. Or other artificial Baths, of the vertue, to which you may add hot things to cheriſh the Native Heat, as Roſemary, Marjoram, Lavender, and the like.

Alſo if Heat be the Cauſe, you may uſe Oyntments to cool, dry and aſtringe, ſuch as work by propriety to the Reins or Codds.

Among which this is excellent. Take *Oyl of Myrtles, Maſtick, Quinces, each three ounces; Oyl of Orris two ounces, Juyce of Plantane, Purſlain, Lettice, Mints and Vinegar, each one ounce and an half*; boyl them till the Juyce be conſumed, add *Cypreſs roots, or Galls, Orris roots, Agnus Caſtus ſeeds, each one dram; Juyce of Sloes two drams, Spikenard one ſcruple, with Wax*, make an Oyntment.

The Oyl of Camphire is commended to the Codds, and Seam or Seate.

A thin leaden Plate applied at night to the Back, as it will reſtrain Lechery, ſo will it cure the Gonorrhæa.

A Pillow ſtuffed with Wool, with Agnus Caſtus, and Rue, laid under the back is alſo good.

Opening of a Vein is good, if it come from plenty of ſeed, eſpecially where there is Plethory, to take away the cauſe of ſeed.

Let them be dieted as in ſalacity or Lechery mentioned: and uſe much Vinegar, for it wonderfully allayes the heat and ſharpneſs of meat and ſeed. And if the ſeed be too thin, let them eat groſs meats, as Lentils, parched Beans, with Vinegar; alſo Pine-nuts, Almonds, Rice; alſo Turtle and Parſnips.

The Cure of a virulent or venemous Gonorrhæa or Running of the Reins.

A virulent Gonorrhæa is not to be cured, and ſtopped as another, becauſe it comes from corrupt ſeed, which will hurt if retained, by ulcerating the parts, but you muſt provide that better may follow that which Nature ſends forth. And this is compleatly done by curing the Fench Pox, if it be joyned therewith. But if it come after the Pox, which leaves an Ulcer in the Yard which ſends forth this matter, then you muſt cure it as a mattery Excretion, as was ſhewed there.

Alſo if this malignant Gonorrhæa come from another impure Copulation, becauſe it turns to matter, it muſt be cured as this.

The Cure of Seed flowing forth in Convulſions.

Other involuntary Excretions of ſeed in Epilepſies and Convulſions, becauſe they do no hurt, and neither the Patient, nor they about him obſerve it is not regarded.

The Cure of too much Venery.

Too much Venery which cauſeth Faintneſs, requires no other Cure but abſtinence from immoderate uſe thereof. And for that end I have in Salacity mentioned Medicines to quench the Heat. And let the Body after be reſtored by nouriſhing and refreſhing Diet: as we ſhewed in the involuntary Excretion of Seed.

The Cure of too quick Effuſion of Seed.

When ſeed is ſpent ſooner then it ought, in the beginning or preparation to Venery, by which means the act is imperfect and unprofitable for Conception, becauſe it is too hot and moiſt; you muſt take thoſe things mentioned in the Gonorrhæa from Heat and Moiſture, and this will be cured with more eaſe then that, which is involuntary, if it be corrected, and the Diet continued.

CHAP. V.

Of Voiding of Blood

The Kinds,

THat Excretion of Blood which is according to Nature in Womens Courſes, and at the Noſe, or Hæmorrhoids turneth preternatural, if it flow by places not ordained for the ſame; or if the blood offend in quantity or quality: as we ſhall ſhew. But if blood be ſpet out, vomited, piſſed, or void by ſtool, with other Humors mixed, the Cure ſhall be mentioned in thoſe Excretions.

Bleeding of the Eyes. If blood come forth at the Eyes though little, which is very ſeldom, it is preternatural.

Bleeding at the Ears. Or if the Ears ſend forth blood or matter with blood. I ſaw one that uſed to bleed at the Noſe, who had a great beating pain of his Head with redneſs of Face, and bled both at Noſe and Ears very plentifully.

Bleeding at the Noſe. The Noſe often bleeds, and it is called the *Hæmorrhagia*. And becauſe it is uſual and Natural with ſome; it is not counted preternatural, till it is immoderate, and the Patient faint or die, as it hapneth to ſome both ſound and ſick. And in ſome Diſeaſe of the Noſe, blood flows forth with ſnot.

Bleeding at the Yard. Pure Blood ſeldom flows from a Mans Yard without Piſſing, and then it is preternatural, and painful. Somtimes Blood inſtead of Seed is voided in Copulation: which as I ſhewed, is rather imperfect ſeed.

Voiding of blood by the paſſages of urin. In Women there is a preternatural Flux of blood from the paſſage of the urin, without piſſing with great pain, when the ſtone is taken out of the Bladder.

The immoderate Flux of the Terms. The Natural Flux of the Terms is preternatural, if it be not at the night time, or be longer, or in great quantity; or after they have been long ſtopped; or when women have been thought with Child, by reaſon of the greatneſs of their bellies, through that ſtoppage, and then have them ſuddenly, and in great quantity with great weakneſs and hazard of life. But

In old Women there is a Flux of blood from the womb different from the Terms. that Flux is preternatural and different from the Flux of the Terms, if when the Terms are paſt, and the Woman is old, it come without order, ſometimes more, ſomtimes leſs, remaining long, which we call not the Courſes, but an Hæmorhagy of the womb.

Faintneſs, Palneſs and evil Habit followeth theſe preternatural Purgations of blood from the womb, either pure or mixed. And after a long ſtoppage, if there come ſuddenlya great Flux, it weakneth and ſomtimes kills. I obſerved in three Women which were paſt their Courſes, this Hæmorrhagy or Bleeding of the womb, in one it laſted above two years, in the other a long time, and in one of them with ſuch great pain of the womb, almoſt continuing a whol year, not yeelding to any Medicines, it continued till death.

Bleeding after Child-birth. Somtimes the Flux after Child-birth is ſo great that the woman is much weakned thereby. And this is not only after a Natural birth, but after Abortion with great Danger.

Bleeding in the time of deflowring and Copulation. There is another Flux of Blood from the womb at the firſt Copulation of the woman, when ſhe looſeth her Virginity, ſuch as when ſhe hath her Terms, and this becauſe it is counted the ſign of Virginity, and therefore ought to follow, is not counted preternatural or hurtful.

Alſo this bleeding in Copulation, is afterward and with great pain.

The immoderate Flux of the Hæmorrhoids. There is another Flux at the Fundament, beſides that of a Dyſentery, Needing, or Liver-flux, which is common in both ſexes, called *Hæmorroids*, as any other flux of blood may be called. Which albeit it is uſual and profitable to ſome Tempers and Conſtitutions, eſpecially of Men, and ſomtimes of Women, when old eſpecially, comming not in order like the Courſes, but once, twice, or thrice in a year: yet is it preternatural, when it is immoderate, and flows too long, or returns too often, and cauſeth Faintneſs, Weakneſs, Paleneſs, evil Habit and Dropſie, as we ſhewed in other Fluxes of blood.

In this Flux, the Blood is ſeparated from the other Excrements being almoſt pure, and not ſo black as blood that flows from other parts. And if it be diſcoloured or impure, it will be rather very red or yellow, then otherwiſe.

When this Flux comes in a Diſeaſe, and doth not good, as when it comes in order, curing the Diſeaſe, but hurt by its violence, making the Body weak, it is preternatural.

Alſo that which comes not Naturally, but by a violent Cauſe, as ſhall be ſhewed, and therefore is unprofitable, eſpecially when painful, and hurt followeth, is preternatural

Another bleeding at the Fundament different from the Hæmorrhoids. Beſides this Flux of the Hæmorrhoids, there are other preternatural from the Fundament. As that which is of little blood appearing, comming from a violent Cauſe, with Itching and Pain.

Hither may be referred that bleeding in women, when the Terms come not only from the womb, but Fundament. This is ſeldom, but ſomtimes it hath ulcerated the Parts.

The drops of blood from the Pores of the Skin. It can ſcarce be without a Miracle as in our Savior, that Blood ſhould ſweat through the Pores of the skin. But we ſaw once in a Child that had a Dropſie moſt of his Pores bloody, as if his Body had been ſprinkled with blood, and yet the blood did not flow or foul the Linnen.

Bleeding by wounds or Orifices. Blood uſually flows from the body, not naturally by its orifices and wounds great or ſmall, either made for bleeding by Art or by Chance: as we ſhall ſhew here, and as was declared in Wounds, and the like Diviſions of the Skin and Diſeaſes.

Blood flows but little from the skin, when that is only divided without other hurt.

When a Vein is opened, it leaps out abundantly, and this will weaken the ſtrength, if immoderate: As alſo when there is no need, and when it is done raſhly, and from an evil Cuſtom, by which means many have grown weak and old before their time.

In the opening of an Artery, the Blood being hot, leaps by ſtarts, and if it continue, it brings weakneſs and worſe accidents. As it hapned in the opening of an Aneuriſm, there was a total loſs of blood and ſtrength which cauſeth Death.

We have ſeen in the Feet a Vein open of it ſelf, as in Phlebotomy, and it hath flowed in great quantity into the Shoes be for Notice hath been taken thereof. And we have ſeen the ſame in the crooked Veins of the Thighs. And ſome ſay that it hath been ſo in the Face, Arms, Breaſt and under the Ribbs; from whence, if it ſhould come at night, and not be diſcovered, it would be as dangerous, as bleeding over much from opening of a Vein by Art. This is rare in Men, but uſual in Horſes, when they are very hot, but it doth no harm.

When I was at School, I ſaw my School-fellow that ſat

next me, bleed at the ſmall Vein, in the tip of his Noſe very much and often, and it opened of it ſelf, and this came from the heat of his Body by violent Exerciſe.

Somtimes the Blood flows more or leſs from the Habit of the Body in Wounds and Amputations, and it is ſo great ſomtimes, that it cauſeth great weakneſs, except it be ſtopped.

Somtimes Blood flows from the internal Cavities of the Belly, Breaſt, Head &c. In wounds there, or falls into the Cavities. And if this be immoderate, it weakneth, and if it be contained in the Cavities, it grows together and putrifies, and brings greater Symptoms then thoſe that come from a Wound.

The Cauſes.

The Cauſes of all theſe Kinds of Bleeding from divers Parts of the Body, is either from the Solution of Continuity, by opening of the Mouths of the Veins, or the ſolution of Continuity from the Hurt done to ſome Veins or parts underneath.

The opening of the mouths of the Veins or Anaſtomoſis in the Ears, noſe, neck of the womb, ſtrait gut or skin is the Cauſe of bleeding in thoſe Parts.

Some comes from the opening of the Mouths of the veins according to their diverſity.

The inward Veins of the Ears opened by Anaſtomoſis, ſomtimes bleed much; and this comes from the plenty or the thinneſs of the blood in the head but ſeldom, for then Nature would rather ſend it forth by the Veins of the Noſe, except it flow both wayes: as we ſhewed.

The inward Veins of the Noſe that come from the jugular Vein, that aſcendeth by the Jawes to the Brain, being opened by Anaſtomoſis, cauſe an Hæmorrhagy. The Cauſe of this Anaſtomoſis is the plenty of blood, which Nature deſires to diſcharge, by theſe tender Veins in that place of the Noſe, which are more eaſily opened, in Men who have no eaſier Paſſage for it. For that Evacuation which they have by the Hæmorrhoids, which is ſeldom, and but in ſome, is onely of that blood which is in the branches of the Gate-vein. But in Women, if they be ſo full of blood, that it cannot be ſufficiently diſcharged by the menſtrual Veins of the womb, or when the Terms are ſtopped, Nature doth often ſend it forth by the Noſe. And this Hæmorrhagy though it be not uſual, yet it is Natural, except it be immoderate. Alſo when Blood is too hot, it opens the Veins of the Noſe, either when it is ſo hot by Nature, or by Motion, Sunning or Baths. Or if it be inflamed in hot Diſeaſes of the Head or Feavers, it breaks forth at the firſt, or in the heighth of the Diſeaſe by Criſis or judicially. Alſo thin blood and more watery, and mixed with Choller, which ſooner pierceth the Mouths of the Veſſels, cauſeth bleeding at the Noſe. Hence in evil Habit, Dropſies, and Jaundies, although blood abound not, this bleeding may be. But if more Cauſes agree, the Flux will be the greater. And this is oftner and greater, if the Veins be looſe by Nature or often purging. Alſo it flows and is increaſed by force, as violent and often blowing of the Noſe, which opens the Veins by force of the blood thither.

If the Veins in the Neck of the Womb, that come from the hollow Vein, be opened by Anaſtomoſis, there is great Effuſion of blood. For as when theſe open at their ſet time, they cauſe the Natural Flux of the Terms, ſo when they open at other times, they cauſe a preternatural Flux which is immoderate, or the like which is unſeaſonable, but like to the Courſes which we mentioned before. When the Mouths of the Veins are open by plenty of blood ſent thither, in a Plethory, and they bleed ſooner and oftner, which is unſeaſonable, or when they bleed at the appointed time, but immoderately: Or when the blood there, by its Heat and Thinneſs, opens the Mouths of the Veſſels, and cauſeth an immoderate Flux: Or when Nature diſcharging her ſelf by this way of Superfluities, with the Blood at the time of the Courſes, or otherwiſe cauſeth this unuſual and large Flux: In which the Blood is ſometimes watery, and ſomtimes impure. But this Flux is greateſt, when much blood either pure or impure, is in the Veins of the Womb, from the long ſtoppage of the terms, and ſuddenly breaks forth, and ſo enlargeth the Mouths of the Veins by its violence, that blood is not only out of the womb, but other great Veſſels which ſupply, and the Body left as it were without blood.

And as this is in the Veins of the Neck of the Womb, ſo it is in thoſe of the bottom thereof, in Women that have had their Courſes long ſtopped, which ſwells their bellies: as we ſhewed in Tumors, and when they open ſuddenly they cauſe a dangerous Flux.

Somtimes there is a Flux of Blood from violence, when the Mouths of the Veins of the Neck of the Womb are only opened without Solution of Continuity. And this is often at the firſt Copulation, not by reaſon of the skin called *Hymen*, being broken (as they ſuppoſe) becauſe a Membrane hath no blood, and if it came from thence, it ſhould be torn away. But which is more probable, it is from that ſudden and ſtrong enlarging and dilating of the Orifice of the womb, or from the Rubbing of the Neck of the Womb, which it hath not felt before, that the menſtrual Veins are a little opened, and ſend forth blood like the Courſes, or at leaſt ſome Sprinklings.

Alſo there may be a Flux of Blood at the womb, from Medicines that open the Veins thereof, eſpecially if they be ſtrong, or things put into the womb, as Peſſaries, &c.

And, there may be an immoderate Flux after Childbirth, from the Cauſes that the Terms over-flow: and as it is Natural, to have the Veſſels open and bleed, ſo it is preternatural when the quantity is too great, or the blood too thin.

As the Hæmorroids come Naturally from the opening of thoſe Veins which come from the branches of the Gate-vein, yet they flow not ſo as the Terms, (by which it is neceſſary that that blood in women that are fit to conceive, which is laid up for the nouriſhing of a Child, ſhould be avoided every month till they do conceive) but onely then, when the blood in the Meſeraicks aboundeth, or is hot and chollerick (as we ſhewed in the Cauſes of intermitting Feavers that Choler is chiefly increaſed) and aboundeth there, not carried into the hollow Vein, or purged by the Gall, and therefore is ſent forth by the Fundament which is near, and which is ordained for other Evacuations alſo. So when theſe Veins are too open, or too long cloſed, Nature, being provoked by the plenty of blood, or the Heat thereof, or by Choler, which may cauſe great Diſeaſes, endeavors to make an immoderate Flux, and the rather, when the Veins are ſo open, that they cannot cloſe themſelves. From which Cauſe I ſhewed you that two very Learned Men who lived a ſedentary Life, and procured the Hæmorroids by Art, were brought to ſuch a violent Flux, which could not be ſtopped, but cauſed their Death.

But if Nature being moved, neither by Repletion or Impurity of blood, but by other Cauſes, doth ſend forth good Blood from the Meſeraicks without Neceſſity; this Flux will be preternatural, neither uſual nor profitable.

By the opening of the Veins of the skin, blood cannot flow through it or the Pores, nor by the Rarefaction or Diapedeſis of the skin, can blood ſtrain through the like Sweat, becauſe it is thither, and the Pores very little, except the skin be divided, but if it be under the skin with the Sweat there it ſtayes, and cauſeth the Hypochyma or Suffuſion of Blood, which I ſpake of. And although as I ſhewed in the Boy with the Dropſie, it was ſprinkled about the body, yet it paſt not through the skin, but ſtuck in the Pores, and this is very rare.

There

The dividing of the veins in the Eyes, ears, Yard, Womb, Fundament, Skin, is the cauſe of Bleeding.

There are many Fluxes of blood that come from the Solution of Continuity in divers parts, which differ in that Reſpect.

If the Tunicles of the Eye be rubbed when they itch, or divided, the Veins may be hurt, and they may bleed though but a little.

Alſo they may bleed from the hurting of the horny Tunicle; For I obſerved in a Boy that had a piece of ſharp Glaſs in the Pupilla of his Eye which I drew forth, that the blood was diſcuſſed without any hurt.

If the inward Veins of the Ears be hurt by things thruſt into them, a little blood may come forth; or more from a Fall or Stroak, when the Veins are broken.

If the inward Veins of the Noſe be hurt, they bleed. This is done by the Nails when they are pricked ſometimes, or with other things, by which Men willingly cauſe Bleeding; as when they provoke Sneeſing it may happen. The ſame comes from a blow or ſtroak upon the Noſe, or a ſharp Humor in the Noſtrils. In the Gravedo, that is, when a raw Humor falls into the Noſe, the blood wil flow, eſpecially when it is much blown. As alſo from the rubbing off of a Scab therein.

If the Catheter or Inſtrument thruſt into the Yard, do hurt the ſame, there is a flux of blood alone, or with piſs. And this may come alſo from a ſtone that paſſeth through the ſame.

Alſo the Veins of the Neck of the Womb being hurt cauſe bleeding: as in hard travail, after the drawing away of the Secondine, which teareth the Veſſels. Or by the Child, which paſſing through a narrow place teares the ſame. Or from the Abortion, when the Veſſels of the Child growing to thoſe of the womb, will not ſo well be ſeparated, as when the Child is ripe, but are violently broken.

Or there is a Flux from violent Copulation at the firſt or afterwards.

There often follows a Flux of Blood, from the uſing of a widening Inſtrument to the Neck of the Bladder, when they take out the Stone.

Alſo from the hurt of the ſtrait Gut; the Veins thereof are of two ſorts, if the internal Veins be hurt, which come from the Meſeraicks; there is a Flux of Hæmorrhoids, but it doth no good: But if the inward Veins of the Fundament that come from the hollow Vein, there is but a ſmall Flux.

This comes often from things voided, as hard Excrements, or from ſharp things eaten, or ſharp Suppoſitories, or from difficult Travail, which hurts the Fundament by ſtraining.

Or from a hollow Ulcer, going from the Neck of the Womb to the ſtrait Gut, the Terms may paſs through the Fundament. For without a wound it cannot be ſo, becauſe Nature cannot make her way, where there is no Continuity of Veins, with the Menſtrual which come from the hollow Vein and the Hæmorrhoidal which come from the Gate-vein.

The Cauſe of all Bleeding in the outward Parts, is Solution of Continuity from internal or external Cauſes: and they are divers in reſpect of the Parts.

If the skin be flea'd off by ſcratching, when it itcheth or the like, there may be a little bleeding.

There will no great Flux come from a wound, only in the skin, when you cut it for the crooked Veins curing, or for Tumors, it bleeds but little, till the Veins be opened.

Opening of a Vein cauſeth Bleeding.

If any great Vein be opened under the skin, there is bleeding, eſpecially if it be cut, as in Phlebotomy, which ſo much uſed to prevent and cure Diſeaſes, in which there will be a great Flux, except it be ſtopped: Or when any great Vein, as the Jugular is cut. And ſomtimes when the crooked Veins are cut. And it hapneth that when the skin is cut for other Cauſes, for Ruptures, or preternatural Tumors that the Veins are cut and bleed; or by a Wound by chance.

When the mouth of a vein opens of it ſelf, it cauſeth a Flux.

Sometimes the Veins open of themſelves, and bleed as if they were cut. This is cauſed by Plethory, or Fulneſs, or by Heat, which may open the mouths of the Veins, but ſeldom break them, except the Vein be very much ſtretched, as in the crooked veins. Or when Nature hath been uſed to be often diſcharged at one part, and ſeeks to get out by the ſame, which is the eaſier done, when the skin is thin, and the veins larger from the often opening.

The cutting of an Artery, the cauſe of bleeding.

When an Artery is opened by Art or otherwiſe there is a great loſs of Arterial Blood. Alſo there may be a ſtrong and long Flux of Blood from an Artery pricked or torn under the Teeth: If the Gums be onely hurt, the bleeding is little. And if you open an Aneuriſm that is let out the Blood that came from the Cutting of an Artery to lodg under the skin, there follows a dangerous Flux of Blood.

A wound in the Parts is a Cauſe of Bleeding.

If many Parts be wounded, the bleedings are divers. Some wounds are made to cure Diſeaſes, as Impoſthumes, Tumors, the Stone in the Bladder, Ruptures: Others are by accident. In which if one or more of the great Veins or an Artery be cut, the bleeding is greater. And becauſe Nature hath placed thoſe great Veins, that they may be ſafer under the Muſcle of the Arms and Thighs, the bleeding is greater. And as in great Veſſels, ſo if the ſmall Veins only are hurt, or if the fleſhy Parts be only wounded, the Flux is leſs. And in great wounds of great veins, if the blood fall into the internal Cavities, as of the Belly or Breaſt, there will be no great flux at the wound. When ſuch wounds are made by art, not only the blood but matter, which you deſire may be let out therewith.

The greateſt Fluxes are from the Cutting off of Members, which muſt be done when they are uncurable or putrified; or when an Arm or Leg is cut off firſt, and then the bone ſawed aſunder; or when the finger is cut about the fleſh, and then the bone nipped off with a pair of Forceps; or when any Parts that ſtick out and want bones, are cut off as the Noſe, Ears, Lips: or wounded by chance.

The Cure.

When Bleeding comes from the Anaſtomoſis or opening of the Mouths of the Veſſels becauſe it is great, that is firſt to be treated of, becauſe we did not explain the Cure thereof in other Diſeaſes.

The Cure of bleeding at the Ears.

When the Ears bleed from Anaſtomoſis, becauſe it is ſeldom and from great plenty, it requires no particular Cure, if it be joyned with the bleeding at the Noſe, you muſt firſt look to that.

The Cure of bleeding at the Noſe.

If Bleeding at the Noſe do good, as when it takes away fulneſs, or foulneſs, and ſtayes a Diſeaſe, it muſt not be hindered, unleſs it be ſo often that the ſtrength fail. Otherwiſe when it doth hurt comming from Heat, Thinneſs, Force, or the like; if it be immoderate, it muſt ſooner be ſtopt: if it be little, or without Snot, it is to be regarded. And if it comes from an Ulcer, that is firſt to be cured.

The beſt Method to cure it, is to take away the Cauſe, when it comes often, eſpecially at the time that it flows not, if it come from Plethory, by diminiſhing the blood, and if it be hot or thin to temper it. But when the blood flows, you muſt endeavor to draw it from the Noſe, and to ſtop the Paſſages, and drive it back: which is done by theſe following.

You

You muſt open a Vein in the Arm, on that ſide that the Noſe bleeds, that that blood may follow from the Head into the place of that which is let out, and ſo be drawn from the Noſtril; you muſt not take much at a time, but ſtop the Vein, and then bleed a little more, and ſo by often ſtopping and bleeding, the blood will be turned, and the Patient not be weakned.

Scarification is like Blood-letting to attract, but is not ſo violent, becauſe it draws only at the ſmall Veins in the skin: This is beſt in the Shoulders and ſides of the Neck. Some commend it in parts more remote, as in the Wriſts.

Alſo you may draw blood from the Noſe by Horſleeches behind the Ears.

Cupping-glaſſes with a great flame, do derive the blood if often applied, behind the Ears and Shoulders: they are beſt to the Breaſts in Women. And if the right Noſtril bleeds, apply a great Cupping-glaſs under the right Ribs, and if the left under the left.

Ligatures made with Roulers, or the like to the Arms and Feet, do reſtrain the violence of the blood running to the Noſe, and draw it from the Head, if they be tyed till the Part be red or pained; and this is better in the Fingers and Toes where there is leſs danger, it is dangerous in the Codds.

Frictions alſo or violent Rubbings of the Parts do draw down the blood.

We purge, when the Blood is too watery or cholerick, becauſe cholerick blood pricks and provokes, and water makes it flow; and by cleanſing the blood in an old Hæmorrhagy or Bleeding, we have done very much.

We purge with gentle things, for hot and ſharp Medicines will inflame the blood after and weaken the Patient; and with things that bind, as Rhubarb, Myrobalans, Juyce and Syrup of Roſes, Senna, and the like, or with ſtronger things mentioned when there is much Choller or water.

We uſe things that alter which are cold and drying, or thicken the blood, or with ſome other Property ſtay the flux.

The Decoction of five leaved Graſs, Plantane, Shepheard-purſe, Solomons Seal, Myrtles, Comfrey, Horſetayl, Mouſear, Sanicle, Pyrola or Winter-green, and the like, mentioned in Wounds, with Lettice, Water-lillies, Sorrel, and Roſe-flowers.

You may make Syrups of the Decoctions of the ſame, mentioned in Spitting of Blood; and theſe of Sorrel, Lemmons, Pomegranates, Quinces, and Water-lillies.

The Juyces alſo are good of theſe and the Plants, mentioned in Spitting of Blood, uſed as there is taught: and with thoſe four Syrups and Juyces, as Pomegranate-wine and Vinegar, or uſed for Sauce.

Alſo the diſtilled waters of the ſame Plants, as of Sorrel, Water-lillies, and Roſes, as there mentioned.

And the Pouder of the Troches there mentioned againſt Spitting of Blood are good here, or of ſtronger things then may be given for Diſeaſes in the Breaſt. As, Take *Bole or ſealed Earth two drams, Blood-ſtone, red Coral, each one dram; of Bulls or Dears Horn burnt, half a dram, Pomegranate-flowers and Plantane ſeed, each one ſcruple*: make a Pouder.

The Conſerves are that of Roſes which is old, Violets, Water-lillies, Succory, Sorrel, and Comfrey-roots candied &c.

Electuaries are made of theſe Syrups, and Pouders and Conſerves, or that for Spitting Blood, that begins; Take *old Conſerve of Roſes, and Violets, &c.*

Potions are made of Syrups, Juyces, Waters and Pouders, or you may give thoſe mentioned in Spitting of Blood.

To allay the expulſive Faculty of Nature, you may give Narcoticks, which will be proper, as we ſhewed in ſpitting of blood, or Pills of Dogs-tongue, Syrup of Poppies, or the Pouder there mentioned: And other things mentioned in the Colick, chooſing thoſe which are cooleſt, and have leſs hot things, with which they that do correct Narcoticks do ill, becauſe they are hot.

You muſt put Aſtringents and Dryers into the Noſe, or things that bring a Cruſt by burning a little, or that ſtop by glewing theſe, or ſnuffed up, or put up with the finger like an Oyntment: or are put into a Spunge covered with a Clout, or blown up. They are made as followeth.

Some Plants onely a little bruiſed may be put up, as Plantane, Horſe-tayl, or the Root Shepheard-purſe, Yarrow, Willow-herb, and other Aſtringents: Alſo Leeks, Baſil, Nettles, Bettony, and Rue according to *Dioſcorides*.

Alſo the Juyces of theſe Plants.

This following Pouder is good to be blown up, or put up with the white of an Egg, and a little Vinegar, or with a Clout.

Take *Frankincenſe two parts, Aloes one part*, make a fine Pouder; Spiders webs, or Touchwood, or Hairs of an Hare may be added, but becauſe you cannot cut Hair ſo, but it will prick the Noſe, you may leave that out.

Another. Take *Galls one dram, Juyce of Sloes, Dragons blood, Mummy, each half a dram; Varniſh one ſcruple*: make a Pouder.

You may mix it with the former.

A third very ſtrong. Take *Bole, Plaiſter of Paris, each one dram; burnt Vitriol and Allum, each half a dram*: make a Pouder.

You may uſe the Pouder of Troches of Amber.

Aſſes Dung is commended both dry, and the Juyces with Vinegar, adding the Pouders or Juyces aforeſaid, and a little Hoggs Dung, which is as good as that of Aſſes.

The Aſhes of Paper, Raggs, Hares Hair, Cotton, Spunge, Egg-ſhells, burnt by themſelves, or with their Yolks; alſo of Snails and Froggs: alſo Soot is very good.

The Blood which flows if it be long ſtopped, till it clodder will ſtop the Veins. Alſo the ſame burnt with Egg-ſhells and their Yolks to pouder.

Spiders webbs alone, or mixed Mill duſt, and Touchwood poudered fine: Alſo the Down of Willow-flowers, and other Plants, and of white Poplar, and other Down that ſticks to Leaves, firſt ſteep'd in Vinegar and dryed, thruſt into the Noſe ſtop the veins, with the help of the congealed blood.

Alſo dip Clouts, or Cotton or Silk in Ink, ſuch as they write with, and dry them, and put them into the Noſe, or make them into Pouder.

And burnt Vitriol with Orpiment and Aſſes Dung, and the Juyces aforeſaid.

The ſmell of ſtrong Vinegar, with Camphire, is alſo good.

That Moſs which ſticks to old walls and tyles of houſes, that is moiſt and ſandy at the Roots, if you hold it to the Noſe, and ſnuff up the ſcent which is cold and moiſt, doth ſtop bleeding at the Noſe ſuddenly when all things fail.

Let him hold cold water in his Mouth, and renew it often when it grows warm.

There are things outwardly to be applied for ſtopping of blood at the Noſe, which work both by manifeſt and hidden Qualities.

They which do it manifeſtly are actually cold, or potentially cold, which allay the Heat of the Blood, and by thickning it, keep it from flowing, and ſtop the Paſſages by binding. Theſe are applied to the parts following.

To the ſides of the Neck by which the veins and Artetyes aſcending to the Head, paſs to the inward branches of the Noſe, to ſtop up the blood from flowing thither. And theſe do good applied to the Temples and Fore-head by cooling and thickning; they are made of the following Remedies.

Epithems are made of Water and Vinegar, a Clout being dipped therein, applying it very cold, with which you may alſo wet the Face.

You may add the Juyce of Plantane, and to make the Liquor ſtick better, the white of an Egg beaten or Mil duſt, and inſtead of common water, the diſtilled water of Plantane or Shepheards-purſe, and of other aſtringent Plants, and of Roſe-water: The Juyce of Nettles applied to

the Temples doth alſo ſtop Bleeding at the Noſe.

Other Applications that ſtick longer, are thus made. Take *Juyce of Plantane four ounces, red or Roſe-vinegar two ounces, the Juyce of four Grapes one ounce and an half, Bole ſix drams, Dragons blood half an ounce, Pomegranate-peels or flowers, two drams, Wheat flower or Starch, one dram, three Whites of Eggs beaten,* apply them with Cotton or a Clout.

Another. Take *Galls one ounce, Frankincenſe, or Maſtick and Varniſh, each half an ounce; Juyce of Sloes two drams, Blood-ſtone one dram*; mix them *with convenient Liquor, as Juyce of Plantane, Shepheards-purſe, Solomons Seal, Blood-wort, or other Aſtringents, or with Vinegar, and whites of Eggs, or the Infuſion of Gum Traganth.*

You may add to theſe other aſtringent Pouders, as of ſealed Earth, Fullers-earth, red Coral, burnt Ivory, Aſſes Dung, or Swines Dung, Roots of Snakeweed, Cypreſs-nuts, Myrtle-ſeeds.

We ſhewed in the Cure of Ophthalmy or Redneſs of the Eyes, Emplaſters that keep the Blood from flowing into them, and they are good here. As thoſe that are to be applied to the Fore-head and Temples. Alſo the common defenſative of Bole there mentioned, which is very good, if two of them be laid to the Jugulars on each ſide of the Neck.

Oyntments though they are weaker, may be uſed to theſe parts of aſtringent Oyls, as of Roſes, Omphacine, Myrtles, Maſtick, with the Juyces aforeſaid, and Vinegar, and the aſtringent Pouders.

Or that which is mentioned in Ophthalmy to be uſed after the defenſative.

Cataplaſmes of theſe aſtringent Herbs whoſe Juyce we commended, are good, applied to the places aforeſaid, to which you may add others mentioned.

Cold things applied to the Stones, becauſe they have many veſſels that carry blood, and have great conſent with the whol Body (as appears by the change of Conſtitutions in them that are gelt) do ſtop the bleeding at the Noſe.

If they be waſhed with a Clout or Spunge dipp'd in cold water or ſnow-water, becauſe it is leſs dangerous to the Stones then the Head, or with Vinegar, or the like mentioned.

They do the ſame applied to the Breaſts, becauſe there are alſo many veins.

Cooling of the Hands and Feet is alſo good, with Vinegar and Water, or wetting the wriſts where the Pulſes beat, or the Palmes of the Hands and Soales of the Feet therewith: Or hold Flints or Iron in the Hands, or the like, or apply Plates of Lead to the Feet.

The ſame do well under the Arm-pits, becauſe the veins meet there. Or,

Plung the whol Body in cold water except the Head, to cool the blood; this is good for ſtrong people in hot weather, but not for weak.

You muſt apply things that are potentially cold to the Liver to cool the Blood, eſpecially if the Liver be very hot.

As thoſe Epithems which are mentioned in the Cure of the Inflammation of the Liver, and of continual putrid Feavers; and the Oyntments there mentioned.

Theſe following Amulets are ſaid to cure the Bleeding at the Noſe by an occult Quality, if hang'd about the Neck, or held in the Hands, ſo that they touch not the naked fleſh.

Beads are thus uſed, made of precious Stones chiefly the Jaſper, the Cornalian or Coral. Theſe about the Neck cool the jugulars and ſoporal Arteries, and ſtanch blood.

The touching and wearing of ſome Plants is good, Perwincle, Shepheards-purſe, Snakeweed-roots, Moſs of a dead Man Skull, and of Box-tree.

They ſay the Carpe-ſtone held in the Mouth being cold ſtops bleeding at the Noſe; it is thought to be a ſquare Griſſe between the Head of the Carpe, and the firſt ſpondil partly Bone, partly Griſſe, and therefore it is found in the Palate. But there is another ſtone found in the brain of a Carpe near his Eye, like a half Moon harder then that is found in other Fiſhes as the Perch; Beads made of the Stones mentioned, cooled in water as they grow hot, held in the Mouth or applied. The Root of Perwinkle and of Dandelion held under the Tongue doth the ſame.

Nettles put nnder the Cap will ſtop bleeding at the Noſe, alſo if the Fore-head be anointed with the Juyce thereof.

Alſo Perwincle with Salt, or Niter or Vitriol beaten and applied to the Head or Fore-head.

Becauſe Imagination doth much, I ſhall tell you what ſome ſay, *viz.* That if you write with the Blood upon the Fore-head, *It is finiſhed*, it ſhall ſtop. I ſhall omit the other as ſuperſtitious and wicked.

The Diet muſt be as followeth, becauſe ſome things hurt, and others do good.

Let him be in cold Air rather then hot, not too light or near the Sun-ſhine, becauſe it tickleth the Noſe, and moves the expulſive Faculty to neeſing; as alſo ſtrong Scents; the vulgar think that beholding the Blood or red Colours doth alſo provoke bleeding; but this may be from Imagination.

Let his Meat be ſuch as keeps the blood from being thin, groſs and glutinating, of young Beaſts feet well boyled, and the like, green Cheeſe, but a little ſalted, Rice, Barley, and binding Fruits, as Quinces, Pears, and cooling Pot-herbs, Endive, Lettice, Purſlane boyled and crude in Sallets: Let him take heed of ſpices and ſalt.

Let him drink water and not wine, except the ſtrength fail. And though he cannot abſtain from wine, that is very ſubject to bleeding: let him beware of Drunkenneſs. And let his wine not be ſtrong, but red and mixed with water, and ſomwhat ſharp.

Reſt is good, for Motion will cauſe the flux to increaſe, therefore let the parts eſpecially near the Noſe be at reſt. Let him not ſpeak much or loud; and not chew violently any hard thing.

Let him ly with his Face upwards, his Head backwards, that the Blood may go back, and it will do good, provided the blood fall not into his Mouth, or deſcend farther which is worſe.

A ſudden Commotion or Paſſion of the Mind draws the blood in, and ſtops it. This you may do by a fright, if his ſtrength will bear it. Fainting and Swounding doth it better, and preſently ſtops Bleeding. But this we ſhal not adviſe to be forced becauſe of the Danger. But when it comes of it ſelf from an over bleeding, we have obſerved that it hath often ſtopped the blood.

The Cure of the over flowing of the Courſes and other Fluxes of the Womb.

Bleeding at the womb which is Natural to Women, if it be ſomwhat too violent, becauſe ſome Bodies require more, ſome leſs, if it cauſe no Diſtemper, is not raſhly to be ſtopped. But if you fear Diſeaſes as Dropſies, then you muſt ſtop in time. And as if the Terms flow more violently and oftner then uſual; Or when they have long been ſtopped with a ſwelling in the belly, they break out violently in great quantity, and with great weakneſs and danger of life. Or if the purging after Birth be too great, eſpecially after Abortion, which is no leſs dangerous. That Flux which women have in age when their Courſes have left them is preternatural, and cannot continue without harm, muſt be alſo ſtopped, and the rather if it be large, often, and of long Continuance. That bleeding which comes from external violence, eſpecially from Copulation, if it be at the loſs of Maiden-head, becauſe it is not much, and hurts not, and is a good ſign is not regarded, eſpecially if the Terms come the ſooner for it. But if it be great and from ſome great hurt, either at the firſt or other Copulations, it muſt be ſtopped.

That bleeding which comes from the tearing of the neck of the Bladder in a woman when a Stone is taken out, requires no other Cure but that of other wounds.

The

The Cure of all Bleedings at the Womb is by Evacuation of blood, and turning it from the womb, with things that make it more pure, thicker, and leſs flowing, and ſtop the places by which it is carried thither. Or that act by a hidden Property, you muſt proceed according to the cauſe with ſome of theſe, as conſidering whether it came by violent uſe of hot and ſharp Meats, the violent Motions of Body or Mind.

Blood-letting is good to prevent it in thoſe that are ſubject to it, if it be in the Arm, and in women with Child, if they formerly had the ſame in Child-birth, for it hath bin ſo often uſed to the ſame woman, being full of blood and hath not taken the Nouriſhment from the Child, as ſome ſuppoſe.

In the time of the Flux to drive it back, it is good to open a Vein in the Arm, or Hand or other place above, not below, for in the Foot it provokes the Terms. And you muſt take a little at a time and by degrees, for much will weaken.

Great Cupping-glaſſes, or many little ones are applied under the breaſts to draw up the blood, becauſe the Veins there, and of the womb conſent. And they may alſo be applied to the right ſide, and to the ſhoulders. Frictions of the extream parts, are here alſo good.

If water in the blood cauſeth it to be fluid, you muſt ſweat often in dry baths before the flux to prevent, but in the flux it will heat and move the Humors, and do more hurt then good.

If there be Water and Choler in the blood which cauſeth the flux, you muſt purge them away. But this is better to prevent before the flux comes from them; you may uſe the ſtronger Medicines, which you cannot well do in the flux, becauſe it would more weaken, and inflame the body, and by moving it, increaſe the Flux.

And then if the belly be bound, uſe gentle Lenitives, that leave an Aſtriction, as Rhubarb, Myrobalans, and the like, mentioned in Dyſenteries.

And this Potion. Take *Tamarinds and ſtoned Prunes, each ſix drams; yellow Myrobalans half an ounce:* boyl them *in Water and the third part Wine,* and when it is ſtrained, *infuſe half a dram of Rhubarb, of Spikenard one ſcruple,* ſtrain them, and add *Syrup of red Roſes dryed one ounce,* give it at once. It will work better with a little Senna, and not ſtir up Nature much, becauſe the Juyce being taken out by Decoction, is very like the Juyce of Rhubarb, and of Saffron Colour, by which we gather that it doth not differ in ſtrength: And becauſe it is uſed as Rhubarb in many diſeaſes from Choler.

Or this. Take *yellow Myrobalans poudered two drams, infuſe them in red Wine, with one ſcruple of Spike,* ſtrain them, add *Syrup of Roſes ſolutive one ounce, Rhubarb finely poudered two ſcruples, or a dram,* give it at one doſe.

Half an ounce of Tryphera Perſica taken doth the ſame, becauſe it hath many aſtringents, and things that allay the heat of the blood.

It is not ſafe to give other hot and ſharp Compoſitions which have Scammony, or Agarick, or Turbith, in a great flux, becauſe by pricking, they force the Terms.

We give things that alter which thicken the blood, and allay its heat, and bind the Paſſages, and ſtop it. Many whereof have been mentioned in the Bleeding at the Noſe, and Spitting blood which are good here, but theſe are chiefeſt that follow.

Let them eat things that breed thick blood, of Flower of Bread-corns, and Pot-herbs of glutinating fleſh, and green Cheeſe; to which they add ſour Milk, and Eggs, and the like, mentioned in immoderate Piſſing.

Let them uſe aſtringent Fruits crude or boyled, or divers Sauces made thereof, as Quinces, Pears, Services, Cornel-berries, Medlars, Mul-berries, Black-berries, Sloes, Straw-berries, Currance, Myrtles.

Of Pot-herbs, Purſlane, Lettice, Endive, Succory, Sorrel, Plantane; boyled in broath, or raw in Sallets: to which you may add other plants, mentioned in the Decoction which taſt leſs like Phyſick.

Let him drink Decoctions often, and if they muſt be kept, boyl them to Syrups.

The beſt ordinary Syrups are of Myrtles, and red Roſes dryed.

Or this Decoction. Take *Comfrey roots one ounce, Plantane with the Roots, Shepheards-purſe, Tarrow, each one handful; red Roſe flowers one pugil, Pomegranate flowers two drams, Myrtle and Plantane ſeeds, each one dram;* boyl them in Rain-water, add to the ſtraining, as much Sugar as will make a Potion for three doſes, or boyl it to a Syrup with Sugar.

Decoctions may be made of divers others, mentioned in Bleeding at the Noſe, as of Herbs for the vulnerary or wound-drink, of Winter-green, Agrimony, Horſe-tayl, Sanicle, wild Tanſey, Mouſear, Comfrey, Solomons-ſeal, Straw-berries, Bears-ear, Sumach, Shepherds rod, Lung-wort, Blood-wort, Burnet, Sorrel, Purſlane, Moon-wort, wild Baſil, Mints, Arſinart, Phœnice, Rock-Comfrey, flower, Leaves and Roots, Myrtle leaves, Maſtick leaves, Olive leaves, Oak leaves, Brambles; alſo Roots of Avens, Raſ-berries, Water-lillies, Sulphur-wort, Sanders, Braſil, Lote-tree, Olive-tree, Pomegranate-peels, Roſes, Grapes, The Indian Milium-flower gentle.

Some Juyces are given, either crude or boyled to a ſyrup, as thoſe of four Fruits, Quinces, Pomegranates, Currance, Bar-berries. Theſe Juyces with Sugar may be ſet in the Sun, and ſo they will have a taſt and ſcent like wine. Theſe Juyces are made into Lozenges with Sugar, and are very delicate, with Roſe and Plantane water and the like. And inſtead of theſe, you may uſe other four Juyces, as of Citrons &c.

You may likewiſe uſe the Juyce of ſome plants by themſelves or boyled, as of Plantane, Sorrel, Purſlane made into Syrups; and of Shepheards-purſe and Yarrow; and as *Dioſcorides* teacheth, the Juyce of Water-bettony, and Goats-beard, and Arſinart.

Waters ſimple or mixed, are of Plantane, red Roſes, Shepheards-purſe, Purſlane, Sorrel, and the like aboveſaid.

Some approve the water of Snails: and that wherein Iron is quenched.

Mucilaginous or ſlimy things alſo, as whites of Eggs, Mucilage of Quince-ſeeds, Gum Traganth &c.

The old Conſerve of Roſes, and Tablets of Pouder of red Roſes, with Sugar candied, or conſerved Comfrey-roots; alſo the Conſerve of Peach-flowers: or others of Sorrel, or of the Plants mentioned.

Theſe following Troches may be taken with ſugar of Roſes, or with wine and water, or in Electuaries, or Potions.

The troches of Amber, thus made. Take *Amber, Gum Arabick, Traganth, Maſtick, Frankincenſe, Lacca, Acacia, or Juyce of Sloes, burnt Harts horn, Coral, Pomegranate-flowers, black Poppy-ſeeds, Saffron and Mucilage of Fleabane.*

The troches of *Terra Lemnia.* Take *Terra Lemnia, Bole, Blood-ſtone, Coral, Pearl, burnt Horns horn, and Ivory, Amber, Gum Arabick, Traganth, Frankincenſe, Juyce of Sloes, Dragons blood, Roſes, Pomegranate-flowers, Seeds of Purſlane, Roſes, black Poppyes, Galls, burnt Starch, Plantane-water.*

The troches of burnt Ivory. Take *Spodium, or burnt Ivory, Gum Arabick, Seeds of Sorrel, Purſlane, Coriander, Grains of Sumach, Bar-berries, burnt Starch, the Juyce of Grapes.*

Inſtead of which you may make theſe pouders following, as this of Plants. Take *of the Leaves of Plantane or Agrimony, or Horſtayl, Myrtles, or Oak, Roſes, Pomegranate flowers, each one dram; Seeds of Plantane, Sorrel, or Docks, Purſlane, Coriander prepared, Cummin torrefied, each half a dram; Cypreſs-nuts, Galls, Myrtle-berries, Bar-berries, Sumach, Pomegranate and Grape Kernels, each one dram; Hazle-nuts, Cheſ-nuts or Acorns, each one ſcruple; red Sanders, Cypreſs-nuts, each half a dram; Spike half a ſcruple, Acacia, Gum Arabick, Frankincenſe, Maſtick, Dragons blood,*

each

each one ſcruple: make a pouder. Which with the Infuſion of *Gum Traganth in Roſe or Plantane-water*, make into Troches.

Another is thus made. Take *Amber, red Coral, Bole, or Terra Lemnia, each one dram and an half; Blood-ſtone half a dram, Pearl one ſcruple, burnt Harts horn, and Ivory, each one dram, Cuttle-bone half a dram, burnt Egg-ſhells one ſcruple:* make a pouder.

This is ſtronger. Take *Corke, Pomegranate peels, Dates, Roſes, Mary-thiſtle, Acorns, roaſted Cheſnuts, Berries of bloody Rod, Nut ſhells, burnt Date ſtones, Aſhes of Bee-nettle, dryed Mulberries, Services, Cornil-berries, Medlars, Lemmon Kernels, and of Sea bull-ruſhes, Water-lillies, Piony, Juniper-berries, Mummie, the Runnet of a Kid and Hare, Snakes skins, pretious Stones, Jaſper, and burnt Oyſter-ſhells*: Some add *the filings of Iron.*

There are divers Mixtures of the aforeſaid, as Juleps, Waters with Syrups, or Potions, Decoctions, Pouders, Electuaries, Conſerves, Syrups.

You may make pills of thoſe that are unpleaſant, that they may be the better taken, or of prepared Steel or Iron quenched in Vinegar, not in Aqua fortis, as Crocus Martis is made, though ſome ſay this makes women barren: Alſo of dryed Goats dung. To which you may add other things, and with Syrup convenient, make pills.

Some women ſay this is experienced, you muſt ſwollow nine turds of the greater ſort of Mice.

Alſo things mentioned for the Hæmorrhoids are good here, as pills of Bdellium, Micleta, Electuary of Myrtle-berries, or the Confection of Rhaſis, made of Filings of Iron.

Narcoticks ſtop the Terms as well as other Fluxes, and becauſe they provoke ſleep (which ſtops all fluxes but Sweating,) they are good. You muſt give thoſe Compoſitions that have Opium beſides the things that ſtop blood, as Troches of ſealed Earth, of Amber, with Opium, and Diacodium Galeni, Philonium Perſicum, and others that have Terra Samia, Lemnia, Bole, Coral, Starch, Juyce of Sloes, pomegranate flowers, Juyce of plantane, with Henbane ſeeds and Opium. There are other Narcoticks, as Syrup of poppies, the Decoction of poppy topps and the like, mentioned for the Colick, with things which ſtay fluxes, as Syrup of Myrtles, Bole, Acacia, it is good to give one ſcruple of Henbane ſeeds with ſome of the ſame, or as in the Spitting of Blood. Some give poppy ſeeds inſtead thereof.

Outwardly you may ſtop the blood with Oyntments and Applications to the Reins and privities.

Anoint them with Oyl of Roſes, Myrtles, Quinces, Maſtick.

Or Oyl wherein four and unripe Fruits have been boyled, as pears, Sloes, Medlars, Cornil, and Service-berries, or Juyce of plantane, Shepheards-purſe, Solomons-ſeal, Leaves of Brambles, Oaks, adding red Vinegar as much as Oyl.

Some think that Stupefactives to the womb are good, as Oyls that do take away ſenſe, as Narcoticks, and ſo they ſtop Fluxes, and not by cooling. Oyl of Henbane or the like, wherein Opium is diſſolved, or Barks of Mandraks, and the like.

Of Oyntments, that of the Counteſs is the beſt, made of theſe following boyled in Plantane-water, as inward rinds of Acorns, Cheſnuts, Beans, Celandine, Snakeweed, or Tormentil roots, Horſtayl, Capars, Sloes, Medlars, Acorn cupps, Galls, Myrtle-berries, Grape ſtones, with Galls, Aſhes of Ox bones, Troches of Amber, Oyl of Myrtles and Wax.

The uſual Oyntments are of Roſes, that cooleth the Reins. Such take away the Heat from the Blood which is ſent plentifully from the Emulgents to the Kidneys, and ſo ſtop the Flux.

Alſo the Plaiſter againſt the Rupture, applied before and behind to the Region of the Womb.

Or this Oyntment. Take *Biſtort or Snakeweed, Tormentil, Galls, Acorn cupps, Cypreſs-nuts, Pomegranat peels, each one dram and an half; Pomegranate flowers, Myrtle-berries, Grape kernels, Acacia, each one dram; Dragons blood half a dram, Bole one dram and an half, red Coral one dram, Maſtick two drams, with Oyl of Roſes or the like, in which Vinegar hath been boyled, and with Wax* make *an Oyntment, or with Roſin and Pitch an Emplaſter.* Theſe may be alſo applied to the Soles of the Feet.

The Troches of Amber, ſealed Earth, Ramich &c. are better inwardly then outwardlp uſed.

You muſt uſe Fomentations about the Privities, or baths to ſit in, of the Decoction of theſe, Roots of Snakeweed, Tormentil, five leaved Graſs, Acorus, Comfrey, Pomegranate peels, Plantane, Shepheards-purſe, Solomons-ſeal, Brambles, Horſtayl, Sumach, Mullein, Tamariſk, Sage, Mints, red Roſes, Pomegranates, Galls, Acorn-cupps, Cypreſs-nuts, Myrtles-berries, Sumach, Sloes, Acacia and other four Fruits, and if ſtronger is required, burnt Chalk, Bole, Allum, or Vitriol: boyl them in Iron-water, or red Wine, and a little Vinegar.

An Epithem to be laid to the part, is made of Plantane-water, and Shepheards-purſe two parts, and one of Vinegar, it is good alſo laid to the Soles of the Feet with a Spunge, as alſo Allum boyled in Vinegar.

Apply this Cataplaſm. Take *Plantane, Shepheards-purſe, Rupture-wort, Mints, each one handful*; boyl them *in red Wine*, beat them, add *Lentil meal half a pound, Goats, Aſſes, or Hoggs dung dryed two ounces, Juyce of Sloes half an ounce, Dragons blood, Frankincenſe, each two drams, burnt Chalk and Bole, each one ounce*: mix them *with the white of an Eg, and Vinegar*, and apply them to the Region of the womb, or *with Oyl of Roſes and Myrtles.*

Things put into the womb, do well to ſtop the Mouths of the Menſtrual Veins if they be open: alſo Injections are good if the Flux come from the bottom of the womb, for their vertue will reach thither.

They are made of the Decoction mentioned for a Fomentation; Or of the Juyce of Plantane, Shepheards-purſe, Yarrow, Horſtayl, Solomons-ſeal, with the like.

Or this. Take *of the Decoction or Juyce of the Plants mentioned one pint*, ad *Juyce of Sloes, or four Grapes ſix drams, Dragons blood two drams, Bole half an ounce, the red Juyce which is taken from Grinding of a Blood-ſtone half an ounce, Aſſes or Hoggs dung two drams*: make an Injection, it is better with a little Vitriol.

Or the Decoctions or Juyces of Herb Willow, Goats beard, Coriander, Yarrow, Rue, Houſleek.

Peſſaries are made of the Oyntment of the Counteſs, or the Linaments mentioned with wool: Or of the Plants mentioned, as Plantane in a bag.

Or thus. Take *Galls one ounce and an half, Acorn-cups one ounce, Starch, Roots of Snakeweed, or Tormentil, each half an ounce, Pomegranate flowers, Myrtle ſeeds, each two drams, Frankincenſe three drams, Acacia, Dragons blood, each two drams, Blood-ſtone one dram*: pouder them finely, *and with the White of an Egg, Juyce of Plantane, and Vinegar* make *a Peſſary.*

Or, Take *Pomegranate peels one ounce and an half, Cypreſs Nuts one ounce, Meal of Lentils, Roots of Docks, each half an ounce; red Roſes and Sumach-berries, each two drams; Maſtick three drams, Mummy and Juyce of Sloes, each one dram and an half; Gum Arabick one dram, Bole or Oaker half an ounce, Allum or Vitriol one dram, dryed Goats dung two drams* mix them in pouder, *with the Infuſion of Gum Traganth, with Juyce of four Grapes, or Wine-Lyes for a Peſſary.*

You may add aſtringent and drying Pouders, of Roots and Herbs, Aſhes of an Oak, Down of Willow flowers, and the like, the pulp of Wolves fat, Spiders webbs, Hares dung, Ruſt of Iron, Coral, Troches of Amber, of ſealed Earth, with Micleta.

It is experienced by ſome Women that a Peſſary made of hot aſhes, and hot red Wine, with Juyce of plantane cureth: but one ſpoyled her privities by applying it too hot.

Let

Let her take this Fumigation from the hot Decoction. Take *of Frankincenſe and Maſtick, each two drams; Labdanum one dram, Amber, Cypreſs-nuts, red Roſes, Pomegranate-flowers, each half a dram; Spike one ſcruple, with Gum Arabick infuſed in Roſe-water,* make troches.

Alſo the Fumes of an Aſſes or Horſes hoof, Shoe-ſoles, and burnt Harts horn, with Frankincenſe and Maſtick to make them ſmell ſweet.

Alſo the Fume of Vinegar from a hot Iron.

Alſo the Vapors that comes from a piece of green Oak warmed hot, and ſprinkled with Vinegar, put between the Leggs.

Things alſo applied to the Liver when it is too hot, and weak, as Oyntments, Cerots, and cooling things that ſtrengthen it, are good, as in bleeding at the Noſe, and Inflammation of the Liver, eſpecially that Cerot of Sanders.

Theſe Amulets ſtop blood, hung about the Neck, or held in the Hands, as Blood-ſtone, red Coral, Cornelians, Onyx, Jaſper; alſo the great Celandine, wild tanſey, Sorrel, perwinkle, tyed to the Leggs and Thighs. Eggs beaten, and Cotton dipped therein, tyed to the Soles of the Feet, and renewed when they are dry.

The Cure of the preternatural Flux of the hæmorrhoids.

The Flux of the Hæmorrhoids, though it be troubleſom at the firſt, yet muſt it not be ſtopped, becauſe it cureth many dangerous Diſeaſes, and prevents others.

But if it do weaken by being too large, too often, or too long, then you muſt moderate and ſtop it. And it is done by Evacuations and Alteratives, as the terms over-flowing are cured.

There are divers Evacuations, and Blood-letting is good when it abounds in the Meſeraick Veins, and though the blood comes not from them, becauſe they reach not to the skin, but becauſe the hollow Vein is emptied thereby, and then takes blood from the Meſeraicks, it muſt be good. Eſpecially if it be taken in great quantity from the Arm or Hand, or from the Legg or Foot, by which means the flux will not be provoked as in the terms, becauſe theſe Veins are not continued from the Hæmorrhoids, as from the Menſtrual Veins, and therefore it will rather ſtop by Revulſion then increaſe the Flux.

Scarifications, Cupping-glaſſes, Frictions, although they cauſe Revulſion in other fluxes, when the blood comes from the branches of the hollow vein, yet in this they do no good, becauſe they can neither draw the blood from the hollow vein, or from the Meſeraick, you may purge when the Body is bound, leaſt ſtraining provoke them, with Laxatives mentioned in want of Stools. You may alſo purge the Humors, if the Hæmorroids flow frym too much Choller in the Meſeraicks, or the like, to prevent when any are ſubject to them, and to hinder yellow, or black Choller which is made of the yellow, and not of blood; this is beſt before the Flux, when thoſe Excrements lying in the firſt paſſages, are ſooner carried into the Guts.

Nor muſt you neglect purging, when the Hæmorroids flow, to keep the Excrements from increaſing the Flux, with ſuch things which ſtir up Nature to ſtool, and yet provoke not the Hæmorrhoids or Pills, with gentle things that leave a binding, and not with ſtrong and hot. But ſuch as are mentioned in the over-flowing of the terms, as Rhubarb, Myrobalans, Syrup of Roſes, and the like, alſo Tryphera perſica.

Then we proceed to alter, with things that thicken, aſſwage, and ſtop, as in the immoderate terms.

Many things may be uſed here, as in the terms, as thoſe Meats which make thick blood, and make it leſs hot and cholerick, by which the blood in the Meſeraicks will be more temperate, and flow leſs.

The Medicines there mentioned are good here, as the Decoctions, Syrups, Juyces, Conſerves, pouders, Mixtures, whoſe vertue going by the Guts to the Meſeraicks and Hæmorrhoids, which joyn to the Guts, doth ſooner worke then in any other Flux.

Micleta is alſo good, made of parched Myrobalans, Pomegranate-flowers, Water-creſſe ſeeds, Cummin, Aniſe, Fennel, Ameos, Caraway ſeeds ſteeped in Vinegar, the Medicine uſed for Spodium called Antiſpodium, Maſtick, Gum Arabick, pouder of Sumach, Syrup of Myrtles.

Alſo Electuaries of Myrtle-berries, Myrobalans, Aniſe, Cummin, Smallage ſeeds ſteeped in Vinegar and Syrup of Quinces.

Alſo the Confection of ſcales of Iron of Rhaſis, of Myrobalans, Schænanth, Cypreſs, Ginger, Pepper, Ammi, Frankincenſe, ſcalls of Iron.

And chiefly pills of Bdellium, Amber, Sea-ſnails, Ammeos ſeeds, and Juyce of Leeks, and others of Myrobalans only, and Bdellium, with Ruſt of Iron.

Narcoticks are good, if the expulſive Faculty be ſtirred up too much to ſtupifie it, they are mentioned in the over-flowing of the terms.

Outwardly theſe are applied to ſhut the Veins of the Fundament.

You muſt foment with Decoctions made of Mullein, which is ſpecifical and proper, boyled in red wine, and Iron-water.

To which you may add things mentioned in the over-flowing of the terms.

As Cataplaſms there mentioned, or the Fomentation, with Hog-fennel, and Perwincle.

Or this following eaſie to be made. Take *Mullein, Plantane, Oak leaves, each one handful, Houſleek, or Nightſhade one pugil*; boyl them *in red Wine, and Iron-water,* ad *Oyl of Myrtles one ounce and an half*. make a Cataplaſm.

You may add the pulp of Quinces, Medlars, and of other aſtringent Fruits.

Alſo apply Oyntments, Cerots, and Plaiſters to the Fundament, as the Oyntment of the Counteſs, plaiſter for Ruptures.

Or this: Take *Snakeweed roots two drams, Galls half an ounce, Frankincenſe two drams, Acacia, or Dragons blood one dram and an half, Bole half an ounce, Ruſt of Iron two drams,* make *a fine Pouder,* and add *Oyl of Roſes Omphacine, or Myrtles, or Oyls in which the Juyces of Mullein, Plantane, Shepheards-purſe, Sparrow tongue, or Brambles, or Baſil, with red Vinegar have been boyled, and with Wax* make an Oyntment, or Cerot, or with Roſin, an Emplaſter.

There is another Oyntment or Plaiſter which is good here, and the dripping of a roaſted Eel, is excellent therewith.

This plaiſter is ſtronger without Oyl, take thoſe pouders, with Amber, and the White of an Egg, or Mucilage, of Fleabane ſeeds, or Infuſion of Gum Traganth, in plantane-water, and let it be applied and renewed before it be too dry: Or to keep them from drying, mix them with Syrup of Myrtles, or other Aſtringents.

Mix alſo other pouders if you pleaſe, as of the Stones of Myrobalans, burnt Spunge, Hedg-hogs, Chefnuts, Aſhes of Hare-foot, Mummy, Amber, Maſtick, burnt Harts-horn, Eggs and ſhells, Ceruſs, Antimony, Lytharge, Bloodſtone &c. alſo Soote of a Chimney.

This plaiſter ſtops it excellently. Take *Aloes, Frankincenſe, Bole or Chalk, each half a dram, Dragons blood, or Juyce of Sloes two drams*: mix them with Syrup aforeſaid, and apply often renewing it, leaſt it ſhould ſtick too faſt.

Things are put into the Fundament to cloſe the Veins, as thoſe Oyntments and plaiſters with Cotton, or Spunge, or the peſſaries, mentioned in the flowing of the terms.

And if theſe come forth by their ſharpneſs, uſe theſe ſuppoſitories. Take *Colophony, Frankincenſe, each three drams; Bole half an ounce, Ceruſs, burnt Lead, each one dram; Acacia half a dram,* pouder them finely, *and with the White of an Egg, or other Glew or Wax,* make a Suppoſitory.

The Muſh-room called Wolfes-fart, being dryed and poudered fine is good; alſo Spiders webbs, and Hares hair.

You may inject with a Syringe, with things made of plantane, or the like, mentioned in the Flux of the terms

Mans blood, or other Blood injected, doth wonderfully ſtop the flux of the belly. Sheeps Lungs hot applied to the Fundament, is alſo good to ſtop Bleeding.

Alſo a Fume of Decoction of things mentioned, taken into the Fundament, and of Bdellium, and things mentioned in the Dyſentery.

Alſo if the Vein appears, when the Patient ſtraineth, you may apply ſtrong aſtringents, as Bole, burnt Allum, Vitriol, and the like, or things that burn a little, when there is Neceſſity, but warily, leaſt you hurt the ſtrait Gut, as the Pouder of Roots of Cabbage, Dogs dung, burnt Wine-Lyes, burnt Vitriol. It is an excellent Remedy to touch the Vein with Oyl of Vitriol, or in great Deſparation with Aqua fortis. It is dangerous and unprofitable to uſe other potential Cauteries, becauſe they cannot ſtick long. But the actual Cautery, is the onely laſt Remedy with a touch.

Alſo if you take up the vein with a forceps, and ſew it with ſilk.

You muſt apply cooling Oyntments that ſtrengthen to the Liver and Spleen, when they are too hot, becauſe the Meſeraicks are in them: ſuch as are mentioned in the Inflammation of the Liver.

The Leaves of black Hellebore, green, and bruiſed, and tyed on, like a Girdle next the skin, and renewed when they are dry, do cure this flux, as well as the terms, and flux after birth.

The Cure of bleeding from divers Orifices

The Cure of bleeding is different according to the divers parts and veins.

If blood flow from the adnate tunicle of the Eye being hurt, or from a wound: the Cure is mentioned in the hurt of the Eye.

If blood flow from the Ears, from hurt by things put therein, it is treated of in the Wounds of the Ears: if from a Contuſion in the Head, that muſt be firſt cured, becauſe it is moſt dangerous.

If blood come from the Yard by a Catheter put in, or by the paſſing of a Stone through; it is not worth the Cure, but if Heat of Urin follow, or there be fear of an Ulcer, that is to be prevented with things mentioned in their proper place.

Bleeding of the Neck of the Bladder in a Woman, from the taking out of a Stone, requires no other Cure but to aſſwage the pain, as in other wounds, for it will ceaſe of it ſelf.

If the Privities bleed from hard travail or violent Copulation, you muſt cure it as other bleeding at the part by Anaſtomoſis. If the Hæmorrhoids bleed from ſending forth, or taking in any thing, you muſt cure it as formerly mentioned. But if it bleed little, you muſt reſpect the wound more then the bleeding. But if the terms flow at the Fundament from a fiſtulated Ulcer which pierceth the ſtrait Gut, it is to be cured as a Fiſtula.

The Cure of bleeding by Wounds.

You muſt cure bleeding of wounds in the external parts according to the part wounded.

If it be from the skin taken off, it is not worth the Cure; for it will ceaſe of it ſelf, or with little trouble. Alſo it is eaſie to ſtop a vein, either opened by art, or broken. But if a great vein be cut, or an Artery, it is hard to be ſtopped; if the Artery be ſmall, for I have known a great flux of blood not to be ſtopped from the tearing of a ſmall Artery, at the drawing of a tooth, and one dyed thereof. And the reaſon was becauſe the Artery lay ſo deep, that the medicines could not be conveighed to it. And therefore in wounds they hurt the internal part, becauſe it is dangerous to fill up the Cavities with medicines, in which the blood lyeth, it is impoſſible. In other wounds though great, and with a great flux, yet is blood eaſily ſtopped, becauſe medicines may be applied. In the ſtoppage of all which we proceed as followeth.

We revel or draw back the blood from the part whence it flows, and turn it another way to abate its force: By Letting blood, Scarifying, Cupping, Ligatures, Frictions, as in other fluxes. And that in the remote parts from that which bleeds, if we intend Revulſion, or in the adjacent part, if we intend Derivation.

We hinder the flowing of blood to the part, by applying upon the Paſſage of the Veins not far from the womb, Epithems, Unguents, Plaiſters, which may bind the Paſſages, and cool the Blood, and repel or drive back, and thicken: ſuch as were mentioned in other fluxes, as of the Noſe, to the ſides of the Neck of the Eyes, to the Fore-head and Temples.

For the ſame you may cut off the Vein firſt above, opening the skin gently, and laying the vein bare, and binding it at both ends, that it go not back, but this is not to be done but at laſt, and when all fail.

Or when the Vein is bare, bind it till it ceaſe.

We ſtop Veins with Aſtringents and Cauſticks, by Ligatures we do not only keep things on that are applied, but hinder the flux; theſe Ligatures are to be made as we ſhewed in the Cure of Wounds.

Surgeons uſually ſtop Blood with a Bolſter of Lint, and good Ligature only.

Bleeding is alſo ſtanched by preſſing the wound if narrow, with the finger, by which means the blood ſtopped congeals about the wound, and hinders the flux.

We keep it from flowing, by keeping up the wounded part above the reſt.

Alſo by ſtuffing it if deep, we ſtop or reſtrain it, this is done with ſoft Lint. And if things be added that will alſo ſtanch blood, it will be the better, as theſe following.

Spiders webs thruſt into ſmall wounds of the skin, becauſe being light and thin, they get into every part, and ſtop the blood, not ſo much by drying as by filling the part, and glutinating the Lips, by help of the blood which grows hard, and theſe are better with Mill-duſt.

The Down of Flowers and Fruits, and Cotton, or Lint, with Hares hair, are good with Plaiſters that ſtanch blood, but without well cleanſed, if put into ſmall wounds.

The round Muſh-room or Fuzball, being very light, laid upon the vein, or thruſt into the wound, ſticks cloſe, and keeps the Blood from flowing, eſpecially mixed with other Pouders, or Plaiſters.

The ſpungy skin in old Trees between the Bark, or Touch-wood laid upon ſmall wounds, is alſo good.

Alſo a Spunge laid on, or thruſt in, if the wound be large; And if the Artery be dilated as in an Aneuriſm opened, and bleed; becauſe it requires large ſtuffing, a Spunge is good; yet the flux was ſo great, and the Orifice ſo large, that the Spunge would do no good to one Man, but he bled to Death of an Aneuriſm opened.

There are divers things laid upon the part: firſt ſuch as dry, bind, and glew, as the Pouders alone, or with Lint, or the like, or with Glew like a Plaiſter, either laid upon the Vein or Artery, or upon the wounds, or put in when it is deep, and bound on, for divers dayes, till the fear of bleeding is over, and then after gentle moiſtning taken off. Alſo if the wounds be deep, a Plaiſter is put in. And when it is after cutting off an Arm or Legg, let the pouders be put into a Bladder, and laid on, and the Bladder tyed faſt about. Thoſe Plaiſters were mentioned in the Cure of Wounds, and they are to be applied at firſt to ſtop the flux, and heal the wound. As that of three parts of Bole and Frankincenſe &c. to glew the lips of the wound; and to heal them, as that with Frankincenſe and Myrrh; or that of *Galen*, which is one part Aloes, two parts Frankincenſe, with the White of an Egg, and Hairs of an Hare; and others there mentioned, beginning thus. Take *Galls &c.* Or, Take *Colophony &c.* Some that are mentioned againſt Fluxes in the Eyes, are good here, as that which begins thus. Take *Maſtick, Frankincenſe, &c.* Or, Take *Bole half an ounce, Sanguis Draconis &c.* without Oyl of Roſes. Alſo Pouders of burnt things, aſhes of Froggs, Worms, Aſſes or Horſes dung, Eg-ſhells, Spunge, Rags, Cotton, Paper, Nettles. Alſo Soote,

burnt

burnt Blood, Roſin poudered, Gum Arabick, and Traganth parched. Alſo Blood-ſtone, Stibium, burnt Lead. Alſo other fat Earths beſides Bole. And Downs mentioned; of Flowers and Fruits, as that in the ſhells of Cheſnuts, or Cotton, Down, or Lint: All which mixed with the Pouders mentioned for Plaiſters, and incorporated with the things mentioned, may be applied like a Plaiſter. Or you may apply the pouders with the Juyce of Plants, as of Plantane, Solomons-ſeal, Shepheards-purſe, or Blood made into a paſt, with ſome Glew or Roſin to make it ſtick.

There are other Fumes, as that which we ſaw ſtopped preſently, the blood of a Theif that had both his Hands cut off; It was thus made: The Wife of the Executioner put the wriſt where the hand was cut off into a Hen, in which ſhe had made a large Orifice about the Rump, and tyed her with the feathers to the part, and ſo he lived till he was brought to Execution without any great loſs of blood. And this Courſe have I taken often with good ſucceſs, when fingers have been cut off.

This remedy may be uſed in other parts, by tying it faſt upon the part, when it is cut or ſlit in the middle, whether it be Hen or Chickin, or the Lungs of a Sheep bleeding, or other freſh Entrals; ſuch as we preſcribed for the Cure of a Phrenſie.

Alſo Mans blood, or other blood hot, and mixed with Bran to a paſt, may do the ſame.

A Linnen-clout three or four times doubled and dipped in Frogs-ſpawn when ſqueeſed, will ſurely ſtop blood: and it is uſual to keep Clouts dipp'd in the Spawn of Froggs at the time of the year, for the ſame purpoſe.

The laſt remedies are Cauſticks, which cauſe an Eſchar, and ſtop the Blood.

Burnt Vitriol is the beſt, or Copperas what Colour ſoever it is of; or burnt upon a hot Iron till it be red, which the Chymiſts call *Colcothar*, with burnt Allum, and burnt Tartar, or Wine-Lyes. Or if you will have it burn more, a little Arſenick, or Sublimate, which you may apply with the White of an Egg, and a little Lint.

Quick-lime poudered doth the ſame, which you may make of more force with the other.

Somtimes we add other aſtringents, which allay their violence, and by ſtraitning the part, ſtop the blood, as that pouder for healing Plaiſters for Wounds, which begins thus. Take *burnt Bones &c. alſo Vitriol, and burnt Allum.* Alſo things which are uſed to take down proud fleſh, which begins thus. *Take burnt Allum three drams, Pomegranate-flowers &c.* Or, *Take Vitriol half an ounce, Allum &c.* eſpecially the corroding pouder there mentioned.

The Spirit of Vitriol dipp'd in Cotton, and applied to the Vein, doth aſtringe and ſomwhat burn; which if it ly deep, muſt be ſtopped in, as you do for an hollow tooth.

Aqua fortis doth it more powerfully, ſo applied, and burns more. Of which ſprinkled upon filings of Iron, you may make Crocus Martis from the yellow Colour ſo called; which you may uſe for the ſame.

Clouts wet in Vinegar or Steel-water, wherein the Phyſical Stone hath been quenched, and dryed. Or in Aqua fortis, or Oyl of Vitriol often dryed and wet, will do the ſame.

The actual Cautery is the laſt, which will preſently ſtop Blood, if you can touch the Veins or Arteries. This is done with a hot Iron proportioned to the wound, either ſmall pointed, or flat, or with a round bottom, for great wounds: ſuch as are uſed in Diſmembring. But this is done with ſmall ſucceſs, eſpecially when the amputation or cutting off is in a thick fleſhy part, becauſe the burning reacheth not to the Veins, but only to the fleſh. And by this lingering before the Plaiſter is put on, there is a great loſs of Blood; and the new pain which comes after the pain of amputation, doth much weaken the Patient.

If you thruſt the remaining part of a finger cut off into melted Pitch, and preſently pull it out, it will ſtop Blood, not only by the burnning of the wound, but by the ſticking of the Pitch thereon, which will grow hard, and ſtop the Veins. And this you may do in other parts.

If you lay Cotton upon the wound, and ſet it on fire, it will by the flame inſinuating into the wound ſtop wonderfully, and the rather if it be dipped firſt in Oyl of St. Johnswort.

You may ſtanch Blood by Potions which we uſe for the Cure of Wounds, for they thicken the Blood by a drying vertue, which healeth, and alſo ſtoppeth the Flux, eſpecially if you mix things proper to ſtop blood. As that Potion for a wound from a Contuſion, which is chiefly uſed for to diſſolve blood congealed, which begins thus. Take *Mummy &c.* to which to ſtop bleeding, you may add Bole ſealed Earth, Dragons blood, Sperma Ceti &c. or the like.

Many other things which are given againſt bleeding at the Noſe and Womb, may be applied here while it laſteth. Which will be moſt proper when the wounds pierce into the internal Cavities and Bowels.

The Brain of Hens given in Drink, is good againſt any flux of blood from the Head, ſaith *Dioſcorides.*

They attribute much to Amulets, about the Neck, and held in the Hands, ſuppoſing that they ſtop all ſorts of bloody Fluxes. Thoſe that were mentioned in other fluxes of blood, may be here made uſe of.

CHAP. VI.

Of Excretion, or Voiding of Matter.

The Kinds,

A Purulent or Mattery Excretion, is when liquid Matter made of ſome other Humor by Suppuration, and turned white is voided, differing according to the Humor, ſomtimes concocted, ſomtimes crude, and ſtinking, and filthy: All theſe are called Matter. And this is preternatural in reſpect of the Excretion and of the Matter, and it comes from divers parts. We ſhall ſpeak of that Excretion of Matter, which is in Spitting, Vomiting, Piſſing, and going to the Stool, in thoſe Diſeaſes.

Matter from the Eyes.

Oftentimes there is in the Eye without any other Infirmity, Matter in the Corners, or about the Ball or Sight thereof, and it falls off of it it ſelf. Or it gets at night into the Eye-lidds being ſhut, and glews them together. Somtimes it is ſeen in red inflamed Eyes; ſometimes it comes from Ulcers there, either white and concocted, or thin and watery, from the Corners of the Eye, or through the Noſtrils, ſmelling ſtrong ſomtimes. And we have ſeen it get out under the lower Eye-brows by a Paſſage there made.

Matter voided from the Ears.

Oftentimes Matter flows from the Ears at certain times, and for a long ſeaſon, eſpecially when any part adjacent is hurt: Either with pain, or without, as we ſhewed in the Pains of the Ears.

Matter from the Noſe.

In the Diſeaſe called *Coryza*, Matter flows from the Noſe, eſpecially towards the end, ſtinking and white, after a thin flux of water.

Or Matter and Snot are voided together in an Ulcer of the Noſe: as we there ſhewed.

And we ſaw in a Child, a little before he dyed of a conſumption, thick matter that flowed like milk out of his Noſe. And I ſaw in my Fathers dayes, the like matter with ſome of the ſubſtance of the Brain, come out of the Noſe in two Virgins which had the Falling-ſickneſs from their Birth, it came forth in the fits, and they preſently after dyed.

From

Matter from the Yard, Vreters, or Neck, of the Bladder.

From the Yard or Paſſage of Urin in Women, there comes either yellow or white matter, ſomtimes that fouls the linnen: This is accompanied with burning of Urin, pain in the Yard, or Vreters, when Urin is rendered, or it flows without ſenſe, and is leſs troubleſom. This is called an Ulcer in the Yard, or neck of womens Bladders. This Diſeaſe in Men comes from unclean Copulation, and ſomtimes from a venemous Gonorrhæa. This ends ſomtimes in a hollow Ulcer, about the lower part of the Yard and Seam, where it opens in one or divers places, and ſends forth Matter and Urin.

I obſerved in one that when his Yard was ſqueezed, a great deal of matter came forth, which before was mixed with Urin a long time. And after he voided matter at the Yard and Fundament, eſpecially when a Clyſter was given, and he had great pain about the *Os ſacrum* and Rump; but an Inflammation upon each Buttock followed, and Impoſthumes out of which the matter flowed, and not from the other Parts.

To theſe we may refer the Voiding of tough Matter by Urin, and at the Yard without it, or after Urin made, which ſtops the Paſſage, and will not paſs but by degrees and with pain. Somtimes it will not come out without pulling, hanging like a long ſtring. This is joyned with the Ulcer of the Bladder, or the Stone: as ſhall be ſhewed in the Cauſes.

Matter from the Womb.

Somtimes it flows from the womb with cutting pain.

From the openings of the body.

Alſo from openings made by a Diſeaſe or Cutting: ſomtimes from Ulcers in the ſuperficies of the Body; otherwhile from deep ulcers. And inward Cavities, ſomtimes more or leſs, and of different Colour; ſomtimes with other filth: as we ſhewed.

The Cauſes.

The Cauſes of al Excretion of Matter from divers parts, are different, as the Excretion is either with, or without an Ulcer.

If it be with an Ulcer, it is from Suppuration of Blood or Fleſh, turned into Matter, after an Impoſthume broken: this is in divers parts of the Body ulcerated.

The ulcer of the Eye, is the cauſe of matter voided.

There may come Matter from an Ulcer in the Eye, and more uſually from that which is in the inward corner of the Eye, from whence it flows, or it fixeth it ſelf in a hollow, and falls into the Noſe, or eats a way through another part. As we ſhewed in Ulcers of the Eyes, and Fiſtula Lacrimalis.

The ulcer of the ears, is the cauſe of matter voided.

There comes Matter from the Ulcer of the Ears. If it be deep, when the Ear is preſſed, the matter comes forth, if it be higher, it flows of it ſelf, and if it get to the drum of the Ear, and eat through, it takes away Hearing. But if it be external, it doth not hurt the Hearing.

The ulcer of the Yard inwardy is the Cauſe of matter from it

There comes Matter from ulcers in the Noſe, for the Cauſes there mentioned. From the ulcer of the internal Paſſage for Urin and Seed in the Yard, there flows Matter. This ulcer is from ſome greater hurt then that of the Catheter which fetcheth blood; or from venemous Seed, which breeds the Gonorrhæa. Alſo it may come from ſeed not corrupted, but out of its place when it ſtops there, which will cauſe great pain by Irritatino, or Pricking, and Heat: as we ſhewed there, and alſo an Ulcer if it be ſharp.

The Ulcer of the neck of the Bladder, the cauſe of matter without Piſſing.

There comes a Piſſing of Matter from the Ulceration of the Neck of the Bladder in both Sexes, and ſomtimes it flows without Piſs, eſpecially when it is in the fore part of the Bladder, out of which if it be foul, there will come much matter.

And in the ſame Ulcer of the Neck of the Bladder, the Matter which comes with, and without the Urin, is the Cauſe of the Excretion.

An ulcer in the neck of the Womb, the cauſe of Matter voided.

The Excretion of Matter from the Womb, is cauſed from an Ulcer in the Neck of the Womb. As we ſhewed in the Ulcers of the Womb.

External and internal Ulcers, are the Cauſes of the Excretion of matter by the opened places of the Body.

There is a Voiding of Matter from the external Ulcers, diſperſed by the Superficies of the Body in the skin and fleſh, either made by force external, or opened of themſelves. And from the internal Impoſthumes alſo opened. From whence if the Matter have been long there, it will freely come forth, either ripe or ſtinking, pure or venemous, or mixed with Venom: the Cauſes of all which we ſhewed in Ulcers and Impoſthumes.

When an Empyema is opened, of which we ſpake in its place, there comes forth as much matter from the Cavity of the Breaſt, which caſhe by the Ulceration and Corruption of the Lungs, ſomtimes as will fill divers Baſons.

That Matter which is in the Belly from an Impoſthume in the Liver or Spleen, as we ſhewed, can ſcarſe be diſcharged by opening of the belly. For although matter may be in the belly, from Impoſthumes which broke of their own accord, yet, in regard it is ſeldom known, nor can it be diſcovered by a tumor external, becauſe ſo much cannot be gathered together, you muſt not be raſh in opening a part to let it out. And if matter be gathered within the skull, you muſt be as wary: For it is not to be known certainly that matter is there, and therefore we muſt not open the skull but upon neceſſity, when we know there is matter, becauſe it is dangerous; and Nature (if death prevent not,) will diſcharge it at the Noſe.

There is alſo an Excretion of Matter without an Ulcer, in the Eyes and Noſe, which are alwayes wet, which cauſeth it.

The moiſture of the Eye turned into matter, is the cauſe of the Excretion of matter.

In the Eye when the water is concocted, and made thick.

This comes from the Heat of the Eye-lidds, which dryeth the humor, as we ſee in red Eyes, which goes away when the Heat and Redneſs is gone, which cauſed it. But while they continue, there are alwayes tears, as in Epiphora, and Filth. As we ſhewed in this Diſeaſe of the Eyes.

The moiſture of the Noſe turns into matter.

When ſlimy Flegm ſtayes too long in the Cavities of the Noſe, it cauſeth an Excretion of Matter concocted, as in the end of a Coryza or Poſe.

That Flux of white Matter like Milk out of the Noſe of a Child, came from the Brain, where it was made of blood and flegm; becauſe the brain was affected, ſo that there were continual Convulſions and Death.

The Cure.

The Cure of matter in the Eyes.

If Matter come from the Eyes, and that from an Ulcer, firſt cure the Ulcer. If the Eyes be mattery without an ulcer as in Epiphora, you muſt cure it as was there ſhewed. If it come from too great a Heat of the Eyes, when that ceaſeth, the Matter will ceaſe. If Matter be in the Eye from any Cauſe, and hinder the Sight, it is taken away by gently rubbing the Eye with a fine Clout, to bring it to the corner, that it may get out.

The Cure of filth or matter in the Ears.

We ſhewed in the Ulcers of the Ears how any matter flowing from thence ſhould be cleanſed away

If the Matter in the Noſe come from

concocted

The Cure of matter from the Noſe.

concocted Flegm, in regard it ſignifieth that the Flux or Coryza ceaſeth, it muſt not be ſtopped, but rather provoked with Errhines and things mentioned in the Stoppage of the Noſe. As alſo the milk-like Flux which is ſeldom ſeen, muſt not be ſtopped, though uſually death follow. But if the Matter come from an Ulcer in the Noſe, the Cure is mentioned there.

The Cure of the ulcer of the yard and the matter that flows from it.

When there is Matter voided at the Yard not with Piſs, but by it ſelf, and when there is heat of Urin alſo, which comes from an Ulcer in the Yard, it is leſs dangerous then piſſing of matter, which comes from an Ulcer in the neck of the Bladder, becauſe the part is leſs noble. And if it be not old, or lie too deep, it is more eaſily cured, but more hard when more filthy and deep, then it requires a long Cure, or elſe it eates through the Perinæum, and lets out the Urin there.

Voiding of Matter from the Ureters in Women without Piſs, or with it, becauſe it comes from an Ulcer in the neck of the Bladder, it is as hard to be cured, as piſſing of matter.

The Cure of the Ulcer of the Yard, and the Heat of Urin from thence, is as that of the Ulcer in the Neck of the Bladder: And the things to heal the Ulcer, and abate the Heat, are to be uſed here.

In Women it is cured, as piſſing of matter, to which diſeaſe I refer you, for both come from an Ulcer in the neck of the Bladder. But if it come from the neck of the womb or an Ulcer there, the Cure was mentioned in the Treatiſe of thoſe Diſeaſes.

In both Sexes, we give Clyſters, to looſen the Belly, there mentioned.

And the Cleanſers and Dryers there mentioned, becauſe this Ulcer is near the neck of the bladder, and in the ſame Paſſage, ſo that the medicines good againſt thoſe Ulcers, muſt needs be good againſt the Ulcers in the Yard, if they be uſed often.

The Decoctions mentioned in the Cure of Ulcers in the neck of the bladder, may be here given to be drunk, becauſe good both againſt Ulcer and Heat, and alſo they have Guaicum, and the like which heal Ulcers.

Alſo the Vulnerary or Wound-drinks, are good here, as in other Ulcers. They are beſt which are mentioned in the general Cure of Ulcers, as the wines and diſtilled waters, or the Decoction that begins thus. Take *Comfrey-roots, Fennel &c.*

Juyces, Waters, Milk, and Roſin are here to be uſed, as in the neck of the bladder.

And the Compound Pouders, and thoſe three Pouders, two whereof are good againſt heat of Urin and Ulcers, and the third only againſt Ulcers.

Simple Pouders are of Acrons, Horſtayl, perwincle &c.

To aſſwage pain when violent, the Narcoticks mentioned in Heat of Urin are to be adminiſtred alone, or mixed.

Injections into the Yard come ſooner and eaſier into the part affected, then when it is in the neck of the bladder, and therefore are here of more concernment. And thoſe mentioned there, which firſt cleanſe, and then dry and heal; alſo Milk, Decoctions, Juyces, Waters &c. to which you may add Ægyptiacum, if it be very foul.

For the Ulcer in the Yard, when you muſt cleanſe, make this Injection. Take *Liquoriſh one ounce and an half, Beanſhales ſix drams, red Peaſe one pugil*: boyl them *in Goats Whey, with a little Lye, and Honey of Roſes, Sugar, or Turpentine diſſolved with Honey, and the Yolk of an Egg.*

Another Injection to heal. Take *Roots of Comfrey one ounce and an half, Horſtayl and Plantane, each one handful; Litharge ſix drams*: boyl them *in Iron-water, and in one pint thereof, diſſolve Honey of Roſes, or Sugar of Roſes two ounces, Turpentine one dram, diſſolve it in the Yolk of an Egg*, for an Injection.

Or thus: Take *the white Troches of Rhaſis half a dram, Lapis Calaminaris, Tutty, burnt Lead, Bole, each a dram; diſſolve them with convenient Liquor, or Milk, or Whey.*

Another. Take *Ceruſs half an ounce, Litharge two drams, Tutty prepared three drams, Starch one ounce*: make a Pouder, and inject it with Water, or drop it into the Nut or head of the Yard.

A good Water for an Injection. Take *Comfrey roots half a pound, Roots of Snakeweed, Tormentil, each two ounces; ten Heads of Daffodil roots, Horſtayl and Plantane, each two handfuls, Tops of St. Johns-wort, with the Flowers two pugils, Allum one ounce, Honey of Roſes as much as is ſufficient, twelve Eggs beaten*, if the Herbs be dry, ſprinkle them with *Plantane-water, and diſtil them all.*

If you add to theſe Injections, ſome Drops of Spirit of Vitriol, or of Salt, they will be ſtronger. And if theſe ſpirits be uſed alone with Whey, they will cleanſe and heal.

The Balſom of Suphur invented by *Roland*, doth cleanſe and heal excellently.

Theſe may be dropped into the Yard, if the Ulcer be not too deep; as alſo Juyces.

They put ſome Oyntments alſo, as Pompholygos, with a wax Candle, which is better then other Inſtruments, becauſe it will bend better in the crooked Paſſage. But you muſt remember that you tye it with a thread, leaſt it ſhould get into the Bladder, and the Oyntment go beyond the Ulcer. The diſtilled Oyl of Henbane dropp'd into the Yard, doth aſſwage pain.

You muſt anoint the ſeam or ſuture between the Stones and the Fundament, and foment it, when there is heat and it will be felt within, and the Paſſages muſt be looſned, with Oyntments mentioned in the Ulcer in the Neck of the Bladder, to which add Opium, if the pain be great. Anoint alſo the part with Oyntments, there mentioned to heal the Ulcer.

And let the Diet be as there mentioned.

The Cure of the Ulcer in the Neck of the Bladder & the ſlimy Matter.

The Excretion of ſlimy Matter from the Yard without Urin, and in Women from the Urin-paſſage, is cured as that of the Stone and Matter, with Injections which cleanſe the ſlimy Matter, and if it ſtick in the Yard, it muſt be drawn out. Or if you put the Yard into a hollow Radliſh, the matter will be drawn forth.

The Cure of the ulcer in the womb & the matter that flows from it, as alſo from other parts of the Body.

The Matter which comes from the Womb, is to be cured as the Ulcer of the womb. When it flows by any other Orifices, from any internal filthy Ulcers, which lye deep in the Body, and are made of Impoſthumes that break or are opened, you muſt cleanſe and heal: As we ſhewed in Ulcers, Impoſthumes, and Wounds. And we ſhewed in the Cure of Empyema, how you ſhould order the Matter that flows from the Breaſt after Inciſion.

CHAP. VII.

Of Excretion, or Voiding of Water.

The Kinds,

VVE call that a watery Excretion, when a moiſt Humor, thicker or thinner, made of the Excrements of Flegm, or of that which is Natural and crude; and of the Serum or Whey mixed together, ſo that the one is more then the other floweth forth. Which Excretion is preternatural, chiefly when it is much and often, and corrupted, or comes not out at the proper place. This comes from divers parts, beſides that of Spitting, Vomiting,

Pissing, and Purging: Of which shall be spoken in their places.

Tears. Tears flow from the Eyes often, which are like Whey, or Serum, or Flegm mixed with water, they break out in sound people, especially in Children, and doting old Men, from a small Cause, and in others from a great Passion of Mind. And therefore are not counted preternatural. But when they are troublesom, and of long Continuance, in some Diseases of the Head and Eyes, they are Symptomes of the same. Some Tears are hot and sharp, others cold.

The dropping at the Nose. There is often water from the Nose which is natural, because it is by the right way, but when it aboundeth, it is preternatural. And it is in some from whose Nose, water flows like tears, and a drop hangs at the end of it. Or it is like slimy Flegm which being usual in children, is counted less noisom then in Men.

Coriza or Pose. The same is in the Kind of Defluxion called *Coryza*; there falls at the first a thin moist Humor constantly, actually cold, sometimes hot and sharp, that makes the Nose smart, and provokes Neesing, and causeth Tears, inflamming and corroding the Nostrils and Lips, with great Spitting, Hawking, and Coughing somtimes. And this Humor at the last, is thick, white, or of another Colour.

The same happens in other Diseases of the Head and Defluxions: As was shewed.

Water from the Ears. There comes a water out at the Ears thin, or thick somtimes, but seldom. And a certain Maid had divers measures of water that flowed from her Ear without any other hurt.

The Flux of the womb or the Whites. It is usual in Women to have the white Flux. And because it useth to come when women are past their Courses, they are called the white Terms. But these use to be out of order, and with women that have their Courses, and last more or less time. And somtimes they trouble such as have their Courses stopped: As those who are past them, and are in old Women. In Virgins it is but seldom, and often in women with Child.

Somtimes this Flux is of water, and very much, and clear, and milk, somtimes sharp or salt, yellow, green, or black, somtimes mattery, stinking.

Somtimes it is mixed with Flegm that is tough, without scent, cold and little, or as much or more then the water.

If this Flux be immoderate, there is no other accident, and both Wives and Virgins have it many months and years without hurt. But if it be immoderate, there is an evil Habit of Body therewith: Also Faintness and Weakness, also Barrenness in some, although it hinders not some. If the matter befoul there is an Itching, Pricking, and Heat in the Privities. And it is very noisom when it stinks, and makes the Husband loath her.

Preternatural Sweat. Usually there sweats a whey or water out of the Pores of the skin, it is Natural and common to all Complexions: but it is preternataral, when it is too much or foul, as it is in Diseases, and somtimes without.

There is too much Sweat without a Disease, when it is caused oftner then it should be, or continued longer, so that they faint, and if it be often, they grow faint.

The Sweat is evil when it stinketh. This is somtimes al over the Body, or in the parts, as Feet, as we shewed concerning the Stink of the Feet. Also that which is cold and clammy, not hot, moist and like water, is preternatural: As also that which staineth the shirt with any Colour, or like Saffron.

That Sweat is also counted unseemly, when the Hands and Soles of the Feet are constantly, or for no, or little Cause, wet as is usual with some.

In Diseases, if Sweat be not convenient, or at an unseasonable time, as in Feavers, or too great, as in the English Sweats, it is preternatural, because the Patient is not refreshed thereby, but is worse and weaker. Also it is evil, when the Sweat is not over all the Body, but only in some certain places. And if it be cold and tough, but when it stinks, if it be beneficial, it is not evil: as we shewed in Feavers and other Diseases.

The Voiding of Water at other Parts opened. In the Dropsie Ascites when the Belly is opened, there is great store of Water, and if the Thighs be opened, it drops and continueth long. Also in the Water-rupture it flows freely from the Codd being opened, and out of the Bladder, Pustles, and watery Tumors. Also there flowes a watery Humor from Ulcers; as we shewed in Ulcers.

The Causes.

This watery Humor which flows at the Eyes, Ears, Nose, Womb, Pores, and other openings, comes from the Brain, or from other parts of the Body.

A watery humor from the brain, is the Cause of tears. It is plain that Tears come from a Defluxion of Water from the Brain, because they are somtimes without sharpness, and heat, like water, but somwhat clammy. As Flegm somtimes thin and clear, as whey, somtimes sharp, salt, cholerick and hot And that these Humors flow from the Brain is plain, because Tears break forth so speedily, and in such plenty. For though that Moisture with which the Eyes are moistned for their better Motion, come from the Serum which sweats through the Veins of the Eyes; yet those little Veins cannot contain so much as will make Tears to flow. This Defluxion of water into the Eyes to make tears is more easie, because there is an usual Passage to the Nose, by which it is evacuated Naturally, by a private Hole at the Roots of the Eyes, and another in the inward Corner of the Eye. By which means upon the least Motion, the Eye is filled with tears. Also an Excrement of Flegm and Water, gathered in the brain, as we shewed, may flow forth divers wayes, and so it may descend into the Nose and Eyes. We cannot grant that the tears should flow by an internal or external Veins, as some have supposed; because the Veins carry Blood, and not Flegm, and the water cannot be quickly separated from the blood, but we say it comes from the Brain by Passages ordained therefore. And if by Chance such excrementitious humors should flow to the Eyes from without the Skull, we suppose it would rather lye under the skin and Eye-lidds swell them, then make many tears.

And the reason why this Flegm and whey is carried into the Eyes and causeth tears, which in sound people are flegmatick, in sick more watery, which are of long Continuance, is the abundance of those excrementitious humors in the Head, by which means they flow into the Nose, and also into the Eyes, keeping them alwayes wet and full; and the rather, when the Eye is made fit to receive it by being often watered, or is weak, and loose from some Disease. And these Kinds of Tears do no wayes inconvenience, but by their Moisture, especially when they come from a flegmatick Humor. But if they come from abundance of water, being salt, sharp or hot, with Itching, or redness of the Eye-brows, mentioned in Epiphora, they are troublesom.

Also from an Ulcer of the inward Corner, or the Eye, when the little flesh that grows there is consumed, and the Hole enlarged, by which the Moisture of the Eye falls upon the Nose, or from a Fistula there, when it falls into the Nose, and fills the Eyes, and causeth a continual weeping. As we shewed in Epiphora, or Rhewm of the Eyes, and *fistula lacrymalis*.

The expulsive Faculty being stirr'd up by the provoking of the Eye, or the parts adjacent, driving the Humors suddenly into the Eyes, causeth tears, though not of long Continuance. As the Sun-shine, Smoak, any sharp Fume, as o ſOnions, or Mustard, and the like, or things fallen in-

to

to the Eyes cause Tears. Also the pain of any part near, as the Tooth-ach.

Tears usually break forth from a violent motion of the Humors by straining; or from a disturbance of the mind, in which, by reason of that wonderful Convulsion of the Muscles, Cheeks, Lips and Eyes, which we observe to go before tears in crying: these watery Humors near the eyes being moved, insinuate themselves into the Eyes, and cause tears. As we may observe tears to fall from violent laughtre, when the Mouth is strained with too much Joy. Also we may observe that tears will fall in other strainings or forcings, as at stool, or in Child-birth, with Coughing or Sneesing.

A moist Humor comming to the Nose from the Brain, is the cause of dropping and Coryza or Pose.

VVhen a moist Humor falls from the Brain into the Nostrils that are ordained for the discharge thereof, it causeth the dropping of the Nose. In which the Flux is greater, by how much it aboundeth in the Brain. And there fals a thin Humor like water, if it comes directly from the Brain, because it is generally that of the Brain, and if it be kept long in the Cavities, it quickly grows thick and clammy. Also there is a serous Humor in the Brain which is an Excrement as we shewed in other Defluxions mixed with Flegm, and flows to the Nose, and either causeth or increaseth this Flux, and then it is thinner, sharper, and hotter, and causeth Itching and Sneesing, and that which is called *Coriza* or Pose. The Collection of Humors in the Brain causeth this Defluxion: And these things that stir up the expulsive Faculty, do increase it. As we shewed in other Diseases from Defluxions, especially in the Cough.

A watery humor comming from the Veins, is the cause of the moist Flux of the Ears.

That water which flows out at the Ears comes from other parts besides the Brain; for it cannot come to the place of hearing any way, but by the hole in the hearing Nerve, and if it should enter by that, it can only come into the internal seat of hearing, and cannot pass to the external, except it pierce through the Tympane, which it cannot do without hurting of it, and loss of hearing. But when this Flux is without the loss of hearing, and comes externally, it is plain that the water was carryed to the outward Passage of the Ear, into which the serous Matter sweating through doth moisten; and when it is too much, it comes from the Veins there about, and causeth this Flux: this is seldom, because there are better Passages for it; and but sometimes, especially when the Passages are loosned. As we shall shew in the Whites, that water and flegm comes from the Veins.

A moist Humor coming from the Veins to the neck of the Womb, is the Cause of the Whites.

As we shewed that the Terms come from the veins of the neck of the womb, so the Whites come from the same; and not from the Cavity of the womb, as some dream, because that is so narrow, that it cannot hold such a quantity as usually floweth, neither can it be contained therein, or pass through the veins which are small, and are not enlarged till the woman be with Child; as it may through the Veins of the neck of womb which are larger. And this is, when this excrementitious Humor is mixed with blood, or with the terms, which makes it ill-coloured; or after the terms are gone, when it presseth by the same wayes they did, for which Cause it is called the white Terms. And this may be at other times, when Nature is burdened, both in such as have, or such as are past their Courses. As it is sometimes in women with Child: In whom in regard the inward Orifice of the womb is closed it cannot flow from the cavity of the womb, but from the neck; and in them who are not with Child it is the same. Nor is it a wonder, that nature should purge these Excrements by the same way that blood is evacuated, because she doth the like in other Vessels ordained for other Evacuations. And the reason why they are white. and without Blood is, because Nature dischargeth them at that time, when there is no blood to be sent forth. As also because Nature separates the blood from the Impurity, and keeps it, and sends out the Excrements as noxious. Which Excrements, if serous or watery, come from the whey, if flegmatick, from crude blood, if mattery from blood stained. And if other Humors be mixed, as yellow, green, or black Choller, it is discoloured therewith. And if they be sharp, or the whey salt, then by pricking, and burning in the Parts to which it sticketh, it causeth Itching, and sense of Heat; and if it continue long, ulcerateth. But when it is alone, it flows without sense, like water, or the white of an Egg beaten, nor is it then noxious, except it be immoderate.

The Cause of these Excrements in the Blood which feed this Flux, is that which is eaten or taken in, and the weakness of Concoction, and of those Bowels which separate the Excrements, as in a Cachexy, of which we spake sufficiently. These Excrements are sent forth by nature when she is burdened, and the sooner if there be weakness of the womb, as may be from divers Causes, and also from this Moisture which wets and cools the Part. As also when Nature is stirred up to expel them by other means. As we have known women who never had the whites before after they have taken a Purge, which stirred up Nature have had them. And many have had the same by sitting long in a Bath, not from Infection, as they have thought from other that were in at the same time. But Nature throwing out Excrements by bathing, doth cause the whites which are too thick to be sweated forth.

Serous Matter getting through the Pores, is the Cause of Sweat,

That water which is swet forth through the whol Body, is serous; and mixed with blood, gets into the Superficies of the Body, by an obscure solution of contiguity of the skin, it goes through the Veins.

This Solution of Contiguity comes from the opening of the Pores, or Anastomosis, or Rarefaction of the Skin, or Diapedesis: For then the Serum being very thin, passeth through the Pores of the skin, and causeth Sweat, being either drawn, or driven thither.

Serum or water is attracted by Heat external, for then that with the Blood is snatched to the superficies of the body, and goes through the skin, as water is distilled from Plants, as I shewed. And the rather, when the water is made thin and hot, that it may pierce. And if there be plenty, or if it be thin, sharp, or cholerick, it will be more easily drawn out by the heat. And as Heat doth cause a Natural sweat, so if it be vehement or long, it is preternatural. This Heat is from Exercise or Baths, dry and moist, and the immoderate use of these causeth immoderate Sweats. Therefore Baths are said to weaken.

In Diseases, as Feavers, though the whol Body burn, yet it scarce sweats, till Nature expells the Cause thereof by sweat, which is in intermitting Feavers when the heat ceaseth in the day of rest, and in continual Feavers, when they decline. For when the Body is hot, and Nature is busie in the Concoction of the Cause of the Disease, it cannot be sent forth by sweat, but when it is prepared, and made thin it may.

Nature drives water to the Superficies of the Body, where it is burdened therewith, and then the expulsive Faculty labours to cast it out by sweat.

Nature is burdened, when the quantity or quality of the Serum is offensive; when it is too much in the Veins for want of Evacuation by Urin; then when it cannot be purged from the blood, otherwayes it is sent forth, or drawn forth by sweat. Therefore they which piss little, sweat much, especially they that use moist Diet, and drink much.

If it be offensive in quantity, and be impure by mixture of other Humors, and so burdensom to Nature, it is sent forth by sweat as well as urin. In Cacochymicks or Bodies of evil Juyce, Sweats are not Natural, but are stinking or clammy, and somtimes discoloured; now all over the

the Body, and ſomtimes in ſome places only; wherefore ſome ſweat in their Hands and Feet, and are filthy: as we ſhall ſhew in Filth. All theſe Sweats are evil, and forerunners of Diſeaſes.

If the Cauſe of a Diſeaſe be in the Blood, part whereof is Serum; as in Feavers, Nature if ſhe can find no other way, as the Urin ſends it forth by ſweat. And this if it comes kindly is healthful, though it ſtink and be diſcoloured. But if it be immoderate, or not ſufficient, or at an unconvenient time, when Nature is not prepared for Expulſion, it is evil and unprofitable. This is uſual in Contagious Diſeaſes, Nature oftentimes ſends forth the evil Quality with the Whey with Sweat, which is ſometimes healthful, and ſomtimes deadly. And if it come when Natural Heat begins to be extinguiſhed, and the Body is outwardly cold, then a cold ſweat will appear. All which we have mentioned in ſuch Diſeaſes.

Alſo when Nature is moved by Paſſion, and drives the Spirits inward or outward, there will be ſweat, which will preſently be cold, if the heat go in, as in a ſwounding, and in the pangs of Death.

Moiſture getting into the openings of the skin, is the Cauſe of the flux.

There follows a Flux of moiſture from ſolution of continuity in any part of the Body; and if the skin be only ſcratched, the water is little, as in Scarification, Incilion, Burning, in Water-puſles, or Hydropick Leggs: but if the Orifice be large, by cutting, pricking, tapping in a Dropſie, or when water is taken out of the Codd, or from watery Tumors. Or when it comes from an Ulcer, it is larger.

The Cure.

The Cure of Tears.

Some Tears are to be cured, ſome not. For if they come from a Cauſe that continueth not, as Paſſion of Mind, or be provoked by Brightneſs, Scents, Smoak, and the like, they will be gone, when they are removed. And theſe are to be avoided that are ſubject to Tears. But thoſe Tears that come from a laſting Cauſe which returns, require Cure. And if they are joyned with Redneſs, Heat, and Itching, as in Epiphora or Flux of the Eyes, and come from thence, it is cured as that is. Alſo if tears be with an ulcer of the Eye or Lachrymal Fiſtula, and come from thence, they muſt be firſt cured before the tears will ceaſe. And in regard theſe Diſeaſes of the Eye are hard to be cured, the tears from them are hard to be cured alſo. Except it happen as ſomtimes it did in the Cure of a Lachrymal Fiſtula, that it grows ſo big, or there be ſo great a hole from the eating away of the bone of the internal corner of the Eye, that all the water falls no longer by the Eye, but from the Noſe.

If often, or conſtant tears be without the Diſeaſes mentioned, by reaſon of water flowing not by uſual Paſſages, but into the Eyes, it muſt be cured. Thus the Humors that abound in the Head muſt be purged, and they are to be hindered in their Paſſage, and the Flux ſent from the Eyes to another Paſſage, and ſtopped, the tears conſumed, and the Eyes ſtrengthened.

Thus you muſt purge by ſtool, by maſtication, or chewing, by ſneeſing, for though ſneeſing cauſe tears, yet becauſe it ſends them to the Noſtrils, it doth good: ſuch as are preſcribed in Defluxions, and the Pain they cauſe, in the Cough, Ophthalmy, or Inflammation of the Eyes, and in Weakneſs of Sight.

Sweating often doth chiefly take away thoſe Moiſtures from the Head and whol Body, which may be done by the Decoction of Guaicum, and other Sudorificks long continued, becauſe Baths are not ſo good for the Eyes: As we ſhewed in Defluxions.

We hinder the increaſe of theſe Humors by a wholſom, ſlender Diet, by applying and giving things to the Head that dry and ſtrengthen, and by Fumigations, mentioned there.

We divert or turn away theſe from the Eyes by Cupping-glaſſes, Frictions, and other things that revel and derive: And laſt of all uſe Cauſticks and Veſicatories to the Neck behind, and to the Shoulders. And uſe actual and potential Cauteries to thoſe parts, or to the Crown of the Head.

Every day after he hath combed his Head, let him rub his Neck with a rough Cloth, this is good againſt all Defluxions.

Apply Dryers and Binders to the Fore-head and Temples, to hinder the comming down of the Humor, eſpecially the Emplaſter, mentioned in the cure of a ſalt rhewm in the Eyes.

At Bed-time, uſe things to the Eyes at their corners, that they may be better kept in, with Cotton, or Spunge, the Patient ſleeping upon his back; or Oyntments, or Pouders, or Fumigations.

Thoſe are preſcribed in Epiphora, and in the Cure of the Ulcer of the Eyes, as that Pouder in Epiphora which begins thus. Take *Cadmia, or Braſs, Ore &c.* Or thus: Take *Antimony prepared, or that of Blood-ſtone, Smoak of Frankincenſe, &c. and that of Salt, and the Collyria or Eye-medicines made of white Vitriol, and the ſtrong aſtringent Pouder there mentioned.*

And the Oyntments mentioned for the Ulcers of the Eyes, both white, red and black, and that with Sarcocol, &c. And the three Collyriums of Rhaſis, called Eleiſer, of Lead, and Polycreſton, leaving out the Opium in the two laſt.

Beſides theſe you may add ſome drying Waters, as of Myrtle, Honey-Suckles, Sumach, Agrimony, Privet leaves, wild Vine, Oſiers; or of ſharp Fruits, Pomegranates, and Sloes diſtilled.

The Decoction of the ſame is good, chiefly of Pomegranates, and *Dioſcorides* commends the Decoction of plain Tree leaves.

He alſo commends Buck-wheat, and dryed Flower.

Alſo the Pouder of Ebeny.

This is an excellent Oyntment to put into the corner of the Eyes. Take *the Juyce of four Pomegranates, or of Bramble tops, or Roſes* as much as you pleaſe, boyl it to the conſumption of half, mix it *with Pouder of burnt Myrobalans, four Grapes,* and add *a little of that Juyce which is taken from a Blood-ſtone, or a Hone, ſuch as Barbers ſet Rayſors with, being rubb'd with another Whet-ſtone, and convenient Liquor. And other drying Pouders.*

Burnt Vitriol with Sugar diſſolved in Water is excellent.

The Cure of the dropping at the Noſe.

In regard the dropping at the Noſe and Snot, is an Excrement of the Brain, you muſt rather prevent the increaſe of the Humor then ſtop it.

The Cure of the Coryza or Poſe.

In the Coryza or Poſe, water flows from the Noſe abundantly, and the Noſtrils are offended, and the Parts adiacent, which brings alſo a Cough. You muſt purge the Excrements of the Brain and the Defluxion, as there mentioned; Not neglecting the Noſtrils which are ſore, but uſing things againſt Inflammations and Ulcers.

The Cure of matter from the Ears.

If a Water-flux from the Ears be little, and do no other hurt, you need do nothing but take away the Humor in general, and if it be large, uſe things that hinder the increaſe of the Humor, and purge it with water-purgers and Diureticks that is by urin; of which there are divers in the Cure of the Dropſie Aſcites. If it be thick Snot, and flows not ſo readily as the other, you muſt uſe Cleanſers: ſuch as are uſed to purge the Ears, there mentioned.

The Whites, although women have them without hurt a long time; yet at length it makes them diſcoloured, and ſlothful, and unfit to conceive, and diſtaſtful to Men, for which Cauſe they deſire much to be cured: which is difficult when it is old, and ſcarce abſolutely to be done ſo, but it will return. And if the Whites be malignant, then beſides the Filthineſs and Stink, there are hurts in the neck of

of the womb to the bottom and ulcers: And ſomtimes other Diſeaſes are cauſed by the too great Evacuation.

The way of Cure is, to hinder the Bleeding of theſe Humors in relaxation to the Stomach, and ſo fetch them out of the Body, and conſume them, and to draw them, and turn them from the womb, and to dry and ſtrengthen the Part. But if other Diſeaſes be joyned therewith, that came before, or after it, as Cachexy, Dropſie, then you firſt muſt look to them; and thoſe parts that are ordained for Concoction, and are faulty, muſt be amended. If barrenneſs follows, and the woman be troubled therewith, you muſt aim at both in the Cure: And if Conception be hindered by moiſtneſs or plenty of Excrements, you may uſe the Courſe mentioned in the Cure of Barrenneſs. But for the Whites alone, you muſt uſe things to evacuate and to alter as follow.

There are divers Evacuations to purge theſe Excrements from the whol Body, as Blood-letting, Purging, Vomiting, and Sweating.

Blood-letting is good in full bodies, becauſe ſome of the Excrements are taken away thereby, either at a Vein or with Scarification: As alſo by provoking the terms is ſtopped, becauſe thereby the Excrements that cauſe the Whites are totally taken away or in part.

Firſt we muſt purge, and the more by how much the greater the Flux is; and we muſt regard the Conſtitutions and purge with things proper for the humor abounding, alwaies uſing thoſe Purgers which have an aſtringent quality, as in other Fluxes.

In moiſt bodies, in whom this Flux is moſt ordinary, we prepare before purging; firſt we give a Clyſter or a Laxative, then we give theſe following three, four, or five daies.

As this Julep. Take *Honey of Roſes, Syrup of Hyſop, each two ounces; Syrup of Stœchas, Mugwort, each one ounce; Water of Balm, Betony, Nep, Penny-royal, Sage twice as much as the Syrups*: mix them *with a little Cinnamon, or Diamoſchum, or Diambra.*

Or this Decoction. Take *Orris roots one ounce and an half, Madder, or Valerian one ounce, Cypreſs roots, Elicampane, each half an ounce; Betony, Nep, Balm, Mugwort, or the like, three or four handfuls, Roſemary tops, Lavender, Wallflowers, red Roſes, each one pugil; the great hot Seeds two drams, the leſſer hot Seeds one dram, Peaſe one pugil*: boyl them *in Waters, and with Sugar, and Honey, and Cinnamon, mix them for four or five doſes.*

Purge afterwards thus. Take *of the Decoction mentioned as much as will ſerve for once*, add *Carthamus ſeeds, and Senna each half an ounce*; boyl them, and infuſe *two drams of Agarick well mixed with Honey of Roſes*: make a Potion.

Or give Diaphœnicon, Diacarthamum, de Citro ſolutivo alone, or diſſolved with the Decoction, or preparing Waters, or Pills of Agarick, Cochy, Fœtidæ.

You muſt purge often, gently, as with Pills of Hiera, Maſtick, Aſſaiereth, Alephangine, or with the ſtronger mentioned, among which the preparative Decoction increaſing the quantity thrice, and adding *Agarick five drams, Turbith three drams, Ginger half a dram* may be given ordinarily: Or you may infuſe them all in Wine, with a little Wormwood.

Things good to prepare and purge Flegm, as in Defluxions, are good alſo here.

When the body is corrupted, and the humor malignant and evil coloured. Prepare thus,

A Julep. Take *Honey of Roſes two ounces, Syrup of Betony, Endive, Fumitory or Hops, each one ounce; Wormwood, Maiden-hair, Bugloſs, and Fennel-water twice or thrice as much as the Syrups, take it often.*

Or with this Decoction. Take *Liquoriſh one ounce and an half, Succory, Fennel, Dandelion, Elder, and Danwort barks, each an ounce; Endive, Succory, Bugloſs, Fumitory, Hops, Betony, each one handful; Cordial Flowers, and Broomflowers, each one pugil; the four great cold Seeds half an ounce, Fennel, and Aniſe-ſeed, each two drams, Dodder ſeed one dram*: make a Decoction, ſtrain it, and ſweeten it with ſugar, Cinnamon, and Diarrhodon.

Purge thus: Take *of the preparing Decoction, as much as will ſerve*, add *Senna half an ounce, yellow Myrobalans one dram and an half*; boyl them, infuſe *Rhubarb one dram, Syrup of Roſes one ounce and an half, or Juyce of Roſes one ounce*: make a Potion.

Or with the Potions mentioned in the Flux of the terms beginning thus. Take *Tamarinds, Prunes &c.* Or, Take *yellow Myrobalans &c.*

Or give the Electuary of the Juyce of Roſes, Diaſenna, Confection Hamech, diſſolve it with the aforeſaid Decoction or Waters, or Goats whey; or give aggregative Pills.

When we will purge often, we give gentle medicines, Catholicon, Diaſebeſten, Tryphera Perſica, or Syrup of Roſes, or the Infuſion of Senna, Rhubarb, Agarick, or of Fumitory, or Epithymum, or ſtronger mentioned.

Or this Apozem. Take *the Decoction mentioned to prepare*, add *Raiſons ten pair, Prunes ſix, Tamarinds one ounce, Polypody two ounces, Senna three ounces, Epithymum two drams, Myrobalans yellow, Chebs and Indian, each two drams*; boyl them in water, and infuſe *the ſtraining Rhubarb three drams, Spike one ſcruple*, ſtrain them, add *Sugar to ſweeten it.*

You may uſe many Preparatives and Purges, mentioned in Cachochymy, and the like Diſeaſes, as Cachexy and Dropſie, when the Body is inclined thereunto.

A Vomit makes a great and ſudden Evacuation, and is good here. When the body can endure it afore meat; or after, meat when they are weak. And this draws the humors upwards.

Diaphoreticks are either inſenſible by tranſpiration, or ſenſible by Sweat, and they are good in flegmatick bodies, when the Diſeaſes are old.

Alſo Exerciſe to provoke Sweat, is good.

And to lay on Cloaths to provoke Sweat.

But a hot Houſe is beſt, becauſe it is ſtronger, eſpecially if it be heated with the Decoction of things that provoke Sweat: As Chamomil flowers, Melilot, and other ſweet Herbs, of which we ſhall ſhew how to make moiſt Baths, in which they may ſit. And which alſo do provoke Sweat.

Fumigations alſo for the whol Body, and Oyntments for the Back-bone; theſe do not only ſweat, but dry the body, and conſume the humidity. Among which is that of Cinnabar for the Pox. But here we uſe but a little with other things, leaſt the Jawes ſhould be infected, and it is good when the Diſeaſe is deſperate.

Alſo you may give things to drink, that provoke Sweat. And continue them for ſome weaks, when the Diſeaſe is old, with a ſpare Diet. And this is to be done by the decoction of Guaicum and Sarſa, as in the French Pox.

You may give Alteratives to dry and conſume the Humidity if it be very watery, with Aſtringents if it be immoderate; ſuch as are mentioned in the Cure of the overflowing of the Terms, which ſtop them, and may alſo theſe. But becauſe the filth is purged by theſe, and not profitable blood, as in the Courſes, and the body is not ſo much or ſo ſoon weakned by theſe, they are not ſo ſuddenly to be ſtopped, therefore let the medicines be rather drying then binding, and warm to comfort the womb: They are thus made.

Pouders are beſt alone with red wine, or ſteeled wine, or the like, or with Sugar in tablets.

The firſt Pouder. Take *burnt Harts horn two drams, Ivory one dram, red Coral burnt one dram and an half*: make a Pouder.

Another. Take *Amber two drams, Frankincenſe, or Maſtick one dram, Gum Arabick, or Traganth half a dram*, make a Pouder.

A third Pouder. Take *Date-ſtones burnt two drams, four Pomegranate kernels, or Roſe-ſeeds one dram, the inward down of Cheſnuts, or Hazel-nuts half a dram.*

The fourth Pouder. Take *burnt Cork two drams, Grains*

of *Sumach one dram, Acacia, or Hypocistis half a dram.*

The fifth. Take *dryed Berbery seeds, of the two low Bramble-berries, Raſ-berries, or Mulberries, Myrtles, each one dram, Agnus Caſtus seeds half a dram*: make a Pouder.

The ſixth. Take *Comfrey leaves two drams, Ladies-mantle, or Yarrow one dram, Mints half a dram*: make a Pouder.

To any of theſe you may add half a dram of the following Pouder which is pleaſant. Take *Cypreſs roots, and Galangal, each one dram and an half; dryed Citron peels, Cinnamon, each one dram; Aniſe-ſeeds* (which *Dioſcorides* commends) *one dram and an half, Coriander ſeed parched one dram, Spike one ſcruple.*

Or, Take *as much Aromaticum Roſatum, Diagalanga, or other Dryers.*

Of theſe you may compound others. Others are of the Roots of Avens, Fullers thiſtle, Mead ſweet, Oak leaves, Brambles, Sumach, wild Tanſey, Lungwort, Adders-tongue, Moonwort, Roſemary, Flower gentle, Millium, Roſes, Piony ſeeds; alſo Aſhes of Cray-fiſh, Shell-fiſh, Spunge.

If you muſt bind more, you may add ſome of this Pouder following to the former. Take *Galls, or Pomegranate-peels one dram, Pomegranate flowers half a dram, Bole, or the like one dram, Bloodſtone half a dram, Acacia, or Dragons blood half a ſcruple.* Or uſe the Aſtringents, mentioned in other Fluxes.

You may make Decoctions of the ſame Plants, or you may make Wine in the Infuſion of them dry.

You may alſo uſe the Juyces of the ſame, alone, or with other Drinks.

You may make Syrups of the ſame, or give ſome aſtringent uſual Syrups, mentioned in the Terms, as of Mugwort, Stœchas, &c,

Drink Waters of Plantane, Oak budds, wild Tanſey, Yarrow, Ladies-mantle, Roſes, Water-lillies, Mints, Service-berries.

Conſerve of old Roſes, Pomegranate flowers, Acorus, Roſemary flowers, Stœchas, candied Citrons.

You may make Electuaries of the ſame, with Pouders and Conſerves, and give Waters to drink after them.

Pills of Bdellium are good here, as in other Fluxes.

Cymbalaria, or that wall herb which is like Ivy, is good in Sallets, and Bee-nettle.

The Chymicks cry up the Vitriol of Iron for a great ſecret, and give every night one grain thereof at bed-time for a month, in Plantane-water, or red Wine, and make Pills of Magiſtery of Coral and the ſame.

Many things are applied outward, which dry up the humors, and being aſtringent, do fix the Veſſels about, which conveigh the humor, and ſtrengthen the womb.

The uſe of Natural Baths for many daies, or weeks after purging often, and good Diet, with drying and ſweating, is good; therefore women that have the Whites, and are barren, do much uſe them. All Dryers are good, as in Sterility or Barrenneſs, Allum, Niter, Salt, actually hot by Nature or Art. Alſo the Sulphur Baths, by uſe whereof women as I ſhewed had the Whites, and were cured by the ſame.

Artificial Baths to ſit in, do the ſame, uſed long or often, as we ſhewed in Barrenneſs: Of Salt, Allum, Sulphur, boyled in Rain-water, till the water taſt of them, adding Vitriol to bind, or Ruſt of Iron.

Or you may uſe Iron-waters, with burnt Plaiſter of Paris to make it dry more.

Baths of Plants, decocted in the Waters mentioned, or with Iron-water, or Bean-water, or Lye, or red Wine, with Snakeweed roots, Docks, Madder, Valerian, Cypreſs, Periwincle, Mugwort, Bettony, Tamariſk, Savine, Ivy.

If you will bind more, uſe Galls, Acorn-cupps, Pomegranate peels, Cork, Sumach, Roſes, Pomegranate flowers, Oak moſs, Myrtle-berries, and the like. In cold women, add the hot ſweet Plants, as Penny-royal, Organ, Calamints, Mints, Balm, Sage, Nep, Marjoram, Roſemary, the great and leſs hot Seeds, Rue, and Agnus Caſtus. To which Decoction add Earths that are dry and ſalt or Bole, or Blood-ſtone, and then they will aſtringe more.

You may uſe Fomentations inſtead of baths, or bags to be ſitten upon hot, full of the ſaid Herbs, wild Rocket boyled in wine, is the beſt. It is good to put in ſome ſweet plants to take away the ſtink of the excrements, chiefly Bay leaves, and Myrtles, Angelica roots, Coriander-ſeeds, Cloves and the like, Vinegar of Roſes, Elder flowers, or the like.

Oyntments and Plaiſters applied to the Privities, Reins, and Loyns, ſtop this Flux, as well as that of the terms: and the Oyls there mentioned, eſpecially of Henbane. To which you may add hot things, becauſe the humor is watery, and ſome of the pouder for a Peſſary. Gallia Moſchata, Musk, & Ambergreece, yet the ſcent wil be loſt with other things.

Many things are put into the neck of the womb to dry, and aſtringe the looſe Orifices, and ſtay the Flux, and ſtrengthen the Part.

Some Herbs are put in ſtamped, Periwincle, Yarrow, Tamariſk, and the like, alſo Aſarum roots which cleanſeth, and takes away the ſtink.

A drying Peſſary is thus made. Take *Galls, or Acorn-cupps three drams, Cypreſs-nuts two drams, Pomegranate flowers one dram, Frankincenſe one dram and an half, Aſhes of Tamariſk one dram, Savine, or Mugwort half a dram, Goats dung, or Aſhes dryed one dram, with Juyce of Shepheards-purſe, and the White of an Egg, and fill a bag for a Peſſary.*

To take away the evil Scent. Take *Cypreſs roots two drams, Marjoram, Mints, Penny-royal in Pouder, each one dram; Schœnanth, Spike, each half a dram; Cloves one dram*: make a Pouder to be uſed alone, or with the aforeſaid, you may add Sanders, and wood Aloes.

Gallia Moſchata, Musk, and Ambergreece will make a better Scent.

You may uſe cleanſing Injections, ſuch as are mentioned in the Ulcer of the Womb, and theſe following.

You muſt make drying and aſtringent Injections of the Decoction that dryes and heal the Ulcer of the womb, or of the Baths and Fomentations, which we uſe outwardly. And if there be a ſtink, let them be qualified as afore.

Fumes pierce beſt into the womb, they dry, bind, and ſtrengthen, and refreſh the womb by their Scent.

Theſe are made of the Decoction of Plants, mentioned for a Bath hot, and taken in with a Funnel, or under the Cloaths.

Or you may caſt Pouders, or the Troches, mentioned in Barrenneſs, upon Coales, Or thus: Take *Maſtick two drams, Frankincenſe, Labdanum, each one dram; Amber, Hypociſtis, Storax, Benzoin, each half a dram; with Bdellium*, make a Pouder.

Keep a good Diet. Let the Air be dry, and avoid cold and moiſture. Eat little, and that which is of a good Juyce and breeds little ſuperfluous Moiſture. Let the Drink be little, rather wine then water. Avoid idleneſs and too long ſleep.

The Cure of preternatural Sweat.

Evil Sweats that ſtinke, are clammy, or ſtain Linnen, becauſe they purge Excrements from ſound and ſick muſt not be ſtopped, but rather furthered. And you muſt cure it by taking away the Cauſe of the abundance of Excrements, and prevent thoſe Diſeaſes which ſweating foreruneth. And if this Sweating be in a Diſeaſe, and the Diſeaſe not cured thereby, you muſt uſe all diligence to take away the remainder of the Cauſe of the Diſeaſe.

There is nothing peculiar for cold Sweats, for in Diſeaſes they are deadly. If they come from fainting, they ceaſe when the Patient comes to himſelf. If Heat cauſeth ſweating with faintneſs, that muſt be allayed. If the abundance of Moiſture that muſt be diminiſhed. If Sweats in Diſeaſes be ſuperfluous and unprofitable, and cannot be well ſtopped without weakneſs: though Nature endeavors to diſcharge her ſelf thereby, yet being ſo great that the Patient may ſooner die then the Diſeaſe be diſcharged, they muſt be ſtopped.

We

We open a Vein when there is fulneſs, and the Body ſweats too much, that with the blood ſome water may alſo come forth.

Alſo by purging water, or ſuch humors as make it too fluid. Alſo in Diſeaſes, if the Sweat be too much, and neither cures nor abates the Diſeaſe, we are thereby admoniſhed to purge again often.

Forcing of ſweat doth ſomtimes cure ſweat that comes of it ſelf, as often bathing, or hot Houſes, which taketh away the Matter.

We give Drinks to thicken the water, to cool and aſtringe, and ſo hinder Sweat. As we ſhewed in immoderate Piſſing, that they would ſtop it, which are proper here, if we mix Reſtauratives when there is weakneſs, alſo the Diet there mentioned is proper here.

Provoking of Urin doth hinder ſweating, by diverting and evacuating it.

Alſo Syrups, Decoctions, Waters, Conſerves, Mucilages, Pouders there mentioned, with Cordials, as Diamargariton frigidum.

Outwardly apply things to repel the Flux of water, and that bind the skin, and ſtop the Pores, by degrees.

Anoint the Back and other parts, with Oyl of Willow-leaves, or of Myrtles, Roſes, Quinces.

Or, Take *Oyl of Willows three ounces, Myrtles two ounces, Juyce of Houſleek, or Nightſhade, Vinegar, each one ounce and an half*; boyl them till the Juyces be conſumed.

To this you may add things to cloſe the Pores, *as of Mucilage, of Fleabane, or Quinces, one ounce and an half, Infuſion of Gum Arabick, or Traganth in Roſe-water one ounce, one White of an Egg, and Wax.*

Or, Take *Maſtick two drams, red Sanders one dram, red Roſes, Pomegranate flowers, Myrtle leaves or Berries, each half a dram; with this Oyl mentioned* make *a Linimens, or with Wax an Oyntment.* Dioſcorides adds *Sulphur, Gypſum, and the Stone Morochthus.*

Smoak the Linnen with Frankincenſe, Maſtick, Gum of Juniper, Roſes, and Pomegranate flowers, to dry the Body.

The Smell of Camphire in Roſe-water is commended.

Actually cold things cloſe the Pores, if they touch the skin, theſe are to be uſed by degrees, not ſuddenly.

Cold Air is the beſt, by opening windows, and caſting off Cloaths, or by ſprinkling cold water in the Chamber, Vinegar, or cool Herbs.

Sprinkle the Face with water and vinegar, it is excellent.

Apply cold things to the Heart and Pulſes, being cordial.

Let the Air be free, and not hot, and the Garments thin. Let Baths be avoided, the Exerciſe moderate. Let ſleep be little, if the Sweat be moſt then.

The Cure of a watery Flux from a Tumor opened, or an Ulcer.

That Flux of water which comes from the tapping for the Dropſie in the Belly, or from other pricks or cuts, or burnings in the Water-rupture, or in Puſtules, or watery Tumors, or Ulcers is cured: As we ſhewed in Tumors and Swellings.

CHAP. VIII.

Of Spitting.

The Kinds,

SPitting by which Spittle is ſent out of the Mouth, with Hawking, and ſomtimes Coughing is preternatural, chiefly when it is much and filthy; becauſe other humors are alſo ſpet forth, it differs, and is either of Flegm, or Blood, or Matter.

Spitting of Flegm.

There is a Spitting of flegm or water more often then is fit, in ſound Men, ſo that ſome ſpit when they are ſpeaking at every full point. This is not commendable in Orators, except it be ſeldom, and after a long Sentence.

Ptyaliſmus.

In ſome Diſeaſes, as Catarrhs, and Moiſtneſs of Stomack, there is the ſame continual Spitting called *Ptyaliſmus*.

That great Spitting which comes from Medicines for Salivation or Head-purgers, cannot be counted preternatural, becauſe it is good for Health; nor that which comes from Quick-ſilver in the Pox, becauſe it conduceth to the Cure.

Flegmatick old Men uſe to ſpit Flegm with more difficulty. This is either hawked out of the Paſſage of the noſtrils, or Jawes, or coughed from the Breaſt. In flegmatick Diſeaſes that cauſe a Cough, this Spetting of Flegm comes often. In which it is ſomtimes thin, ſomtimes thick and mattery with ſcent, and without ſomtimes, ſomtimes with more eaſe, ſomtimes harder fetcht up: As we ſhewed in the Cough.

Spitting of Blood.

There is ſomtimes a Spetting of Blood without a Cough or Pain, in which the Spittle is onely bloody which defiles the Meat, ſomtimes pure, thin, or thick, with a bleeding at the Noſe, going before, or with it. Somtimes it is with pain, or hurt about the Jawes, Tongue, Palate, Gums: as ſhall be ſhewed.

Blood is coughed out at the Mouth, either alone, or with ſpittle like matter, in a Pleuriſie, or Impoſthume of the Lungs, with a pricking of the ſide, and a Feaver, as we ſhewed in the Pain of the Breaſt.

Spitting of Blood.

Pure Blood is ſometimes ſpet out at the Mouth with a Cough, ſomtimes more plentifully then others, and at a certain time, at a diſtance. A Conſumption follows this if it continue.

We have known divers women that have without hurt coughed up pure blood every month, but not much.

Others have caſt forth great quantities, which have been otherwaies ſound, or ſhort breathed, and ſome have loſt their lives thereby.

And ſome in Feavers, and other Diſeaſes, have filled baſons with blood, and then died.

As I knew a young widdow that had a Conſumption from her Husband that died but a little before, who after ſhe had with great difficulty, voided ſharp Stones or Gravel with great pain by coughing, voided abundance of blood by the rough Artery, twice, and the third time died.

Spitting of Matter.

Somtimes there is Matter ſpit up with Flegm or follows it; ſomtimes it is clear, thin, or ſnotty; ſomtimes thick and white, yellowiſh, greeniſh, or blackiſh; ſomtimes without taſt; ſomtimes ill-taſted. Other voidings of matter follow other Diſeaſes, and are joyned to their great Symptoms.

The chief are pain in the Ulcers of the Mouth, Noſe, and other parts, as of the Jawes in the Squinzie, in which diſeaſes, Matter is ſpit up. Alſo in ſpitting of blood with Matter and a Cough, in the Pleuriſie and Ulcer of the Lungs, in which we have ſeen a baſon full of thin Matter ſpit up in a little time. The Conſumption of the body is joyned with ſpetting of matter with a cough in the Phthiſick, which continueth till death. As we ſhewed at large in thoſe Diſeaſes.

Alſo an Empyema joyned with a Pthyſick, the Spetting of Matter is the more.

The Spitting forth of an Impoſthum.

There is alſo a Spitting of Matter by which there is Matter ſent forth with its bag, as big as a peaſe or nut, one or more at a time, when they are little. Somtimes the Matter is ſpet forth before the bag, which is broken; this is accompanied with a ſhortneſs of breath, a Cough, and ends in a Phthiſick.

The

The Cauſes.

The Cauſe of all theſe Kinds of Spitting is from Spittle, or Flegm, or Blood, or Matter, or a corrupt Humor.

Plenty of Spittle is the Cauſe of Spitting of flegm

Often ſpitting comes from much water which is Naturally in the Mouth, to moiſten it, mixed with Flegm; from an evil cuſtom, as of Orators who that they may not ſeem to be out, will ſpet at every full point, or oftner. Alſo much water gathered to the Mouth by long moving of the Tongue in Diſcourſe, may cauſe the ſame, Alſo medicines may cauſe the ſame, but becauſe it is then profitable, it is not preternatural. Alſo the phanſying or remembring of ſharp, bitter, ſour, or things pleaſant to the Tongue and Palate, may cauſe the Mouth to water, but it is preternatural.

Flegm from the brain is the cauſe of Spetting.

The great Spitting in the Diſeaſes called *Ptyaliſmus* comes from a water without taſt or ſalt, or ſour, falling from the Head into the Mouth, and mixing it ſelf with the ſpettle. And if this Humor falls as low as the Lungs, it cauſeth the Spetting with a Cough which is mentioned. In which at firſt the humor is thin, and then thicker by continuance, and at length being baked with heat and white, it reſembleth Matter: As we ſhewed in the Cauſes of Spetting of Matter.

Flegm ſent from the Lungs to the jawes, is another Cauſe.

Flegm made of the Excrements in the Lungs, either like Snot or Matter, if it be coughed into the Mouth, cauſeth the like ſpetting. And this is uſual in found and old men: And in the Diſeaſe of the Cough, and ſomtimes in the Aſthma, in which it is not ſpet forth, and being clammy, cauſeth no Cough: As we ſhewed.

Moiſtneſs of the ſtomach, is another Cauſe of Spetting.

Moiſture carried up from the Stomach and mingled with the Spittle in the mouth, is the Cauſe of Ptyaliſmus or Spitting, as it is from the Head. In which Nature by often ſpetting, labours to diſburden her ſelf in the morning faſting, when the Stomach hath nothing in it but that water. The Cauſe of which Moiſture of the Stomach, we ſhewed in the Weakneſs of the Stomach from that Diſtemper.

Spetting of Blood comes from Blood brought to the Mouth, from a Vein or Artery opened in the Noſe, Mouth, Jawes, or Lungs, or Breaſt.

The blood from the Noſe, is the Cauſe of Spetzing it from the Mouth.

We ſhewed in Hæmorrhagy, how blood might flow from the Noſe to the Mouth, but the plenty thereof, or when the lower Veins are opened, or when the Noſe is ſtopped, and the Patient lyes upon his Back to ſtanch it, is the Cauſe of the Falling of it into the Mouth.

The Swelling, ſucking, or hurt of the Gums, is the cauſe of ſpitzing Blood.

Blood eaſily gets into the Mouth from the Gums eaſily when they are ſwollen, becauſe they are ſoft, and ſo looſe fleſh. Or when they are ſucked, as in the toothach, or otherwiſe hurt, as by picking the Teeth, or eating hard things. But eſpecially when a tooth is pulled out, and torn from the Gums and Membranes. I once ſaw ſo great a Flux of Blood from an Artery opened by the drawing of a tooth, that it could not be ſtopped, and the Patient died thereby.

A Wound in the inward part of the mouth, is the Cauſe of Spetting of Blood.

Without great violence, blood will not flow from other parts of the mouth, as from the tongue, cut, or bitten, as it is uſual in Convulſions, or from the skin of the Mouth wounded. Alſo Blood flows plentifully from the Veins under the tongue when they are opened, called the *Ranunculi* or Frog veins. And I knew a widdower that cauſed both thoſe Veins to be opened, who ſpit blood till he died.

Blood from the Lungs is often ſpet at the Mouth, and it comes from the inward Veſſels of the Lungs, which fill them with blood; being opened or broken, it is carried into the branches of the rough Artery, and thence into the windpipe, and ſo by coughing into the mouth, and then ſpet forth. Somtimes the Veins are opened by Anaſtomoſis, and there is a Diſeaſe called *Hæmoptoica Paſſio*, or ſpetting of blood. As when there is a plenty of blood in the lungs which ſtretcheth the Veſſels, and opens the Mouths thereof, till it ſweat through, or flow forth, more or leſs. And this is often without other hurt, if the Mouths do ſhut themſelves again, as we have ſeen in men of full bodies, and women that wanted their Terms through Conception, or the like. But it is dangerous, and deadly often, when the Mouths of the Veins are ſo enlarged, or continually moved, that they cannot be ſhut. Or when any part of the blood gets into the ſubſtance of the Lungs which putrifieth them: As we ſhewed in the Phthyſick.

The opening of the Veins of the Lungs by corroſion, is the Cauſe of Spetting blood

From the ſame Blood of the Lungs, that gets out by Anaſtomoſis, and doth not go directly into the branches of the rough Artery, but firſt into the ſubſtance of the Lungs cauſing Inflammation, and thence into the branches of the rough Artery: There is a Spetting of Blood and Matter in the Pleuriſie, and the Impoſthume of the Lungs, or Peripneumony: As we ſhewed.

When the great or ſmall Veins of the Lungs are broken, there is a Flux accordingly with a Cough, and that is called *Hæmoptoica Paſſio*, which being hard to be cured, ends in an Ulcer of the Lungs, with the Phthyſick. And this breaking of the Veins may be from violent Dilatation, or Contraction; as great blowing or whooping, or trumpeting; ſomtimes from a Cough or Sneeſing but ſeldom; ſomtimes from violent holding of the breath in ſtraining and Child-birth, or in carrying of burdens. Hence I have known divers Stone-cutters, which removing of great Stones ſpet blood, and became Phthyſical or Conſumptive, which the Vulgar ſuppoſeth to come from the Saw-duſt which they breath in, but falſly, for if the duſt ſhould get into the rough Artery, it would preſently be coughed out by its roughneſs, rather then ſharpneſs which it hath not, and therefore cannot hurt the Lungs. The ſame may come from other violent labour, or from a bruiſe of the Breaſt, by a fall or ſtroak, or the like that breaks the veins.

When the Veſſels of the Lungs are corroded, and the ſubſtance of the Lungs alſo, it is by degrees, and cauſeth a filthy Ulcer, there is the Phthyſick rather then the Hæmoptoick Paſſion or Blood-ſpetting; Yet blood is from the Ulcer ſpet up: As we ſhewed in the Phthyſick.

When Veins are opened in other parts of the Breaſt beſides the Lungs, and they ſweat through, or pour forth blood to the Lungs, there may be Spetting of Blood, as in the Inflammation of the Membrane, in the Pleuriſie; or breaking of any Veins in the hollow Breaſt. But when the blood flows into the Cavity of the breaſt, and not into the Lungs and ſtayes, and corrupteth, cauſing a Phthyſick, or Empyema; we ſhewed in the Cauſes of a Pleuriſie: we cannot make this the Cauſe of ſpetting of blood. Except from a wound in the Breaſt and Lungs, when the blood flows not only into the inward parts of the breaſt, but into the Veſſels, and ſo to the Mouth. And the rough Artery be wounded, the blood flows into the Lungs, and it is coughed up.

Ulcers in the Mouth, Noſe, Jawes, Lungs, Breaſt, Cauſes of ſpitting of Matter.

Matter is ſpet from an Ulcer in ſome parts; as the mouth and noſe, and the Jawes in the Squincie. Alſo from ulcered, rotten Lungs, in the Phthyſick, as we ſhewed. In an Empyema there is Matter in the hollow of the breaſt which fals from the Lungs, and if the Lungs be rotten, and a way open thereby, it is coughed up, neither can it be ſent any other way then by opening it externally. As we ſhall ſhew.

But

The Blood of the lungs turned into a matter, is the cauſe of Spetting of Matter.

But the Matter of the Lungs is not alwayes from an Ulcer, but from blood when the Lungs are inflamed without an Ulcer. And that Spetting of Matter in a Pleuriſie and Peripneumony is blood ripened..

Somtimes Blood flowing in a ſmall quantity from the Veins of the Lungs into ſome other part of the Lungs, where it ſtayes, and turns to Matter by degrees, which is by the dryneſs of the outſide turned to a Bladder. And this is the Cauſe of the Spetting of Impoſthumes, with little skins or bladders. And this may be without any other inconvenience, except the Matter ſo incloſed, hath hurt the Lungs. And then a Phthyſick or Conſumption followeth.

The Flegm of the Head, or Noſe, falling upon the Lungs, is the Cauſe of Spetting of Matter.

There is a alſo a Spetting of Matter with Flegm for the moſt part, when Rhewm from the Head, is fallen into the Cavity of the Noſtrils, or upon the Lungs, where it lyeth, till by Heat it be baked into Matter. This we have often ſeen in ſound people, and in flegmatick Diſeaſes that cauſe Coughing, when there hath been neither Ulcer, nor Conſumption.

The ſubſtance of the Lungs corrupted, is the Cauſe of Spetting of the Lungs.

It may come to paſs, that a putrid Humor concocted, may ſo eat the ſubſtance of the Lungs, that a piece of them may be ſpet up.

The Cure.

The Cure of moſt kinds of Spittings joyned with other Diſeaſes, is mentioned in thoſe Diſeaſes: But we ſhall ſpeak of the Cure of other Spittings according to their Cauſes.

The Cure of Spetting of Flegm.

Often Spetting from an evil cuſtom, as in Orators, is not to be cured, but by forbearing by degrees: If it come from much ſpeaking, let him be ſilent. If a Ptyaliſmus or Spetting come from Rhewm in the head or from the Stomach, when a watery Humor riſeth up and fills the Mouth. For that from the Head, you muſt hinder the increaſe of Rhewm, and purge it, and conſume it, and ſtop the Defluxion, as in the Cure of a Catarrh, and Cough mentioned. As for that from the Stomach, you muſt hinder the increaſe of Flegm in the Stomach, and that which is muſt be purged, and the weakneſs of the ſtomach ſtrengthned, with things mentioned in the Cure of a weak Stomach, which done, in both Cauſes, dry up the moiſture in the Mouth, and draw it away with Maſticatories to chew and the like, mentioned in the cold Diſeaſes of the Brain, and in the Tooth-ach.

Spetting, by reaſon of a Defluxion upon the Lungs, or Flegm bred in the Lungs, is cured as a Cough.

The Cure of Spetting of Blood.

The Cure of Blood-ſpetting is divers, as blood is from one part or another. From the Gums when blood floweth, we take blood, becauſe it is a ſign of Plethory, leaſt it ſhould cauſe worſe accidents: And we cure it as a Plethory. And if it continue, we uſe aſtringent Mouth-waters. Bleeding from a Tooth drawn, although it ſtop uſually of it ſelf, yet it ſtops ſooner, when the Mouth is waſhed with red Wine, Roſe Vinegar, and Roſe-water. But if it ſtop not by reaſon of a Vein or Artery broken, then you muſt uſe Aſtringents, mentioned in the Inflammations of the Mouth, and looſneſs of Teeth: And if it ceaſe not, you muſt ſtop the place from whence the tooth was taken, with Pouders mentioned in Bleeding of Wounds. Burnt Vitriol is excellent. If theſe will not do, uſe an actual or potential Cautery that will burn ſpeedily, leaſt it be held long in the Mouth. And this is done well with a Pill made of Cotton, and dipp'd in Aquaſ or-tis, and ſtopped into the ſpace between the Teeth. And this we have found by Experience, to have done the work, when others fayled, in this and other bleedings. When bleeding is from other parts of the mouth, hurt or wounded, it is ſtopped with the ſame waſhings of the mouth. And if there be a great Flux from the biting of the tongue, as I have ſeen after Convulſions with danger of death, then you muſt uſe ſtronger Cauſticks.

When Blood falls from the Noſe into the Mouth, it is cured, as the bleeding at the Noſe. But if there be danger, leaſt it falling into the Mouth ſhould be ſwallowed, or fall upon the Lungs, which can ſcarce be, for when it comes to the rough Artery, it cauſeth a Cough which caſts it forth: He muſt lie with the Face downward, that it may rather flow out at the Noſe then backward. Alſo you may keep it from flowing down, with holding water in the Mouth.

Blood-ſweating from the Lungs, and mixed with Spetting, and coughed up in a Pleuriſie or Peripneumony, is cured, as is mentioned in the Pains of the Breaſt.

The Cure of Hæmoptoica Paſſio, or Spetting of Blood.

The Hæmoptoical Paſſion, although it be in ſome, eſpecially women, without other hurt; yet is it ſomtimes dangerous, if often, and in great quantity: And ſomtimes deadly, through the ſudden loſs of blood, both in Diſeaſes and without. But uſually it turns to a Conſumption. Therefore it muſt be ſtopped in time, and if the Mouths of the Veſſels be open, they muſt be cloſed: And if they be broken, they muſt be healed. And in both caſes, the blood that clodders in the breaſt muſt be cleanſed, leaſt it hurt the Lungs, and the Cough cured. But if the Lungs be ulcerated, and there be blood voided with matter, from the corroding of the Veins; then you muſt cure it as a Phthyſick by healing the Ulcer, and the like.

For the Cure of the Hæmoptoick Paſſion, or Spetting of blood, is as followeth.

There muſt firſt be Evacuations by Blood-letting in the Arm, upon which ſide there is a pain, or heavyneſs, or pricking.

Alſo by Scarification, with Cupping in the Shoulders, ſides of the Neck, and Wriſt; or by a great Cupping-glaſs under the Ribbs, or Hypochondria's. Alſo by uſing Ligatures, and Frictions, as in Bleeding at the Noſe.

In full bodied Women we provoke the terms, if ſtopped or but few. And in Men the Hæmorrhoids, if they formerly had them.

If the Blood be watery we purge, but with mild things, and not hot, leaſt they ſhould cauſe Vomiting, which would do hurt. And with things that aſtringe, & ſtay other Fluxes, though they open the belly, as Rhubarb in pouder, with Juyce or Syrup of Plantane, or Purſlane, and a little Spikenard.

Alteratives muſt be in their Meat, and Medicines.

Let the Air be cool, and dry, either Naturally or Artificially, becauſe it being taken immediately into the Lungs, will dry well, as burnt Frankincenſe, Maſtick, and the like.

Let the Meat be glutinating of boyled Fleſh, boyled Snails are commended, and the Blood of Turtles and Kids. Let him eat Starch boyled in Roſe-water; and things made of Rice, or Barley, and rear Eggs, with boyled or raw purſlane in Sallets: Alſo ſour Fruits. Let him drink water, milk, ptiſanes, and the like, avoid ſtrong wine, and other things, actually or potentially hot.

You muſt provoke ſleep, if it be abſent.

Let him beware of coughing and ſpeaking loud, or much.

The Emplaſtick Medicines and Aſtringents mentioned in the Hæmoptoick Paſſion, which ſtop the Mouths of the Veſſels and heal, not with too much binding, leaſt the blood be ſtopped in the breaſt, with ſuch things as diſſolve and cleanſe the breaſt, not too ſharp and ſour, may alſo be uſed.

Let him drink morning and evening for two or three dayes this Decoction. Take *Comfrey roots two ounces, Marsh-mallows roots one ounce, Purslane,* if it be to be had green, *Plantane, Shepheards-purse, Solomons-seal, each one handful; red Roses one pugil, Seeds of Purslane, Plantane, Sorrel, Endive, Coriander, white Poppies, each one dram; Myrle-berries three drams, Jujubics, and Sebestens, each six pairs.* Boyl them in Rain-water, or Cistern-water, when it is strained, add *to one pint and an half thereof, as much Sugar, Penidyes, or Honey of Roses as will make an Apozem.*

Other things are good in a Decoction, as Roots of Avens, Brambles, Oak barks, or Acron-cupps, Sumach, Horstayl, Comfrey, Willow-herb, Vervain, Flowers of Teazles, Cheese-wort, Oliers, Reeds, Pomegranates, Harefoot, Leek, and Rose seeds, the Berries of bloody Rod.

They mix with these Plants for Wound-drinks, to heal the Veins, as Winter-green, Mousear, Sanicle, Golden Rod, wild Tansey, Yarrow, Agrimony, Nosebleed.

You may add for the Breast, Liquorish, Coltsfoot, Melon seeds, and Herbs that thicken the blood, as Violets, Endive, Bugloss, Water-lillies.

Some commend the Decoction of Iron, and Harts horn, in plantane-water, or the Decoction of the pouder of Blood-stone.

You may make a Syrup of the former Decoction to keep it longer, with more Sugar, and give it by ounces.

Or a Syrup of the other plants, as of purslane, which is best; it is made of three parts of the Juyce of Purslane, with two parts of Sugar boyled to a consistance. In the want of which, you may use the Syrup of Purslane by *Mesue*, of it, with Juyce of Endive, Vinegar, and Sugar. Juyce of plantane in a Syrup is also good.

The usual Syrups are Astringents, as that of dryed Roses, Myrtles; and Thickners, as of Jujubes, Violets.

You may give also the Juyces of the plants aforesaid, alone, as of plantane, purslane, or with others, and with Honey, or Sugar.

Some give Juyce of Sage, and Mints, with Sugar or Honey.

The distilled Waters are good in three ounces or more at a time, especially of purslane, plantane, Solomons-seal, Shepheards-purse, Comfrey, with other Astringents, as Horstayl, privet, Myrtles, Oak leaves, Roses. Some commend Water of Sowbread; others that of Mints and sugar.

A Compound Water is thus made. Take *red Snails out of the shells one pound, Comfrey roots half a pound, Plantane, Purslane, each one handful; red Roses one pugil, Myrtle-berries half a pugil, Juyce of Quinces, Bar-berries, or Cornel-berries four ounces, Spikenard half a dram*: distil a water.

There are pouders of divers things to be given with Sugar, because they are unpleasant, as this. Take *Comfrey-roots one dram and an half, Seeds of Purslane, Plantane, white Poppy, St. Johns-wort, each one dram; red Roses half a dram, Pomegranate flowers one scruple, Starch, Amber, each one dram; Gum Arabick and Traganth, each one scruple; burnt Harts horn half a dram, Bole, or sealed Earth, red Coral powdered, each two scruples; Dragons blood one scruple, Sugar of Roses, or Penidyes as much as all the rest*, make a pouder, give *a dram, or a dram and an half at a time.*

The Pouders of the Troches of Amber, or sealed Earth without Opium, or of burnt Ivory, are also good.

To which you may add Grape seeds, Bar-berries, Myrtles: Also Frankincense, Mastick, Ashes of Egg-shells, Cuttle-bone.

Old Conserves of Roses also, often taken, and that of Comfrey roots, and Sugar, or Honey, or of the strongest Herbs mentioned.

Also candied Comfrey roots.

And this Electuary Take *Conserve of Roses, Violets and Comfrey, each one ounce and an half; of Quinces one ounce, of the Pouders mentioned, two drams, Acacia one dram*: mix them *with Syrup of Myrtles.*

Another when there is fear of congealed Blood. Take *of the Looch of Purslane, Pouder of Comfrey roots half a dram, Amber one scruple, the Runnet of an Hare half a scruple, with Syrup of dryed Roses*: mix them, let him take it often. Some add Mummy, when the blood is clotted.

Or this Lohoch. Take *a White of an Egg well beaten,* and add *as much Mucilage of Fleabane, made with Purslane-water, and the Infusion of Gum Traganth in Rose-water, with Penidyes, and a little Starch.*

The Lohoch of purslane is the best against blood-spitting, made of Juyce of purslane, Gum Arabick, Dragons blood, Troches of Lemnos, Earth, Amber, burnt Hares hair, and Sugar.

Another of Traganth, and Arabick infused in Rose-water, and old Conserve of Roses, Syrup of dryed Roses, Lemnos, Earth, and Bole.

You may make Lozenges of the aforesaid pouders, to be held in the Mouth, with Gum Traganth infused in Rose-water, or with Sugar dissolved in proper Water.

Sugar of Roses, and Diatragacanth frigid, are good to be held under the tongue.

Potions are thus made, or Juleps. Take *the Syrup of Purslane, and Plantane, each one ounce and an half; Water of Solomons-seal, Shepheards-purse, and Roses, each two ounces*; sweeten it with *Sanders* or *Spike.* Let it be given at thrice.

Of other Waters and Syrups you may make the like.

Or: Take *one dram and an half of the Pouder mentioned, and give it with Water, or Milk, or Water and Honey, or with some Syrup, and then you may give half a dram without Sugar.*

Or this: Take *Syrup of Purslane, or Plantane one ounce, of Myrtles, and red Roses dryed, and Wine of sharp Pomegranates, each half an ounce; Bole, or sealed Earth, Coral, each half a dram; Bloodstone and Amber, each one scruple; or of the Pouders, or the Troches mentioned, one dram,* give it *with Water of Shepheards-purse, or of Solomons-seal.*

We make these stronger with Narcoticks, which do not only astringe, but stupefie the sense, and keep the motion of Nature from bleeding, and asswage the Cough, they are thus made.

An excellent pouder. Take *Sugar boyled with Rose-water, or Violet water till it be thick, one ounce, Pouder of Henbane seeds one dram, give one dram at a time, alone, or with convenient Liquor,* you may add *Pouder of red Coral, Bole, or other fat Earth, each half a dram, Gum Arabick one scruple, Penidyes two drams, then give one dram and an half,* if the Flux be violent, or add the pouders that begins thus. Take *Comfrey roots &c. and Henbane seeds two drams.*

They may be made into Lozenges, with Gum Traganth infused in purslane-water.

Or give this Opiate. Take *Conserve of Roses, or Violets one ounce and an half, white Henbane seed powdered, one dram and an half, Syrup of Poppies, or Diacodium one ounce: The Dose is a dram at a time.*

Philonium persicum, and Diacoralium of *Galen*, the Troches of Winter-cherries with Opium; which have besides the binders, and the Opium, Henbane seeds. Also the troches of Amber, with Opium. All these are given a *a dram* in weight with convenient Liquor.

Athanasia Nicolai is commended, Treacle and Mithridate are not so good here.

Seven grains of Cynogloss pils which have Opium, and Henbane seeds, are good to stop Blood and Fluxes.

The Syrup of poppy, or Diacodium, with Syrups, Juyces, and other convenient Waters, is good also.

Outward Applications can do little to stop Veins in the Lungs, because they grow not to the breast, and strong astringents laid to the breast, do keep in the blood; therefore use only a little Oyl of Myrtles, Mastick, or Quinces which do but little good or hurt. And if the Vein be opened in the breast, apply stronger things where the pain is, for then there is no spiting of blood, as I shewed.

You may here if the bleeding be great, apply things to the Liver, Stones, and other parts, as in other Fluxes. As the Amulets for bleeding at the Nose. That

The Cure of Spitting of Matter.

That Spitting of Matter which is from Flegm changed into Matter, is cured as the spitting of Flegm.

If it be mixed with blood comming from the Inflammation of the Lungs, cure it as a Pleurisie or Peripneumony, or Inflammation of the Lungs.

If it come from an Ulcer in the Lungs, cure it as the Phthysick. If it come from the cavity of the Breast in an Empyema, passing through the Lungs ulcerated, cure it as the Phthysick also, opening the Breast: As we shewed in the Excretions in the Superficies of the Body.

The Cure of a bladder or imposthume spet up.

If a Bladder with Matter be voided by spitting, either whole or broken, cure it as an Ulceration of the Lungs in a Consumption. But if the Lungs be not hurt or no signs thereof, you must not take that course; except, after they have bin often voided, there be a suspition that others may grow, then by the medicines mentioned for the Cough, you must hinder the growth of them. And if they be new grown, as will appear by the heavinesse of the Lungs, least it should hurt the Lungs by Continuance; *Dioscorides* orders that Goats Organ, and Sowbread seeds be often drunk, or licked with Honey. The Fume of dryed Colts-foot will do the same. And other strong expectorating Medicines.

CHAP. IX.

Of Vomiting.

The Kinds,

A Vomit or Vomiting by which the thing taken, and other Humors and Excrements are sent forth from the Stomach by the Gullet and Mouth, is almost alwayes preternatural, though it doth good, because it is not usual and necessary as spitting, pissing, going to stool, nor is it so easie as those, when they are according to Nature; but is like a cough with labour, pain, crying, and sweat, and there goes before a loathing moistnesse and bitternesse of the mouth, trembling of the Lipps, and other accidents, worse in them who are unfit, and hard to vomit. And it is chiefly preternatural, when it is often and much, or things are voided that ought not.

Preternatural Vomiting.

These are of divers sorts, both in Diseases whose symptoms they are, and without Diseases.

When Vomiting is without a Disease or other accidents, but only those of Vomiting, that is after Gluttony or Drunkennesse: They cast up their gorge, and immoderate wine, and therewith somtimes many Excrements, both of Flegm and Choler. This happens to many, either suddenly or after sleep, with a Dizinesse. And though it refresh, yet if it be usual, and continue long, it weaknens the Stomach, and leaves thirst and other accidents.

There is another Vomiting after nauseous meats, by which they, and other things are cast out of the Belly; and this, if immoderate is hurtful.

There is also another which is usual, and comes after the giving of venemous medicines purges especially, which are suddenly thrown up again; or when they begin to work downwards, with divers Excrements.

Also that Vomiting which is from a Vomit given on purpose, if it be violent or much, is dangerous. And such symptomes as follow Cholar, follow these Vomitings.

There is another usual Vomiting with Women with Child, who Vomit after their Conception, when fasting, or after meat.

And though this is without hurt, yet if it be with great force, and continue, it hurteth.

There are some Vomitings when Men are sick, in which some throw up easily too much, or nauseous meat, crude and unconcocted.

Some vomit much Flegm, Snot, Choler, especially in the morning, with pain of the Heart before, and sourenes, bitternes, and roughnes of Teeth after it. All which, though they give ease, yet by continuance, they hurt, and bring other Diseases. As that excellent Printer *Frobenius* that used after his first sleep for many years, to vomit corrupt matter blackish, dyed after of the same Disease.

In divers Diseases of the Stomach, Guts, and other parts, Vomitings are with other symptoms: As I shewed in them which are different in respect of Flegm, Choler, or Blood.

Vomiting of Flegm.

There is in divers Diseases, Vomiting of Flegm alone, or with other Humors. And it is either clammy, snotty, glutinous, muddy, frothy, or watery, either sweet, sour, or sharp, al these are called flegmatick. We shewed this in other Diseases at large.

Vomiting of Choler.

Vomiting of Choler is as usual in many Diseases, where it was described, in which yellow, or like Brimstone, or like the Yolk of an Egg is voided, which is tough, or green, and that like Herbs; moist and thin, like Leeks, or Horehound in colour; or so green, that it is compared to Verdegreece, or black, or skie-coloured; which I saw plentifully vomited by women in a Dropsie alone. And then there are worse Symptoms.

The Disease of Choler.

There is a kind of choletick Vomiting, worse then the other accidents, which is accompanied with purging of Choler, this is called the Disease of Choler: differing from the Colick.

A continual Purging or Vomiting with great force and conturbation, is of sharp and bitter Choler, thin, or thick, green, black, or yellow, pure, or mixed, and sometimes bloody.

There are great Pains in the Belly, and Guts, with pricking, and pain of the Back and Loins.

There is often herewith burning of Urin by reason of Choler.

And an intollerable thirst without a Feaver, which is but somtimes, called a *Synochus*, which we described in cholerick Diseases, which is not great, nor can be, except another Feaver come.

Then follows great weaknes and faintnes, the pulse is swift and weak, and when the Disease continueth, and increaseth, there is fainting and swounding, the Heart beats, and when the outward parts begin to grow cold, and of a cold sweat, Death is at hand. Usually a Convulsion followeth, before which went the Hickets, and Cramp of the Legs, which foretelleth the Danger.

Vomiting of Blood.

There is Vomiting of blood but seldom, in Diseases that have others joyned therewith, and in women that want the terms, in which blood is vomited alone, or mixed with them; somtimes more plentifully pure or mixed; somtimes clodded and tough like Pitch, and black, somtimes like Ink, which a famous Lawyer vomited in abundance, and purged also: Not only purging of Blood, but great Diseases follow this Vomiting.

Vomiting of Dung.

There is also a Vomiting of Excrements by themselves, or with Humors mentioned: when the dung of the belly which should be sent forth by stool, is vomited at the mouth, of which we shall speak when we treat of the wrong passage of the Dung.

The Causes.

It is necessary in all Vomiting that the Stomach be troubled, from whence the expulsive Faculty is stirred up, to expel

expel that which troubles it, and throws out all, or some part that is in the Stomach into the left upper Orifice, and so into the Gullet, by the help of the Midriff which is near to it. This Vomiting is called the subvertion of the Stomach. The stomach is thus affected, either when it is troubled, or oppressed, or pricked. And the sooner when the Cause is great, or many meet, or when the stomach hath a most exquisite sense, and easily suffereth, or loosned from an evil custom of Vomiting, cannot so righty contain the meat, and cannot contain them, when they are too many, or unpleasant. The Cause of the troubling, pressing, or pricking of the stomach, is either from external force, or from things taken in, or from the Humors, Excrements, and other things in the Stomach.

The trouble, oppression, or pricking of the stomach either from outward force, or things taken in, is the cause of preternatural Vomiting.

Outwardly the rubbing of the stomach, or violent thrusting, or bending forward, or motion by Wagon or Ship, especially after much eating, or drinking, or lying down after Drunkenness, causeth Vomiting, by disturbing the meat in the stomach.

The Finger, or a Quill, or the like, thrust into the throat, by tickling the tunicle of the mouth, which consents with the stomach, causeth it by labouring to expel what offends it, to throw out whatsoever is contained therein.

From too much meat and drink, especially wine, the stomach being too full, vomiteth; and the rather, if they offend the stomach. And this may come from a Physical Diet.

If things be taken that are loathsom, they are vomited up again. As unusual meats, (as we shewed in Loathing) and such as Nature abhors, or filthy, and abhominable things, either by chance, or necessity: the very conceit, or imagination of which maketh some vomit. Also ill-scented things, as medicines, especially Purges cause a Loathing, and therefore are often thrown up again; some meats are loathed, not because they are unpleasant, but because they are contrary to some Natures, so that if by chance they be eaten, they are spewed up again. In many Diseases where meat is loathed, any smell of Food, flesh especially fat or roasted, which is of it self pleasant, is loathsom, and they vomit it up.

Medicines taken, that prick the stomach, or burn it, or that purge, as Hairs cut, or shavings of the Nails will provoke Vomiting, and if they work long, or violently, they are the Cause of hurtful Vomiting. Other vehement medicines, especially purges do the same by troubling the stomach. And they are vomited as soon as taken, or when they begin to work, they cause the pain at the Heart, and so Vomiting. But chiefly corroding medicines or poysons taken by chance, or otherwise. In which Vomiting, whatsoever juyce, humors, or Excrements are in the stomach, are thrown out together or a sunder: But chiefly thin Choler, as we see after the giving of Stibium or the like, it hath been voided by basons full. Which was not in the stomach or Guts before, because there were no symptoms of it; but it was forced by Nature from the Meseraicks, through the violence of the medicine, as we shall shew in Vomiting of Choler.

Choler pricking the Stomach, is the cause of the vomising thereof.

Besides many things swollowed by chance, have caused Vomiting.

Among Humors and Excrements, Choler is the chief cause of Vomiting, either fasting, or in Diseases of Choler. And if it be clammy, as that like yolks of Eggs, or sharp, as the green and black, it pulls and burns the stomach, and makes not only Vomiting, but purging; and the more, if it be plentiful, and sent to the Guts, especially the thin Guts which are united to the stomach. And it is greater or lesser, as it is more or less offensive to the Stomach and Guts.

This Choler breeds in the stomach from meats, which are too hot, and of sharp cholerick Juyce, or turns suchby Corruption in the stomach. As appears by the use of Cowcumbers, and Melons, as we shewed in the Disease of Choler. Also Choler that is sent from the gall, and corrupted, may turn to such, and cause the same. Also when it hath been long in the Meseraicks till it corrupt, Choler may get into those parts, and cause the Disease of Choler. As we shewed in the Causes of intermitting Feavers, how it was gathered in the Meseraicks, and of what it was made.

The Cause of Vomiting of Flegm is the fulness of the Stomach or Loathing.

Somtimes vomit is raised from other Humors and Excrements which fill, or offend the stomach. As from crude Juyce made of meat not well concocted, which flowing in the stomack, and filling it with wind, compels it to vomit it up sour for the most part. Or from other sharp Juyces, besides Choler, made of the Corruption of meat. Whence come Vomitings not long after eating, or when Concoction is beginning. Also Vomiting may come from any Flegm, or from tough Matter in the Stomach, long retained, or from water, which cause Loathing: as we shewed in the Want of Appetite: Or from other immoderate things, especially if there be other evil Humors mixed. These alone, or with other Humors bred in the stomach, or sent thither, offending the stomach, cause Vomiting in divers Cacochymicks, and in Women that are with Child, and want their Terms, or others that have not conceived, by reason of the filth stopped with the terms: and in the beginning of Feavers, and other malignant Diseases, when the stomack consenteth, or is hurt by them. As we shewed in the Causes of these Diseases.

Vomiting of blood from the stomach filled with the blood from the meseraicks.

Blood getting into the Stomach by the Meseraick Veins which go through the same, or rising from the Veins of the Guts, is the Cause of Vomiting blood, and as the Blood is, so is the Vomiting; somtimes watery, filthy, or black, such as is laid up in the Meseraicks, as we shewed in Feavers; sometimes when it hath been long in the stomach it grows thicker. Now it gets out of the Veins, either from the plenty thereof; as we shewed in the stopping of the Terms, that Women with Child may vomit blood without hurt, or from the ceasing of other bleeding at the Nose, or when blood is in the Body from the taking off of a Member. Or from the thinness of the blood mixed with water, or from the thinness of the Choler in divers Diseases, or from other impurity or malignity. Also Blood is vomited somtimes from a Contusion, about the stomach, upon the parts adjacent; or from some hurt of the stomach, by any thing swollowed, or a wound. Also blood from the Jawes, or Nose, or Breast swallowed down, is vomited up in clodders. As I lately observed in our Cap-maker, who being loaden with his wares, and comming from a fair, towards night, made great hast to get into the City before the Gates were shut, but being tyred, he lay in the Suburbs all night in a sweat. And comming into the City the next morning, he grew very weak with Vomiting of clotted Blood, with a Megrim, and purging also of Blood.

The Cure.

When any thing is sent forth by Vomit, profitably or necessarily, it must not be stopped, but provoked, if it come not freely. But if by violence, and long continuance, the strength decay, or the like, then you must make it more easie, or shorter. When it is unprofitable, as of meat or medicine, it must be prevented and stopped.

The Cure of preternatural Vomiting from things taken in.

If Vomiting come after surfeiting, or Drunkenness, it must not be stopped, but furthered. But if it be often, take heed of it, and use things mentioned in Alienation of Mind, and let them not sleep presently upon a full stomach, nor let them cause

Giddi-

Giddineſs uſually goes before, with reading or motion. And if it continue, give things mentioned Againſt, Vomiting, Choler.

When Vomiting is from Loathing of things neceſſary which were better kept in the Body, that muſt be prevented, eſpecially after a purge is taken, becauſe if it be ſuddenly vomited up, the working is loſt, but if it be kept any while, the medicine may have an Operation, though caſt up with many Excrements, which could not go downwards.

And though the ſtools are not large, becauſe of the double Evacuation, yet the medicine will work its effect. And the rather, if it be not all vomited up.

You muſt prevent the Vomiting up of a medicine, with pleaſant ſcents and taſts, which reſiſt the evil ſcent and taſt thereof; as with a cruſt of bread toaſted, and dipped in Vinegar, applied to the Noſe, with the pouder of Nutmeg or Cloves; or by tying a clout dipped in Vinegar, about the Neck; or waſhing the Mouth with Vinegar and Water. Or by eating or chewing ſome ſharp fruit, or other pleaſant thing.

An Eg held to the throat, is thought by the common people to hinder the Vomiting of a medicine. Alſo there are many things in Vomiting Choler, which will prevent it here.

But if Vomiting begin when the purge ſhould work, with pain at the Heart, it is not amiſs, becauſe Evacuation is made both wayes. Yet becauſe they are weakned by the heart-pain, ſo that they ſound ſomtimes, let them waſh the ſtomach from that which pricks it, when it firſt begins. As Barley-water, which *Hippocrates* ſaies muſt be taken warm with Sugar, or Cream of Barley, with Sugar, or Peaſe-broath, whatſoever allayes pricking is then good: As any Broath of fleſh.

A Clyſter then given, takes away the Heart-pain, and quickens the medicine, and hinders the Vomiting.

If Vomiting follow the violence of any medicine or poyſon, then we give things to reſiſt the ſharp burning, and malignant force, and to cleanſe, that they may vomit eaſily, and ſtop it not. Or if we do, it is with ſtupefactives, to take away the ſenſe of the ſtomach. Or we give Antidotes againſt poyſon, which if they have Opium as Treacle, are the better. Such as are mentioned in the Pain of the Heart.

The Cure of Vomiting of Flegm raiſed from Excrements.

If Vomiting be from Flegm, or any crude Humor, or Excrements, whether in Cacochymicks, Women with Child, or Diſeaſes, and Excrements be voided thereby, it muſt not be ſtopped, But if it come often, and in ſound men, or ſick, it is convenient, or if it be too violent, you muſt ſtop it, obſerving diligently if it be in women with child, or the Patient be ſick of another Diſeaſe, that proper medicines may be given.

Vomits are given in Vomitings, when there is a tough Humor in the ſtomach, which continually provoketh, and yet will not be voided, but alwayes provoketh to vomit. Then you muſt give a Vomit that cleanſeth and cutteth, when it is clammy. The Kinds of Vomits are mentioned in the Cure of Weakneſs of the Stomach.

Purgers to provoke downwardly, are given when vomits cannot work, or ſufficiently diſcharge, that they may ceaſe to moleſt, and paſs the uſual wayes. Such are mentioned in the Weakneſs of the Stomach. But you muſt make choice of the beſt, and pleaſanteſt Purges, leaſt they be vomited up again. Among which the purging wine is the beſt: Or Pills, if they can be ſwallowed.

Clyſters alſo draw down the Cauſe, and are good in great Vomiting, not given in great quantity, nor too ſharp or looſning, leaſt when they get into the Colon, they ſhouldpreſs the ſtomach that is near, or relaxe it, or provoke it: ſuch as are mentioned in the Colick.

When in a conſtant Vomiting no meat can be retained, you muſt preſerve the Patient with nouriſhing Clyſters: ſuch as are preſcribed in the Hectick.

When the Matter is voided by Vomit, by Nature, by Art, by Stool, you may give things to ſtop ſuch are in this Cauſe, hot and binding, proper for the ſtomach, ſuch as are mentioned in the Weakneſs of the Stomach. To which you may add the following, which are good when Vomiting is too violent.

Cinnamon-water being pleaſant, is good to ſtop Vomiting, and other diſtilled Spices, that are not loathſom, mentioned in the weakneſs of the ſtomach.

Wine is beſt to ſtop Vomiting, becauſe it is pleaſant to the ſtomach, eſpecially Rich-wine.

A Phyſical Wine made by Infuſion, which is bitter, is better then ſweet, becauſe that provokes Vomiting. That of Wormwood is beſt, to which the matter is very tough, we add Squills, Gentian, and topps of Centaury.

Another of Mints, Marjoram, topps of Roſemary, Bettony, Myrtle-leaves, red Roſes, Coriander ſeed infuſed in wine, with Wormwood, Cloves, Nutmegs, Mace.

Hippocras is good alſo, or other Wines, mentioned in weakneſs of the ſtomach, or made of the Aromatical Pouders in wine, as ſhall be ſhewed; with Pouder of red Coral, with but a little Sugar, leaſt the ſweetneſs offend.

Decoctions are not ſo pleaſeant, but are eaſily vomited up, but they may be made into a Syrup, and given by ſpoonfuls: As of Wormwood, and Mints, with wine, with Juyce of Mints, Pomegranates, and Quinces.

Or this Decoction. Take *Roots of Cypreſs, Galangal, white Thorn, each half an ounce; Mints, Bettony, Burnet, each one handful; Roſemary tops one pugil, Coriander ſeeds two drams, Piony ſeeds one dram, Schænanth, Spike, and Coral poudered, each one dram and an half*; boyl them *in wine, and Water, and with Sugar* make a Syrup.

It is good to eat Beans, Kidney-beans, Lentils.

Dioſcorides directs twenty two Lentils.

Divers Stomach pouders, mentioned in the weakneſs of the ſtomach, which are aſtringent, as Aromaticum Roſatum, and Gariophyllatum, Roſata Novella, and Diagalanga.

Or make this aſtringent Pouder. Take *Roots of Cypreſs, Galangal, Acorus, Caſſia Lignea, each one dram and an half; Nutmegs, Mace, Cloves, each one dram; Schænanth, Spike, Wood-Aloes, each half a dram, Pepper, and Ginger, each half a ſcruple*: make a Pouder, which will be ſtronger, but leſs pleaſant, *with Marjoram, Mints, Roſes, each half a dram; Maſtick, or Frankincenſe two ſcruples.* Theſe are given with Wine and Sugar.

Alſo there are many Conſerves, and Candyes good, as that of old Roſes, Mints, Marjoram, Citrons, Nutmegs, and the like.

You may apply to the Stomach, ſtrengthners and aſtringers, mentioned in the weakneſs thereof, chooſing thoſe which are beſt ſcented.

Anoint the Stomach with Oyls there mentioned, which ſtrengthen and bind. And leaſt the greaſieſcent offend the ſtomach, keep the Head off, and uſe ſome ſweet Scents. Or ſprinkle ſome ſweet Pouders there mentioned, after anointing, or mix ſweet things with the Oyntment. Oyl of Nutmegs is good forthat.

The Oyntment mentioned for a moiſt and looſe ſtomach, is good if you ſweeten it.

It is better to apply Plaiſters, leaſt by chaſing the ſtomach, you cauſe Vomiting, as that of Maſtick, mentioned in the weakneſs of the ſtomach.

Alſo the Fomentations there, which ſtrengthen and aſtringe, which are the better for being ſweet-ſcented.

The ſweet pouders alſo there, are to be ſprinkled here upon the Oyntments, and to be applied in bags to the ſtomach.

Alſo uſe the Cataplaſms without the unctious things, which are well-ſcented, and there mentioned.

The Juyce of Mints with Leaven, laid like a plaiſter to the Stomach and Guts, doth quickly cure Vomiting of flegm and wind. And the ſame is good for cholerick Vomiting, and the Diſeaſe Choler.

Alſo Cupping, Dropax, Ligature, Amulets, are good, but beſt in Vomiting of Choler.

Remembering alwayes a ſpare and convenient Diet.

The Cure of cholerick Vomiting and the Diſeaſe Choler.

If Vomiting come from Choler, or a ſharp Humor, from corrupt Meat, or otherwiſe which pricks the Stomach, when theſe are voided, you muſt provoke rather then ſtop it. But if it be often in Cacochymicks, becauſe it is worſe then that of flegm, and cauſeth hurt, threatning diſeaſes, it muſt be cured. As alſo when it is immoderate, and vehement. And in regard Vomiting is the chief ſymptom in the Diſeaſe Choler, and ſo dangerous: The cure in general muſt be aimed at. This Diſeaſe of Choler is moſt acute and dangerous, if it come without a maniſeſt Cauſe, but it is leſs dangerous, when it is from eating of Cowcumbers, Mellons, or the like turned into Choler. And it threatneth Death, if the Pulſe be weak, the Heart beat, and faint, with Hickocks and Convulſions: And if the Pulſe intermit, and the Urin be blew, and the outward parts cold, Death is at hand.

Your aim in curing of theſe immoderate Vomitings of Choler, or ſharp Humors, is to cleanſe away the Choler that ſticks ſo faſt with other Humors, alwayes regarding the Diſeaſe and other Symptoms if there be any,) and to abate their force, and drive them down when they aſcend too much. And then to ſtrengthen the Stomach and Guts by aſtringents. And if need require to take away their ſenſe of feeling, with inward and outward Applications. And to have regard to the ſtrength, and to drive away all accidents approaching, and to mind the flux of the belly in Choler: which are all done by theſe following.

The Vomits mentioned in Heart-pain from Choler, are good here to take away the Cauſe. Theſe alſo evacuate Choler that cleaveth, and ſtop the violent Flux of the Belly by Revulſion.

Alſo Purges mentioned for the Heart-ach, from Choler chiefly Myrobalans, and Rhubarb, with Spike which correcſts it, and ſtops all Fluxes, giving alwayes things which ſtop the Vomiting by drawing the Choler downwards. The things mentioned in Dyſentery, are good in the Diſeaſe Choler, becauſe the belly flows too much, when the Choler ſticks to the Guts. Stronger remedies are not given but to prevent in ſuch as are ſubject to it. And therefore in the time of the Diſeaſe, abſtain from them.

Clyſters are beſt to draw down Choler, which cleanſe and allay Heat.

Many Alteratives are good, which are mentioned in cholerick Heart-ach, if you chooſe thoſe that bind, and are not nauſeous, as alſo theſe.

Sour Fruits raw, or boyled, eaten, or uſed as Sauce, or the Juyces thereof in Meats, if not too ripe, as Grapes, Cherries, Medlars, Services, Cornil-berries, alſo ſour Pot-herbs, or eaten with Vinegar, candied Cabbage topps, and Turneps.

The conſerved or candied ſour Fruits are good, alſo Myrobalans, Citron barks candied, Conſerve of Roſes, and Sorrel.

Alſo the Juyces of the ſame ſour Fruits and Herbs, without Meat ſtay vomiting. Alſo vinegar drunk alone, after a ſurfeit, or Drunkenneſs, as it allayes Drunkenneſs, ſo it hinders vomiting. Wormwood-wine cures the vomiting of Choler, therefore Drunkards uſe it for their mornings-draught, when pain of the Heart forerunneth it. Alſo to drink cold water after Meat, will ſtay vomiting.

Thoſe four Syrups mentioned in Heart-pain are good, given alone, or with Sorrel-water. And you may add which is the beſt of the Syrup of four Pomegranates four parts, of Mints one part.

Or boyl the Juyces of both to a Syrup, or boyl a little Mints, with the Syrup of Pomegranates therein.

The Chymiſts give ſome drops of the Oyl of Pearl in this Diſeaſe.

You may make a Pouder to be given in wine, or otherwiſe thus, Take *Pulp of Quinces, or of ſour Pears, Medlars, or Services, or Cornil-berries dryed before they be ripe, half an ounce, dryed Citron peels one dram, Galls half a dram, Cynk-foyl roots, Sorrel ſeeds, and of Plantane, Grapes, Barberries, Sumach, Pomegranates, Roſes, Coriander, each one dram, Roſes and wild Vine, each half a dram; Antiſpodium of Ivory, or Harts horn, red Coral, each one dram and an half; Cryſtal half a dram, Pearls one ſcruple, Bole, or other fat Earth one dram, Hypociſtis half a dram, red Sanders, and Groſs Cinnamon, each one dram*: make a Pouder.

Alſo the Pouder of Maſtick, Frankincenſe, Amber, with the Yolk of an Eg, and a little Salt.

Alſo Pouder of three leaved Graſs, Cheſnuts-ſhells, Mallow-ſeeds, Cherry, Gum drunk with wine.

The Moſs of Trees called Lungwort, and the Leaves of Harefoot, with the Seed, is commended by *Dioſcorides*.

Alſo Diacydonites without the Species, Troches of Spodium, with Sorrel ſeeds. Alſo Troches of Frankincenſe is good, except the ſcent offend, as that of *Rhaſis*, of Frankincenſe, Maſtick, Bole, Amber, Champhire, Gallia Moſchata, with Cloves to ſweeten.

The Pouder of Liquoriſh with Ivory and Cinnamon given in Broath, ſtayes both Vomiting of Choler and Flegm, and are good after the taking of a Purge.

Alſo the Electuaryes and Candyes, mentioned in Heart-pain.

Or this: Take *Conſerve of Quinces two ounces, Citron peels candied, Conſerve of Roſes, each one ounce; Conſerve of Sorrel half an ounce, Roſe, Sorrel and Coriander ſeeds, each half a dram; red Coral one dram, with Trionſantalon, or Diamargariton frigidum.* If they ſwound, Narcoticks, Antidotes, mentioned there alſo, by taking away ſenſe from the Stomach, ſtay Vomiting by themſelves, or with other things.

You muſt apply ſtrengtheners to the Stomach, before and behind, temperate, or ſomwhat cool, but actually hot, becauſe the Stomach is quickly offended with Cold: therefore we mix cold things with hot. Theſe are alwayes good in Fluxes, eſpecially when there is a loathing of meat, being of ſweet ſcent.

Oyls relaxe actually, therefore are not to be uſed alone, but with cold Aſtringents, adding ſome that are hot, as in Heart-pain. Vinegar, as there ſaid, is good, but in a greater quantity, or with other ſour Juyces, and aſtringent Pouders that are ſweet.

Or this which is more binding. Take *Maſtick two drams, Frankincenſe, Cypreſs roots, Pomegranate flowers, each one dram; dryed Wormwood and Spike, each half a dram*: make a Pouder.

The cooling ſtrengthning Oyntment, mentioned in Heart-pain alſo, or this which is more binding. Take *Oyl of Maſtick, Quinces, Roſes, Omphacine, each one ounce; Oyl of Myrtles ſix drams, Oyl of Wormwood half an ounce, Vinegar of Roſes, old white Wine, each one ounce and an half; Juyce of Quinces, or Pears, or of Citrons, and Lemmons one ounce*, boyl them to the conſuming of Juyces, then add *Pouder of Maſtick, Olibanum, each one dram; Bole one dram and an half, Acacia, or Hypociſtis, or Juyce of Sloes, each one dram; Galls, Pomegranate flowers, red Roſes, each half a dram; with Wax* make an Oyntment.

Or an Emplaſter, adding to the aforeſaid doubled in weight, *Dragons blood two drams, Acorn-cupps, Cypreſs-nuts, Citron peels, Bramble leaves, Myrtles, Wormwood, Mints, Myrtle ſeeds, Coriander, each one dram; Antiſpodium one dram and an half, Spikenard, Nutmeg, each half a dram; red Sanders one dram, Gallia Moſchata two ſcruples, with Pitch, Roſin, and Oyls aforeſaid*, make a Plaiſter.

Pouder of Maſtick with the White of an Eg, and ſome of the Oyls aforeſaid is good, if it be applied as a plaiſter.

Roſe-cakes ſprinkled with Roſe-water, and Vinegar of Roſes, with red Wine, is excellent.

A Cruſt of Bread toaſted and ſteeped in Vinegar of Roſes, and then dryed, and tyed with a fine linnen-clout, that it may ſtick to the ſtomach, is a good and eaſie remedy. on which you may ſprinkle Maſtick, Cloves, and the like.

Or

Or you may wet the Toſt in Juyce of Quinces, or of four Grapes, or the like aſtringents, or red Wine; or apply the Juyces with Bran, or Barley-meal, . Theſe will be ſtronger, with the Pouder of Maſtick, Wormwood, Mints, Roſes; or boyl the Plants, in red wine, and beat them with Bread, and other Aſtringents, mentioned in the Emplaſters.

The Compound Plaiſter of the Cruſt of Bread, with Oyls is made of the Cruſt of Bread, toaſted and ſteeped in Vinegar, *with Barley-meal, each two ounces; Oyl of Quinces and Maſtick, each one ounce; Maſtick, Antiſpodium, Coral, red Sanders, Mints, each one dram.* To which you may ad *Wormwood, and other Aſtringents.*

The Emplaſter made of Dates by *Alexander*, with Bread, Quinces, Vinegar, Oyl, and many Aſtringents, is alſo good to ſtay vomiting.

Or that made of Pulps; thus: Take *Quinces, or Pears, or four Apples that ſmell ſweet, or the like, bake them if they be green, if they be old, boyl them in red Wine, with Vinegar, beat them, and apply them.* Add *Oyl of Mints, and Wormwood which are good by themſelves, and keep the other from drying, and from being too tough.*

An Epithem *of Roſe-water four ounces, Vinegar of Roſes two ounces*, applied hot with a red Cloath, *with two drams of Maſtick, one dram of red Sanders, red Roſes and Cloves, each half a dram; and ſome grains of Camphire.* Alſo a Clout dipp'd in Juyce of Quinces, Pears, or ſharp Apples, with Juyce of Citrons, Lemmons, Pomegranates, and applied hot with the Pouders mentioned.

An aſtringent Fomentation is made of the Decoction of Wood and Leaves of Pears, Quinces, Oak Services, Barberries, Privet, Olive, Medlars, Sumach, Myrtles, Brambles, Roſes, wild Vine, Pomegranate flowers and peels, and Galls, with Wormwood, and Mints, Coriander ſeeds, and Myrtles, and Sanders, with Spices, in red wine alone, or with water, or in Iron-water.

Cupping-glaſſes fixed to the Stomach, or at the bottom thereof, ſtoppeth vomiting. And if done while the Patient is eating, he will not vomit it up. But if Choler be carried from the Meſeraicks to the Stomach, you muſt apply the Cupping-glaſs to the Liver or Spleen, where the great veins are, or a Dropax, or ſticking Plaiſter of Pitch diſſolved in Oyl, laid to the Stomach, and violently drawn off, doth ſtop vomiting.

Ligatures alſo, and Frictions of the extream parts, and ſprinkling of the Face with cold water. Let him ſmell and eat things pleaſant to the Stomach, as Apples, Pears, Quinces, and other things mentioned for the keeping down of a Potion, or put his Hands in cold water.

A broad Plate of Ivory laid to the Stomach, is reported to ſtop vomiting.

Alſo a Jaſper-ſtone hung about the Neck to touch the Stomach.

As for Diet. Let his meat be little, and often of good Juyce, pleaſant, not loathſom, rather thick then thin, with Sauces aforeſaid.

Bread of Wheat or Barley, with Juyce of Pomegranates, or with Roſe-water, Roſe-vinegar, and Sugar is proper.

And Gelly of Capon-juyce, boyled between two diſhes, with Juyce of Citrons, and other Cordials, when ſwounding feared.

Let the Drink be actually cold rather then hot. Let the wine be ſharp, or if they love not wine, let them drink water boyled with Coriander ſeed, or water with ſharp Syrups, with a regard of Nature and cuſtom.

Cold water drunk after meal, doth the ſame.

They commend the drinking of Spaw-waters, for them that are ſubject to vomiting, not only for to ſtay it, but to cure the Cachexy from thence. Alſo ſharp Drinks.

Let them reſt, and ſpeak little, and not move the mouth with chewing.

Sleep is profitable, becauſe it ſtoppeth Fluxes, and to provoke it, you muſt give Dormitives.

We cure the accidents of Choler as we cure choler, as the Flux of the Belly, with outward things that ſtop vomiting.

Alſo Thirſt, with ſharp Drinks. The Feaver with things that void Choler. The Convulſion which is preſent, or at hand, with Oyntments to the Back, and the like, mentioned in the Cure of Convulſion. Faintneſs or Swounding we cure with cordials, and good victuals. Or if there be heat of urin, or the like, let medicines be ſought for in their proper places.

The Cure of Vomiting of Blood.

If Blood be vomited, and ſticks clottered in the mouth, then you muſt provoke vomiting, rather then ſtop it, leaſt other Symptoms be produced. If blood come from the Meſeraicks, it ſhews the danger, and greatneſs of the Diſeaſe, and then the Diſeaſe muſt be chiefly looked at. If it come from the hurt of the Stomach, or any part adjacent it is very dangerous, and the remedies muſt be applied to the wound, or contuſion. In every cauſe, when blood is vomited in great quantity, you muſt rather hinder the flux of blood into the Stomach, then ſtop the vomiting, with inward and outward means. And you muſt hinder the Flux, with things that diſſolve congealed Blood in the ſtomach, which cauſeth dangerous accidents. Thus,

Blood-letting can draw but little from the Meſeraicks, which fill the Stomach and Guts with blood: Yet in Plethory or Fulneſs, when the cauſe requires it, you may open a proper vein. And if the Terms be ſtopp'd, open that in the Foot.

Revulſion of this Blood-vomiting, is alſo made with Cupping-glaſſes to the Hypochondria under the Ribbs, in the Belly, below the Stomach, or to the Hipps, when the Terms are ſtopp'd.

Alſo with Ligatures and Frictions of the extream parts, eſpecially of the Thighs.

Purge not, except the Diſeaſe do require it, and then not with ſtrong medicines. But with a little Rubarb, to take away the congealed blood, which will bind alſo afterwards, or with Syrup of Roſes.

Alſo if blood be voided by vomit and ſtool, congealed and black, give Clyſters to cleanſe, and ſtop the mouths of the veins, ſuch as are for a Dyſentery. And when clots of blood ſtick in the Guts, Water and Vinegar will diſſolve them.

Let him eat Pap of Starch, Rice, Barley flowers, Gelly, and Milk.

The White of an Egg, and Mucilage of Quince ſeeds, and Gum Traganth extracted with Roſe-water, or Plantane, well beaten, may be given alone, or with Sugar pellets, or Sugar of Roſes, or with red Wine, or Vinegar of Roſes.

Or make a Syrup of the Juyces mentioned, boyling them with Sugar; *or of the Herbs with one pugil of red Roſes, Pomegranate flowers half an ounce, red Sanders one dram,* boyl them *in Iron-water, with Vinegar and Sugar, to a Syrup.*

The uſual Syrups are good, as of Myrtles, Quinces, dry-Roſes, Bar-berries, of unripe Grapes, of Plantane-water alſo drunk, or Water of Nuts to diſſolve blood.

Let him drink *ſteeled Water, with one ounce of Maſtick, white Coral half an ounce, Cryſtal, or Jaſper two drams, or Vinegar and Water.*

A Pouder. Take *Bloodſtone two drams, red Coral one dram and an half, Bole, Acacia, each one dram; Gum Arabick, or Traganth parched, half a dram,* make the Pouder, add *the Roots of Snakeweed, Pomegranate flowers, Horſtayl, each half a dram; of Henbane ſeeds: let him take one dram, with Wine alone, or with a little Water and Sugar two drams, or make Lozenges thereof with Sugar, boyled in Plantane-water.*

To diſſolve clotted Blood, give Amber, true bitumen, Mummy, or the Runnet of a Kid, &c.

The Pouders uſual, are of the Troches of Amber, of Lemnos Earth, which both ſtop blood, and by reaſon of the Amber, diſſolve it when congealed. Alſo the Troches of

of Antiſpodium, with Sorrel ſeed. Theſe are better, becauſe of the Poppey therein.

A good Electuary. Take *Conſerve of Comfrey roots, and old Roſes, and Quinces, each one ounce; Troches of Amber, or Lemnos Earth, or the Powder mentioned two drams,* and if he be faint, *the Powder of Diamargariton frigidum, or of Gemms half a dram, with Syrup of Quinces,* make *an Electuary, or with Sugar, Lozenges, give as much as a Cheſnut,* and let him drink after it ſome diſtilled Water that is proper.

One dram of Philonium Perſicum is highly commended, to which you may add *half a dram of Rhubarb,* to diſſolve the congealed Blood.

Outwardly the Fomentation and Epithem deſcribed in Vomiting of Choler are good, as alſo the Oyntments and Plaiſters there.

Or theſe: Take *Oyl of Myrtles, and Quinces, each two ounces and an half; Juyce of Plantane, or the like, one ounce and an half, Vinegar of Roſes one ounce,* boyl them till the Juyce is conſumed, add *Acacia, and Hypociſtis, each one dram,* make an Oyntment, or add *Maſtick half an ounce, Bole two drams, Pomegranate flowers and peels, Galls and Sumach, each one dram; with Wax* make a Cerot, *or with Roſin* an Emplaſter.

CHAP. X.

Of Piſſing.

The Kinds,

Preternatural Piſſing. THat Piſſing by which the Urin in Males, paſſeth through the Yard; in Women through their piſſing place is Natural. But when it is involuntary, or immoderate, or often, or little, or thick, or bloody; or cometh by a wrong paſſage, it is preternatural.

Involuntary Piſſing. When the Urin flows out of its own accord, without the Will of the Patient, it is involuntary. And this is ſomtimes without Feeling, as in Apoplexies, Palſies, and Swoundings. And ſome who have been cut for the ſtone have it for ever.

Piſſing of Bed. There is another involuntary Piſſing, which they have who piſs their Beds, eſpecially Infants, if it be a fault in them: It is unſeemly in young people that know it, and ought to avoid it. But worſe when they come to years.

Immoderate Piſſing. It is called immoderate, when it is too much, too often, or unſeaſonable, as in Drunkards. They fill themſelves with wine and riſe from meat to piſs. This is thought unſeemly among people of reputation, which hold Drunkenneſs for a great ſhame, as indeed it is.

There is another immoderate Piſſing, when it is not after large Drinking, but oftner then it ought to be: For which cauſe they cannot tary long in Aſſemblies, but are forced to go forth, and piſs.

But that is chiefly immoderate Piſſing, when they piſs more then they drink or eat of moiſt meats. This is in ſound Folkes, which are called *Vritici* without another infirmity. And in ſick in the Criſis or Declination of a diſeaſe. And becauſe it is profitable, and not hurtful, it is not preternatural, except it continue to the loſs of ſtrength, which will eaſily decay by ſuch an Evacuation.

Diabetes Dipſacus. There is another in the Diſeaſe, called *Diabetes* but ſeldom, which is a large and immoderate Piſſing, when what is drunk is little or nothing changed, with an unquenchable thirſt from whence it is called *Dipſacus*, when the Body is hot and conſumeth.

Dropping of urin. Strangury. There is another, often and little Piſſing, when the Urin is voided by drops, called *Strangury*, which is ſomtimes without pain: Of which we ſpake in the want of Piſſing.

Hot Piſſing, ſcalding Urin, Dyſury, or difficulty of urin. There is often a burning pain in piſſing, called ſcalding Urin, or Dyſury, though this word is more proper to piſſing with difficulty or pain, as Dyſentery is in the Guts, then to little Piſſing. In this Diſeaſe while the Urin drops, there is pain: but when it comes more freely, it begins at the Concluſion. And continueth a little after, and begins again before the next Piſſing, cauſing ſuch a ſtraining, that it produceth horror and ſweat. A grievous pain in Males about the end of the Yard or Glans, which is then touched; hence the Germans call this, cold Piſſing, though it be hot. Women are pained alſo in the paſſage for Urin.

This Dyſurie or Difficulty of Piſſing troubles young and old, ſomtimes without other Diſeaſes, and is ſhort, if it come from the taking of any thing, or from ſome cauſe that continueth not, as we ſhall ſhew. Somtimes it is longer in which there are ſome ſigns of a foul Body.

Somtimes it is with other Diſeaſes, as in thick Piſſing, when it is mattery, ſlimy, or like Milk with Urin, for the Diſeaſes of the Reins, Bladder, or other parts: Alſo in the Ulcer of the Yard, and Bladder, matter is voided alone; and Seed involuntary in a Gonorrhœa, or Running of the Reins, eſpecially when it is venemous: As we ſhall ſhew concerning them.

Somtimes ſymptoms of the Stone in the Bladder, are with this Dyſury, as itching about the Privities, ſtanding of the Yard, ſenſe of Heavineſs about the Fundament, into which, if the Finger be thruſt, the Stone in the Bladder may be felt; alſo ſtraining with cruel Urin, ſometimes thick and bloody, and ſometimes it is quite ſtopped.

Thick Piſſing. There is often turbulent or thick piſſing, as of matter which ſettles in the urinal like a Pultis, and mixeth again with the urin when it is ſhaked, and goes to the bottom again when it ſettleth. It is ſomtimes white, without ſcent, ſomtimes ſtinking, ſomtimes white Filmes do fly in the Urin, as in the Ulcer of the Kidneys: As we ſhall ſhew. Sometimes it is without ſcalding, but with heavineſs, and pain of the Reins, ſomtimes with ſcalding.

They ſay that piſſing of Matter may be from an Impoſthum in the Liver which is rare, and from a Pleuriſie, or Peripneumony, or Empyema, which is moſt rare and ſeldom.

There is another thick Piſſing of Slime with the Urin, which ſticks to the bottom of the Urinal, like Glew after the Urin is poudered out, this is from the Ulcer of the Bladder, and then there is alſo ſcalding of Urin. Alſo this ſlime is voided alone: As we ſhall declare in the Excretions of the Yard without Urin.

Milkie Piſſing. Another thick Piſſing is like Milk, and then there is a great white ſediment at the bottom of the Urinal, and is mixed with the urin when it is ſhaked. I have obſerved this in my ſelf and others, ſomtimes for many daies, and ſomtimes at certain hours, eſpecially at night, after Exerciſe without other accident, except heat in Piſſing and ſtraining after.

Piſſing of blood. Piſſing of Blood, is when the Urin is coloured like blood. In which after ſettling there is a thick and black ſediment.

This is often with other accidents in the Stone of the Kidneys, and after violent Exerciſe; alſo in the Stone of the Bladder. And if there be an Ulcer, there is Matter with Blood.

They who uſe the Catheter have often a little blood in the Urin. And they who have had a great Fall or Stroak piſs blood.

And they who have taken Cantharides, or Spaniſh flies, or the like.

Other-

Otherwiſe there is ſeldom Piſſing of Blood. Only in Feavers it may be a Criſis, or for Judgment: And I knew a Maid in a peſtilential Feaver, that piſſed ſome chamber-pots full of blood before ſhe dyed.

Alſo Blood hath been piſſed without a Diſeaſe: As we ſhall ſhew in the Cauſes of all ſorts of Piſſing Blood.

Urin of a preternatural color or mixed.

There are alſo other kinds of preternatural Piſſing. As when the Urin is of another ſtrange colour, mixed with ſand, ſlime, which ſhew Diſeaſes, or the approaching of them. Of theſe we ſhal not ſpeak, becauſe when the Diſeaſe is cured, they vaniſh.

Urin mixed with dung, bones, or the terms.

Here may be mentioned Urin with dung, as we ſhewed in the preternatural Voiding of Excrements of the Belly, or with bones, or the like, which we ſpake of in preternatural Excretion. Or with the Terms, as we ſhewed in their preternatural Flux.

The Flux of urin by a Wound.

Somtimes the Urin flows another way, as out of a Wonnd, as in cutting for the Stone, it flows at the Perinæum, till it be healed. The ſame may be about the loins and lower parts of the Belly, from a wound there: As we knew one who made no Urin, but at his Groins for many years.

The Cauſes.

The Cauſe of all preternatural Piſſing, as involuntary, immoderate, often, little, thick, bloody, dyed, or mixed, is from an evil cuſtom, or Diſeaſe in the Reins or Bladder, as a hot Conſtitution or weak, a cold or hot Diſtemper; or forcing, or ſolution of continuity or contiguity: Or from a Diſeaſe by conſent of the Bladder. Or ſome Diſeaſe in a part like the Reins and Bladder.

An evil cuſtom is the Cauſe of often Piſſing.

Somtimes often piſſing is from an evil cuſtom; for when Nature is not diſordered by Diet, ſhe keepeth her order and time for voiding the Excrements of the belly: And if you diſorder her by any means or forcing, it will not be ſeaſonable. Therefore Infants that have long piſſed their beds, are familarly troubled therewith, an it continues with them, when grown up, which is unſeemly.

The Conſtitution of the Reins and Bladder.

Some kinds of Piſſings come from the Conſtitution of the Reins and Bladder. As when there is exquiſite ſenſe in the bladder, which being pricked by the urin, ſends it forth before the time. And this may be the cauſe why Children piſs a bed, except they be raiſed at night. And if to this exquiſite ſenſe, there be a ſharpneſs of Urin, it will be rendered oftner, and ſooner ſcaul'd, as ſhal be ſhewed.

Heat and weakneſs of the Kidneys, is the cauſe of often Piſſing.

A Natural Heat of the Kidneys, may cauſe more, and oftner Piſſing, becauſe heat makes a ſooner ſeparation. As alſo weakneſs, when the retentive Faculty cannot retain the Urin long enough.

This is often from the Birth, through want of heat, or from the looſneſs and ſoftneſs of the Veſſels, or from much drinking: Or from immoderate Venery, which weakens theſe parts.

When the Bladder is weak, looſe, or ſoft, there is often Piſſing. Or when it is over-ſtretched, and too thin, which is from the birth in ſome, or from long retention of Urin, in Aſſemblies.

Alſo ſtrong Imaginations in a Dream, may cauſe this, when they dream they piſs in a convenient place, which ſtirres up the expulſive Faculty.

A cold Diſtemper of the Reins, is the Cauſe of often Piſſing.

When the retentive Faculty is weakned by a cold diſtemper in the reins and bladder, there is often Piſſing: this is from external cold, ſo cold at the Feet by conſent of theſe parts, may cauſe Piſſing.

Many think that *Diabetes* comes from a hot diſtemper; but the Reins are many times hot without that diſtemper: And if the Reins were very much inflamed, piſſing would not be increaſed, but diminiſhed, or ſuppreſſed, and the attractive vertue rather deſtroyed then increaſed. Moreover though there be Thirſt and Conſumption, with the Diabetes, or often Piſſing, yet it is not proved to come from the heat of the reins. Becauſe thirſt may come from want of moiſture, through continual piſſing. And the heat of the whole Body cannot be kindled, only from the heat of the Reins, without an Inflammation, whence piſſing will be diminiſhed: neither can the Body be conſumed thereby. Therefore there is another cauſe of Diabetes, which is ſeldom ſeen. We freely grant that piſſing may be haſtned from a hot diſtemper of the Reins, if there be much water: As we ſhewed it might be in the hot Conſtitution of the Reins, but we deny that this confuſed and unuſual piſſing can come from heat thereof.

A hot Diſtemper in the Kidneys, is the Cauſe of ſcalding Urin.

But ſcalding Urin comes from the heat of the Reins, or is increaſed thereby: As we ſhewed in the Inflammation of the Reins, in which the Urin is made hot. And this may come from a ſimple diſtemper without Inflammation, but the Urin is ſharp and hot, firſt from other Cauſes, and thenis farther inflamed by the Reins,

Pricking in the Reins and Bladder, is the cauſe of preternatural Piſſing.

From the pricking of the Reins and bladder, there are divers kinds of preternatural Piſſing. And it is cauſed by Urin, by Matter, by Seed, or by a Stone.

Much Urine, is the cauſe of large Piſſing.

There is a large Piſſing from too much Urin that pricketh the bladder. And that is from the uſe of watery things, and drinking much.

Too much drink is the Cauſe of immoderate Piſſing.

From great Drinking, it happens that the Drink is little changed, but paſſeth through the veins to the Reins, and ſo to the Bladder. When the Drink taken is ſo much, that it cannot ſtay to be changed and mixed with Humors, but paſſeth through unconcocted.

Plenty of Water, is the Cauſe of immoderate Piſſing, and Diabetes.

An immoderate Piſſing may be when a great quantity of water, which lay in the veins, is ſuddenly ſent this way. As in many ſuperfluities of the Body: and in ſome Diſeaſes, as in Cachexy or Dropſie, and the like, eſpecially in continual Feavers, in which the cauſe of the diſeaſe is expelled by urin in a Criſis: Or when an intermitting Feaver declineth.

There is alſo a large piſſing after a long ſuppreſſion of urine by a Stone, or ſlimy Matter in the Vreters. As I obſerved two years ſince in a Preacher, who made no urin in eleven dayes, by reaſon of the Stone, and ſlime in the Ureters, and was in a miſerable condition: But in one night on a ſudden the Vreters opened, and he voided eight meaſures of water containing every one three pints, with great refreſhment to his whole Body.

But if this Evacuation be too much, and nature ſending forth the Cauſe of the Diſeaſe, be ſo profuſe, that all the moiſture begins to be voided, there will follow a Diabetes. Thence comes the heat of the whol Body, and thirſt, eſpecially, if there be a Feaver; and Leanneſs, eſpecially, if the Feaver be conſumptive. And becauſe in Feavers this piſſing is ſeldom ſeen, only in a Criſis, when the Fea-

ver is cured thereby. Diabetes is a rare Diſeaſe, which weakneth exceedingly. Nor is it a wonder, when the urin paſſeth through ſo quick, that it is crude and not coloured. And this is the cauſe of a Diabetes, and not the hot diſtemper of the Kidneys, from which alone it cannot proceed. And though the practical Phyſitians did not plainly mention a Feaver in the Cauſe of a Diabetes, yet in their Prognoſticks, if it be joyned with a Feaver they pronounce it deadly, and preſcribe cool Remedies. We ſuppoſe that a true Diabetes in which there is ſudden melting of the Body with heat and thirſt, is an accident of a burning Feaver, and gives ſome occaſion alſo of the melting; and therefore it is a Symptom joyned therewith, as the Feaver is alſo, except there be a Diabetes without a Feaver, by reaſon of abundance of drink, long kept in the Meſeraicks, (for it cannot ſtay ſo long in the Stomach and Guts) and after thruſt by Nature to the Reins, rather then attracted. Hence the drink is as it was drunk, and not altered in the firſt Concoction which it eſcapeth. And if there be then heat of the Body or thirſt, theſe come from great emptyneſs, and not from the heat of the Kidneys which cannot do theſe things, or ſo weaken the body, as I ſhewed. But in regard drink is ſeldom ſo contained in the veins. This Diabetes is very ſeldom ſeen.

Sharpneſs of urin the Cauſe of ſcalding Piſs.

There is a ſcalding Piſſing with a Strangury from the quality of the Urin, provoking and pricking the Bladder to render it. And if it be ſharper then it is by Nature, by which it naturally provokes the bladder to let it out, preſently after it comes to the bladder, though in little quantity, it provokes it to get out, eſpecially when the bladder is very ſenſible, hence it falls often by drops, and being in a narrow paſſage that is very ſenſible, it pricks, and cauſeth this heat and pain in Piſſing.

This is eſpecially in the top of the Yard, becauſe when ſharp Urin comes into the neck of the bladder which is narrow, and into the Yard, it cauſeth pain there by ſcalding. And this is felt chiefly in the Head or Glands, which is moſt ſenſible. And becauſe through great pain the Yard hangs down, and grows looſe for want of blood and Spirits: It turns cold and pale. And this pricking is when the urin is too hot and inflamed; or when it is corroding, or too ſalt; or too ſour, by which means it doth not only prick, but bind the paſſage.

Sharpneſs of urin is the cauſe of piſſing.

From this provoking or pricking of urin, there is a bloody piſſing alſo, when it is corroding to the bladder.

The Urin takes theſe qualities, by which it cauſeth ſcalding and bloody piſſing, from things taken into the Body, ſomtimes mixed with Humors and Excrements.

As from Diet, as too much Wine and Spices, and hot Oyls, of Water-creſſes, Onions, and Muſtard. It receives ſaltneſs from ſalt Meats, ſourneſs from ſour things, eſpecially ſour wine, as hath been experienced, and a cleanſing quality from the things mentioned, and other abſterſives. Among which is beer which makes the urin ſharp in them that are not uſed to it. The ſame may be from Medicines, and from hot Purges, as Spurge, and Coloquintida which provoketh urin, as ſtools by their ſharpneſs. Alſo Cantharids inflames the urin, and ſuch things cauſe piſſing of blood, and ulcers in the Yard. And it appears that Spaniſh-flies do it by heat, becauſe outwardly they raiſe Bliſters. The Urin may take the ſame qualities from the mixture of Humors, as of Choler, it may take heat, ſharpneſs, and cleanſing, when it is preternatural and burning; for Natural Choler in the Gall mixed with water, cannot make the urin ſo ſharp, as it is in the Jaundies, though the water be dyed with Choler, yet the urin is not ſcalding. There are divers Cauſes of this choler, both in Diſeaſes, and without; of which heat of urin is a ſymptom. The cauſe of this Choler mixing with the Serum, and ſo with the Urin, is mentioned in other Diſeaſes. And if the Serum be ſalt and ſour from other humors, the urin will be ſuch.

Pricking comming from other matter mixed with the urin, may be the cauſe of Scalding or Dyſury. As from the matter which comes from Ulcers in the Reins, and other corruption in foul Bodies ripened by the heat of the Reins. Theſe may cauſe burning, and matterry urin together. Matter without Ulceration, cauſeth foul Urin without other accident, except heavyneſs in the Reins.

Corrupt Urin from matter like milk, is like the former, except the colour, when there is alſo heat, which though it come from the Reins, as the other, is more ſalt, as appears when it is dry, being like white ſalt in colour and taſt: And I collect that it comes from the ſaltneſs of the Serum in the Reins made thick and concocted, becauſe when it is more hard, it turns to ſand, or a ſtone, as we ſhewed in the Stone.

Seed out of its place, is the Cauſe of ſcalding Urin.

From Seed in Men, moved from its place, and not ſent forth, pricking and burning, may come ſcalding urin, for ſeed by Nature is ſharp, and in its one place it doth no hurt, as Choler in the Gall, but going forth, and ſticking in the paſſage, it corrodes and exulcerates which cauſeth heat of urin. As it is in them who have nocturnal Imaginations or diurnal Luſts, which ſtirs up the Seed, without action or ſpending. This is in old men from the little quantity of ſeed, and inſufficient extenſion of the Yard, and in ſick people, and cauſeth ſcalding Urin.

Corrupt Seed is the Cauſe of ſcalding urin in the Running of the Reins.

In a venemous Gonorrhæa the ſame happens from corrupt Seed, ſo that it runs not only from the ſharpneſs, but alſo corrodeth the paſſage, eſpecially when any part ſticks by the way, and cauſeth ſcalding Urin.

A Stone in the bladder, is the cauſe of hot urin.

There is a dropping of Urin with pain, and deſiring to piſs, from a ſtone in the neck of the bladder which pricketh, and if it be great, is burdenſom. Theſe Stones fall firſt from the Kidneys by the Ureters into the Bladder, and there being kept, they increaſe dayly by the Urin which waſheth them: As we ſhewed in the Cauſes of the Stone of the Kidneys. And in Hypochondriack Pains, where we ſhewed how ſand and ſtones, which are the cauſes of preternatural Piſſing, grow in the Kidneys, and ſomtimes in the Liver.

The Solution of Continuity in the Kidneys & Bladder, is the cauſe of Piſſing of Blood.

There comes Piſſing of Blood from the Solution of Continuity in the Reins and Bladder, when the ſubſtance of the Reins is wounded or bruiſed. But uſually from a Stone in the Kidneys, which rubbs and chaffs them till they bleed; which blood is mixed with water, and piſſed forth, and ſeparateth from the urin to the bottom when it is ſettled: But if the urin be too long in the bladder, then it is ſo mixed with blood, that it will not be ſeparated. This alſo happens when a ſtone moved from its place, cannot get forth, but by forcing a paſſage, bruiſeth the Reins with its hardneſs or unevenneſs; or when it is forced by external motion through the preſſing of the Reins, by which means the Hypochondria are alſo troubled, and ſo cauſeth bleeding within, which blood being rendered with the urin, ſignifieth the ſtone in the Reins, eſpecially if there be other ſigns therewith. And if there be an Ulcer in the Kidneys therewith, the Stone by chaffing it, cauſeth it to void not only matter, but blood.

A Stroak in the Bladder, or a Wound piercing to it, may cauſe bloody Urin, or a touch with a Catheter, which is an Inſtrument to let out urin. Alſo a ſtone ſtriving to paſs the neck of the bladder, may cauſe bloody urin; and then onely ſome few drops come after the urin is made with great pain. And this is one of the infaillible ſigns of the Stone.

When

A Wound upon the Sphincter muſcle of the bladder, is the cauſe of involuntary Piſſings

When the SphincterMuſcle which is the Cauſe of the ſtopping of the Urin is wounded, there is involuntary Piſſing, as is uſual in cutting for the Stone, and though the wound be cured, yet by reaſon of the hurt of the Muſcle, the urin cannot be contained.

A Wound in the bladder, is the cauſe of urin paſſing that way.

Somtimes there is a preternatural flux of the urin from a wound of the bladder, not only by the cutting for the ſtone, but by other external means: As when there is an Inciſion made for a fleſhy rupture in the Groin, as I ſhewed in the want of Piſſing, how one alwayes piſſed that way. And we ſaw one that gored with an Ox whoſe horn pierced through his bladder that voided urin at both Orifices.

And this may be from any other Wound in the Bladder.

An Ulcer in the Reins, is the cauſe of piſsing matter.

From an Ulcer in the Kidneys followeth a piſſing of Matter with urin, which ſettleth at the bottom, which cauſeth pain in piſſing, if it be ſharp, with other accidents. The cauſe of the Ulcer is an Inflammation.

Thoſe Cauſes of Solution of Continuity in the ſubſtance of the Reins mentioned, may cauſe piſſing of blood, if the wound be not cured, but turn'd to an Ulcer.

The Ulcer of the bladder, is the cauſe of piſsing hot matter.

When there is a wound in the neck or bottom of the bladder, there is piſſing of Matter, with Urin, and ſomtimes without, where the wound is in that part of the neck which is farther from the bladder. This matter makes the urin ſtink. Or is preſſed with difficulty, and ſticks to the bottom of the chamber-pot. And then there is hot piſſing, becauſe the ulcer is diſturbed, and then the matter is ſharp. This Ulcer comes from a wound.

Hurt of the neck of the bladder is the cauſe of piſsing of dung, bones, or terms.

That ſtrange piſſing of the Dung and Bones mentioned, comes from an Ulcer in the neck of the bladder. This Ulcer comes from a Wound in the neck of the womb, or ſtrait Gut, which eats into the bladder. And hence womens terms are mixed with Urin.

The Anaſtomoſis, or Diapedeſis of the Veins of the Reins, is the cauſe of piſsing of blood.

Somtimes Blood is piſſed from ſolution of contiguity by Anaſtomoſis or Diapedeſis of the Veſſels; when through plenty of blood, or foulneſs thereof, in Plethory or Diſeaſes from thence, Nature purgeth blood from the emulgent veins, into the Reins, and from thence by the Ureters into the Bladder. And then the blood is voided without pain, or other diſtemper. And as I ſhewed, Feavers have been cured thereby, but ſeldom. And it is probable in the wench that had the plague, and piſſed blood before ſhe died, that Nature was ſtirred up by the force of the venom, to throw it out that wayes, which it could not compleat.

The thinneſs of the blood, is the Cauſe of the Anaſtomoſis or Diapedeſis of the Veſſels of the Reins, which cauſeth piſſing of blood. By which means before the blood is ſeparated from the Serum in the Kidneys, Guts, through the Veſſels into the Bladder, and cauſeth blood with urin, more mixed then when it is carried to the bladder alone.

Looſneſs of the Veſſels, is the cauſe of piſsing blood.

The next Cauſe of piſſing blood, is the weakneſs and looſneſs of the Reins, and then there is often piſſing alſo.

There is alſo involuntary piſſing from a Diſeaſe by conſent, as when the bladder is hurt, and the Muſcles ſuffer alſo.

The Sphincter Muſcle ſuffer from the want of Animal Spirits, for then being relaxed, they cannot contain the Urin. This want of Spirit is from a diſtemper of that Nerve which moveth the Sphincter Muſcle, either alone, or with all the reſt in a Palſie. Therefore ſome men in Palſies and Apoplexies piſs involuntarily.

Want of animal or vital Spirits is the Cauſe of involuntary piſſing.

In a Swounding, when there is a total privation of vital ſpirits, ſo that all the Functions reſt, the ſphincter muſcle being idle, the Urin flows forth.

The ſame is in the Convulſion of the Muſcles of the Belly, when the Urin is driven out of the Bladder by conſtriction or ſtraitneſs of the Muſcles, and preſſing of the belly, and if the ſphincter be alſo ſtrained, it cannot ſtop the veins.

A Convulſion of the Muſcles of the belly, is the cauſe of involuntary piſſing.

Preternatural piſſing comes alſo from other parts, as from an Impoſthum of the Liver turn'd to an Ulcer, the matter being mixed with the Serum, and there with the Urin. As alſo from the Lungs and Breaſt in a Pleuriſie, Peripneumony, and Empyema. And if it may come from thence to the Ureters, then it may come from other parts internal being ulcerated; the matter may go back into the Veſſels, and ſo be carried with the Serum into the Reins, and mixed with the Urin.

An Impoſtum in the bowels, is the cauſe of piſsing of matter.

From Diſeaſes in the Stomach, Liver, Spleen, and other parts, eſpecially in Feavers, and from their diſtemper and humors; the urin may be diſcoloured, or mixed with other matter, and cauſe preternatural Piſſing. As we ſhewed in thoſe Diſeaſes.

The diſeaſes of the internal bowels may cauſe a tincture in the urin, and a mixture.

The Cure.

There are divers ſorts of Cures for divers Piſſings, as involuntary, immoderate, often, or hot piſſing, thick, and bloody. Or when it paſſeth a wrong way.

If involuntary piſſing comes from a Palſie, or want of ſtrength, or the like, you muſt cure it as the Apoplexy, Palſie, or Swounding. Apply medicines to the Back, and Loins, and to the Fundament, where the neck of the bladder is; ſuch as were mentioned in the Palſie.

The Cure of involuntary piſſing from want of animal or vital Spirits.

If involuntary Piſſing come after a wound in the Muſcle of the bladder, or when it is torn for the taking out of the Stone, it is incurable ordinarily. But you muſt uſe ſuch things for the allaying of the urin, and binding the paſſages, as are mentioned in immoderate piſſing.

That involuntary piſſing in the ſleep, when young Children, and others piſs their beds, muſt be cured by preventing an evil cuſtom; by piſſing before they ſleep, and by being raiſed at midnight to piſs, till Nature is brought to another cuſtom. And this is the beſt Cure, eſpecially if you take away the Cauſes which provoke urin, as large drinking, eſpecially at bed-time.

The Cure of piſsing a bed.

But if it come from weakneſs, or too much ſenſe in the bladder, then you may uſe things to abate the ſharpneſs, and make it thick, and bind, and a little ſtupefie: As ſhall be ſhewed in immoderate Piſſing.

Theſe following are good by propriety, boyled, or roaſted, as a Hedg-hog, Mice, Lungs of a Kid, the Brain and Stones of Hare, or Fox, the brain of a Vultur, or Eagle, and Fat of a Partridg.

Alſo the Pouders of theſe following, or the Aſhes, as the pouder or aſhes of an Hedg-hog, a Hares head, with the skin burnt, the Bladders of an Ox, Hog, Goat, Sheep, and

and Swimms of Fiſhes, the inward skins of Hens Gizards, Cocks necks, Geeſe tongues.

It is good againſt Piſſing of bed to put the Yard into a dryed Bladder, or the like; others uſe a Spunge, but the bed will be wet, notwithſtanding that.

The Cure of involuntary Piſſing from the diſtemper of the Reins, immoderate piſſing.

Immoderate Piſſing, when it is too much or too often; if it come from an evil cuſtom of piſſing often, let them not piſs at every motion. And that will bring Nature into order.

When it is from the exquiſite ſenſe of the bladder, then keep the urin from being too ſharp, and if it continue, abate the ſenſe with remedies mentioned in hot Piſſing, yet not ſo ſtrong, becauſe this is not ſo conſiderable.

If too much Urin be made by reaſon of a hot Conſtitution, becauſe it doth little hurt, let them only take heed of hot meats and drinks, and uſe temperate things that cool.

That often piſſing which comes from weakneſs, or want of Natural heat, or looſneſs of veſſels, or enlarging, or making the bladder thin, if it come from the Birth, is hard to be cured, but if from much drinking, and long holding of the water, then take away the Cauſes, as alſo when it is from too much Venery, which weakneth the Reins.

But if being old, it will not ſo be cured, in regard there are worſe accidents begin firſt with them.

If often piſſing come from a cold diſtemper of the reins and bladder, chiefly from the cold of the Feet, it is but of ſhort continuance, and not regarded. But if the cold diſtemper remain in the parts, theſe hot remedies mentioned in the Paſſie of the Bladder are to be uſed, as alſo when there is weakneſs from that Cold.

The Cure of much piſſing after much Wine.

If much piſſing be from much wine, becauſe it is good, there is no other courſe to be taken, to prevent riſing from the table, or piſſing Breeches or Bed, but to avoid drunkenneſs, and uſe the remedies againſt piſſing a bed.

The Cure of much piſſing from abundance of ſerum.

When much piſſing comes from abundance of Serum or Whey in the veins, it is neceſſary, and good in ſound men to prevent, and in Dropſies and Cachexies to cure the Diſeaſes, except it be immoderate.

But if from the ſudden Evacuation, the ſtrength is abated, it may be hurtful, as in the tapping for a Dropſie, if much water be taken out at once, ſo here though the way be Natural, yet the Flux being great and ſudden may be dangerous.

This immoderate piſſing in Feavers, when Nature expel the cauſe, in a Criſis of a continual Feaver, and in the declination of an intermitting, is good to cure the Feaver. But if be too much, and too long, and the matter not concocted without a Criſis, becauſe then the Cauſe of a Diſeaſe is not abated, nor the Patient refreſhed thereby, but weaker, thirſt increaſed, and the body withered, there follows the deadly Diabetes. But when the cauſe of the diſeaſe is taken away by piſſing, you muſt not ſtop it.

The Cure of Diabetes.

In other violent piſsings that weaken, as in Diabetes which is ſeldom ſeen, which conſumeth the body, and cauſeth thirſt, you muſt ſpeedily ſtop them; firſt hinder the increaſe of Serum, and then evacuate it otherwayes, after correct the thinneſs, heat, or ſharpneſs, with things that thicken, cool, and aſſwage. Alſo ſtop and aſtringe the paſſages, and ſtupefie the ſenſe of the bladder. As we ſhewed in hot Piſsings; and uſe theſe following with reſpect to the Diſeaſe accompaying them. If the Diſeaſe hinder not, in full Bodies let blood.

Alſo give cooling, and gentle aſtringing Clyſters, with the Decoction of Rhubarb, and Myrobalans, and ſtilled Waters of Roſes, Plantane, with glutinating things, as whites of Eggs, Mucilage of Fleabane, Quinces, or Infuſion of Gum Traganth in proper Water.

Let the Diet be ſparing, only that which will keep the ſtrength: Let them beware of ſo ur things, ſalt, ſharp, burning, and hot Spices, all which provoke urin.

Let them reſt, and not heat the Reins by lying upon their backs.

Purges to derive the Whey and Serum from the Veins to the Guts, and ſo to hinder the plenty of urin, are good, becauſe when men purge they piſs little; and often piſſing in ſound men doth ſignifie the need of purging: and in Diſeaſes it ſhews that the Body is not ſufficiently purged.

Theſe muſt be gentle, if the ſtrength abate, and aſtringent with Rhubarb, Myrtles, Citrons, Syrup of the Infuſion of Roſes, with other aſtringent Syrups, Decoctions, or Waters, as in the Dyſentery.

Sweating is good to ſend the ſerum through the Habit of the Body, and derive it from the Veins, and ſo to abate Urin. And it muſt be provoked betimes, when we fear too much piſſing, before the ſtrength be abated.

There are divers Drinks that thicken, bind, and cool, and heating Meats, as Bread, Pulſe of Wheat, Starch, Groats of Barley hulled, as Ptiſans of Rice, Almonds, divers wayes prepared; Lentils boyled, Almonds, Nuts, roaſted Cheſnuts; alſo groſs and clammy Fleſh, Whites of Eggs, Lettice, Endive, Bugloſs, Purſlane.

Alſo Broaths of Corn and Fleſh, Milk, ſteeled water, Emulſions of Almonds, thick binding Wine, with water of Myrtles, Bugloſs, or the like.

Alſo Syrups of Myrtles, dryed red Roſes, Juyce of Sorrel, and others that bind, and heat not.

Or this Decoction. Take *Comfrey roots, and of both Bugloſſes, each one ounce; Plantane leaves two handfuls, Cordial flowers one handful, dryed Pomegranate flowers, yellow Myrobalans, each half an ounce; Myrtle ſeeds one dram, Plantane, Dock, Purſlane, and Sorrel ſeeds, each one dram*; boyl them *in ſix pints of red Wine.* Let him drink thereof.

Plantane and Shepheards-purſe-water, and the like, if there be heat, are good.

Alſo candied Comfrey roots, Myrobalans, Quinces, Elicampane, old Conſerve of Roſes.

Alſo Mucilages of Fleabane, Quinces, Infuſion of Gum Traganth in Roſe or plantane water, given *half an ounce*, with Sugar or convenient Syrup.

Alſo pouders, with ſugar of Roſes, red Wine, or other Liquors.

That of Acorns only is excellent, or mixed with Lentils, huſked and baked.

Or this: Take *Coriander ſeed two drams, Agrimony one dram, red Roſes half a dram, red Sanders, Cinnamon, each one ſcruple, Spikenard half a ſcruple.*

With Acorn-cupps, Galls, Pomegranate flowers.

Or, Take *Frankincenſe, Amber, each one dram and an half; Myrrh two ſcruples, the Aſhes of burnt Ox, or Hoggs, or of other domeſtick Creatures Bladders, half a dram*, make a Pouder.

Another. Take *yellow Myrobalans, Date ſtones burnt, each two drams; Bay-berries, Roſe ſeeds, Pomegranate ſeeds, or of Myrtles, each one dram; plantane and purſlane ſeed, red Roſes, Gum Traganth, or Arabick, each half a dram; Acacia, and Dragons blood, each one ſcruple, with burnt Ivory, and Camphire*, make a pouder.

Or, Take *red Coral, and Bole, each one dram and an half; Bloodſtone half a dram*: make a pouder, give it alone, or with the other the fourth part of this.

To theſe you may add pouders and aſhes of living creatures, which have a propriety mentioned in involuntary piſsing; and others, as wild Rue ſeeds and leaves, Mints, Calamints, Myrtles, Dates, Snakeweed, Tormentil, and Elicampane.

The Chymiſts in the Cure of Diabetes and Dyſentery, extol the Eſſenſe of Crocus Martis according to *Crollius*, and the tincture of Smaragds, which *Harſman* commends, and ſhews how to prepare it in his Practice of Chymiſtry. And they alſo extol to admiration the tincture and ſalt of Coral.

If

If the Urin prick, give Stupefactives, as Syrup of Poppies, Philonium Perſicum which alſo bindeth, and the like. Treacle is commended againſt Diabetes, and they ſay it quenceth thirſt: which being hot, it cannot do, but it may help by its Narcotick Quality.

Externally apply Coolers to the Reins and Binders, as the Oyntment mentioned in the Inflammation of the Reins and Liver, beginning thus: Take *Oyl of Roſes, Quinc.* &c. to which you may add *Oyl of Violets, Water-lillies, Juyce of Lettice, Mints.* Alſo Oyl of Earth-worms which is thought to ſtop piſsing by a propriety. Alſo Seeds of plantane, purſlane, Camphire. Alſo the cooling Oyntment there mentioned, and that of Roſes, the Cerot of Sanders, made of Oyl of Roſes, Sanders, Roſes, burnt Ivory, Bole, and Camphire.

The repelling Epithem mentioned in the Inflammation of the Reins and Liver, is alſo here good, and this of roſe-vinegar. And that mentioned which begins. Take *water of Nightſhade, and Lettice* &c. to theſe you may add *Sorrel, and Wormwood-water, with Bole and Spike.*

A Fomentation or Bath for the reins, is made of the decoction of plantane, Shepheards-purſe, Mullein, Violet-leaves, Mallows, Water-lillies, Vine leaves, Roſes, Pomegranate peels and flowers, Sumach, Bar-berries, Myrtles, Roſes &c. with Smiths-forge-water, or Iron-water.

You may make Cataplaſmes of the ſame, with Barley-meal, and the Oyls mentioned, and Earth-worms.

The Cure of ſcalding urin.

If Heat of Urin come from Irritation in the neck of the bladder, or paſſage of the Yard, it is more eaſily cured, then when it comes from an Ulcer in the paſſage of the Yard. If it come from an Ulcer in the neck of the bladder, it is moſt difficult, becauſe the heat of the urin will not be gone, till the ulcer be cured, which is very ſeldom done. If it come from the Stone, it is not cured, till that is taken away. And if there be many cauſes together, and the heat comes both from the ulcer, and urin, it is worſe and worſe, when there is a ſtone there, which cannot be voided.

As for the Cure: we ſhall firſt ſpeak of ſcalding Urin from Irritation. And if there be an ulcer, becauſe then the urin is muddy; we ſhall treat of it in turbulent Piſsing: As alſo if it come from a Gonorrhæa, we ſhall ſpeak of it there. And laſtly we ſhall ſhew the Cure of it when it comes from the Stone.

The Cure of ſcalding piſſing from heat of urin only.

If piſsing be hot from heat and ſharpneſs of Urin, from things taken, or from the mixture of humors, with the heat of the reins, it muſt be cured, by taking away the cauſe, correcting the heat and ſharpneſs of the urin: And by deffending the bladder and paſſage from the ſenſe of the pain. Theſe are done by internal and external remedies that cleanſe and alter.

If the Belly be bound, it muſt be looſned, becauſe ſtraining at ſtool cauſeth a preſsing of the paſſage of the urin and pain. Then we purge Choler or ſharp Humors with gentle means.

Caſsia is the beſt, which is alſo Anodine, and Diacaſsia, Diaprunis, Diabeſten.

This common Electuary doth looſen and leniſie. Take *Caſsia newly drawn two ounces, Manna one ounce and an half, Pulp of Sebeſtens, Tamarinds, or ſweet Prunes, each one ounce; Mucilage of Fleabane ſix drams, the four great cold Seeds half an ounce, Juyce of Liquoriſh one dram, with Syrup of Roſes ſolutive:* make an Electuary, give *one ounce* at a time.

We chiefly reſpect Choler in purging, and therefore ad Rhubarb, Myrobalans, Syrup of Roſes laxative, Violets, Catholicon, and the lenitive Electuaries mentioned, with Senna, if you will have it ſtronger, or Diaprunis.

A Potion is thus made. Take *Polypody two ounces, Senna one ounce, Liquoriſh one ounce and an half, Raiſons one ounce, Prunes ten, Jujubies, Sebeſtens, each ten pair, Barley one pugil, Aniſe ſeeds one dram*: make a Decoction, add *Syrup of Roſes ſolutive two ounces, Syrup of Violets one ounce*, you may infuſe *Rhubarb.*

Alſo uſe Clyſters of Mallows, Marſh-mallows, Violets, Prunes, the four cold Seeds, with Caſsia, Honey of Violets, Oyl of Violets, red Sugar, &c.

Vomiting, becauſe it draweth Choler from the Meſeraicks, which keeps the urin from ſharpneſs, is good.

They alſo uſe Frictions and Sweating, to revel or draw back the Choler.

If you fear an Inflammation in the lower parts by reaſon of pain, let blood in the vein under the Knee.

And open the Hæmorrhoids when they are uſual, to take away Choler.

Give Alteratives which cool the urin and reins, and leniſie the paſſages, and ſtupefie, and take away pain, of which there are divers forms.

Any Milk drunk, doth leniſie, and heal Excoriations of urin.

An Emulſion is excellent, of cold Seeds the greateſt, being bruiſed, and mixed with Barley-water, and ſtrained; or of Almonds, pine-nuts, or altogether, with white poppy ſeeds, which take away pain and heat.

Make a Mucilage of Quince ſeeds, Lime ſeeds, Mallows, Marſh-mallows ſteeped in proper water, or boyled in the former Decoctions, give *one ounce and an half*, with Broath or Milk; the Mucilage of Fleabane is excellent, and the Infuſion of Gum Tragantu.

The White of an Eg well beaten, and the froath caſt off, taken often alone, or with Sugar of Roſes, or Oyl of ſweet Almonds.

Alſo a Decoction of Marſh-mallow roots, Mallows, Sebeſtens, the great cold Seeds, white Poppy ſeeds, Fleabane or Quinces in Water or Broath, with Sugar.

To this we add to provoke urin, red peaſe, Liquoriſh, Winter-cherries, and in cholerick Natures, theſe Coolers, Endive, Lettice, Violets, Bugloſs &c.

The Julep and Syrup of Violets, purſlane, and Jujubes, and other Coolers, is alſo good.

The Waters alſo of Mallows, and Marſh-mallows.

A Pouder to abate heat in the urin. Take *the Seeds of Guords, or Pompions huſked, and other new cold Seeds, one ounce, white Poppy ſeeds three drams, white Henbane ſeeds one dram, Sugar pellets, or Sugar of Roſes one ounce*: make a pouder, give *one dram with Milk or Broath, or Julep, or convenient Water.*

Or, Take *of the great cold Seeds one ounce, white Poppy-ſeeds freſh three drams, Line-ſeed, or Quince ſeed one dram and an half, Mallow ſeeds, and white Henbane ſeeds, each one dram; Purſlane ſeeds, and Winter-cherries, each half a dram; or Smallage ſeed to provoke urin, Starch one dram, Almonds, Nuts, Pine-nuts, or Piſtachoes three drams, Gum Traganth, Arabick, each half a dram; or Gum of Peaches, or Almonds*: make a fine pouder, uſe it as the other. You may add pouder of Liquoriſh, or the Juyce thereof.

Somtimes we add Opium when the pain is great, *to two ounces of the Ponder half a dram*, mixing it well, and giving *one dram* at firſt, to try the Operation.

When neceſsity urgeth, we give ſtronger Narcoticks, as Syrup of Poppies, and the like, mentioned in the Colick.

Injections are uſed to leniſie the paſſage, and the bladder, and to take away pain which the urin cauſeth.

Of Womens Milk, or other Milk; or of the Emulſion of the cold Seeds, or of white poppy ſeeds.

The White of an Eg, the Mucilage of Quince ſeeds, Line-ſeeds well diſſolved, with water of Violets, Mallows, Nightſhade, Guords, or with Milk, or the mucilage of Mallow ſeeds, with Henbane and poppy ſeeds, is alſo good.

A Decoction. Take *Marſh-mallow-roots one ounce, mallows one handful, Barley one pugil, the great and leſs cold ſeeds and white Poppy ſeeds, each two drams*; boyl them *in Milk.* It will more aſſwage pain, if you boyl therewith *half an ounce of the Barke of the Roots of Mandrake, or ſome Heads*

of Poppies, or two drams of Henbane-ſeed.

Alſo the Oyl of ſweet Almonds, and Violets mixed with the Injections. Or to take away ſenſe of pain, the Oyl of Mandraks, or that of Poppy ſeeds, or Henbane-ſeeds.

Theſe Oyls are to be put into the Yard with a tent.

You may mix Opium with theſe Injections, or with Milk, *one dram to twelve ounces.* Sometimes you may add Camphire alſo, with Opium, and Saffron to the tents.

A Bath to ſit in is good, of Mallows, Violets, Chamomil, and Melilot flowers, and the like: Or you may foment the Pecten, and Perinæum therewith.

Alſo bath the Yard therein, or in warm Milk and Oyl.

Or foment it with the ſame warm, with hot Clouts, and alſo the Fundament, and this will do well, becauſe while the pain remains, the Glans is cold, and when it is gone, it is warm. It is good alſo to heat the Feet, becauſe Cold doth them hurt.

To piſs in running water, till it make a noiſe, we have found profitable.

Alſo to piſs often in a Sheep-fold, where the Dung is hot, or in Horſe dung, is good againſt heat of Urn or Strangury.

Epithems to the Liver and Reins, and Oyntments are good when the urin is cholerick, eſpecially when they are hot. They are mentioned in the hot Diſtemper of the Liver and Reins.

The like are to be given at the mouth.

A certain Soldier affirmed that he was cured of the ſtrangury by only looking upon the Flower of the milkie Mary-thiſtle.

Let the Air be temperate and cool, beware of too much heat, and things that cauſe Choler, from great motion of the Body, or paſſion of the Mind; from hot, ſalt, and ſharp Meats and Sauces; from Wine, except with much water, and a little. Let him drink Barley-water, or Syrups with Water, or Whey. Let his Meat be ſuch as allays ſharpneſs, and gleweth the paſſages as Neats feet &c. Alſo Pap of Milk and Meal, or Starch: Alſo Barley-cream, of Almonds, Pine-nuts, Piſtachaes, ſmall Nuts, and rear Eggs. Alſo prunes, Apples, Jujubes, Sebeſtens, with Lettice, Spinage, Orach, purſlane, Bugloſs, boyled in Milk, alſo Oyl and Butter.

Copulation is hurtful, becauſe as I ſhewed, the Seed is ſharp, and will provoke as it paſſeth.

The Cure of hot piſsing from the Stone.

If ſcalding Urin come from the ſtone of the bladder, without ulceration; of which we ſpake in troubled Urin. And if the Stone hath not been long there, but fell from the Kidneys, nor be too great, it comes forth with the urin of it ſelf, or by the uſe of medicines. But if after it is fallen into the bladder from the reins, and it grow ſo great that it cannot paſs the neck of the bladder, but when it comes thither, cauſeth pain and heat, then it muſt be taken out, either by medicines to which it will ſcarce yeeld, or by cutting which endangereth the life: As ſhall be ſhewed in the Cure of the Stone of the Bladder.

The Cure of the ulcer of the reins and bladder.

Turbulent or mattery piſsing, like ſlime, comming from the ulcers of the reins and bladder with heat of urin, is not cured but by the Cure of the ulcers. And that being difficult, maketh the cure alſo difficult of that which comes from the ulcer. The ulcers of the reins being old, increaſe matter in the vein, and devour the ſubſtance of the reins, leaving only a hard skin like a purſe. And if this be but in one Kidney, the Patient may live long, aud the other Kidney may perform the duty. The ulcers of the bladder are either incurable, or very obſtinate, becauſe they cannot unite by reaſon of the moiſture, and becauſe the urin being ſalt, doth alwaies provoke. The greateſt hope is when the fleſhy part of the Neck is only ulcerated: but when the membranous part ſuffereth it cannotbe healed, except as we ſhewed in Wounds of the Bladder, it grow to the fleſh adjoyning. If a Stone be with theſe ulcers, either in the reins or bladder, it makes them incurable, becauſe the ulcers cannot be cured, except it be taken out, and that is impoſsible.

We ſhall ſpeak of the Cure of the Ulcer of the Reins and Bladder together, becauſe they agree in many things. They are to be cleanſed, and then dryed and healed, alwayes mixing things that reſiſt ſharpneſs of urin, and lenifie the paſſages, and ſtupefie the pain; or uſing ſomtimes one, and ſomtimes another, as neceſsity urgeth: For the ulcer of the bladder and neck thereof, uſe Injections. And if a Stone be therewith, mix things to break it, but gentle, leaſt you enrage the ulcer, or cut out the ſtone, for the ulcer will not elſe be cured: As we ſhewed in the Stone of the Bladder. Many Cleanſers mentioned in the Cure of the Ulcers, are good here to break the Stone.

Alſo ſlimy and glutinating things which defend the ulcer, and take away ſharpneſs, and cover the ſtone, and make it ſmooth. But for the Cure of the ulcer of the reins and bladder we take this courſe. As for purging it is ſufficient to purge the Guts for excrements and wind, which increaſe the pain, bewaring of ſtrong purges, which would do the ſame, and not cleanſe the ulcer.

Gentle Laxatives mentioned in the heat of piſsing for the urin, are good, eſpecially Caſsia, with Liquoriſh pouder &c. Alſo Manna which cleanſeth ulcers, and Whey, and chiefly Turpentine, which looſneth the belly, and heals the ulcer.

Things that alter, cleanſe, and heal, and allay the heat of urin, are given in divers forms.

Alſo the Decoction mentioned in ſcalding Urin, with the Roots of Comfrey, Agrimony, Plantane, Ceterach, Myrtle ſeeds, and the like.

Or this Decoction. Take *Guaicum half a pound, Comfrey roots two ounces, Skins of Guords dryed one ounce and an half, Horſtayl one handful, red Roſes one pugil:* boyl them *in Rain-water to four pints.* Let them often take a draught *with Honey, Sugar of Roſes, or Syrup of Myrtles &c,*

Alſo the Juyces of the Plants alone, or made into Syrups, are good.

Alſo Water of Horſtayl, Plantane, Myrtles, &c.

As Milk is good in ulcers of the Lungs by cleanſing, glewing, and lenifying, ſo eſpecially here, becauſe it can better get to the reins.

Roſin of Larke-tree, or Tutpentine is good, for it cleanſeth and glueth, and you may know the vertue of it reacheth to the reins by the violent ſcent of the urin; give *one dram* or more, if you will have it looſen the belly, or in pills with Liquoriſh, Sugar, and the like: It wil work beſt with the Yolk of an Eg, and Honey, with water and wine.

The chieſeſt Pouders to cure ulcers in the Kidneys and Bladder, are made into Troches, with Gum Arabick, that they may keep. Theſe are poudered again, and given *one dram* with, or without Sugar, with Milk, or Water, and Honey, or the like in the morning faſting, or at night, eſpecially if they be Narcotick, that they may ſleep four hours after ſupper.

Theſe pouders may be made a bolus, or pills, with turpentine.

The troches of Alkekengi are uſual, being made of Seeds of Nightſhade, Winter-cherries, the four leſs cold Seeds, Poppy, ſweet Almonds, Pine-nuts, piſtachaes, Barley, Liquoriſh, Roſes, Gum Arabick, Myrrh, Bole, Spodium, Sugar-candy, pellets, and Hydromel.

Others that cure the ulcer, and aſſwage pain, are thus made.

The firſt. Take *the Pouder to abate heat, mentioned in often Piſsing, Comfrey roots one dram, red Roſes, Amber, Frankincenſe, each two ſcruples; Bole, or ſealed Earth one dram, Dragons blood, Spodium, each half a dram;* make a pouder, give it as formerly.

Another made of divers things, and very excellent. Take *Almonds, Nuts, Piſtachaes, Pine-nuts, each half an ounce; bitter Almonds, and Peaches, Cherrier-ſtones each two drams; Cheſnuts, Acorns, and cold Seeds, each half an ounce;*

ounce; Barley, and Rice, each three drams; Comfrey roots two drams, Liquoriſh half an ounce, red Roſes, Pomegranate-flowers, Purſlane, Lettice, Endive, Fleabane, Cotton, Line, Quince, Mallow, Myrtle, Coriander, Winter-cherries Aniſe, Smallage, and Parſley ſeeds, each one dram; white Poppy ſeeds half an ounce, Henbane ſeeds two drams, Date-ſtones five, Cherry, and Plum-tree Gum, each two drams; Gum Arabick, Traganth, each one dram; Turpentine half an ounce, Frankincenſe, Amber, each one dram; Juyce of Liquoriſh, Wheat, or Starch, each two drams; Acacia, or Juyce of Sloes one dram and an half, Sanguis Draconis half a dram, Opium when there is pain, *one dram, Bole, or ſealed Earth ſix drams, red Coral, Oſteocolla the ſtone ſo called, Crabs eyes, each two drams; Spodium one dram, Aſhes of a Bulls or Boars pizle half a dram, red Sanders one dram, Sugar Candy, and Penidyes, each one ounce*: make a Pouder, give it alone, or with *Gum Traganth made into Troches, or with ten ounces of Sugar mixed*, give *two drams by it ſelf, or made into Troches.*

The third Pouder is only for curing of Ulcers. Take *red Coral waſhed two drams, pouder of Horſtayl, and aſhes of the ſhells of Pompions, each one dram; Frankincenſe, Maſtick, Sarcocol ſteeped in Milk, each half a dram; Sanguis Draconis one ſcruple, Sugar candy, or of Roſes, the weight of all the reſt.*

Half a dram of the Pouder of Cuttle-bone, or from ſix grains of the Mageſtery thereof to ten, given in a rear Eg, or old Conſerve of Roſes, in the morning, as it ſtops the running of the reins, ſo doth it the burning of troubled urin, from the reins and bladder ulcerated.

To theſe Pouders you may add Opium, as in the Troches of Winter-cherries.

Or other Narcoticks as in ſcalding urin, which I have obſerved a hundred times and more, being taken every night in this and other painful Diſeaſes, hath allayed the pain, and refreſhed the Patient that he hath lived, though without it he could not for pain.

Healing and narcotick Pills. Take *Frankincenſe, and Maſtick, each one dram; Myrrh, Storax, and Gum Traganth each half a dram; the Barks of Mandraks one dram, Henbane ſeed half a dram, Opium, and Juyce of Liquoriſh diſſolved in Wine, each one dram; with Syrup of Poppies*, make *Pills*, give one or more, as you ſhall think fit.

Injections are not for the Kidneys, but for Ulcers of the Bladder, to which they ſcarce reach in men, by reaſon of the bending and length of the Yard, but return again, though not in women; and if the Inſtrument be thruſt to the neck of the bladder, it will hurt the ulcer: yet they are to be uſed for neceſsity.

For making whereof, take Cleanſers and that alſo dry, which is hard by reaſon of the conſtant moiſture, and things that abate heat of urin, as thoſe Anodine Injections there mentioned.

They are made of Milk which aſſwageth pain, cleanſeth and healeth Womens and Cows Milk aſſwage pain beſt, or Goats, with Sugar, or Honey, Water, and Whey, when you will heal, uſe Sheeps milk, or other boyled and mixed with Sugar, or Honey.

Alſo the Decoction of Barley, with Bean ſhales, Sugar, and Honey.

Wine is good to cleanſe, if white and thin, with ſome drops of Spirit of Vitriol.

Alſo Whey, and ſome drops of Spirit of Vitriol injected with a Syringe, doth cleanſe.

A Decoction for an Injection to cure ulcers. Take *the Roots of Comfrey one ounce and an half, the dryed barkes or skins of Pompions one ounce, Horſtayl, Plantane, Nightſhade, each one handful; Roſemary, and St. Johns wort flowers, each one pugil, the four great cold Seeds ſix drams*: boyl them *in Barley-water, in a pint whereof diſſolve four ounces of Sugar, or Honey.*

If you muſt dry more, add Mouſear, Solomons-ſeal, Shepheards-purſe, Ceterach, Bettony, Herb Robert, Daffodil roots which glew well, alſo plantane and purſlane-ſeeds.

Adding alſo the Juyce of Plantane, Horſtayl, Shepheards rod, alſo Starch.

Alſo the Waters of thoſe Plants are good, eſpecially plantane, or Myrtles, Brambles, or Olive tops, Roſes, Centaury, of St. Johns-wort.

Alſo ſteeled Water, or wherein Iron is quenched, or melted Lead hath been often infuſed.

There are glewing mixtures for Injections. As, Take *Sarcocol ſteeped in Milk one dram, the Infuſion of Gum Arabick or Traganth half a dram made in an ounce and an half of Plantane-water, Ceruſs half a dram, Dragons blood one ſcruple*, diſſolve them *in Milk, or a Decoction, or ſtilled Waters.*

This oyly Injection heals ulcers. Take *Hens dung, fry it in a pan with Butter or Oyl emphacine, then put them in cold Water, preſerve the Oyl that ſwims at the top.*

Mix with theſe, ſomtimes things that aſſwage pain, as the Decoction of white poppy ſeeds, Rinds of Mandraks, or Mucilages, the white of an Eg, and Opium in caſe of great pain.

In obſtinate Ulcers the Decoction of Litharge is good, two ounces, in plantane, or Roſe-water four ounces.

Or mix with the Injections mentioned, Bole, Cadmia, or Braſs ore, called *Lapis Calaminaris*, Tutty, Ceruſs, Lead burnt and waſhed; Antimony, and the Juyce from the grinding of a Bloodſtone. And in filthy ulcers a little Myrrh.

The troches of Alkekengi, and Gordonius, are good to be taken at the mouth, and thoſe of Amber, ſealed Earth, Spodium, diſſolved in the Liquors aforeſaid.

Some drying Collyriums for the Eyes are good here, as that white one, and the yellow one, and that of Frankincenſe of *Rhaſis*; alſo of Tutty, and the like, of Ceruſs, Sarcocol, Frankincenſe, Gum Traganth, Arabick, Starch, which aſſwage pain, with Opium.

A little Ægyptiacum is good when ulcers are very foul.

The Chymiſts commend the ſpirit of Mercurius dulcis, with plantane or Horſtayl-water, injected to cure ulcers in the Yard and Bladder, cool Oyntments for the reins are good to cool the urin: As we ſhewed in burning urin.

You muſt anoint the privities, and perinæum, or ſeam, with Oyl of Roſes or Violets, with Oyl of Myrtles, Quinces, and a little Vinegar, if the pain threaten Inflammation.

To theſe Unguents are added, Ceruſs, Litharge, Juyce of plantane, and Horſtayl to dry the ulcer, yet they do little outward, and becauſe by aſtringing outwardly, they will ſtop the paſſage of urin, it is better to uſe relaxing Oyntments to open, as Oyl of ſweet Almonds, Chamomil which alſo ſtay pain.

You may make Fomentations of the ſame for the peſten or perinæum, as of Mallows, Chamomil, Melilot, with Coolers if there be heat, as Water-lilly roots, and flowers, Violets, &c.

The Diet muſt be as in the Cure of ſcalding Urin without an ulcer, and glutinous Meats that cover the ulcer, to keep it from ſharpneſs. Fat things foul ulcers, and are not here good.

The Cure of turbulent piſſing from the Reins.

Other thick piſsings as of matter, or of milkie white from the Reins not yet ulcerated, come from a filth that is bred there, and mixed with the urin, becauſe they cauſe heat in piſsing, and by continuance alſo excoriation of the bladder that cauſeth an ulcer, muſt be cured.

This is done by purging the Body from foul excrements and humors, which cauſe the filth to grow to the reins, and is turned into matter: then by cleanſing the reins with things mentioned in the Cure of the Ulcer of the Kidneys. Among which Turpentine is excellent, and Milk, and the like, with Lenitives which take away heat, mentioned in Heat of Urin, which allay the acrimony of urin, and of this matter alſo.

As

The Cure of pissing of matter from the Liver and other parts.

As for the Pissing of Matter which comes from Imposthumes in the Liver or other parts, besides the Reins and Bladder, or from an Empyema a Pleurisie or Peripnumony. In these you must help Nature in her motion, and not stop, with things that cleanse the filth of the blood by urin, mentioned in Feavers, and for the rest, go to the Disease rather then the Symptom.

The Cure of pissing blood from the stone

If Pissing of Blood come from a stone which grateth upon the Loins, through motion, because there is then but little blood mixed with urin, and it continueth not but when motion ceaseth, the urin comes to its colour again, it requires no other Cure but that of the Stone, which is the cause thereof: As we shewed in the Cure of the Stone.

The Cure of pissing of blood from Anastomesis or hurt of the Reins.

But if Pissing of Blood come from the Kidneys, being too full of blood, which Nature sends forth with the urin, being impure or too thin, it must be cured, if it continue. And also if it come from a hurt in the Reins, with these medicines following.

We revel or pluck back the blood when it flows too much, by blood-letting and cupping, in the extream parts, but if the Loins be cupped, the blood would be drawn thither from the great Veins.

If the Flux come from the blood being watery or unclean, it must be cleansed with gentle purgers that astringe as we shewed in all other Hæmorragies.

We stop the Flux with things that thicken the blood, and stop the passages, with some things that stupefie the sense, as follow.

Pouders are given with Sugar of Roses, or an Eg, or steeled Milk, or Sheeps milk, or old red Wine, Syrup of dryed Roses, Myrtles, or convenient Waters.

These are proper, pouder of Horstayl, Yarrow, Comfrey roots, Snakeweed, five leaved Grass, Myrtle seeds, Date-stones, Maudlin according to *Dioscorides*, wild Cummin seed, Bole, or sealed Earth, Blood-stone, red Coral which dissolves the clotted blood, Amber, burnt Ivory, Gum Traganth, Arabick, Acacia, and the like.

The troches also of Amber, Winter-cherries, of *Gordonius*, and such as bind, mentioned in the Ulcers of the Reins, that allay the heat of the urin.

Waters, Juyces, and Decoctions of Plantane, Purslane, Yarrow, Shepheards-purse, Sumach, Quinces, and the like.

Also Narcoticks, as Philonium Persicum, as in other Fluxes, and other Troches, with Opium. And with Henbane seeds, as in Spitting of Blood.

Anoint the Reins with this. Take *Bole, or other glutinating Earth, half an ounce, Rinds of Pomegranates, or Galls two drams, Dragons blood, Allum, each one dram; with Oyl of Myrtles, the White of an Egg, and a little Vinegar*: make an Oyntment or Plaister, *Juyce of Plantane instead of the Oyl, is better.*

Mix Juyce of Purslane with Barley-flower, and apply it to the Reins.

The Cure of pissing blood from taking of Spanish Flies.

If Pissing of Blood come from taking of Cantharides or Spanish flies, we give things which allay the heat of urin, by which the mouths of the emulgent Vessels are opened, and this Flux is raised; chiefly the Decoction of Line-seed, and steeled Milk: Emulsions of the great cold Seeds, white Poppy seeds, and sweet Almonds. Also Oyl of Almonds, Roses, whites of Eggs, and Mucilage of Fleabane seed. And if it continue other remedies mentioned.

The Cure of pissing of blood from hurt of the bladder.

If Pissing of Blood come from a hurt of the bladder, in regard much blood cannot flow from so few veins, you must apply remedies to the hurt or wound, both at the mouth, and by Injections. And if it continue, use the remedies mentioned, and the Oyntments to the bladder.

If clotted blood stop the bladder, we give things to dissolve it, as Amber, Kids Runnet, and the like, mentioned in want of Pissing from clotted blood, chiefly Savory dissolves blood in the bladder. And if you put the Yard into a hollow Raddish, the clotted blood will come forth.

The Cure of preternatural pissing from a Wound.

When the Urin comes forth at a Wound, as when you cut for the stone, there is no way but to cure the wound.

When a wound pierceth the lower parts of the belly and bladder, and the urin comes forth, cure only the wound; but if it be incurable as usually it is, the urin will pass that way till death; neither will the ulcer grow together: As we shewed in the Cutting of a fleshy Rupture, when the bladder was divided, so that the wound turned into a Fistula, and the Patient pissed through it without other inconvenience, because the urin fell not into the belly, but came forth. Sometimes as in him that was gored with an Ox through the belly and bladder, when the wound is cured, the urin turns to its proper passage; which we suppose was done because the wound was in the fleshy part of the bladder, which will grow together, and be healed, otherwise in the membranous part it will not, except the wound be near to some flesh which is pierced, unto which the membrane may grow, so that the hole in the bladder may be covered with a Callus, and the urin return to its Natural passage.

CHAP. XI.

Of Dejection, or going to Stool.

The Kinds,

DEjection is commonly that Excretion which is by the Belly, by which the Excrements thick and thin are voided with divers Humors. This is preternatural when the Excrements voided are too many, and is called *Diarrhæa*. Or when other humors are mixed with the excrements or raw flesh, in the Lientery: Or the Chyle in the Cœliack passion mentioned, or blood in the bloody flux, or matter, or fat, mentioned in the unctious Dejection. And if things are voided, as worms, and other things taken; we shall mention them in a Chapter by themselves. Also that is a preternatural Excretion of the belly, when the excrements pass the wrong way. Of which we shall speak in order.

Preternatural Dejection.

Diarrhæa or Flux of the belly over purging.

Diarrhæa is a Flux of the Belly, if it come after the taking of a purge, it is called an over-purging, this is a preternatural, immoderate, and often going to stool, when the dung and other excrements and humors, are voided often, more or less. These are first thick, then thin and watery, of divers colours, ash-coloured, clay-like, yellow, black, equally or unequally tinctured: many times mixed with white, thick, clammy flegm. This excrement is sometimes waterish, frothy, clammy, clear, and white, like Froggs spawn; somtimes thick, like melted glass, as we have seen after a stool, without evil scent.

The Flux of the Brain.

Somtimes frothy Flegm is voided in abundance, and then it is called the Flux of the Brain from whence it comes; somtimes it is yellow, cholerick, and froathy; somtimes black and thick. These, because they are voided thick, and but few, rather cause a needing or *Tenesmus*, then

then a Dirrhæa: Of which we ſhall ſpeak, which continually moleſteth without voiding much, and with great difficulty.

In Dirrhæa's there are ſomtimes pains of the belly, greater and leſs, with ſtretching and rumbling, eſpecially at firſt: Somtimes there is a heat in the Fundament, and deſire to void often, eſpecially in Teneſmus.

Somtimes there is pain of the ſtomach or heart as they ſay, with vomiting, yet not ſo violent as in the Diſeaſe Choler, mentioned in Vomiting, by which the meat, chyle, ſlime, flegm, or choler in the ſtomach is vomited up; ſomtimes other natural faculties are hurt, and there is a Feaver.

Lientery. Lientery is a preternatural Dejection of the belly, in which the meat eaten is little changed, but comes forth with other excrements in a Flux, not ſo great as a Diarrhæa: Somtimes with noiſe of the ſtomach and belly, and hurt of Natural Functions.

Cœliack paſſion. The Cœliack paſſion, is that preternatural Excretion of the Belly, whether it be more or leſs, in which the Juyce made of the meat eaten, or the Chyle imperfectly concocted or crude, and moiſt of an Aſh, or Clay-colour, thick and whitiſh: ſomtimes more or leſs, pure, is ſent forth. And the Patient is weak, and evil coloured.

Dyſentery. Dyſentery is a voiding of blood, either alone, or with other things, it is ſo called, becauſe the guts are affected. It is many times popular or Epidemical, moſt in young men, ſomtimes in old men, and men of ſuch and ſuch a conſtitution. In this there is an urging moleſtation to void ſomtimes more, ſomtimes leſs, with often needing and gripings with noiſe and rumbling, and blood is mixed with the excrements, and beſides that a ſlime like flegm, or like that fibrous ſubſtance which is in blood that falls into water, when a vein is opened, this is falſly called flegm, and is voided ſomtimes in great abundance: The Germans call it the white Dyſentery. This ſlime is thought to be fat by ſome, becauſe the guts being turned by the Butchers are fat, they ſuppoſe that they are inwardly alſo fat, which is not ſo; ſome ſay it is the ſhavings of guts, which if they come forth, as ſeldom they do, are membranous. Alſo Choler yellow, green, or black is mixed therewith, and alſo Flegm as in all Dejections or Stools.

There is commonly a thirſt in this Diſeaſe, and ſigns of heat, the urin is dyed and cholerick; and there is a Feaver called *Synochus*, uſually, as we ſhewed in the Diſeaſe Choler.

Somtimes a Dyſentery follows a Feaver, either putrid, continual, or intermitting, or which is more uſual, malignant, and peſtilential, which is contagious and epidemical.

I have often obſerved a Hiccup to continue till death in a Dyſentery, and other great Symptomes.

Bloody Stools that come from an Inflammation, with gripings and ſymptoms of a Dyſentery, not from an Ulcer, mixed with excrements, are taken for a Diſentery.

Teneſmus. Somtimes ſlimy matter mixed with a little blood is voided, and it is called *Teneſmus*, or Needing from the great ſtraining without intermiſſion, without other pains, if this continue, at length there is nothing voided but abundance of matter, without any ulcer appearing in the Fundament.

The Liver-flux. Somtimes wateriſh blood is voided like that water wherein bloody fleſh hath been waſhed, and it is called the Hepatick Flux, becauſe it comes from the Liver. This Flux is great and without pain, moſt in the night, and continueth long: It weakens the ſtrength and the natural Functions, and comes with thirſt and other accidents. The bloody thin Flux in a Dyſentery, is like to this.

Voiding of clotted blood by ſtool. Somtimes congealed blood or parched black like Pitch, is voided with the excrements more or leſs joyned with vomiting of the ſame: As we ſhewed in Vomiting, with great weakneſs and other accidents.

Sound people have often a Flux of pure Blood from the Hæmorrhoids, which is not mixed with the excrements, and ſhall be mentioned in other Excretions of Blood.

Matter voided by ſtool. The voiding of Matter in the Dyſentery and Teneſmus, is little and without pain, and ſomtimes when the Dyſentery is gone, it continueth and weakneth the Patient. Somtimes matter is ſent forth in abundance without pain, for a long time, and the Patient is evil coloured, and conſumeth, with other Diſeaſes in the Natural parts.

Slime and Flegm voided by ſtool. There is ſomtimes a ſlimy and flegmatick Dejection in a Diarrhæa: and it is often mixed with blood in a Dyſentery and Teneſmus, and towards the end in a Teneſmus it comes forth pure matter. And *Fernelius* obſerves that more white Flegm may be voided without pain, after long Diſeaſes and great riding.

Voiding of Fat by ſtool. Somtimes Stools are unctious and fat like Oyl or Butter, or other Greaſe. And we have ſeen them like tallow candles ends, with other excrements for a long time, and many. I have ſeen the ſame like ſuet not melted often, as big as Hazel-nuts in an old Diarrhæa. This is a kind of Lientery, if they come from things eaten, and often; or of a Diarrhæa, if they be voided with other things, and come from any thing but meat. And this they call the melting of the Guts, from a miſtake of the cauſe.

When excrements or dung come another way then the ordinary, it it preternatural, as when they come from theſe places following.

The voiding of Excrements by vomit. Dung or Excrements are vomited ſomtimes which ſtink, and are thin, like Chyle with great pain, and wonder to the Spectators. In the Diſeaſe called *Convolvulus* in Hernia or Rupture: as we ſhewed.

The voiding of Excrements by urin. We have ſeen the Fæces or Excrements of the belly voided by urin, with bones of birds, with piſſing of matter, heat of urin, and great pain. And I have ſeen the kernels of Apples voided the ſame by ſtool.

The voiding of excrements by the womb. We have alſo ſeen the Excrements of the belly voided by the womb, with matter and other accidents.

The voiding of excrements at wounds. Somtimes the Chyle as alſo the Excrements will come forth at a wound of the belly, not in ſuch only as die preſently, but in them that live long after, from a Fiſtula that hath remained.

The Cauſes.

The Cauſe of all theſe preternatural Dejections, being more or oftner then is fit, or ſtrange, and unuſual, is in the Stomach and Guts.

The irritation of the ſtomach, is the cauſe of preternatural Dejections by ſtool. And the chief is the irritation or provoking of the bowels that are ſo ſenſible, which ſo ſtirs up the expulſive Faculty, that it ſtrives to expel what is therein, eſpecially if the parts adjacent be alſo ſtirred up by conſent, ſo that they endeavor alſo to expel what is in them; this cauſeth divers kinds of Dejections, with griping and pain. For if the Stomach be ſtirred up, it ſends things to the Guts, rather then to the mouth, except it be ſo diſturbed, that it muſt preſently diſcharge: as I ſhewed in Vomiting. Therefore the ſtomach avoids great evils, and is more ſeldom ulcerated then the Guts.

The irritation of the guts, is the cauſe of Dirrhæa Dyſentery, and bloody Flux.

When there is an irritation in the long paſſage of the guts, it cauſeth Dejections more or leſs. By this the expulſive Faculty of the guts is ſtirred up, and ſends downwards what is in them, and by ſtraining cauſeth a Diarrhæa, with griping. Or if it be greater, and knaws or corrodes the ſubſtance of the guts there is a Dyſentery; and if the Colon be affected, the pain is about it, eſpecially on the left ſide. And becauſe the Colon paſſeth under the Navel, there is pain alſo. And if the thin guts are affected, the pain will be there. And the blood which is voided with the excrements, is more or leſs mixed, by how much the farther it flows from the thin guts, and the nearer from the ſtrait gut. And the greater the hurt, the more the blood, and the leſs when the ulcer begins to ſtink, for then there is matter alſo. And this blood is thinner or thicker, purer, or more impure, as it is in the Meſeraicks. And from the pain there is a Feaver, eſpecially if it cauſe an Inflammation of the guts, which is ſomtimes joyned with a Dyſentery. And by reaſon of ſtrong irritation, when the guts are not ulcerated, through the opening of the mouths of the veſſels, there may be voiding of blood by ſtool, ſeldom pure, often clotted, and ſomtimes black: as we ſhewed. Or there may be a bloody Flux like a Dyſentery with an Inflammation, in which without an ulcer of the guts, blood flows with great pain, a Feaver and ſtraining: As we have obſerved in Infants opened, that have been thought to die of a Dyſentery.

The irritation of the ſtrait gut, is the cauſe of Teneſmus.

If this irritation be in the end of the ſtrait gut, or an ulcer, then by reaſon of the exquiſite ſenſe of the part, there is a continual provoking to ſtool, and is the cauſe of Teneſmus; which if it come from an ulcer, hath ſigns of blood and matter, this is the firſt kind of Teneſmus. If Choler flow, or other clammy Matter, it cauſeth the ſecond ſort of Teneſmus, if nothing, the third. And then the ſtrait gut is provoked or moleſted with the ſtone in the bladder that lies near it, or with a tumor, or hard excrements, or heat which inflameth the urin; or from worms called *Aſcarides*: As ſhall be ſhewed. This Teneſmus which hath needing or ſtraining, without voiding of any thing, may come from cold gotten into the Fundament. And this irritation may open the Hæmorrhoids, and then pure blood is voided.

Pain of the ſtomach or guts, is the cauſe of Dejection.

Some Diſeaſes of the ſtomach and guts cauſe Dejections with leſs pain, then irritation, as the being burdened with excrements and humors, and other bodies, or when they are ſo many that they cannot contain them longer, being preternatural, and of an evil quality which provoketh Excretion. Hence are divers ſorts of Dejections: In all which the ſtomach and guts do ſooner void excrements, when they are dilated or looſned.

The ſtopping of the guts, is the cauſe of vomiting Excrements.

The Fæces of the Belly, and the Chyle coming upwards, by reaſon of the ſtoppage of the guts, cauſe this preternatural Excretion by vomit, the cauſe of which ſtoppage we ſhewed in the Convolvulus, and in the Cure of the Rupture.

A Wound in the guts, is the cauſe of voiding excrements thereat.

When the guts are wounded, the excrements come out there, if it pierce the belly, and wound the guts, and if the thick guts are wounded, thick Excrements flow out, if the thin, thin: And if the Jejunum be wounded, the Chyle comes forth. And ſomtimes being turned into a Fiſtula, the Excretion remains there, and the Patient liveth. And this is when the lips of the wounds of the guts and belly grow together, which is ſooner in a fleſhy part of the belly. And then if the ulcer be not cloſed as I have ſeen, it turns to a Fiſtula, and lets out the excrements, and keeps them from falling down. This is like that of the bladder: As we ſhewed in preternatural Piſſing.

A Wound in the ſtrait gut, is the cauſe of Excrements from the womb.

That voiding of dung at the womb, and by urin mentioned, comes from an ulcer in the ſtrait gut which joyns to the neck of the womb and bladder.

The Cauſes of all theſe Diſeaſes of the Stomach and Guts, from whence theſe preternatural Excretions ariſe (beſides wounds, ulcers, and obſtructions, from whence the excrements are ſent forth by vomit, urin, or the womb: As we ſhewed in the Iliack paſſion,) are from theſe following.

Purges cauſe over purging, & bloody Flux.

If purging medicines do ſo ſtir up the expulſive Faculty of the Stomach and Guts, that they work too ſtrong, or too long, there is ſuper-purgation. And though this cometh commonly from ſtrong medicines, yet gentle things, as Caſſia, Manna, may cauſe it by their cleanſing quality being dry, unctious, and provoking Nature by contrariety. Some purges are ſharp, and hot, as Spurge, wild Cowcumber, Coloquintida, Laurel, and theſe do not only over purge, but ulcerate by corroding, and inflaming, and cauſe Dyſenteryes, or bloody Fluxes, by opening the veins. If the force of them reach to the Fundament, it cauſeth Teneſmus, as from Coloquintida, or they open the Hæmorrhoids. And the ſame may be done by Clyſters and Suppoſitories forcibly thruſt up, which cauſe a Teneſmus. And this may be done by the violent uſe of a Clyſter-pipe.

Clyſters and Suppoſitories, the cauſe of Diarrhæa and Teneſmus.

Beſides purges, poyſon may cauſe Diarrhæa's and Dyſenteryes. Among which the pouder of a Loadſtone drunk, is the cauſe of a Dyſentery.

Alſo Poyſons, and ſome Meats, Drinks.

Alſo other ſharp and pricking things ſwallowed, but they ſtay ſeldom in the Guts, Meat and Drink by plenty and corruption, or crudity, cauſeth preternatural Dejections, eſpecially when ſwallowed down, and being crude, they lie heavy, breed wind, diſturb, or being moiſt, looſen, or fat, and cauſe ſlipperineſs, and ſo produce a diarrhæa. Or things that eaſily corrupt, cauſe a Diarrhæa ſooner, being turned into bad humors: Of which we ſhall ſpeak. Or things that breed many Excrements, Mud, or Filth, or ſordid Matter, by their plenty and adverſe quality, may cauſe a Diarrhæa.

This may be partly from the Meat that will eaſily be ſo corrupted, and from the Stomach which is apt to pervert them: As we ſhewed in Weakneſs of the Stomach. But if meat remains crude, without any concoction, there is Lientery, when it is much and burdenſom to Nature, and thrown out as taken in. This is when things are taken that either cannot be digeſted, but with great difficulty; or when the ſtomach is ſo weakned, as that it cannot concoct; as I ſhewed in Weakneſs of the Stomach; alſo a Scar left in the ſtomach from a wound, is reported to be a cauſe when theſe cauſes meet, there is a Lientery; and if they be at a certain time from meat that many eat, or the like, there is a popular Lientery, which they ſuppoſe comes from the Air.

Choler is the cauſe of Diarrhæa, Dyſentery, or Teneſmus.

Sharp pricking Humors that burn and corrode, cauſe preternatural Dejections, as yellow and black Choler, which if bred in the ſtomach and guts, or ſent thither from the gall or meſeraicks, by its plenty, or in Diſeaſes, as in Jaundies and Feavers, being mixed with the Flegm and ſlime of the Guts, and with water or ſerum, made milder, cauſeth only a Diarrhæa, which ſends forth moiſt, froath, yellow, or black Excrements, as the Choler is. But if the Choler bemore malignant, ſuch as corrodes and grips the guts, wherein it can lie longer then in the ſtomach, then it produceth

ceth a Dyſentery, with Inflammation or Ulcer, or ſuch a bloody Flux as was mentioned, as Choler is, which flows with the blood and excrements, either yellow, green, or black. Alſo the ſame Choler deſcending to the end of the ſtrait Gut, and there ſticking if it be clammy, by provoking or ulcerating the part, cauſeth Teneſmus. And this may follow a Dyſentery, by reaſon of Choler brought thither by it. This Choler may come from the ſame cauſes, with that of the Diſeaſe Choler; and is chiefly in young people that eat much green Fruit, which corrupt and turn into Choler, and therefore they have the Dyſentery, chiefly in *Autumne*, when the Fruite is plentiful, and the rather, when the Fruit is not kindly but worm-eaten; or as *Rondoletius* ſaith when they eat aſtringent Fruit, which ſtops the paſſage of the former. This Dyſentery is popular or epidemical, when many have it.

Other ſharp Humors are the cauſes of Dyſentery, Dyarrhæa, and Teneſmus.

A Diarrhæa may alſo come from other ſharp Humors that gripe like yellow or black Choler, or are corrupt and malignant, when they are qualified with flegm: Or a Dyſentery or Teneſmus, may come from the ſame, being more ſharp and not qualified. And if theſe Dyſenteryes have a malignant cauſe, they are epidemical. And theſe humors come from evil diet, or humors in the ſtomach and guts, or meſeraicks. As it is often in malignant and peſtilential Feavers, that the putrid humors, or venom in the plague which is very hot, being ſent by the force of Nature to the guts, as the common ſhore, and there retained, doth provoke and prick them, and ſomtimes ulcerate. As I have often obſerved in the ſmall Pox, that the guts have been ulcerated by the humors, which hath cauſed a deadly or long laſting Dyſentery. Theſe are either joyned with the feavers, or follow them. Alſo in other venemous Diſeaſes as in the French Pox, when the malignant humor is carried by Nature or medicines into the guts, as by Quick-ſilver, it will cauſe a Diarrhæa or Dyſentery, as well as a flux or ulcer in the mouth.

Flegm is the cauſe of Diarrhæa, eneſmus, and Flux of the Brain.

Somtimes Flegm mixed with dung or humors or water, cauſeth Diarrhæa's, and is ſomtimes moſt pervalent, eſpecially at the concluſion, when all other excrements are purged away. And this Flegm is bred in the ſtomach aud guts, being ſomtimes wateriſh, ſlimy, or glaſſie from the cauſes thereof; ſomtimes it is ſent thin like water by the meſeraicks, with other humors from divers parts of the body. And this may come from the brain to the ſtomach and guts, being froathy, and cauſe the flux of the brain, according to *Hippocrates* Aphoriſm, which teacheth that they who have froathy excrements, have a flux of Rhewm from the brain. The cauſe of which defluxion of flegm from the brain was mentioned in Defluxes. Alſo it is affirmed that ſalt flegm gathered about the Fundament, may cauſe a Teneſmus. And if it be not very ſharp, there well be no ulcer, but only a ſtraining.

This pricking in this kind of Teneſmus comes not from the ſharpneſs or ſaltneſs of the ſlime, but from its ſticking by which it cleaves to the gut, being very ſenſible, and continually provoketh a needing and ſtraining to diſcharge it.

The Serum or Whey mixeth it ſelf with the Blood, and other other Humors and Excrements. And the greater quantity there is of it, the more thin are the ſtools. Eſpecially in a Diarrhæa, where the ſtools are like water, becauſe the ſerum mixeth with, and moderateth the ſharp and cholerick humors; and this ſerum is made in the firſt concoction for moiſt meat and drink; or it is ſent to the guts by the meſeraicks, and carrieth divers humors with it, either by nature or medicine in time of repletion, and cauſeth a Diarrhæa thus mixed. And it appears that this could not come from the ſerum that ſweats through the meſeraicks, becauſe the quantity is great, and the flux is conſtant, and ſo much cannot be retained in the ſtomach and guts, nor can the moiſture taken in at the mouth cauſe it, being ſomtimes very little: Neither is that an objection, that being mixed with blood, it receives no colour from it; when the ſweat from the whole body and the water that comes from wounds, and to the reins by the emulgents is not bloody: And after a vein is opened, when the blood is ſettled, the water or ſerum is ſeparated from it.

Bloody Serum or Whey is the cauſe of a Liver-flux.

It cometh to paſs, but ſeldom, that Serum is voided in a Liver-flux in great quantity like water, wherein fleſh was waſhed, tinctured with blood, which it receives from the blood in the meſeraicks: And yet in other fluxes of water, are not diſcolour'd or red. The queſtion is how this ſhould be. Some ſay the weakneſs of the liver is the cauſe, and want of ſanguification. And although this may be the cauſe of abundance of ſerum and crude blood which cauſeth a Diarrhæa, yet becauſe the tincture is ſeldom there muſt be another cauſe not ordinary in the liver and meſeraicks. As the thinneſs of the meſeraick blood, or the dilatation or opening of the mouths of the veſſels. And the cauſe hereof is rather the heat then coldneſs of the liver, as appears by the heat, thirſt, and burning about the Hypochondria, with a Feaver ſomtimes, and ſomtimes after; as alſo in regard it is cured by cold things rather then hot.

From this heat of the Liver, and Conſtitution of blood, with the Anaſtomoſis or opening of the Veins cauſed by this heat, it comes to paſs, that the Serum returns the ſame way tinctured with a little blood, and falls into the Guts, cauſing this bloody tincture in the flux of ſerum, as in a Dyſentery from an ulcer that opens the mouths of the veins.

Slime in the ſtomach and guts, is the cauſe of ſlimy Dejections and blood ſlime, is the cauſe of a Dyſentery.

That Slime which beſmeareth the ſtomach and guts, cannot alone cauſe a preternatural Dejection, becauſe it comes ſeldom forth alone, but when it is mixed with other excrements being much in quantity. The cauſe of the abounding of this is clammy meat which breeds excrements. But that ſlime which is in a Dyſentery, if it be voided more then other excrements cauſeth the white Dyſentery, and the ſame cauſeth a Teneſmus. This ſlime from the ulcerated ſubſtance of the guts, which being membranous, cauſeth ſuch matter, as we ſee in the ulcer of the bladder: which at firſt hath ſome ſigns of blood, and is after white matter. And becauſe it is gathered into the ſtrait gut about the Fundament, it being thick, comes forth alone in this Diſeaſe.

Therefore we count this Slime, Matter rather then flegm, which ſome account ſalt flegm, that hath only a force of pricking, when it is not ſo. And the needing in a Teneſmus, comes rather from the hurt of the gut which is very ſenſible, then from this flegm, though ſharp. As for the Slime which *Fernelius* ſaith, is voided without pain, which ſome think to be Matter, it is he ſaith the dregs of blood from the veins of the Fundament, in long melancholick Diſeaſes, as the Whites in women.

We ſhewed formerly how Matter like Slime comes from a Dyſentery and Teneſmus, and alſo from a Colick.

Matter voided by ſtool.

Beſides theſe, Matter in a Dyſentery from an Ulcer is continually voided, and alſo without pain. Which muſt come from a great ulcer that is foul. becauſe there is ſo much, and from a part that is inſenſible, and of no great Functions, becauſe he dieth not ſuddenly, but conſumeth by degrees. This hath been in the meſentery, which is an ignoble part, and ſent by the veins into the guts, as appears by Anatomy. If it ſhould come from farther parts, as liver or ſpleen, it may be brought by the meſeraicks; and then there will be great ſymptoms, as the Dropſie by reaſon of the ulcers there. If it cannot come

come from the breaſt or head, becauſe the matter may not be brought for want of paſſage, though divers have been invented. And if any ſhould paſs, it would be very little, and it muſt paſs through the hollow vein into the branches of the gate-vein, which would rather then paſs the emulgents to the reins and bladder : As I ſhewed in their places.

The Chyle is the Cauſe of the Caliack paſſion.

When the Chyle ſlips through the guts it is called the Cœliack paſſion ; and by reaſon of the diſtribution thereof hindered, it is not carried into the meſeraicks, but gathered into the guts in great quantity, corrupted, or mixed with ſharp humors, and ſo caſt down by ſtool, as it is in quantity and colour, or mixed with other humors. This want of diſtribution, comes either from the weakneſs of the bowels ordained to ſanguifie, which cannot attract the Juyce, or from the obſtruction of the paſſages or meſeraicks. Alſo Chyle made of moiſt and fat meats, doth ſooner paſs through.

Much fat in the excrements cauſeth greaſie Dejections, and ſlipperineſs of guts and excrements, but doth not enlarge them. This comes from eating Fat, Oyl, Butter, that come forth without concoction ; as we ſhewed in a Lientery. And they which teach that fat may be voided by reaſon of the melting and colliquation of the Fat of the Guts, being perſwaded that the guts are fat within, and that that Fat may be diſſolved or ſhaked off, were perſwaded thereunto, becauſe Fat may be carried from the meſentery, or cawle by the fat membranes that are joyned to the guts, (which if it ſhould be, it muſt firſt be melted, that it may paſs the meſeraicks) which being hard to be done, it is not probable that either that Fat or other that is more remote, ſhould paſs. Becauſe there cannot be actual heat enough within to melt it, neither doth the heat of the heart melt the Fat which is about it. Therefore as we ſhewed in the Hectick Feaver, it cannot paſs by urin, ſo can it not paſs here by ſtool : As we ſhewed concerning Matter.

Fat Meats and Drinks, the cauſe of fat ſtools.

We ſhewed how blood may cauſe a flux from the corroſion and ulceration of the guts that flows pure with the excrements in a Dyſentery, or in the Hæmorrhoids or clotted. And how being mixed with ſerum, it may cauſe the Liver-flux.

And we ſhewed how Meat might paſs not changed, in a Lientery.

The Cure.

Firſt, I ſhall begin with thoſe Dejections or Purgings that are moſt difficult, that is the Deſentery, then Teneſmus, then Diarrhæa, then Lientery, Liver-flux, Cœliack or Chyle paſſion, and purulent Dejections, and voiding of fat by ſtool.

The cure of a Dyſentery.

A Dyſentery is a dangerous Diſeaſe that deſtroys Infants young and old, and eſpecially when the Guts are hurt, which is known by the plenty of Blood and fleſhy fibres, and Matter voided, with griping of the Belly. And if there be an Inflammation, there is a Feaver and Convulſion. And it is worſt when yellow, or yolk-like Choler, or green, like Verdegreece, or black is voided. Alſo if the ſtrength ſuddenly fail : And Hiccup following are deadly. It is very obſtinate, if it be conſtant, or if when blood is ſtopped, there be a Lientery or Diarrhæa, or ſtinking Excrements. All theſe fore ſhew death which follows within a week two or three. If a Dyſentery be a ſymptom of a continual malignant or peſtilential Feaver or epidemical, it kills many. Somtimes it ends in a filthy ulcer ; and then when the Dyſentery is paſt, they have long after a purulent Dejection which conſumeth and killeth.

The Cure is by taking away the Cauſe, whether it be Choler or other evil Humors, or corroding Medicines, or Poyſon. By Evacuations and Cleanſers, and by abating the violence of the Lenitives, Stupefactives, and Antidotes, if the Humor be venemous ; and with Coolers, if there be Inflammation. Then we muſt cure the Diſeaſe, which is an Excoriation or Ulceration, with Dryers : As we ſhewed in Ulcers, with Aſtringents that dry, and ſtop the Flux, as followeth.

Among evacuating Remedies, Purges are beſt, to take away the Griping, venemous Humors of what kinds ſoever. And theſe are of the beſt Operation, when the Cauſe lyes deep in the ſmall Guts, unto which Clyſters cannot reach : And when they are given at firſt, before great hurt be done, and often if need require. You muſt make choyce of ſuch Purgers as have an aſtringent quality, to prevent too much Evacuation from the Diſeaſe and Medicine.

And Rhubarb is the beſt firſt torrified, to make it more aſtringent. And then it will be better poudered, but if it be over dryed, it is of no force. Give it at firſt while ſtrength laſts, for if you give it after it requires more torrifying or parching. The doſe is from half a dram to four ſcruples or five, with red Wine, Roſe-water, Plantane, Dock or Sorrel-water, or the like, with Juyce of Quinces, Plantane, or the Syrups of the ſame, or of dryed Roſes, or Myrtles one ounce, or two drams of Acacia. And if you alſo dry up the Ulcer, uſe pouder of burnt Harts horn, ſeed of Roſes and Plantane, and other drying Pouders to be mentioned.

To Rhubarb we add yellow Myrobalans, becauſe theſe purge and bind after, twice as much, becauſe they are weaker.

Alſo the Syrup of Roſes ſolutive, or of red Roſes which bindeth more, made with the Infuſion of Rhubarb one ounce, or one ounce and an half.

In the beginning of a Dyſentery the purging Extract of Quinces, given four or five ſpoonfuls is good, it is thus made. Take *two or three ripe Quinces, paired and ſliced, the Seeds taken out, put them in a glaſſed Veſſels well ſtopped, and put it in another Veſſel of boyling Water four or five hours, keeping the Water from boyling into it.* Then pour off the Juyce which I call purging Extract, gentle, and keep it for uſe.

Of all theſe you may make this Potion, adding things that heal the Ulcer.

Take *Liquoriſh one ounce and an half, Plantane and Roſes each one pugil ; Raiſons one ounce, Tamarinds ſix drams, yellow Myrobalans infuſed in Wine three drams :* boyl them in Hydromel, when it is ſtrained, infuſe *Rhubarb one dram, Spike half a ſcruple,* ſtrain it, and add *Syrup of Quinces, or red Roſes dryed one ounce.*

When the Flux is more ſliny, cholerick, or the Excrements many, and not ſo bloody, give Tryphera Perſica, or Saraſenica *Nicolai* two ounces, with aſtringent Syrup, and convenient Waters ; or diſſolve half an ounce of Triphera Saracenica in a Decoction of Citrine and Indian Myrobalans.

Catholicon is given to one ounce, with Rhubarb and Myrobalans, and the like ; alſo Hiera, Agarick one dram by *Dioſcorides*, which purgeth ſtrongly, and is not ſharp, if it be given with Honey, or Syrup of Roſes, and Rhubarb. Some give Carthamus ſeeds in Whey : Others the Pulp or Decoction of Tamarinds, which allays the heat of Choler. It is dangerous to uſe ſtronger, which wil inflame the Guts.

Vomiting is only alowed in a Dyſentery, when the cauſe reacheth to the ſtomach, and is nouriſhed from it. And if it come from a burning Medicine or poyſon.

Blood-letting will do little good, becauſe little is taken from the Meſeraicks thereby, which ſend the Blood into the Guts, and it weakens. Yet when the Hæmorrhoids open of themſelves, and flow not too much, they do good.

Sweating doth ſtop this Flux, and muſt be uſed while there is ſtrength, with Coverlidds, Bricks, Bottles, or the like

like, provoking of urin doth the ſame, by carrying the matter in part to the Ureters, as with this. Take *of the four great cold Seeds beaten with their ſhells, each two drams; Maiden-hair half an handful, Aſparagus roots one ounce, or Seeds thereof one dram, Sumach three drams, Coriander and Aniſeſeed, each one dram and an half*; boyl them *in Broath*, and let him drink it when he is thirſty.

If the thick Guts are hurt, Clyſters are good, becauſe they reach to the part, but if the Ulcer be deep in the ſmal Guts, they cannot ſo well reach the part, and are not ſo proper; but only to take away pain and the Excrements, and to ſtop the Flux gently. You muſt give them in ſmal quantity, when the great Guts are hurt, and in larger, when the ſmall are hurt, that they may reach the part, which if they do, they muſt be repeated.

Theſe are made of Lenients, Cleanſers, and Aſtringents, againſt the ſharp corroding Humors, and the Ulcer.

Lenitive Clyſters allay the ſharpneſs of Humors, and defend the Guts, take away pain, prevent further hurt, are given at any time, alone, or mixed, as with Stupefactives to take away pain, and ſtop the Flux. Theſe are good alſo to cure the Ulcer, if they be mixed with Cleanſers and Dryers.

Cleanſing Clyſters muſt be firſt given to take away the Humor that provoketh, and waſh the Ulcer, with dryers. And muſt be continued while the Ulcer is foul; and leaſt theſe ſhould prick, the parts being very ſenſible, or inflame them, they muſt be moderate, except the Ulcer be very foul: And then you uſe Lenitives after, if they cauſe pain, or mix Lenitives therewith.

Drying Clyſters muſt be uſed after cleanſing, to heal the Ulcer, with which uſe things to glew: As we ſhewed in Excoriation and Ulcers. Among which, they which dry moſt, and bind are beſt. Theſe if they be ſtrong, are uſed in the concluſion, after weaker, mixed with cleanſers, if the Ulcer be foul. And when we uſe ſtrong Aſtringents for the violence of the Flux, we add glutinous things, that they may not exaſperate: And we do not hinder healing, but cauſe it to be more ſafely done. Theſe forms following are beſt.

Among lenitive Clyſters, Milk doth not only take away pain, but cleanſeth and healeth. That cleanſeth moſt which hath moſt Whey. And it will heal more, if you quench Stones or Iron in it, to conſume the Whey.

It is more operative, and takes away pain better, if to one pint you add one or two yolks of Eggs, or four ounces of Mucilage of Fleabane, or Quince ſeeds, or one ounce of freſh Suet, which heals Excoriations: As was ſhewed, Goats ſuet is beſt, and then Dears, eſpecially that taken from the Kidneys, which is hardeſt. This in a great pain is given with an equal proportion of Oyl of Roſes.

When we muſt cleanſe and leniſie together, we add one ounce and an half of Sugar, or Honey to the Milk. And if we will heal or glew more, three or four ounces of the Juyce of Plantane.

Cream of Barley, or Almonds, or an Emulſion with Rice, is good to be injected.

Mutton-broath, or Chicken-broath, with yolks of Egs, or Mucilages, are good here, as in the Colick.

A lenitive glutinating Decoction. Take *Marſh-mallow roots one ounce, Barley or Rice one pugil, Line-ſeed, or Fænugreek, Quince ſeeds one ounce, Fleabane ſeeds half an ounce*, and againſt wind, *Aniſe-ſeeds two drams, Chamomil, or Dill flowers one pugil*: make a Decoction *in Milk or Broath*, adding *yolks of Eggs, Suet, and Oyl, as in the Clyſter of Milk*.

To all theſe Decoctions, you may add in time of pain Philonium one or two drams, eſpecially Perſicum, which ſtops Fluxes, or one or two ſcruples of Cynogloſs pills, or as I have done often with good ſucceſs, one ounce and an half of Syrup of Poppies.

You may uſe one ſcruple, or one dram of Opium with the former, but it is better when it is diſſolved in Compoſitions, and fermented.

In time of extream pain, we are conſtrained to uſe oyls alone, which otherwiſe being greaſie, and enemies to the Ulcers, we omit them, as Oyl of ſweet Almonds, or of Roſes that is more aſtringent, eſpecially Omphacine, or a little Oyl of Quinces, or Myrtles, with Mucilages, and yolks of Eggs.

The common cleanſing Clyſter is this. Take *Barley-water one pint, courſe Sugar, or Honey two ounces.*

When we will leniſie alſo, add to it two yolks of Eggs. And to aſtringe, uſe Oyl of Roſes inſtead of common oyl, and one dram of Turpentine, diſſolved with the yolk of an Egg, to cleanſe and heal.

Whey alone, or Hydromel, that is mead, cleanſeth, to which you may add the former.

Another cleanſing Clyſter. Take *Liquoriſh one ounce and an half, Figgs, Raiſons, each two ounces; Bran one pugil, Barley, Peaſe, Lentils, or Lupines two ounces*: boyl them *in Whey, or Mead*, and diſſolve therein *Sugar, or Honey*.

A ſtronger in foul Ulcers, add to the former Pellitory, and Beets, or Centaury, Wormwood, and Gentian, boyled in weak Lye. And if corruption follow, uſe ſtronger, as Lye, or Piſs, ſalt Water, Brine, or pickl'd. Some uſe Ægyptiacum, as in outward Ulcers; or Oyntments of Orpiment. The ſafeſt of which are mentioned in the Ulcers of the Mouth; and are to be carefully uſed with Milk, Barley-Cream, or Rice, and the like.

To glew and heal an Ulcer, a gentle drying Clyſter is made of burnt Milk, with Flints or Steel quenched therein, and Roſes boyled,

Another is of Barley-water, and Rice parched, and one pugil of red Roſes, with two yolks of roaſted Eggs, Honey of Roſes, and if you will have it ſtronger, one ounce of Juyce of Plantane.

The third Clyſter to glew and aſtringe. Take *Comfrey-roots, and Mullein, each one ounce; Plantane, and Conſound, each one handful; red Roſes, and parched Barley, each one pugil; Myrtle ſeeds two drams, Grapes half an ounce*: boyl them in Ciſtern-water, and diſſolve *Honey of Roſes one ounce and an half, a White of an Eg, or Gum Traganth one ounce, Goats ſuet two ounces, Juyce of Plantane, or Solomons-ſeal one ounce*: make a Clyſter.

The fourth Clyſter to aſtringe and dry the Ulcer. Take *Roots of Snakeweed, or Tormentil one ounce and an half, Comfrey one ounce, Shepheards purſe, or Rod, Solomons ſeal, or Rupturewort, Horſtayl, Mouſear, each one handful; Pomegranate flowers, Acorn-cupps, Cypreſs-nuts, each two drams; Lentils, and parched Rice, each one pugil*; boyl them *in Forge-water*, add *Juyce of Plantane two ounces, and two yolks of roaſted Eggs*: make a Clyſter.

To theſe Decoctions Aſtringents and Healers may be added, as Sanicle, Winter-green, golden Rod, & other wound-herbs; alſo Myrtles, Maſtick-tree, Olive, Sumach, Ceterach, Agrimony, Brambles, Bloodwort, Oſier, Sparrow-tongue, Flowers of Chamæleon, Galls, Pomegranate-peels, and the Juyces of aſtringent Fruits, and Juyces of Plants aforeſaid.

Juyce of Plantane alone, or with Milk, or Barley-water is good, two drams of Gum Traganth, diſſolved in a Clyſter, or infuſed in Roſe and Plantane water, and ſo mixed, is excellent.

The Infuſion of Gum Traganth, with Juyce of Plantane or Goats ſuet, is alſo good.

Alſo the Mucilage of Quince, or Fleabane ſeed, with water of Plantane, or Shepheards-purſe, and an aſtringent Decoction.

Gum Arabick is as good as Traganth, alſo Frankincenſe, Maſtick, Sarcocol: theſe diſſolved, glutinate, and do not exaſperate the Ulcer, as ſtrong Aſtringents.

Dryed Juyces, as Acacia, Hypociſtis, Dragons blood, a dram or two diſſolved in Clyſters cauſe aſtringency.

Alſo red Wine from the grinding of the Bloodſtone, with Plantane, or Roſe-water two drams, added to the reſt, doth glutinate and ſtop the Flux of Blood.

Alſo fat Earths that are not rough, but drying and ſmooth, as Bole, and Terra Lemnia, are good to be mixed two drams, with the former.

The Troches of Amber, or the white troches of *Rhaſis*, two drams, with Milk, Juyce of Plantane, or Decoctions, or with other Clyſters, are good here, as in the Excoriations and Ulcer of the Bladder. And if you add Opium, it will abate the pain.

Other Pouders are not neceſſary, becauſe they ſettle at the bottom, and provoke and exaſperate the part: Yet ſome add burnt Paper, and burnt Vitriol.

Oyntments are too greaſie, as of Roſes, Pompholyx, Diapalma, Divinum, though ſome uſe them.

Some commend the Blood of a Dear in a Dyſentery.

If the Diſeaſe be in the upper Guts, there are other Medicines to be taken at the Mouth, beſides Purges: to lenifie, cleanſe, and cure.

Cow milk lenifieth, cleanſeth, and healeth all inward Ulcers, and is given with Honey, or Sugar of Roſes, when you will cleanſe, or Goats milk.

But if you deſire to heal more, give Cow or Sheeps-milk, which hath had Flints, Iron, or Steel quenched therein.

Take *three ounces of Cow milk, one ounce of Juyce of Plantane, and as much of Sugar of Roſes*, and it will heal.

You may boyl Comfrey roots in the Milk.

Veal-broath that is ſtrong of the Fleſh, is beſt.

Alſo Rice-porrage is good to heal.

And a Decoction of Barley, and Liquoriſh, with Sugar, or Honey, to cleanſe.

A healing Decoction. Take *Roots of Tormentil one ounce, Comfrey and Marſh-mallows, each half an ounce; Plantane, Shepheards-purſe, each one handful; red Roſes dryed one pugil, Sumach, or Grapeſtones two drams*: boyl them in Rain-water, *and a little red Wine*, add to the ſtraining *Sugar of Roſes*. Let him drink it at twice or thrice.

Or, Take *Cynkfoyl roots, or Biſtort, Snakeweed one ounce, Water-lillies ſix drams, Tarrow, or Horſtayl one handful, wild Vine one pugil, Plantane ſeeds, and Sorrel ſeeds, and Dock ſeeds, each two drams*; boyl them *in Plantane-water, and a little Wine*, and diſſolve therein the *Syrup of Quinces*, or the like: make a Potion, give it as the former.

You may add to theſe Decoctions the Roots of Avens, Fern, Sorrel, Polemount, Water-plantane, and theſe wound Herbs, as Conſound, Wintergreen, Mouſear, Straw-berry leaves, wild Tanſey, Sanicle, golden Rod, Willow-herb, Scordium, Agrimony, Knot-graſs, or Rupturewort, Harts tongue, Balſom, Perwinkle, Oak leaves, Brambles, Myrtles, and Maſtick-tree. To theſe we add Diſcuſſers of wind, as Chamomil flowers, Aniſe-ſeeds.

We mix Rhubarb to take away the Cauſe of the Diſeaſe. As, Take *Rhubarb parched one dram, Coriander parched two drams*, infuſe them *in red Wine, or Juyce of Quinces*; let them boyl, and ſtrain them, add *Syrup of dryed Roſes one ounce and an half*: make a Potion for two doſes. If you add *one dram of Acacia, or Hypociſtis*, it will be ſtronger.

Or *two or three drams of Bole, or Spodium, or half an ounce of Maſtick, boyled alone in Roſe or Plantane-water.*

Dioſcorides commends Wax boyled in Broath.

The Decoction of Aſs dung is counted a ſecret, to be drunk after boyled in wine, with things to take away the ſcent.

The Decoction of Earth-worms is alſo good, but let not the Patient know it.

Phyſical Wines are made of burnt red wine, with Steel, or Gold quenched therein, or Tormentil, and Snakeweed roots boyled, which makes the wine more aſtringent, and not unpleaſant. To which you may add Sugar, or Cinnamon that it may be like Hippocras.

You may boyl ripe dryed Sloes in red wine, and it will be aſtringent and pleaſant, and other aſtringent Fruits.

Some highly commend Rice boyled in red wine.

Alſo Juyces, as of Quinces boyled, are good; one ſpoonful, or two at a time, or of other Fruits that are not too ſour to cauſe torments, as of Pears, Pomegranates of the middle ſort, of which wine is made, preſſed with the peels. Alſo the Juyce of Cornil-berries, and the like.

Three or four ounces of the raw Juyce of Plantane heals, and takes away Inflammation alone, or you may give it with Milk or Broath.

Hollerius ſaith that the Juyce of Ground-Ivy drunken, hath ſaved the lives of many.

Some give the milkie Juyce of Engliſh Galangal.

Some ſharp Syrups not too ſour, are given by ſpoonfuls, as of Quinces alone, or boyl'd in Wine, Myrtles, or red Roſes, or of Juyce of Plantane, or the Decoctions mentioned, with Sugar. Boyl one ounce, of Water-creſs ſeeds parched in a pint of Syrup of Quinces.

Alſo Juleps are good, and quench thirſt, as that of Roſes, or Plantane water boyled.

Or give the Syrup with ſteeled water, or ſtilled waters, or Roſe budds, or of Privet, Plantane, Shepheards-purſe, Oak, Goof-graſs.

Let the Diet be of nouriſhing Papps.

As of boyled Rice in Milk, with yolks of Eggs, and Juyce of Ground-Ivy, by which *Lerius* in his Hiſtory, ſaith many Sea-men almoſt killed with Dyſenteries, have been recovered: Alſo Rice boyled in Almond milk. And if Steel or Gold be quenched in the Milk, it is the better.

Alſo Starch boyled with Eggs beaten, and with Roſe-water, Sugar, and Butter, or Veal ſuet, is good.

Alſo Milium boyled in Milk, with yolks of Eggs, or drink the pouder thereof, with a roaſted Eg.

Oate-meal, or the Grewel made thereof is uſed in *Germany*.

To theſe Papps of Rice, Oats, Starch, Milium, you may add Bean flower, Tormentil roots, ſeeds of Plantane, Sumach, and Bole.

Or two drams of Virgins wax ſliced and boyled in the ſame.

Bread alſo made with whites of Eggs, Pouder of Galls, or Pomegranate peels, is good to be given in Pouder, with Wine.

Dioſcorides commends Beans boyled in Vinegar and water; others commend Lentils.

Alſo Eggs poached in Vinegar or fryed, till hard, with one dram of new wax, to which may be added pouder of Sumach, Plantane ſeeds, or Hemp.

The Blood of a Goat or Dear fryed, is commended by *Dioſcorides*. And chiefly that *of an Hare, with Barley-meal, alſo a roaſted Turtle ſtuffed with Myrtle-berries, and new Wax, each two drams; or two drams of Frankincenſe, and one dram of dryed Pigeons blood, and other Aſtringents, as Plantane ſeed, Roſes, Sumach, and Cinnamon.*

Among Fruits, Quinces, Pears, and Apples that are ſharp, roaſted, or boyled, are the beſt: Alſo ſweet Meats made thereof. Or roaſt a Pear, or Quince, with Wax, and let him eat it.

Alſo Medlars, Services, Cornil-berries, Cherries, and ſharp Plums before they are ripe, are aſtringent.

Alſo Goof-berries are aſtringent, and Bramble-berries. And Mulberries, but they cauſe pain, and therefore are to be uſed warily.

Dioſcorides commends the Berries of the Lote-tree, and Bar-berries, and the Huskes of Beans.

Alſo roaſted Cheſnuts, and Acorns, with Almonds not roaſted, but theſe will clog a weak Stomach.

Purſlane is the beſt pot-herb for a Dyſentery, it takes away the ſharpneſs.

There are divers Pouders which dry and bind, or have a ſecret quality, given alone, or mixed from one dram to one dram and an half, commonly with ſharp red Wine, or with ſteeled Water, Broath, or Milk, Plantane water, or the like, with Sugar, Honey, or proper Syrups.

The Pouder of the Roots of Tormentil, Snakeweed, are not ill-taſted. Water-lilly roots do wonders in Dyſenteries: Alſo Comfrey roots, wild Sage, and Avens roots.

Dioſco-

Dioſcorides commends the Pouder of Yarrow, Fleabane, Scordium, and the tops of Tragus; alſo Mouſear, Cudwort, Sun-flower with the Roots, the middle of the root of Mullein, Horſtayl, Balſamine, or the like, mentioned for Decoctions.

Flowers of Ivy, Ciſtus, Palma Chriſti, Flower gentle, and Pomegranate flowers. Alſo red Roſe cakes: Alſo the Fruit of the Roſe, with its down and ſeeds, and Bar-berries.

Roaſt a Pomegranate, and give it in Pouder.

Alſo Seeds of red Roſes, Pomegranates, Raiſons, Grapes.

Seeds of Water-creſſes alone, or with others, is counted an excellent Remedy againſt a Dyſentery, and becauſe they are ſharp and burning, they are firſt parched. Alſo Tamariſk ſeed.

The Seeds alſo of Docks, and Bloodwort, or Sorrel.

The Pouder of roaſted Acorns doth wonders. Alſo of Cheſnuts, or of Beech maſt.

The Down of Cheſnuts within the ſhell, as alſo of Acorns, and Hazel-nuts, is good in pouder.

Frankincenſe, Maſtick, Myrrh, Traganth, ſwallowed or drunk in pouder.

The pizle of a Dear alſo poudered, and drunk in wine.

Alſo burnt Harts horn, or unburnt, and the pouder of Ox ſhanks.

The Runnet alſo of a Hare, or Kid, or Mare, is commended by *Dioſcorides*.

He alſo preſcribeth Goats ſuet, with Batley-flower, and Roſes.

Alſo Hares, Dogs, or Swins dung, is given with Milk that hath had Steel quenched therein.

Alſo Bole, or other fat Earth, as that of Lemnos, red Coral, Cryſtal, Pearl, Sapphyres, Smarag'ds.

The Chymiſts commend the tincture of Smaragds, as ſpecifical in a Dyſentery: It is thus made. Let the ſparkes or pieces of Smaragds be ground finely upon a Marble, with the Urin of a Boy, or diſtilled Vinegar, or Juyce of Lemmons, and the tincture drawn out at the fire. And then let it be evaporated, till it be a grey pouder, then draw out the green tincture with ſpirit of wine, and then evaporate the ſpirit of wine, and let it be brought to an Eſſence at the bottom; two or five tops of this they ſay, taken with Plantane-water, cureth Dyſenteries miraculouſly.

Some give Allum with an Eg.

And *Dioſcorides* gives Salt with red Roſe ſeeds for ſauce with Meat.

There are divers Pouders compound of theſe, to be given in the like quantity, or with Sugar in a greater quantity, with a Sop in Wine.

The firſt is: Take *Roots of Tormentil two drams, Snakeweed one dram, Seeds of Docks and Sorrel, each one dram and an half; red Coral half a dram.*

Another: Take *half of this Pouder that is three drams, Seeds of red Roſes and Myrtles, each one dram; Pomegranate flowers, burnt Harts horn, or Ivory, each half a dram; Pearl half a ſcruple.*

The third Pouder more aſtringent. Take *with the former Galls one dram, Sanguis Draconis, or Acacia half a dram, Bole, or Terra Lemnia one dram, and half a dram of Bloodſtone which is ſtronger.*

A Pouder of Acorns which bindeth and healeth wonderfully. Take *roaſted Acorn kernels one ounce, Coriander ſeed prepared one dram and an half, Purſlane and Fleabane-ſeed, each half a dram;* you may add *roaſted Cheſnuts.*

If you will heal more, mix *Starch one dram and half, Gum Traganth a little parched one dram.*

And if you will dry and aſtringe more, mix it *with a dram or two of the former Pouders.*

Aſhes alſo are highly commended, as of a quick Hare, burnt in an earthen pot well ſtopped.

Land-turtles, or Snails alſo burnt with their ſhells.

Alſo Pouder of Mans bones, or aſhes in red wine, or ſteeled wine.

Theſe may be mixed with other Pouders, as Bole, Dragons blood, and Mummy, with pouder of Turtles, or pouder of Galls, with aſhes of a Turtle, and a little white Pepper.

Alſo theſe Aſhes following. Dip a hempen Cloath in two parts of Plantane-water, and one of Roſe-vinegar, in which a little Allum, and Bole are diſſolved, then dry it, and burn it to aſhes.

Alſo the Troches of Amber, burnt Ivory, or ſealed Earth, with Sorrel ſeeds, Ramich *half a dram*, taken every day: Give in pouder, with red Wine, or other proper Liquor, Sugar of Roſes, or convenient Syrups, or with old Conſerve of Roſes, or Syrup of Myrtles: make Pills or a Bolus.

Theſe Electuaries following are made of Conſerves and Candyes. Take *old Conſerve of Roſes, and Marmulate of Quinces, each one ounce; Conſerve of Comfrey roots half an ounce, Coral two drams; Troches of ſealed Earth, or the like, ſimple or compound one dram, parched Nutmeg and Cinnamon, each half a dram; Sugar of Roſes,* as much as will make a Mixture.

Or, Take *the Conſerves and Candyes mentioned, with thoſe of Services, Cornils, Roſes, Medlars, and other Aſtringents, Pouder of Rhubarb parched one dram;* mix them *with ſyrup of Quinces, or Juyces or Syrups mentioned.*

Micleta Nicolai of Myrobalans, Maſtick, Gum Arabick, Sumach, Pomegranate flowers, burnt Ivory, Water-creſſ-ſeeds, and others that expel wind, is good in Dyſenteries, and other Fluxes.

Two drams of Watercreeſs-ſeeds parched, and poudered, boyled in Syrup of Quinces, till they be thick, and three ſpoonfuls given at once, is excellent.

Another that lenifieth and healeth. Take *Mucilage of Quince ſeeds, Comfrey roots, Infuſion of Gum Traganth, all made with Roſe-water one ounce, Starch one dram, red Coral two drams, Bole one dram, Pomegranate flowers half a dram, Juyce of Services, Cornil-berries, or Marmalade of Quinces two ounces, Sugar of Roſes one ounce*: make an Electuarie, give *two drams.*

Narcoticks as we ſaid in Clyſters, aſſwage pain and ſtop Fluxes, and they do better taken at the Mouth, cauſing reſt and ſleep, which the Dyſentery hindereth, and ſo do increaſe ſtrength: theſe are to be given as oft as pain and watching require, for nothing doth better allay the expulſive Faculty,

Philonium Perſicum is beſt, *one dram*, and a little more.

Alſo pills of Dogs tongue called *Cynogloſs*, ſtay Defluxions, and are good with Juyce of Plantane and Roſes, and other aſtringents from *half a ſcruple, to a ſcruple.*

Troches of Amber, with Opium, do alſo cure Ulcers, and other Narcoticks, mentioned in the Colick and Stone, here are good, if mixed with aſtringents, as you mix Syrup of Myrtles, with ſyrup of Poppies, or Diacodium, and diſſolve them with plantane-water, and add a little Diamargariton frigidum, or boyl white poppies in Roſe-water.

Or mix Bole, Terra Lemnia, Galls, Pomegranate-flowers, Acacia, Hypociſtis, with Treacle, Mithridate, Athanaſia, with the like Confections, or Narcoticks.

Or if you add to the Pouders and Electuaries mentioned, a little Opium well prepared: As we ſhewed.

As for external Medicines, anoint the Belly with Oyl of Quinces, Myrtles, Roſes, or Oyl omphacine, if you will bind more, or add the third part of Vinegar, then boyl them till the Vinegar is conſumed. And if the Stomach be diſordered, add Oyl of Maſtick, or Wormwood. If the pain be great, add Oyl of Chamomil, or ſweet Almonds, if there be Inflammation or Heat, Oyl of Violets. Some anoint the Fundament with theſe.

After anointing, ſprinkle theſe pouders following.

The firſt: Take *Myrtle-berries, or Bar-berries, or Grapes, or Raiſon-ſtones, half an ounce, Galls, or Pomegranate peels, Cypreſs-nuts, or Acorn-cupps, each two drams; red Roſes, or Pomegranate flowers one dram and an half, Maſtick, or Frankincenſe one dram.*

Ano-

Another ſtronger : Take *the Pouder mentioned, half an ounce, Bole two drams, Sanguis Draconis, Acacia, or Hipociſtis, each one dram ; Sumach one dram and an half, red Coral burnt one dram.*

The third is made of the troches of ſealed Earth, or of Bole, or Amber, with other Aſtringents.

Of theſe pouders is made an Oyntment, with proper Oyl and Wax.

Alſo an Emplaſter with aſtringent Oyl, Roſin, and Pitch, with Aloes, and Varniſh, *each two drams.*

Or this aſtringent Plaiſter. Take *Bole ſix drams, Frankincenſe half an ounce, Dragons blood, Maſtick, Mummy, each two drams ; with white of an Eg, and Vinegar,* make a Plaiſter, and tye it under the Navel with a Clout.

This Cataplaſm is excellent. Take *green Quinces or dry as they are kept, or Pears, or other Fruit that is aſtringent, pulped four ounces, the Cruſt of Bread burnt and often ſprinkled with Roſe-vinegar at a time two ounces,* boyl them *in red Wine, Oyl of Roſes emphacine,* beat them, and add *Pouder of Galls ſix drams, Bole, Maſtick, each half an ounce ; or one ounce of the compound Pouders mentioned.*

Inſtead of theſe, apply Mullein, and the Roots, Shepheards-purſe, Plantane, Comfrey roots, red Roſes boyled in Oyl of Roſes, and beaten up with the pouders mentioned.

The Cawle of a Weather, or Goat, or Lamb, applyed hot, as is ſaid in the Colick, doth take away pains in Children. And it muſt be taken anointed with Oyl that is aſtringent, as of Quinces, or Myrtles : Or add pouders of ſimples mentioned, or pouder of Mullein. Cumminſeed ſteeped in Vinegar, and parched, and applied to the Belly, doth the ſame.

Alſo the Emplaſter of *Meſue* called Diaphænicon.

Alſo a Rowler ſteep'd in Vinegar, and bound about the Belly.

Alſo Cupping-glaſſes applied to the Navel, or Center of the Belly, or on both ſides, about the Groyns, are good to ſtay a great Flux.

Foment the Belly and Fundament with a Decoction of aſtringent Herbs, as of Mullein with the Roots, Plantane, Solonions-ſeal, Oak leaves, Pears, Quinces, Services, Cornil-tree, Myrtles, Bar-berries, red Roſes, Pomegranate flowers, Sumach, Fern roots, white Chamelion, Pomegranate peels, pine-nuts, Acorn-cupps, Galls, Myrtles, Grape ſeeds made in red Wine, Vinegar, and ſteeled Water.

You may foment the Belly with the Oyls mentioned, to anoint, adding a little Vinegar, and Juyce of proper Herbs.

Dioſcorides adviſeth, that the Belly be anointed with the Broath of a Sheath-fiſh, River-whayl. And to waſh the Feet in the Decoction hot, before mentioned, is good.

And it is as good, if they be waſhed with a Decoction of Steel, or Iron, in ſtrong Vinegar.

'Tis alſo good to let the Vapour of theſe Fomentations be taken up into the Fundament, or the Vapour of the decoction of Eels.

Alſo a Fume of thoſe Roſins mentioned in Teneſmus, burnt upon Coales, or hot Iron ; or of the pouder of Mullein ; or dryed Aſſes dung, or the Fume of ſtrong red Vinegar, after a red hot Iron is quenched therein, in which Vinegar you may boyl the aſtringents.

The Suppoſitories mentioned in Teneſmus, as that of Suet, which allay pain, are alſo good.

It is good after ſtools to cleanſe the Fundament with Mullein, or Haresfoot leaves, which are ſoft, and ſtrengthen : And alſo with Marſh-mallow leaves.

As for Diet : Let the Meat be of good Juyce proper for the Diſeaſe, as Milk, Eggs, Papps, and the like ; Or boyled in Iron-waters, or Roſe-water, with the Pouders and Juyces mentioned. Let the Drink be ſteeled Water, or Almond milk, or red Wine mixed with ſteeled water. Let all fat, ſharp, and ſour things be avoided.

Let the Patient be at reſt, and not move from Bed, but void the Excrements with a Bed-pan, or the like.

And if there be another Diſeaſe joyned therewith of the Liver and Spleen : then if the cholers come from the Liver, or there be a Flux of the Liver, which is moſt to be feared, and is deadly ; the Liver muſt chiefly be regarded, and Epithems, and Cérots proper, muſt be applied, mentioned in the Flux of the Liver.

And if there be pain and weakneſs of the Stomach, you muſt mix things proper for it, with other aſtringents, as Maſtick, Roſes, Wormwood, as are mentioned in the weakneſs of the Stomach.

The Cure of the bloody Flux without ulceration.

Other bloody Fluxes are from the opening of the Meſeraick veins, (beſides the Dyſentery and Liver-flux) with an Inflamation thereupon : And are like a Dyſentery, only there is no Ulcer. Yet are they not ſo obſtinate and dangerous as a Dyſentery, if the Inflammation be abated. And they ſooner vaniſh then a Dyſentery, if they be well ordered. But if the Inflammation and Feaver increaſe, they die of Convulſions through pain, as in the Colick. Or if they tend to Impoſthumation, they are changed into a true Dyſentery, which leaves a filthy Ulcer from which matter is voided by ſtool. In the Cure of this Diſeaſe, the cauſe which provoked it, if it perſiſt, muſt be removed, with the ſame Emptiers and Cleanſers, as in a Dyſentery, only they muſt be milder, in regard of the Inflammation. And Coolers muſt be uſed as in a Dyſentery, with Inflammation, and the Colick. Then you muſt have regard to the Meſeraicks, the Inflammation being gone, and ſtop the Flux, with ſuch aſtringents as are mentioned in the Dyſentery. And if the Inflammation tends to an Impoſthume, and ſo to an Ulcer, then uſe the things mentioned in Dyſenteries for Exulceration.

The Cure of clotted blood voided by ſtool.

If much clotted Blood that is black, be voided from the opening of the veſſels, by reaſon of ſtrong purging, or the like, or by vomiting, it is dangerous : And we have known ſome die ſuddenly thereby. For the Cure thereof, you muſt uſe ſuch things inward and outward : As we mentioned in Vomiting of Blood.

The Cure of Teneſmus.

A Teneſmus is leſs dangerous then a Dyſentery, becauſe the Cauſe is in the end of the Guts, which may be eaſily reached with Medicines, only the difficulty is cauſed, and the cure prolonged, by the pricking and provoking to ſtool, which will not let a Medicine be retained, though it be gentle ; and by the foulneſs of the Ulcer.

The end of curing is according to the diverſity of the cauſe. For if it be the firſt kind of a teneſmus with ulceration, and voiding of ſlimy matter with blood, or if it come of it ſelf or follow a dyſentery ; in regard the ulcer is in the ſtrait Gut, it muſt be cured as a dyſentery, with the like medicines. But if only Irritation produce the other kind of teneſmus, in which the Excrements are cholerick and ſharp, the remedies muſt be ſuch as abate the ſharpneſs and heat, and then ſuch as cleanſe and heal. In the third kind of teneſmus, where there is needing without Excretion, you muſt remove it with reſpect to the cauſe, as if it come from hard Excrements, they muſt be mollified, if from cold, the part muſt be warmed. If it come from a Stone in the Bladder that paſſeth the Gut, or from worms, or from the paſſage of the Bladder : the cure was ſhewed in thoſe diſeaſes. In other cauſes you muſt uſe theſe remedies following.

Purges are ſeldom given, becauſe the Humor that cauſeth it, is in the extremities of the Guts ; except they be to take away the antecedent cauſe, which may increaſe the diſeaſe. And then uſe ſuch as are preſcribed for a dyſentery, if there be an ulcer, ſuch as purge and bind. If the cauſe be otherwiſe, uſe other Evacuations, ſuch as are gentle, leaſt the belly be provoked too much.

Things given at the mouth, can have but little operation

on open the Guts which are ſo remote; yet if they be given in great quantities to lenifie and heal the Ulcer, or often, their vertue will reach to the part. As Milk, or Barley water drunk much and often. The Decoction of Bettony, and Sage, mentioned againſt the teneſmus.

Clyſters are chiefly given in this caſe, becauſe they come near to the part affected, and waſh it; and that they may be long kept, they muſt be little in quantity, and be given often with care that the pipe offend not.

Lenifying Clyſters are good in all ſorts of teneſmus, whether the part be corroded, ulcerated, or provoked by ſtraining and pain, to mitigate the pain, and allay the ſharpneſs. *T*heſe were preſcribed in Dyſentery, of Milk, Decoctions, and Oyls, as you will have them cleanſe or heal.

If there be a ſtinking Ulcer in teneſmus, or pricking from ſlime, you muſt uſe cleanſing Clyſters: As in a diſentery of Whey, Water, and Honey, Barley-water, and the like.

Healing Clyſters are only uſed in teneſmus from ulceration, made of things mentioned in a Dyſentery.

*T*urpentine unwaſhed or waſhed in Plantane water, or Nightſhade water, put into theſe Clyſters, makes them cleanſe and heal better.

Mollifying Clyſters are uſed in a teneſmus, when the Excrements are hard. *T*o which you may add Laxatives, if there be a needing, and no voiding of ſtool. If the Humor be cold, or cauſed by cold or wind, uſe things to heat and diſcuſs wind, and things gently warm do alſo aſſwage pain. When we will mollifie and looſen, we take the decoction of the five mollifying Herbs, Line-ſeeds Fœnugreek, with Oyl and other Fats that looſen. If we will heat, and expel wind, we uſe hot Herbs, as Organ, Calamints, both Penny-royals, Baulm, Hyſop, Sage, Marjoram, Bay leaves, Rue, Flowers of Chamomil, Melilot, Dill, Roſemary, Stœchas, or French Lavender, Caraway, and Fennel ſeeds. Such Clyſters are mentioned in the Colick from Excrements, Wind, and Cold.

In every teneſmus you may uſe Suppoſitories to abate pain, and then ſuch as cure Corroſions and Ulcers, if they cauſe it: theſe muſt do good to the part which they touch, if they can be retained, for the part is ſo ſenſible, that it is provoked by the touch of any hard thing, therefore the Suppoſitories muſt be gently made of theſe following.

Goats ſuet made like a Suppoſitory, takes away pain and Excoriation.

And it is better, if you firſt melt down the Suet with Poppy, and Henbane ſeeds, and then caſt it into a mould like a Suppoſitory, to take away pain. And alſo if you put ſome drops of Oyl of thoſe Seeds, *or half a ſcruple* of Opium diſſolved in Oyl of ſweet Almonds.

And it will heal better, if you add Starch, or Gum traganth poudered or infuſed in plantane-water.

Or thus, infuſe a little Gum traganth in plantane water, let it not be too thin, and mix it with Mucilage of Fleabane, or Quinces, and the yolk of a roaſted Egg, and while they are hot, with a little white Wax: make a ſuppoſitory, if it be too ſoft, dip Cotton, or Silk therein, and apply it. *T*o theſe you may add the Narcoticks mentioned.

*T*o theſe pouders may be added to cure great Corroſion, but they muſt be very fine, leaſt they offend. As of Ceruſs, *T*utty prepared, Bole, Pomegranate flowers, and other dryers that are not ſharp.

If you will aſtringe more, add the Juyce of Sloes, Dragons blood, with the Infuſion of Gum Traganth.

Rhaſis makes a healing and anodine Suppoſitory of Lycium, which is the Juyce of Brambles.

When the Excrements are hard, uſe mollifying Suppoſitories and Laxatives, with hot things to expel wind: As we ſhewed in Clyſters for the Colick. Some are made of Labdanum, and Storax, with hot Oyls.

*T*heFumes and Vapors mentioned for a dyſentery, are good here. Beſides which, make Fumes of ſtrong dryers that ſmoak much, as of Pitch, Bitumen, Amber, Colophony, Turpentine, Roſin, Sarcocol. Some add a little Brimſtone, and ſteep them firſt in Vinegar.

If you muſt heat more, uſe the Vapour of the Clyſter there mentioned, or the Fume of Savine, boyled in Wine, and Vinegar.

You may make a Fomentation to heal the Ulcer in Teneſmus of Plants mentioned in the Dyſentery, or a Bath.

A Fomentation of the Decoction of Myrrh, cureth a teneſmus that follows a dyſentery.

If much Blood be voided. Take *Mullein, with the Roots, two handfuls, red Roſes one pugil, Pomegranate peels, and Galls, each half an ounce*; boyl them *in two parts of Iron-water, and one of Wine.* You may add *half an ounce of Prmegranate flowers, or of Pine barks.*

It is ſtronger with *half an ounce of Allum.*

To heat, you may make Fomentations of Plants in the Clyſters mentioned, for the Fundament, and lower parts of the Belly: And they may ſit in the ſame. To which, if there be Corroſion, we add Plantane, and Mullein, or Mullein only boyled in Wine, if the Hæmorrhoids be open.

Or foment with warm Water, Oyl, and Wine, or Oyl of Chamomil, Dill, Rue, &c.

Uſe the Oyntments mentioned for Ulcers in the diſentery.

When there is great pain in Teneſmus, anoint with Oyl of Roſes, Violets, Water-lillies, Mucilage of Fleabane, yolks of Eggs, or the like, mentioned in the Hæmorrhoids.

If you muſt heat, uſe Oyl of Chamomil, Dill, Bayes Rue, and the like.

You may make Cataplaſms of the ſame Ingredients.

A warm Anodine bag is made of Milium, Bran, and Salt, fryed with hot Herbs dryed.

In an Ulcer make it of aſtringents, as Coriander ſeeds, Myrtles, Acorn cupps, Galls, and other Herbs, mentioned in the Fomentations for a Dyſentery. And let him ſit upon the bag boyled in red wine.

A Brick that is black with Smoak, beaten, and ſteeped in wine, and put into a cloath, is good to be applyed to the Perinæum and Fundament, when there is an Ulcer.

Let the Patient ſit upon hot Mugwort.

Alſo warm Cloaths applyed to the Fundament and Perinæum, are good to abate pain.

The Cure of Diarrhœa.

If a Diarrhœa be a Flux of filthy Excrements and Humors, by Medicine or Nature, which takes away the plenty of them, it muſt not be ſtopped, neither in thoſe that are found, becauſe it preventeth Diſeaſes; nor in thoſe that are ſick, from plenty of humors, and evil Juyce; nor in the beginning of acute Diſeaſes, for as *Hippocrates* ſhews if things which ought to be purged, be purged, and the Patient endures it wel, it is good. Nor in the declenſion or Criſis of a Diſeaſe, which ſomtimes is cured thereby. But it is to be ſtopped if it happen in ſound and pure Bodies, eſpecially if there be an over purging. And in ſick, when it is provoked, or comes of it ſelf, when it will not ceaſe, and takes not away from the cauſe of the diſeaſe, but weakneth. As in internal Inflammations, Pleuriſie, Peripneumony, and in ſome acute and malignant peſtilential Feavers: and others that weakens, as in Hecticks, Conſumptions, Dropſies, with which it is deadly. In all which we muſt prevent it, or ſtop it, foretelling the danger.

Obſerving firſt, if it be alone, without other diſeaſes, with it, or after it, whether it came from an over purging Medicine, or too much meat and drink that is crude or corrupt, or from Choler, or ſharp humors or water. Then we muſt evacuate the cauſe, and abate the pricking. Then we fortifie and bind the Stomach and Guts, with hot, temperate, or cold things, as the cauſe requires, as followeth.

The Stomach and Guts are to be purged with gentle things, leaſt the Belly that is already moved, ſhould be

too much troubled. And if the tumor be water or flegm with pills for the Stomach: As theſe of Maſtick, and Aſſaiereth, and others in the Lientery.

Or give *ſix drams of the Electuary of Hiera, or two drams of the Pouder, with one ounce of Syrup of Vinegar,* to take off the bitterneſs, all diſſolved in *Wine and Water, or Liquor convenient, or ſweet Wine.* But Pills of Hiera are better taken.

There are other purges to be taken in wine, mentioned in Lientery and Weakneſs of the Stomach.

If the Humor be cholerick and ſharp, uſe Remedies for the Dyſentery there mentioned.

As a Potion of Rhubarb parched or not, or the Infuſion thereof, with Wormwood wine, or Syrup, or that of Mints.

Alſo you may make a Potion of the Infuſion *of half an ounce* of yellow or chebs Myrobalans, or *of two drams* of Myrobalans, *and one dram* of Rhubarb.

Or give *two ſcruples* of the Pills of Rhubarb, made with *one ſcruple* of Maſtick, and *half a ſcruple* of Spike, with Juyce of Roſes. Or a bolus of the ſame, with Conſerve of Roſes, or Quinces, or the Pouder of Rhubarb, with Cinnamon, and Sugar of Roſes, and Myrobalans; if they make not the Medicine too large.

If you muſt purge in a Diarrhæa, uſe the troches of Roſes, burnt Ivory, Barberries, the cold great Seeds, with Diagredium.

The Tryphera Saracenica *Nicolai*, is given in *ſix drams*, when there is plenty of Humors, or ſo much Catholicon in potions of Myrobalans, and Rhubarb, it is not ſafe to uſe ſtronger Remedies to purge in this Diſeaſe.

A Vomit ſomtimes is good to revel, and take away the cauſe, as in a Dyſentery. Alſo Sweating, eſpecially when it comes from much water. And if ſtrength will ſuffer, uſe them often, moderate faſting, is alſo good to hinder the increaſe, and to conſume Humors, but in people of ſharp, cholerick Conſtitutions, it hurteth.

All Clyſters are good that have aſtringent qualities, though they be preſently voided.

The fourth Clyſter mentioned in a Dyſentery, is good here, it is a ſtrong aſtringent, to the Decoction of which you may add alſo other aſtringents; as Juyce of Plantane, Bloodſtone, or drying Earths. And if the humor be ſharp, and threaten Excoriation, you may give the third Clyſter there mentioned, to aſtringe and heal.

But before, uſe Cleanſers, if the Humor be ſharp and cholerick, and fret the Guts.

And you may mix other things, if there be other Humors; as Wormwood, Centaury, and in a phlegmatick Cauſe, againſt pains and noiſe of wind, things to expel wind, as Fennel, and Aniſe ſeeds, Chamomil, Melilot, and Dill flowers, or Oyls thereof.

If the Humors fret the Guts, uſe Lenitives, or when a violent purge hurts them, they are mentioned in Dyſentery: As that which begins thus. Take *Marſh-mallow-roots one ounce, Barley, &c.*

Medicines muſt be given in divers forms, twice or thrice in a day, eſpecially that bind, or that cleanſe and lenifie, leaſt Nature being accuſtomed to one, ſhould be no way moved thereby.

Dioſcorides commends divers Decoctions in wine and water, as of Maiden-hair, golden Locks, Marſh-mallows, Brambles, Cinquefoyl, or five leaved graſs, Piony.

Alſo wine of the Infuſion of dryed Sloes, and the like, Moſs of a tree, Wormwood, Snakeweed, Citron peels, and the like aſtringents.

Alſo Juyce of Plantane, Solomons-ſeal, Horſtayl, Gum Succory, Quinces, ſour Pomegranates.

Alſo Syrup of Quinces, Myrtles, red Roſes dried, Barberries, Currance, with the waters following in Juleps.

Waters of Plantane, Roſes, Sorrel, Shepheards purſe, Services, Sloes, Oak leaves.

Of the Decoction mentioned in Dyſentery. One begins thus: Take *Tormentil roots one ounce, Comfrey roots &c.*

Another thus: Take *Roots of five leaved Graſs, or Snakweed, &c.* Of which you may make Syrups.

Or make a Syrup of the Juyces to be kept. Take *Juyce of Quinces, three ounces, of Bar-berries two ounces, Juyce of Plantane, or the like, one ounce and an half, red Wine, and Roſe-water, each two ounces; Sugar four ounces:* boyl them *to a Syrup, and* add *a little red Sanders,* it is better, *if two drams of Juyce of Sloes,* and in a cholerick Cauſe *a little Roſe-water* be added to make it ſharp.

The Syrup of *Nicolas* of the Decoction of Fruits, and the like, is good in all Fuxes of the Belly.

Alſo this diſtilled Water. Take *Yolks of Eggs boyled hard twenty, Nutmeggs parched a little, two ounces,* infuſe them *in red Wine.* Let them ſtand a while, and then diſtil them according to art: the doſe is *one or two ounces.*

Let his Meat be boyled in ſteeled water, with Sumach, or other things that bind, and are not unpleaſant, as in a Dyſentery.

Let his Broath be ſeaſoned with Juyce of Quinces, or the like.

Let his Meat be thick, and not thin.

A Turtle prepared, as in a Dyſentery.

And fryed Blood,

Steeled Milk of Cow, or Sheep, as in a Dyſentery.

Yolks of hard Eggs, with Vinegar.

Take out the white of an Eg at a little hole, and fill it with Roſe-water, ſtop it well, and boyl it till the water be conſumed, and let him eat the Yolk, or drink it in Broath.

Alſo the Husks of Milium, with a roaſted Eg,

Or an Eg and Wax.

Or Cheeſe boyled in Milk or toaſted, which is the Helvetian Medicine, and commended by *Dioſcorides.* Let the Bread be wheat, not new, nor mouldy.

Or made of Starch, Bean flower, and Eggs, with Plantane ſeed. Or of Barley, and Rice, with Yolks of Eggs, which well dryed, will keep long, and may be taken in Milk like pap,

Other Bread is made of Barley meal, with Juyce of Elder-berries, dry baked, give *one ſpoonful,* with red wine.

Rice boyled with ſteeled Milk, or Broath, with Gum Traganth, or Arabick.

Alſo Starch with Almond Milk, as in a Dyſentery.

Alſo Pap of Oat-meal, Milium, and boyled Lentils, with Vinegar, and other Aſtringents, and with Beets, as *Dioſcorides.*

Medlars, Services, Cornil-berries, wild Pears, green or dry.

Boyl Coleworts, Beets, with the Roots, plantane, Endive, Smallage, and with Vinegar, eat them.

Let Meat be ſeaſoned with parched Cloves, and Vinegar.

Let him drink Barley-water, or ſteeled water, with the pouders, in a Dyſentery.

The chief Roots are Marſh-mallows, Tormentil, which is good againſt poyſon, Horſtayl poudered and drunk in wine; alſo Leaves of Harefoot, Dock ſeeds, and of Sorrel, plantane, Water-creſſes parched with Maſtick, and Gum Tragahth.

Pouder alſo of peaſe, Earth-nuts, Hyacinth, Brank-urſine, water-plantane, Tamariſk, Mullein, Rasberries, barks of Tamariſk.

Leaves of Burnet, Strawberries with the Roots, wintergreen, Mouſear, golden Rod, Lungwort, perwinkle, Alkanet, Lentils, Harts-tongue, Houſleek, Dates, Rue, wild Baſil, Dill, Aniſe, Fennel.

Flowers of wild Vine, Mullein, Indian Milium.

Stones of Myrobalans burnt, Nut ſhells, parched Nutmeggs, Cloves, Coriander ſeeds, Huskes of Milium, Dill, and pomegranate ſtones, Hares Runnet, Dogs dung, and Harts horn.

Bole, Earth of Armenia, Cryſtal, Pearl, Coral, Gum Arabick, Traganth.

Alſo troches of Ramich, and *Miſne* againſt Fluxes, of ſea-

ſealed Earth, Amber, burnt Ivory, with Sorrel ſeeds, given as in a Dyſentery, or in pills: Alſo Diacoralium.

A pouder with Rhubarb. Take *Rhubarb parched one dram and an half, Bole, Bloodſtone, each one dram; burnt Stones of Myrobalans, Amber, each half a dram*; make a pouder: or make pills of it, *with Gum Tragath, infuſed in Roſe, or Plantane-water*: Give *a dram.*

Add Cordial pouders, if ſtrength fail, as Diamargariton frigid de Gemmis, Trionſantalon, Diarrhodon.

Or thus: Take *roaſted Cheſnuts, or Acorns half an ounce, the Rines of yellow and chebs Myrobalans parched two drams, Coriander, and Water-creſs ſeeds ſteep'd in Vinegar and torrified, each one dram and an half; Myrtle ſeeds, Sumach, Medlars, ſour Pomegranates, Bar-berries, Roſes, Plantane, and Dock ſeeds, each one dram and an half; Cummin ſeeds ſteeped in Vinegar, Frankincenſe, or Maſtick, each half a dram; red Coral two drams, Bole, Bloodſtone, each one dram, burnt Harts horn half a dram, Pearls, or precious Stones one ſcruple, Acacia, or Juyce of Sloes one dram*: make a pouder. Give *one dram* by it ſelf, or *with Sugar*, or make an Electuary thereof.

Diacydonites, in a cold cauſe with the ſpecies, in a hot cauſe without, is given by it ſelf, or with other things, as an Electuary, or pouder, with Sugar of Roſes, *from one dram and an half, to two drams.*

Old Conſerve of Roſes, Galangal, Comfrey, and other cordial Conſerves, or Marmalade of Quinces, Citrons, Myrobalans candied, are given alone, or with the pouder of troches for that purpoſe.

Micleta, or the Electuary of *Nicolas*, is given in a Diarrhæa, and other Fluxes, as in a Dyſentery, where the way to make it, is declared.

The Electuary alſo of *Meſue*, of Myrobalans, Myrtle-berries, Aniſe, Cummin, and Smallage ſeeds, with ſyrup of Quinces.

I think it fit not to let paſs unmentioned, the Electuary of ſmaragds, which is excellent in the Falling-ſickneſs, and in Dyſenteries, and Diarrhæ's, and to ſtop all Fluxes, it is thus made.

Take *Smaradgs well prepared one dram and an half, Piony ſeeds huſked, and the Extract of the Roots of Piony, each two drams; red Coral prepared three drams, Salt of Coral one dram, Wood-Aloes well poudered, two drams and an half, the Extract of Saffron eight grains, of the beſt Cinnamon, Sorrel ſeeds, Citrons, Purſlane, Dock ſeeds, Miſleto of the Oak, Cochenil, or grains of Kermes, each two drams; Pearls prepared four ſcruples, Salt of the ſame one dram, Harts horn, Philoſophically prepared four ſcruples*: mix them *prepared exactly with ſyrup of the Juyce of Citrons, or Quinces three ounces*, and let them ferment in the ſun, or by the fire, and keep it cloſe ſtopped for uſe.

Narcoticks, as in Colicks, ſo in Diarrhæa's mitigate pain, and ſtupefie the expulſive Faculty, which ſtayes the Flux. And they muſt be uſed as in a Dyſentery, with aſtringents proper.

Outward Applications do better in a Diarrhæa then a Dyſentery. And Clyſters do better in a dyſentery, by reaſon of the Ulcer internal; which the ſtomach is afflicted with cold, things to be mentioned in Lientery, are good: but in a hot Diarrhæa, things to be mentioned in a Dyſentery, are good.

The ſame Oyls are to be uſed here, as in dyſentery. And if the ſtomach be afflicted, uſe the things mentioned in a Lientery.

Or anoint the ſtomach and belly with this. Take *Oyl of Myrtles, Quinces, Roſes omphacine, each one ounce and an half; Oyl of Maſtick one ounce, Wormwood, and Nard Oyl, each half an ounce; Juyce of Plantane, and Shepheards purſe each one ounce and an half; Vinegar of Roſes one ounce*: boyl them *till the Juyces are conſumed, with Wax*, make an Oyntment. And either mix therewith, or ſprinkle upon it after anointing ſome of the pouders mentioned for a Dyſentery. To which you may add *Nutmeg two drams, Sanders one dram, Galangal, or Cypreſs, Coriander ſeeds, Storax, each half a dram*; Dioſcorides mixeth *Wine Lyes therewith.*

Fomentations and Baths are made of tormentil, ſnakeweed, five leaved Graſs, Calcatrippa, or prickle Herb, Fern, Mullein, Plantane, Horſtayl, ſhepheards purſe, Knotgraſs, Bramble leaves, Barberries, ſumach, Maſtick tree, with Wormwood, and Mints for the ſtomach. Cypreſs-nuts, pomegranate peels, Myrtle berries, Water-creſſes, Roſes, pomegranate flowers, ſpunge boyled in red wine, or ſteeled water, with a little Vinegar, and Allum added.

You may make a bag of ſome of the ſame, or two to be changed, and applied to the belly, after boyling.

Uſe the Vapors and Fumes for a Dyſentery mentioned.

Make a Cataplaſm of the remainder of the Fomentation, with the Oyls mentioned, Goats ſuet, Bran, ſtarch, or Bread, with pouders mentioned.

Or of the Juyce of the Herbs mentioned; or of aſtringent Fruits, pears, ſour Apples, ſloes, Quinces, ſervices, Medlars, Cornil-berries, Barberries, with Bran, or Bread, Oyls, and the pouders aforeſaid.

The Emplaſters and Cataplaſms mentioned in a Dyſentery, are good in a hot Diarrhæa, and thoſe for a Lientery in a Cold.

Or this: Take *of the aſtringent Fruits mentioned, well dryed, four ounces, Barley meal two ounces, fryed in Vinegar, Roots of Snakeweed half an ounce, Hyrſtayl, Wormwood, Mints, Pomegranate peels, Galls, Myrobalans, Cypreſs-nuts, each two drams, Myrtle berries, Grape ſtones, Coriander prepared, Cummin, Water-creſs ſeeds torrified after they are ſteeped in Vinegar, each one dram; Frankincenſe half an ounce, Mummy, Acacia, Dragons blood, each one dram and an half; Bole, Bloodſtone, each one dram; Nutmeg two drams, red Sanders, Cloves, each one dram; Spikenard half a dram, old Cheeſe, and Glew of Fiſhes*, pouder them, and mix them *with red Wine, and Juyce of Herbs proper.* And let them be fryed and beaten *with Oyl of Maſtick, Roſes omphacine, each two ounces and an half*: make a Cataplaſm, *or with Wax, and Pitch, Colophony, and Roſin, a Plaiſter.*

The uſual Plaiſters are of Gallia moſchata of *Meſue*, Maſtick, Diaphænicon, that againſt Ruptures, Ceratum ſantalinum, with ſtrong aſtringents.

Alſo the Cawle of a Weather, with Oyl of Roſes omphacine, or others, may be ſprinkled with the pouders.

And a Cupping-glaſs applied to the Navel.

Alſo wild tanſey applied to the Feet.

Let the Fundament be wiped with Mullein leaves.

It is excellent to heat the Feet, either actually or potentially, to ſtop Fluxes, eſpecially when a diarrhæa comes from cold of the Feet, or other parts. Or when Flegm or water waſheth and cooleth the Guts; or when cold is taken by ſitting upon a cold ſtone, then the part muſt be warmed.

If another diſeaſe be with a diarrhæa, which is not mixed with it, or the cauſe thereof, then cure it diſtinctly, and look firſt to that which is worſe. But if it be the cauſe of a diarrhæa, then take that away firſt: and then if it yeeld not after the cauſe is removed, proceed thus.

The Cure of a Diarhæa meeting with a Defluxion.

If a Catarrh or Defluxion meet with a diarrhæa, you muſt uſe medicines for both, eſpecially when a ſalt or ſharp water flows from the brain to the ſtomach, then firſt look to the defluxion, and after to the diarrhæa. As for the defluxion, it is not good to purge with ſtrong medicines, but with particular Evacuations by the Noſe and Mouth, and diverſions, as waſhing of the Feet hot, which is good for both, if the decoction be made of Head-medicines and aſtringents. Alſo by Frictions, and Cupping galaſſes. Then ſtrengthen the Head with Pouders, Capps, Emplaſters, and Fumes: Of which there are divers Forms in defluxions, mentioned in Cephalæa, ſleeping Apoplexy, and Palſie.

But for the diarrhæa, you muſt purge the ſtomach from flegm, gently, and then ſtrengthen it, and apply aſtringents;

gents: as we ſhewed in a flegmatick Diarrhæa and the Lientery. Making choiſe of things for the Head: as many aſtringents are, Nutmegs, Galangal, Cypres.

The Cure of Diarrhæa coming after other Diſeaſes.

If a Diarrhæa follows an intermitting Feaver, and Choller be voided from thence, you muſt purge as in a chollerick Diarrhæa, and ſtop the Flux as a diſentery alwaies regarding the Feaver. And this is to be obſerved in continual Feavers when nature diſchargeth choller, in which you muſt not ſtop except it cauſe much weakneſs: If it comes otherwiſe by weakning, it ſignifies no good: yet we muſt ſtop and ſtrengthen. And the ſame muſt be done in Peſtilential Feavers, in which if the Flux take nought of the cauſe away, it is dangerous.

If it come in diſeaſes of the Liver or Spleen, you muſt obſerve the ſame rule. A flux of the belly after a Conſumption or Phthyſick, Atrophy, Hectick or Dropſie is uſually deadly: yet it muſt be reſiſted, alwaies having regard to the diſeaſe that accompnieth it.

The Cure of a Lientery.

Lientery is a Flux wherein the meat is not changed, but is voided, as eaten. If it come from the fault of things eaten, it is cured more eaſily. If from the Stomack, it ſhews much weakneſs, in regard the meat is no waies concocted, the Cure is harder, and in old men impoſſible. As alſo that which is joyned to great diſeaſes.

The method of Cure is in reſpect of the Cauſe: If the diſtemper be cold and moiſt or ſimple weakneſs, or joyned with Water, it is to be cured as the weakneſs of the ſtomack: alwaies chooſing in this caſe things that aſtringe and evacuate Flegm, and change the temper and ſtrengthen the Stomack.

The Humor is to be voided by Vomits, if it cleave to the ſtomack: By which means the Flux of the Belly is diverted, with Oxymel ſimple or of Squils.

Alſo we purge the ſame humors with things proper for the ſtomach, and that ſtrengthen it: as gentle Pills, of Hiera, alephanginæ, Aſſajereth and ſtomach pills; or ſtronger, as of Maſtick, or Agrick, ſuch alſo as are mentioned in weakneſs of the ſtomack, good to purge and ſtrengthen the ſtomack; beginning thus: Take *Aloes prepared with juyce of Wormwood half an ounce &c.* Or thus Take *Aloes the beſt prepared half an ounce, Rhubarb &c.* Or uſe the Phyſical Wine mentioned for the Cure of a looſe weak flegmatick ſtomach: that begins thus: Take *Rhubarb two drams, yellow Myrobalans &c.* and others there that purge and ſtrengthen the ſtomach.

Clyſters are not here neceſſary, becauſe the ſtomach is here worſt which muſt be more regarded then the ſtools: except there be an immoderate dejection, as in other Diarrhæas: And then things that ſtop other Fluxes may be uſed: Chooſing thoſe that reſpect the ſtomach, oe mixing ſuch with the Decoction, as Cypreſs roots and Nuts, Wormwood, Sage, Roſes, French Lavender, Roſemary and the like.

We ſtrengthen the ſtomack with divers things mentioned in the weakneſs thereof, chooſing thoſe that are moſt aſtringent for a looſe and moiſt ſtomach: as Nutmegs and Cloves which muſt be torrefied a little: Or ſwallowing two or three grains of Maſtich.

Old, Red, aſtringent Wine is good; by it ſelf or after other ſtrengtheners: in a final quantity. Or that phyſical wine that begins thus; Take *roots of Maſterwort, Galangal. &c.*

Or this: Take *roots of Tormenil or Snake weed one ounce Citron peels ſix drams, Nutmegs and Cloves, of each three drams; Coriander ſeeds two drams, Maſtick one dram and an half*: beat them for wine

Some commend the wine of the infuſion of Tree Moſs.

The ſtomack powders mentioned in weakneſs of the ſtomach are good, the uſual are Aromaticum Roſatum of *Gabriel* and *Meſue*, Roſata Novella, Diagalanga.

And thoſe after meat to be given, as that which begins: Take *Cinnamon half an ounce, ſweet Caſſia two drams, Galangal, &c.*

And thoſe made into Lozenges which begin thus: Take *of the eighth Pouder, and of Aromaticum Roſatum one dram, &c.*

Or this: Take *parched Nutmegs two drams, Cloves parched and Coriander ſeeds prepared, each one dram; Coral two ſcruples*, give it with *Wine* or with *Sugar of Roſes* or *pulp of Quinces*: Make an Electuary.

Or add to this pouder, *Pomegranat ſeeds and Sorrel ſeeds one dram, Dock ſeeds, Rayſons ſtones, each half a dram*; and other ſtomachical aſtringents, as Acacia, Box-thorne, and torrefied Myrobalanes.

Other ſtrengtheners and aſtringents for a looſe moiſt cold ſtomack, are of Candies as of Acorus, Citron peels, Quinces, Nutmegs, Cloves.

Electuaries, are Diacydonites with the ſpecies, of wild Acorus, with the ſpecies: Or our Compoſition which conſiſts of *Marmalad of Quinces one ounce andan half, candied Citron peelsone ounce, &c.* and the two mixtures there mentioned.

Conſerve of Roſemary flowers hath been often given with good ſucceſs: with ſome drops of ſpirit of Vitriol.

After flegm is purged, apply outwardly to ſtrengthen and bind the ſtomach, things mentioned in the weakneſs thereof, eſpecially aſtringents which are good both to the ſtomach and belly. And ſome things mentioned in Diarrhæa, if the looſneſs be very great.

Oyles mentioned in weakneſs of the ſtomach, ſtrengthen and bind.

And the two Oyntments there mentioned, which begin thus: Take *Oyl of Maſtick and Spike, each one ounce*; *&c.* Thus, Take *Oyl of Myrtles &c.*

Alſo *Galens* Cerot for the ſtomach or that which begins thus: Take *roots of Birthwort, Galangal, each half an ounce, &c.* Or thus, Take *Maſtick one ounce and an half, Frankincenſe, &c.*

Alſo Emplaiſters, as that of Maſtick, which begins thus: Take *Maſtick two ounces, Frankincenſe one ounce, Storax &c.* Or that Diaphœnicon of *Meſue*, or of *Monſagnanus* made of a cruſt of bread, all there mentioned.

Alſo the Cataplaſm there of Juyces, which begins thus. Take *Maſtick half an ounce, Frankincenſe, Labdanum, &c. with the Pulp of Quinces apply it.*

Or this: Take *Pulpe of Quinces, or Pears* (as in the cataplaſm for the dyſentery) *three ounces, Rie-bread Crumbs eight ounces*: boyl them *in ſtrong Wine*, and towards the concluſion, add *Pouder of Citron-peels two ounces, Pomegranate peels one ounce, Nutmeg half an ounce, Roots of Galangal, or Cypreſs two drams, Cloves one dram, Spike half a dram, Wormwood dryed, Mints, each two drams, Labdanum three drams, Maſtick half an ounce*, beat them well together, and *with Oyl of Myrtles, Roſes omphacine, each one ounce and an half*; *Oyl of Spike one ounce*: make a Cataplaſm.

Alſo Fomentations, as that for a weak ſtomach, which begin thus: Take *Galangal, Maſterwort roots, &c.* Or that for a flagging looſe ſtomach, which begins thus. Take *Citron peels half an ounce, Pomegranate peels two drams, &c.*

Alſo that aſtringent bag, which begins thus. Take *Maſtick half an ounce, Frankincenſe two drams, &c.*

Cupping-glaſſes to the ſtomach, (as we ſhewed in Vomiting) keep the meat longer in the ſtomach.

Some uſe a Dropax or ſtinking Plaiſter, and Sinapiſms, or thoſe of muſtard.

The Cure of a Lientery from a ſharp Humor, or Choler, or meat eaten.

If a Lientery come from other cauſes as from choler, or a ſharp Humor which forceth the ſtomach to ſend out the Nouriſhment; then the firſt care muſt be to evacuate that, and allay its

ſharp-

neſs; and to ſtop the Flux and Vomiting, as in a Dyſentery, and the Diſeaſe of Choler.

If a Lientery come from meats eaten, let thoſe be afterwards forborn, and a good diet be kept, as in the weakneſs of the ſtomach. Let not the Food be moiſt, but thick and clammy, that will ſtay, and alſo will eaſily concoct: as lean and moiſt fleſh, green Cheeſe, Rice, Papps, not made of milk. Applying the mean while outward aſtringents, and a Cupping-glaſs.

The Cure of a Lientery from an ulcer or ſcar.

If a Lientery proceed from an Ulcer of the Stomach, that muſt firſt be regarded: as we ſhewed in the Pain of the Heart, from the Ulcer of the Stomach, and the Flux as in a Diarrhæa.

If it come from a ſcar, it is ſcarce curable, becauſe it cannot be taken away, except it depart of it ſelf.

The Cure of the Liver-flux.

A Liver-flux, if it follow a Dyſentery, and the ſtrength be ſpent, and the Liver naught, is deadly. There is another which weakneth, by reaſon of the great Evacuation of water; as we ſhewed in Diabetes and dropſie. And the Liver hath then a preternatural Heat, and is weak: For the Cure of which, the temper muſt be altered, and the Liver ſtrengthned, and the Flux ſtopped, as in a Dyſentery. Therefore it is good to take heed of too great openers that are hot, and of opening the Veins, except with temperate things that carry the whey to the Ureters: Thus,

Opening of a Vein is not needful, for the bleeding is ſo little in this Diſeaſe, that it requires not ſo large an Evacuation, which will weaken.

Rhubarb is called the Soul of the Liver, and is good here as in a Dyſentery, where there is any thing to be purged. The pouder is given to *two drams, with half a ſcruple of Spike, or half a dram of Cinnamon, with Myrobalans,* or others mentioned in a Dyſentery. Or make pills of Rhubarb and Maſtick, as in the Diarrhæa: Take heed here of Aloes, for it opens the mouths of the Veins.

Clyſters are not good but of milk, if there be pain or other accident, uſe a cleanſer, or a healer, or an aſtringent Clyſter, as in a Dyſentery.

Or uſe theſe Potions to ſtop the Flux, and to correct the diſtemper of the Liver.

Take *Syrup of Quinces, and of dryed Roſes, of Myrtles, each one ounce; of Succory alone, or with Rhubarb, and of Endive, each half an ounce*: mix them.

Or make a Julep thereof, with water of plantane, of Oak leaves, Endive, Liverwort.

Alſo Syrup of Liverwort, boyled with Sugar, is good.

A proper Decoction. Take *Aſparagus roots, Sorrel, Plantane, Fennel, each one ounce; Liverwort one handful, Endive, Agrimony, each one handful and an half; Raiſons, with the Stones, three ounces*: boyl them *in Broath or Water.* It is better *with half a dram of the Pouder of a Wolfes Liver,* given at every draught.

We allow Milk ſomtimes, becauſe it ſtops the mouths of the Veſſels, eſpecially to them that have uſed it, and love it. It muſt have Steel quenched therein, and Sheeps milk is beſt, if the Whey be taken out by the quenching.

Alſo Almond milk, and Rice milk, and Barley cream, are good.

Raiſons, and Currance are good for the Liver, eſpecially if unſtoned or bruiſed.

You may make a thick Juyce of Raiſons by boyling them in red wine, and ſtraining them, and then boyling them again to a Rob or Quiddeny. This may be given alone, or with pouders.

Pouders are given alone, with Wine, Broath, Milk, or with Rob of Raiſons, Quinces, or with Syrups, like Electuaries, or with Sugar of Roſes, or Conſerves, as of Succory, &c.

The firſt pouder. Take *Coriander, and Dock ſeeds, each one dram; Endive, Purſlane ſeeds, each half a dram; of red Roſes one ſcruple, Sanders half a dram, red Coral two ſcruples.*

The ſecond: Take *Sorrel ſeeds one dram, Seeds of Hatchet Herb, or Dodder, or Water-creſſes, each half a dram; burnt Ivory two ſcruples, the inward Skins of Hens Gizards one ſcruple.*

You may add to theſe one dram of the Pouder of Wolfes Liver, or to ſtrengthen, Diamargariton frigidum.

The third Pouder: Take *Rhubarb, Wolfes Liver prepared, each one dram; Barke of Frankincenſe-tree half a dram, Cinnamon one ſcruple, Spike half a ſcruple.*

The uſual Pouder for the Liver and the Flux thereof, is Diatrionſantalon, by reaſon of the Sanders, and the Rhubarb, which is ſomtimes doubled in quantity. And by reaſon of the Gummis, it ſtops the Veins, and of coolers, it allayes the Heat. It may be given in Lozenges or Pouder. Diarrhodon Abbatis doth the ſame, being of the ſame Ingredients, and more. When the Heat is not great and the Stomach weak, you may uſe Aromaticum Roſatum.

Narcoticks are rather given againſt watching then pain, becauſe the Flux is moſt at night. Among which Philonium Perſicum is good to aſtringe.

Outwardly uſe things mentioned for the Dyſentery to the Belly, becauſe the Veins muſt be ſtopped, and the Flux ſtopped, alwayes adding things proper for the Liver, which lyeth under the right ſide of the Ribbs, and the Oyntment uſeth to reach to it. You may uſe the Oyntments, Pouders, Cataplaſms, and Plaiſters there mentioned, adding for the Liver Wormwood, Agrimony, Sanders, Spike, Schænanth, Aſarum roots, burnt Ivory, Storax, &c.

You muſt apply to the Liver if it be hot, things that temper and ſtrengthen, as in the beginning of an Inflammation, as that of Oyl of Roſes, Myrtles, with Juyce of Endive, or Succory. Alſo the Unguent of Roſes, and Cerot of Sanders, with Wolfes Greaſe, which is highly commended outwardly and inwardly. And the Epithem there mentioned, which repelleth, which is of Roſe-water &c with burnt Ivory.

You may apply ſome Coolers mentioned for the Liver to the Reins, which ſuffer and conſent therewith.

Alſo to bath the Feet, and uſe externals mentioned in the Dyſentery, it is good.

The Cure of the Cœliack paſſion.

Cœliack paſſion, or the Flux of the Belly, when the Chyle is voided pure, is an uſual Diſeaſe in Children, and not dangerous, except joyned with other Diſeaſes, or a Diarrhæa. In this caſe when it comes from the Obſtruction of the Meſeraicks, with weakneſs of the Liver, and the Veins adjoyning, which cannot ſuck: You muſt firſt open Obſtructions, with things proper for the Liver, that diſturb not the Belly; abſtaining from aſtringents, becauſe the Flux is not immoderate: Nor muſt they be uſed except after Obſtruction is opened, there follow another Diarrhæa or Flux. The remedies are theſe following, beſides thoſe mentioned in Obſtruction of the Liver.

Theſe gentle Pills are good to take away Flegm, Slime, and Filth, which ſtops the Veins. Take *Rhubarb one dram and an half, Agarick one dram, Cinnamon half a dram, Spike, Schænanth, each one ſcruple*: make a Pouder. Or *with Water, Juyce, or Syrup of Endive, or white Wine, Pills, let two ſcruples be the doſe.*

Or, Take *that pouder, and ſprinkle it with white Wine for a night, and with Fennel, Smallage, and Succory-water* ſtrain it, and add *Syrup of Roſes laxative of Endive, Maiden-hair, each half an ounce:* make a Potion for once.

Then give theſe following, the Lozenges of Diarrhodon, Diatrionſantalon: Or if you will open more, of Diacurcuma, all which have Rhubarb.

Or give this Electuary. Take *Conſerve of the Flowers and Candyed, Roots of Succory, each one ounce; of Maiden-hair ſix drams, Conſerve of Smallage, or Fennel, one ounce and an half, Conſerve of Eryngus roots half an ounce, Pouder of Diarrhodon, or Trionſantalon one dram, Diacurcuma half a dram, with Syrup Bizamine,* make an Electuary.

Corcus Martis made with Juyce of Citrons, or diſtilled Vinegar, is good to be put into Electuaries.

Let diſtilled Waters be drunk preſently after the taking of Lozenges or Electuaries, of Fennel, Smallage, Succory, Endive, with the third part of white Wine.

The Syrup Bizantine, of the five Roots, or of two roots, of Succory, Endive, or Maiden-hair, may be given alone, or with diſtilled Waters.

Or this Decoction. Take *Roots of Succory, Fennel, Smallage, each one ounce; Eryngus, wild Parſnips, each half an ounce;* ſteep them *in white Wine, of Maiden-hair, Sowthiſtle, Endive, each one handful; red Peaſe one pugil, Coriander, and Smallage ſeeds, each one dram;* boyl them, and add to the ſtraining *Sugar, and one dram of Cinnamon, Sanders, and Schænanth, each one ſcruple.* Let it be for three draughts.

A Wine of the Infuſion of thoſe Roots is better, adding *Monks Rhubarb, Madder, each one ounce; Cypreſs-roots half an ounce, Wormwood, and Agrimony, each two drams.*

The Belly muſt be anointed, not with aſtringents, but things that open Obſtructions, which will pierce to the Meſentery, and the Veins of the Omentum. Therefore,

Make this Oyntment. Take *Oyl of bitter Almonds one ounce and an half, Spike, Chamomil, or of Melilot, each one ounce; Juyce of Smallage, or Fennel, and white Wine, each one ounce and an half;* Let them be boyled or mixed for a Liniment, uſed with the hand firſt dipped in Aqua vitæ.

Or, Take *the aforeſaid Liniment, and with Aſarum roots, and Gentian, each one dram; Spike, and Schænanth, each half a dram, Smallage ſeed one ſcruple, and Wax* make an Oyntment.

Apply things mentioned in the Weakneſs of the Liver, to the region thereof.

A Cupping-galſs applied there, is thought to draw the Chyle thither.

If a Diarrhæa follow, then you may uſe gentle aſtringents inward and outward, as in a Lientery, but not otherwiſe.

The Cure of maſtery Stools. If it come from the Dyſentery, or colick, the Cure is there mentioned: or from the Liver or Spleen.

If this Voiding of Matter be of long continuance, and come from an Impoſthume of the Meſentery turned to an Ulcer, the Patient is of ill Habit of Body, and diſcoloured. And the Cure is difficult, becauſe the Ulcer is without the Guts: and the Matter may eaſily fall into the cavity of the Belly. But the ſame things muſt be uſed as in a Dyſentery and Teneſmus, with Matter.

The Cure of fat and oyly ſtools. It is cured as a Lientery, if it come from eating of fat Meats that are not concocted: Or as a Diarrhæa, when fat is mixed with other Excrements.

The Cure of the Voiding of Excrements at the mouth. The Excrements are voided otherwiſe then by the Fundament. And if by vomiting, it is dangerous, and few eſcape: As was ſhewed in the Iliack Paſſion and the Rupture. And then you muſt look to the cauſe of the Diſeaſe, as was ſhewed; and waſh the Mouth with wine-vinegar, and ſweet things, by reaſon of the abhominable ſtink, and ſtrengthe Stomach, but you muſt not ſtop, leaſt the filth be retained.

The Cure of the excrements voided by Urin. If Dung come forth with Urin, you muſt regard wholly the Ulcer fiſtulated, which paſſeth through the ſtrait Gut to the Neck of the Bladder: As was ſhewed in Piſſing of Matter.

The Cure of Excrecremnts of the belly voided at the womb. You muſt cure the hollow Ulcer in the neck of the womb, which pierceth the ſtrait Gut: As we ſhewed in the Ulcer of the womb.

The Cure of Excrements voided by wounds and and Fiſtula's. If Dung or Chyle paſſeth through a wound of the Belly that hath pierced the Guts, the wound muſt be cured. And if it be deadly, as uſually it is when great, or if the Excrements fall with Blood into the hollow of the Belly, then it ends with death. But if the wound be turned into a fiſtulated Ulcer, then the Excretion is permanent and incurable. But if this wound not only in the skin and fleſh, but in the Guts, grow together by a Callus, as we have ſeen, or by the fleſh that grows near to it: As we ſhewed in Wounds of the Bladder. This filthy Excretion may be cured, and the Patient may live.

And in theſe deſparate wounds, if they be large, ſo that you may ſee the Guts that are wounded, or if you enlarge them, you may put in a ſilver Pipe or rather of Lead, and bind the Gut ſtrongly thereupon, which hath ſaved many from their Graves.

CHAP. XII.

Of filthy Excretions.

The Kinds,

VVHen other Excrements beſides thoſe mentioned, come from the Body, they are preternatural; as from the parts following.

Filth from the Ears. There is alwayes Filth in the Ears, and it comes not forth but by being taken out, it is commonly like wax yellow and thick, ſomtimes hard, and diſcoloured other wayes. This cauſeth Itching when there is much, and hinders Hearing, as we ſhewed in the Hurt of Hearing.

Filth from the Noſe. There is ſomtimes Filth in the Noſtrils that is thick, moiſt, or dry, white, yellow, or black, ſticking ſo, that it cannot be taken off without hurt, or filling the Noſe, of an ugly aſpect when it is forth: And eſpecially when Children, or other naſty people ſwallow it.

Filth from the Eyes. Beſides Matter and Tears, there is thick, white, or yellowiſh Filth in the Eyes, in bleareyed people, and others, as I ſhewed in the Diſeaſes of the Eyes.

Filth in the corners of the Mouth. Filth ſticketh in the Corners of the Mouth which are called in Latin *Bridles*, and ulcerateth it, it continues long.

Filth in the Womb. Sometimes in ſluttiſh women there is Filth in the Privities beſides other Fluxes, and alſo in the Glans of Mens yards, that is covered with the Fore-skin, which cauſeth a ſtink.

Filth from the Skin. Filth ſticketh in many places to the Skin, thin, and thick, which makes a ſtink like that of a Goat, called in high Dutch *Brietelen*; as if by long continuance in a place, like a Hen hatching of Eggs, they had contracted it.

Filth between the Toes. They who have ſweating Feet have filth and ſtink, this is uſual, eſpecially in Summer, which is offenſive to their Companions: And between the Toes there is thick, black Filth, that ſtinketh. As alſo under the Arms and in other hairy places, where it eaſily ſticketh.

Filth of the Teeth. The Teeth are often foule all over, or at the Roots: And the Filth is either ſoft like Pap, or yellow; ſometimes hard and like Gravel: And ſomtimes they are black, as with Soote.

The Cauſes.

Choler is the cauſe of filth in the Ears The Colour and Bitterneſs ſhews that

that Choler is the cauſe of the Filth of the Ears. This Choler comes with water or whey into the cavity of the Ear, and the water ſweats out, and the Choler grows thick. And it appears that it comes not from the inward paſſage of the Ear, becauſe it hurts not the drum nor the hearing, but by ſtopping the Ear outwardly.

Water is the cauſe of filth in the Ears, Eyes, Noſtrils, and Privities.

The watery Humor which moiſtneth the Eyes and Ears, being made thick by continuance, cauſeth the filth in the corners of the Eyes and the yellow filth in the ears. And from Moiſture eſpecially, if they have the Whites, womens Privities ſmell ſtrong. And the filth between the Glans and Præpuce in men which ſtinketh, and cauſeth Itching, is from corruption of Seed, or a ſlimy Humor.

And the ſame Humor dryed in the Noſtrils by hot air, cauſeth the filth there, which ſticks ſo cloſe, eſpecially in the night, if the Head lie back, ſo that the moiſture cannot come to the Noſtrils.

Sweat cauſeth the filth in the Feet and Skin.

From uſual Vapors and Sweats which come from the Body, that ſmell ſtrong like a Goat, in ſlovenly people, the skin grows foul and ſtinketh. And Nature throws them to the extream parts, whereby men that ſweat, have ſtinking Feet, eſpecially in Summer. And when filth is long kept in ſtrait places, or hairy, as in the Arm-holes, Groyns, Privities, and between the Fingers and Toes, it ſends a noiſom Scent.

Meat is the cauſe of foul Teeth and Corners of the mouth.

Thoſe ſtuffs that foul the Teeth, being thick and clammy, come from Meat that is ſlimy, and ſticks thereto by chewing, except they be rubbed and waſhed. And alſo thoſe in the Mouth that cauſe Ulcers, if they be not cleanſed, come from the ſame.

Spittle is the cauſe of foul Teeth

Spittle being ſlimy, fouls the Teeth, eſpecially when the meat eaten makes it more tough, or hot breath when the mouth ſhut, dryeth it. And when the teeth are idle, and chew not any hard thing, as bread which uſeth to cleanſe them, they are foul. Hence it is that they which chew with one ſide of the mouth only, have the other ſide filthy; and that Filth grows hard like gravel, diſcoloureth, and maketh the teeth uneven. And this may come from ſerous earthy matter in the Spittle growing to the Teeth: As we ſhewed other Stones may grow, eſpecially where the Teeth are rough, and about the Gumms, and where they are worn. This Filth will grow hard and over the teeth, if they be not cleanſed. Alſo in the French Pox the Spittle defiled with Quick-ſilver which blacks the teeth, and makes them looſe.

Vapors are the cauſe of foul Teeth.

From a hot Breath in hot Diſeaſes, or malignant Vapors in the Plague, the Teeth and Jawes may be likewiſe affected.

The Cure.

The cure of Filth in the Ears. And in the eyes.

We ſhewed in the Hurt of Hearing how the Ears are to be cleanſed.

The Eyes muſt be cleanſed as in Epiphora and Tears.

In the Noſe.

The Filth in the Noſtrils may be taken out with the Finger, if not, let Milk or other Liquor be ſnuffed up firſt.

In the corners of the mouth.

Filth muſt be wiped from the Mouth which the Spittle and Meat cauſeth: Or if there be an Ulcer it muſt be cured as the Ulcers of the Mouth.

In the Skin.

It is taken of with water, eſpecially if warm. And if it is much by bathing. And if it be too ſlimy, and tough, greaſie, and ſtinking, it muſt be waſhed of with cleanſers and oyly things. As with Lye of Aſhes, with Lime ſomtimes, if we will have it ſtronger, which hath alſo a fat Slime beſides its cleanſing vertue: Soap is of the ſame force, being made of aſhes, Lime and Suet boyled hard, adding a ſweet ſcent, as Orris roots. Oyl is uſed for Suet, and then the Soap is ſofter and blacker. Rub theſe Soaps in the hand till it maketh ſudds, and it will take off any Filth: waſh the Hands in your own Piſs, and it will cleanſe almoſt as well as Lye. Other things to make clean white and ſoft hands are mentioned in Coſmeticks or Paints and Waſhes.

The Cure of the Filth of the Feet.

The ſtink of the Feet from Filth and Sweat is hardly cured, becauſe ſweat returneth; it often continueth long, and is nauſeous to company, and therefore requireth Cure. And it muſt be done as followeth; as alſo the ſtink of the Arm-holes. Firſt purge away the matter which occaſioneth the ſweat, as the humor is.

Then provoke Sweating that the abundance of Humors may be thrown to the Superficies, often, till it ceaſeth.

Then waſh the Feet or Arm-holes, with Cleanſers and Dryers, mixing alwayes ſweet Scents.

A Lye of Aſhes is good for this, eſpecially of drying Wood, and burnt Bones, with Bole, Tartar, Salt, Allum, Vitriol, if you will dry more.

All, or ſome of theſe may be boyled in Smiths-water, or water of other Minerals.

A Decoction of Vitriol alone in water, is good.

In all theſe for ſcent ſake, boyl ſweet Herbs, as Sage, Lavender, Spike, Myrtle leaves, Wormwood, and mix Wine therewith, and other aſtringent Herbs, to dry ſtrongly.

Dioſcorides commends Applications of Myrrh, and Allum, Carduus roots, and Daffodil roots.

If it be very ſtrong, and hard to be removed, uſe drying Baths, &c.

We ſhewed in the Cure of Whites, how the Privities ſhould be cleanſed from filth which is ſo ſtinking and offenſive to the Husband.

The Cure of foul Teeth.

All kinds of Filth of the Teeth, white, or yellow, or black, or gravely, hard are taken away with the following Remedies.

Firſt by pricking them after meat, and by waſhing the mouth.

Tooth-pickers muſt not be made of Iron, leaſt the teeth be hurt, nor muſt you pick them with the point of a knife which is an evil cuſtom, but of wood, or a ſtrong bone that will bend, as of ſome Fiſh, or the tendons of Cocks Leggs, or claws of great Birds.

Some are made of Wood that fix the Teeth, and give a ſcent, as of Maſtick tree, Myrtle, Bay, Juniper, Fennel ſtalks, laid in Musk.

A good Tooth-picker is made of a Marſh-mallow root, when we fear that hard will wear the Gumms, you muſt firſt dry the Root in a Oven, and then cut into Tooth-pickers.

The Mouth is to be waſhed alſo with water. And the Teeth muſt be wiped, or rubbed with the finger, or a cloth or with a piece of Scarlet. Or the outward bark of a Nut-tree, or with inward green, or the like cleanſers.

This is better done with Dentifrices or things to rub Teeth, made of Pouders, to be taken wet with the finger or cloath. Or to be made into things like Suppoſitories, with Gum Traganth infuſed in Roſe-water: Or with honey like a Pap. Theſe muſt not be uſed conſtantly, leaſt the teeth be worn away thereby.

Theſe Pouders do actually cleanſe as Sand and the like, doth cleanſe Veſſels, or potentially, by a drying and cleanſing quality. And they muſt be beaten very fine, leaſt they make the teeth rough, or wear them.

As Pouder of Cuttle-bone which is eaſily beaten, Crabs Eyes, Pumex, and Spunge ſtone, and that of the Froath of the Sea called *Halcyonius*.

Some muſt be burnt as the Pumex, inſtead whereof cinders well burnt may be uſed.

This

This burning makes them cleanſe more; Harts horn is of moſt uſe, Ivory, and divers Teeth, as of Horſes, all kinds of ſhells, of the Sea, Land, as of Snails, and of Fruits, as of Dates, Myrobalans, Olives, Cypreſs-nuts; theſe are all beſt burnt. Alſo Pouder of Stones, as of Alabaſter, the ſpecular or clear Stone like Graſs, and others that are eaſily beaten, or burnt, alſo Bricks or Tiles.

Some ſoft things are dryed in an Oven, as Cruſts of Bread of Barley is the beſt.

Alſo of Plants, as Burnet, Pellitory, Beets, Maidenhair, Coleworts, Myrtles, Maſtick-tree, Olive-tree, and of ſweet ſcented Herbs, as Penny-royal, Organ, Hyſop, Mints, Sage, Roſemary, burnt as the other.

To theſe are added Pouder of Cinnamon, Cloves, wood aloes, to make them ſweet; or Marjoram, Lavender, Orris roots, and Musk.

And to faſten the Gumms if looſe, Maſtick, Frankincenſe; and Myrrh, if foul. And if the Teeth be rotten, uſe things formerly mentioned for them.

And to take away Flegm, add Pellitory of Spain, muſtard ſeed, Pepper, Ginger; or a little Hellebore, if flegm be abundant.

Salt doth not corrode, and yet cleanſeth the Teeth, therefore is good to be rubbed upon the teeth, being it is alwayes at hand. And it may be mixed with other Pouders to make them ſtronger and more pleaſant. The boyled common Salt is good as well as that which is digged out of the Earth called *Sal Gem.* Alſo Allum and Niter burnt.

The fat that ſwims upon the Salt Leati or Glaſs-wort, diſſolved with broken ſtones to make Glaſſes, which being cold turnes into a ſtone and is called the greaſe of Glaſs, being poudered, doth wonderfully cleanſe the Teeth.

And white Wine Lees or Tartar doth the ſame with other Pouder.

You may make divers compoſitions of the former, and theſe are eaſieſt made. Take *Cuttle-bone half a dram, Coral finely poudered one dram, burnt Harts horn half a dram, Salt two drams*, or more, make a Pouder.

Or, Take *Pumex ſtone half a dram, burnt Ivory half a dram, Pouder of Alabaſter one dram, of the Greaſe of Glaſs two drams.*

Or, Take *burnt Cruſts of Bread two drams, Crabs eyes one dram, Date ſtones burnt half a dram, Aſhes of Roſemary one ſcruple, burnt Allum half a dram.*

You may make theſe ſweet with Angelica, or Orris roots, or Cinnamon, or Cloves, or the Oyls thereof, or make them into Dentifrices with the musked infuſion of Roſe water, with a little Maſtick to ſtrengthen the Teeth, and other ſimples mentioned.

This Dentifrice is of excellent vertue: Take *Barley meal and common Salt, each equal parts; and with Honey*, make a Paſt, put it in Paper and dry it in an Oven till it be almoſt burnt, pouder it, and add to *three drams thereof, aſhes of Crabs, Pumex calcined, Egg ſhels, Cypreſs, Allum burnt* if you pleaſe, *two drams, dryed Citron peels, Camphire, each one dram*: make a fine Pouder.

The Teeth are cleanſed by the juyces of ſome Plants, as of Burnet, and roots of Sowbread. Alſo with a clout dipp'd in ſome diſtilled waters. As this: Take *common Salt, or Sal Gem three ounces, Sal Ammoniack one ounce and an half, Allum one ounce*: let them be beaten, and diſſolved *with a little Roſe, or Lemon water*, and diſtil them.

Aqua fortis, if it be mixed with other waters, til it be made harmeleſs, is admirable to cleanſe the Teeth, eſpecially in the French Pox.

Alſo Oyl of Vitriol uſed as the former.

By waſhing of the mouth, the meat that ſticks in the Teeth is not only waſhed out, but alſo the filth and foyl which by breathing at night ſticks to them is taken off, or prevented. If every morning you waſh with water, Wine and a little Vinegar and rub the Teeth, and after uſe Dentifrices if need require, and then waſh them again with the ſame. If this ſhould be done dayly, as the Teeth need no leſs waſhing then the Hands, they might be kept clean and ſound til old age, except ſome other accident, and without theſe they cannot be kept clean, white, and uncorrupted.

Eating keeps the Teeth clean, therefore on that ſide where the Teeth are rotten and they cannot ſhew, is ſooner infected and there are ſcales. Therefore let them uſe to eat one both ſides.

When meat faſtned in the Teeth is picked out, ſomthing is taken from the ſides, becauſe it cannot be ſo eaſily come at, when it is lodged within, as when any filth is without. Therefore it is good to dip the Tooth pickers made of wood (as was ſhewed) in Salt, or Allum water.

You muſt take off the hard ſlakes with Iron Files or flegms for that purpoſe, made broad or ſharp.

CHAP. XIII.

Of the Voiding of Living Creatures.

The Kinds,

THere are ſome Living Creatures bred in the Body which are wholly beſides nature, as alſo the voiding of them. And they are either Worms, or Inſects, or Lice. As for Fleas it is a doubt whether they be bred in mans body or not: but no doubt they come from others.

Worms voided by Stool.

There are divers kinds of Worms that come from divers parts of the Body, which are like other Worms.

Long Worms.

The long worms are called *Lumbrici*, becauſe they are like Earth worms. They are round, ſharp at the both ends like Earth worms, ſhewing neither head nor tail, whitiſh and hard uſual in Children. They are voided more or fewer uſually dead, and ſomtimes alive.

Divers accidents accompany them, the gentleſt are pain of the belly, gnawing at the Heart, ſighing, a dry Cough, Itching of the Noſe, therefore they rub it conſtantly: grating of the Teeth, reſtleſſneſs, heavy dreams, which makes them ſuddenly awake and cry out. The great accidents are greedineſs, vomiting, looſneſs, Lientery, Feaver, Convulſion and Swouning.

Aſcworms.

The ſhort worms that come from the Fundament are called *Aſcarides*, they are round, like Mites in Cheeſe, or Worms in Ulcers. Theſe are voided alive with the Excrements, with great itching and bring ſcarſe any other accidents.

They reckon flat worms with theſe, but becauſe they neither live nor move as the other but are long membranes, that grow in the body, we ſhall mention them in other excretions.

Worms comming out at the mouth.

Such Worms come alſo out at the mouths of Children, in their ſleep, and from others at other times cauſing Vomiting.

I cannot omit the mentioning of a monſterous worm very great behind the Head like a Canker worm, hairy, with a black ſhell like a beatle upon the back, with many Legs like an Ear-wig voided by a ſouldier vomiting, after long heart pains.

Worms of the Teeth.

Some thought that worms breed in the Teeth within, being deceived by the ſmal Fibres

Fibres found in broken teeth, as in cavities of great bones. Some thought them to be Nerves: Others Wormes. But they may be in hollow teeth.

Worms in the Teeth. The Lumbrici or long worms will come out at the Noſe, or Mouth, and cauſe itching.

Somtimes little worms have been blown out at the Noſe, from an Ulceration there.

A Bergen Phyſitian affirmed ſeriouſly to me that he ſaw a hairy worm with many Feet, like an Ear-wig ſneeſed out at the Noſe by a woman, which a long time before felt a great Itching about her Fore-head.

VVorms in the Ears. It was ſhewed in Ulcers of the Ears, that worms come forth with matter.

VVorms coughed up. Some affirm that men in Conſumptions have coughed up worms.

VVorms piſſed forth. I ſaw a Man who had the Colick (of whom I ſpake in the Colick) that made Urin with infinite ſmall worms like mites in cheeſe, ſwimming alive therein; which dying, ſanke down in a great lump to the bottom. And I ſaw the ſame after in others. And have ſince read of divers that have ſeen the ſame.

VVorms in Ulcers. Navel-wormes. VVe ſhewed in verminous or worm Ulcers, how they bred there.

VVe have ſeen in the bottom of the navel a long round worm, ſuch as breeds in meal, that thruſt it ſelf forth, and drew in again.

VVorms in a wound of the Belly. Some affirm that the long worms of the Guts have come forth at an Ulcer which hath pierced through the Belly and Guts.

Dracunculi or little dragons. It is reported that in ſome Diſeaſes there are worms in the Arms, Leggs, Thighs, and ſides called *Dracunculi*, in high Dutch *Miuſroß*. But we leave the deſcription of them to them that have ſeen them.

VVorms remaining incloſed in the Body. Beſides theſe kinds of worms, others are bred in the Body, where there is no paſſage for them to get out. But after death are found in diſſection or Anatomy; of which neither the Patient that complained of other Diſeaſes, nor the Phyſitian knew. Theſe belong not to things voided or Excreta, but to other accidents, where they ſhall be ſpoken of.

VVorms under the heart. Under the Heart, it is reported that worms breed which prick and moleſt, but they expreſs not the part: being deceived with thoſe worms that riſe to the mouth of the ſtomach, and there moleſt the Heart. For they cannot breed any where about the Heart or Pericardium or under it, becauſe it grows to the Midriff.

Phtheiriaſis or the louſie Diſeaſe. Lice come from divers parts of the Superficies of the Body, and cauſe an Itching moleſtation, which is called *Phtheiriaſis*. The kinds whereof are diſtinguiſhed by the parts of the Body.

Lice in hairy Parts. Lice breed moſt in hairy places, eſpecially the Head, uſually in Children and poor people; and ſomtimes in other unclean perſons. When they are grown they are broad with many feet equal, becauſe they leap not, but creep. And they have a black ſpot in their backs ſometimes. The young ones are called Nits.

Somtimes they grow in the Beard and Eye-brows, and cauſe Itching there: But are little, and are quickly routed from thoſe ſmall quarters.

VVorms that eat the Hair. Alſo in the Hair under the Arms, ſome teach that the Hair of the Head and Beard may be eaten and cleſt with worms or lice, ſcarce viſible.

Lice that grow to the skin, or crablice. There are Lice found faſtned to the skin about the hairy parts of the Privities, that cauſe grievous itching and pricking, and ſtick very faſt. Which the French call *Morpions*: Or kil-Doves, becauſe they are like the Lice in Dove-cots that kill Pigeons. We call them Crab-lice, becauſe they reſemble the Crab-fiſh. Theſe ſomtimes creep into other parts, and there ſtick in the skin.

Hand-lice. There is a peculiar ſort of Lice that breeds in the Palms of the Hands, and in no other part, except the Soles of the Feet, under the skin which cauſeth a little ſwelling or cleft, and a continual Itching. And when they are taken out, they cannot be ſeen to move but upon a clear glaſs. Theſe are called *Chirones* from the Hand in Greek, and *Acari*.

The Cauſes.

All kinds of Worms or Lice breeds of Juyce or Filth.

Worms breed of Juyce that putrefieth by heat, which is either Chyle, or any putrid Matter.

Chyle is the cauſe of long Worms. The Lumbrici of the Guts breed of chyl in the hungry Gut called *Jejunum*, where any of it, which is not ſucked away by the Meſeraicks, becauſe it is too thick, or too fat, but is wrought by the heat of the guts, through long continuance into one or more living worms. This Chyle is produced from the eating of certain meats which afford matter for worms. For which cauſe chiefly Infants that feed too ſoon upon fleſh, and have not milk that is convenient, are ſo troubled with worms. Theſe worms as they breed of this Juyce, ſo are they nouriſhed thereby. And when they conſume it, they cauſe a great appetite. And if they creep into the guts, they torment them with tickling, ſucking, and pulling, and cauſe griping and Fluxes. And if they get up to the ſtomach, whether they may eaſily go from the final guts, then by moleſtation and hindering of concoction, they cauſe accidents and diſeaſes of the Stomach and Lientery: And if they gnaw the mouth of the Stomach, they produce Symptomes of the Heart and Brain. And if they riſe upwards to the Jawes and Noſtrils, they trouble them. But they cauſe the greateſt accidents when they are killed and putrefied in the ſmall Guts, and ſend up ſtinking vapors to the Heart and Brain, which cauſe Convulſions and Feavers. It is thought that worms a long time retained, can ſo gnaw the Guts, that they may paſs through the Belly about the navel or Groyns. But this is not probable, for they have neither ſharp bills nor open, nor teeth, and by ſucking, they cannot do it. Therefore if worms come forth there theſe come from ſome Impoſthume in the outward parts, and are not Lumbrici or long worms, but ſuch as breed in Ulcers. And if they come from the Guts, there was firſt a wound which made the paſſage. But if worms come downward from the ſmall Guts with the Excrements, into the Gut Colon, then if they paſs preſently through they come forth alive at the Fundament. Or if they be mixed with the Excrements and kept long, they are caſt forth dead with the Excrements.

Slime or flegm is the cauſe of Arſe-worms and Noſe-worms. Aſcarides or little Worms in the Fundament and elſewhere, come from a putrid matter which getting a new heat from putrefaction, produceth divers worms according to the diverſity of the matter, which is ſimple or compound.

Aſcarides come from Flegm or Slime long kept in the folds of the thick Guts, and they will lie long there, till they are ſent forth by the Excrements. Alſo from flegm long lodged and putrefied in the cavities of the Noſe, may come worms. And that hairy or downy Canker-worm which we reported to be ſneeſed out from a womans noſe was ſo bred.

Matter is the cauſe of worms in the Noſe, Ears, and Lungs, and Teeth. From Matter not only ripe, but putrefied in Ulcers of the Noſe, and external Ulcers of the Ears. And from that in the Navel, come

worms. And from that in the Lungs ulcerated, come worms which are ſpit forth. And if they be found in the teeth, they come from the putrefaction in the cavities thereof.

Meat eaten that putrefieth is the cauſe of Arſe-worms, and teeth-worms, and ſuch as are piſſed forth

Aſcarides or Arſe-worms come more uſually from **Meat** that eaſily putrefieth, as Fleſh, Cheeſe, Fruits, when it ſticks in the windings of the thick Guts, then from Flegm. Becauſe we may perceive that ſuch things being out of the Body, produce the ſame. The ſame things ſticking long in a hollow tooth, may produce worms.

VVe ſhewed formerly, that ſome worms bred of cheeſe were piſſed forth, and it is probable, for they are very like mites. And the Patient as we ſhewed in the **Colick**, lived long upon **Cheeſe**, and voided a quantity of it by the uſe of a Clyſter. Of which Cheeſe long retained and putrefied in the Guts, it is probable that theſe worms bred. And were ſent by the Meſeraicks with the Serum or whey into the hollow Vein, and ſo into the Kidneys and Bladder. And this is eaſie, becauſe they are very little bodies. And in regard thicker Humors, and bodies do paſs the ſame way. And this is the reaſon why others have piſſed worms from eating **Cheeſe**, which had them or bred them after it was eaten. For in another corruption of Humors, either in or out of the Veins; it is ſeldom ſeen that worms are voided by urin. And every corruption doth not produce worms of this form like mites, but aſcarides, or the like. Nor can they be from the ulcers of the Reins and Bladder, becauſe they come from Ulcers in another form.

Filth of the ſkin, is the cauſe of Lice.

Lice breed from filth ſticking to the skin, which filth proceeds from Vapors, Sweating, and the Excrements of the Skin, both under and above it, in Children, and poor people, and ſuch as are naſty in certain parts of them where they putrefie. Eſpecially in hairy parts, becauſe filth will ſtick faſter there, and can be leſs taken off then from the ſmooth skin. Eſpecially in the Head, where they are moſt abundant, ſmal at the firſt, and ſticking to the skin, but being nouriſhed by the nouriſhment that comes to the skin, they grow great, and march about the Head, and ſomtimes into the Garments and other parts of the Body.

But if this Filth have any other Infection beſides the excrementitial moiſture, as about the Privities, where there is a venemous Vapor in unclean perſons, it cauſeth a worſe Progeny; and then the Lice are worſe ſtick deeper in the skin, called *Crab-lice*. **Theſe** come from **Copulation** when the hairy parts are united.

The Venom of humors, is the cauſe of Lice in the Hand.

From that which cauſeth Scabs, being retained under the thick skin of the palm of the Hand, and corrupted, proceed thoſe little Lice under the ſcarſe skin called *Chirones*, as appears by the Puſtles and Scabs that are at the ſame time there.

And the thickneſs of the skin in the Palm of the Hand, is the cauſe why they are rather there, then in another part, which keeps theſe thin Excrements from being diſcuſſed. And the ſame may be in the Soles of the Feet.

The Cure.

The Cure of long Worms.

Lumbrici or long Worms bred in the thin Guts, ſtaying long, and nouriſhed with Chyle: are not known when they do hurt. And without other Remedies paſs through the Guts with the Excrements, or get upwards, but ſeldom, through the Mouth and Noſe. But when they do hurt, either alive or dead, by ſtaying in the Guts, and producing accidents, in tender Bodies eſpecially, and endanger life, they ought to be cured.

The intention of Cure is to keep them from breeding, and to expel them that are bred out of the Body. We prevent their breeding, when we keep the Chyle from turning into worms; by making it moderate and thin like **Milk**, not much, and thick with Meat of good Juyce, not ſuffering **Children** to feed upon fleſh and fat: but keeping them long to Milk and Pap.

VVhen worms are bred, we expel them alive or dead, with things that provoke Nature thereunto. When alive, with things that cauſe them to flie, or kill them by a contrary quality, either manifeſt, as bitter and ſharp, or ſalt, or ſour, which worms hate. Or by ſatneſs, which ſtops their breath. Or by a hidden quality which we know by Experience. Alſo we allure them to deſtruction, with pleaſant things. All theſe are to be directed according to the conſtitution and the accidents. As when there is a Fever you muſt avoid hot things that are bitter and ſharp, or temper them with things which by ſourneſs, allay the heat, and yet reſiſt the worms. If the Belly be looſe, you muſt uſe things that bind ſomwhat, and alſo kill worms. If there be ſwoundings, give **Cordials**. If Convulſions, things proper againſt them. For the doing of all theſe, let this courſe be taken,

Purge to ſtir up Nature to expel the Excrements and worms, with things that are proper to kill them if alive.

Rhubarb is the beſt ordinary Purge, eſpecially in a flux, for it bindeth afterward: and alſo in a Feaver. Alſo Myrobalans, Juyce of Roſes, and Peaches, Laurel tops, are enemies to worms. Eſpecially Aloes, by reaſon of its bitterneſs, and being good for the Stomach, it purgeth it from crudities, and makes the **Chyle** pure.

Moſt ſtrong Purges are bitter and ſharp, and therefore good. As Senna, Agarick, Turbith, Scammony, **Coloquintida**, of which you muſt give more or leſs, according to the ſtrength.

A pouder is thus made. Take *Rhubarb two drams, pouder againſt Worms half a dram, Coraline one ſcruple*: give it *with convenient Liquor, or Syrup*, half to thoſe in years at a time, and leſs to Children *one dram, of Senna, or Turbith* will make it ſtronger, *and half a ſcruple of Scammony*, if you will have it yet ſtronger.

Pills are thus made: Take *Aloes two drams, Myrrh one dram, Wormſeed one ſcruple, with Syrup or Juyce of Wormwood, or Gentian.* Make *a Maſs for Pills*, give *a dram, or half a dram* to the younger ſort. You may make them quicker with the former Purgers, or *ſix grains of Niter.*

A proper Infuſion: Take *Rhubarb four ſcruples, infuſe them in Wormwood wine.* Or if there be a Feaver *in Purſlane, or Knot-graſs water*, ſtrain it, and give it with Sugar.

A good Decoction. Take *Knotgraſs roots one one ounce and an half, white Dittany one ounce, Southernwood, Hyſſop, Peach leaves, each one handful; Lupines two drams, Wormſeed one dram, Cummin ſeed one ſcruple, Scheſtens ten pairs.* Theſe are ſaid to kill worms, *Senna one ounce, Polypody ſix drams*: boyl them, adding *two drams of Rhubarb towards the Concluſion, and one dram of Cinnamon.* Give it at twice, and to young people at three or four times.

A very good Wine, which is not ſo bitter and unpleaſant. Take *white Dittany roots one ounce and an half, Tormentil roots one ounce, Fern, and Gentian roots, each half an ounce; Wormwood, Southernwood, each two drams; Mints, Hyſſop, each one dram and an half; Tops of the leſſer Centaury one dram, Worm ſeed half an ounce, Senna one ounce and an half, Agarick or Mechoacan three drams, Turbith, Rhubarb, each two drams*; beat them, and infuſe them *in four pints of Wine.* Let it be given more or leſs, according to the Operation.

The Syrup of Peach flowers is the beſt uſual Purger, to kill worms. Or Syrup of Roſes ſolutive, which kills them by its bitterneſs, and they are better with Rhubarb infuſed in them, or a little Scammony.

Pills and purging Lozenges, if there be a Convulſion with the worms, mentioned in the Cure of the Falling-ſickneſs, may be given here.

There

There is a good pouder againſt worms that purgeth, made of Senna, worm ſeed, Coriander, and Harts horn.

Alſo the uſual Pills of Aloes, and Ruffi, and Hiera, and other Pills that have Aloes.

Alſo purging Electuaries which are good againſt worms, adding other things that kill them therewith, you muſt obſerve the ſtrength and Conſtitution, and other accidents, when you give them, eſpecially if there be a Flux or Feaver, and give aſtringents for the one, and coolers for the other.

There are many things that kill worms by a manifeſt or occult quality, or make them depart. To which we put pleaſant things, that they may ſuck them faſting, with things alſo that reſpect the accidents.

Some Food alſo, and Sauce is good againſt worms, as white Bread, green Nuts, Garlick, and Sebeſtens. And in Sallets, Beets, Endive, Succory, all green. Alſo Purſlane, Water-creſſes, Vinegar, Salt. Therefore when children begin to eat ſalt Meats, they are leſs troubled with worms, then when they did eat Milk, and freſh Meat. Alſo Salt keeps them from riſing up at the mouth.

There are alſo Pouders to be taken with Sugar, or wine, water, or Milk, with Honey, ſour or boyled wine, from half a dram to a dram, Or to be made into Lozenges, with Sugar diſſolved.

The ſimple Pouders are, the pouder of Worm ſeed, Coralin, Harts horn, beſt for Infants, becauſe not unpleaſant.

The Compound Pouders are firſt of theſe three. Take *Worm ſeed half an ounce, Coraline ſteeped in Vinegar, and dry one dram, Harts horn two drams.*

Another: Take *Worm ſeed, Lupines, each two drams; Coleworts ſeeds, Coriander prepared, Purſlane, Citron, or Orange ſeeds, each one dram.*

A third: Take *white Dittany two drams, Tormentil roots one dram, Gentian half a dram, Wormwood, Southernwood, each one dram; Thyme, or Mints, Flowers of Centaury, or Hyſop, each half a dram, Zedoary one ſcruple.*

A fourth Pouder: Take *burnt Harts horn two drams, Ivory ſhavings one dram, Earth worms half a dram, red Coral one dram and an half:* make a Pouder.

If you add Rhubarb to any of theſe, it will kill them, and expel them better.

You may make greater Compoſitions, with the Roots of Fern, Swallow-wort, white Thiſtle, Birthwort, Devils-bit, Alkanet, Madder, Barks of the Roots of Mulberries, and Cappars; Rue, Polymountane, Gooſgraſs, Savine, Horehound, Calamints, Sea-wormwood, Tanſey, Mints, Cat-mints; alſo Seeds of Orrach, Dill, Henbane, Gith, Pepperwort, Water-creſſes, Rochet, Turneps, Lovage, Hopps, Sorrel; alſo with Brimſtone, Saltpeeter, Peaſe, Earth-nuts, Myrrh, Gum of Juniper. And to make it precious, with Gold, Pearl, precious Stones, Unicorns horn, Bone of a Stags heart, Musk, and Ambergreeſe.

Another is uſually made of worm ſeed, Lupines, wormwood, and Harts horn all poudered.

If there be a Convulſion or Swounding therewith. Take *Piony ſeeds one dram and an half, Purſlane, Citron, or Orange ſeeds, each one dram; Harts horn half a dram, red Coral, Diamargariton frigid, each one dram; Sugar of Roſes* as much as all the reſt.

A Decoction or Syrup. Take *Roots of Knotgraſs, Dittany, each two ounces;* (*Tormentil or Biſtort* when there is a Flux of the Belly,) *Orris, Elicampane, Fern, each one ounce; Cardous, wormwood, Horehound, Time, Calamints, Mints, Rue, Hemp, each one handful; Lupines, Bay berries, each two drams; worm ſeed three drams, Purſlane, Colewort, Coriander, Citron or Orange ſeeds, each one dram; Sebeſtens ten pairs.* Boyl them, and diſſolve *in the Liquor ſtrained, Sugar, or Honey,* adding *Cloves, and Cinnamon,* and make a Syrup.

A Decoction of Rie is good to expel worms.

Alſo Sebeſtens, becauſe the clamminеſs thereof ſtops their breath, when other ſweet things will not hurt them.

The Decoction of green Nut ſhells will kill worms, becauſe we find by Experience, if it be poured upon the ground, the worms come forth.

The Flowers of Lupins, which kills Flies boyled in milk, will alſo kill worms, and the ſeed alſo.

The uſual Syrups are bitter, as of Wormwood; and if there be a Feaver, of Endive, Succory, with, and without Rhubarb. And ſour, which are beſt in Feavers, as of Citrons, Lemmons, Oranges, Bar-berries, Currance, Sorrel, Vinegar, Byzantine.

Alſo their Juyces, and of Goats-Rue, Germander, Mints, Agrimony, Elicampane, &c.

Wormwood-wine, with other bitter things mentioned, as worm ſeed, &c.

Alſo Wine of the Infuſion of Groundpine, and of Agrimony.

Alſo an Infuſion of Rhubarb, Wormſeed, and Scordium in Aqua vitæ, or Brande-wine, may be given to Children.

A diſtilled Water of Wormwood, Gentian, Knotgraſs, Purſlane, Horſraddiſh, Rue, Mints, Flowers of Sloe-buſh. And if there be a Feaver, of Endive, and Succory.

Conſerves for the ſame, are of Peach flowers, Gilly flowers, Orange flowers, Lemmons, Citrons: as I have proved. Alſo the Peels candied, ſo that they may keep their bitterneſs.

To drink your own Urin, or Lye, or Brine, is alſo good.

Alſo Oyl of Olive choaks the worms, and other things that breath. And if you take as much of the Juyce of Lemmons, and give them to drink, it will kill them effectually.

Alſo Oyl of bitter Almonds, Peach kernels, Indian Nuts, and Oyl of St. Johns-wort.

Alſo diſtilled Oyls, as of Spike, or Vitriol two or three drops.

There are divers Mixtures for the ſame Electuaries or Pils.

In fear of a Convulſion, This: Take *Citron peels candied one ounce, Conſerve of Piony, Roſes or Bugloſs flowers, and of Mints, each half an ounce; of the Pouder mentioned one dram, Syrup of the Juyce of Citrons, or Lemmons,* as much as will make an Electuary. Let it be taken, and water of Purſlane, Piony, or Bugloſs, &c. drunk after it.

Treacle and Mithridate are alſo good.

Some give a drop or two of Quick-ſilver, or half a ſcruple, and it will make the worms flie away. And it may be given ſafe: as I ſhewed elſewhere.

VVater in which Quick-ſilver hath been ſteeped and ſtirred and ſtrained, doth wonderfully expel them. And you may do the ſame in wine, or other Liquor.

Give warm water that hath had Lead or Tinn quenched therein, and it will expel all ſorts of worms, as I have known by Experience.

Clyſters are given to draw worms out of the thin Guts into the thick, and keep them from aſcending. They are made of theſe following which are pleaſing to the worms: firſt giving things at the mouth that drive them down.

They are made of Milk, which may be omitted in Feavers; or of fleſh Broath, or the Decoction of Figgs, Raiſons, Barley, Wheat one pugil, with Sugar, Honey two ounces, and two Yolks of Eggs.

If we conceive that they ſtick in the thick Guts, we give in Clyſters bitter things. As, Take *Roots of Gentian one ounce, Wormwood, Southerwood, Aſarnart, each one handful; Tops of Centaury one pugil, Lupins half an ounce, Wormſeed two drams:* boyl them, and diſſolve *in the ſtraining, Oyl of Wormwood one ounce and an half, Salt one dram.*

The ſame, or made of pickle or Brine, or Lead, *with one ounce and an half* of the Oyl of Bayes, Hiera picra, Aloes, Juyce of Wormwood, Gall of an Hog or Ox.

VVhen you repeat a Clyſter to fetch them out after killed, boyl them in Agarick, Carthamus ſeed, or diſſolve Benedicta Laxativa, or Hiera, or other Purgers.

If there be a Feaver, leave out theſe hot things, and uſe others that are bitter. As, Take *Endive, and Succory with the Roots, Dandelion, Purſlane, Sowthiſtle, with the Roots, each one handful; Rie one pugil;* boyl them, add

Juyce

Juyce of Beets, or Pot-Mercury one ounce and an half, Juyce or Syrup of Roſes, Oyl of bitter Almonds, each one ounce; Salt half a dram, make a Clyſter.

If there be a Flux of the Belly. Take *Tormentil roots, Birthwort, each one ounce and an half; Pomegranate peels, Myrobalans, each one ounce; Lentils one pugil, Myrtle-berries half a dram, red Roſes one pugil:* make a Decoction, ad *Oyl of Mints one ounce,* make a Clyſter.

Theſe following things are applyed outwardly to the Navel, where the ſmall Guts meet, and where the worms are.

The Oyls to anoint with Hands dipped in Aqua vitæ, or Vinegar firſt, are Oyl of Peach kernels, or bitter Almonds, Wormwood, Rue; alſo Oyl of Coloquintida made by iufuſing Oyl in the hollow of a Coloquintida Apple, or boyling the Pulp of Coloquintida therein.

Another Compound Oyl. Take *Oyl of Nuts ſix ounces, Juyce of green Nut ſhells two ounces, of Peach leaves, or Water-creſſes, Vinegar of Squills, each one ounce and an half; Hogs or Ox gall one ounce:* boyl them till the Juyce be ſpent.

An Oyntment of theſe Juyces is good. Take *Juyce of Garlick, or Leeks, and Wormwood, or Arſmart, or Stonecrop, each one ounce and an half; Juyce of Orris, Aloes diſſolved in ſtrong Vinegar, Gall of an Ox or Hog, each half an ounce, Aqua vitæ two drams.* If you add *the Juyce of wild Cowcumbers,* it will be better.

An Oyntment or Plaiſter is thus made: Take *Gentian roots one ounce, Dittany, or Birthwort roots ſix drams, Orange peels one ounce, Coloquintida one dram, burnt Harts horn two drams, Saffron half a dram;* make a Pouder, adding *Gith ſeed, Agarick, white Hellebore:* mix it *with Oyl of wormwood, Peach kernels, or bitter Almonds, and wax, and Roſin,* make an Oyntment or Cerot, or with Pitch a Plaiſter. This Pouder may be put into the fore mentioned Oyntment, and with Roſin made a Plaiſter.

The Oyntment of Sowbread is uſual to anoint the Belly, which purgeth, and kills worms.

An eaſie Cataplaſm to be made of Rie flower, or Lupins, and ſtrong Vinegar; apply it ſo, or boyl it a little. To which you may add ſome Oyls, mentioned to keep it moiſt, or the Juyces mentioned.

Other Cataplaſms are thus made. Take *Garlick, Onions, or Leeks,* if the ſcent of Garlick diſpleaſe, *four ounces, Squills one ounce, Peach kernels one ounce and an half, Lupine meal two ounces, Gall of an Ox one ounce, Oyl of wormwood two ounces.*

Or thus: Take *of wormwood, Southernwood, Horehound, Mints, Motherwort, Tanſey, Rue, Croſwort, Scordium, Goats-rue, Peach leaves, Centaury tops:* boyl them *in Vinegar,* beat them *with Flower of Lupins three ounces, Oyl of Peach-kernels two ounces, Aloes diſſolved in Aqua vitæ half an ounce, Myrrh two drams:* make a Cataplaſm.

A Fomentation for the Belly of the ſame Herbs boyled in Wine, Vinegar, and Water, is alſo good.

Alſo Baggs filled with the remainder of the Herbs, or the ſame dryed in pouder, or ſprinkled after anointing.

You may apply things to the Stomach, if you ſuſpect the worms to be there, as wormwood, Mints, Aloes, &c. And if there be a Flux ad Oyl of Maſtick, Quinces, Spike, Roſes, Pouder of Maſtick, Roſes, Cloves: and the like proper for the Stomach.

Some approve of Oyntments for the Heart, of things that kill worms and Cordials: theſe are good in Faintings, and reach to the Stomach. Some apply them to the Pulſes alſo, and Temples, and Back-bone.

Chiefly this following. Take *Aloes an ounce, Myrrh two drams, Saffron half a dram,* pouder them, and add *juyce of Citrons, Lemmons, or Oranges, or Roſe vinegar,* for an Oyntment.

Inſtead hereof you may moiſten the peſtilential Pills in the Juyces, and apply them to the Heart.

Or this Oyntment. Take *the three things mentioned, and* add *Citron ſeeds peeled, Ivory ſhavings, burnt Harts horn each one ſcruple; red Coral half a dram, Piony ſeeds,* If you fear a Convulſion, *two ſcruples, Cloves, wood-Aloes, each one ſcruple:* mix them with Juyces as the former, for an Oyntment or a Plaiſter.

Treacle may be mixed ſo, alſo with Pouders or Juyces, and applied to the Heart or Pulſes.

The Urin of a Boar that is found in his Bladder, mixed with Oyl, and hung in the Smoak, is good to anoint the Pulſes and Temples.

This Oyl following alſo to the Heart, Pulſes, and Temples is highly commended.

It is made of Oyl of Scorpions in which Treacle, Aloes, Myrrh, Scordium, Gentian, white Thiſtle, Gith, and Vinegar are boyled.

Others make Epithems for the Heart, adding to the former Wormſeed, Cordial pouders, Piony ſeeds, and mix them with the Oyntments.

Of Amulets, they ſay that Garlick hung about the neck kills worms, and yellow French Lavender.

The Cure of Arſ-worms.

Aſcarides that breed in the thick Gut, are often voided with Excrements, greater or leſs. And if they come to the fundament, and cauſe Itching, they muſt be cured.

VVhich is done by keeping the Excrements from too much putrefaction, with good diet and purging, and things that reſiſt putrefaction; as ſour Juyces, and other Dryers, as Harts horn, and others mentioned in the Cure of Worms.

Alſo ſuch things as draw them down, or kill them.

They are cured as the long worms, with Purges and proper Medicines. But eſpecially with Clyſters and Suppoſitories, for things taken at the mouth, looſe their vertue before they come to the part. For Suppoſitories they are to be put into the Fundament, and tyed with a threed, being made of things that allure them. As Fleſh, Fat, Lard, a little Salt, or of a Fig the inſide outward, or of a Beet root, or Cabbage ſtalk ſpread over with Honey.

Alſo a Suppoſitory of boyled Honey without Salt, with Pulp of Figs or Raiſons boyled, and put up, doth bring them forth, though it come not it ſelf whole forth.

And to kill them, mix Aloes, and Gall of an Ox, with Honey, without Salt at firſt, that it may be kept in the longer.

Clyſters to kill theſe worms, are the ſame with the former, in a leſs quantity.

Or this: Take *Gentian, and Birthwort roots, each one ounce: Wormwood, Horehound, Arſmart, Calamints, each one pugil, Lupins one ounce:* boyl them, adding *the Gall of an Ox, Goat, or Hog two drams, Sal Gem, one dram,* make a Clyſter. You may add *Hiera, Benedicta Laxativa,* or ſome bitter Oyls.

Alſo a Clyſter of Lye, Pickle, Brine, or Urin, kills theſe worms in the Arſe.

Anoint the Fundament with Quick-ſilver, Roſin, and Greaſe mixed, or anoint a Suppoſitory therewith, this is the beſt Remedy to cure theſe Arſe-worms.

The Cure of worms in the Noſe.

For the Cure of all theſe Worms, you muſt as here prevent the cauſe that breeds them and kills them, and carry them away. As the worms in the Noſe muſt be cured by curing the Ulcer: as we ſhewed in Ulcers. And by the ſmoak of Leek ſeed, Wormwood, and Aloes taken into the Noſe.

The Cure of worms in the Ears.

They are cured by curing the Ulcer: as was ſhewed in Ulcers of the Ears. And with the Juyce of Calamints, and Hemp, and as *Dioſcorides* ſhews, with the Juyce of Capar roots, or Urine boyled in a Pomegranate ſhell, and dropped in.

The Cure of worms coughed up.

And with other things there mentioned. If from an inward Ulcer of the Lungs, worms be coughed up, which is ſeldom, you muſt cure the Ulcer as we ſhewed in the Phthyſick.

If

The Cure of worms piſſed forth. If piſſing of worms comes from eating of any thing, as Cheeſe mentioned. Let them abſtain from it.

The Cure of worms in Ulcers. Bitter, ſharp, and cleanſing things cure louſie Ulcers, and kill worms in them, as Juyce of Wormwood, Centaury, Garlick, Leeks, Onions, and Galls of Beaſts.

Or a Decoction of Hellebore, Dittany, Gentian roots, Wormwood, Centaury, Calaminth, Horehound in Lye, with Bran.

Or the Pouder of Dandelion, Hogs-ſnout ſprinkled upon the Ulcer.

Eſpecially the Oyntment of Quick-ſilver.

The Cure of worms in the Navel. VVe have cured the worm that lyeth in the Navel, and drawn it out, with Flower of Lupins boyled in Vinegar, without any hurt.

The Cure of worms in the Teeth. If worms breed in a hollow tooth, they cannot remain long there, but fall out, or are eaſily taken out, when the teeth are cleanſed.

And if they ſtay, and be thought the cauſe of the toothach, ſtop the teeth with Aloes, and Camphire mixed with aqua vitæ.

Or take in the Smoak of Leek ſeed, Wormwood, and Aloes caſt upon fire.

The Smoak of Henbane ſeed taken in with a Funnel, cures the worms in the teeth, as thoſe in the Hands. Some write that by the taking in of thoſe Fumes to allay the Tooth-ach, there are bred things like worms.

The Cure of worms under the Heart. They ſay that worms are bred under the Heart, and are killed with drinking of the Juyce of Garlick, Raiſh, and Water-creſſes: and if there be a ſuſpicion of their breeding by an Itching about the Heart, that may be from the worms that ſuck the Mouth of the Stomach, nevertheleſs give the ſame Remedies.

The Cure of Lice. Thoſe Lice that march about, are more eaſily cured, then they that are fixed to the Skin: they have been in ſuch ſwarms in ſome diſeaſes, that they have cauſed death. But this is rather imputed to Divine Judgement then to Natural Cauſes.

The Cure is firſt of the Cauſe, then of the louſie Diſeaſe.

The Cauſe which is Naſtineſs, muſt be prevented and taken away. By Evacutions, if there be foulneſs of blood thereby, or Plethory which cauſeth the abundance of them: Such as we ſhewed in the Cure of the Itch. Among which Sweats are excellent to cleanſe the skin, either with a dry or moiſt Bath.

To the Evacuations, joyn a good Diet, for ſome things drive the Excrements to the skin, and breed Lice, as Figs, and Vipers fleſh: Of which we ſhewed the force in Elephantiaſis. And for Figgs, they thought from the likeneſs of the ſeeds to Lice, that they bred them, but were deceived.

VVaſhing often with Lye, rubbing, and combing the Head, is good to take away Greaſe and Dandrough, and in other parts of the Body.

VVe uſe ſtrong Dryers and Cleanſers to the Diſeaſe it ſelf, to kill the Lice, and take away filth that breeds them, which are bitter or ſharper.

They cannot do it by being taken inwards. But ſome eat Garlick, or drink it with the Decoction of Organ, to kill Lice, and Worms. And ſome Countrey-fellows eat Garlick to keep off the flies.

Outward things are beſt to kill them, and take away Itching: as Lotions for the Head, and other parts.

As this: Take *Birthwort one ounce and an half, Hellebore roots half an ounce, Beets, Arſmart, Wormwood, Horehound, Tamarisk, Tops of the leſſer Centaury, each one handful; Staphiſager, Lupins, each half an onnce; Berries of the Spindle-tree, and Agarick two drams*: boyl them in Lye. And waſh the part affected.

It is ſtronger with Salt, Allum, or Niter, or Vinegar, eſpecially of Squills.

When we waſh the Head, we uſe things proper for it: as Bettony, Sage, French Lavender,

For Lice in the Eye-brows, waſh with Vinegar, and Aloes, and Salts.

A Pouder to drive Lice from the Hair. Take *Staphiſager two drams, Salt three drams, Aloes one dram, Cinnabar two drams.*

The Oyntment alſo of Quick-ſilver mentioned, is beſt here; for it kills infaillibly all ſorts of Lice and Itch.

It may be thus made. Take *Quick-ſilver one dram, Turpentine two drams, Hoggs greaſe, Butter, or Oyl ſix drams*: make an Oyntment.

Or inſtead of Quick-ſilver, uſe *two drams* of Cinnabar, which is made of Quick-ſilver and Brimſtone.

Or for the Lice in the Hands, uſe *one dram* of Sublimate inſtead of Quick-ſilver.

There are other Oyntments of Staphiſager, and Greaſe. Thus; Take *Staphiſager half an ounce, white Hellebore one dram and an half, Pepper, Niter, each one dram; Greaſe, Butter, or Oyl, with a little Wax make a Liniment.*

To theſe add ſome of that with Quick-ſilver, or *one dram* of Sandarck.

The uſual Oyntment in ſhops is this. Take *Staphiſager, white Hellebore, Salt, Quick-ſilver, Hoggs greaſe, Oyl of Bayes, Soap, and Vinegar.*

Another Oyntment of bitter things. Take *Aloes two drams, Myrrh, Gum of Ivy, each one dram; Hogs gall, or of an Ox one dram and an half, Quick-brimſtone, Allum, each one dram; Oyl of Wormwood, or bitter Almonds, as much as will make a Liniment.*

A Paſte made of Ox gall, or other Gall and Meal of Lupins, and held in the Hands long, kills the worms there.

The linnen Clouts that Gold-ſmiths uſe when they guild Silver with Gold, and Quick-ſilver, applied to the part, kill Lice infaillibly.

The Fume of Henbane ſeed taken into the Palm of the Hands, kills the worms there. But we ſuppoſe it rather allayes the Itch, as anointing with the Oyl of Henbane ſeed, or Poppies, or Syrup of Poppies, or a little Opium diſſolved in Aqua vitæ.

Smoak your Cap with Tobacco, and the Lice will be killed.

Alſo Tobacco aſhes and Piſs cureth Crab-lice.

The worms in the Hands are picked out with a needle, not thruſt in deep to wet the part, and hinder the ſight of them. And then waſh the Hands with Wine, or Vinegar, Salt, Allum, or Niter often.

A very fine Comb will take them out of the Head.

Or a rubbing Bruſh which is invented for that purpoſe, with which Women daily cleanſe their Childrens Heads.

CHAP. XIV.

Of the Voiding of living Creatures or Animata.

The Kinds.

THoſe Bodies are called *Animate* which live, are nouriſhed, and grow like Plants, and yet have no ſenſe or motion: They are preternatural, and ſo is the Voiding of them. Theſe are chiefly from the Womb and the Fundament.

A Mole. There is an inſenſible and unmoving Body called a *Mole*, ſent forth from the womb, without ſhape, being ſoft fleſh without bones, full of veins, covered with a skin. Somtimes it is more membranous, and ſtill without ſhape, ſuch as I ſaw voided by a woman,

through the uſe of a Peſſary after eigteen years barrenneſs. Somtimes it is like a Sea-ſtar; as I have ſeen and caſt into the water, to the great amazement of the Beholders: and ſomtimes it is of other forms.

This caſting forth of a Mole, is like a miſchance or abortion, before or after the time, with ſuch ſtriving and voiding of blood. And the accidents before, are like thoſe of Women with Child. We ſpake of the Tumor of the Mole and its accidents, and cauſes in the Tumors of the Belly.

The long Membrane from the guts called Faſcia. The broad worm or fillet of the Guts called Tænia.

The like but ſeldom come from the Fundament, of divers kinds. One is like a long Ribband, like the ſmal Guts, as long as they, but not hollow, a fingers breadth, this they cal a flat worm, but it is a *Tænia* or Fillet of the guts, nothing like a worm, nor is it alive or moveth: coming forth ſo long, that the Patient is frighted, leaſt his Guts ſhould come forth. In which there are black ſtroaks a fingers ſpace diſtant all a long, like the Vertebræ or Spondils.

The Gourd-worm.

This *Tænia*, though very long, is of many little parts which may be divided, and they are like the Seeds of Gourds, and are ſo called from thence. This is ſeldom whole but in pieces, every one of which is called a Gourd-worm, but they are only pieces of the long Fillet or Faſcia.

The Ligula or round point from the Guts.

There is another kind of Tænia as long as the reſt, but not ſo broad round like a worm, and even, called *Ligula* or a point, it moveth not, ſeldom ſeen from men, but uſually from doggs whol or broken, not coming forth, till it be drawn out.

There are no accidents of this Diſeaſe, but the ſudden fright, and the Patient is well: Except there be a greedineſs before, and a heavineſs in the Belly. And if any part remain and ſtink, the Symptoms are worſe then if worms died in the Belly.

The Cauſes.

The Cauſe of theſe Bodies breeding, is either Seed or Chyle.

Conceiving of imperfect Seed, is the cauſe of a Mole.

VVe ſhewed in the Swelling of the Belly, that imperfect Seed cauſed a Mole. And the cauſe of voiding it, is that of Abortion, the expulſive faculty of Nature burdned with the preternatural weight, which divideth the Veſſels, by which it grows to the womb, and ſends it forth the proper way: And the ſooner, when there is external help: Of which we ſpake in Abortion.

The Chyle is the cauſe of the Tænia, and Gourd-worm.

As we ſhewed long worms bred of Chyle that is too thick or fat, ſo if it be ſo much, that it be in the thin Guts from the Stomach to the Colon, growing thereto, that Membrane called a *Tænia* is cauſed. This Chyle is not in the whole compaſs of the Guts, but in ſome part as broad as it comes forth, only there where the Guts are faſtned to the Meſentery al a long, and is turned into theſe *Tæniæ* which are not alive as worms. Therefore they are ſomtimes as long as the ſmall Guts. But they cannot grow in the thick Guts where the Excrements are, and no Chyle is, and from whence they will be expelled, but not from the thin Guts which contain moiſt and fluid matter, that may paſs by. Hence it is that they may be long without any hurt but heavineſs of the Guts, and hunger, becauſe they are nouriſhed with much Chyle; till by violent motion they fall off wholly or in part into the thick Guts, and are voided whole or in pieces, as when the Chyle grows by parcells to the Guts. The plenty of clammy Chyle in the Guts is the cauſe, which is ſeldom ſeen, as alſo the Diſeaſe.

And the worſe Symptomes are when they come not clean away, but ſtay behind, and putrefie.

The Cure.

The Cure of a Mole.

The way to cure a Mole in the Belly of a Woman, is to prevent it, and to expel it before it grow too big. For then it is difficult and dangerous, by reaſon of great bleeding which it cauſeth.

VVe uſe preventions, when we know women have had them, before they conceive, or uſe man; you muſt labor to know which ſeed is imperfect by conſidering both conſtitutions, and if both be out of health, to preſcribe them a good Diet, and convenient Medicines.

The woman muſt be let blood, if there be Plethory, and purged, If there be ſuperfluous Humors or evil, and the womb ſtrengthened, and the rather if the Diſeaſe come from the weakneſs, and want of natural heat in the womb, which cannot conveniently cheriſh the Seed conceived. Thoſe are preſcribed in Barrenneſs and Whites, and other Diſeaſes of the womb, Among which hot Baths are excellent.

VVhen a Mole is bred of Seed, as we ſhewed in the Swelling of the Belly, we muſt hinder its growth, and labour to expel it. But we muſt not uſe violent Medicines before we know the certainty of a falſe Conception, and only take away a little Nouriſhment by Blood-letting, and ſo hinder the growth, and purge away other filth, with which Nature may diſcharge the Mole alſo; and we not fear thus doing to cauſe an abortion, if it ſhould be a true Conception; for many women with child have been ſafely purged, and had Diarrhæ's; becauſe Nature is not ſo ready to caſt forth things Natural, as unnatural which are burthenſom.

But if we are certain that it is a Mole, by many tokens, ſuch as women have formerly had in the ſame. Or if the time of delivery be paſt, and the ſwelling and hardneſs remaineth, then we muſt give, and apply, put in, and inject into the womb, things that may expel it. And open the paſſages. All which we muſt firſt attempt with the ſame things that we provoke terms with, and then with thoſe that expel a dead Child and Secundine; and uſe a Midwife, if it appear, and need be to uſe manual Operation. Or if all fail, we muſt make Inciſion into the womb at the belly. All theſe Operations are ſhewed in the want of Terms, and difficulty of Travail.

The Cure of Tæniæ, and Gourd-worms.

The *Tæniæ* or long Membranes, whereof one is broad, called the broad Worm, the other made of many Joynts called the *Gourd-worm*, a third is round like other worms, if they grow in the thin Guts, which is ſeldom, they lye very long, and being they are not certainly known, they are neglected.

But if they be ſuſpected to [illegible] here, from ſtretching, heavineſs, and great appetite, then they muſt be expelled, and kept from breeding again. And the rather becauſe they ſeem monſtrous, like Serpents.

They are cured thus: Before they breed, the matter muſt be diverted that breeds them, and cleanſed. But when they are bred and grown to the Guts, you muſt uſe ſtrong Cleanſers to take them off, and Purges. It is needful to give things againſt worms, though they have neither life nor ſenſe, as worms have. The Diet and Medicines muſt be as follow.

The Chyle muſt be made moderate and thin, like Milk, by taking away the increaſe and clammineſs thereof, and by cleanſing it, that it ſtick not, and this will keep them from breeding. It muſt be ſuch as was ordered in the Cure of Worms, by eating Garlick, Nuts, bitter and ſharp Herbs,

Herbs, Salt, and spiced Meats, Mustard, and taking Wormwood-wine.

Purges force these from the Guts, and when they are corrupted, drive them out, and cleanse, being commonly bitter or sharp. They are mentioned in the Cure of the Worms, the best whereof are those of Aloes, and Wormwood, and sharp things often given. To which you may add Tartar, or Niter to cleanse.

There are divers Cleansers which take away the Matter that breeds them, and them also, and hinders their return; or if they return, make them sooner fall off, and come forth. They were mentioned in the Cure of Worms.

As the Pouders simple and Compound, that are good here, by reason of their bitterness and cleansing. To which *Dioscorides* adds the Seed of great Sun-flower, and Gith seeds.

Also many Decoctions there mentioned are good here, and Syrups, Juyces, and Conserves.

VVormwood is best with other bitter things, as Centaury, and Horehound. Also Urin, Lye, pickle or Brine drunk, do cleanse much. Also Wine, or Water, with some few drops of Oyl of Vitriol.

Clysters reach not to the thin Guts, where these Ribbands are fixed, and therefore cleanse not so well as things taken down at the Mouth. But if some pieces of them are fallen into the thick Guts, they will carry them forth, and their cleansing quality may reach to the small Guts, if they be often administred. And for that cleansing quality you may give bitter things that kill worms.

Also Oyls, Oyntments, and Emplasters, and Cataplasms, mentioned against worms, are good here to be applied to the Belly, being bitter, sharp, and cleansing, and they will in process of time do very much good.

CHAP. XV.

Of the Voiding of earthy Bodies.

The Kinds.

THe earthy Bodies that grow in Man, are Sand or Mud, Stones hard and soft, and they are preternatural, as also their Voiding. They come from divers parts of the Body which shall be mentioned, from some often from other parts seldom, or very rarely.

Sand pissed forth. Many piss Sand or Gravel, with and without another Disease.

Stones pissed forth. Also Stones are pissed forth forcibly, and this follows the pain in the Kidneys in the Cure of which these were mentioned. Somtimes Blood or stoppage of Urin went afore, or burning of Urin, or slimy Matter: As was shewed in those Excretions. Somtimes there is a muddy white matter with the Urin with signs of the stone in the Bladder. There is often in the Corners of the Eyes and in the Eye-brows a sandie, rough Matter, brittle and yellow, which sticks to the Hair in the night, when the Eyes are shut, so that the Eyes are hard to be closed: as we shewed in the Diseases of the Eyes.

The Gravel in the Eyes.

A Stone blown from the Nose. Somtimes a stone as big as a pease hath been blown out at the Nose, white and brittle, which we keep in the treasury of our Physical Rarities.

A Stone hawked forth. Not only I, but others have known stones to be hawked forth with a cough some white, some brittle, and hard, round, long, or broad, equal, and unequal. And a great difficulty of breathing hath gone before, in which Disease as was shewed, Stones are oftner kept then voided. I keep by me some such that were voided by a comely widow, that was marryed to one in a Consumption, that infected her: Of which I spake, she voided them with great pain and coughing.

Stones under the Tongue. *In the Jawes.* Sometimes other Stones have come from the Mouth, as from a swelling under the Tongue, called the *Frog*, or from a swelling in the Jawes.

Stones voided by stool. I keep at home a stone that was voided by stool; and another that came forth of a Horse that dunged.

A stony Birth. A famous Physitian of our time, saith publickly in writing, and told me that a Woman was delivered of a Child hard as a Stone.

Stones fixed in the Skin. Somtimes they grow in the Pores of the skin, and are taken out, as in the Face: I keep one by me that was taken out of the Sole of the Foot.

Stones in the ball of the Eye. One had a little Stone taken out of the white of his Eye with a Needle, and he brought it to me.

Gravel upon the Teeth like Scales. There are often scales which cover the Teeth, and they are chiefly about the Roots.

Stones from the knots of the Gout. As we shewed in the Gout, stones are often taken out of the Nodes thereof.

Stones from the Bladder. Stones are cut out of the Bladder by a Wound made in the Perinæum.

Stones from the Fistulas From a Wound in the Groyne, when a fleshy Rupture was cut, which turned into a Fistula, there came, as I shewed Sand and Stones with the Urin a long time.

The Causes.

VVe shewed in the Pain of the Reins from the Stone that Sand and Gravel and Stones came from a earthy Matter and Flegm, especially that which is mixed with water fastned in dry parts. And when other earthy Matter is gathered and fixed in certain Excrements or parts, it may do the same, because we find by Experience that wood and bones out of the Body may be turned to stones, and such are found in the Body. And we shall now shew how they breed in divers parts of the Body.

An earthy Matter in the Kidneys, is the cause of the stone. As we shewed in the Causes of the Stone, there comes sand and stones by urin from the Kidneys, rather then other parts, and they are from an earthy Matter fastned to them. And they fall from thence into the Bladder by the Ureters, and if they stay there, as great stones do, and increase by the earthy part of the urin, there is the stone of the Bladder. If they go farther, they are pissed forth: Otherwise they must be cut forth. Which we shewed was done by chance, from a wound in the Groine.

Sand fallen into the Bladder, the cause of pissing of Sand & Stones.

The earthy matter of the Liver, is the cause of Sand that is pissed, & of gravel. VVe shewed in Diseases of the Liver, that Gravel might grow there, by reason of the Serum that pierced into the Vessels, from which it might pass with the Urin to the Reins, and so to the Bladder, but stones cannot pass that way.

The sandy Matter in the Eyes, is the cause of Gravel. Also Gravel is bred in the Eyes, from water that continually moisteneth them: Or it is brought thither with tears, if they be hot and sharp, or

earthy.

earthy. And in ſound Eyes this ſandy Matter is gathered in the Corners of the Eyes and Eye-brows, at night when the Eyes are ſhut. And in diſeaſed Eyes, if there be tears and heat, as in *Epiphora* is ſhewed.

From the ſame Cauſe come little Stones, when ſand is fixed in the hard Tunicle of the Eye.

Earthy Matter growing to the Noſe.

In the Cavities of the Noſtrils from the Earthyneſs of the water and flegm, which flows from the Brain, proceeds the ſtone that was blown out. For though ſtones are found in the Brain, yet cannot they get that way through the narrow paſſages.

An earthy Matter in the Lungs, is the cauſe of Stones.

VVe ſhewed in *Aſthma* the Cauſe of a Stone in the Lungs.

The Cauſe of Stones in the Guts is thick matter that groweth in them.

VVhen Matter lyes long, and grows hard in the Guts, from the Serum which wetteth them with the Excrements, a Stone may be cauſed there. But it is not much regarded, becauſe it paſſeth with the Excrements without pain. And this is probable to be in a man, for I ſaw the ſame voided by a Horſe. Other things turned into Stone, may be from an earthy ſalt Matter taken in, and hardned with the Excrements.

The earthy ſalt Matter in the womb, is the cauſe of a ſtony Child.

The rare bringing forth of a ſtony Child, comes from an earthy ſalt Matter in the womb which turns it to ſtone, even as other things are turned to ſtone out of the Body.

An earthy Matter in the Pores, is the cauſe of the Stone there.

VVhen Earthyneſs is in the Serum in divers Pores of the Body, it cauſeth Stones by being externally dryed, This is moſt in the Face, when it is expoſed to hot and dry Air. The ſame is the cauſe of a Stone in the Eye.

The earthy Matter of Tumors, is the cauſe of ſtones under the tongue in the Jawes, and the Gout.

VVe ſhewed in Tumors, how ſtones grew under the tongue and in the Gout. And the ſame may be in other Tumors.

And the Filth of the Teeth, is the cauſe of Scales.

VVe ſhewed alſo in Filth, how from the Slime and Filth of the Teeth, Scales and Gravel grew.

The Cure.

The Cure of Stones is to be after ſome have been voided, or other ſigns have diſcovered them, from whence we conjecture that they may grow again. For that they are ſeldom, if they will not go of themſelves, they muſt be taken out.

The preventing and Cure of the Stone in the Bladder.

The voiding of Stones by Urin is not to be ſtopped but furthered, or Gravel, and the growth muſt be hindered. And if a ſtone ſtick in the Bladder, it muſt be taken out.

A Caution muſt be for the prevention of the Stone in the Bladder, as in the Reins: As we ſhewed in the Pain of the Kidneys. The Gravel grows firſt in the Reins, and falls from thence into the Bladder. And the beginning of them muſt be prevented in the reins. And then the ſtone in the Bladder will not grow ſo faſt.

For the Cure of the Stone in the Bladder, it muſt be worn, or broken, or expelled, or removed from its place, or taken out by theſe means following.

Purges are ſomtimes given, when the Body is full of evil Humors, to prepare it for things proper, that they may work the better.

And the Belly muſt be kept open: As we ſhewed in the heat of Urin from other cauſes.

Alſo ſtrong purges are given to put nature to the expelling of it, as it doth the other ſuperfluous Excrements.

As we have often ſeen, not only Excrements but ſtones have been voided by ſtrong purgers.

To all theſe are added break ſtones to diminiſh them, and break them. Theſe Purges are mentioned in the ſtone of the Kidnyes and are good here, for the vertue of them will reach to the Urin and Bladder.

Mollifying Clyſters are good, which are mentioned in many places, and Anodynes when the Urin burneth, mentioned in the Colick, alwaies adding things that break the ſtone: Such as are mentioned in the ſtone of the Kidneys, in three examples.

They who ſuppoſe the ſtone is bred of flegm, uſe Vomiting often to prevent. But it is better to cleanſe and prepare the Body, then for any thing elſe.

And this Vomiting by great ſtraining may force the ſtone from the Bladder into the paſſage.

The ſame things mentioned in the ſtone of the Kidneys are given here to open the paſſages, and to cleanſe the Earthineſs, which increaſeth the ſtone, and to make leſs the ſtone; And they are good to prevent the Stone in the Kidneys, from whence hear in the Bladder cometh. And becauſe the Bladder is farther off then the Kidneys, you muſt give the ſtrongeſt Medicines and the greater quantities, that their vertue may reach it.

As nouriſhing and Phyſical broaths, and divers Decoctions. And this: Take *Liquoriſh two ounces, Knot graſs roots one ounce, Aſarum half an ounce, Bettony, Maidenhair or Goldy locks, Mouſe-ear, white Saxifrage, Pellitory of the Wall, Sea fennel, Burnet, of each one handful, flowers of St. Johns wort, Broom, Roſes, each one pugil, Myrtle berries, Annis ſeed, Fennel ſeed, each half a handful; Gromwel and white Thorne ſeeds two drams, Garden Smallage ſeeds and wild Smallage ſeeds, each one dram; Raiſons ſtoned two ounces, red Peaſe one pugil,* boyl them in *Wine* and *Water*; for five or ſix Doſes in a good quantity, that ſo it may ſooner come to the part affected, diſſolving in every draught, *ſyrup of Limons and Oxymel ſimple, each one ounce; Oxymel of Squils two drams.*

To this Decoction, may be added other openers and ſtone breakers, as the opening roots, ſteeped in Vinegar, Madder roots, and Mulbery roots, Rupture wort, ſweet broom, Ladies Gloves, &c.

Alſo the infuſion mentioned in the ſtone of the Kidneys and the Lies.

Alſo the juyces, as Urin, Vinegar, natural waters, and the like there mentioned, with the ſharp juyce of Barberies, and of Sea fennel, Saxifrage, St. Johnswort, of green Nuts and Leeks, given alone, or with Sugar, or other Liquor, or Decocted to a Syrup, or extract, or made into Lozenges. Thoſe of juyce of Limons and Berberies are moſt in faſhion and are very excellent and pleaſant.

Simple and Compound waters diſtilled, for the ſtone in the Kidneys mentioned, are here alſo good. If the Patient will uſe them freely.

The Urin of a Goat or Boar, is commended by *Dioſcorides*, if drunken.

Alſo Oyls mentioned in the Cure of the Stone of the Kidneys are here good.

And the ſame Diet may be uſed.

And thoſe Medicines which are divers waies prepared of which we uſe the Simples, as the Roſins of Plants. Medicines given in ſubſtance, are divers waies prepared: ſome of Simples, as Roſins, Pouders of Herbs, Blood and Aſhes of Beaſts: Some are Compounded of Plants, Animals, and the like, into Pouders, Electuaries and Pills.

Beſides which in the ſtone of the Bladder is commended Mouſe dung, Snailes ſhells, Stones in the Gall of an Oxe, the Stomach or Gizard of an Eagle that breaks bones, therefore called *Oſſifraga*, Connies blood, burnt Glaſs, Sagapenum; Euphorbium with other things mixed

mixed, Gum of Almond-tree, Vine, Eryngus roots, wild Parſnips, Elder flowers, not open being dryed, and given often. Nettle ſeed, Cappars, Water-mints.

You muſt uſe Injections into the Bladder, of ſuch things as allay Heat, mentioned in hot Piſſing.

Laſtly, to break the Stone if poſſible, uſe Oyl of Scorpions, and Medicines made of Goats blood, or Wolfes blood. Of Juyce of Lemmons, and Bar-berries, and other ſharp things, as Vinegar, with Coral, and Pearl, which often, uſed diſſolve the Stone. Theſe may be injected with other things that allay them from hurting the Bladder.

Baths to ſit in, and Fomentations, of ſuch things as relaxe, and open the paſſages, and break the ſtone, are made of ſuch things as we uſe in the Stone of the Kidneys: Which as they are there good, when applied to the Hypochondria, or under the Ribs, ſo here to the lower part of the Belly. To which add theſe, Fennel, Spignel, Saxifrage, Melilot flowers, St. Johns-wort, and other break-ſtones.

Alſo Natural Baths are good, if ſharp, and of Brimſtone, inſtead whereof, you may make Artificial of Brimſtone boyled in Water.

Oyntments preſcribed in the Stone of the Kidneys, which open the paſſages, aſſwage pain, and break the Stone, are good to be applied to the Breaſt and Back, Yard, and Stones. Among which Oyl of Scorpions is beſt alone, or with other; as Birthwort, Gentian, Cypreſs, and barks of Cappar roots boyled therein, with prepared Goats blood.

Inſtead of this, we make an excellent Oyl of Canthorides, and Beetles, and Graſshoppers boyled in Oyl, with Juyce of Raddiſh, Pellitory, and Goats blood, adding a little Vinegar of Squills.

We mentioned a Girdle with a ſtone in it, good againſt the ſtone of the Kidneys: The ſame is alſo good here in the ſtone of the bladder.

Alſo a Girdle made of divers things, uſed all night, is highly commended; as of Linnen waſhed with Juyce of Tanſey, Plantane, Houſleek, Bean flower, and Honey.

You muſt uſe Operations, when the Stone of the Bladder ſticks in the neck thereof, and ſtops the paſſages of urin; as ſhaking when the Patient lies upon his back, his Thighs drawn up, for the Motion of the Bladder and Loyns.

We thruſt the Stone of the paſſage of the Bladder with a Gatheter thruſt in, which is hollow, that the Urin ſtopped may preſently flow forth, and crooked like the paſſage of the Yard: The ſame is done with a wax Candle, becauſe it will work into the paſſage better, being ſofter.

We take the Stone out of the Bladder by other wayes; ſome ſuppoſe it may be done by applying things to the Yard, which have a property to attract the ſtone; as the brayne of a Mag-pie tyed to the Head, or Glans, and Præpuce, called the *Fore-skin*. Or they leave the Yard thruſt into a great Raddiſh made hollow.

Somtimes the Stone is expelled by forcible piſſing, after ſharp wine long retained after great Draughts, eſpecially if the lower parts be ſhaken at that time by ſtamping upon the ground with the Feet.

Somtimes it is ſucked forth of the Yard, when it ſticks there. This is down often in Infants.

We are conſtrained to cut for the ſtone as the laſt remedy, when there is great pain and ſtoppage of Urin, albeit it is not without danger of death, or Convulſions, or ſome other following impediment, eſpecially in Piſſing, which they cannot hold afterwards. But many have been thus cured, and never had ſtone after in the bladder. Some have been twice cut, by reaſon of ſome ſigns of the ſtone falling from the Reins, or left behind at the firſt, and yet have recovered, when others have died at the firſt Cutting.

The Cutters for the ſtone do thus. The Patient ſits upon a table bound to the back of another that holds him (ſo that he cannot hinder the Operation of the ſurgeon with his body or hands) with his thighs drawn up and ſpread abroad, then they put a Catheter into the Yard and Bladder, and thruſt it outwards, above the Podex in the Perinæum, or into the place between the Podex and Cods, where the Neck of the Bladder is; which thruſting out the skin, ſheweth them the way, then they make Inciſion long wayes upon the Noch of the Catheter, made for that purpoſe, and open the Neck of the Bladder, not according to the future or middle part, but upon the one ſide, then they draw out the Catheter, and put a directory Inſtrument with a pipe or guttur upon the outſide; or an Inſtrument like that which opens the Matrix, (made to enlarge the neck of the bladder) into the wound ſo made. And then with a forceps or Inſtrument made at both ends where they meet, hollow like two little ſpoons, they lay hold upon the ſtone, and draw it out, through the hollow Inſtrument, or directory Pipe, if there be many Stones, they draw often, this done, the wound will eaſily be healed, except the Body of the bladder be hurt.

When a Stone ſticks in the paſſage of the Yard it is taken out with leſs labour and danger, by cutting it out underneath, between the two Bodies.

You may take a ſtone from a womans bladder, by enlarging the neck thereof without cutting, with an Inſtrument called *Speculum Veſicæ*, which being put in, may be by degrees ſcrued, ſo that there will be room for the Forceps or Tonges to enter. And becauſe through the enlarging by force of ſo ſenſible a part, there is great pain, and ſomtimes a tearing, and wound of the part. This operation in women is not without danger of the accidents that we ſhewed would follow cutting.

There are ſome that ſay a ſtone may be taken out of the Bladder, by cutting the Belly in that part that is nigh to the ſame, and the Patient recover. This we ſaw in a Fiſher-man wounded by chance in the bladder, who had a Fiſtula after the wound, through which he voided his urin and many times ſtones and gravel.

Some ſay that by the finger in the Podex, when the bladder is preſſed down, you may thruſt down the ſtone in the bladder into the paſſage for Urin, and through the the Yard afterwards without cutting. And when one tryed it in my preſence, he brought it to the entrance of the paſſage, but there it ſtuck, till he took it out by a ſmall Inciſion. Thus by a new and leſs proviſion is the ſtone taken out, but not without danger neither; for ſome part of the bladder may be thruſt into the neck of the ſtone, and ſo cut off.

They muſt uſe the Diet for the ſtone of the Kidneys, for this of the bladder proceeds from thence, and is nouriſhed thereby, by the cleaving of earthy Matter, and ſalt of the Urin together: And the ſame things that hurt or help the one, hurteth and helpeth the other.

The Cure of Gravel in the Eye, and ſtone upon the Eye called Tophulus.

For the Cure of the Gravel ſticking to the corner of the Eyes and Eye-brows, it is by taking away the great moiſture from the Eye. And this is done, as I ſhewed in the Cure of Weeping; and if there be redneſs as in the Cure of Epiphora or Rhewm of the Eye. And when the Eye-lidds are glewed together, to open them with eaſe, uſe Roſe water, or Milk, to ſoften this Matter that grows hard, eſpecially in ſleep. The *Tophulus* is upon the ball of the Eye, and hinders little, and will fall off of it ſelf, or muſt be taken off with a needle, which is without danger in that thick Tunicle of the Eye.

The Cure of Stones in the Noſe.

If a Stone be blown out of the Noſe, and you ſuſpect from a new Obſtruction thereof that there is another, you muſt preſently, uſe Errhines, or things to provoke Neeſing.

The Cure of the Stones in the Lungs.

If Stones be ſpit from the Lungs, and the ſhortneſs of breathing, and Aſthma go not away, we may gather that there are more ſtones yet, and it is good to force them away, with things that expectorate, or cleanſe the Breaſt, mentioned in Aſthma.

The Cure of Stones in the Gums. If Stones are voided by ſtool, becauſe it is the general place for to diſcharge all Excrements, you muſt do nothing, except it be to prevent the growth of them, if they come often.

The Cure of an Infant turned to ſtone. It is better to admire as a thing unheard, that the Child ſhould turn to ſtone in the womb, then to attempt any thing to prevent it.

The Cure of gravel tumors in the Pores. Gravel Tumors in the Pores, go not away with the Nails, or needle opening the skin, when in the Face. But when in the ſoles of the Feet, they are taken out by cutting and dividing the thick skin thereof.

The Cure of ſtones in the tumors of the tongue, almonds of the ears, or in the nodes of the Gout. If Stones come from a Tumor in the Tongue, or Almonds of the Ears, or the like, or from the Nodes in the Gout, you muſt cure the Ulcer. And if there be more in the tumors, and be troubleſom, you muſt bring it to matter, as an Impoſthume, that they may come forth, or be eaſily taken out. And if they will not be ſuppurated, or the Patient be impatient of delay, open it, and take them out: As we ſhewed in the Cure of the Tumors under the tongue called *Ranæ* or Frog.

The Cure of Gravel in the Teeth. When we ſpake of Filth generally and particularly that of the Teeth, we ſhewed how Gravel ſhould be taken therefrom.

CHAP. XVI.

The Voiding of things that get into the Body.

The Kinds.

THings without that get into the Body, and come forth again are divers, either ſuch as get into the inſide of the Body, or only into the outſide. And they are all beſides Nature, as their voiding is, coming from divers parts of the Body.

The voiding of things gotten into the Eye. Many things come out of the eye which fel into it, and cauſed tears, pain, itching, redneſs, or ulceration: As I ſhewed in the pain of the Eyes.

The voiding of things got into the Ears. Some things creep in, or are thurſt into the Ears, which cauſe a noiſe, and deafneſs: As we ſhewin the Cure of Deafneſs, before they come forth.

The voiding of things gotten into the Noſe. Things that are drawn by breathing into the Noſe, and cauſe itching are voided by ſneeſing: And ſometimes things taken at the Mouth came out at the Noſe.

The ſpitting out of things gotten into the Mouth. Some things that fell from the noſe into the moth, are ſpit forth, or coughed out, if they fall upon the rough Artery. Or things taken at the mouth which offend the ſtomach, are

The vomiting of external things got into the Body. vomited up, or that ſtuck in the Gullet: And ſomtimes things given, as a Clyſter have been vomited at the Mouth.

Divers things taken which diſturb the Stomach, are caſt out at the Podex, and ſome without diſturbance; and ſome things are put into it, or creep into it, and come forth again.

Voiding of things got into the womb, bladder, breaſts, &c. Some things have gotten into the Matrix, and come forth again.

Some things taken have been piſſed out.

Others have been ſwallowed, and ſent out of womens breaſts.

Some ſay that things taken, or by Witch-craft thruſt into the Body, have been voided at divers places.

Hitherto may be referred things that get into the skin, and under the Nails, and come forth again.

The Cauſes.

Many are the things which by chance get into the Eyes, Ears, Noſe, Mouth, Womb, and Podex, and come forth as they went in, or otherwayes; or that hath been in the outſide of the Body. It is impoſſible to repeat them all, let the chief ſuffice, and thoſe of moſt concernment, or which are moſt uſual, and how they got in.

Things fallen into the Eye. Many times Flies get into the Eyes by chance, and get out again, as Duſt, Moates, Hairs, Sand, Gravel, mentioned in the Cauſes of the Pain of the Eye, where we ſhewed how the Eye-brows getting into the Eyes, cauſed pain.

Things in the Ear. The things that get into the Ears, and out again, are chiefly water, when they ſwim; alſo Fleas, and Lice, Chinches, Ear-wiggs, and other creeping things, as worms, the ear-wig is moſt feared. Somtimes other little things, ſuch as get into the Eyes, mentioned in Deafneſs, as a Cherry-ſtone, which getting into the Ear of a Child terrified the Parents that it might grow there.

Things in the Noſe. There are alſo ſmall things in the Noſtrils by breathing, and are either preſently blown out, or ſneeſed forth, or falling into the Mouth, are ſpit out, or upon the rough Artery, and are coughed out. Other little Creatures that creep into the Noſe, in ſleep, cannot ſtay long, becauſe they provoke ſneeſing by tickling.

Things gotten into the mouth, is the cauſe of their voiding by ſtool, vomit, or urin. There are divers things that get into the Mouth, that are voided by ſtool or vomit, with griping of the Belly, or without.

Some kind of Meats eaten, are thrown out again, not only unconcocted, as in a Lientery-flux; but when the Stomach is ſound, and yet they are unconcocted, and come forth as they went in, becauſe they were taken in too great quantity for concoction, being fat or unctious, and then there is a voiding of fat, as we ſhewed, or are too hard to be concocted: As we ſhewed in the Colick, how one voided Cheeſe that he had long before eaten immederately. And we ſaw two maids which after Clyſters voided abundance of Cheſnuts: And one in a Dyſentery voided Cheſnuts, which he had plentifully eaten, ſome weeks before.

For the moſt part, that which cannot be concocted in a mans ſtomach, is ſent out unchanged, as in beaſts, as are Cherry and Prune ſtones, and Cornil-berry ſtones, and of the like Fruits, as Medlars that are as ſtones very hard, five of which were ſent to me for ſtones of the Kidneys, which upon Examination I diſcovered.

You may plainly ſee the skins of things, as Fruits, and the like, in the ſtools unchanged, when the inſides are digeſted, eſpeciallly after eating of Peaſe, which the vulgar count unholſom therefore.

I ſaw many Hens bones voided by a woman after a clyſter, who had eaten hens feet for a diet.

Beſides Meats, many other things are taken in and voided. As ſome Creatures quick, ſome dead, which being whole, could not be digeſted, come forth ſo, contrary to other Creatures, who ſwallow mice, ſerpents, and the like,

like, (as I have a God fiſh ſwallowed a Beetle) and digeſt them whole, and though it be alive, yet they hurt them not.

As it is manifeſt that a fooliſh fellow ſwallowed an Eel by jeſting, and voided it by ſtool the next day, after great torments, dead, and as it were flead.

I knew a Soldier that in his ſleep upon the ground, had a Lizard that crept into his Mouth to his Stomach, by which he was miſerably tormented, but voiding bones by ſtool, he was free.

Some Fools, and Melancholick perſons, that hear noiſe in their Guts by wind, perſwade themſelves that they have ſwallowed Snaks,and the like,as Froggs by drinking of Froggs-ſpawn, when they ſwam in the River. But this is falſe, becauſe if theſe or other Creatures get into the Belly, which is hard to be done, they can live no longer, but are ſtifled, and killed with heat.

Hairs are ſwallowed and voided again, and if you look upon them while hot,you wil think they are alive by their motion. Thus the people think true, and I knew an Impoſtor,that gave little ſhort threads in pills, to make them think they voided worms,and after ſhewed them how they moved, and deceived many. I have ſeen, and have by me balls of hair found in the ſtomachs of Calfes, and Goats, made of hair they ſwallowed, compacted, and knit together, and hard all over. The like may be in a Man, if he ſhould ſwallow hairs, as they delight to do.

Some earthy things are voided, as ſwallowed as ſand, Clay, Stones, and Metals. As a Fool who for gain ſake, ſwallowed Flints as big as Nuts, ſuddenly, and filled his Stomach, ſo that you might hear them rattle, waſh them, and ſwalow them again in our ſight. And I ſaw a woman that had ſwallowed Quick-ſilver, who voided it in my Chamber, while ſhe was declaring to me the ſame. Theſe no man can digeſt, being hard and earthy, as Sand and Stones, but I have obſerved certainly that ſheep digeſt them, and Wolves in time of famine preſerve themſelves by eating Clay, and I keep by me ſtony Clay, taken out of the Stomach of a Wolfe, as a rarity.

Many Artificial of Earth or Wood,ſwallowed by chance, except they ſtay in the Guts, are voided by ſtool, as a bullet which ſome ſwallow for death. Other Drunkards, and mad Men ſwallow glaſs that they have chewed.

One Drundard ſwallowed a ſpoon, wherewith he was eating Milk, being thruſt by his Companion, which the next day hung at the Fundament, and was voided, after great pain.

Veſalius reports of one that lying with a Concubine, ſwallowed down her great golden Crucifixe, ſhe had about her Neck, leaſt it ſhould be found about him, and voided it again.

A famous Phyſitian writes that one ſwallowed a knife in a cloath, and after great pain thereby, it produced a great Impoſthume in his Groine, and was there cut out, he living long after.

The famous Phyſitian of *Regiomons* writes a Book of the ſwallowing of a knife taken out of the ſtomach by Inciſion

Another writes that a Needle ſwallowed, was voided forth at a Vein.

A Phyſitian to be beleeved, did certainly affirm to me, that aNeedle came forth of aWomansBreaſt with theMilk.

Many things taken at the Mouth, are vomited up preſently. Some, if they go aſide, as they ſay, and fall upon the rongh Artery, as Crumbs of Bread, after Water is drunk, or the like, they are coughed up again, or forced into the Noſtrils with the Drink.

Some ſticking in the Jawes, hinder ſwallowing and breathing, and ſomtimes choak ; as Thorns, Bones, and Money ſwallowed : As we ſhewed in the Defect of the Throat, which ſtopt in the way.

Rhaſis ſhews that a Horſleech ſuck'd in by chance, ſtuck in the Throat.

Some things eaten,and paſſing from the Guts by the Meſeraicks, have been piſſed out, as Oyl in great quantity drunk off, and the like, neither doth that which ſwims upon the urin come alwayes from the Kidneys.

We ſhewed in the Treatiſe of Urin, that worms eaten with Cheeſe, have gotten to the Bladder, and have been piſſed out.

Alſo ſome ſand paſſing through the Meſeraicks, may make the Urin gravelly, for it is not neceſſary that it be bred in the Body, which is rare.

I have obſerved alſo, that Birds bones eaten, have been piſſed out at a wound of the ſtrait Gut, which was fiſtulated, and pierced the neck of the Bladder.

Vomiting of Clyſters.

Clyſters aſcending out of the thick guts into the ſmall, and ſo into the Stomach, have been vomited up.

Horſleeches are applied to draw Blood from the Hæmorrhoids.

A Countrey-man told me that his Neighbour carrying a quick Mole in his Pocket, had him ſo far in his Podex, that they could not get him forth without killing.

One told me of a Mouſe that got into a Womans Matrix,and not unlikely, for women are very fearful of them.

We ſhall not here mention things put into the Body by Witch-craft.

Things like bones, hairs, and other things are bred in Impoſthumes, but they are not here to be ſpoken of, becauſe they come not from without, except put in by Magick, which alſo may depend upon a Natural Cauſe : As we ſhewed in Tumors that impoſthumated.

Thoſe that cleave to the skin and are taken off, are chiefly filth, not that which is from within, of which we ſpake, but that which by touching filthy things in the Hands, Feet, and under the Nails, which infects them,and makes them black, as we ſaid in Diſcolouration. Telling of Money infects the Hands much, though the deſire thereof tolerates the chief cauſe is,that ſo many thouſands of Lepers, Beggars, and infected perſons have handled it. Among Creatures,Fleas do moſt uſually ſtick to the Body to bite, and ſuck blood, which we ſuppoſe, are not bred as Lice from the Body of Filth, but come from without, as we ſhewed, and appears, becauſe they have a different ſhape from Lice are red, creep not, but skip with two long feet, they feed not of filth as Lice,but of blood. Nor are alwayes about the Body, and change their place ; and though they may breed in Doggs, or increaſe there, yet not in a Man, whoſe Filth is diſtinct, as other Creatures have other Lice, from the diverſity of their Excrements and Filth : which is not only from their Bodies, but from the Neſts of Birds.

Horſleeches.

Horſleeeches are applied to draw blood, and ſeldom fix upon Swimmers in the River : As we ſee ſometimes the little Horſleeches ſtick to the Fiſh.

The Cure.

Theſe, or the like, getting into the Body by falling, or being taken in, or creeping in. If they continue, and we know not, or if we know not of them, are neglected, but if they declare themſelves by hurt or pain, then we muſt get them forth, as we ſaid in the Symptomes of ſome of them. And when they come of themſelves, this is to be commited to Nature, and the pain muſt be helped, and they forwarned when they come forth.

The Cure of things fallen into the eyes.

Slowly it was preſcribed in the Cure of the Pain of the Eyes, how things got in might be taken out,and what you ſhould do when the Hairs of the Brows hang in the Eyes.

Into the Ears.

We ſhewed in Deafneſs, how you ſhould take things out of the Ears.

Into the Noſe.

Things drawn or gotten into the noſe, are ſneeſed out by their tickling,or they get into the mouth, and if into the rough Artery, they are coughed out, and ſpit out.

And

The Cure of things got into the Mouth.

And ſo are they that get in by the Mouth, or by the Noſe, you muſt uſe Expectorations, if they be in the rough Artery, and not let the Patient be choaked, as is reported with a Flie.

If they ſtick in the Gullet, or about the Throat, as we ſaid of Horſleeches, and the like, which endanger Suffocation, we ſhewed the Cure in the Hindrance of ſwallowing.

If they come into the ſtomach, if they cauſe not vomiting, you muſt give a Vomit.

If they go into the Guts, and out at the Podex, help with Clyſters, and Inſtruments, if they ſtick there.

The Cure of things in the Podex.

If Clyſters are vomited up, it is an evil ſign, and when it is ſo in the Colick, you muſt cure it as was ſhewed in the Colick.

Horſleeches after they are filled with blood, will fall off, or be taken off. If they will not off, cut their tayls, (which they do to make them ſuck after emptying) and they fall off, or ſprinkle ſalt or aſhes upon them, which will make worms depart.

That Mole which got into the Podex, cauſed great pain with his Feet, when drawn out, till they kill'd him, and hurt the Podex, that it was after cured, and ſo did the Mouſe in the womb of which we ſpake.

The Cure of things creps into the Womb.

The Cure of outward Filth.

We ſhewed in the Cure of Filth coming from within, how you ſhould cure Filth without.

The Cure of Filth under the Nails.

The Filth which is under the nails, for want of paring, muſt be taken away by paring.

To keep off Fleas.

It is not our purpoſe to ſhew how Fleas are driven from Chambers, Beds and Cloaths, but that you may with a Decoction, waſh your Body to keep off Fleas and Lice.

The taking off of Horſleeches.

Horſleeches fall off as we ſhewed before of themſelves, or by Art.

FINIS.
